orientation (*Chem.*). (1) The determination of the position of substituent atoms and groups in an organic molecule, especially in a benzene nucleus. —(2) The ordering of molecules, particles, or crystals so that they point in a definite direction.

orientation (*Met.*). The position of important sets of planes in a crystal in relation to any fixed system of planes. See **pure metal crystal.**

orientation (*Surv.*). The process of rotating a plan in the horizontal plane until all survey lines on the plan are parallel to the corresponding lines on the ground.

orienting curvature (*Physiol.*). See **tropism.**

orifice (*Hyd.*). A small opening intended for the passage of a fluid.

origin distortion (*Cathode Ray Tubes*). Distortion of the wave-form indicated by a gas-focused cathode ray oscillograph employing electrostatic deflection, due to the non-linear relation between angular deflection and deflecting voltage which exists at low values of the latter. It results in a flattening of the wave-form where it crosses the zero line.

Oris'kany (Oriska'nian) Stage (*Geol.*) The higher of the two groups into which the strata of Lower Devonian age in eastern N. America are divided. It includes an impure detrital shaly limestone (Port Ewen Limestone), succeeded by the Oriskany Sandstone.

Orizab'a Limestones (*Geol.*). Thick limestones in the Comanchean, partly of Fredericksburg, partly of Washita age, occurring in Mexico.

or'leans (*Textiles*). (1) The name given to fabrics constructed from fine cotton warp and Botany worsted weft.—(2) A good type of American cotton, 1⅛ in. staple, shipped from New Orleans.

orlop deck (*Ship Constr.*). The lowermost deck in a ship of several decks. It is simply a platform, and contributes nothing to main longitudinal strength; usually of small extent.

or'molu (*Furn.*). See **mosaic gold.**

ornamental slating (*Build.*). Slating having a patterned or diamond-like arrangement.

ornis (*Zool.*). A Bird fauna.

ornith'ic (*Zool.*). Pertaining to Birds.

or'nithocop'ros (*Zool.*). The excrement of Birds.

ornithol'ogy (*Zool.*). The study of Birds.

or'nithophi'ly (*Bot.*). Pollination by Birds.

ornithop'ter (*Aero.*). Any flying machine that derives its principal support in flight from the air reactions caused by flapping motions of the wings, this motion having been imparted to them from the source of power being carried.

o'ro-. (1) (Latin *os*, gen. *oris*, mouth). A prefix used in the construction of compound terms; e.g. *oronasal* (q.v.).—(2) (Greek *oros*, mountain). A prefix used in the construction of compound terms; e.g. *orogenesis* (q.v.).

oroanal, ō-rō-ā'nal (*Zool.*). Connecting, pertaining to, or serving as, mouth and anus.

orogen'esis (*Geol.*). A phase in the building of mountains during which the accumulated sediments are compressed, giving rise to folds and faults.

orographic rain (*Meteor.*). Rain caused by moisture-laden winds impinging on the rising slopes of hills and mountains. Precipitation is caused by the cooling of the moist air consequent upon its being forced upwards.

orona'sal (*Zool.*). Pertaining to or connecting the mouth and the nose.

orope'sa float (or **sweep**). A fish-shaped float used in marine mine-sweeping to support the sweeping wire, the latter being drawn between two trawlers and kept at the correct depth by *otter boards* (q.v.).

or'piment (*Min.*). Trisulphide of arsenic, which crystallises in the monoclinic system. It is commonly associated with realgar, and is used as a pigment.

or'rery (*Astron.*). A mechanical model of the solar system showing the relative motions of the planets by means of clock-work; much in vogue in the eighteenth century. (Named after Charles Boyle, Earl of Orrery.)

Orsat apparatus (*Chem.*). A portable apparatus used in the analysis of flue, furnace, and exhaust gases. A sample of the gas is successively scrubbed by solutions which selectively absorb the CO_2, CO, and oxygen.

orthite (*Min.*). See **allanite.**

ortho- (Greek *orthos*, straight). A prefix used in the construction of compound terms; e.g. *orthoenteric*, having a straight alimentary canal.

ortho- (*Chem.*). Derived from an acid anhydride by combination with the largest number of water molecules.

ortho- (*Chem.*). (1) Containing a benzene nucleus substituted in the 1.2 positions.—(2) Consisting of diatomic molecules with parallel nuclear spins and an odd rotational quantum number.

ortho (*Photog.*). A term describing the registration of colours with correct grades of luminosities but without hue. Also ORTHOCHROMATIC, ORTHOSKIAGRAPHIC.

ortho film stock (*Cinema.*). Fine-grained positive film stock for printing in black-and-white, i.e. when the registration of the relative luminosities of colours is not in question.

orthoalumin'ic acid (*Chem.*). A term used to emphasise the acidic nature of aluminium hydroxide.

orthochromat'ic (*Photog.*). Said of emulsions which register visual luminosities correctly, apart from colour. Actually such emulsions are sensitive to all colours except red. See also **ortho.**

orthoclad'ous (*Bot.*). Having long, straight branches.

or'thoclase (*Min.*). Silicate of potassium and aluminium, $KAlSi_3O_8$, crystallising in the monoclinic system; it occurs as an essential constituent in granitic and syenitic rocks, and as an accessory in many other rock types. See also **sanidine, microcline.**

orthodi'agraph (*Med.*). An X-ray apparatus for recording exactly the size and form of organs and structures inside the body.

orthodon'tia. See **dentistry.**

orthogen'esis (*Biol.*). A theory of the mechanism of evolution which postulates that variation is determined by the action of the environment on the fixed constitution of the organism, so that the possibilities of variation are limited to certain definite lines.

orthogeotro'pism (*Bot.*). Growth of a stem vertically upwards, or of a root vertically downwards, in relation to gravity.

or'thogneiss, —thō-nis (*Geol.*). Term applied to gneissose rocks which have been derived from rocks of igneous origin. Cf. *paragneiss.*

orthog'onal (*Bot.*). The manner of arrangement of four members of a flower when two are median and two lateral.

orthograph. A view showing an elevation of a building or of part of a building.

orthojector circuit-breaker (*Elec. Eng.*). A form of circuit-breaker, requiring only a small quantity of oil, in which the arc is extinguished by a flow of oil across the contacts, which flow is produced partly by mechanical means and partly by the high pressure set up by the arc itself.

orthokinet'ic (*Chem.*). Migrating in the same direction.

orthopae'dics, orthope'dics. That branch of surgery which deals with deformities arising from injury or disease of bones or of joints.—*adj.* **orthopaedic.**

orthopho'ria (*Med.*). The state of normal adjustment and balance of the muscles of the eye.

orthophosphor'ic acid (*Chem.*). H_3PO_4. Formed when phosphorus pentoxide is dissolved in water and the solution is boiled.

or'thophyre (*Geol.*). A little-used term for a form of microsyenite, consisting essentially of orthoclase. Better used, if at all, as a textural term.

orthophy'ric (*Geol.*). A textural term applied to medium- and fine-grained syenitic rocks consisting of closely packed orthoclase crystals of stouter build than in the typical trachytic texture. The term actually implies the presence of porphyritic orthoclase crystals.

orthopnoea, orthopnea, —pnē'a (*Med.*). Dyspnoea so severe that the patient is unable to lie down; a symptom of heart failure.—*adj.* **orthopnoeic.**

Orthop'tera (*Zool.*). An order of *Exopterygota* in which the first pair of wings is thickened, and the second pair, if present, is membranous; anal cerci always occur, and the mouth-parts are adapted for biting; carnivorous or herbivorous forms, most of which burrow or live among foliage on the surface of the ground; Earwigs, Cockroaches, Praying Mantis, Stick Insects, Locusts, Grasshoppers, and Crickets.

orthop'terous (*Zool.*). Having the posterior pair of wings straight folded.

orthoptic treatment (*Med.*). The non-operative treatment of squint by specially devised stereoscopic exercises.

orthopyrox'ene (*Min.*). A group of pyroxene minerals crystallising in the orthorhombic system; e.g. enstatite, hypersthene.

orthora'dial (*Zool.*). Said of a type of segmentation in which the lines of cleavage are symmetrically arranged with relation to the main axis of the ovum.

orthorhom'bic system (*Crystal.*). The style of crystal architecture which is characterised by three crystal axes, at right-angles to each other and all of different lengths. It includes such minerals as olivine, topaz, and barytes.

orthoselection (*Biol.*). Modification resulting from the elimination of all other lines of variation through the selective struggle.

orthoskiagraph'ic (*Photog.*). See **ortho.**

orthostat'ic (*Med.*). Associated with or caused by the erect posture; e.g. *orthostatic* albuminuria.

orthostich'ous (*Zool.*). Arranged in straight rows; as the fin skeleton in Fish when the peripheral elements are parallel. Cf. *rachiostichous, rhipidostichous.*

or'thostich'y, orthostichies, —stik'ēz (*Bot.*). A vertical rank of leaves on a stem.

or'thostyle (*Arch.*). A colonnade formed of columns arranged in a straight line.

orthotro'pous (*Bot.*). (1) Said of an ovule which is straight, i.e. with the micropyle in a straight line with the funicle.—(2) Said of organs which show a sharp positive or negative tropism in respect to a given stimulus.

Ortmann's coastal regions (*Ocean.*). A series of faunistic regions into which the coastal waters of the world have been divided.

ory'zenin (*Chem.*). A protein of the *glutelin* (q.v.) group found in rice.

O.S. (*Astron., etc.*). Abbrev. for *Old Style* (q.v.).

O.S. (*Build.*). Abbrev. for *one side.*

Os (*Chem.*). The symbol for *osmium.*

os (*Zool.*). An opening, as the *os uteri.* (Latin *os,* gen. *oris,* mouth.)—*pl.* **o'ra.**

os (*Zool.*). A bone, as the *os coccygis.* (Latin *os,* gen. *ossis,* bone.)—*pl.* **ossa.**

os cloacae (*Zool.*) See **hypoischium.**

os coccygis (*Zool.*). See **urostyle.**

os penis (*Zool.*). A bone developed in the middle line of the penis in some Mammals, as Bats, Whales, some Rodents, Carnivores, and Primates.

osar (*Geol.*). See **esker.**

o'sazones (*Chem.*). The diphenylhydrazones of monosaccharoses, obtained by the action of two molecules of phenylhydrazine on one molecule of the monosaccharose. They are sparingly soluble in water, can be purified by recrystallisation, and serve to identify the respective monosaccharoses.

Osborne Beds (*Geol.*). A group of marls and sands, with thin limestones, belonging to the Oligocene System; found in the Isle of Wight.

oscillating current (*Radio*). The same as *alternating current*; the term is usually confined to those currents having frequencies of the order of hundreds of cycles per second, or higher.

oscillating cylinder (*Eng.*). An obsolete type of steam-engine whose cylinder oscillates on trunnions, through which the steam was admitted and exhausted: the same principle used in certain small oil-pumps, etc.

oscillation (*Radio*). The generation of alternating currents in a resonant circuit, usually with the aid of thermionic valves.

oscillation, centre of (*Phys.*). See **centre of oscillation.**

oscillation constant (*Radio*). The square root of the product of the inductance (in henries) and the capacitance (in farads) of a resonant circuit.

oscillation, damped (*Elec. Comm.*). See **damped oscillation.**

oscillation, time of (*Horol.*). The time of oscillation of a pendulum or balance is twice that of the single vibration.

oscillation transformer (*Radio*). Obsolete term for a high-frequency transformer used for coupling an antenna to a closed resonant circuit.

oscillation valve (*Radio, Thermionics*). An early name for a two- or three-electrode thermionic valve used as a detector or oscillator.

oscillator (*Radio*). A combination of thermionic valves and resonant circuits for the production of oscillations.

oscillator drift (*Radio*). The slow change in frequency of a thermionic valve oscillator occasioned by changing supply voltages, ageing, and warming-up of the valve and circuit elements, etc.

os'cillatory circuit (*Radio*). A circuit containing inductance and capacitance in series. Also called RESONANT CIRCUIT.

oscillatory discharge (*Radio*). The discharge of a condenser through an inductance when the resistance of the circuit is sufficiently low and the current persists after the condenser has completely discharged, so that it charges up again in the reverse direction, until the current reverses; the process is repeated until all the initial energy is dissipated in the resistance.

oscillatory scanning (*Television*). A system of scanning in which the scanning spot moves repeatedly to and fro across the image, so that successive lines are scanned in opposite directions.

oscillatron (*Thermionics*). The normal cathode ray tube as used for exhibiting or registering oscillograph wave-forms.

os'cillogram (*Elec. Eng.*). A record of a wave-form obtained from an oscillograph—usually by photographing the wave-form as exhibited by a line of light in the oscillograph.

os'cillograph (*Elec. Eng.*). An instrument for producing a curve representing the wave-form of an alternating quantity.

See **Blondel—**
cathode ray—
Duddell—
electrostatic—
hot-wire—

os'cilloscope (*Elec. Eng.*). A term sometimes employed to denote a low-voltage cathode ray oscillograph.

os'culant, os'culate (*Zool.*). Intermediate in characteristics between two groups, genera, or species.

osculating orbit (*Astron.*). The name given in dynamical astronomy to the orbit a body would have if at a specified instant all the other planets were annihilated and it moved under the sole attraction of the sun.

os'culum (*Zool.*). In *Porifera*, an exhalant aperture by which water escapes from the canal system.—*adjs.* **oscular, osculiferous.**

Osler's disease, Osler-Vaquez disease (*Med.*). See **erythraemia.**

osmete'rium (*Zool.*). In certain *Papilionidae*, a bifurcate sac exhaling a disagreeable odour which can be protruded through a slit-like aperture in the first thoracic segment.

osmic acid (*Chem.*). An erroneous name for osmium tetroxide, OsO_4, yellow crystals which give off an ill-smelling, poisonous vapour. Its aqueous solution is used as a histological stain for fat.

osmirid'ium (*Met.*). A very hard, white, naturally occurring alloy of osmium (17-48%) and iridium (49%) containing smaller amounts of platinum, ruthenium, and rhodium.

osmium (*Chem.*). Symbol, Os. A metallic element in the eighth group of the periodic system, a member of the platinum group. At. no. 76, at. wt. 191·0, m.p. 2500°. Osmium is the heaviest substance known; sp. gr. at 20° C. 22·48. Specific electrical resistivity 9·5 microhms per cm. cub. Finely divided, it is an important catalyst for gas reactions. The metal is not attacked by any acids.

osmom'eter (*Chem.*). An apparatus for the measurement of osmotic pressures.

os'mophore (*Chem.*). See **odoriphore.**

osmo'sis (*Chem.*). The diffusion of a solvent through a semi-permeable membrane into a more concentrated solution in order to equalise the concentrations on both sides of the membrane.

osmotic coefficient (*Chem.*). The quotient of the van't Hoff factor and the number of ions produced by the dissociation of one molecule of the electrolyte.

osmotic pressure (*Chem.*). The pressure exerted by a dissolved substance in virtue of the motion of its molecules. It may be measured by the pressure which must be applied to a solution in order just to prevent osmosis into the solution.

osone (*Chem.*). The oxidation product of an osazone, obtained by the elimination of phenylhydrazine and oxidation by the action of HCl. Osones contain the group $\mathrm{O{:}\overset{|}{C}\text{—}CH{:}O}$. When reduced, the aldehyde group only is converted into a hydroxyl group, and by this method it is possible to convert an *aldose* (q.v.) into a *ketose* (q.v.); e.g. glucose into fructose.

osphrad'ium (*Zool.*). A sense-organ of certain aquatic *Mollusca*, consisting usually of a patch of columnar ciliated epithelium, richly innervated from the visceral commissure; formerly believed to be of olfactory function, but now suspected of being concerned in the assessment of suspended silt in the water entering the mantle chamber.—*adj.* **osphradial.**

ossa (*Zool.*). See **os.**

ossein, os'e-in (*Chem.*). A collagen forming the chief organic constituent of bone, from which, by hydrolysis, glucosamine can be obtained.

os'seoalbu'minoid (*Chem.*). A collagen found in bone.

osseomu'coid (*Chem.*). A collagen found in bone.

os'seous (*Zool.*). Bony: resembling bone.

os'sicle (*Zool.*). A small bone: in *Echinodermata*, one of the skeletal plates: in *Crustacea*, one of the calcified toothed plates of the gastric mill.

ossifica'tion (*Zool.*). The formation of bone: transformation of cartilage or mesenchymatous tissue into bone.—*v.* **ossify.**

Osta'riophy'si (*Zool.*). A large order of *Neopterygii* having cycloid scales, abdominal pelvic fins, and soft-rayed median fins; the anterior vertebrae are co-ossified and associated with a chain of small bones (Weberian ossicles) connecting the air-bladder with the internal ear; cosmopolitan fresh-water forms. Cannibal Fish, Carps, Loaches, and Cat-fishes.

oste-, osteo- (Greek *osteon*, bone). A prefix used in the construction of compound terms; e.g. *osteogenetic*, pertaining to the production of bone.

ostei'tis (*Med.*). Inflammation of a bone.

osteitis defor'mans (*Med.*). See **Paget's disease.**

osteitis fibro'sa (*Med.*). See **fibrocystic disease.**

osteo-arthritis, ostearthritis (*Med.*). Arthritis deformans. A form of chronic arthritis in which the cartilages of the joint and the bone adjacent to them are gradually worn away.

osteo-arthrop'athy (*Med.*). Strictly, any disease affecting both bones and joints. Specifically, symmetrical enlargement of the bones of the hands and the feet with thickening of the fingers and toes, associated especially with chronic diseases of the lungs or of the heart.

os'teoblast (*Zool.*). A bone-forming cell.

osteochondri'tis (*Med.*). Inflammation of both bone and cartilage. See also **Perthe's disease.**

osteochondro'ma (*Med.*). A tumour composed of bony and of cartilaginous elements.

osteocla'sis (*Med*). (1) The surgical fracture of a bone for the correction of deformity.—(2) The absorption and destruction of bone tissue by osteoclasts.

os'teoclast (*Zool*). A bone-destroying cell, especially one which breaks down any preceding matrix, chondrified or calcified, during bone-formation.

osteocra'nium (*Zool*). The bony brain-case which replaces the chondrocranium in higher Vertebrates.

osteoder'mis (*Zool*). An ossified or partially ossified dermis. membrane bones formed by ossification of the dermis.—*adj.* **osteodermal.**

osteogen'esis (*Zool.*). See **ossification.**

osteogenesis imperfec'ta (*Med.*). See **fragilitas ossium.**

osteol'ogy (*Zool.*). The study of bones.

osteo'ma (*Med.*). A tumour composed of bone.

osteomala'cia (*Med.*). Mollities ossium. A condition in which softening of the bones, as a result of absorption of calcium salts from them, occurs, especially in pregnant women; thought to be causally related to deficiency in Vitamin D in the diet.

osteomyeli'tis (*Med.*). Inflammation of the bone-marrow and of the bone.

osteop'athy. A method of healing, based on the fact that abnormalities in the human framework (bones, muscles, ligaments, etc.) ultimately cause disease by interfering with the blood and nerve supply to the body, thereby allowing other factors in ill-health to exert their influence unduly. These abnormalities are often the direct single cause of much suffering and they can be removed by skilled manual adjustment.

osteopathyro'sis (*Med.*). See **fragilitas ossium.**

osteopetro'sis (*Med.*). Albers-Schönberg disease; congenital osteosclerotic anaemia; marble bones. A rare condition in which the bones become solid as a result of obliteration of the bone-marrow by bone, associated with enlargement of the liver and of the spleen, and with anaemia.

osteopha'gia (*Vet.*). A depraved appetite for bones and dead animals, exhibited by herbivorous animals suffering from a deficiency of phosphorus and calcium salts in the diet.

os'teophyte (*Med.*). A bony excrescence or outgrowth from the margin of osteo-arthritic joints or from diseased bone.

osteoporo'sis (*Zool.*). Development of a porous structure by absorption of bone.

osteosarco'ma (*Med.*). A malignant tumour derived from osteoblasts, composed of bone and sarcoma cells.

osteosclereide, —skler'ēd (*Bot.*). A thick-walled idioblast which is shaped something like a thigh-bone.

osteosclero'sis (*Med.*). Abnormal thickening of bone. See also **osteopetrosis.**

os'teoscute (*Zool.*). In *Vertebrata*, a flat dermal ossification.

osteot'omy (*Surg.*). The surgical cutting of a bone.

os'tiolate (*Bot.*). Having an opening.

os'tiole (*Bot.*). (1) The opening by means of which spores, etc. escape from a conceptacle or a perithecium.—(2) A general term for a pore.

os'tium (*Zool.*). A mouth-like aperture: in *Porifera*, an inhalant opening on the surface: in *Arthropoda*, an aperture in the wall of the heart by which blood enters the heart from the pericardial cavity: in *Mammalia*, the internal aperture of a Fallopian tube.—*adj.* **ostiate.**

Ostrac'oda (*Zool.*). A subclass of *Crustacea* of minute size, occurring in both fresh and salt water; there is a bivalve shell without growth lines enclosing the head, and a large mandibular palp; normally there are seven pairs of appendages; parthenogenesis commonly occurs, the males of some species being unknown.

Ostwald colour atlas (*Photog.*). A system of colour relations arranged according to hue, luminosity, and saturation.

Ostwald's dilution law (*Chem.*). The application of the law of mass action to the ionisation of a weak electrolyte, yielding the expression $\frac{\alpha^2}{(1-\alpha)V}=K$, where α is the degree of ionisation, V the *dilution* (2, q.v.), and K the ionisation constant, for the case in which two ions are formed.

Ostwald's theory of indicators (*Chem.*). The assumption that all *indicators* (1, q.v.) are either weak acids or weak bases, in which the colour of the ionised form differs markedly from that of the undissociated form.

O.S. & W. (*Build.*). Abbrev. for *oak, sunk, and weathered.*

ot-, oto- (Greek *ous*, gen. *otis*, ear). A prefix used in the construction of compound terms; e.g. *otalgia* (q.v.).

otal'gia (*Med.*). Earache.

o'tic (*Zool.*). Pertaining to the ear or to the auditory capsule. one of the cartilage bones of the auditory capsule.

otid'ium (*Zool.*). A statocyst of *Mollusca*.

oti'tis (*Med.*). Inflammation of the ear.—OTITIS EXTERNA, a term for various inflammatory conditions of the external ear.—OTITIS MEDIA, inflammation of the middle ear.

otoco'nia (*Zool.*). Numerous small concretions which, in some *Mollusca* (e.g. most *Euthyneura*), replace the single large concretion or otolith in the otocyst.

o'tocyst (*Zool.*). In many aquatic Invertebrates, a sac lined by sensory hairlets, filled with fluid, and containing a calcareous concretion (*otolith*) which subserves the equilibristic sense, and was formerly believed also to serve the sense of hearing: in Vertebrates, part of the internal ear which is similarly constructed (as the utriculus).

o'tolith (*Zool.*). The calcareous concretion which occurs in an otocyst.

otol'ogy (*Med.*). That part of surgical science dealing with the organ of hearing and its diseases. —*n.* **otol'ogist.**

otorhi'nolaryngol'ogy. That part of surgical science which deals with diseases of the ear, nose, and throat.

otorrhoe'a, otorrhe'a (*Med.*). A discharge, especially of pus, from the ear.

otosclero'sis (*Med.*). The formation of spongy bone in the capsule of the labyrinth of the ear, associated with progressive deafness.

o'toscope (*Med.*). An instrument for inspecting the external canal of the ear and the ear-drum.

otter (*Furs*). The dressed skin of the otter, a fish-eating animal living in streams and lakes; the fur is of a rich-brown colour, even and thick.

otter boards (*Ocean.*). Oblong boards, bound with iron, attached to the sides of a trawl net and eccentrically to the towing warps; they serve to keep the mouth of the net open. Also used in marine mine-sweeping (see **oropesa sweep**).

Otto cycle (*I.C. Engs.*). The working cycle of a 4-stroke engine, consisting of suction, compression, explosion at constant volume, expansion, and exhaust, occupying two revolutions of the crankshaft.

ottoman rib cloths (*Textiles*). Dress fabrics made from Botany quality yarns, generally hard twisted, with a warp rib; in two of the varieties, *ottoman* and *soleil*, the ribs are of equal size, but in *ottoman cord* they are of two different sizes.

ot'trelite (*Min.*). A manganese-bearing chloritoid mineral, a product of the metamorphism of certain argillaceous sedimentary rocks, named from Ottrez in the Ardennes (Belgium).

ottrelite-slate (*Geol.*). A metamorphic argillaceous rock characterised by abundant crystals of ottrelite.

out-and-in bond (*Masonry*). The mode of laying ashlar quoins, so that they shall be headers and stretchers alternately.

out-of-balance (*Eng*). Said of a reciprocating engine in which the reciprocating parts are imperfectly balanced.

out-of-phase (*Elec. Eng.*). Said of alternating quantities, having the same frequency, which reach their maximum values at different instants of time.

out of register (*Print.*). See **register.**

out of wind (*Carp., etc*). A term applied to a flat surface. a surface which is not twisted.

out-to-out (*Join., etc.*). A term applied to an overall measurement across a piece of framing.

out-band (*Masonry*). A jamb stone laid as a stretcher and recessed to take a frame.

outbreeding. See **exogamy.**

outburst bank (*Hyd. Eng.*). The middle part of the slope of a sea embankment, above the footing and below the swash-bank.

outcrop (*Geol.*). An occurrence of a rock at the surface of the ground.—Also *v.*

outdoor substation (*Elec. Eng.*). A substation in which the transformers, switchgear, etc. are mounted entirely in the open air, having been suitably weatherproofed for the purpose.

outer (*Elec. Eng.*). Either of the two conductors of a 3-wire distribution system which are respectively at a voltage above and below earth. Cf. the *neutral* (or *middle*) *conductor*, which is at approximately earth potential.

outer conductor (*Elec. Eng.*). See **external conductor.**

outer cover (*Aero.*). The external covering of the hull structure of a rigid airship; it serves for the protection of the gas-bags and structure, and to preserve the aerodynamic form of the hull.

outer dead-centre (*Eng.*). The position of the crank of a reciprocating engine or pump when the piston is at the end of its outstroke, i.e. when the piston is nearest the crankshaft.

outer forme (*Typog.*). The forme of type from which the outside of a sheet is printed, viz. pages 1; 4, 5; 8, 9, etc.

outer string (*Join.*). The *string* (q.v.) farthest from the wall.

outer tympan (*Typog.*). The larger tympan of a press, into which the smaller one fits.

outfall (*San. Eng.*). The discharge point of a sewer.

outfall sewer (*San. Eng.*). The main sewer carrying away sewage material from a town to the place where it is to be purified or discharged.

out-gate (*Foundry*). See **riser.**

outgoing (*Teleph.*). Indication of the direction of a call with respect to a position, exchange, or selector. Cf. *incoming.*

outgoing feeder (*Elec. Eng.*). A feeder along which power is supplied from a substation or generating station.

outgoing jack (*Teleph.*). A jack which is directly connected to a junction to another exchange, or with a trunk line.

outlet (*Auto. Teleph.*). One of a number of possible outgoing circuits from a switch to the next free switch which is to be operated in establishing a connexion.

outlet (*Build.*). An opening serving to direct the discharge of a liquid.

out'lier, —li-er (*Geol.*). A remnant of a younger rock which is surrounded by older strata. It normally forms a hill, often capped by a durable rock, and occurs in front of an escarpment. Cf. *inlier.*

output coefficient (*Elec. Eng.*). See **specific torque coefficient.**

output transformer (*Elec. Comm.*). A transformer which couples the last stage in a valve amplifier with the load, e.g. a loudspeaker or line.

output valve (*Radio, Thermionics*). A valve designed to be capable of delivering a relatively large amount of alternating-current power, instead of being purely a voltage amplifier. The final valve in a multi-stage amplifying circuit. Also called POWER VALVE.

outrigger (*Build.*). A projecting beam carrying a suspended scaffold.

outside broadcasting (*Radio*). The broadcasting of programme material which originates outside the precincts of the studio. Abbrev. **O.B.**

outside crank (*Eng.*). An overhung, or single-web crank attached to a crankshaft outside the main bearings.

outside cylinders (*Eng.*). The steam cylinders carried outside the frame of a locomotive, working on to crank-pins in the driving wheels.

outside gouge (*Carp., etc.*). A firmer gouge having the bevel ground upon the convex side of the cutting edge.

outside lap (*Eng.*). The amount by which the slide-valve of a steam-engine overlaps the edge of the steam ports when in mid-position. Also called the STEAM LAP.

outside lines (*Cinema.*). Sight lines which are outside the angle of view of the lens of a camera.

outside lining (*Join.*). The external member of a cased frame.

outside reams (*Print.*). Reams of paper made up of defective sheets (*outsides*, q.v.).

outsides (*Paper*). See under **insides.**

outwash fan (*Geol.*). A sheet of gravel and sand, lying beyond the margins of a sheet of boulder clay, deposited by melt-waters from an ice-sheet or glacier.

ova (*Bot., Zool.*). *Pl.* of *ovum.*

oval (*Bot.*). Flat, rounded at each end, with curved sides, and about twice as long as broad, widest in the middle.

oval pistons (*I.C. Engs.*). (1) Pistons, originally round, worn oval through friction at the thrust faces.—(2) Pistons purposely turned slightly oval, to compensate for the unequal diametral expansion due to the gudgeon-pin bosses.

ova'rian (*Anat.*). Pertaining to or connected with the ovary.

ova'riole (*Zool.*). In Insects, one of the egg-tubes of which the ovary is composed.

ova'riotes'tis (*Zool.*). See **ovotestis.**

ovari'tis (*Med.*). Inflammation of an ovary.

o'vary (*Anat., Zool.*). A female gonad: a reproductive gland producing ova.—*adj.* **ova'rian.**

ovary (*Bot.*). (1) The basal enlarged part of a carpel or of a syncarpous gynaeceum, containing the ovules.—(2) Loosely used as meaning the *pistil.*

ovate (*Bot.*). Flat and thin, shaped like the longitudinal section of an egg, widest below the middle.

overall efficiency (*Elec. Eng.*). When power is passed through a number of items of plant in succession, e.g. a steam turbine and a generator, or a transformer and a synchronous convertor, the *overall efficiency* is the ratio of the output from the final item of plant to the input to the first.

overall grade of service (*Auto. Teleph.*). The grade of service of an exchange as a whole, as distinct from the grade adopted in specified groups of circuits. See **grading.**

overbridge (*Civ. Eng.*). A bridge carrying one road over another which is in cutting.

overburden (*Build.*). The encallow, or overlying stratum of soil, in brickfields.

overcast (*Meteor.*). Said of the sky when more than eight-tenths of it is covered by cloud.

overcasting (*Bind.*). The method of sewing used to make separate leaves into sections for binding Also called WHIPPING, WHIPSTITCHING.

overcheck (*Textiles*). The name applied to a prominent check effect in a check fabric, to distinguish it from the more subdued pattern with which it is combined.

overcloak (*Plumb.*). When the overlapping edge in a roll extends over to the flat surface beyond the roll, it is called an *overcloak*.

overcoil (*Horol.*). The last coil of a balance spring, which is raised above the plane of the spring and then bent to form a terminal curve.

over-compounded generator (*Elec. Eng.*). A compound-wound d.c. generator in which the series winding is so designed that the voltage rises as the load increases.

over-compounded motor (*Elec. Eng.*). A compound-wound d.c. motor in which the series winding is so designed that the speed rises with an increase in load.

over-current (or **overload) relay** (*Elec. Eng.*). A relay which operates as soon as the current exceeds a certain predetermined value.

over-current release (*Elec. Eng.*). A device for tripping an electric circuit when the current in it exceeds a certain predetermined value. Also called OVERLOAD RELEASE.

overcutting (*Acous.*). The use of too great amplitude of radial motion in cutting the original gramophone record on the wax blank, so that one track cuts into the adjacent track.

overdoor (*Build.*). (1) An ornamental door-head.—(2) A pediment.

over-exposure (*Photog.*). Excess of exposure of any sensitive surface, above that required for the proper gradation of light and shade. Over-exposure is indicated by lack of detail and prevalence of fog after development.

overfeed stoker (*Eng.*). A *mechanical stoker* (q.v.) consisting of a hopper from which the fuel is continuously fed on to the bars of an inclined stepped grate, mechanically oscillated or rocked to cause the burning fuel to descend towards an ash table.

overflow (*Plumb.*). A means of escape provided for excess water supplied to cisterns, sinks, water-tanks, etc.

overflow meter (*Auto. Teleph.*). A meter which counts the number of calls which fail to get through any system of trunking in an automatic switching exchange because of lack of trunks or outlets.

overfold (*Geol.*). A fold with both limbs dipping in the same direction, but one more steeply inclined than the other. Cf. *isoclinal fold.*

overgraining (*Paint.*). A coat of graining colour (usually mixed with beer to act as a drier) applied over grained work so as to produce shades across the work.

overgrowth (*Crystal.*). See **crystalline overgrowth.**

overhang (*Aero.*). (1) In multiplanes, the distance by which the tip of one of the planes projects beyond the tip of another.—(2) In a wing structure, the distance from the outermost supporting point to the extremity of the wing tip.

overhang (*Elec. Eng.*). See **armature end connexions.**

overhead camshaft (*I.C. Engs.*). A *camshaft* (q.v.) running across the top of the cylinder-heads of an engine, usually driven by a bevel-shaft from the crankshaft, the cams operating on rockers or directly on the valve-stems.

overhead-contact system (*Elec. Eng.*). The method of supplying current to the vehicles of an electric traction system whereby the current is collected from a contact wire suspended above the track, by means of current-collectors mounted on the roof of the vehicle. The term may also refer to the actual contact wire and its supporting structure.

overhead crossing (*Elec. Eng.*). A device used on the overhead-contact wire system of an electric railway or tramway, to allow the crossing of two contact wires and permit the passage of a current-collector along either wire.

overhead expenses. See **on-costs.**

overhead railway (*Civ Eng*). An elevated railway carried above ground-level on arches or viaducts.

overhead transmission-line (*Elec. Eng.*). A transmission line in which the conductors are supported on poles, towers, or other similar structures at a considerable height above the earth.

overhead travelling-crane (*Eng.*). A workshop crane consisting of a girder along which a wheeled crab can be traversed. The girder is mounted on wheels running on rails fixed along the length of the shop, near the roof. Travelling, traversing, and lifting are done by hand or power. Also called SHOP TRAVELLER.

overhead valves (*I.C. Engs.*). In a vertical petrol- or oil-engine, inlet and exhaust valves working in the surface of the head opposite the piston, either in a vertical position or inclined.

overhearing (*Teleph.*). The *cross-talk* (q.v.) between a phantom and a side circuit.

overheated (*Met.*). Said of metal which has been heated in preparation for hot-working, or during a heat-treating operation, to a temperature at which rapid grain growth occurs and large grains are produced. The structure and properties can be restored by treatment, and in this respect it differs from burning (see **burnt metal**).

overlap (*Geol.*). The relationship between conformable strata laid down during an extension of the basin of sedimentation (for example, on the margins of a slowly sinking landmass), so that each successive stratum extends beyond the boundaries of the one lying immediately beneath. Cf. *off-lap* and *overstep.*

overlap span (*Elec. Eng.*). See **section gap.**

overlap test (*Elec. Eng.*). A test used for locating a fault in a cable; the resistance between the cable and earth is measured, first with the far end of the cable earthed, and again with it free.

overlay (*Typog.*). To adjust the impression surface of a machine by cutting and patching, in order to increase the pressure on dark tones and decrease it on light tones.

overload. A load on a machine, etc. greater than that which it is designed to withstand continuously.

overload capacity (*Elec. Eng.*). The amount of overload which an electrical machine can withstand for a specified length of time without excessive heating, commutation, or other adverse effect.

overload protective system (*Elec. Eng.*). A system of protecting an electric power network by means of over-current relays. To provide discrimination, the relays have time lags, graded so that the relays more remote from the supply point have shorter lags.

overload relay (*Elec. Eng.*). See **over-current relay.**

overload release (*Elec. Eng.*). See **over-current release.**

overman (*Mining*). (1) An underground manager of one or more ventilating districts in a coal-mine.—(2) An umpire appointed to an arbitration board in a mine dispute.

overmantel (*Build.*). The upper part of the ornamental front to a fireplace.

overmodulation (*Radio*). Modulation to a depth exceeding 100%, i.e. to such a degree that the amplitude falls to zero for an appreciable fraction of the modulating cycle.

overpick (*Weaving*). The condition when the *picking* (q.v.) arm of a loom is above the shuttle box.

overpoled copper (*Met.*). See **poling.**

overproof (*Spirits*). See **proof*.**

overreach (*Vet.*). An error of gait in the horse, in which the toe of the hind foot strikes the heel of the fore foot.

over-rigid (*Struct.*). See **redundant.**

overrun (*Typog.*). To carry words from the end of one line of type to the beginning of the next, and so on until the matter fits. Insertions or deletions frequently necessitate overrunning.

oversailing courses (*Build.*) Brick or stone courses projecting from a wall for the sake of appearance only, as distinct from corbels, which are load-carrying.

overshooting (*Cinema.*). The application of too high transmission level to the film recorder, so that the modulation exceeds the available maximum amplitude in variable-area recording and the latitude of the emulsion in variable-density recording.

overshot wheel (*Eng.*). A water-wheel in which the discharge flume or head-race is at the top, the water flowing tangentially into the buckets.

oversite concrete (*Build.*). A concrete layer covering a building site within the external walls, serving to keep out ground air and moisture, and also providing a foundation for the floor.

overspeed protection (*Elec. Eng.*). Protection, usually by means of a centrifugally operated device, against excessive speed of an electric machine; used on inverted rotary convertors and also on d.c. motors in certain cases.

overstep (*Geol.*). The structural relationship between an unconformable stratum and the outcrops of the underlying rocks, across which the former transgresses. Cf. *overlap.*

overstrain (*Eng.*). The result of stressing an elastic material beyond its *yield point* (q.v.); a new and higher yield point results, but the elastic limit is reduced.

overthrust fault (*Geol.*). A fault of low hade along which one slice or block of rock has been pushed bodily over another, during intense compressional earth-movements. The horizontal displacement along the thrust plane may amount to several miles. See **thrust plane.**

overtone (*Acous.*). In a complex tone, any of the components above the fundamental frequency.

overvoltage (*Chem.*). The difference between the potential at which a gas, especially hydrogen, is evolved from a solution and the potential of a reversible electrode of the same gas in the same solution. It is largely characteristic of the material at which the gas is evolved.

overvoltage protective device (*Elec. Eng.*). A device giving protection to electrical apparatus against the possibility of damage caused by an excess voltage, i.e. a voltage above normal.

overvoltage release (*Elec. Eng.*). A device arranged to trip an electrical circuit when the voltage in it exceeds a certain predetermined value.

ovi- (Latin *ovum*, egg). A prefix used in the construction of compound terms; e.g. *oviform.*

o'vicell (*Zool.*). In *Polyzoa*, a modified zooecium which acts as a brood-pouch.

o'viduct (*Zool.*). The tube which leads from the ovary to the exterior and by which the ova are discharged.—*adj.* **ovidu'cal.**

ovif'erous, ovig'erous (*Zool.*). Used to carry eggs, as the *ovigerous* legs of *Pycnogonida.*

ovip'arous (*Zool.*). Egg-laying; cf. *viviparous.*—*n.* **ovipar'ity.**

oviposition (*Zool.*). The act of depositing eggs.—*v.* **ovipos'it.**

ovipos'itor (*Zool.*). In some Fish (as the Bitterling), a flexible tube formed by the extension of the edges of the genital aperture in the female: in female Insects, the egg-laying organ formed by the three pairs of gonapophyses.

o'visac (*Zool.*). A brood-pouch: an egg receptacle.

o'void (*Bot.*). Solid, like an egg in form, and attached by the broader end.

o'volo (*Arch.*). A quarter-round convex moulding.

o'votes'tis (*Zool.*). A genital gland which produces both ova and spermatozoa, as the gonad of the Snail.

o'vovivip'arous (*Zool.*). Producing eggs which hatch out within the uterus of the mother.

ovula'tion (*Zool.*). The formation of ova: in Mammals, the process of escape of the ovum from the ovary.

ov'ule (*Bot*). (1) The nucellus containing the embryo sac and enclosed by one or two integuments, which, after fertilisation, and subsequent development, becomes the seed.—(2) A young seed in course of development.

ovulif'erous scale (*Bot.*). One of the scales of a fertile cone in *Coniferae*; it bears the ovules, and later, the seeds, and the sum total of all the ovuliferous scales present makes up the greater part of the mature cone.

o'vum (*Bot., Zool.*). A non-motile, female gamete.—*pl.* **ova.**

Owen bridge (*Elec. Eng.*). An a.c. bridge in which an inductance is measured in terms of a standard capacitance and two resistances.

Owen's organ (*Zool.*). In female *Nautiloidea*, an oval structure with numerous closely set ridges lying between the groups of tentacles.

ox-eye (*Build*). A dormer window oval in shape.

oxalates (*Chem.*). The salts and esters of oxalic acid.

oxal'ic acid (*Chem.*). $HOOC{\cdot}COOH,2H_2O$, a dibasic acid which crystallises with two molecules of water in monoclinic prisms, m.p. 101° C., m.p. (anhydrous) 190° C.; it sublimes readily, occurs in many plants, is obtainable by the oxidation of many organic substances and is prepared technically by the fusion of sawdust with caustic soda or potash at about 220° C. Permanganate of potash oxidises it to CO_2, which reaction is used in volumetric analysis.

oxalu'ria (*Med.*). The presence of crystals of oxalates in the urine.

ox'alyl (*Chem.*). The bivalent acid radical $O{:}\overset{|}{C}{\cdot}\overset{|}{C}{\cdot}O$.

oxam'ic acid (*Chem.*). $H_2N{\cdot}CO{\cdot}COOH$, a crystalline powder, m.p. 210° C. (with decomposition).

oxam'ide (*Chem.*). $H_2N{\cdot}CO{\cdot}CO{\cdot}NH_2$, the normal amide of oxalic acid, a crystalline powder which sublimes when heated.

oxazoles (*Chem.*). Derivatives of oxazole,

ox'eote (*Zool.*). Rod-shaped.—*n.* **ox'ea.**

Oxford Clay, Oxfordian Stage (*Geol.*). A thick bed of blue marine clay which is shaly in part and belongs to the Upper Jurassic rocks. It is important for brick-making, e.g. at Peterborough (Fletton), and has yielded the remains of many extinct reptiles (*Ichthyosaurus, Plesiosaurus, Dinosauria*, etc.) and ammonites.

Oxford shirting (*Textiles*). A plain-weave cotton fabric, generally striped, used for shirting; a plain shirting of this type is known as a *plain Oxford.*

ox'idase (*Bot., Zool.*). One of a group of enzymes occurring in plant and animal cells and promoting oxidation.

oxidation (*Chem.*). The addition of oxygen to a compound. More generally, any reaction which involves the loss of electrons from an atom.

oxidation-reduction indicators (*Chem.*). Substances which exist in oxidised and reduced forms having different colours, used to give approximate values of oxidation-reduction potentials.

oxidation-reduction potential (*Chem.*). See **standard oxidation-reduction potential.**

oxides (*Chem.*). Compounds of oxygen with another element. Oxides are formed by the combination of oxygen with most other elements, particularly at elevated temperatures, but not with those of group O in the periodic system, the inert gases, helium, argon, neon, etc.

oxide-coated cathode (*Thermionics*). A cathode coated with oxides of the alkali and alkaline-earth metals, to produce thermionic emission at relatively low temperatures.

oxide-coated filament (*Thermionics*). An incandescent filament, coated with oxides of the alkali metals, which acts as an oxide-coated cathode.

oxide-film arrester (*Elec. Eng.*). A lightning arrester depending for its action on the fact that a layer of lead peroxide, which is a good conductor, changes to red lead, which is a good insulator, when heated by the passing of a current.

oxidising agent (*Chem.*). A substance which is capable of bringing about the chemical change known as oxidation.

oxidising flame (*Chem.*). The outer cone of a non-luminous Bunsen flame.

ox'imes (*Chem.*). Compounds obtained by the action of hydroxylamine on aldehydes or ketones, containing the bivalent oximino group :N·OH attached to the carbon. The oximes of aldehydes are termed *aldoximes* (q.v.) and those obtained from ketones *ketoximes* (q.v.).

oxim'ide (*Chem.*).  $\begin{matrix}CO\\ |\\ CO\end{matrix}\!\!>\!NH$, colourless prisms. It is prepared by the action of P_2O_5 upon oxamic acid.

oxin'dole (*Chem.*).  $C_6H_4\!<\!\begin{matrix}NH\\ CH_2\end{matrix}\!>\!CO$, the lactam of *o*-aminophenyl-acetic acid, colourless needles, m.p. 120° C. Oxindole is amphoteric, dissolving both in alkalis and in acids. The imino-hydrogen is exchangeable for other groups; e.g. ethyl, acetyl, etc.

oxo'nium salts (*Chem.*). Derivatives of a hypothetical oxonium hydroxide, $H_3O{\cdot}OH$, a base with a tetravalent oxygen atom. Such substances are readily produced from several heterocyclic compounds containing oxygen, e.g. dimethylpyrone, which forms salts with hydrochloric acid, etc. by direct addition to the oxygen atom.

oxter piece (*Carp.*). A piece of timber used in ashlering.

oxy- (Greek *oxys*, sharp). A prefix used to construct compound terms; e.g. *oxygnathous*, having sharp jaws.

oxyacan'thine (*Chem.*). $C_{19}H_{21}O_3N$, an alkaloid of the *iso*quinoline group, obtained from the root barks of the *Berberis* species. It crystallises in needles, m.p. 208°-214° C.

oxy-acetylene welding (*Eng.*). Welding with a flame resulting from the combustion of oxygen and acetylene.

oxycelluloses (*Chem.*). Products formed by the action of oxidising agents on cellulose. They dissolve in dilute alkaline solution and have strong reducing properties. When boiled with hydrochloric acid they yield furfuraldehyde quantitatively. This reaction serves for the analytical estimation of oxycelluloses.

oxyceph'aly (*Med.*). Steeple-head. A deformity of the skull characterised by a high forehead and a pointed vertex, associated with exophthalmos and impairment of vision.

oxychloride cement (*Build.*). A strong, extremely hard-setting cement used in making composition floors; composed of an oxide and a chloride of magnesia chemically combined.

ox'ychlor'ocru'orin (*Zool.*). The compound formed by oxidation of *chlorocruorin* (q.v.).

oxychro'matin (*Cyt.*). A form of chromatin which stains comparatively lightly, and contains little nucleic acid. Cf. *basichromatin.*

oxydac'tylous (*Zool.*). Having narrow-pointed digits.

oxygen (*Chem.*). Symbol, O. A non-metallic element in the sixth group of the periodic system. At. no. 8, at. wt. 16·0000, valency 2. It is a colourless, odourless gas which supports combustion and is essential for the respiration of most forms of life. M.p. −218·4° C., b.p. −183° C., density 1·42904 gms. per litre at N.T.P., formula O_2. An unstable form is ozone, O_3. Oxygen is the most abundant element, forming 21% by volume of the atmosphere, eight-ninths by weight of water, and nearly one-half by weight of the rocks of the earth's crust. It is manufactured from liquid air, for use in hot welding flames, in medical practice, and in anaesthesia; liquid oxygen mixed with charcoal, sawdust, etc. forms a powerful explosive.

oxygen-free high-conductivity copper (*Met.*). Copper made by a special treatment after electrolytic refining. Distinguished from tough-pitch by the absence of oxygen, and from deoxidised by the absence of deoxidisers.

oxyge'notax'is or **oxytax'is** (*Biol.*). Response or reaction of an organism to the stimulus of oxygen. —*adjs.* **oxygenotac'tic, oxytac'tic.**

oxygenotro'pism or **oxytro'pism** (*Biol.*). Synonym for *oxygenotaxis.*

oxyhae'mocy'anin (*Zool.*). The compound formed by oxidation of haemocyanin.

oxyhaemoglo'bin (*Chem., Zool.*). The product obtained by the action of oxygen upon haemoglobin. The oxygen is readily given up when the oxygen-tension is low in the surrounding medium.

oxy-hydrogen welding (*Eng.*). A method of welding in which the heat is produced by the combustion of a mixture of oxygen and hydrogen.

oxymuriatic acid (*Chem.*). The name given by Lavoisier to *chlorine.*

oxyn'tic (*Zool.*). Acid-secreting.

oxyproline (*Chem.*). 4-Hydroxypyrrolidine-2-carboxylic acid, obtained by the cleavage of gelatine.

oxytax'is (*Biol.*). See **oxygenotaxis.**

oxytocic, —tŏ'sik (*Zool.*). Stimulating uterine contraction.

oxytro'pism (*Biol.*). See **oxygenotaxis.**

oyster-fitting (*Illum.*). A bulkhead fitting designed to emit light on both sides of the bulkhead or other partition upon which it is mounted.

ozae'na, oze'na (*Med.*). Chronic atrophic rhinitis. Chronic inflammation of the nasal mucous membrane, which atrophies, with the formation of crusts in the nose and a foul smell.—(*Vet.*) Catarrh of the frontal and maxillary sinuses of the horse.

Ozar'kian (*Geol.*). The name applied by Ulrich to the equivalents, in N. America (Ozark, Missouri), of the Tremadocian of Great Britain; deposited during a period of transition between the Cambrian and Ordovician periods.

o'zobrome (*Photog*). A process for the production of large carbon prints from bromide prints.

ozo'kerite (*Min.*). A mineral paraffin wax, of dark yellow, brown, or black colour, m p. 55°-110° C., sp. gr. 0 85-0·95, soluble in petrol, benzene, turpentine; it is found in Galicia and near the Caspian Sea. When bleached, it forms *ceresine* (q.v.).

ozone (*Chem.*). O_3. Produced by the action of ultra-violet rays and radium emanation on oxygen, and when air or oxygen is exposed to a silent discharge of electricity. Powerful oxidising agent. Used in the conditioning of air and in ventilation.

o'zonides (*Chem.*). Explosive organic compounds formed by the addition of an ozone molecule to a double bond. They thus contain the characteristic grouping:

ozoniser (*Chem.*). An apparatus in which oxygen is converted into ozone by being subjected to an electric brush discharge.

o'zotype (*Photog.*). A process in which a carbon tissue is pressed on to an exposed bichromated print before development.

p (*Build., Hyd.*). Abbrev. for *prime, pitch,* and *pressure intensity.*

***p*-** (*Chem.*). An abbrev. for: (1) *para-*, i.e. containing a benzene nucleus substituted in the 1.4 positions; (2) *primary*, i.e. containing the functional group attached to a $-CH_2$ group.

p_H, *p*H, P_H (*Chem.*). See ***p*H-value.**

P (*Biol.*). Symbol for *parental generation.*—P_1, the first parental generation.—P_2, the grandparental generation.

P (*Chem.*). The symbol for *phosphorus.*

[*P*] (*Chem.*). The symbol for *parachor.*

P. and C. (*Build.*). Abbrev. for *parge and core.*

P. and S. (*Carp.*). Abbrev. for *planking and strutting.*

P side. See **prompt side.**

P-trap (*San. Eng.*). A type of trap shaped like the letter P, and having a nearly horizontal outlet; used in sanitary pipes.

P-wire (*Auto. Teleph.*). The third, guard, or private wire of the three which constitute a channel through an exchange; it holds the circuit when established, and, by retaining an earth, guards the circuit at every point from an extraneous connexion.

π- (*Chem.*). A symbol for *peri-*, i.e. containing a condensed double aromatic nucleus substituted in the 1.8 positions.

π-network (*Elec. Comm.*). An electrical network consisting of a shunt arm, a series arm, and another shunt arm equal to the first shunt arm.

Π (*Chem.*). A symbol for *pressure*, especially *osmotic pressure.*

Pa (*Chem.*). The symbol for *protoactinium.*

P.A. (*Elec. Comm.*). Abbrev. for (1) *public-address*; (2) *power amplifier.*

P.A.B.X. (*Teleph.*). Abbrev. for *private automatic branch exchange.*

Pacchionian glands, pak-i-ō'—(*Zool.*). Villous processes of the arachnoid which penetrate into the veins and venous sinuses of the dura mater and beyond to become embedded in the skull; they serve to drain the cerebrospinal fluid into the venous system.

pace (*Build.*). An area of floor which is raised above the general level of the surrounding floor.

pachy-, pak'i- (Greek *pachys*, thick). Prefix used in the construction of compound terms; e.g. *pachycarpous.*

pachycar'pous (*Bot.*). Having a thick pericarp.

pachyder'matocele (*Med.*). A soft flabby tumour, composed of fibrous and nervous tissue, which hangs over the face or the ears.

pachyder'matous (*Zool.*). Thick-skinned.

pachyder'mia, pachyderma (*Med.*). Abnormal thickness of the skin.

pachydermia laryngis (*Med.*). A rare variety of chronic laryngitis in which there is hyperplasia and thickening of the mucous membrane of the vocal cords.

pachymeningi'tis (*Med.*). Inflammation of the dura mater (the outer membrane covering the brain and spinal cord).

pachyne'ma (*Cyt.*). A stage in reduction division; *pachytene* (q.v.).

pachyphyl'lous (*Bot.*). Having thick leaves.

pach'ytene (*Cyt.*). The third stage (*bouquet stage*) of meiotic prophase, intervening between zygotene and diplotene, in which condensation of chromosomes commences.

Pacific Ocean. An ocean lying between the west coast of the American continent and the east coast of Asia and Australia. It extends from the Arctic Circle to the Antarctic Circle. See **ocean depths, ocean temperatures.**

Pacific Province (*Geol.*). The name applied to those regions bordering the Pacific Ocean within which rocks of Cambrian age occur; characterised by a different faunal assemblage from that occurring in rocks of the same age in the Atlantic Province.

Pacin'ian corpuscles (*Zool.*). In Vertebrates, sensory nerve-endings in which the nerve ends in a club-shaped expansion surrounded by many concentric layers of connective tissue.

pack (*Textiles*). The weight-measure by which wool or wool tops are sold, viz. 240 lb.

pack amplifier (*Elec. Comm.*). See **power amplifier, power pack.**

pack-hardening (*Met.*). Case-carburising, using a solid carburising medium, followed by a hardening treatment.

package (*Textiles*). A general term for a cop, cheese, cone, etc. of yarn, indicating that the yarn is in a convenient form for transport or for further processing.

packer (*Mining*). A man employed in a coal-mine, to build pack walls along roadways, etc., to support the roof.

packing (*Eng.*). Material inserted in *stuffing boxes* (q.v.) to make engine and pump rods pressure-tight; it may consist either of compressible material such as hemp, or of metal rings. See **metallic packing.**

packing (*Masonry*). The operation of filling in a double or hollow wall.

packing fraction (*Phys.*). The divergence from a whole number of the mass number of an atom (obtained from its mass spectrum), divided by the mass number and expressed in parts per 10,000, *oxygen* = 16 being taken as standard. See **isotopes.**

paco (*Textiles*). A synonym for *alpaca.*

Pacputan' (*Textiles*). A wool of coarse quality, from the N.W. Frontier of India.

pad (*Elec. Comm.*). See **attenuator pad.**

pad saw (*Carp.*). A type of hand-saw having a very narrow tapering blade, used for curved work.

pad stone (*Build.*). A stone *template* (q.v.).

padder (*Elec. Comm.*). A small adjustable condenser for fine adjustment of capacity, as in a filter or a series of tuned circuits.

paddle hole (*Hyd. Eng.*). The opening in a lock-gate through which water flows from the high-level pond to the lock-chamber, or from the lock-chamber to the low-level pond.

paddle wheels (*Ship Constr.*). Wheels arranged at the sides or stern, dipping into the water and fitted with blades parallel with the shaft, which may be fixed or feathered. When revolved, the wheels propel the vessel.

paddle-wheel fan (*Eng.*). See **centrifugal fan.**

paddling (*Tanning*). A process in tanning light skins by which the skins and the liquor are kept in movement by a revolving paddle.

padlock (*Build.*). A form of movable lock for securing doors and gates from the outside only, for which purpose it is used in conjunction with a hasp and staple.

paediat'ric, pediat'ric (*Med.*). Pertaining to *paediatrics* (*pediatrics*), i.e. that branch of medical science which deals with the study of childhood and the diseases of children. (Greek *pais*, gen. *paidos*, a boy.)

paediatric'ian, pediatric'ian, paediat'rist (*Med.*).

A medical man who specialises in the study of childhood and the diseases of children.

paedog'amy (*Zool*). A variety of autogamy in which both nucleus and cytoplasm divide and reunite.

paedogen'esis (*Bot.*). Markedly precocious flowering.—(*Zool.*) Reproduction by larval or immature forms.

Page effect (*Elec. Eng.*). An audible click heard when a bar of iron is magnetised or demagnetised.

Paget's disease of bone (*Med.*). Osteitis deformans. A chronic disease characterised by progressive enlargement and softening of bones, especially of the skull and of the lower limbs.

Paget's disease of the nipple (*Med.*). A condition in which chronic eczema of the nipple is associated with the subsequent development of cancer of the breast.

pagi'na (*Bot*). A synonym for *lamina.*

pag'odite (*Min.*). This is like ordinary massive *pinite* (q.v.) in its amorphous compact texture and other physical characters, but contains more silica. The Chinese carve the soft stone into miniature pagodas and images. Also called AGALMATOLITE.

Pahoehoe lava, pa-hō'e-hō-e (*Geol.*). A Hawaiian term for viscous lava which consists of wrinkled and hummocky flows, free from large scoriaceous masses.

paint. A pigment in the form of a cake, powder, liquid, or paste, or ready mixed with oil or water.

Painted Desert Beds (*Geol.*). A series of orange-coloured clayey sandstones followed by irregularly bedded, brightly coloured variegated sandstones, belonging to the Triassic System in Arizona. This lower group is followed by the Upper Painted Desert Beds, probably of Jurassic age.

painter's putty (*Paint.*). The same mixture as *glazier's putty* (q.v.).

painter's torch (*Paint.*). A blowlamp with a vaporising burner, used to soften oil paint prior to scraping it off with a flexible knife, in cases where an old coat of paint is to be removed.

pair (*Build., etc.*). To match two similar objects on opposite hands.

pa'lae-, palaeo- (Greek *palaios*, ancient) A prefix used in the construction of compound terms; e.g. *palaeobotany* (q.v.).

Palaearc'tic region (*Zool*). One of the subrealms into which the Holarctic region is divided; it includes Europe and northern Asia, together with Africa north of the Sahara.

palaeobot'any. The study of fossil plants.

Pal'aeogene System (*Geol.*). The name given to the older part of the Tertiary System, which includes the rocks of Eocene and Oligocene age.

Palaeog'nathae (*Zool.*). A division of *Neornithes* possessing a dromaeognathous palate.

Palaeolith'ic Period (*Geol*). The older stone age, characterised by successive 'cultures' of stone implements, made by extinct types of men. Cf. *Neolithic Period.*

palaeonis'coid scale (*Zool.*). In Fish, a type of scale consisting of an outer layer of ganoin, a middle layer of cosmin, and an inner layer of isopedin.

palaeontol'ogy (*Geol.*). That branch of geological science which is essentially the study of animal life in past geological periods. It deals with the successive faunas which have peopled the earth since earliest times; with the structure, relationships, evolution, and environment of the individual creatures.

Palaeopterygii, —op'ter-ij'i-i (*Zool.*). A subclass of very primitive *Pisces* in which the skull consists of a persistent cartilaginous cranium with an investment of membrane bone; caudal fin diphycercal or heterocercal; integument usually with unarticulated ganoid scales with branched canals for blood-vessels; infraclavicles occur in the shoulder-girdle. Bichirs, Sturgeons, and Spoonbills.

Palaeozo'ic (*Geol.*). A major division of geological time comprising the Cambrian, Ordovician, Silurian, Devonian, Carboniferous, and Permian Periods. Some geologists place the Permian in the succeeding geological epoch, the Mesozoic.

palag'onite (*Geol.*). A term applied to altered basaltic glass. It occurs as infillings in rocks, and is a soft-brown or greenish-black cryptocrystalline substance. Named from Palagonia, Sicily.

pal'ama (*Zool.*). The webbing of the feet in Birds of aquatic habit.

palat-, palato- (Latin *palatum*, palate). A prefix used in the construction of compound terms; e g. *palatopharyngeal.*

palate (*Bot*). The prominent part of the lower lip of a ringent corolla which closes the opening of the corolla.

palate (*Zool.*). In Vertebrates, the roof of the mouth: in Insects the epipharynx.—*adjs.* **pal'atal, pal'atine.**

pal'atine (*Zool*) Pertaining to the palate: a paired membrane bone of the Vertebrate skull which forms part of the roof of the mouth.

palatople'gia (*Med.*). Paralysis of the palate.

pale-, paleo-. Prefix. See **palae-, palaeo-.**

pale, palea (*pl.* **paleae**), **palet** (*Bot*). (1) The inner bracteole, thin and membranous, which, with the flowering glume, encloses a grass flower.—(2) A general name for the glumes associated with the grass flower.—(3) The scales which form the ramentum in ferns.

pale (*Build.*). A *paling* (q.v.).

pale ale (*Brew.*). Ale of a light colour and with a distinct flavour of hops; usually bottled. See **beer.**

pale leaf gold (*Dec.*). An alloy of gold and silver beaten out into extremely thin sheets so that it may be applied to surfaces which it is required to gild.

palea'ceous (*Bot.*). Chaffy in texture.

paleo'la (*Bot*). See **lodicule.**

palet (*Bot.*). See **pale.**

pa'liform (*Bot*). Having the form of a stake.

paling (*Build.*). One of the upright boards in a fence.

palingen'esis (*Geol*). The rebirth of granitic or allied magma by pure melting, or by the action of intensely penetrating granitic liquid charged with magmatic vapours.

palingenesis (*Zool.*). The reproduction of truly ancestral characters during ontogeny.—*adj.* **palingenet'ic.**

palisade (*Build.*). Fencing formed of pointed wooden poles or iron railings.

palisade cell (*Bot.*). (1) One cell of the palisade layer of a leaf.—(2) One of the terminal cells of the hyphae forming the cortex in a lichen thallus.

palisade layer (*Bot.*). A layer of elongated cells, set at right-angles to the surface of a leaf, underlying the upper epidermis, containing numerous chloroplasts, and concerned with photosynthesis.

palisade stereide (*Bot.*). A rod-shaped, thick-walled cell, elongated at right-angles to the surface of the seed, and occurring in the testa.

palisade tissue (*Bot.*). One or more layers of palisade cells beneath the epidermis of a leaf.

Palisades sill (*Geol.*). A massive intrusive sheet of dolerite (diabase) intruded during the Triassic period of vulcanicity in the Hudson region.

palladinised asbestos (*Chem.*). Asbestos fibres saturated with a solution of a palladium compound, which is subsequently decomposed to give finely divided palladium dispersed throughout the asbestos.

palladious iodide (*Chem.*). PdI_2. Precipitated when potassium iodide is added to solutions of palladious chloride. As the other halogen salts of palladium are soluble, this reaction is used to distinguish iodine from the other halogens.

palla'dium (*Met*). Symbol, Pd. A metallic element in the eighth group of the periodic system. At. no. 46, at. wt. 106 7. The metal is white, m p. 1550°, b.p. 2500°, sp. gr. 11·4. Used as a catalyst in hydrogenation. Native palladium is mostly in grains and is frequently alloyed with platinum and iridium.

pallaesthe'sia (*Med.*). Sensibility of bone to vibratory stimuli.

pal'lasite (*Min.*). A group name for stony meteorites which contain fractured or rounded crystals of olivine in a network of nickel-iron.

palles'cent (*Bot.*). Becoming lighter in colour with age.

pallesthe'sia (*Med*) See **pallaesthesia.**

pallet (*Acous.*). The flap of wood, faced with felt or leather, which is raised to permit the flow of air to wind-chests, etc., in the mechanism of an organ.

pallet (*Build.*). A thin strip of wood built into the mortar joint of a wall, to provide a substance to which joinery may be nailed.

pallet (*Horol*). The surface or part upon which the teeth of the escape wheel act to give impulse to the pendulum or balance. The first pallet acted upon by a tooth of the escape wheel is known as the *entering pallet*, and the other pallet as the *exit pallet*.—CIRCULAR PALLETS, pallets which are equidistant from the pallet-staff axis — EQUIDISTANT LOCKING PALLETS, pallets in which the locking corners of the entering and exit pallets are equidistant from the pallet-staff axis.—EXPOSED PALLETS, usually refers to a clock movement in which the pallets are in front of the dial.

pallet brick (*Build.*). A purpose-made brick with a groove in one edge to receive a fixing strip.

pallet jewel (or **stone**) (*Horol.*). The jewel in the pallets upon which the escape-wheel teeth act.

pallet staff (*Horol.*). The pivoted axis upon which the pallets are mounted.

palli-, pallio- (Latin *pallium*, mantle). A prefix used in the construction of compound terms; e.g. *palliopedal.*

pal'lial groove (*Zool.*). The groove between the mantle and the body in Bivalves.

pallial line (*Zool.*). The line of attachment of the mantle to the shell in Bivalves.

pal'liative (*Med.*). Affording temporary relief from pain or discomfort: a medicinal remedy which does this.

pal'lium (*Zool.*). The mantle in *Brachiopoda* or *Mollusca*, a fold of integument which secretes the shell: in the Vertebrate brain, that part of the wall of the cerebral hemispheres excluding the corpus striatum and rhinencephalon.—*adjs.* **pallial, palliate.**

Palm Beach (*Textiles*). A light fabric of plain weave made from cotton warp and lustre worsted weft, or entirely of cotton; the warp yarn provides a colour effect.

palm oil (*Chem.*). A reddish-yellow fatty mass from the fruit of *Elaeis guineensis*, m.p. 27°-43° C., sp. gr. 0·90-0·95, saponification value 196-205, iodine value 51-57, acid value 24-200.

palm-kernel oil (*Chem.*). A yellowish oil from the nuts of *Elaeis guineensis*, m.p. 26°-30° C., sp. gr. 0·95, saponification value 247, iodine value 13·5, acid value 8·4.

pal'mar (*Zool.*). See **thenal.**

pal'mate (*Bot.*). Having several (often 5-7) lobes, segments, or leaflets spreading from the same point, like the fingers from the palm; applied particularly to leaves.

palmate (*Zool.*). Having webbed feet.

palmat'ifid (*Bot.*). Having the leaf blade cut about half-way in, to form a number of diverging lobes.

pal'matine (*Chem.*). An alkaloid of the *iso*quinoline group, obtained from calumba root, *Jateorhiza columba*. It has not been isolated in the free state. Salts, however, are known, e.g. the iodide, $C_{21}H_{23}O_4NI \cdot 2H_2O$, which crystallises in yellow needles, m.p. 240° C.

palmat'isect (*Bot.*). Having the leaf blade cut nearly to the base, so forming a number of diverging lobes.

palmel'la stage (*Zool.*). In some holophytic *Mastigophora*, a pseudo-colonial stage simulating the lower *Algae*, produced by division taking place when the flagella are withdrawn and the organism is in a resting phase.

palmit'ic acid (*Chem.*). $C_{15}H_{31} \cdot COOH$, a normal fatty acid, m p. 63° C., b.p. 269° C. It occurs as glycerides in vegetable oils and fats.

pal'mitins (*Chem*). The glycerine esters of palmitic acid.

palmu'la (*Zool.*). In *Insecta*, the terminal process or lobe of the tarsus between the claws.

palp (*Zool*). See **palpus.**

pal'pacle (*Zool.*). In *Siphonophora*, the tentacle of a dactylozooid.

palpe'bra (*Anat., Zool.*). An eyelid.

palpebral fissure (*Anat.*). The space between the upper and lower eyelids.

pal'pifer (*Zool*) In Insects, a lateral sclerite of the stipes which bears the maxillary palp. Also PALPIGER.

Palpigra'di (*Zool.*). An order of small *Embolobranchiata* having a prosoma with the last two segments free, and a segmented opisthosoma; the telson is a long jointed flagellum; the pedipalps are leg-like and tactile; there are no eyes; respiration is cutaneous or by three pairs of lung-books; occur under stones. Micro-Whip-Scorpions.

palpimac'ula (*Zool*) In Insects, a sensory spot on the labial palps.

palpitation (*Med.*). Awareness on the part of a person that his heart is beating against the chest wall, usually associated with increase in the frequency of the heart beat: loosely, increased frequency of the beat of the heart.

pal'pocil (*Zool.*). In *Coelenterata*, a sense hairlet attached to a sense cell.

palpon (*Zool.*). See **dactylozooid.**

palpus (*Zool.*). In *Crustacea* and *Insecta*, a jointed sensory appendage associated with the mouth-parts and representing the exopodite of the gnathobase to which it is attached: in *Polychaeta*, a sensory appendage of the prostomium.—*adj.* **palpal.**

palsy (*Med.*). See **paralysis.**

paludic'olous (*Ecol.*). Living in ponds, streams, and marshes.

pal'udism (*Med.*). See **malaria.**

pal'udose (*Bot.*). Inhabiting wet places.

pampero, pam-pā'rō (*Meteor.*). A line-squall (Argentina and Uruguay).

pam'pinody (*Bot.*). The change of parts of a leaf, or of leaves, into tendrils.

Pamun'key formation (*Geol.*). The local representative of the Eocene Series in the coastal region of Virginia and Maryland.

pan (*Bot.*). (1) A compact layer of soil particles, lying some distance beneath the surface, cemented together by organic material, or by iron and other compounds, and relatively impermeable to water.—(2) A depression in the surface of a salt marsh, in which salt water stands for lengthy periods.

pan (*Build.*). A panel of brickwork, or lath and plaster, in half-timbered work.

pan breeze (*Build.*). A mixture of coke breeze and clinker collected in the pan below a furnace consuming coke breeze. It is used as a coarse aggregate in the manufacture of concrete.

pancake coil (*Elec. Eng., Radio*). An inductance coil in which the windings are arranged spirally, in the form of a flat disc.

pancaking (*Aero.*): The landing of a heavier-than-air craft at a relatively steep angle, with low forward speed.

pan film stock (*Cinema.*). The normal negative stock used in cinematograph motion-picture cameras; it implies a panchromatic emulsion, this being requisite for speed and uniformity of registration of luminosities over the visible spectrum.

pan shot (*Cinema.*). See **panning shot.**

panache, pan-ash' (*Civ. Eng.*). A *pendentive* (q.v.).

pana'ris, bovine (*Vet*). An acute inflammation beneath the horny covering of the claw of cattle.

pancardi'tis (*Med.*). Concurrent inflammation of the three main structures of the heart—the pericardium, the myocardium, and the endocardium.

panchromatic emulsions (*Photog.*). Emulsions which are reasonably sensitive photographically to all visible colours, particularly towards the red-end of the spectrum.

pan'creas, —krē-as (*Zool.*). In Vertebrates, a large compound digestive gland the duct of which opens into the duodenum and which also contains islands of endocrine gland tissue.—*adj.* **pancreat'ic.**

pancreatec'tomy (*Surg.*). Surgical removal of the pancreas.

pancreat'ic enzymes (*Chem.*). The enzymes of the pancreatic juice are trypsin, steapsin, amylopsin, maltase, a lactase, pancreatic erepsin, rennin, and possibly invertase.

pancreati'tis (*Med.*). Inflammation of the pancreas.

pancreat'olith (*Med.*). A calculus in the pancreas.

pancreat'omy (*Surg.*). Incision of the pancreas.

pandem'ic (*Med.*). (Of an epidemic) occurring over a wide area such as a country or a continent: an epidemic so widespread.

pandiculation (*Med.*). The combined action of stretching the body and the limbs and yawning.

pan'durate, pandu'riform (*Bot.*). Shaped like the body of a fiddle.

pane (*Build.*). (1) A panel.—(2) A sheet of glass cut to size for use as a window light.

pane, pean, peen (*Tools*). The end of a hammer-head opposite to that carrying the hammering face; made to various shapes for particular operations such as riveting, etc. See **ball-pane hammer, cross-pane hammer, straight-pane hammer.**

panel (*Elec. Eng.*). A sheet of slate, marble, or other material upon which instruments, switches, relays, etc., are mounted. Also called SWITCHBOARD PANEL, CONTROL PANEL. See also **Board of Trade panel.**

panel (*Join.*). The thin flat wooden piece surrounded by the framing of a door, and having its surface sunken in relation to the general surface of the framing members.

panels (*Eng.*). In a truss or open-web girder, the framed units of which the truss is composed; the divisions separated by the vertical members.

panel heating (*Build.*). A system of heating a building in which heating units or coils of pipes are concealed in special panels, or built in wall or ceiling plaster. Also called CONCEALED HEATING.

panel mould (*Plast.*). A mould used for running panels.

panel mounting (*Elec. Comm.*). The normal method of accommodating a collection of non-portable apparatus. Each piece or unit is constructed separately on its standard panel, which is mounted with others on a standard vertical rack, the different panels being provided with terminal blocks so that the units can be wired together after assembly.

panel saw (*Join.*). A hand-saw used for panelling, having seven teeth to the inch.

panel-switch (*Elec. Eng.*). See **flush-switch.**

panelled framing (*Join.*). Doors and frames formed of stiles, rails, and muntins framed together with mortise-and-tenon joints, and having panels fitted into the spaces.

panelling (*Build., etc.*). A general name for panelled surfaces.

Paneth's cells (*Zool.*). Conspicuous cells, containing oxyphil granules, occurring at the base of the crypts of Lieberkuhn.

pangam'ic (*Zool.*). Of indiscriminate mating.

panhysterec'tomy (*Surg.*). Complete surgical removal of the uterus.

panic bolt (*Build.*). A special form of door-bolt which is released by pressure at the middle of the door; commonly used on exit-doors in public buildings.

panicle (*Bot.*). (1) Strictly, a branched raceme with each branch bearing a raceme of flowers.—(2) Loosely, any branched inflorescence of some degree of complexity.

panic'ulate (*Bot*). (1) Having the form of a panicle.—(2) Branched (said of an inflorescence).

panidiomor'phic (*Geol.*). A term applied to igneous rocks which have almost all their constituents of perfect crystalline shape.

Panizza's foramen, pa-nĕt'sa (*Zool.*). In *Loricata*, a small foramen allowing interchange of blood between the right and left systemic arches.

panmix'ia (*Zool.*). Cessation of natural selection, as in the case of an organ which through change of habits or environment of a species is no longer useful.

panne velvet (*Textiles*). A warp pile fabric with silk pile; used for dresses and furnishings.

panniculi'tis (*Med.*). Inflammation of the subcutaneous fat in any part of the body.

pannic'ulus carno'sus (*Zool.*). In some Mammals, an extensive system of dermal musculature covering the trunk and part of the limbs, by means of which the animal can shake itself.

pannier (*Civ. Eng.*) A kind of gabion.

panniform (*Bot.*). Looking like felt.

panning shot (*Cinema.*). A shot obtained in motion-picture production by swinging the camera sideways, so that the view appears to pass across the screen, like a panorama. It is accomplished either with a fixed focus, or with a pulled focus if the objects to be taken are at varying distances. See **vertical panning.**

pannose (*Bot.*). Felted.

pannus (*Med.*). The appearance of a curtain of blood-vessels round the margin of the cornea; e.g. in trachoma, or in phlyctenular keratitis.

panoistic, —ō-is'tik (*Zool.*). In *Insecta*, said of ovarioles in which nutritive cells are wanting.

panophthalmi'tis, panophthal'mia (*Med.*). Inflammation of all the structures of the eye.

panorama head (*Cinema.*). A swivel device fitted to the head of a camera tripod to permit the sideways swinging motion of the camera when taking panning shots.

panoramic camera (*Photog.*). A camera intended to take very wide angle views, generally by rotation about an axis and by exposing a roll of film through a vertical slit.

pan'otrope (*Acous.*). A purely electrical reproducer of disc gramophone records, using a pick-up, valve amplifier, and one or more loudspeakers. Cf. *acoustic gramophone.*

panphotomet'ric (*Bot.*). Said of a narrow leaf which stands nearly or quite erect.

pansinusi'tis (*Med.*). Inflammation of all the air-containing sinuses which communicate with the nasal cavity.

panspor'oblast (*Zool.*). In *Neosporidia*, a cell-complex producing both sporoblasts and spores.

pantas (*Vet.*). Diarrhoea of herbivorous animals.

panther (*Furs*). See **leopard.**

pan'tile (*Build.*). A roofing tile, usually 13¼ × 9½ in., which is shaped with a double curve or ogee.

pan'tograph (*Elec. Eng.*). A sliding type of current-collector for use on traction systems employing an overhead contact wire. The contact-strip of the collector is mounted on a hinged diamond-shaped structure, so that it can move vertically to follow variations in the contact wire height.

pantograph (*Instruments*). A mechanism by which a point is constrained to copy, to any required scale, the path traced by another point. It is based on the geometry of a parallelogram; used in engraving machines, etc.

pantograph (*Textiles*). The part of an embroidery frame by means of which is determined the position of the ground net in relation to the needles.

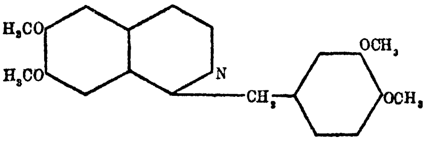
pantoph'agous (*Zool.*). Omnivorous.

Pantop'oda (*Zool.*). See **Pycnogonida.**

pap (*Build.*). An outlet nozzle fitted to an eaves gutter.

pa'pain (*Chem.*). A protein-digesting enzyme present in the juice from the fruits and leaves of the papaw tree (*Carica Papaya*); it can soften meat that has been wrapped for a time in the leaves.

papav'erine (*Chem.*). An alkaloid occurring in opium, colourless prisms, m.p. 147° C., optically inactive. It is 3,4-dimethoxybenzyl-4',5'-dimethoxy-*iso*quinoline and has the formula:



paper. Consists of continuous webs of suitable vegetable fibres, freed from non-cellulose constituents and deposited from an aqueous suspension. Wood-pulp, esparto, and rags are the chief raw materials, though other substances are used. During the process of manufacture, the fibres are reduced to the requisite length, and their physical properties are modified by mechanical or chemical treatment. See **cellulose.**—(*Diel.*) Cable papers have a breaking strength of 7000 lb. per square inch longitudinally and 3500 transversely. Elongation before breaking is 2 and 4% respectively.

paper cable (*Elec. Comm.*). See **dry-core cable.**

paper condenser (*Elec. Comm.*). A condenser which has thin paper as the dielectric separating aluminium foil electrodes, these being wound together and waxed. See **Mansbridge condenser.**

paper-hanging (*Build., Dec.*). The operation of pasting wall-paper to interior wall surfaces as a decorative covering.

paper negatives (*Photog.*). Negatives made with emulsions on paper supports, instead of the more usual film or glass. They have the advantages of lightness, cheapness, ease of retouching, and possibility of large dimensions.

paper surface record (*Acous.*). In this type of gramophone record a coarse core material is used for the interior of the disc, the fine surface material being carried on a disc of thin paper until united, one on each side of the core, in the press in the final stage of manufacture.

papier-mâché, pă'pyer mash'ā *or* pap'yā mah'shā (*Paper*). A material consisting either of paper-pulp mixed with glue or some other hardening substance or of sheets of paper pasted together. It can be made to resemble hardened wood or plaster. See **flong.**

papiliona'ceous (*Bot.*). Having some likeness in form to a butterfly; said of flowers like those of the pea.

papil'la (*Zool.*). A small conical projection of soft tissue, especially on the skin or lining of the alimentary canal: the conical mass of soft tissue or pulp projecting into the base of a developing feather or tooth.—*adjs.* **papillary, papillate.**

papillae folia'tae (*Zool.*). In some Mammals, two small oval areas at the back of the tongue, marked by a series of alternating transverse ridges and richly provided with taste-buds.

papilli'tis (*Med.*). Optic neuritis. Inflammation of the disc or head of the optic nerve within the globe of the eye.

papilloedema, papilledema, —e-dē'ma (*Med.*). Choked disc. Swelling and congestion of the disc or head of the optic nerve within the globe of the eye, as a result of increase of pressure within the skull.

papillo'ma (*Med.*) A tumour (usually innocent) resulting from the new growth of the cells of the skin or of the mucous membrane.

pap'illose (*Bot.*) Covered with papillae.

papoon (*Textiles*). A cotton fabric of plain weave, generally with a self-coloured warp shot with a different colour of weft Sometimes has a 2-and-2 stripe of different warp colours. Shipped to Eastern markets for native dresses.

pappose, pappous (*Bot.*). Having a pappus.

pappus (*Bot*) A ring of hairs or of scales, or a flat radiating group of hairs at the upper end of a stalk, attached to the top of a fruit and serving in wind dispersal. Dandelion 'clocks' are a familiar example

pap'ulae (*Zool.*). The dermal gills of *Echinodermata*, small finger-shaped, thin-walled respiratory projections of the body-wall.

papule (*Med.*). A small, circumscribed, solid elevation above the skin; as in chicken-pox.—*adj.* **papular.**

papulopus'tular (*Med.*). Of papules and pustules.

papyra'ceous (*Bot*). Papery in texture.

papy'rotypes (*Photog.*). Photographic processes in which paper supports are used in transfer work.

para- (*Chem.*). (1) Derived from an acid anhydride by combination with an unusually large number of water molecules.—(2) A polymer of . . . —(3) A compound related to . . . —. See also ***p-***.

para- (*Chem.*). (1) Containing a benzene nucleus substituted in the 1.4 positions.—(2) Consisting of diatomic molecules with anti-parallel nuclear spins and an even rotational quantum number.

para- (Greek *para*, beside). A prefix used in the construction of compound terms; e.g. *para-mastoid*, beside the mastoid.

para reds (*Paint.*). Pigments obtained from paranitraniline.

paraba'sal apparatus (*Zool.*). A peculiar striated body surrounding the ring of blepharoplasts in certain *Mastigophora* with a tuft of flagella.

parabasal body (*Zool.*). In certain parasitic *Mastigophora*, a body of unknown function associated with the base of the flagella.

parabio'sis (*Embryol.*). The union of similar embryos between which a functional connexion exists; e.g. Siamese Twins.—*adj.* **parabiot'ic.**

parablast'ic (*Zool.*). Said of (1) certain large nuclei occurring in the proximal nutritive syncytial layer of tissue which lies on the yolk in the early stages of development of certain Fish; (2) certain similar nuclei of yolk-laden cells in the development of some Mammals.

parab'ola (*Maths.*). (1) The section of a right circular cone by a plane parallel to a generator of the cone. —(2) The locus of a point equi-distant from a fixed point (*focus*) and a fixed line (*directrix*). The eccentricity is unity and the curve is of the form $y^2 = 4px$.

parabolas, positive ray (*Phys.*). Parabolic traces on the photographic plate obtained by Sir J. J. Thomson's original method of positive-ray analysis, which consisted in subjecting a narrow beam of the rays to the action of mutually perpendicular magnetic and electrostatic fields. See **positive rays, mass spectrograph.**

parabol'ic (*Bot.*). Having a broad base and gradually narrowing by curved sides to a blunt apex.

parabolic arch (*Civ. Eng.*). An arch having the outline of a parabola.

parabolic mirror, parabolic reflector (*Light*). A mirror or reflector whose surface is a paraboloid of revolution. Such a mirror gives a point focus, free from aberration, for incident rays parallel to its axis. For this reason the main mirror of a reflecting telescope is given a paraboloidal form. Such mirrors are also used in searchlights and automobile headlamps.

parabolic (or **German**) **nozzle** (*Eng.*). A nozzle of parabolic section with a high coefficient of discharge, placed in a pipe to measure the flow of a gas. The pressure drop is measured by a manometer.

parab'oloid of revolution (*Maths.*). A solid figure formed by the revolution of a parabola about its axis.

parabron'chi (*Zool.*). In Birds, the branches into which the secondary bronchi divide; the air-pipes.

paraca'sein (*Chem.*). A term for the coagulated casein or insoluble curd of milk.

paracente'sis (*Surg.*). Tapping The puncture of body cavities with a hollow needle, for the removal of inflammatory fluids.

par'achor (*Chem.*). A quantity which may be regarded as the molecular volume of a substance when its surface tension is unity; in most cases it is practically independent of temperature. Its value is given by the expression $[P] = \frac{M\gamma^{\frac{1}{4}}}{\rho_L - \rho_V}$, where M is the molecular weight, γ the surface tension, ρ_L and ρ_V are the densities of the liquid and vapour respectively.

parachor'dals (*Zool.*). In the developing cranium, a pair of flat curved plates of cartilage lying on either side of the notochord.

parachute (*Aero.*). A collapsible umbrella-like flotation device, whose function is to retard the rate of descent of a falling body.—FREE PARACHUTE, a parachute to be released or opened by the falling person.—AUTOMATIC PARACHUTE, a parachute which opens automatically.—AUXILIARY PARACHUTE, a small parachute which aids the release of the main one.

parachute disseminule (*Bot.*). A fruit or seed provided with a pappus, or a tuft of hairs, or any other device which facilitates dispersal by the wind.

parachute flare (*Aero.*). A pyrotechnic flare, attached to a parachute released from an aircraft in order to illuminate a region. Used for emergency landing, military observation, bombing, etc.

parac'me (*Zool.*). The period in the history of an individual or a race when vigour is decreasing: the senescent period in the life-history of an individual: the phylogerontic period in the history of a race. Cf. *epacme*.

paracoele, —sēl (*Zool.*). The cavity of one of the cerebral hemispheres of the Vertebrate brain.

par'acone (*Zool.*). In Mammals, the antero-external cusp of an upper molar tooth.

paracon'id (*Zool.*). In Mammals, the antero-external cusp of a lower molar tooth.

paracorol'la (*Bot.*). See **corona.**

Paractinopoda (*Zool.*). See **Synaptida.**

paracym'bium (*Zool.*). The smaller of two parts into which the pedipalpal tarsus of some male Spiders is divided.

parades'mose (*Bot.*, *Zool.*). A very slender thread of stainable material which connects for some time the two halves of a dividing blepharoplast.

paradoxical bone (*Zool.*). See **prevomer.**

paraeiopod, par-ī'o-pod (*Zool.*). In *Crustacea*, a walking leg.

paraesthe'sia (*Med.*). An abnormal sensation, such as tingling, tickling, and formication.

parafeed coupling (*Elec. Comm.*). The combination of resistance-capacity with intervalve-transformer coupling so that the anode-feed through a resistance is diverted from the transformer, which can then be designed with reduced dimensions and cost.

paraffins (*Chem.*). A term for the whole series of saturated aliphatic hydrocarbons of the general formula C_nH_{2n+2}. The term PARAFFIN HYDROCARBONS is also used. They are very indifferent to oxidising agents, and not reactive, hence the name *paraffin* (Latin *parum affinis*, little allied).

paraffin, liquid. A liquid form of *petrolatum* (q v.), odourless and tasteless, used as a mild laxative.

paraffin oil (*Fuels, etc.*). See **kerosene.**

paraffin wax (*Chem.*). Higher homologues of paraffins, wax-like substances obtained as a residue from the distillation of petroleum; m p 45°-65° C., sp. gr. 0 9, resistivity 10^{16} ohms per cub. cm, dielectric constant 2-2·3.

parafib'ula (*Zool.*). A bony element external to the proximal end of the fibula in some *Lacertilia* and young *Metatheria*.

paraformal'dehyde (*Chem.*). $(H\,CHO)_2$, a condensation product of formaldehyde obtained by the evaporation of an aqueous solution of formaldehyde. It is a white crystalline mass, soluble in water.

par'afrons (*Zool.*). In certain Insects, the area between the frontal suture and the eyes.

paragan'glia (*Zool.*). In higher Vertebrates, small glandular bodies, occurring in the posterior part of the abdomen, which show a chromaphil reaction and are believed to secrete adrenaline.

paraganglio'ma (*Med.*). Chromaffinoma; phaeochromacytoma. A tumour composed of chromaffin cells, especially those of the adrenal medulla; usually associated with high blood-pressure.

paragas'ter (*Zool.*). The internal cavity of a Sponge, lined by choanocytes.

paragastric canals (*Zool.*). In *Porifera*, the canal-system: in *Ctenophora*, the paired blind canals running from the infundibulum to the oral cone.

paragas'trula (*Zool.*). A stage in the development of *Porifera* in which the flagellate cells of the amphiblastula are invaginated.

paraglos'sa (*Zool.*). In Insects, the outer pair of lobes arising from the margin of the prementum.

paragna'tha (*Zool.*). In some *Crustacea*, a pair of lobes formed by subdivision of the metastoma.

paragna'thous (*Zool.*). Having jaws of equal length; as Birds, which have upper and lower beak of equal length.

paragneiss, par'-a-nīs (*Geol.*). A term given to gneissose rocks which have been derived from detrital sedimentary rocks. Cf. *orthogneiss*.

paragonimi'asis (*Med.*). Invasion of the lungs by the lung fluke *Paragonimus westermanii*; the condition is endemic in the Far East, and infection results from eating fresh-water crustaceans.

parag'onite (*Min.*). A silicate of sodium, aluminium, and hydrogen. It is a sodium mica, has a yellowish or greenish colour, and is usually associated with metamorphic rocks.

paragraph'ia (*Med.*). Faulty spelling, misplacement of letters and words, and use of wrong words in writing, as a result of a lesion in the brain.

paragu'la (*Zool.*). A region of the Insect head, beside the gula.

paragutta (*Cables*). A substance containing deproteinised rubber and wax, used for insulating submarine telephone cables.

paragy'nous (*Bot.*). Said of an antheridium applied to the side of an oögonium.

parahor'mone (*Zool.*). A substance which, like a hormone, has a controlling effect on distant parts of the body, but which is an ordinary by-product of metabolic activity, not produced for a specific purpose.

parahypoph'ysis (*Zool.*). In Vertebrates, a vestigial structure in the region of the pituitary body.

parakerato'sis (*Med.*). Faulty formation of the horny layer of the skin, with scaling of the skin

para-lavas (*Geol.*). The name applied by L. L Fermor to certain argillaceous sedimentary rocks which, following fusion at the surface of the ground, developed the characters of lava flows.

paral'dehyde (*Chem.*). $(CH_3{\cdot}CHO)_3$, a condensation product of acetaldehyde, obtained by the action of concentrated sulphuric acid upon acetaldehyde It is a colourless liquid, b.p. 124° C., and can be converted again into acetaldehyde by distillation with dilute sulphuric acid. A common hypnotic

paralex'ia (*Med*). A defect in the power of seeing and interpreting written language, with meaningless transposition of words and syllables, due to a lesion in the brain.

parallactic angle (*Astron.*). The name given to that angle in a spherical triangle on the celestial sphere which is made at the heavenly body itself by the arcs of great circles drawn to it from the celestial pole and the zenith respectively.

parallactic ellipse (*Astron.*). The small ellipse on the celestial sphere apparently described by every star in a year about its mean position owing to the earth's orbital motion; the semi-major axis of the ellipse is the star's *parallax*, namely the angle subtended by the earth's mean distance from the sun at the star's distance.

parallactic inequality (*Astron.*). A periodic term in the mathematical expression of the moon's motion, so called because it is due to the finite distance of the sun and therefore depends on the solar parallax; it amounts to about 2 ft. 7 in. at a maximum, and has for period the synodic month.

par'allax. Generally, the apparent change in the position of an object seen against a more distant background when the viewpoint is changed. Absence of parallax is often used to adjust two objects, or two images, at equal distances from the observer.—(*Astron.*) The apparent displacement of a heavenly body on the celestial sphere due to a change of position of the observer. According to the nature of such a change, three parallaxes are distinguished, viz. (1) *diurnal* or *geocentric*; (2) *annual* or *heliocentric*; (3) *secular*. (See these articles.)—(*Surv.*) A condition set up when the image formed by the object-glass of a surveying telescope is not in the same plane as the cross-hairs, so that on moving his eye from side to side or up and down the observer can see relative movement between them.

parallax stereogram (*Photog.*). The use of a line screen in front of a positive transparency of alternate strips of two views of an object, made by exposing an emulsion in a similar arrangement with a large lens and two apertures representing the two eyes.

parallel (*Geog.*, *Surv.*). A *parallel of latitude* is an imaginary line around the earth's surface connecting points of equal terrestrial latitude.

parallel (*Elec. Eng.*, *etc.*). Two circuits are said to be *in parallel* when they are connected so that any current flowing divides between the two. Two machines, transformers, or batteries are said to be *in parallel* when the terminals of the same polarity are connected together.

parallel body (*Ship Constr.*). That portion of a ship's form wherein the fullest transverse shape is maintained constant.

parallel descent (*Bot.*). The manner of derivation of structures which are similar but occur on plants not descended from an obvious common ancestor.

parallel feed (*Radio*). A method of connecting the anode of a thermionic valve to the high-tension supply through a high resistance or inductance, whilst the a.c. circuits are connected through a condenser. The d.c. and a c. components of the anode current are thereby separated. Also called SHUNT FEED.

parallel feeder (*Elec. Eng.*). A feeder connected in parallel with an existing feeder in order to carry additional load.

parallel-feeder protection (*Elec. Eng.*). A type of balanced protective equipment relying for its action on the fact that the current in two parallel feeders will normally be equal, this balance being upset if a fault occurs on one of the feeders.

parallel folding (*Bind.*). The method of folding a sheet so that all folds are parallel.

parallel gutter (*Build*). A rectangular roof-gutter, e.g. one bounded at the sides by a parapet wall and a pole plate.

parallel motion (*Eng.*). A system of links by which the reciprocating motion of one point is copied to an enlarged scale by another—a modified pantograph mechanism. Used on piston-type engine indicators, etc.

parallel ruler (*Instruments*). A drawing instrument consisting of two straightedges so linked together by connecting pieces that their edges are always parallel, although the distance between them may be varied.

parallel slot (*Elec. Eng.*). The most usual shape of slot for the armature windings of electric machines, the slot having parallel sides. Cf. *taper slots*.

parallel-veined (*Bot.*). Having the main veins running side by side for some distance in the leaf.

par'allelism (*Bot.*). Evolution along similar lines in unrelated groups of plants.

parallelodro'mous (*Bot.*). Having parallel veins.

parallelogram of forces (*Mech.*). A rule for the composition of two forces which states that if two forces, acting at a point, are represented in magnitude and direction by two adjacent sides of a parallelogram, the resultant of the two forces is similarly represented by the diagonal of the parallelogram passing through the common point.

parallelotrop'ic (*Bot.*). Said of a plant member set along the direction of stimulus.

paraly'ser (*Bot.*). A substance which destroys an enzyme or prevents it from acting.—(*Chem.*) A *catalytic poison* (q.v.).

paral'ysis (*Med.*). 'Palsy.' The loss in any part of the body of the power of movement, or of the capacity to respond to sensory stimuli.

paralysis agitans (*Med.*). Parkinson's disease; 'shaking palsy.' A progressive disease due to degeneration of certain nerve cells at the base of the brain; characterised by rigidity of muscles (the body being fixed in a posture of slight flexion), mask-like expression of the face, and a coarse tremor, especially of the hands. See retropulsion.

paralysis, fowl (*Vet.*). See neurolymphomatosis.

paralysis, guinea-pig (*Vet.*). A filterable-virus infection of cavies characterised by a diffuse meningo-myelo-encephalitis.

paralysis, infantile (*Med.*). See under **poliomyelitis.**

paralytic ileus (*Med.*). See **ileus (paralytic).**

paramagnetic (*Magn.*). A substance is said to be *paramagnetic* when it has a permeability greater than that of a vacuum, i.e. greater than unity.

paramas'tigote (*Zool.*). Having one long principal flagellum and a short accessory flagellum.

paramatta (*Textiles*). The name applied to twilled fabrics with a Botany worsted or cotton warp and a worsted weft; made into waterproof garments.

par'amere (*Zool.*). Half of a bilaterally symmetrical structure: one of the inner pair of gonapophyses in a male Insect.

param'eter (*Maths.*). Generally, a line or figure that serves to determine a point, line, figure, or quantity in a class of such things.—(*Elec. Comm.*) A derived constant of a transmission circuit or network, which is more convenient for expressing performance or for use in calculations.—(*Crystal.*) The *parameters* of a plane consist of a series of numbers which express the relative intercepts of that plane upon the crystallographic axes. Given in terms of the established unit lengths of those axes.

parametric equations (*Maths.*). Of a curve or surface: equations in which co-ordinates of points on the curve or surface are given in terms of one or more variables (*parameters*) of the curve or surface.

parametri'tis (*Med.*). Pelvic cellulitis. Inflammation of the pelvic cellular connective tissue in the region of the uterus, e.g. in the puerperium.

parame'trium (*Med.*). The subperitoneal connective tissue surrounding the uterus, especially that in the region of the cervix.

paramito'sis (*Zool.*). A form of mitosis occurring in *Protozoa*, in which the longitudinal halves of the chromosomes remain attached at one end after division so that they appear to divide transversely.

par'amorph (*Min.*). The name given to a mineral species which can change its molecular constitution without any change of chemical substance. See **pseudomorph.**

Paramount (*Build.*). A building-board made of a fireproof gypsum.

paramphistomi'asis (*Med.*). Invasion of the human intestine with trematode parasites of the family *Paramphistomidae*.

paramudras (*Geol.*). Flint nodules of exceptionally large size and doubtful significance occurring in the Chalk exposed on the east coast of England.

paramy'osin'ogen (*Chem.*). One of the chief proteins contained in living muscle.

parane'ma (*Bot.*). A sterile hair.—*pl.* **parane'mata.**

paraneph'ric (*Zool.*). Situated beside the kidney.

paraneph'ros (*Zool.*). See **suprarenal body.**

paranoi'a (*Psychiatry*). A psychosis characterised by the insidious development of a permanent and unshakeable delusional system, resulting from internal causes, and accompanied by the preservation of clear and orderly thought, action, and will. Hallucination is not usually present. Attributed by Freudians to unconscious homosexuality.—*adj.* and *n.* **paranoi'ac.**

par'anoid schizophrenia (*Psychiatry*). A type of schizophrenia showing certain symptoms of paranoia, including delusions of persecution and jealousy, but with less systematisation of thought and with much disintegration of the personality.

paranoid state (*Psychiatry*). A state in which a person shows certain characteristics of paranoia, but in a lesser degree and without disintegration of the personality.

parano'tum (*Zool.*). In Insects, a lateral expansion of a thoracic tergum.—*adj.* **parano'tal.**

paranu'cleus (*Zool.*). A term which has been loosely used to indicate any structure lying beside the nucleus; as a micronucleus of *Ciliophora*, or a mass of mitochondria.

para-o'phoron (*Zool.*) A rudimentary structure in the ovary of Vertebrates homologous with the paradidymis of the male.

parapet (*Build., Civ. Eng.*). A low wall built along the edge of a bridge, quay, or roof.

parapet gutter (*Build.*). A gutter constructed behind a parapet wall.

paraphase amplifier (*Elec. Comm.*). A push-pull amplifier incorporating one or more stages of paraphase coupling.

paraphase coupling (*Elec. Comm.*). An amplifier with a push-pull stage, or series of stages, in which the reversed phase is obtained by taking a fraction of the output voltage of the first valve of the amplifier and applying it to a similar balancing first valve, which operates succeeding stages as in normal push-pull, the number of transformers being minimised thereby.

parapha'sia (*Med.*). A defect of speech in which words are misplaced and wrong words substituted for right ones; due to a lesion in the brain.

paraphimo'sis (*Med.*). Persistent retraction of the inner lining of the prepuce behind the glans penis in a case of phimosis.

paraphototrop'ic (*Bot.*). See **diaphototropic.**

paraphrax'ia (*Med.*) The performance by a person of an act different from the one required of him; due to a lesion in the brain.

paraphre'nia (*Psychiatry*). A type of schizophrenia characterised by the extremely insidious development of ideas of persecution and, later, of exultation, without disintegration of personality. Gradually ideas of grandeur and of the patient's own importance may replace ideas of persecution, and auditory and other hallucinations may develop.

par'aphyll (*Bot.*) A very small leaf-like, or much branched, structure found among the leaves of mosses.

paraph'ysis, *or* **—fi'zis** (*Bot.*). A sterile hair, which may be simple or branched and may consist of one or more cells, occurring among reproductive structures in many lower plants.

paraphysis (*Zool.*). A thin-walled sac developed as an outgrowth from the non-nervous roof of the telencephalon.—*pl.* **paraphyses.**—*adj.* **paraphysate.**

paraphy'soid (*Bot.*). A plate of cells occurring between the asci in some *Ascomycetes*.

parapi'neal body (*Zool.*). In *Cyclostomata*, some Fish, and most Lizards, an epiphysial outgrowth of the roof of the thalamencephalon just anterior to the pineal body; in some forms developed as a third eye with a lens.

par'aplasm (*Cyt.*). The inactive, vegetative portion of the cytoplasm.

paraplec'tenchy'ma (*Bot.*). Pseudoparenchyma.

paraple'gia (*Med.*). Paralysis of the lower part of the body and of the legs.

parapo'dium (*Zool.*). In *Mollusca*, the epipodia: in *Polychaeta*, a paired fleshy projection of the body-wall of each somite used in locomotion.—*adj.* **parapo'dial.**

parapoph'yses (*Zool.*). A pair of ventrolateral processes of a vertebra arising from the sides of the centrum.

parap'sid (*Zool.*). (Of a skull) possessing a single postorbital fossa.

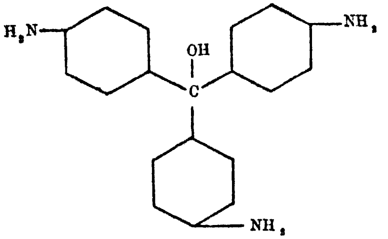
parap'teron (*Zool.*). See **tegula.**

parap'terum (*Zool.*). In Birds, a group of small feathers attached to the humerus.

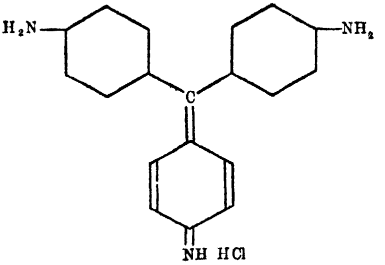
paraquad'rate (*Zool.*). See **squamosal.**

***para*-quinones** (*Chem.*). Quinones in which the two quinone oxygen atoms are in the *para* position.

pararosan'iline (*Chem.*) A triamino-triphenylcarbinol of the formula:



It is obtained by the oxidation of a mixture of *p*-toluidine (1 mol.) and aniline (2 mols.). As oxidising agents, arsenic acid or nitrobenzene are used. Acids effect the elimination of water and the formation of a dyestuff with a quinonoid structure, e.g. the hydrochloride of pararosaniline or parafuchsine has the formula:



pararosol'ic acid (*Chem.*). See **aurine.**

paraseie'nae (*Meteor.*). See **mock moons.**

parasite (*Bot., Zool.*). An organism which lives in or on another organism and derives subsistence from it without rendering it any service in return. See **parasitism.**

parasit'ic bronchitis (*Vet.*). See **husk.**

parasitic castration (*Bot.*). The condition when a plant is unable to fruit owing to damage to the reproductive organs by a parasite.—(*Zool.*) Castration brought about by the presence of a parasite, as in the case of a Crab parasitised by *Sacculina.*

parasitic drag (*Aero.*). The drag of all aircraft parts other than the induced and profile drag associated with the production of lift.

parasitic loss (*Elec. Eng.*). A term sometimes used to denote loss in electric machines due to eddy-currents occurring in any part of the machine, i.e. in the conductors themselves or in parts of the metal framework. The term does not include losses due to the main flux in the magnetic circuit, which come under the heading of *iron loss* (q.v.).

parasitic male (*Zool.*). A dwarf male in which all but the sexual organs are reduced, and which is entirely dependent on the female for nourishment; as in some deep-sea Angler-fish (Ceratioids).

parasitic oscillation (*Radio, etc.*). Unwanted oscillation of an amplifier, or oscillation of an oscillator at some frequency other than that of the main resonant circuits. It is generally of high frequency, and may occur during a portion of each cycle of the main oscillation.

par'asitism (*Biol.*). A close, internal, or external partnership between two organisms which is detrimental to one partner (the *host*) and beneficial to the other partner (the *parasite*); the latter obtains its nourishment at the expense of the nutritive fluids of the host.

par'asitoid' (*Zool.*). An animal which is parasitic in one stage of the life-history and subsequently free-living in the adult stage, as the parasitic *Hymenoptera.*

parasol (*Aero.*). An aeroplane, usually a monoplane, in which the main plane is carried as a separate structure above the body or fuselage.

parasphen'oid (*Zool.*). In some of the lower Vertebrates, a membrane bone of the skull, which forms part of the cranial floor.

paras'tas (*Build.*). A *pilaster* (q.v.).

paraster'num (*Zool.*). The gastralia of certain Reptiles.

parastichy, —stik'i (*Bot.*). A spiral line passing once round a stem through the bases of successive leaves.—*pl.* **parastich'ies.**

parasti'pes (*Zool.*). See **subgalea.**

parasymbio'sis (*Biol.*). The condition when two organisms grow together but neither assist one another nor harm one another.

parasympathet'ic nervous system (*Zool.*). In Vertebrates, a system of motor nerve-fibres supplying the smooth muscles and glands of the body and originating in the head from the brain and in the sacral region from the spinal cord; *cf. sympathetic nervous system.*—*adj.* **parasympathetic.**

parasynap'sis, parasynde'sis (*Cyt.*). Side-by-side union of the elements of a pair of chromosomes; cf. *telosynapsis.*—*adjs.* **parasynap'tic, parasyndet'ic.** See also **synapsis.**

parathe'cium (*Bot.*). A layer of hyphae around the apothecium of a lichen.

parathy'roid (*Zool.*). A ductless gland of Vertebrates arising from the gill-pouches, the function of which is believed to be associated with calcium metabolism and the control of the discharge of nervous energy.

parathyroidec'tomy (*Surg.*). Surgical removal of one or more of the parathyroid glands.—*v.* **parathyroidectomise.**

parat'omy (*Zool.*). In *Annelida*, a form of reproduction by fission in which regeneration takes place before separation.

paraton'ic movements (*Bot.*) Plant movements in relation to an external stimulus.

paratra'cheal (*Bot.*). Said of xylem parenchyma occurring at the edge of the annual ring and round the vessels, but nowhere else.

paratuberculo'sis (*Vet.*). See **Johne's disease.**

paraty'phoid (*Med.*). An infectious disease due to infection by *Bacterium paratyphosum A, B,* or *C*; similar to, but more mild than, typhoid fever; characterised by enteritis, enlargement of the spleen, raised temperature, and a rash of rose-coloured spots.

paratyphoid, avian (*Vet.*). A contagious disease of birds due to infection by *B. aertrycke.*

paratyphoid, swine (*Vet.*). A contagious disease of swine due to infection by bacteria of the *Salmonella* group, particularly *B. suipestifer.*

paravane (*Armaments*). A kite-shaped device used in mine-sweeping. By means of it a sharp wire is kept at an angle from a mine-sweeper, so that mines may be cut from their moorings and float up to view, to be sunk by puncture or detonation.

parax'ial (*Photog.*). The path of a ray which is parallel to the axis of an optical system.

Parazo'a (*Zool.*). A subkingdom of the animal kingdom comprising multicellular animals having two tissue layers only (of which one is composed of choanocytes), and lacking a nervous system and enteric cavity, and showing little co-ordination between the different cells composing the body. Cf. *Protozoa, Metazoa.*

Par. C. (*Build.*). Abbrev. for *Parian cement.*

parcel plating (*Elec. Eng.*). The electrodeposition of a metal over a selected area of an article, the remainder being covered with a non-conductor in order to prevent deposition.

parchmentising (*Paper*). The process of passing paper through sulphuric acid, which causes the fibres to swell and the paper to become transparent. Paper so prepared is used principally for food-wrapping.

parenceph'alon (*Zool.*). A cerebral hemisphere.

paren'chyma, *or* —en-ki'ma (*Bot.*). A tissue composed of blunt-ended cells, having thin walls consisting of cellulose, and often forming a general packing among conducting and mechanical tissues. —(*Zool.*) Soft spongy tissue of indeterminate form, consisting usually of cells separated by spaces filled with fluid or by a gelatinous matrix, and generally of mesodermal origin.—*adj.* **parenchymatous.**

parenchym'ula (*Zool.*). In *Porifera*, a flagellate larval form the internal cavity of which is occluded by a form of parenchyma.

parent metal (*Elec. Eng.*). A term used in welding to denote the metal of the parts which are to be welded.

paren'teral (*Med.*). Said of the administration of therapeutic agents by any way other than through the alimentary tract.

paren'theses (*Typog.*). A mark of punctuation ( ) used to enclose a definition, explanation, reference, etc., or interpolations and remarks made by the writer of the text himself. Cf. *bracket.*

pare'sis (*Med.*). (1) Slight or incomplete paralysis. —(2) General paresis; the same as *general paralysis of the insane* (q v.).

paresthesia (*Med.*). See **paraesthesia.**

par'gasite (*Min.*). A monoclinic amphibole closely similar to hornblende but containing a peculiar molecule with fluorine, aluminium, and sodium as its chief constituents. Named from Pargas, Finland.

parge-work (*Build.*). An ancient form of external plastering with a mixture similar to that used in *pargetting* (q.v.) chimneys. Also called PARGING.

par'getting (*Build.*). The operation of rendering the interior of a flue with a lime and hair mortar liberally mixed with cow-dung.

parging (*Build.*). See **parge-work.**

parhe'lia (*Meteor.*). *Sing.* **parhelion.** See **mock suns.**

Pa'rian (*Pot.*). A feldspathic, yellowish, semi-transparent body, resembling Carrara marble; usually cast.

Parian cement (*Plast.*). A hard plaster made from an intimate mixture of gypsum and borax which has been calcined and then ground to powder.

parich'nos (*Bot.*). In certain lower vascular plants, a pair of scars, one on each side of the leaf base; each scar marks the end of a strand of parenchyma passing into the stem.

pariet-, parieto- (Latin *paries*, gen. *parietis*, wall). A prefix used in the construction of compound terms; e.g. *parieto-occipital*, pertaining to the parietal and occipital lobes of the cerebrum.

pari'etal (*Bot.*). Attached to, or lying near to and more or less parallel with, a wall. Applied particularly to the placenta when this arises from the peripheral wall of a carpel, and to chloroplasts of *Algae* lying not far inside the cell wall.

parietal (*Zool.*). A paired dorsal membrane bone of the Vertebrate skull, situated between the auditory capsules: pertaining to, or forming part of, the wall of a structure: (in Insects) said of the part of the epicranium between the vertex and the frons.

parietal cells (*Zool.*). The oxyntic cells of a gastric gland in *Vertebrata.*

pari'etes (*Anat., Zool.*). The walls of an organ or a cavity.—*sing.* **paries,** pār'i-ēz.

paring chisel (*Carp., Join.*). A long chisel with a thinner blade than a firmer tool, used for finishing off work by hand. It is not intended to be struck with a mallet.

paring gouge (*Carp. etc.*). A gouge having the bevel ground upon the inside or concave face of the cutting edge.

paripin'nate (*Bot.*). Said of a compound pinnate leaf which has no terminal leaflet.

Paris green (*Chem.*). A double salt of copper acetate and copper meta-arsenite. Also known as SCHWEINFURT GREEN.

parison (*Glass*). The intermediate shape produced in the manufacture of a glass article in more than one stage. In the automatic and semi-automatic methods, the parison is formed in one mould, being then transferred to another for the final forming operation.

parity (*Med.*). The condition or fact of having borne children.

Parke's process (*Met.*). A process used for desilverising lead. It depends on the fact that when zinc is added to molten lead it combines with silver and gold to form compounds that have a very slight solubility in lead. Furthermore, in cooling the lead, the zinc added is eliminated and only about 0·6% requires to be removed in a later operation.

Parker's cement (*Build., Civ. Eng.*) See **Roman cement.**

parkerising (*Met.*). The process for producing a protective coating on iron and steel by boiling in a solution of manganese dihydrogen phosphate.

Parkinson's disease (*Med.*). See **paralysis agitans.**

parkinsonism (*Med.*). The gradual development, as a sequel to encephalitis lethargica, of a state closely similar to that found in *paralysis agitans* (q.v.).

parliament hinge (*Join.*). See **H-hinge.**

parliamentary candle (*Illum.*). See **standard candle.**

parlour (*Build.*). A sitting-room in a small dwelling-house.

paroccipital, par-ok-sip'— (*Zool.*). A ventrally directed process of the exoccipital in Mammals.

paroi'cous (*Bot.*) Said of those *Bryophyta* in which the antheridia and archegonia occur on the same branches but are not mixed, the antheridia being borne lower on the stems than the archegonia.

parony'chia (*Med.*). A felon or whitlow. Purulent inflammation of the tissues in the immediate region of the finger nail.

paronychia (*Zool.*). In Insects, bristles on the pulvillus of the foot.

parot'ic process (*Zool.*). In some Vertebrates, a bony process formed by the fusion of the opisthotic with the exoccipital.

parot'id gland (*Zool.*). In some *Anura*, an aggregation of poison-producing skin glands on the neck: in *Mammalia*, a salivary gland situated at the angle of the lower jaw.

paroti'tis (*Med.*). Inflammation of the parotid gland. EPIDEMIC PAROTITIS and INFECTIOUS PAROTITIS are synonyms for *mumps.*

parova'rial (*Zool.*). Beside the ovary.

parova'rium (*Zool.*). In some female Mammals, a small collection of tubules, near the anterior end of the ovary, which represents the mesonephros.

parpoint work (*Masonry*). Stone-wall construction in which the squared stones are laid as stretchers, with occasional courses of headers.

parquet, par'kā (*Build.*). A floor-covering of hardwood blocks glued and pinned to the ordinary floor boarding and finally wax-polished.

par'quetry (*Furn.*). A type of marquetry, as wood inlay, consisting of geometrical designs.

parrot disease (*Med., Vet.*). See **psittacosis.**

pars (*Zool.*). A part of an organ.—*pl.* **partes.**

pars anterior (*Zool.*). In higher Vertebrates, part of the anterior lobe of the pituitary body, developed from the hypophysis.

pars intermedia (*Zool.*). In higher Vertebrates, part of the posterior lobe of the pituitary body, which is derived from the hypophysis at first but tends to become spread over the surface of the *pars nervosa* (q.v.) as development proceeds.

pars nervosa (*Zool.*). In higher Vertebrates, part of the posterior lobe of the pituitary body, developed from the infundibulum.

pars tubera'lis (*Zool.*). In higher Vertebrates, part of the anterior lobe of the pituitary body, derived from the hypophysis.

parsec (*Astron.*). The chief unit used in measuring stellar distances, being the distance at which the semi-major axis of the earth's orbit would subtend one second of arc; hence, a star's distance in *parsecs* is the reciprocal of its annual parallax in seconds of arc, one parsec is equal to 206265 astronomical units or $19{\cdot}16 \times 10^{12}$ miles.

Parson's steam turbine (*Eng.*). A *reaction turbine* (q.v.) in which rings of moving blades of increasing size are arranged along the periphery of a drum of increasing diameter. Fixed blades in the casing alternate with the blade rings. Steam expands gradually through the blading, from inlet pressure at the smallest section to condenser pressure at the end.

part (*Arch.*). The one-thirtieth portion of a module.

parted (*Bot.*). Cleft nearly to the base.

parthen-, partheno- (Greek *parthenos*, virgin). A prefix used in the construction of compound terms; e.g. *parthenogenetic* (q.v.).

parthenap'ogamy (*Bot.*). A fusion of vegetative nuclei.

par'thenocar'py (*Bot.*). The production of a fruit without a preliminary act of fertilisation, and without any development of seeds within the fruit.

par'thenogam'y (*Bot*). The union of two female gametes or of structures equivalent to them.

parthenogenet'ic (*Bot., Zool*). Reproducing by the production of ova capable of development without fertilisation by male elements.—**parthenogenesis.**

parthenogonid'ia (*Zool.*). In some *Mastigophora*, agamonts which multiply by fission to form daughter-colonies.

par'thenospore (*Bot.*). A spore formed without a previous sexual act.

par'thenote (*Bot., Zool.*). An individual developed from an egg containing only one nucleus, which is haploid.

partial (*Acous.*). Any one of the single-frequency components of a complex tone; in most musical complex tones the partials have harmonic frequencies with respect to a fundamental.

partial (*Bot.*). Secondary; subsidiary; not general.

partial common (*Auto. Teleph.*). A trunk which is common to some of the groups in a grading unit.

partial earth (*Elec. Eng.*). An earth fault having an appreciable resistance.

partial habitat (*Bot.*). The habitat occupied by a plant during one stage in its life-history.

partial larva (*Zool.*). A parthenogenetic larval Amphibian produced by artificial stimulation of the ovum without the agency of a spermatozoon.

partial parasite (*Bot.*). A plant which has at least some power of photosynthesis, but obtains some material, mainly mineral salts and carbohydrates, from a host.

partial pressures (*Chem.*). See **Dalton's law of partial pressures.**

partial pyritic smelting (*Met.*). Blast-furnace smelting of copper ores in which some of the heat is provided by oxidation of iron sulphide and some by combustion of coke. See **pyritic smelting.**

partial roasting (*Met.*). Roasting carried out in order to eliminate some but not all of the sulphur in an ore. In copper smelting, the sulphur left after roasting combines with copper and some iron to form a matte.

partial umbel (*Bot.*). One of the smaller groups of flowers which altogether make up a compound umbel.

partial valencies (*Chem.*). The residual affinity which, according to Thiele's theory, still prevails in double bonds. The formation of additive compounds and the selective addition in the 1,4-position of conjugated *double bonds* (q.v.) is explained by the presence of partial valencies, although numerous exceptions cannot be accounted for by this theory.

partial veil (*Bot*). A hyphal weft or membrane joining the edge of the pileus to the stipe, and on rupture leaving an annulus.

particle (*Acous.*). A volume of air or fluid which has dimensions very small in comparison with the wavelength of a propagating sound-wave but large in comparison with molecular dimensions.

particle velocity (*Acous.*). In a progressive or stationary sound-wave, the longitudinal alternating velocity of the air or fluid particles, taken either as the maximum velocity or as the r m.s. velocity.

particulate inheritance (*Gen.*). Inheritance, in one individual, of distinctive characteristics of both parents.

parting (*Met.*) The process of removing silver from gold-silver bullion. The composition is adjusted so that the silver content is three times the gold content, the silver being then dissolved out with sulphuric acid.

parting bead (*Join.*). A bead fixed to the cased frame of a double-hung window in order to separate the inner and outer sashes.

parting sand (*Build*). A layer of dry sand separating two layers of damp sand, which are thereby prevented from adhering to one another.—(*Foundry*) Dry sand sprinkled on the parting face of a mould in order to prevent adhesion of the two surfaces at the joint when the cope is rammed.

parting slip (*Join.*). A thin lath of wood or zinc which keeps the sash-weights apart within the cased frame of a double-hung window. Also called MID-FEATHER, WAGTAIL.

parting strip (*Civ. Eng.*). A narrow strip of land, usually bounded by a kerb, separating the carriageways of a double-carriageway road.

partite (*Zool.*). Split almost to the base.

partition (*Bot.*). See **dissepiment** (1).

partition (*Build.*). A dividing wall between rooms.

partition coefficient (*Chem.*). The ratio of the equilibrium concentrations of a substance dissolved in two immiscible solvents. If no chemical interaction occurs, it is independent of the actual values of the concentrations.

partition plate (*Carp.*). The upper horizontal member of a wooden partition, capping the studding and providing a support for joists, etc.

partridge disease (*Vet.*). A popular term for infection of the bowels of partridges by the nematode worm *Trichostrongylus tenuis.*

partu'rient (*Med.*). Of or pertaining to parturition: about to give, or in the process of giving, birth.

parturient apoplexy, parturient fever, parturient paralysis (*Vet.*). See **milk fever.**

parturition (*Zool.*). In viviparous animals, the act of bringing forth young.

party (*Teleph.*). A former name for *subscriber.*

party colours (*Paint.*). A term used in description of a surface painted in more than one colour.

party fence (or **wall**) (*Build.*). A fence or wall separating adjoining properties and owned equally by the two proprietors.

party line (*Teleph.*). An exchange line which is used by a number of subscribers, who are called by selective harmonic ringing.

parvifo'liate (*Bot.*). Having leaves which are small in relation to the size of the stem.

Paschen series (*Phys.*). One of the hydrogen spectral series in the infra-red region. It is represented by the formula $\nu = N\left(\frac{1}{3^2} - \frac{1}{m^2}\right)$, where m takes integral values 4, 5, 6 . . . etc. See **Balmer series, Lyman series.**

pas'cual (*Bot.*). Inhabiting pastures.

pass-key (*Build.*). A special key capable of operating a number of locks in a building.

pass-over offset (*Plumb.*) The local bend which is given to a pipe so that the latter may pass over another pipe in cases where the axes of the pipes are in the same plane.

passage beds (*Geol.*). The general name given to strata laid down during a period of transition from one set of geographical conditions to another; e.g. the Downtonian Stage consists of strata intermediate in character (and in position) between the marine Silurian rocks below and the continental Old Red Sandstone above.

passage cell (*Bot.*). A thin-walled non-suberised cell in an endodermis or an exodermis, through which solutions can diffuse in a transverse direction.

Passerifor'mes (*Zool.*). An order of *Coraciomorphae* having an aegithognathous palate; the front of the shank is covered by a few large scales and the hallux is large and backwardly directed; the right carotid artery is lacking; the young are altrices; an enormous group containing nearly half the known species of Birds—Perching Birds, Song Birds, Swallows, Lyre Birds, etc.

passing hollow (*Horol.*). See **crescent.**

passing-off (*Furs*). The operations of beating, cleaning, and brushing fur to freshen it up.

passing place (*Civ. Eng.*). A railway siding.

passings (*Plumb.*). The overlap of one sheet of lead past another in flashings, etc.

passive electrode (*Elec. Eng.*). The earthed electrode of an electrical precipitation apparatus, being that upon which the particles are deposited. Also called COLLECTING ELECTRODE.

passive metals (*Met.*). Metals on which an oxide film that prevents further attack on the metal is readily formed. When metals other than noble metals have a high resistance to corrosion it is because of passivity. Examples are chromium, nickel, aluminium and tin, and various alloys. See **passivity.**

passive network (*Elec. Comm.*). A network of electrical elements in which there is no source of electromotive force or other source of gain.

passive transducer (*Elec. Comm.*). Any transducer in which the output power is obtained entirely from the applied power, as in a network. See **active transducer.**

passivity (*Met.*). The phenomena associated with the conversion of certain metals (*passive metals*, q.v.) into an extremely unreactive form, as the result of either anodic polarisation, or immersion in certain solutions (e.g. concentrated nitric acid), or exposure to air. It is ascribed to the formation of a very thin, often invisible, surface film of an insoluble compound of the metal, generally an oxide.

paste (*Jewel.*). Strass and other special glass used to imitate precious stones, particularly diamonds.

paste (*Pot.*). Material of which porcelain body is formed. *Hard-paste* (*pâte dure*), composed of china stone and china clay, is true porcelain. *Soft-paste* (*pâte tendre*), composed of glass or frit with white, is artificial porcelain.

pasteboards (*Paper*). See **cardboards.**

paste-mould blowing machines (*Glass*). A machine for blowing light-walled hollow-ware. As a good finish is needed, the moulds are coated with 'paste' and are wetted before each blowing operation.

paste-mould process (*Glass*). See **paste-mould blowing machines.**

pasted filament (*Illum.*). An electric-lamp filament prepared by squirting through a die a paste formed of powdered metal, usually tungsten, together with a binding material, the latter being subsequently removed by heat treatment.

pasted plate (*Elec. Eng.*). A plate in which the active material of the plate is applied in the form of a paste; used for lead-acid accumulators.

pasteurello'sis (*Vet.*). Contagious infection of animals and birds by bacteria of the germs *Pasteurella*. Also HAEMORRHAGIC SEPTICAEMIA.

pasteurisation (*Med.*). Reduction of the number of micro-organisms in milk by maintaining it in a holder at a temperature of from 62·8°-65·5° C. for thirty minutes.

pastillage, pas-tē-yazh' (*Pot.*). Dot and line designs made with coloured slip, which is dribbled from a container with a flexible base and a spout.

pata'gium (*Zool.*). A lobe-like structure at the side of the pronotum in some *Lepidoptera*: in Bats and some other flying Mammals, a stretch of webbing between the fore limb and the hind limb: in Birds, a membranous expansion of the wing.—*adj.* **patagial.**

pat'and (*Build.*). A sill resting on the ground as a support for a post.

Patap'sco formation (*Geol.*). The highest division of the Comanchean of the eastern U.S.A., consisting of brightly coloured, often sandy, clays with fossil plants.

patch (*Elec. Comm.*). To join together units of apparatus, such as amplifiers, equalisers, etc., by flexible cords terminated on plugs, which are inserted into break-jacks bridged across the terminations of each unit.

patch bay (*Elec. Comm.*). The section of rack-mounted equipment which includes all the break-jacks which terminate the units of equipment.

patch, blooping (*Cinema.*). See **blooping patch.**

patch cord (*Elec. Comm.*). The flexible cord, generally shielded and containing a pair of tinsel conductors, which is terminated in plugs for patching between units of rack-mounted equipment.

patch in and **patch out** (*Elec. Comm.*). The temporary connexion (*patching in*) of spare apparatus in a circuit with patch cords, defective apparatus being thereby *patched out*.

pâte dure, pâte tendre, paht dür, tahn^{g}dr (*Pot.*). See **paste.**

patella (*Bot.*). A sessile apothecium, saucer-like, and with a distinct margin.

patella (*Zool.*). In higher Vertebrates, a sesamoid bone of the knee-joint or elbow-joint.

patel'late, patel'liform (*Bot.*). Shaped like a saucer or dish.

patent (*Bot.*). Said of leaves and branches which spread out widely from the stem.

patent board (*Build.*). A general name for any proprietary building-board.

patent glazing (*Build.*). The name applied to various marketed devices for securing together glass sheets (for roof coverings, etc.) without using putty in sashes, the connexion being made usually with special metal sections or flashings.

patent leather (*Leather*). An enamelled leather produced by spraying the leather with a cellulose lacquer.

patent log (*Ships*). See **log (nautical).**

patent plate (*Glass*). Plate glass that has been ground and polished on each side.

patent satin or **mitcheline** (*Textiles*). A fabric of compound structure, with an embossed pattern. Used as a bed-covering.

patent stone (*Civ. Eng.*). *Reconstructed stone* (q.v.).

pat'era (*Plast.*). A circular ornament in relief on friezes.—*pl.* **paterae.**

pathetic muscle (*Zool.*). The superior oblique muscle of the Vertebrate eye

pathetic nerve (*Zool.*). See **trochlear nerve.**

path'ogen (*Med.*). Any disease-producing micro-organism or substance.

pathogen'esis (*Med.*). The development or production of a disease-process —*adj.* **pathogen'ic.**

path'ognomon'ic (*Med.*). Specially indicating a particular disease.

pathological. Concerning pathology: morbid, diseased.

pathol'ogy. That part of medical science which deals with the causes and nature of disease, and with the bodily changes wrought by disease.

pat'in (*Build.*). A *patand* (q.v).

pat'ina (*Chem.*). The thin, often multi-coloured, film of oxide formed on the surface of a metal

patroclin'ic, patrocli'nous (*Bot., Zool.*). Exhibiting the characteristics of the male parent more prominently than those of the female parent. Cf. *matroclinous.*

patromor'phic (*Bot.*). Resembling the father.

patten (*Masonry*). The base of a column or pillar.

patter (*Build*) A kind of float, made of thick wood, used to consolidate and level cement surfaces.

pattern (*Foundry*) A wood, metal, or plaster copy, in one piece or in sections, of an object to be made by casting. Made slightly larger than the finished casting, in order to allow for contraction; and suitably tapered to facilitate withdrawal from the mould. See **contraction rule, double contraction, metal pattern, plate moulding.**

pattern (*Photog., Print.*). A regular texture effect formed by superimposing two or more sets of lines or dots of different pitch or at certain angles; a defect to be avoided, especially in half-tone reproduction of steel-engravings and in half-tone four-colour work.

pattern weaver (*Textiles*). A hand-loom weaver engaged in the work of producing section ranges for new-season styles.

Pattinson's process (*Met.*). The process used for the separation of small quantities of silver from lead by partially solidifying a molten bath of the two metals and separating the remaining liquid. This process is repeated several times and the silver is concentrated in the liquid.

Pattinson's white lead (*Chem.*). A pigment of a lead oxychloride type.

pat'ulous (*Bot.*). Spreading rather widely.

pat'uron (*Zool.*). The first or basal segment of the chelicerae in *Arachnida.*

Patux'ent Beds (*Geol.*). The lowest group of Comanchean beds lying unconformably on older strata in the eastern U.S.A. They consist of arkosic sands with clays, and contain plant remains.

paunch (*Zool.*). See **rumen.**

paur'ometabol'ic (*Zool.*). Showing incomplete metamorphosis, the young resembling the adults both in form and in mode of life; as in *Collembola.* Cf. *hemimetabolic.*

Paurop'oda (*Zool.*). An order of very small *Myriapoda* having twelve trunk somites, nine pairs of legs, and triflagellate antennae.

pavement (*Civ. Eng.*). (1) The side-walk provided for pedestrian traffic only, alongside a road.—(2) The hard surfacing of a road or side-walk.

See **block—** **sheet—**

pavement epithelium (*Zool.*). A variety of epithelium consisting of a layer of flattened cells.

pavement light (*Build.*). A panel formed of glass blocks framed in iron or steel, built into a pavement surface over an opening to the basement of a building, into which it admits light.

pavilion (*Build.*). An ornamental, detached structure which has a roof but is usually not entirely enclosed by walls. Used on sports fields, or as a place for entertainments.

pavilion (*Jewel.*). The base of a faceted stone, between the girdle and the culet.

pavilion roof (*Build.*). A roof which in plan forms a figure of more than four straight sides.

pavings (*Build*). Very hard purpose-made bricks, usually of the dark-blue Staffordshire variety, having a surface chequered by grooves to make it less slippery.

paving flags (*Civ. Eng.*). Thin flat stones used for surfacing pavements. They may be of natural or artificial stone, and should be not less than 2 ft. wide or 6 sq. ft. in area, or less than 3 in. thick.

pavior (*Build.*). (1) A specially hard brick used in the construction of pavement surfaces.—(2) A worker who lays bricks or setts to form pavement surfaces.

Pavit (*Civ. Eng.*). A trade-name for a type of bitumen used for forming pavement or road surfaces.

Pavy's solution (*Chem.*). A modified Fehling's solution containing sufficient ammonium hydroxide to redissolve the cuprous oxide.

pawl (*Eng*). A pivoted catch, usually spring-controlled, engaging with a ratchet wheel or rack to prevent reverse motion, or to convert its own reciprocating motion into an intermittent rotary or linear motion.

Pawlov'sky's glands, pav— (*Zool*). In *Anoplura*, a pair of glands opening into the stylet sac; believed to secrete a lubricating fluid.

P.A.X. (*Teleph*). Abbrev. for *private automatic exchange.*

Paxboard or **Paxfelt** (*Build.*). Trade-name for an insulating material.

paxil'la (*Zool.*). An upright spine bearing two or three circles of horizontal spinelets, occurring in some *Asteroidea.*—*pl.* **paxillae.**—*adjs.* **paxillar, paxilliform.**

Paxillo'sa (*Zool.*) An order of *Asteroidea* in which the dorsal surface is closely set with tufts of spines known as *paxillae* (q.v.); the tube-feet are mostly devoid of suckers, and pedicellariae, if present, are few in number and never forcipulate.

pay load (*Aero.*). That part of an aeroplane's load for which revenue is obtained.

pay station (*Teleph.*). The same as *public call office.*

Pb (*Chem*). The symbol for *lead.*

P.B.X. (*Teleph.*). Abbrev. for *private branch exchange.*

P.B.X. final selector (*Auto. Teleph.*). A final selector arranged so that when it switches to the first of a group of lines going to a P.B.X., it automatically hunts over these until a free line is found.

P.C. (*Civ. Eng.*). A common abbrev. for (1) *prime cost*; (2) *Portland cement.*

Pd (*Chem.*). The symbol for *palladium.*

p.d. (*Elec. Eng.*). Abbrev. for *potential difference.*

Pea Grit (*Geol*). A bed of pisolitic limestone, containing shell fragments, found in the Lower Jurassic rocks of Gloucestershire. It is not a true grit.

peacock ore (*Min.*). The name given to *bornite* (q.v.) because it rapidly becomes iridescent from tarnish.

peak arch (*Arch.*). A pointed arch, such as a Gothic arch.

peak factor (*Elec. Eng.*). The ratio of the peak value of an alternating or pulsating wave to its root-mean-square value. Also called AMPLITUDE FACTOR, CREST FACTOR.

peak joint (*Build.*). The joint between the members of a roof truss at its ridge.

peak load (*Elec. Eng.*). The maximum load on a generating station or power distribution system.

peak value (*Elec. Eng.*). The maximum positive or negative value of an alternating quantity. Also called AMPLITUDE, CREST VALUE, MAXIMUM VALUE.

peak voltmeter (*Elec. Eng.*). A voltmeter for measuring the peak value of an alternating voltage. Also called CREST VOLTMETER.

pean (*Tools*). See **pane.**

pear oil (*Chem.*). See under **amyl acetate.**

pear-push (*Elec. Eng.*). See **pendant push.**

pear-switch (*Elec. Eng.*). See **pendant switch.**

pearl. An abnormal concretion of nacre formed inside a mollusc shell round a foreign body such as a sand particle or a parasite.

pearl (*Typog.*). The old name for a type size, about 5-point.

pearl disease (*Vet.*). Bovine *tuberculosis* (q.v.).

pearl fabrics (*Hosiery*). See **purl fabrics.**

pearl lamp (*Elec. Eng.*). See **inside-frosted lamp.**

pearl spar (*Min.*). See **dolomite.**

pearl white (*Chem.*). See **bismuth trichloride.**

pearlite (*Met.*). A microconstituent of steel and cast-iron. It is produced at the eutectoid point by the simultaneous formation of ferrite and cementite from austenite, and normally consists of alternate plates of these constituents (see, however, **globular pearlite**). A carbon steel containing 0.9% of carbon consists entirely of pearlite. See **eutectoid steel, hypo-eutectoid steel, hyper-eutectoid steel.**

pearlite iron, Perlite Iron (*Met.*). In general, *pearlite iron* is grey cast-iron consisting of graphite in a matrix of pearlite, i.e. without free ferrite. In particular, *Perlite Iron* is a German proprietary name denoting an iron of low silicon content, which is caused to solidify grey by the use of heated moulds.

peat (*Geol.*). The name given to the layers of dead vegetation, in varying degrees of alteration, resulting from the accumulation of the remains of marsh vegetation in swampy hollows in cold and temperate regions. Geologically, peat may be regarded as the youngest member of the series of coals of different rank, including brown coal, lignite, and bituminous coal, which link peat with anthracite. Peat is very widely used as a fuel, after being air-dried, in districts where other fuels are scarce—in Russia on a very large scale for steam-raising. It is low in ash, but contains a high percentage of moisture, and is bulky; calorific value per pound about 7000 B.Th.U.

pebble (*Jewel.*). Semi-precious stones, chiefly agates and quartz.

pebble-dashing (*Plast.*). A rough finish given to a wall by coating it with plaster, on to which, while it is still soft, small stones and liquid lime are thrown.

Pebid'ian (*Geol.*). The name given to a series of igneous rocks, of Pre-Cambrian age, found in Pembrokeshire.

P.E.C., pec (*Cinema.*). Contraction for *photo-electric cell.*

P.E.C. amplifier (*Cinema.*). Abbrev. for *photo-electric cell amplifier.*

pecker (*Teleg.*). The small cylindrical pin which rises and falls in scanning the holes punched in a slip corresponding to the coding of the message. The passage of the pecker through the slip actuates the mechanical part of the transmitter (e.g. a Wheatstone high-speed morse or a Siemens), which sends the electrical signals to line.

peckings (*Build.*). Under-burnt, badly shaped bricks, used only for temporary work or for the inside of walls.

pecky (*Timber*). Showing signs of decay.

pecten (*Zool.*). Any comb-like structure: in some Vertebrates (Reptiles and Birds), a process of the inner surface of the retina of unknown function: in *Arachnida*, a stridulating organ.—*pl.* **pecti'nes** (q.v.).—*adjs.* **pecti'nal, pec'tinate.**

pec'tinate (*Bot., Zool.*). Comb-like; said especially of a pinnatifid leaf having many narrow lateral lobes.

pectine'al (*Zool.*). Comb-like; said (1) of a process of the pubis in Birds, (2) of a ridge on the femur to which is attached the *pectineus muscle*, one of the protractors of the hind limb.

pectinel'lae (*Zool.*). In some *Mastigophora*, transversely planted comb-like membranellae representing the adoral spiral of cilia.

pectines, —ti'nēz (*Zool.*). Comb-like chitinous structures of tactile function attached to the ventral surface of the second somite of the mesosoma in *Scorpionida.*

Pec'tinibran'chia (*Zool.*). An order of *Streptoneura*, having a concentrated nervous system and a single auricle; the central radula tooth is single or absent; there is a monopectinate ctenidium attached to the mantle throughout its length; terrestrial, fresh-water, and marine forms. Periwinkles, Cowries, River Snails, Apple Snails, Slipper Limpets, Worm Shells, and Whelks.

pectins (*Bot.*). A mixture of non-crystalline carbohydrates of high molecular weight occurring in the cell walls of fruits and vegetables, especially in the middle lamella. The mixture is soluble in water and is precipitated from aqueous solution by excess of alcohol. Pectins can form jellies with fruit juices when suitable concentrations of acid and sugar are present, and play an important part in the setting of jam.

pectisation (*Chem.*) The formation of a jelly.

pec'tolite (*Min.*). A silicate of calcium and sodium, with a variable amount of water, which crystallises in the monoclinic system. It occurs in aggregations like the zeolites in the cavities of basic eruptive rocks.

pec'toral fins (*Zool.*). In Fish, the anterior pair of fins.

pectoral girdle (*Zool.*). In Vertebrates, the skeletal framework with which the anterior pair of locomotor appendages articulate.

pectora'les (*Zool.*). In Vertebrates, muscles connecting the upper part of the fore limb with the ventral part of the pectoral girdle.—*sing.* **pectora'lis.**

pectoril'oquy (*Med.*). Conduction, to the chest wall, of the sound of words spoken or whispered by the patient and clearly heard through the stethoscope; indicative of consolidation or cavitation of the lung.

pectus (*Zool.*). A thoracic sclerite of *Insecta*, formed by the fusion of the pleuron with the sternum; in *Vertebrata*, the breast region.—*adj.* **pec'toral.**

peculiar (*Typog.*). A term describing any unusual type character, such as certain accents.

peculiar motion (*Astron.*). A term, more often found in its Latin form, *motus peculiares*, meaning that part of a star's observed motion which remains after allowing for the three motions of the observer, viz., the rotational, orbital, and solar motions, which all contribute to the star's apparent motion.

pedal. Pertaining to the foot or feet.

pedal (*Acous.*). In a piano, the foot-operated lever which raises all the dampers from the wires: the foot-operated key in an organ console. See **balanced pedal.**

pedal feed motion (*Textiles*). A motion for controlling the speed at which sheets of raw cotton are fed to the beater; the speed is varied according to the thickness of the sheets.

ped'ate leaf (*Bot.*). A palmately divided compound leaf having three main divisions, and having the two outer divisions forked one or more times.

peda'tifid (*Bot*). Having the lamina deeply cut in pedate fashion.

pedes, ped'ēz (*Zool.*). See **pes.**

pedestal (*Build.*). A base for the support of a statue, column, or other object.

pedestal (*Furn.*). (1) A panelled stand.—(2) A tall, slender chest, as a pedestal (or night) table: the isolated blocks of a pedestal sideboard or writing table.

pediatric, etc. (*Med.*). See **paediatric,** etc.

ped'icel (*Bot.*). The stalk which bears a single flower or a single fruit.

pedicel (*Zool.*). The second joint of the antennae in Insects: more generally, the stalk of a sedentary organism: the stalk of a free organ, as the *optic pedicel* in some *Crustacea.*

pedicella'ria (*Zool.*). In *Echinodermata*, a small pincer-like calcareous structure, consisting of a basal plate with which are articulated two or three jaws provided with special muscles and capable of executing snapping movements; it may be stalked or sessile.

ped'icel'late, *or* ped-is'— (*Bot.*). Said of a flower or a fruit which has a stalk.—(*Zool.*) Provided with a pedicel.

ped'icle (*Zool.*). In some *Arachnida*, a narrow stalk uniting the prosoma and opisthosoma.

Pedicula'ti (*Zool.*). An order of *Neopterygii* in which the first dorsal fin-ray is moved forward on to the top of the head and provided with a terminal lappet which acts as a bait; pelvic fins jugular or absent; gill-opening reduced, posterior to base of pectoral fin; mainly bottom-living forms of tropical and abyssal waters. Angler-fishes, Bat-fishes, Frog-fishes.

pediculo'sis (*Med.*). Infestation of the body with lice.

pediment (*Build.*). A triangular or segmental part surmounting the portico in the front of a building.

pe'dion (*Crystal.*). A crystal form consisting of a single plane; well shown by some crystals of tourmaline which may be terminated by a pedion, with or without pyramid faces in addition.

Pedipal'pi (*Zool.*). An order of *Embolobranchiata* in which the prosoma is joined to the segmented opisthosoma by a narrow waist; there is usually a narrow segmented telson; the powerful pedipalps are large and chelate or clawed; the first pair of legs are used as feelers; respiration is by lung books; predaceous tropical forms. Whip Scorpions.

ped'ipalps (*Zool.*). In *Arachnida*, the appendages, borne by the first post-oral somite, of which the gnathobases function as jaws; they may be tactile organs or chelate weapons.

pedom'eter (*Surv.*). An instrument for counting the number of paces a walker makes; it is capable of being set so as to record distances travelled.

ped'uncle (*Bot.*). The main stalk or stalks of an inflorescence.

peduncle (*Zool.*). In *Brachiopoda* and *Cirripedia*, the stalk by which the body of the animal is attached to the substratum: in some *Arthropoda*, the narrow portion joining the thorax and abdomen or the prosoma and opisthosoma: in *Vertebrata*, a tract of white fibres in the brain.

pedun'culate (*Bot., Zool.*). Having, or borne on, a peduncle.

peeling (*Print.*). The operation of preparing *overlays* (q.v.) by thinning the hard edges of an illustration.

peen (*Tools*). See **pane.**

peg (*Bot.*). An outgrowth from the hypocotyl of seedlings of cucumbers and related plants. It plays some part in assisting the seedling to emerge from the testa.

peg-and-cup dowels (*Eng.*). Metal pegs and sleeves inserted in the halves of a split pattern, in order to hold them in register while ramming the mould.

peg count meter (*Teleph.*). The manually operated meter at an operator's position.

peg plan (*Weaving*). The plan indicating the order in which the healds are to be lifted during weaving. Also called LIFTING PLAN.

pegwood (*Horol.*). Sticks of close-grained wood used for cleaning out the pivot holes of clocks and watches.

pegged-sole shoes (*Boots and Shoes*). A type of footwear in which the outer sole is attached to the inner sole and the upper by two or more rows of pegs; used for sea boots.

peggies (*Build.*). Slates 10-14 in. long.

peg'matite (*Geol.*). A term originally applied to granitic rocks characterised by intergrowths of feldspar and quartz, as in graphic granite; now applied to igneous rocks of any composition but of particularly coarse grain, occurring as offshoots from, or veins in, larger intrusive rock bodies, representing a flux-rich residuum of the original magma.

pegmatite phase (*Geol.*). That chapter in the cooling history of a body of magma dealing with the production of liquid residua in which fluxes are concentrated, giving a high degree of liquidity to this late fraction of the magma, and hence great penetrative power and, through free molecular movement, abnormally large crystals.

pel'age (*Zool.*). *Fur* (q.v.).

pela'gic (*Geol.*). A term applied to any accumulation of sediments under deep-water conditions.—(*Zool.*) Living in the middle depths and surface waters of the sea Cf. *benthic.*

Pel'agothu'rida (*Zool.*). An order of *Holothuroidea* having shield-shaped buccal tube-feet with enormous ampullae but no retractor muscles, and no tube-feet on the trunk; respiratory trees are lacking; the madreporite is external; pelagic free-swimming forms.

Pelargomor'phae (*Zool.*). A legion of *Neognathae* characterised by the possession of a desmognathous palate; includes Swans, Geese, Ducks, Herons, Storks, and Birds of Prey.

Pelecypo'da (*Zool.*). A class of bilaterally symmetrical *Mollusca* in which the foot is keel-shaped, the mantle is divided into two folds, and the shell consists of two valves which are alike externally, the one being the mirror image of the other. Unlike *Brachiopoda*, the valves of the shell are inequilateral and are hinged together in some cases by a resilient ligament and a more or less complicated series of teeth fitting into sockets in both valves. Sedentary, or slow-moving forms, of exclusively aquatic habit. They are ciliary feeders, a radula being lacking. Cockles, Oysters, Mussels, Scallops, Clams, and Shipworms.

Pélé's hair, pā-lā (*Min.*). Long threads of volcanic glass, which result from jets of lava being blown aside by the wind in the volcano of Kilauea, Hawaii.

pelio'sis rheumatica (*Med.*). Purpura rheumatica; Schönlein's disease. A disease characterised by swelling of the joints and the appearance of purpuric spots and of wheals (urticaria) in the skin.

pelit'ic gneiss (*Geol.*). A gneissose rock derived from the metamorphism of argillaceous sediments.

pelitic schist (*Geol.*). A schist of sedimentary origin, formed by the dynamothermal metamorphism of argillaceous sediments such as clay rocks.

pella'gra (*Med.*). Maidismus. A chronic disease occurring in those who eat maize; thought to be due to deficiency of nicotinic acid (part of vitamin B_2); it is characterised by gastro-intestinal disturbances, a symmetrical erythema of the skin, mental depression, and paralysis.

pellet (*Build*). A term applied to a moulding characterised by a series of spherical protuberances.

pellet (*Plastics*). A small tablet of moulding composition, made to a stock size and weight so that the number required to make up the weight necessary to form a charge for the moulding press may be counted.

Pellet's process (*Photog*). The same as *positive cyanotype*, or reversed blue-printing.

pellicle (*Bot*). The outer layer of the upper surface of a pileous, when it can be stripped off as a delicate membrane.

pellicle (*Photog*). A thin film, particularly of an emulsion when dried.

pellicle (*Zool*). A thin cuticular investment, as in some *Protozoa.*—*adj.* **pellic'ulate.**

pellu'cid (*Bot., Zool.*). Transparent.

pelma (*Zool.*). See **planta.**

Pelmatozo'a (*Zool.*). A subphylum of *Echinodermata* comprising stalked forms of sessile habit; the *Crinoidea* are the only living representatives of the group. Cf *Eleutherozoa.*

pelmet (*Build.*) A head, whether built in or not, to the interior of a window, which conceals the fittings from which the curtains hang.

pel'ophile (*Bot.*). A plant which occurs on clayey soils.

pelo'ria, pel'ory (*Bot*). An abnormal condition in which the flowers of a species normally producing irregular flowers are regular.

pelt (*Mining*). See under **pelter.**

pelt (*Skins*). (1) A general term for the skin of a mammal with the hair on; a raw hide.—(2) The name given specifically to a hide after unhairing.

pelt wool (*Textiles*) Wool which has been removed by the fellmonger from the pelts of slaughtered sheep.

peltate (*Bot*). Said of any plant member which is more or less flattened, and has its stalk attached to the middle of the lower surface.

pelter (*Mining*). A man employed in a coal-mine to take down *pelt* (shaly stone) from the roof of a narrow seam, in order to make height for a coal-cutting machine.

Peltier coefficient (*Elec. Eng.*). The amount of energy absorbed or given out per second, due to the Peltier effect, when unit current is passed through a junction of two dissimilar metals.

Peltier effect (*Elec. Eng.*). The phenomenon whereby heat is liberated or absorbed at a junction where an electric current passes from one metal to another.

Pelton wheel (*Eng.*). An impulse water-turbine in which specially shaped buckets attached to the periphery of a wheel are struck by a jet of water, the nozzle being either deflected or valve-controlled by a governor.

pelvic fins (*Zool.*). In Fish, the posterior pair of fins.

pelvic girdle (*Zool.*). In Vertebrates, the skeletal framework with which the posterior pair of locomotor appendages articulate.

pelvim'eter (*Med.*). A specially designed calliper for measuring distances between various bony points of the female pelvis.

pelvim'etry (*Med.*). Estimation, by the use of pelvimeters or of X-rays, of the size and shape of the female pelvis.

pelvis (*Zool.*). The pelvic girdle or posterior limb girdle of Vertebrates, a skeletal frame with which the hind limbs or fins articulate: in Mammals, a cavity, just inside the hilum of the kidney, into which the uriniferous tubules discharge and which is drained by the ureter.—*adj.* **pelvic.**

pemph'igus (*Med.*). An inflammatory condition of the skin characterised by the eruption of crops of blisters, the mucous membranes at times also being involved.

pen (*Zool.*). In *Cephalopoda*, the shell or cuttle-bone.

pencat'ite (*Geol*). A crystalline limestone which contains brucite and calcite in approximately equal molecular proportions. Formed by contact metamorphism from magnesian limestones. See also **predazzite.**

pencil (*Light*). A narrow beam of light, having a small angle of convergence or divergence.

pencil (*Photog.*).
See **abrasive—** **bromide—**

pencil stone (*Min.*). The name given to the compact variety of pyrophyllite, used for slate-pencils.

pencilling (*Build.*). The operation of painting the mortar joints of a brick wall with white paint so as to accentuate the contrast of colours.

pendant (*Build.*) Ornamentation suspended below an object or surface to be decorated, as from a ceiling.

pendant (*Horol.*). The neck of a watchband, to which the bow is attached.

pendant (*Illum*). A lighting fitting suspended by means of a flexible support.

pendant push (*Elec. Eng.*). A pushbutton arranged for attachment to a flexible cord. Also called PEAR-PUSH, SUSPENSION-PUSH.

pendant socket-outlet (*Elec. Eng.*). A socket-outlet arranged for attachment to a flexible cord.

pendant switch (*Elec. Eng.*). A switch arranged for attachment to a flexible cord. Also called PRESSEL-SWITCH, PEAR-SWITCH, SUSPENSION-SWITCH.

penden'tive (*Civ. Eng.*). A spherical triangle formed by a dome springing from a square base.

pendentive dome (*Civ. Eng.*). A dome covering a square area to which it is linked at the corners by pendentives.

Pendleside Series (*Geol.*). A series of dark shales and limestones found in North Lancashire; they belong to the uppermost Lower Carboniferous Series; well seen in Pendle Hill.

pendulous (*Bot.*). Said of an ovule which is suspended from a point at or near the top of the ovary.

pendulum. The simple pendulum consists of a small, heavy bob suspended from a fixed point by a thread of negligible weight. Such a pendulum, when swinging freely with small amplitude, has a periodic time given by $T=2\pi\sqrt{\frac{l}{g}}$, where l is the length of the thread and g is the acceleration due to gravity.—COMPOUND PENDULUM, any body capable of rotation about a fixed horizontal axis and in stable equilibrium under the action of gravity. If the centre of gravity is at a distance h from the axis of rotation, and k is the radius of gyration about a horizontal axis through the centre of gravity, the period of small oscillations is:

$$T=2\pi\sqrt{\frac{h+\frac{k^2}{h}}{g}}.$$

See **centre of oscillation.**

pendulum (*Horol.*). The time-controlling element of a pendulum clock. The theoretical length of a pendulum, in inches, is given by $L=39\ 14\times t^2$, where t is the time of swing in seconds and 39·14 is the length of a pendulum beating seconds in London. For household clocks the pendulum beats ½-seconds or less. For long-case clocks and regulators, a seconds pendulum is used; for tower clocks it may be up to 2 seconds.

pendulum bob (*Horol.*). The weighted mass at the end of a pendulum.

pendulum damper (*Aero.*). A short heavy pendulum, in the form of pivoted balance weights, attached to the crank of a radial aero-engine in order to neutralise the fundamental torque impulses and so eliminate the associated critical speed.

pendulum governor (*Eng.*). An engine governor the many forms of which involve the principle of the conical pendulum. Heavy balls swing outwards under centrifugal force, so lifting a weighted sleeve and progressively closing the engine throttle valve. See **Porter governor, Proell governor, Watt governor.**

pendulum rod (*Horol.*). The rod of a pendulum which supports the bob.

pendulum spring (*Horol.*). The thin ribbon of spring steel used for suspending the pendulum.

pen'eplain (*Geol.*). A gently rolling lowland, produced after long-continued denudation.

penetration (*Chem.*). A term used in testing bituminous material. Penetration is expressed as the distance that a standard needle vertically penetrates a sample of the material under known conditions of loading, time, and temperature.

penetration (*Radio*). See **depth of penetration.**

penetration twins (*Min.*). Two (or more) crystals united in a regular manner according to a twin law, the one having the appearance of having grown through the other. Cf. *juxtaposition twins.*

pe'nial setae (*Zool.*). See **copulatory spicules.**

pen'icillate, penicil'liform (*Bot.*). Tufted, like a camel-hair brush.

penicil'li (*Zool.*). See **Ruysch's penicilli.**

penis (*Zool.*). The male copulatory organ in Mammals and most *Sauropsida*: a form of male copulatory organ in various *Invertebrata*, as *Platyhelminthes, Gastropoda.*—*adj.* **pe'nial.**

Penmorfa Beds (*Geol.*) A series of flaggy mudstones of Upper Cambrian age, found in North Wales.

pennae (*Zool.*). *Plumae* (q.v.).

Pennant Series (*Geol.*). A series of coarse sandstones and grits found in the Coal Measures of South Wales and in the Bristol Coalfield, between two series of productive measures.

pennate (*Bot.*). Said of diatoms which have an elongated cell which is isobilateral, zygomorphic, or dorsiventral in structure.

pen'ninite (*Min.*). A silicate of magnesium with chemically combined water. It crystallises in the monoclinic system, but is rhombohedral in habit. It is a member of the chlorite group of minerals.

Pennsylvanian System (*Geol.*). A great continental formation, including strata deposited under alluvial fan, flood plain, and delta swamp conditions; the coal-bearing strata of N. America, equivalent to the Coal Measures of Britain. Represented in the Cordilleran trough by marine strata, chiefly limestones, well exposed in the Wasatch Mts.

Penrhiw Series, pen-roo' (*Geol.*). A series of red and green volcanic tuffs and halleflintas which form the basal member of the Pre-Cambrian rocks in Pembrokeshire.

pent-, penta- (Greek *pente*, five). A prefix used in the construction of compound terms; e.g. *pentactinal*, five-rayed.—(*Chem.*) Containing five atoms, groups, etc.

penthouse (*Carp.*). A projecting surface above a door, window, etc., shielding the latter from rain.

pent roof (*Build.*). A roof having only a single slope, often built against another building.

pentacri'noid (*Zool.*). A larval form of some *Crinoidea*, which resembles *Pentacrinus*.

pentacy'clic (*Bot.*). Having the parts arranged in five whorls.

pentad. The period of five days; being an exact fraction of a normal year, it is useful for meteorological records.

pentadac'tyl (*Zool.*). Having five digits.

pentadactyl limb (*Zool.*). The characteristic free appendage of *Tetrapoda* with five digits.

pentag'onal (*Bot.*). Having five angles with convex surfaces between them.

pentagonal dodecahedron (*Crystal.*). A form of the cubic system comprising twelve identical pentagonal faces. Pyrite frequently crystallises in this form, hence the synonym *pyritohedron.*

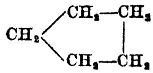
pentagraph. A *pantograph* (q.v.).

pentagrid (*Thermionics*). See **heptode.**

pentahy'dric alcohols (*Chem.*). Alcohols containing five hydroxyl groups: e.g. arabitol, $HO{\cdot}CH_2{\cdot}(CHOH)_3{\cdot}CH_2OH$, xylitol (stereoisomeric) and rhamnitol, $HO{\cdot}CH_2{\cdot}(CHOH)_4{\cdot}CH_3$.

pentam'erous (*Bot.*). Having five members in a whorl.

pentameth'ylene or ***cyclo*pentane** (*Chem.*). A saturated cyclic hydrocarbon oil of the formula:



It belongs to the group of naphthenes and occurs in crude petroleum.

pentamethylene-diamine (*Chem.*). *Cadaverine* (q v.).

pentanes (*Chem*). C_5H_{12}. Low-boiling paraffin hydrocarbons. The *n*-pentane has a b p. 36° C., sp. gr. 0 63.

pentane lamp (*Light*) See **Vernon-Harcourt pentane lamp.**

pentane standard (*Light*) See **international candle.**

pentan'gular (*Bot*). Having five angles with flat or concave surfaces between them.

pen'taploi'dy (*Cyt*) The condition of having five times the haploid number of chromosomes.

Pentasto'mida (*Zool*). A class of minute *Arthropoda*, parasitic in the nasal sinuses of flesh-eating Vertebrates; elongate, vermiform animals having a pair of claws on both sides of the mouth and lacking a respiratory system.

pen'tastyle (*Arch*). A row of five columns.

pentava'lent (*Chem.*). Capable of combining with five atoms of hydrogen or their equivalent.

pent'landite (*Min.*). A sulphide of iron and nickel which crystallises in the cubic system. It commonly occurs intergrown with pyrrhotite, from which it can be distinguished by its octahedral cleavage. Also called NICOPYRITE.

pentode valve or **pentode** (*Thermionics*). A five-electrode thermionic tube, comprising an emitting cathode, control grid, a screen (or auxiliary grid) maintained at a positive potential approximately the same as that of the anode, a suppressor grid maintained at about cathode potential, and an anode. It has characteristics similar to those of a screen-grid valve, except that the secondary emission effects are suppressed.

Pentone (*Thermionics*). A trade-name for the *pentode*.

pen'tosans (*Chem.*). $(C_5H_8O_4)_x$, polysaccharides, comprising arabinans and xylans.

pentoses (*Chem.*). A group of monosaccharoses containing five oxygen atoms in the molecule, and having the formula $HO{\cdot}CH_2{\cdot}(CHOH)_3{\cdot}CHO$ and $CH_3{\cdot}(CHOH)_4{\cdot}CHO$. Important pentoses are *l*-arabinose, *l*-xylose, rhamnose, and fucose. Pentoses cannot be fermented. They are characterised by the fact that they yield furfuraldehyde or its homologues on boiling with dilute acids. A qualitative test for pentoses is the occurrence of a bright-red colour when they are boiled with HCl and phloroglucinol.

penultimate cell (*Bot.*). The last cell but one at the tip of an ascogenous hypha; it is commonly binucleate, and later becomes the ascus.

penum'bra (*Astron.*). See **umbra.**—(*Light*) See **shadow.**

pe'po (*Bot.*). A fleshy or succulent fruit, often of large size, formed from an inferior syncarpous ovary, and containing many seeds; it is a particular type of a berry. The cucumber is a familiar example.

peppertype (*Photog.*). A printing process using pepper and rubber as the sensitive surface to be exposed and dusted with powdered colour. See **powder process.**

pep'sin (*Zool.*). A protein-digesting ferment of the alimentary canal of Vertebrates; secreted by the gastric glands.

peptic ulcer (*Med.*). An ulcer of the stomach or of the duodenum.

peptisation (*Chem.*). The production of a colloidal solution of a substance, especially the formation of a sol from a gel.

pep'tonephrid'ia (*Zool*). In some *Oligochaeta*, modified nephridia which open into the cavity of the alimentary canal instead of to the exterior.

peptones (*Chem.*). Products obtained by the progressive action of enzymes on albuminous matter. They do not coagulate and cannot be precipitated by ammonium sulphate. They still show the xanthoprotein and biuret reactions.

per- (*Chem.*). (1) A prefix which properly should be restricted to compounds which are closely related to hydrogen peroxide, and thus contain two oxygen atoms linked together, e g. *persulphates*, *percarbonates*, *perchromates*.—(2) A prefix which is loosely used to denote that the central atom of a compound is in a higher state of oxidation than the usual, e g *perchlorates*, *permanganates*.

per-acid (*Chem*) A true per-acid is either formed by the action of hydrogen peroxide on a normal acid, or yields hydrogen peroxide by the action of dilute acids. Organic per-acids are assumed to contain the group –CO·O·OH.

per-salts (*Chem.*). Salts corresponding to *per-acids*. A solid per-salt reacts immediately and quantitatively with neutral potassium iodide to form iodine.

Per'acar'ida (*Zool.*) A division of *Crustacea* in which there are six abdominal somites and the thoracic limbs have a two-jointed protopodite; the carapace, when present, leaves four thoracic somites distinct; the first thoracic somite is fused with the head and the protopodite of the antenna is three-jointed.

perambulator (*Surv*). An instrument for distance measurement consisting of a large wheel (often 6 ft. in circumference) supported on its axis by a long handle, so that it may be wheeled along the distance to be measured. A recording mechanism records the number of revolutions of the wheel and is calibrated to give distance traversed directly. Also called an AMBULATOR or ODOMETER.

percentage articulation (*Elec. Comm.*). The percentage of elementary speech-sounds received correctly when logatoms are called over a telephone circuit in the standard manner.

percentage differential relay (*Elec. Eng.*). A differential relay which operates at a current which, instead of being fixed, is a fixed percentage of the current in the operating coils.

percentage modulation (*Radio*). See **depth of modulation.**

percentage registration (*Elec. Eng.*). The registration of an integrating meter expressed as a percentage of the true value.

perception (*Bot.*). The first changes which must be assumed to occur when a plant is stimulated; they lead to the appropriate reaction in due course.

perception (*Psychol.*). The faculty of recognising external objects through the senses. Disorders of perception are *agnosia*, *illusion*, and *hallucination* (qq.v.).

perch (*Build.*). A measure of stonework, usually about 25 cub. ft.

perching (*Leather*). A process for stretching and softening a skin by working over it with a crutch stake, on the flesh side, while it is fixed to a horizontal pole (*perch*).

perching (*Textiles*). The examination of a fabric after weaving, and at various stages of finishing, for possible defects; the cloth is drawn over the *perch*—two spars or rollers a few feet apart, overhead—and the cloth hanging from the front roller is examined in a good light.

perchlor'ates (*Chem.*). Salts of perchloric acid, $HClO_4$. They are all soluble in water, though the potassium and rubidium salts are only slightly soluble. The alkali perchlorates are isomorphous with the corresponding permanganates.

perchlor-ether (*Chem.*). $(C_2Cl_5)_2O$, a solid mass, of camphor-like odour. It is the final substitution product of ether by chlorine, and can be obtained by the action of chlorine upon ether in the dark and in the cold.

perchloric acid (*Chem.*). $HClO_4$. A colourless fuming liquid, m.p. –112° C., b.p. 110° C, a powerful oxidising agent; harmful to the skin; monobasic, and forms perchlorates.

perchro'mates (*Chem.*). Recently three series of perchromates have been recognised: M_3CrO_8 (red salts), $MCrO_6$ (blue salts), and the brown salts, which are co-ordination compounds of the oxide CrO_4. The red perchromates are formed by the action of hydrogen peroxide on chromates in slightly alkaline solution, and on heating change back to chromates. The blue perchromates are formed by the action of hydrogen peroxide on chromates in acid solution.

perc'nosome (*Bot.*). An inclusion of obscure nature found in the cytoplasm of sperm mother cells in mosses.

percolating filter (*Sewage*). A bed of filtering material, such as broken stone or slag, used in the final or oxidising stage in sewage treatment. This stage consists in sprinkling the liquid sewage over the filter, through which it percolates. Also called a CONTINUOUS FILTER. See **contact bed.**

Percomor'phi (*Zool.*). A very large order of *Neopterygii* having bony fin-rays; pelvic fins thoracic in position, typically with one spine and five rays; perch-like forms of varied habits occurring in both salt and fresh waters. Bream, Perch, Mullet, Wrasse, Parrot-fishes, Bass, Snappers, Drums, Butterfly-fishes, Horse Mackerel, Dragonets.

percrystallisation (*Chem.*). The crystallisation of a substance from a solution which is being dialysed.

percurrent (*Bot.*). Said of a vein which runs through the whole length of a leaf but does not project beyond the tip.—(*Zool.*) Running from one end to the other of the body: extending from base to apex.

percussion (*Med.*). The act of striking with one finger lightly and sharply against another finger placed on the surface of the body, so as to determine, by the sound produced, the physical state of the part beneath.

percussion, centre of (*Phys.*). The same as *centre of oscillation* (q.v.).

percussion figure (*Min.*). A figure produced on the basal pinacoid or cleavage face of mica when it is sharply tapped with a centre punch. It consists of a six-rayed star, two rays more prominent than the others, lying in the unique plane of symmetry.

percussion fuse (*Ammunition*). A mechanism fitted either to the nose or in the base of H.E. shell to produce detonation on impact with an obstruction.

percussive boring (*Civ. Eng.*). The process of sinking a borehole in the earth by repeatedly dropping on the same spot, from a suitable height, a heavy tool which pulverises the earth and gradually penetrates.

percussive welding (*Elec. Eng.*). See **resistance percussive welding.**

perdistillation (*Chem.*). Distillation through a dialysing membrane.

pereion, per-ī'on (*Zool.*). In *Crustacea*, the thoracic region. Cf. *pleon.*

perei'opods (*Zool*). In higher *Crustacea*, the thoracic appendages modified as walking-legs. Cf. *pleopods.*

perenna'tion (*Bot.*). Survival from season to season, with generally a period of reduced activity between each season.

peren'nial (*Bot.*). A plant which lives for three or more years, and normally flowers and fruits at least in its second and subsequent years.

peren'nibran'chiate (*Zool.*). Retaining the gills throughout life, as certain *Amphibia.*

perfect (*Bot., Zool*). Having all organs in a functional condition.

perfect fluid (*Hyd.*). An ideal fluid which is incompressible, has a uniform density, and offers no resistance at all to distorting forces.

perfect frame (*Struct.*). A frame which has just sufficient members to keep it stable in equilibrium under any system of external forces acting at its joints, without change of shape.

perfect gas (*Chem., Phys.*). A gas which obeys the gas laws, particularly Boyle's law. The equation of state of a perfect gas is $pv=nRT$, where p is the pressure, v the volume, n the number of gram molecules, R the gas constant, and T is the absolute temperature. The nearest approach to a perfect gas is given by the 'permanent' gases, hydrogen, helium, oxygen, and nitrogen.

perfect paper (*Print.*). Reams of paper made up to a printer's ream, i.e. 516 sheets. Since the standardisation of paper quantities the term has been largely discarded.

perfect up (*Print.*). To print the second side of a sheet of paper, and so complete the section.

perfecting engine (*Paper*). A machine with fixed and moving bars which by interaction reduce knots and large particles in the pulp. In more modern practice large particles are discharged by centrifugal action. Also known as a REFINER.

perfector (*Print.*). A type of machine which prints both sides of the paper before delivery.

perfo'liate (*Bot.*). Said of a leaf base which surrounds a stem completely so that the latter appears to pass through it.

per'forate (*Bot.*). (1) Pierced by holes.—(2) Containing small rounded transparent dots which give the appearance of holes.

perforate (*Zool.*). Having apertures, said especially of shells: (of gastropod shells) having a hollow columella.

perforated bars (*Textiles*). Flexible strips of steel in the well of a lace machine which guide the warp threads.

perforating fibres (*Zool.*). See **Sharpey's fibres.**

perforation (*Bot.*). An interruption in the continuity of a stele not due to a leaf gap.

perforato'rium (*Zool.*). An *acrosome* (q.v.).

pergamenta'ceous (*Bot.*). Having the appearance or texture of parchment.

pargeting (*Build.*). See **pargetting.**

peri- (Greek *peri*, round). A prefix used in the construction of compound terms; e.g. *peridental*, surrounding a tooth.

***peri* position** (*Chem.*). The 1,8-position in naphthalene derivatives.

peria'nal (*Anat.*). The region round the anus.

perian'dra (*Bot.*). The leaves surrounding a group of antheridia in mosses.

per'ianth (*Bot.*). (1) A general term for calyx and corolla together.—(2) The outer whorl of a flower when it is not distinctly composed of sepals and petals.—(3) A cup-shaped or tubular sheath surrounding the archegonia of some liverworts.

per'iarteri'tis nodo'sa (*Med.*). A rare and usually fatal disease characterised by inflammation of the arteries, in the walls of which small inflammatory nodules appear.

periartic'ular (*Anat.*). Said of the tissues immediately around a joint.

perias'tron (*Astron.*). That point in an orbit about a star in which the body describing the orbit is nearest to the star; applied to the relative orbit of a double star.

per'iblast (*Zool.*). In meroblastic eggs, the margin of the blastoderm merging with the surrounding yolk. See also **periplasm.**

periblast'ic (*Zool.*). (Of cleavage) superficial.

per'iblem (*Bot.*). That portion of an apical meristem from which the cortex is ultimately formed.

peribran'chial (*Zool.*). Surrounding a gill or gills, as part of the atrium in *Urochorda.*

pericar'diomediastini'tis (*Med.*). Inflammation both of the pericardium and of the mediastinum.

pericardioper'itone'al canal (*Zool.*). In *Selachii*, a small aperture which puts the pericardial and peritoneal cavities into communication.

pericardiot'omy (*Surg.*). Incision of the pericardium.

pericardi'tis (*Med.*). Inflammation of the pericardium.

pericar'dium (*Zool.*). The space surrounding the heart: the membrane enveloping the heart.—*adj.* **pericardial.**

per'icarp (*Bot*). The wall of a fruit, if derived from the wall of the ovary.

pericen'tral siphon (*Bot.*). One of the tubular elements surrounding the central siphon in the thallus of certain red algae.

perichaetial bract, —kē'ti-al (*Bot.*). One of the leaves composing the perichaetium in a moss.

perichae'tine (*Zool.*). In *Oligochaeta*, a complete ring of chaetae surrounding the body.

perichae'tium (*Bot.*). (1) A cup-like sheath surrounding the archegonia in some liverworts.—(2) The group of involucral leaves around the archegonia of a moss.

perichondri'tis (*Med.*). Inflammation of the perichondrium, especially of the perichondrium of the cartilages of the larynx.

perichon'drium (*Zool.*). The envelope of areolar connective tissue surrounding cartilage.

perichor'dal (*Zool.*). Encircling or ensheathing the notocord.

perichordal centra (*Zool.*). Centra which arise by chondrification or ossification of tissues surrounding the notochord without invasion of the notochord sheath.

perichordal sheath (*Zool.*). The mesenchymatous layer surrounding the notochord in adult Cyclostomes and the very young forms of all other Vertebrates.

perichy'lous (*Bot.*). Having water-storage tissue surrounding the chlorophyll-containing tissue.

per'iclase (*Min.*). Native magnesia. Oxide of magnesium, which crystallises in the cubic system. It is commonly found in metamorphosed magnesian limestones, but when exposed to a damp atmosphere it hydrates to the much commoner brucite.

pericli'nal chimaera (*Bot.*). A chimaera in which one component is completely enclosed by the other.

periclinal wall (*Bot.*). A cell wall which is parallel to the surface of an apical meristem or other part of a plant.

per'icline (*Min.*). A variety of *albite* (q.v.) which usually occurs as elongated crystals which are twinned (*pericline law*).

pericoli'tis (*Med.*). Inflammation of the peritoneum covering the colon.

pericra'nium (*Zool*). The fibrous tissue layer which surrounds the bony or cartilaginous cranium in *Vertebrata.*

per'icycle (*Bot.*). A layer, one or more cells thick, of non-conducting cells at the periphery of a stele.

pericy'clic fibre (*Bot.*). A strand of sclerenchyma in the pericycle.

per'iderm (*Bot.*). A protective layer which develops on the outside of parts of plants which last for some time ; it consists of cork, the cork cambium, and, usually, some phelloderm.

periderm (*Zool.*). See **perisarc.**

perides'mium (*Zool*). The coat of connective tissue which ensheathes a ligament.

peridid'ymis (*Zool*). The fibrous coat which encapsules the testis in higher Vertebrates.

perid'ium (*Bot*) A general term for the outer wall of the fruit body of a fungus, when the wall is organised as a distinct layer or envelope surrounding the spore-bearing organs partially or completely.

per'idot (*Min.*). See **olivine** ; also **Brazilian peridot, Ceylonese peridot.**

perido'tite (*Geol.*) A coarse-grained ultramafic igneous rock consisting essentially of olivine, with other mafic minerals such as hypersthene, augite, biotite, and hornblende, but free from plagioclase. See **dunite, kimberlite, scyelite.**

peridu'ral (*Zool.*). Surrounding the dura mater.

perigastri'tis (*Med*). Inflammation of the external surface of the stomach (as a result usually of gastric ulcer), with the formation of adhesions between it and other abdominal viscera.

per'igee (*Astron.*). That point in the moon's orbit where the moon at one end of the apse line is nearest to the earth.

per'igone (*Bot.*). A perianth which is not clearly differentiated into calyx and corolla.

perigo'nial bract (*Bot.*). One leaf of the perigonium in mosses.

perigo'nium (*Bot.*). A group of leaves, often forming a flat rosette, around the base of the group of antheridia in mosses.

perigy'nium (*Bot.*). A group of leaves around the group of archegonia in mosses : a tubular sheath surrounding the archegonia in hepatics.

perigy'nous (*Bot.*). Said of a flower in which the receptacle is developed into a flange or into a concave to deeply concave structure, on which the sepals, petals, and stamens are borne ; the receptacle remains distinct from the carpels.—*n.* **perigy'ny.**

perihae'mal (*Zool.*). Said (1) of an anterior paired prolongation of the trunk coelom lying beside the dorsal blood-vessel in *Enteropneusta* ; (2) of a system of coelomic cavities in *Echinodermata* which derives its name from the fact that in *Asteroidea* its radial branches surround the radial blood-vessels.

perihaemal system (*Zool.*). The perihaemal coelomic cavities of *Echinodermata.* See **perihaemal.**

perihe'lion (*Astron.*). That point in the orbit of any heavenly body moving about the sun at which it is nearest to the sun ; applied to all the planets and also to comets.

perihepati'tis (*Med.*). Inflammation of the peritoneum covering the liver.

perikinet'ic (*Chem.*). Pertaining to the Brownian movement.

perikon detector (*Radio*). A crystal detector comprising a point-contact between crystals of zincite and bornite.

per'ilymph (*Zool.*). The fluid which fills the space between the membranous labyrinth and the bony labyrinth of the internal ear in Vertebrates.—*adj.* **perilymphatic.**

perimedul'lary zone (*Bot.*). See **medullary sheath.**

perim'eter (*Med.*). An instrument, in the form of an arc, for measuring a person's field of vision.

perimetri'tis (*Med.*). Inflammation of the peritoneum covering the uterus.

perime'trium (*Anat.*). The peritoneum covering the uterus.

perimy'sium (*Zool.*). The connective tissue which binds muscle fibres into bundles and muscles.

perinaeum (*Zool.*). See **perineum.**

perine'al glands (*Zool.*). In some Mammals, a pair of small glands beside the anus which secrete a substance with a characteristic odour.

perine'oplasty (*Surg.*). Repair of the perinaeum by plastic surgery.

perineor'rhaphy (*Surg.*). Stitching of the perinaeum torn during child-birth.

perinep'hric (*Anat.*). Said of the tissues round the kidney ; e.g. *perinephric* abscess.

perinephri'tis (*Med.*). Inflammation of the tissues round the kidney.

perine'um, perinae'um (*Zool.*). The tissue wall between the rectum and the urinogenital ducts in Mammals.—*adj.* **perineal, perinaeal.**

perineu'rium (*Zool.*). The coat of connective tissue which ensheathes a funiculus of nerve fibres.

perin'ium (*Bot.*). See **epispore.**

period (*Chem*). The elements between an alkali metal and the rare gas of next highest atomic number, inclusive, occupying one (*short p.*) or two (*long p.*) horizontal rows in the periodic system.

period (*Cinema.*). The division of time effected by the intermittent mechanism in a projector or camera.

See **moving— projection— stationary— period** or **periodic time** (*Phys.*). The time for one complete cycle of any periodic phenomenon. The period of oscillation of a vibrating body is the time between successive passages in the same direction across the position of rest; it is the reciprocal of the frequency.

period-luminosity curve (*Astron.*). A relationship between the period and absolute brightness, discovered by Miss Leavitt to hold for all Cepheid variables ; it enables the distance of any observable Cepheid to be found from observation of its light curve and apparent magnitude, this indirectly deduced distance being called the *Cepheid parallax.*

period of decay (*Chem.*). See **half-life.**

period of induction (*Chem.*). See **induction period.**

period of reverberation (*Acous.*). See **reverberation time.**

peri'odates (*Chem.*). Formed by the oxidation of iodates. Periodates form heteropolybasic compounds of the types $M_5[I(WO_4)_6]$ and $M_5[I(MoO_4)_6]$.

periodic acid, —ī-ŏ'dik (*Chem.*). H_5IO_6. A weaker acid and a stronger oxidising agent than iodic acid. May be regarded as orthoperiodic acid. Exists in deliquescent crystals. Resembles phosphoric acid in furnishing partially dehydrated acids.

periodic law, per-i-od'ik (*Chem.*). See **periodic system.**

periodic precipitation (*Chem.*). See **Liesegang phenomenon.**

periodic system (*Chem.*). A classification of the chemical elements, in nine groups, which demonstrates the fact that the physical and chemical properties of an element and its compounds vary periodically with the atomic number of the element. The system was perfected, as far as possible, from 1869 onwards, by Meyer and Mendeléev.

periodic table (*Chem.*). See **periodic system.**

periodic time. See **period.**

periodicity (*Biol.*). Rhythmic activity.

periodicity (*Phys*, *etc.*). See **frequency.**

perio'donti'tis (*Med.*). Inflammation of the membrane investing that part of the tooth seated in the jaw.

perioesophage'al, per-i-ē'—(*Zool.*). Encircling the oesophagus

peri-oöphori'tis (*Med.*). Inflammation of the peritoneum investing the ovary and of the cortex of the ovary.

periop'ticon (*Zool.*). The ganglionic plate or outer zone of the optic lobe of the brain in Insects.

perios'teum (*Zool.*). The covering of areolar connective tissue on bone.

periosti'tis (*Med.*). Inflammation of the periosteum.

perios'tracum (*Zool.*). The horny outer layer of a Molluscan shell.

periot'ic (*Zool.*). In higher Vertebrates, a bone enclosing the inner ear and formed by the fusion of the otic bones: petrosal.

peripharynge'al (*Zool*). Encircling the pharynx.

periph'eral. Situated or produced around the edge.

periphlebi'tis (*Med.*). Inflammation of the outer coat of a vein.

per'iphy'sis (*Bot.*). A hair-like extension of the end of a hypha, forming with many others of the same kind a pile-like lining in the ostiole of a perithecium.

per'iplasm (*Bot.*). The plasma lying just within the oögonial wall in some *Oomycetes*; it contains degenerating nuclei and contributes to the formation of the wall of the oöspore.—(*Zool.*) A bounding layer of protoplasm surrounding an egg just beneath the vitelline membrane, as in Insects.

periplasmo'dium (*Bot.*). The material produced by the breakdown of the tapetum in the sporangia of *Pteridophyta* and *Phanerogamae*; it helps in the nutrition of the developing spores.

per'iplast (*Zool.*). The cuticle of *Mastigophora*, formed by the conversion of the ectoplasm and containing myonemes.

peripneu'stic (*Zool.*). (Of *Insecta*) having the spiracles arranged in a row along each side of the body.

peripo'dial (*Zool.*). Surrounding an appendage.

per'iproct (*Zool.*). The area surrounding the anus.

periprocti'tis (*Med.*). Inflammation of the cellular connective tissue round the rectum.

perisalpingi'tis (*Med.*). Inflammation of the peritoneum covering the Fallopian tube.

per'isarc (*Zool*). In *Coelenterata*, the horny cuticular covering of a hydroid colony.

perisomat'ic (*Zool.*). Surrounding the body, as the *perisomatic cavity* of a developing *Sacculina*.

per'isperm (*Bot.*). A nutritive tissue present in some seeds, derived from the nucellus of the ovule.

perispleni'tis (*Med.*). Inflammation of the capsule of the spleen and of the peritoneum investing it.

per'ispore (*Bot.*). Remains of the contents of the cells of the tapetum, forming a deposit on the outside of the walls of the spores of ferns.

peris'sodac'tyl (*Zool.*). Having an odd number of digits.

peristal'tic (*Zool.*). Compressive: contracting in successive circles; said of waves of contraction passing from mouth to anus along the alimentary canal; cf. *antiperistaltic, systaltic.*—*n.* **peristal'sis.**

peris'terite (*Min.*). A whitish variety of albite, which is beautifully iridescent.

peristo'mate (*Bot.*). Possessing a peristome.

per'istome (*Bot.*). (1) A fringe of elongated teeth around the mouth of the capsule of a moss; the teeth are formed from persistent remains of unevenly thickened cell walls.—(2) A fringe of hyphae around the opening of the fruit body of some *Gasteromycetes.*—(3) A kind of lip arising as an outgrowth in some *Protophyta*, assisting in the ingestion of solid food.

peristome (*Zool.*). (1) The margin of the aperture of a gastropod shell.—(2) In some *Ciliophora*, a specialised food-collecting, frequently funnel-shaped, structure surrounding the cell-mouth.—(3) More generally, the area surrounding the mouth.

peristo'mial. *Adj.* from *peristome.*

peristo'mium (*Zool.*). In *Chaetopoda*, the somite in which the mouth is situated: in some forms (as *Nereis*) two somites have been fused to form the apparent peristomium.

per'istyle (*Arch.*). A colonnade encircling a building.

perisys'tole (*Zool.*). The period between diastole and systole in cardiac contraction.

perithe'cium (*Bot.*). A globose or flask-shaped structure with a sterile wall enclosing asci and paraphyses, the characteristic fruit body of the *Pyrenomycetes.* A true perithecium has an ostiole, but the term is often used to include the *cleistocarp*, which has no ostiole.

perithelio'ma (*Med.*). A tumour the cells of which are arranged in sheath-like fashion around thin-walled blood-vessels and are believed to arise from endothelium.

peritone'al cavity (*Zool.*). In Vertebrates, that part of the coelom containing the viscera; the abdominal body cavity.

peritone'um (*Zool.*). In Vertebrates, a serous membrane which lines the peritoneal cavity and extends over the mesenteries and viscera.—*adj.* **peritone'al.**

peritoni'tis (*Med.*). Inflammation of the peritoneum.

per'itreme (*Zool.*). In Insects, the annular sclerite which surrounds the external opening of a trachea: the margin of a shell aperture.

Peritrich'a (*Zool.*). An order of *Ciliata* the members of which are usually of sedentary habit; they possess a permanent gullet with undulating membrane; cilia are either absent or reduced to a single ring.

peritrich'ous *or* —tri'kus (*Bot.*). Said of bacteria when there are flagella distributed over the whole surface of the cell.

peritrichous (*Zool.*). Having an adoral wreath of cilia surrounding the cytopharynx.

peritro'phic (*Zool.*). Surrounding the gut; as the *peritrophic membrane* of Insects, a membranous tube lining the stomach and partially separated from the stomach epithelium by the peritrophic space.

Perkin's phenomenon (*Elec. Eng.*). The decrease which is observed to occur in the conductivity of a rod of graphite when a negative electric charge is imparted to it.

Perkin's synthesis (*Chem.*). The synthesis of unsaturated aromatic acids by the action of aromatic aldehydes upon the sodium salts of fatty acids in the presence of a condensing agent, e.g. acetic anhydride.

perknite (*Geol.*). A family of coarse-grained ultramafic igneous rocks which consist essentially of pyroxenes and amphiboles, but contain no feldspar.

perlite (*Geol.*). An acid and glassy igneous rock which exhibits perlitic structure.

Perlite Iron (*Met.*). See **pearlite iron.**

perlit'ic structure (*Geol.*). A structure found in glassy igneous rocks, which consists of systems of spheroidal concentric cracks produced during cooling.

Permali (*Diel.*). Beech plywood impregnated with bakelite. Electrical strength is 60-90 kV/cm. across the grain and 20-30 kV/cm. along the grain.

Permalloy (*Met.*). An alloy with high magnetic permeability at low field strength, and low hysteresis loss. Original composition nickel 78·5%, iron 21·5%, but the term is now used generally to cover numerous alloys produced by adding other elements, e g. copper, molybdenum, chromium, cobalt, manganese, etc. Some of these have special names, e.g. *Mu-metal, Perminvar, Hypernik* (qq.v.).

permanent adjustment (*Surv.*). An adjustment to a surveying instrument which need be made only occasionally, not each time the instrument is used, e.g. adjustment of line of collimation so that it may be parallel to the axis of the draw tube.

permanent collenchyma (*Bot.*). Functional collenchyma present in petioles and in the stems of herbaceous plants.

permanent dentition (*Zool.*). In Mammals, the second set of teeth, which replaces the milk dentition.

permanent finish (*Textiles*). A cloth finish which will maintain its appearance; the cloth will not shrink or develop dull spots after rain.

permanent hardness (*Chem.*). (Of water) the hardness which remains after prolonged boiling is *permanent hardness*. Due to the presence of calcium and magnesium chlorides or sulphates in the water.

permanent hybrid (*Gen.*). A hybrid which breeds true because some types of possible offspring are prevented from developing by the operation of lethal factors.

permanent load (*Struct.*). The dead loading on a structure, consisting of the weight of the structure itself and the fixed loading carried by it, as distinct from any moving loads.

permanent magnet (*Elec. Eng.*). A magnet of hard steel which, having once been magnetised, retains the greater portion of its magnetisation.

permanent-magnet instrument (*Elec. Eng.*). An electrical measuring instrument of the moving-coil type in which the necessary magnetic field is provided by a permanent magnet.

permanent mould (*Met*). A metal mould (other than an ingot mould) used for the production of castings, e.g. in die-casting.

permanent set (*Eng.*). (1) An extension remaining after load has been removed from a test piece, when the elastic limit has been exceeded.—(2) Permanent deflection of any structure after being subjected to a full load.

permanent tissue (*Bot.*). Tissue consisting of fully differentiated elements.

permanent way (*Civ. Eng.*). The ballast, sleepers, and rails forming the finished track for a railway, as distinct from a *temporary way*.

permanent white (*Dec.*). A name given to both zinc white and blanc fixe.

permanent wilting (*Bot.*). Wilting from which a plant does not recover if placed in a saturated atmosphere.

perman'ganates (*Chem.*). Oxidising agents, the best known being *potassium permanganate* (q.v.), the commonest salt of manganese.

permangan'ic acid (*Chem.*). $HMnO_4$. Powerful oxidising agent. Decomposes in the presence of organic matter.

permeability (*Phys.*). The rate of diffusion of gas or liquid under a pressure gradient through a porous material. Expressed, for thin material, as the rate per unit area, and for thicker material, per unit area of unit thickness.

permeability (*Elec. Comm.*). The ratio B/H for a magnetised material within a current-carrying coil, where B is the flux density produced, and H is the magnetising force, dependent on the ampere-turns per unit length of coil.

See **differential— incremental— initial—**

permeability (*Elec. Eng.*). ABSOLUTE PERMEABILITY, the ratio of the magnetic flux density produced in a medium to the magnetising force producing it.—RELATIVE PERMEABILITY, the ratio of the magnetic flux density produced in a medium to that which would be produced in a vacuum by the same magnetising force.

permeability bridge (*Elec. Eng.*). A device for measuring the magnetic properties of a sample of magnetic material, fluxes in different branches of a divided magnetic circuit being balanced against each other.

See **Ewing— Holden—**

permeability tuning (*Radio*). A method of tuning a resonant circuit by varying the value of the inductance by means of a movable iron core.

permeameter, per-me-am'— (*Elec. Eng.*). An instrument for measuring magnetic permeability.

See **Drysdale— traction—**

per'meance (*Elec. Eng.*). The reciprocal of the reluctance of a magnetic circuit.

Permian System (*Geol.*) That system of rocks deposited between the Carboniferous and Triassic Periods of geological time, the type area being Perm in Russia. Permian rocks include the Magnesian Limestone of N.E. England, the Brockram and the Penrith Sandstone, as well as important gypsum and salt deposits, the whole assemblage bearing evidence of accumulation under arid, desert conditions.

Permic (*Geol.*). Equivalent to *Permian* (see above); comprises the continental Dunkard Series, essentially similar to the Pennsylvanian. See also **Guadaloupian Group.**

Perminvar (*Met.*). An alloy of the Permalloy type, developed to give constant permeability over a range of field strengths. Typical compositions are: nickel 45%, cobalt 25%, and iron 30%; and nickel 45%, cobalt 25%, iron 23%, and molybdenum 7%.

permissive waste (*Build.*). Dilapidations resulting from the neglect of a tenant.

permittivity (*Elec. Eng*). ABSOLUTE PERMITTIVITY, the ratio of the electric displacement of a medium to the electric force producing it.—RELATIVE PERMITTIVITY, the ratio of the electric flux density produced in a medium to that which would be produced in a vacuum by the same electric force. Also called SPECIFIC INDUCTIVE CAPACITY, DIELECTRIC CONSTANT.

permo (*Textiles*). A lustre dress fabric with a crêpe-like appearance; the weft is hard-spun Botany worsted and the warp lightly spun mohair and cotton. The cotton is removed, after weaving, by carbonising or other process of extraction.

Per'moglaze (*Paint.*). Trade-name for a liquid which on application to a wall produces a hard, transparent, non-absorbent, glass-like surface.

Per'mutite (*Min.*). A trade-name for artificial *natrolite* (q.v.), a zeolite used for water-softening, as it readily exchanges lime in the water for soda in its own structure. See **base exchange.**

permutoid (*Chem.*). Involving a double decomposition between a soluble substance and an insoluble one.

pernicious anaemia (*Med.*). Addison's anaemia. A disease characterised by anaemia, abnormalities in the size and shape of red-blood corpuscles, *achylia gastrica* (q.v.), and changes in the nervous system, due to the absence, from the body, of an anti-anaemic factor normally present in liver.

Peromedu'sae (*Zool.*). An order of *Scyphozoa* comprising active medusoid marine forms with four inter-radial tentaculocysts; alternation of generations does not occur.

per'onate (*Bot.*). Having the stipe, particularly at the base, covered by a thick felted sheath.

perone'us, peronae'us (*Zool.*). In Vertebrates, the fibula: in Birds, a leg muscle.—*adj.* **perone'al.**

pero'ral (*Zool.*). Surrounding the mouth; as the *peroral membrane* of *Ciliophora*, which surrounds the cytopharynx.

perov'skite (*Min.*). Titanate of calcium, which may crystallise in the cubic system or else in the orthorhombic (to which system its optical characters conform). An accessory mineral in melilite-basalt.

perox'idases (*Chem.*). Enzymes which activate hydrogen peroxide and induce reactions which hydrogen peroxide alone would not effect.

perox'ides (*Chem.*). (1) Oxides whose molecules contain two atoms of oxygen linked together and which yield hydrogen peroxide with acids, e.g. barium peroxide,  . Organic peroxides are known, e.g. diethyl peroxide, $C_2H_5{\cdot}O{\cdot}O{\cdot}C_2H_5$.—(2) The term is used loosely for certain oxides in which the valency of the central atom is greater than the usual value, e.g. lead dioxide or peroxide, $O{=}Pb{=}O$.

per'pend, perpend-stone (*Masonry*). See **through stone.**

per-radius (*Zool.*). In *Coelenterata*, one of the four primary radii.

perrhe'nates (*Chem.*). See **rhenium oxides.**

perrhe'nic acid (*Chem.*). See **rhenium oxides.**

perron (*Build.*). An external staircase to a building, leading from ground-level to the first floor.

Per'seids (*Astron.*). A swarm of meteors whose orbit round the sun is crossed by the earth on August 11, on or about which date a shower with its radiant point in the constellation Perseus may be expected.

persevera'tion (*Med.*). Meaningless repetition of an action or utterance.

Persian (*Leather*). The terms *Persian goat* and *Persian sheep* are used in the trade for goat and sheep skins tanned in India.

persistence of vision (*Optics, Cinema.*). The ability of the eye to retain perception for a short time after the stimulus has been removed; thus the intermittent flashes of pictures on a cinematograph screen give the illusion of a continuously moving image.

persistent (*Zool.*). Continuing to grow or develop after the normal period for the cessation of growth or development, as teeth; said also of structures present in the adult which normally disappear in the young stages.

persistent perianth (*Bot.*). A perianth which remains unwithered, and often enlarged, around the fruit.

person (*Zool.*). An individual organism.

persona (*Psychol.*). A term used by Jung to denote the outermost part of consciousness which is in relation to the outside world; it is viewed as the expression of the personality of the individual. It contrasts strongly with the *anima* or *animus* (qq.v.), which is the unconscious collective aspect of the self. Also MASK.

personal equation. The correction which is to be applied to the reading of an instrument on account of the tendency of the observer to read too high or too low. For a given observer and instrument, the personal equation is usually constant.

personality (*Psychol.*). The integrated organisation of all the psychological, intellectual, emotional, and physical characteristics of an individual, especially as they are presented to other people.

per'sonate (*Bot.*). Said of a two-lipped corolla which has some likeness to a mask or to the face of an animal, as in the snapdragon.

persorption (*Chem.*). The extremely effective absorption of a gas by a solid, with the formation of an almost molecular mixture of the two substances.

perspective (*Acous.*). See **acoustic perspective.**

perspective, aerial (*Photog.*). See **aerial perspective** and **atmosphere.**

Perthe's disease (*Med.*). Osteochondritis deformans juvenilis. A deformed condition of the epiphysis of the head of the femur in young children, associated with a painful limp.

perthite (*Min.*). The general name for megascopic intergrowths of potash- and soda-feldspars, both components having been miscible to form a homogeneous compound at high temperatures, but the one having been thrown out of solution at a lower temperature, thus appearing as inclusions in the other. See also **microperthite.**

perth'osite (*Geol.*). A type of soda-syenite consisting to a very large extent of perthitic feldspars, occurring at Ben Loyal and Loch Ailsh in Scotland.

perturbations (*Astron.*). Those departures from regularity in the orbital motion of a planet, comet, or other body, caused by the disturbing gravitational force of another body.

per'tusate (*Bot.*). Perforated: pierced by slits.

pertus'sis (*Med.*). Whooping cough. An acute infectious disease, due to infection with the bacillus *Haemophilus pertussis*; characterised by catarrh of the respiratory tract, also by periodic, recurring spasms of the larynx, which end in the prolonged crowing inspiration known as the 'whoop.'

Peru balsam (*Chem.*). See **balsam of Peru.**

pervaporation (*Chem.*). The evaporation of a solvent from the outside of a semi-permeable or dialysing membrane.

perversion (*Psycho-path.*). Any pathological state in which there is a deviation from the normal method of sexual gratification with the love-object; exemplified in sadism, masochism, fetishism, homosexuality, etc.

pes, pēz (*Zool.*). The podium of the hind limb in land Vertebrates.—*pl.* **pedes.**

pes ca'vus, pes arcua'tus (*Med.*). Claw foot. A condition of the foot in which the balls of the toes approximate to the heel, so that the foot is shortened and the instep abnormally high.

pes pla'nus, pes valgus (*Med.*). Flat foot. A condition of the foot in which the longitudinal arch is lost, so that the foot is flattened and turned outwards.

pes'sary (*Med.*). An instrument worn in the vagina to remedy displacements of the uterus: any occlusive or medicated appliance for insertion into the vagina to prevent conception.

pes'sulus (*Zool.*). In Birds, an osseous band which traverses the trachea horizontally at the point of origin of the bronchi, forming a vertical septum between the two bronchial apertures.

pestle (*Chem.*). A club-shaped instrument, of glass or porcelain, for grinding and pounding solids in a mortar.

pet cock (*Eng.*). A small plug-cock for draining condensed steam from steam-engine cylinders, or for testing the water-level in a boiler.

petal (*Bot.*). One of the leaves (often coloured) composing the corolla.

pet'alite (*Min.*). A silicate of lithia and aluminium which crystallises in the monoclinic system. Crystals are rare.

petalo'dy (*Bot.*). The transformation of stamens into petals.

pet'aloid (*Bot., Zool.*). Looking like a petal: petal-shaped, as the dorsal parts of the ambulacra in certain *Echinoidea*.

petaloma'nia (*Bot.*). An abnormal increase in the number of petals.

petas'ma (*Zool.*). A curtain-like structure of certain Prawns (*Penaeidae, Sergestidae*) formed by the union of lobes projecting inwards from the base of the first pair of pleopods in the male.

pete'chia (*Med*). A small red spot due to minute haemorrhage into the skin.

pete'chial fever (*Vet.*). See **purpura haemorrhagica.**

Peterlineum (*Build.*). A liquid, similar to creosote, applied to timber as a preservative.

Petersburg standard (*Timber*). 165 cubic feet.

Petersen coil (*Elec. Eng.*). A reactor placed between the neutral-point of an electric-power system and earth. The value of the reactance is such that, when an earth fault occurs, the current through the reactor exactly balances the capacitance current flowing through the fault, so that any tendency to arcing is suppressed. Also called ARC-SUPPRESSION COIL.

pe'tiolate (*Bot.*). Having a leaf stalk.

pe'tiole (*Bot.*). The stalk of a leaf.

petiole (*Zool*). The narrow stalk-like zone formed by the constriction of the second abdominal segment in certain *Hymenoptera* (*Apocrita*); cf. *propodeum.*—*adj.* **petiolate.**

pe'tiolule (*Bot.*). The stalk of a leaflet of a compound leaf.

petit mal, pe-tĕ mal (*Med*) A form of epileptic attack in which convulsions are absent and certain transient phenomena, e.g. brief loss of consciousness, occur.

petrail (*Carp*). A heavy beam in the framing of a timber building.

petri-, petro- (Greek *petros*, stone) A prefix used in the construction of compound terms; e.g. *petrifaction* (q.v.), *petro-squamosal*, pertaining to the squamosal and the petrous part of the temporal

petrifaction (*Geol*). The term applied to any organic remains which have been changed in composition by molecular replacement but whose original structure is in large measure retained.

petrified wood (*Min*). Wood which has had its structure replaced by calcium carbonate, silica, or agate in solution. Many of the original minute structures are preserved.

petrographic province (*Geol*). The name given, by Professor Judd, to a group of igneous rocks which have originated during a definite cycle of igneous activity. They usually possess certain chemical, mineral, and textural similarities which suggest a common origin and evolution. As a group of rocks cannot constitute a 'province,' the term *comagmatic assemblage* is much to be preferred.

petrog'raphy (*Geol.*). Systematic description of rocks, based on observations in the field, on hand specimens, and on thin microscopic sections. Cf. *petrology*.

petrol or **gasolene** (*Fuels*). The lightest product obtained by the fractional distillation of petroleum, or from synthesised hydrocarbon oils; sp. gr. at 60° F. ranging from ·720 (aviation petrol) to ·745, and flash-point ranging from 70° F. to less than 100° F. The fuel is generally a blend of natural and cracked petrol; used in light combustion-engines. See **cracking.**

petrol-electric generating set (*Elec. Eng.*). A small generating plant using a petrol engine as the prime-mover.

petrol engine (*I.C. Engs.*). A reciprocating engine, working on the Otto 4-stroke or the 2-stroke cycle, in which the air charge is carburetted by a petrol spray from a carburettor, or alternatively by *direct petrol injection* (q.v.). In 4-stroke engines, inlet and exhaust valves control the entry of charge and the exit of exhaust gases; in 2-stroke engines the piston is usually made to act both as inlet and exhaust valve. Ignition of the combustible mixture is effected by sparking-plug, operated either by coil and battery or by magneto.

petrol pump (*Automobiles*). (1) A small pump of the diaphragm type, operated either mechanically from the camshaft, or electrically. It draws petrol from the tank and delivers it to the carburettor.—(2) A pump at a petrol station for delivering a supply of petrol to an automobile or other vehicle. The quantity is indicated on a dial.

petroleum (*Chem*). Crude mineral hydrocarbon oils obtained from natural oil-wells in many parts of the world—in Texas, California, Mexico, Venezuela, Trinidad, Persia, Iraq, Russia, Rumania, etc. It consists chiefly of saturated and unsaturated aliphatic, and partly of aromatic, hydrocarbons. Petroleum from some sources (e.g. Russia) contains a large proportion of naphthenes. For commercial use it is refined and distilled to remove sulphur, resinous matter, etc. See also **liquefied petroleum gases*.**

petroleum ether (*Chem.*). See **gasolene.**

petroleum jelly or **petrolatum.** A mixture of petroleum hydrocarbons; used for making emollients, for impregnating the paper covering of electric cables, and as a lubricant. See **paraffin (liquid).**

petrology (*Geol.*) That study of rocks which includes consideration of their mode of origin, present conditions, chemical and mineral composition, their alteration and decay.

Petropine (*Build.*). A composition used in forming jointless flooring.

petro'sal (*Zool.*). In higher Vertebrates, a bone formed by the fusion of the various otic bones.

pet'rous (*Zool*). Stony, hard (as a portion of the temporal bone in higher Vertebrates): situated in the region of the petrous portion of the temporal bone.

petticoat (*Elec. Eng.*). One of the umbrella-shaped shields commonly provided on pin-type insulators in order to increase the length of the leakage path which will remain dry under rain conditions.

petticoat insulator (*Elec. Eng.*). A pin-type insulator equipped with one or more petticoats.

petuntse, —oont'se (*Pot.*) China stone, a fusible feldspathic substance, represented in England by 'moorstone.'

petzite (*Min.*). A telluride of silver and gold. It is steel-grey to black and often shows tarnish.

pewter (*Met*). An alloy containing 80-90% of tin and 10-20% of lead. Extensively used in the past for household utensils and ornamental articles. Now little used.

Peyer's patches (*Zool.*). In higher Vertebrates, lymph follicles occurring on the walls of the intestine and consisting of masses of reticular tissue containing numerous lymphocytes. Also called SOLITARY FOLLICLES, SOLITARY GLANDS.

peziz'oid (*Bot.*). Resembling a cup-shaped apothecium.

P.F. (*Build.*). Abbrev. for *plain face.*

pF., pf. (*Elec. Eng.*). Abbrev. for *pico-farad* (q.v.).

Pfann'kuch protection (*Cables*). A protective system for use with the cables of an electric-power system; some of the strands of the cable are lightly insulated from the others and have an e.m.f. applied between them, this e.m.f. causing a current to flow and operate relays if the insulation is destroyed by a fault. The system is widely used in Germany.

P.F.I. & R. (*Build.*). Abbrev. for *part fill in and ram.*

Pflüger's egg-tubes (*Zool.*). In higher Vertebrates, rounded strings of epithelium cells growing inwards into the stroma of the ovary from the germinal epithelium.

Pflüger's rule (*Cyt.*). The mitotic figure elongates in the direction of least resistance.

Ph (*Chem.*). A symbol for the phenyl radical C_6H_5-.

***p*H-value** (*Chem.*). The logarithm, to the base 10, of the reciprocal of the concentration of hydrogen ions in an aqueous solution. It is a convenient method of expressing small differences in the acidity or alkalinity of nearly neutral solutions; such differences are of great importance in many biological and electrolytic processes. See **hydrogen ion concentration.**

φ (*Chem.*) A symbol for the phenyl radical C_6H_5—.

φ- (*Chem.*). A symbol for *amphi-*, i.e. containing a condensed double aromatic nucleus substituted in the 2.6 positions.

phacel'la (*Zool.*). In some *Coelenterata*, a gastral filament bearing nematocysts.

phacel'lite (*Min.*). See **kaliophilite.**

phacoi'dal structure (*Geol.*). A rock structure in which mineral or rock-fragments of lens-like form are included. The term is applicable to igneous rocks containing softened and drawn-out inclusions; also to metamorphic rocks such as crush-breccias and crush-conglomerates; and to certain gneisses. (Greek *phakos*, lentil; see **lens.**)

phac'olite (*Min.*). A mineral of the zeolite group, related to chabazite; so named from its lens-like crystal form.

phac'olith (*Geol.*). A minor intrusion of igneous rock occupying the crest of an anticlinal fold. Its form is due to the folding, hence it is not the cause of the uparching of the roof (cf. *laccolith*). The type example is the Corndon phacolith in Shropshire, England.

phacomala'cia (*Med.*). Pathological softening of the lens of the eye.

phaeic, phaeochrous, fē'ik, fē-ōk'rus (*Zool.*). Dusky.—*n.* **phaeism.**

phae'nogam'ous (*Bot.*). Relating to a flowering plant.

phae'nogams (*Bot.*). See **Phanerogamae.**

phaeo-, pheo- (Greek *phaios*, dusky). A prefix used in the construction of compound terms.

phaeochro'macyto'ma (*Med.*). See **paraganglioma.**

phae'ochrome (*Zool.*). Chromaphil.

phaeochrous, fē-ōk'rus (*Zool.*). See **phaeic.**

phaeo'dium (*Zool.*). In some *Radiolaria*, a greenish or brownish mass, situated at the main opening of the central capsule; it consists of food-material and excretory substances.

Phae'ophy'ta, Phae'ophy'ceae (*Bot.*). The brown seaweeds. A large group of algae, almost all marine, in which the green chlorophyll is more or less masked by a yellow pigment, fucoxanthin, so that the plants look brownish. The thallus may be of simple construction, but it is often very complicated; some members of the group are the largest algae known, and may reach many feet in length.

phae'oplast (*Bot.*). The chromatophore of the *Phaeophyceae.*

phae'ospo'rous (*Bot.*). Having dark-coloured one-celled spores.

phag-, phago- (Greek *phagein*, to eat). A prefix used in the construction of compound terms; e.g. *phagocyte.* The corresponding suffix is *-phagy*; e.g. *oliphagy,* the habit of feeding on a restricted range of food plants.

phagedae'na, phagede'na (*Med.*). Rapidly spreading and destructive ulceration.

phag'ocyte (*Zool.*). A cell which exhibits amoeboid phenomena, i.e. spontaneous change of form, ability to throw out pseudopodia (and so to engulf foreign bodies), and to migrate from place to place. See **opsonin.**

phagocyto'sis (*Zool.*). Destruction of tissue-cells or microparasites by the action of phagocytes.

phalan'ges (*Zool.*). In Vertebrates, the bones supporting the segments of the digits: fiddle-shaped rings composing the reticular lamina of the organ of Corti.—*sing.* **phalanx.**

Phalangid'ea (*Zool.*). See **Opiliones.**

phalanx (*Zool.*). See **phalanges.**

phallus (*Zool.*). The penis of Mammals: the primordium of the penis or clitoris of Mammals.

phanero- (Greek *phaneros*, visible). A prefix used in the construction of compound terms; e.g. *phanerocrystalline* (q.v.).

Phan'eroceph'ala (*Zool.*). A subclass of *Polychaeta* in which the body somites are similar, eyes, cirri, and tentacles usually occur, and the prostomium is not hidden by the peristomium.

phan'erocodon'ic (*Zool.*). Detached and free-swimming; said of a medusoid person.

phan'erocrys'talline (*Min.*). Said of an igneous rock in which the crystals of all the essential minerals can be discerned by the naked eye.

Phan'erogam'ae, Phan'erogam'ia (*Bot.*). A large group of higher plants, including about 200,000 species, which produce flowers in which the sexual organs are readily discerned. They are divided into *Gymnospermae*, with seeds produced naked on the surface of a scale, and *Angiospermae*, with seeds enclosed in an ovary.

phan'erogam'ous (*Bot.*). Relating to a flowering plant.

phan'erophyte (*Bot.*). A tree or shrub with the resting buds freely exposed to the air on branches raised above the surface of the soil.

phantasy (*Psychol.*). A mental state of preoccupation with thoughts and ideas which are associated with certain desires unobtainable in reality.

phantom antenna (*Radio*). See **dummy antenna.**

phantom circuit (*Teleph.*). A telephonic circuit using pairs of conductors in parallel for the go and return circuits, the pairs of conductors each forming a side-circuit.

phantom loading (*Teleph.*). The loading which is inserted in phantom circuits, the two legs of each side-circuit being taken round the coil as if one winding; resistance is added to the side-circuit, but not inductance.

phar'macolite (*Min.*). A hydrous arsenate of calcium which crystallises in the monoclinic system. It is a product of the late alteration of mineral deposits which carry arsenopyrite and the arsenical ores of cobalt and silver.

pharmacology (*Med.*). The scientific study of drugs (Greek *pharmakon*, drug) and their action.—*n.* **pharmacol'ogist.**

phar'macosid'erite (*Min.*). Hydrated arsenate of iron. It crystallises in the cubic system, and is a product of the alteration of arsenical ores.

pharos (*Civ. Eng.*). A *lighthouse* (q.v.).

pharyng-, pharyngo- (Greek *pharyngx*, gullet). A prefix used in the construction of compound terms; e.g. *pharyngobranchial*, pertaining to the pharynx and the gills.

pharyngis'mus (*Med.*). Spasm of the muscles of the pharynx.

pharyngi'tis (*Med.*). Inflammation of the pharynx.

pharyngobran'chial (*Zool.*). The uppermost element of a branchial arch.

pharyngople'gia (*Med.*). Paralysis of the muscles of the pharynx.

pharyng'oscope (*Med.*). An instrument for viewing the pharynx.

pharyngot'omy (*Surg.*). Incision into the pharynx.

pharynx (*Zool.*). In Vertebrates, that portion of the alimentary canal which intervenes between the mouth cavity and the oesophagus and serves both for the passage of food and the performance of respiratory functions: in Invertebrates, the corresponding portion of the alimentary canal lying immediately posterior to the buccal cavity, usually having a highly muscular wall.—*adj.* **pharynge'al.**

phase (*Astron.*). (Of the moon) the name given to the changing shape of the visible illuminated surface of the moon due to the varying relative positions at the earth, sun, and moon during the synodic month. Starting from *new moon*, the phase increases through *crescent*, *first quarter*, *gibbous*, to *full moon*, and then decreases through *gibbous*, *third quarter*, waning to *new moon* again.

phase (*Chem.*). The sum of all those portions of a material system which are identical in chemical composition and physical state.

phase (*Elec. Eng.*). One of the windings or circuits of a piece of polyphase electrical apparatus or system.

See **single-phase**
two-phase
three-phase
polyphase
in-phase
out-of-phase
phase-angle.

phase advancer (*Elec. Eng.*). A machine connected in the secondary circuit of an induction, in order to improve its power factor.

See **Kapp—**
Le Blanc—
Scherbius—
Walker—

phase-angle (*Elec. Eng.*). (1) The angle between the two vectors representing two harmonically varying quantities (e.g. a current and a voltage) having the same frequency.—(2) The phase difference between the primary current (or voltage) and the reversed secondary current (or voltage) of a current (or voltage) transformer. Sometimes called PHASE-ANGLE ERROR.

phase-angle error (*Elec. Eng.*). See **phase-angle.**

phase changer (*Elec. Eng.*). A machine for transferring power from a system having one number of phases to a system having another number of phases. Also called a ROTARY PHASE CONVERTOR.

phase compensation (*Elec. Comm.*). The use of networks for correcting the varying phase delay with frequency which arises in long transmission lines and which results in delay or phase distortion.

phase compensator (*Elec. Comm.*). An electrical non-dissipative network introduced into a communication circuit for adjusting the phase delay in the system.

phase constant (*Elec. Comm.*). The same as *wavelength constant*. See **image phase constant.**

phase correction (*Elec. Comm.*). The same as *phase compensation*.

phase delay (*Elec. Comm.*). The delay, in radians or seconds, for the transmission of a wave of a single frequency through the whole or part of a communication system.

phase delay distortion (*Elec. Comm.*). Distortion of a signal transmitted over a long line, so that the difference in time of arrival of the components of a complex wave is noticeable.

phase difference (*Elec. Eng., etc.*). The difference between the phase-angles of two harmonically varying quantities. Also called PHASE DISPLACEMENT.

phase distortion (*Elec. Comm.*). Distortion in the wave-form of a transmitted signal on account of the non-linear relation of the wavelength constant of a line, or the image phase constant of an amplifier or network, with frequency.

phase equalisation (*Elec. Comm.*). See **phase compensation.**

phase indicator (*Elec. Eng.*). See **power-factor meter.**

phase intercept (*Elec. Comm.*). The phase delay, in radians for zero frequency, for the whole or part of a transmission system; obtained by extending the curve for the phase delay with respect to frequency, as measured or calculated.

phase intercept distortion (*Elec. Comm.*). Distortion in a received signal wave-form solely because the phase delay for zero frequency is not an exact multiple of π.

phase meter (*Elec. Eng.*). See **power-factor meter.**

phase modifier (*Elec. Eng.*). A term sometimes used to denote a synchronous condenser when this is used for varying the power factor of the current in a transmission line in order to effect voltage regulation.

phase modulation (*Radio*). Periodic variation in the phase of a high-frequency current or voltage in accordance with a lower impressed modulating frequency. It usually occurs as an unwanted by-product of amplitude modulation, but can be independently produced.

phase reaction (*Chem.*). A reaction involving a change in the proportions of the phases present in a system. It takes place at constant temperature and involves the absorption or evolution of heat.

phase retardation (*Elec. Comm.*). The same as *phase delay*, but usually expressed in radians, whereas phase delay generally refers to time in seconds.

phase reversal (*Chem.*). An interchange of the components of an emulsion; e g. under certain conditions an emulsion of an oil in water may become an emulsion of water in the oil.

phase rule (*Chem.*). A generalisation of great value in the study of equilibria between phases. In any system, $P+F=C+2$, where P is the number of phases, F the number of *degrees of freedom* (1, q.v), C the number of components.

phase-sequence (*Elec. Eng.*). The order in which the phase voltages of a polyphase system reach their maximum values. If the phases of a three-phase system are given the standard colourings of Red, Yellow, Blue, this phase-sequence is said to be a *positive phase-sequence*.

See **negative—**
zero—

phase-sequence indicator (*Elec. Eng.*) An instrument for determining the phase-sequence of a polyphase system.

phase shifting transformer (*Elec. Eng.*). A specially designed transformer so constructed that the phase-angle between the primary and secondary voltages is not zero or 180°. In some cases the phase-angle between the two may be made variable.

phase splitter (*Elec. Eng.*). A machine or other device whereby a polyphase system of voltages may be obtained from a single-phase supply.

phase swinging (*Elec. Eng.*). Periodic variations in the phase-angle between two synchronous machines running in parallel.

phase swinging (*Television*). Lack of synchronism throughout the individual cycles of the frame frequency generators at the transmitting and receiving ends of a television system, causing the received picture to wander over the screen.

phase velocity (*Radio*). The velocity of propagation of any one phase state, such as a point of zero instantaneous field, in a steady train of sinusoidal waves. It may differ from the velocity of propagation of the disturbance, or group velocity, and, in the case of transmission through ionised air, may exceed that of light. Cf. *group velocity*. Also called WAVE VELOCITY.

phase voltage (*Elec. Eng.*). See **voltage to neutral.**

phased (*Cinema.*). Said of camera drives when they are switched on to speed-controlled mains, ready to be brought up to speed by starting the generator which supplies these mains.

phaseo′liform (*Bot.*). Shaped like a beam.

phasmajec′tor (*Television*). A device for providing a standard video signal for testing television circuits, the signal being thermionically generated.

phellan′drene (*Chem.*). $C_{10}H_{16}$, a terpene existing in a *d*- and *l*-form, which is Δ-1,5-terpadiene, b.p. 62° C. (12 mm.).

phellem (*Bot.*). The tissue formed externally to the phellogen; cork.

phel'loderm (*Bot.*). A layer or layers of thin-walled cells, with cellulose walls, often containing starch and sometimes chloroplasts, formed internally to the phellogen; a kind of secondary cortex.

phel'logen (*Bot*). The layer of meristematic cells lying a little inside the surface of a root or stem, forming cork on its outer surface and phelloderm internally; the cork cambium.

phelloid (*Bot*). A crust of non-suberised or weakly suberised cells present in the surface of some plants, replacing true cork.

phenacetin, fen-as'— (*Chem.*). $C_2H_5O{\cdot}C_6H_4{\cdot}NH{\cdot}CO{\cdot}CH_3$, aceto-*p*-phenetidine, colourless crystals, m.p. 135° C., used as an antipyretic.

phenakis'toscope (*Photog*). A development of the zoetrope, using a disc and a mirror; images on the disc are seen intermittently and give the illusion of animated motion.

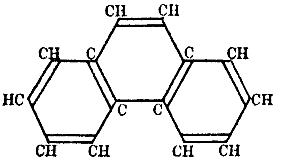
phen'akite (*Min.*). An orthosilicate of beryllium, crystallising in the hexagonal system. It is commonly found as a product of pneumatolysis. Sometimes cut as a gemstone, having great brilliance of lustre but lacking fire. The name (Greek, 'the deceiver') refers to the frequency with which it has been confused with quartz.

phenan'thraquinone' (*Chem*). A diketone obtained from phenanthrene and chromic acid. It has the formula:

$$\begin{array}{l} C_6H_4-CO \\ \;| \qquad\;\; | \\ C_6H_4-CO \end{array}$$

It crystallises in orange needles; m.p. 200° C.

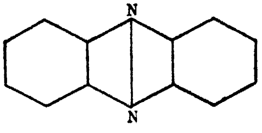
phenan'threne (*Chem.*). $C_{14}H_{10}$, white, glistening plates, m.p. 99° C., b.p. 340° C.; its solutions show a blue fluorescence. It has the formula:



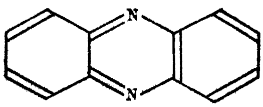
It occurs in coal-tar, and can be synthesised by various reactions, the most important of which is the synthesis by Pschorr, based upon the condensation of *o*-nitrobenzaldehyde with sodium phenylacetate yielding α-phenyl-*o*-nitrocinnamic acid, which on reduction, diazotisation, and subsequent elimination of N_2 and H_2O, yields phenanthrene-10-carboxylic acid. This acid yields phenanthrene on distillation. The 9-10-phenanthrene bridge is readily attacked by reagents, yielding diphenyl derivatives.

phe'nates (*Chem.*). Salts formed by phenols, e.g. C_6H_5ONa, sodium phenate.

phen'azine (*Chem.*). A heterocyclic compound, which can be considered as anthracene in which two CH groups have been replaced by two N atoms. It has the formula:



or



It crystallises in yellow needles, m.p. 171° C., and can be readily sublimed.

***p*-phenet'idine** (*Chem.*). $H_2N{\cdot}C_6H_4{\cdot}OC_2H_5$, the ethyl ether of *p*-aminophenol, basis for a number of pharmaceutical preparations, e g. phenacetin, $H_3C{\cdot}CO{\cdot}NH{\cdot}C_6H_4{\cdot}OC_2H_5$.

phen'etole (*Chem.*). $C_6H_5{\cdot}O{\cdot}C_2H_5$, phenyl ethyl ether, a colourless liquid of pleasant odour, b.p. 172° C.

phe'nocrysts (*Geol.*). Large (megascopic) crystals, usually of perfect crystalline shape, found in a fine-grained matrix in igneous rocks. See **porphyritic texture.**

phe'nol (*Chem*). C_6H_5OH, carbolic acid, colourless hygroscopic needles, m p. 43° C., b p. 183° C., chief constituent of the coal-tar fraction boiling between 170° and 230° C., soluble in caustic soda and potash, forming Na and K phenates or phenolates. It forms with bromine 2,4,6-tribromophenol. Sodium phenolate reacts with CO_2 under certain conditions, yielding sodium salicylate. It is a strong disinfectant.

phenols (*Chem*). A group of aromatic compounds having the hydroxyl group directly attached to the benzene nucleus. They give the reactions of alcohols, forming esters, ethers, thio-compounds, but also have feeble acidic properties and form salts or phenolates by the action of caustic soda or potash. Phenols are divided into mono-, di-, tri-, tetra-, and polyhydric phenols. Phenols are more reactive than the benzene hydrocarbons.

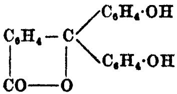
phenol'ic acids (*Chem.*). A group of aromatic acids containing one or more hydroxyl groups attached to the benzene nucleus. The *o*-hydroxy acids are volatile in steam, soluble in cold chloroform, and give a violet or blue coloration with ferric chloride. The *m*-hydroxy acids are the most stable acids. Important phenolic acids are *salicylic acid, gallic acid, tannin* (qq v.).

phenolic alcohols (*Chem.*). A group of compounds possessing phenolic properties in addition to those of an alcohol. Some of them occur as glucosides in nature. Important representatives of this group are saligenin or *o*-hydroxybenzyl alcohol, and coniferyl alcohol.

phenolic resins (*Plastics*). The largest group (weight-manufactured) of artificial plastics, made from a phenol (phenol, *m*-cresol, *p*-cresol, catechol, resorcinol, or quinol) and an aldehyde (formaldehyde, acetaldehyde, benzaldehyde, or furfuraldehyde). An acid catalyst produces a permanently soluble and fusible resin, used in varnishes and lacquers; while an alkaline catalyst results in the formation, after moulding, of an insoluble and infusible resin. Phenolics may be moulded, laminated, or cast.

phenology (*Biol.*). The study of organisms in relation to climate.

phe'nolphthal'ein (*Chem.*). A triphenylmethane derivative, obtained by the condensation of phthalic anhydride and phenol by the action of concentrated sulphuric acid. It has the formula:



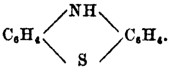
$$\begin{array}{l} \qquad\qquad\quad\; C_6H_4{\cdot}OH \\ C_6H_4-C \\ \;| \qquad\quad | \quad C_6H_4{\cdot}OH \\ CO—O \end{array}$$

It forms colourless crystals which dissolve with a red colour in alkalis. It is used as an indicator in volumetric analysis. The colourless substance has the lactone formula, whereas its coloured salts have a quinonoid structure.

phe'notype (*Gen.*). One of a group of individuals all of which have a similar appearance regardless of their factorial constitution.

phenotyp'ic (*Biol.*). Caused or produced by environmental factors.

phenthi'azine (*Chem*.). A heterocyclic compound of the formula



$C_6H_4\left\langle {NH \atop S} \right\rangle C_6H_4$.

phe'nyl group, *or* fē'nil (*Chem*.). The group C_6H_5—.

phenyl acetate (*Chem*.) $C_6H_5O{\cdot}CO{\cdot}CH_3$, a colourless liquid, b.p. 193° C., obtained from phenol, acetic anhydride, and dry sodium acetate. It is readily hydrolysed.

phenylacetic acid (*Chem*.). $C_6H_5{\cdot}CH_2{\cdot}COOH$, colourless crystals, m p. 76° C.

phenylamine' (*Chem*.). Aminobenzene or *aniline* (q.v.).

phenylbenzine (*Chem*.). See **diphenyl.**

phenyl cyanide (*Chem*.). *Benzonitrile* (q.v.).

phenyl ethyl alcohol (*Chem*.). $C_6H_5{\cdot}CH_2{\cdot}CH_2OH$, an aromatic alcohol of pleasant odour, b.p. 220° C., a constituent of rose oil.

phenyl ethyl ether (*Chem*.). See **phenetole.**

phenylhy'drazine (*Chem*.). $C_6H_5{\cdot}NH{\cdot}NH_2$, a colourless crystalline mass, m.p. 23° C. It is easily oxidised, and is a strong reducing agent. It forms salts with acids. Phenylhydrazine reacts readily with aldehydes and ketones, forming phenylhydrazones, which are crystalline substances and serve to identify the respective aldehydes and ketones.

phenylhy'drazones (*Chem*.). The reaction products of *phenylhydrazine* (q.v.) with aldehydes and ketones, formed by the elimination of two hydrogen atoms of the amino group and the oxygen atom of the aldehyde or ketone group as water.

phenylhydroxyl'amine (*Chem*.). $C_6H_5{\cdot}NH{\cdot}OH$, a colourless crystalline substance, m p. 81° C., obtained by the reduction of nitrobenzene with zinc dust and water in the presence of a mineral salt. It is very unstable and easily oxidised. Mineral acids cause intramolecular rearrangement into *p*-aminophenol, $H_2N{\cdot}C_6H_4{\cdot}OH$.

phenyl methyl ether (*Chem*.). See **anisole.**

phen'ylenedi'amines (*Chem*.). $C_6H_4(NH_2)_2$, obtained by the reduction of the dinitro, the nitroamino, or the aminoazo compounds. The diamines are crystalline substances with strong basic properties. There are three isomers, viz., *o*-phenylenediamine, m p. 102° C., b.p. 252° C.; *m*-phenylenediamine, m.p. 63° C., b.p. 287° C.; *p*-phenylenediamine, m.p. 147° C., b.p. 267° C.

phi'alide (*Bot*.). A short flask-shaped sterigma.

phi'aliform (*Bot*.). Shaped like a saucer or cup.

Philadelphia rod (*Surv*.). A popular type of levelling staff in America, capable of being used either as a self-reading staff or as a target rod.

phil'lipsite (*Min*.). A fibrous zeolite; hydrated silicate of potassium, calcium, and aluminium, usually grouped in the monoclinic system. Some twinned forms possess pseudo-symmetry.

philosopher's wool (*Chem*.). An old name given to the flocculent zinc oxide produced when zinc is burnt in air.

-philous (*Bot*., *Zool*.). Suffix meaning *inhabiting*, *preferring*.

phimo'sis (*Med*.). Narrowness of the prepuce (foreskin) so that it cannot be drawn back over the glans penis.

phleb-, phlebo- (Greek *phleps*, gen. *phlebos*, vein). A prefix used in the construction of compound terms; e.g. *phlebolith* (q.v.).

phlebec'tomy (*Surg*.). Surgical removal of a vein or part of a vein.

phlebenter'ic (*Zool*.). Having branches of the alimentary canal extending into the appendages or limbs, as in *Pycnogonida*.

phlebi'tis (*Med*.). Inflammation of the coats of a vein.

phleboede'sis (*Zool*.). The condition of having a haemocoelic body cavity, the coelom being reduced by the enlargement of the blood-vessels, as in *Mollusca* and *Arthropoda*.

phleb'olith (*Med*.). A concretion in a vein due to calcification of a thrombus.

phlebosclero'sis (*Med*.). Thickening of a vein due chiefly to a pathological increase in the connective tissue of the middle coat.

phlebot'omus fever (*Med*.). See **sandfly fever.**

phlebot'omy (*Med*.). The cutting of a vein for the purpose of letting blood.

phlegma'sia alba dolens (*Med*.). White-leg, milk-leg. Painful swelling of the leg, the skin of which is shiny and white, occurring in women after childbirth; due to thrombosis of veins and obstruction of lymphatics.

phleg'mon (*Med*.). Purulent inflammation, with necrosis of tissue.—*adj*. **phleg'monous.**

phlo'baphene (*Bot*.). Yellow-to-brown substances occurring inside cork cells, probably derived by the decomposition of tannins.

phlo'em (*Bot*.). The conducting tissue present in vascular plants, chiefly concerned with the transport of elaborated food materials about the plant. When fully developed, phloem consists of sieve tubes, companion cells, and parenchyma, but companion cells may not be present.

phloem fibre (*Bot*.). A sclerenchymatous element (or a strand of such elements) present in phloem, affording support to the delicate sieve tubes.

phloem island (*Bot*.). A patch of phloem surrounded by secondary wood.

phloem ray (*Bot*.) That portion of a vascular ray which traverses the phloem.

phloeoter'ma, flē'ō— (*Bot*.). Endodermis in which the radial walls and the inner tangential walls are heavily thickened.

phlogis'ticated air (*Chem*.). An old name for nitrogen.

phlo'gopite (*Min*.). Silicate of potassium, magnesium, aluminium, and hydrogen, crystallising in the monoclinic system. It is a magnesium mica, and is usually a product of metamorphism, being found in crystalline limestone.—(*Diel*.) Phlogopite is not so good as *muscovite* (q.v.) at low temperatures, but it keeps its water of composition until 950° C.

phloroglu'cinol (*Chem*.). 1,3,5-Trihydroxybenzene, $C_6H_3(OH)_3$, large prisms, m p. 218° C., which sublime without decomposition. It can be obtained by the fusion of resorcinol with caustic soda. It possesses reducing properties, and gives a violet coloration with ferric chloride.

phlyc'ten, phlycte'na, phlycten'ule, phlycten'ula (*Med*.). A small round, grey or yellow nodule, occurring on the conjunctiva where it covers the sclera and cornea of the eye. (Greek *phlyctaina*, a bleb.)

phlycten'ular conjunctivitis (*Med*.). Eczematous conjunctivitis. An inflammation of the conjunctiva covering the sclera and cornea of the eye and giving rise to phlyctens.

phobia (*Psycho-path*.). Fear of an internal danger which has been projected on to an external object, e.g. *claustrophobia*.

pho'botax'is (*Biol*.). Response or reaction of an organism to nocuous stimuli, the organism withdrawing at an angle not necessarily related to the direction of the stimulus; also qualified by standard prefixes, as *chemo*phobotaxis.

-pho'bous (*Bot*., *Zool*.). Suffix meaning *avoiding*, *disliking*.

pholido'sis (*Zool*.). The order and arrangement of scales, e.g. of Fish and Reptiles.

phon-, phono- (Greek *phōne*, voice). A prefix used in the construction of compound terms; e.g. *phonautograph* (q.v.).

phon (*Acous*.). The unit of the objective loudness or sound-level scale; the decibel unit of the 1000 cycles per second intensity-level scale which is used for deciding the apparent loudness of an unknown sound or noise, when a measure of loudness is required. This is effected either by subjective comparison by the ear, or by objective comparison with a microphone-amplifier and a weighting network. See **noise meter** and **reftone.**

phon-meter (*Acous.*). An apparatus for the estimation of loudness-level of a sound on the phon scale by subjective comparison.

phon scale (*Acous*). The scale of intensity of the 1000 cycles per second reference tone, with decibel steps above the agreed threshold of the aural perception (0·2 r.m.s. milli-dyne per sq. cm), which is used as an objective loudness scale for noise and other sound measurements. Also called SOUND-LEVEL SCALE.

phonation (*Zool*). Sound-production.

phonaut'ograph (*Acous.*). A primitive recording machine in which sound energy is collected by a horn, operates a needle through a diaphragm, and so makes a trace on a smoked cylinder.

phonen'doscope (*Med.*). A stethoscope fitted with a diaphragm for the amplification of the sounds heard through it.

phonic wheel (or **drum**) (*Elec. Comm.*). An elementary synchronous motor capable of being driven with low power from valve oscillators, so that the frequency of the latter can be measured by a revolution counter.

phonochemistry (*Chem.*). The study of the effect of sound and ultrasonic waves on chemical reactions.

pho'nogram (*Teleph.*). A telegram which is dictated over the telephone, a spelling code (*A* for *Arthur*, etc.) being used to ensure accuracy.

phonogram circuit (*Teleph*). A circuit, from an exchange to a telegraph centre, over which telegrams can be dictated for transmission or reception.

phonogram position (*Teleph*). In a telephone exchange, the position where operators receive and transmit telegraph messages over the telephone system, either to post offices in the locality or direct to subscribers.

pho'nograph (*Acous.*). The obsolete name for the *gramophone*. Strictly it refers to the *Edison phonograph* (q.v.).

pho'nolite (*Geol.*). A fine-grained igneous rock of intermediate composition, consisting essentially of nepheline, subordinate alkali feldspar (sanidine), and soda-rich coloured silicates. Termed also CLINK-STONE, because it rings under the hammer when struck.

pho'novision (*Television*). A system in which the picture-forming signals are recorded on a gramophone record and subsequently reproduced.

-phore (*Chem.*). A suffix which denotes a group of atoms responsible for the corresponding property; e.g. *chromophore*.

phor'esy (*Zool.*). Transport or dispersal achieved by clinging to another animal; e.g. certain Mites which achieve dispersal by attaching themselves to various Insects.

pho'rone (*Chem.*). $(CH_3)_2C{:}CH{\cdot}CO{\cdot}CH{:}C(CH_3)_2$, yellow crystals, m.p. 28° C., b.p. 196° C., a condensation product of acetone obtained by treating it with HCl gas or $ZnCl_2$.

Phoronid'ea (*Zool.*). A phylum of hermaphrodite *Coelomata*, of tubicolous habit, having a U-shaped gut, a dorsal anus, and a lophophore in the form of a double horizontal spiral; marine forms occurring in the sand and mud of the sea bottom.

phorozo'oid (*Zool.*). In *Cyclomyaria*, a zooid of the media row, never sexually mature, acting as a nurse, usually bearing a gonozooid with which it is later liberated.

phoroso'on (*Zool.*). An asexual form preceding, in the life-history, the sexual form.

phos'gene (*Chem.*). $COCl_2$. A very poisonous, colourless, heavy gas with a nauseating, choking smell; b.p. 8° C. It is manufactured by passing carbon monoxide and chlorine over a charcoal catalyst. It is used for the manufacture of intermediates in the dyestuff industry, and as a poison gas in warfare.*

phos'genite (*Min*). A chloro-carbonate of lead, crystallising in the tetragonal system. It is a rare mineral found in association with cerussite.

phosphates (*Chem.*). Salts of phosphoric acid. There are three series of orthophosphates, MH_2PO_4, M_2HPO_4, and M_3PO_4; the first yield acid, the second are practically neutral, and the third alkaline, aqueous solutions. Metaphosphates, MPO_3, and pyrophosphates, $M_4P_2O_7$, are also known. All phosphates give a yellow precipitate on heating with ammonium molybdate in nitric acid.

phosphate printing (*Photog.*). Printing on a slow-printing paper sensitised with silver phosphate.

phosphat'ic deposits (*Geol.*). Beds containing calcium phosphate which are formed especially in areas of low rainfall, and which may be exploited as sources of phosphate. See also **guano, phosphatic nodules.**

phosphatic nodules (*Geol.*). Rounded masses containing calcium phosphate, which are found at various horizons and which represent inhibited deposition.

phosphatu'ria (*Med.*). The presence of an excess of phosphates in the urine.

phos'phides (*Chem.*). Phosphorus unites directly with many metals to form *phosphides*.

phos'phine (*Chem.*). (1) PH_3. A colourless, evil-smelling gas which usually burns spontaneously in air to form phosphorus pentoxide. It has reducing properties and precipitates phosphides from solutions of many metallic salts.—(2) Leather-yellow, impure chrysaniline, 10-*p*-aminophenyl-2-aminoacridine, obtained as a by-product in the manufacture of fuchsine.

phosphines (*Chem*). Derivatives of PH_3, obtained by the exchange of hydrogen for alkyl radicals; classified according to the extent of substitution into *primary*, *secondary*, and *tertiary phosphines*. They correspond closely to the amines, except that they are easily oxidised even in the air, that they are only feebly basic, and that the P atom has a tendency to pass from the tri- to the quinquevalent state.

phosphites (*Chem.*). Salts of phosphorous acid. Soluble in water.

phospho'nium bases (*Chem*). Compounds formed by the combination of a tertiary phosphine with an alkyl halide.

phosphonium salts (*Chem.*). The so-called phosphonium salts are formed when phosphine is brought into contact with hydrogen chloride, hydrogen bromide, or hydrogen iodide. Formed in a similar way to ammonium compounds.

phos'phopro'teins (*Chem.*). Compounds formed by a protein with a substance containing phosphorus, other than a nucleic acid or lecithin, e.g. caseinogen, vitellin.

phosphor (*Cathode Ray Tubes*). A generic name for any fluorescent substance used for coating the screen of a cathode ray tube.

phosphor-bronze (*Met.*). A term sometimes applied to alpha (low tin) bronze deoxidised with phosphorus, but generally it means a bronze containing 10-14% of tin and 0·1-0·3% of phosphorus, with or without additions of lead and nickel. Used, in cast condition, where resistance to corrosion and wear is required, e.g. gears, bearings, boiler fittings, parts exposed to sea water, etc.

phosphores'cence (*Chem.*). The greenish glow observed during the slow oxidation of white phosphorus in the air.—(*Phys.*) A glow emitted by certain substances after having been illuminated by visible or ultra-violet rays. It may be regarded as *fluorescence* (q v.) which persists after the exciting radiation has ceased.—(*Zool.*) Luminosity; production of light, usually (in animals) with little production of heat; as in Glow-worms.—*adj.* **phosphorescent.**

phosphoret'ted hydrogen (*Chem.*). See **phosphine.**

Phosphoria formation (*Geol.*). Important phosphate-bearing beds occurring in the Permian of Idaho, Wyoming, and N. Utah.

phosphor'ic acid (*Chem.*). H_3PO_4. *Orthophosphoric acid* (q.v.)

phosphorised copper (*Met*) Copper deoxidised with phosphorus. Contains a small amount (about 0·02%) of residual phosphorus, which lowers the conductivity.

phos'phorite or **rock-phosphate** (*Min.*). The fibrous concretionary variety of *apatite*.

phos'phorofluor'ic acid (*Chem*). See **hexafluorophosphoric acid.**

phos'phorous acid (*Chem.*). H_3PO_3. Formed by the action of cold water on phosphorous oxide, decomposes on heating; forms phosphites; reducing agent.

phosphorous oxide (*Chem*). P_4O_6. Poisonous; oxidises to the pentoxide on exposure to air; with cold water forms *phosphorous acid*.

phos'phorus (*Chem*). Symbol, P. A non-metallic element in the fifth group of the periodic system. At. no. 15, at. wt 31·02, valencies 3, 5. White phosphorus is a waxy, poisonous, spontaneously inflammable solid; m p. 44·1° C, b.p. 280° C, sp. gr. 1·83. Red phosphorus is non-poisonous and ignites in air only when heated above about 300° C.; m.p. 500-600° C., sp. gr. 2·20. Phosphorus is widely and abundantly distributed in minerals as phosphates, and in all living matter. It is manufactured by heating calcium phosphate with sand and carbon in an electric furnace, and is used mainly in the manufacture of matches.

phosphorus chloronitrides (*Chem.*). Formed by the interaction of phosphorus pentachloride and ammonium chloride.

phosphorus oxychloride (*Chem.*). $POCl_3$. Liquid; fumes in air; slowly hydrolysed by water, forming phosphoric and hydrochloric acids. It is formed when compounds containing a hydroxyl group are treated with phosphorus pentachloride.

phosphorus pentahalides (*Chem.*). The phosphorus pentahalides, *phosphorus pentachloride* (PCl_5), *phosphorus pentabromide* (PBr_5), and *phosphorus pentafluoride* (PF_5), are formed by the action of the dry halogen on the trihalide. The properties of the pentahalides are similar. They transform hydroxyl compounds into the corresponding halides.

phosphorus pentoxide (*Chem.*). P_2O_5; used as a drying agent for the absorption of moisture; when dissolved in water it forms phosphoric or orthophosphoric acid.

phosphorus trihalides (*Chem.*). Phosphorus trichloride (PCl_3), phosphorus tribromide (PBr_3), phosphorus tri-iodide (PI_3), and phosphorus trifluoride (PF_3).

phosphorus trioxide (*Chem.*). P_4O_6. See also **phosphorous oxide.**

phos'phoryl bromide (*Chem.*). $POBr_3$. Formed in a similar manner to phosphoryl chloride or phosphorus oxychloride.

phosphoryl chloride (*Chem.*). *Phosphorus oxychloride* (q.v.).

phosphoryl fluoride (*Chem.*). POF_3. May be made by the action of hydrofluoric acid on phosphorus pentoxide; similar in properties to the other phosphoryl compounds.

phot (*Light*). The unit of light flux, the centimetre-candle; it is the illumination produced on a surface one centimetre from a standard candle.

photo- (Greek *phōs*, gen. *phōtos*, light). A prefix used in the construction of compound terms; e.g. *photography*, *photo-sensitive*, etc.

photo-active (*Photog.*). The same as *photo-sensitive*

photo-aquatint (*Photog.*). An alternative name for *photogravure*.

photo-catalysis (*Chem*). The acceleration or retardation of the rate of a chemical reaction by light.

photo-cathode (*Photo-electric Cells*). A cathode from which electrons are emitted by the action of incident light.

photocell. Contraction for *photo-electric cell*.

photo-chemical cell (*Photo-electronics*). A photo-electric cell comprising two electrodes of similar metal, such as silver, immersed in an electrolyte. Illumination of one of the electrodes causes a P.D. to be developed between them. Also called PHOTO-ELECTROLYTIC CELL, PHOTO-VOLTAIC CELL.

photochemical equivalence (*Chem.*). See **Einstein's law of photochemical equivalence.**

photochemical induction (*Chem.*). The lapse of an appreciable time between the absorption of light by a system and the occurrence of the resulting chemical reaction.

photochemistry (*Chem.*). The study of the chemical effects of radiation, chiefly visible and ultra-violet, and of the direct production of radiation by chemical change.

photochon'dria (*Zool.*). Granules occurring in the cytoplasm of a luminous cell or animalcule.

photochro'moscope (*Photog.*). An alternative name for a *kromskop* (q.v.).

photochron'ograph (*Astron.*). An instrument for recording time photographically. It consists of a rotating drum, covered with sensitised paper, on which is recorded the movement of a spot of light controlled by either a pendulum or some other oscillator, according to the order of interval to be measured; applied astronomically *inter alia* to the analysis of the ratio of observatory clocks.

photo-composition (*Print.*). (1) A method of composing lettering for printing consisting in the projection of light images of the letters successively on to a photo-sensitive material, thus giving a photographic negative for use, particularly in surface and intaglio printing processes, in place of impressions from printer's type.—(2) A term used in America for a composite surface or intaglio printing surface made up of photographic negatives.

photo-conductivity (*Photo-electronics*). The property possessed by certain materials, such as selenium, of varying their electrical conductivity under the influence of light.

photo-current (*Photo-electronics*). The current released from the sensitised surface of a photo-electric cell on the incidence of light, the electrons which form the current being attracted to an anode polarised positively with respect to the surface. The true photo-current is augmented by the presence of gas through ionisation by collision.

photodissociation (*Chem.*). Dissociation produced by the absorption of radiant energy.

photo-elasticity (*Eng.*). The technique of determining the stress distribution in bodies under complex systems of loading by passing polarised light through a nitro-cellulose model.

photo-electric cell. Generally, any device in which the incidence of light causes an alteration in the electrical state. Specifically, any device using the principle of photo-emission.—(*Cinema.*) The light-sensitive device which receives the light from a constant exciter lamp, after this light has been modulated by the sound-track on film being passed through the projector. The consequent electric currents are amplified and operate loud-speakers behind the cinema screen.

photo-electric cell amplifier (*Cinema.*). The thermionic amplifier located in close proximity to the photo-electric cell which receives the light-beam modulated by the sound-track, when the latter passes through the sound-gate in a projector. Abbrev. **P.E.C.** (or **pec) amplifier.**

photo-electric effect (*Photo-electronics, Phys.*). The loss of negative electric charge, or acquisition of positive charge, by an insulated conductor when exposed to light. It is due to *photo-emission* (q.v.), each electron being released by one or more *photons* (q.v.).

photo-electric exposure meter (*Photog.*). A meter which incorporates a photo-electric cell as the essential device for indicating an intensity of illumination from which photographic exposures can be estimated.

photo-electric photometer (*Illum.*). A photometer in which the light from the lamp under test is measured by the current from a photo-electric cell.

photo-electricity. Electricity produced by the action of light.

photo-electrolytic cell. The same as *photo-chemical cell.*

photo-electron'ics. The science dealing with the interactions of electricity and light, especially with those which involve free electrons.

photo-electrons. Electrons ejected from the surface of a body by the action of incident light.

photo-emission (*Photo-electronics*). The emission of electrons from the surface of a body (usually an electro-positive metal) by the incidence of light.

Photoflood lamp (*Cinema*). The same as *Movie-flood lamp.*

pho'togen (*Zool.*). A light-producing or phosphorescent organ; as in some *Polychaeta.*

pho'togene (*Photog.*). The name for a sensitive emulsion, particularly a gum bichromated surface for a powder or dusting-on process.

photogen'ic (*Photog.*). Having the quality of registering photographically acceptable images.

photogenic (*Bot., Zool.*). Emitting light, light-producing; e g. *photogenic bacteria.*

pho'toglyph (*Photog.*). Photographic engraving such as photogravure.

photogram'metry (*Photog.*). The making of photographs (e.g. from the air) for survey work.

photographic barometer (*Photog.*). A formalin-hardened bromide print, coated with cobalt; used to indicate the humidity: pink in damp weather, blue in dry weather.

photographic developers (*Photog.*). Reducing agents for silver salts, usually polyhydric phenols or their derivatives.

photographic efficiency of a light source (*Photog.*). The fraction of the light energy in the emitted spectrum which is usefully registered on a photographic emulsion.

photographic memory (*Psychol.*). See **eidetic imagery.**

photographic recorder (*Cinema.*). The same as *film recorder.*

photographic recording (*Acous.*). The registering of a modulated track on photographic film, so that it can be scanned by a constant beam of light, fluctuations of which, after being converted into corresponding electric currents by a photocell, can be amplified and reproduced as sound by loudspeakers. See **photo-electric cell, sound-film.**

photographic surveying (*Surv.*). A method of surveying employing the principles of *intersection* (q.v.) by means of a special instrument called a photo-theodolite, with which a series of photographs is taken of the points whose positions are required, each point appearing in at least two different photographs.

photographic telescope (*Astron.*). An astronomical telescope in which a camera replaces the eye-piece; it is modified with regard to focal length and composition of the object glass to suit photographic rather than visual work.

photography. The art and science of making permanent images by exposing certain chemical substances to light rays, after which an actual or potential physical or chemical change can be made manifest.

See **aerial—**
colour—
instantaneous—

photogravure, —gra-vūr' (*Photog.*). Printing by means of etched copper plates, prepared by etching through a gelatine relief print of the subject, which has been transferred to the copper plate before development.

photoha'lide (*Chem.*). A halogen salt which is sensitive to light.

photo-lithography (*Photog., Print.*). A process of lithographic printing in which the original subject is photographed, and the negative printed on a grained plate sensitised with bichromated albumen and coated with ink before development, so as to produce a greasy image.

photol'ysis, *or* —lī'-zis (*Bot.*). The grouping of the chloroplasts in relation to the amount of light falling on the plant.

photolysis (*Chem.*). The decomposition or dissociation of a molecule as the result of the absorption of light.

Photom'aton (*Photog.*). An automatic photographing machine which includes automatic reversing of images taken on emulsions on paper supports.

photom'eter (*Light*) An instrument for comparing the luminous intensities of two sources of light. Most photometers employ the principle that, if equal illumination is produced on similar surfaces illuminated normally by two light sources, the ratio of their intensities equals the square of the ratio of their distances from the surfaces.

Ulbricht globe—
Weber—
wedge—

photometer bench (*Illum.*). A bench upon which is mounted the apparatus for carrying out photometric tests by comparison with a standard lamp. The apparatus consists of a mounting for the standard lamp, the photometer itself, a mounting for the lamp under test, and equipment for moving any or all of these and determining their position.

photometer head (*Light*). The unit in an optical measuring system which contains the device for making the actual balance or measurement.

photomet'ric integrator (*Illum.*). That part of an integrating photometer which actually sums up the light flux; e.g. the globe of the Ulbricht globe photometer.

photometric surface (*Light*). A surface used for photometric comparisons.

photom'etry (*Chem.*). Volumetric analysis in which the end-point of a reaction is determined by means of turbidity measurements made with the aid of photo-electric cells.

photometry (*Light*). The measurement of the luminous intensities of light sources and of luminous flux and illumination. See **photometer.**

photo-micrography (*Photog.*). The production of normal negatives and prints of objects of microscopic dimensions.

photo-montage (*Photog.*). See **montage photograph.**

photomorpho'sis (*Bot.*). A change in the structure of a plant following exposure to strong light.

photomu'rals (*Photog.*). Enlarged photographs suitable for wall decoration or for exhibitions.

pho'ton (*Phys.*). A light quantum. It may be considered as a coherent train of waves, that is, one without abrupt discontinuities of phase, or as a particle of mass $h\nu/c^2$, where ν is the frequency of vibration, h is Planck's constant, and c is the velocity of light. See **Compton effect, photo-electric effect**; also Supplement.

pho'tonas'ty (*Bot., Zool*). Response to variation in the intensity of illumination, or to the stimulus of diffuse light.

pho'topathy (*Biol*). Negative phototaxis.

photopercep'tor (*Bot.*). The part of an eye spot which is sensitive to light.

photope'riodism (*Bot.*). The response of a plant to the relative lengths of day and night as these affect the amount of light received by the plant.

photoph'ilous (*Biol.*). Light-seeking, light-loving; said of plants which inhabit sunny places.

photopho'bia (*Med.*). Intolerance of the eye to light, with spasm of the eyelids.

Pho'tophone (*Cinema.*). The trade-name for a system of sound-recording on photographic film, using the variable-area principle.

pho'tophore (*Zool*). A luminous organ of Fish.

photophore'sis (*Chem.*). The migration of suspended particles under the influence of light.

photophthal'mia (*Med.*). Electric-light ophthalmia. Burning pain in the eyes, lacrimation, photophobia, and swelling and spasm of the eyelids as a result of exposure to an intensely bright light (e.g. a naked arc light); due to the action of ultra-violet rays.

photophy'gous (*Zool.*). Shunning strong light.

pho'toplasm (*Zool.*). The photochondria-containing cytoplasm of a luminous cell or animalcule.

photop'sy, photop'sia (*Med.*). The appearance of flashes of light in front of the eyes, due to irritability of the retina

photo-radiogram (*Radio*). A still picture transmitted by radio.

photorecep'tor (*Zool.*). A sensory nerve-ending receiving light stimuli.

photo-sensitive (*Phys*). The property of being sensitive to the action of visible or invisible light, whether subsequent development is required to exhibit sensitivity or not. See **photo-electric cell, photography.**

pho'tosphere (*Astron.*). The name given to the visible surface of the sun on which sun-spots and other physical markings appear; it is the limit of the distance into the sun that we can see.

photosphere (*Zool.*). A light-producing or phosphorescent organ; as in some *Crustacea.*

pho'tostage (*Bot.*). An early stage in the development of a seedling, during which it needs a supply of light.

Pho'tostat (*Photog.*). Trade-name for photographic apparatus (also for any print made by it) designed for rapidly copying, to the required size, flat originals on sensitised paper, and giving a negative image.

photosyn'thesis (*Bot.*). The building up, in the green cells of a plant, of simple carbohydrates from carbon dioxide and water, with the liberation of elementary oxygen. The process goes on only when the plant is sufficiently supplied with light, the chlorophyll acting as an energy transformer, which enables the plant to use the light as a source of energy.

photosynthet'ic capacity (*Bot.*). The efficiency of a plant, a cell, or a chloroplast, in carrying out the process of photosynthesis.

photosynthetic number (*Bot.*). The ratio between the number of grams of carbon dioxide absorbed per hour by a unit of leaf to the number of grams of chlorophyll which that unit contains.

photosynthetic quotient, photosynthetic ratio (*Bot.*). The ratio between the volume of carbon dioxide absorbed to the volume of oxygen set free, during a given time, by plant material occupied in photosynthesis.

phototax'is (*Biol.*). Response or reaction of an organism to the stimulus of light.—*adj.* **phototactic.**

photo-telegraphy (*Teleg.*). *Facsimile telegraphy* (q.v.).

photo-theodolite (*Surv.*). A photographic camera of fixed known focal length, with horizontal and vertical cross-wires pressing tightly against the sensitive plate, on which they are photographed. It is mounted on a tripod and fitted with levelling screws, a graduated horizontal circle, and a telescope for sighting. See **photographic surveying.**

photo-therapy (*Med.*). Light treatment, i.e. the application to the body of radiant heat or ultra-violet rays for therapeutic reasons.

phototo'nus (*Bot*). The condition of a leaf which is able to respond to a stimulus, because it has received an adequate amount of light.

phototro'pism (*Biol.*). See **phototaxis.**

phototropism (*Bot*). The reaction of a plant, by growth curvatures, to light falling upon it in a given direction.

photot'ropy (*Chem.*). (1) The property possessed by some substances, e.g. the fulgides, of changing colour according to the wavelength of the incident light.—(2) The loss of the colour of a dyestuff under the influence of light of a definite wavelength.

photo-voltaic cell (*Photo-electric Cells*). See **photo-chemical cell.**

Photox cell (*Photo-electric Cells*). A copper-oxide dry photo-voltaic cell The electrodes are a disc of copper and a thin film of metal on the surface of the oxidised disc.

Photronic exposure meter (*Photog.*). An exposure meter incorporating a photronic surface of selenium, which gives rise to an electromotive force on illumination, and thus gives an indication of illumination intensity for estimating exposures.

phrag'ma (*Zool*). A septum or partition: an apodeme of the endothorax formed by the infolding of a portion of the tergal region of a somite: an endotergite.

phrag'mobasid'ium (*Bot*). A basidium which becomes septate, and is then divided into four cells.

phreatic gases, frē-at'ik (*Geol.*). Those vapours and gases of atmospheric or oceanic origin which, coming into contact with ascending magma, may provide the motive force for volcanic eruptions.

phreni- (Greek *phrēn*, diaphragm). A prefix used in the construction of compound terms; e.g. *phreni-costal*, pertaining to the diaphragm and ribs.

phren'ic (*Zool.*). Pertaining to, or situated near, the diaphragm (in Mammals).

phrenicec'tomy (*Surg.*). Excision of a part of the phrenic nerve in order to paralyse the diaphragm on the same side; done in the treatment of lung disease.

phrenicot'omy (*Surg.*). The cutting of the phrenic nerve in order to paralyse the diaphragm on one side; done in the treatment of lung disease.

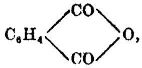
phren'osin (*Chem.*). A cerebroside obtained from the brain substance, a crystalline mass forming an amorphous anhydride. On hydrolysis it yields a fatty acid (*phrenosinic acid*), galactose, and a base (called *sphingosine*).

phthaleins, thal'-e-inz (*Chem.*). Triphenylmethane derivatives obtained by the action of phenols upon phthalic anhydride.

phthalic acid (*Chem.*). $C_6H_4(COOH)_2$, benzene-*o*-dicarboxylic acid, colourless prisms or plates, m.p. 213° C., soluble in water, alcohol, ether.

When heated above the melting-point it yields its anhydride. It is prepared technically by the oxidation of naphthalene with concentrated sulphuric acid in the presence of a small amount of mercuric sulphate.

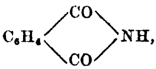
phthalic anhydride (*Chem.*).



$C_6H_4{<}\substack{CO\\ \\ CO}{>}O$, long prisms which can be sublimed, m p. 128° C., b.p. 284° C.

phthalic glyceride resins (*Plastics*). See **glyptal resins.**

phthal'imide (*Chem.*)



$C_6H_4{<}\substack{CO\\ \\ CO}{>}NH$, colourless crystals, m.p. 238° C., obtainable by passing ammonia over heated phthalic anhydride. The imide hydrogen is replaceable by Na or K.

phthiri'asis (*Med.*). Infestation with lice. See also **pediculosis.**

phthisan'er (*Zool.*). An abortive male ant which fails to complete its metamorphosis as a result of its being parasitised by *Orasema.*

phthiser'gate (*Zool*). An abortive worker ant which fails to complete its metamorphosis as a result of its being parasitised by *Orasema.*

phthisis, thī'sis (*Med.*). (1) Wasting of the body.—(2) Pulmonary tuberculosis.—*adj.* **phthisical.**

phthi'sogyne (*Zool*) An abortive queen ant which fails to complete its metamorphosis as a result of its being parasitised by *Orasema.*

phu'goid oscillation (*Aero.*). A longitudinal periodic fluctuation in speed, i.e. a velocity-modulation, in the motion of an aircraft.

phy'cocy'anin (*Bot.*). The blue pigment present in *Myxophyceae.*

phycoerythrin, fī'ko-er'— (*Bot.*). A red pigment, of protein nature, soluble in water, present in the cell sap of *Rhodophyta.*

phycol'ogy (*Bot.*). The study of *Algae.*

Phy'comyce'tes (*Bot.*). The lower Fungi, including 1000 species. The thallus ranges from a rounded sac to an ordinary mycelium, in which regular septation is unusual. Many species are aquatic, reproducing freely by zoospores, and the sexual organs, when present, are either isogametes, heterogametes, or well-defined antheridia and oögonia, or else gametangia which unite without individualisation of the gametes.

phylac'tocarp (*Zool.*). A hydrocladium bearing gonangia.

Phylac'tolae'mata (*Zool.*). An order of fresh-water *Ectoprocta* in which the lophophore is U-shaped and an epistome is present.

phylet'ic classification (*Biol.*). A scheme of plant classification based on the presumed evolutionary descent of organisms.

phyl'lary (*Bot.*). One of the involucral bracts on the outside of a capitulum.

phyllid'ium (*Zool.*). See **bothrydium.**

phyllite (*Geol.*, *Min.*). A name which has been used in several different senses : (1) for the pseudo-hexagonal platy minerals including mica, chlorite, and talc (by some French authors); (2) for argillaceous rocks in a condition of metamorphism between slate and mica-schist (by most English authors). Phyllite in the latter (usual) sense is characterised by a silky lustre due to the minute flakes of white mica which, however, are individually too small to be seen with the naked eye.

phyllobran'chia (*Zool.*). A gill composed of numerous thin plate-like lamellae.

Phyllocar'ida (*Zool.*). A division of *Malacostraca* in which the abdomen consists of seven somites, the last one being apodous ; the telson is usually provided with movable caudal furca ; an adductor muscle joins the valves of the carapace ; and the thoracic limbs are all alike—foliaceous and with a three-jointed protopodite.

phyl'locar'pic movement (*Bot.*). A curvature of the fruit stalk bringing the young fruit under the shelter of the leaves.

phyl'loclade (*Bot.*). A branch which is so flattened that it looks like a leaf, and which functions as a leaf.

phyl'locyst (*Zool.*). In some *Siphonophora,* a dilatation at the apex of a hydrophyllium.

phyllode (*Bot.*). A petiole which is flattened and leaf-like and functions as a leaf; phyllodes are often set on the plant so that they turn their edges to the direction of the brightest light.

phyllo'dy (*Bot.*). The transformation of parts of a flower into leaves.

phyllome (*Bot*). A general term for all leaves and leaf-like organs.

phyllopo'dium (*Bot*). The petiole and rachis of the leaf of a fern.

phyllopodium (*Zool.*). The thin leaf-like swimming foot characteristic of *Branchiopoda,* with broad flat exopodite and endopodite. Cf. *stenopodium.*

phyl'losiphon'ic (*Bot.*). Said of a siphonostele which has both leaf gaps and branch gaps.

phyl'lotax'is, phyl'lotax'y (*Bot.*). The arrangement of leaves on a shoot.

phyllozo'id (*Zool.*) See **hydrophyllium.**

phy'lo- (Greek *phulon,* race) A prefix used in the construction of compound terms; e.g. *phylogenesis,* the history of racial development.

phylo-epheb'ic (*Zool*) Pertaining to the period of maximum vigour of a race or species.

phylogen'esis, phy'logeny *or* —loj'en-i (*Bot.*, *Zool.*). The history of the development of a race; cf. *ontogeny.*—*adj.* **phylogenetic.**

phylogenet'ic series (*Zool.*). The complete range of organisms, extant and extinct, which shows the evolution of the higher from the lower forms. Cf. *taxonomic series.*

phylogeron'tic (*Zool.*). Said of that period in the history of a race or species which corresponds to the senescent period in the life-history of an individual.

phy'lon (*Biol.*). A line of descent.

phy'loneanic,—nē-an'ık (*Zool.*). Said of that period in the history of a race or species which corresponds to the adolescent period in the life-history of an individual.

phy'lonepion'ic (*Zool.*). Said of that period in the history of a race or species which corresponds to the embryonic period in the life-history of an individual.

phy'lum (*Zool.*). A category or group of related forms constituting one of the major subdivisions of the animal kingdom.

physical astronomy. See **astrophysics.**

physical barrier (*Biol.*). Anything which imposes a barrier to the migration of plants or animals; e.g. a sea or a high range of mountains.

physical chemistry (*Chem.*). The study of the dependence of physical properties on chemical composition, and of the physical changes accompanying chemical reactions.

physical circuit (*Teleph.*). The normal loop circuit for telephony, as contrasted with a superposed or phantom circuit.

physical optics (*Light*). That branch of the study of light dealing with phenomena, such as diffraction and interference, which are best considered from the standpoint of the wave theory of light. See **geometrical optics.**

physiog'nomy (*Bot.*). The characteristic appearance of a plant community, by which it can often be recognised at a distance. It is usually determined by the dominant plants of the community.

physiographic climax (*Bot.*). A plant community maintained at a certain stage of development by some natural feature of the habitat, such as active erosion or slow but persistent movement of the ground.

physiological (*Bot.*, *Zool.*). Relating to the functions of plant or animal as a living organism.

physiological anatomy (*Biol.*). The study of the relation between structure and function.

physiological drought (*Bot.*). The condition when a plant is unable to take in water because of low temperature, or because the water available to it holds substances in solution which hinder absorption by the plant.

physiological race (*Zool*). A group of individuals within the limits of a species but differing from other members of the species in habits (as host, larval food, etc.).

physiological variety (*Bot.*). See **biologic form.**

physiological zero (*Biol.*). The threshold temperature below which the metabolism of a cell, organ, or organism ceases.

physiology (*Bot.*, *Zool.*). The study of the manner in which organisms carry on their life processes.

physio-therapy (*Med.*). See **electro-therapy.**

phy'soclis'tous (*Zool.*). (Of fish) having no pneumatic duct connecting the air-bladder with the alimentary canal.

phy'sostig'mine (*Chem.*). Eserine, $C_{15}H_{21}O_2N_3$, an alkaloid of unknown constitution, obtained from the seeds of Calabar beans (*Physostigma venenosum*). It crystallises in two forms (*a*) m.p. 86°-87° C.; (*b*) m.p. 105°-106° C., soluble in alcohol, ether, chloroform.

physosto'mous (*Zool.*). (Of Fish) having a persistent pneumatic duct connecting the air-bladder with the alimentary canal.

phy'toben'thon (*Bot.*). Plants living at the bottom of water.

Phytomastigi'na (*Zool.*). A subclass of *Mastigophora* comprising mainly holophytic forms possessing chromatophores, rarely having more than two flagella and frequently having starch reserves; a few members are colourless and practise holozoic or saprophytic nutrition.

phy'ton (*Bot.*). (Greek *phyton*, plant.) A hypothetical plant unit composed of leaf, blade, and stalk.

phy'topathol'ogy (*Bot.*). The study of plant diseases, and especially of plants in relation to parasites.

phytoph'ilous, phytoph'agous (*Zool.*). Plant-feeding.

phy'toplank'ton (*Bot.*). Plankton consisting of plants.

phytos'terol (*Chem.*). A terpene alcohol, m.p. 137° C. It resembles closely *cholesterol* (q.v.).

phytot'omy (*Bot.*). See **anatomy.**

pi-network (*Elec. Comm.*). See **π-network** (p. 608).

pi'a ma'ter (*Zool.*). In Vertebrates, the innermost of the three membranes surrounding the brain and spinal cord, a thin vascular layer.

pian, pi-an' (*Med.*). See **yaws.**

Pianotron (*Acous.*). A piano in which the normal vibration of the strings is used to modulate the potential applied to electrostatic screw pick-ups, with subsequent amplification and radiation by loudspeaking receivers.

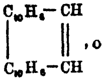
piano whine (*Acous.*). A peculiar defect in gramophone recording caused by sudden variations in the turntable speed due to the large amplitudes occurring in piano music.

piazza, pi-at'za (*Arch.*). (1) An enclosed court in a building.—(2) A colonnade or arcade.

pi'ca (*Med.*). An unnatural craving for unusual articles of food.

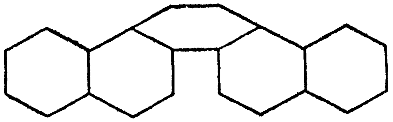
pica (*Typog.*). The old name for a type-size now standardised as 12-point. The pica em is a unit of measurement; it is equal to $\frac{1}{6}$ in.

pi'cene (*Chem.*). $C_{22}H_{14}$, a complicated hydrocarbon, obtained from the coal-tar fraction boiling above 360° C. It has the formula:



$$\begin{array}{l}C_{10}H_6-CH\\ \quad| \qquad\quad \| \\ C_{10}H_6-CH\end{array}$$

, or



pick (*Tools*). A double-headed tool, pointed at both ends, having the handle fastened into the middle of the head (as in a hammer); used for rough digging by quarrymen, road builders, etc.

pick (*Weaving*). See under **weft.**

pick-and-pick (*Weaving*). A term indicating alternate picks of yarns of two different colours or kinds.

pick-at-will (*Weaving*). A mechanism which enables the shuttle from any box to be thrown through a shed.

pick-axe (*Tools*). A tool similar to a pick but having one end edged so that it may cut.

picklock (*Textiles*). The term applied by wool-sorters to the best sort of wool from a fleece.

pick-up (*Acous.*) The reproducing device holding the needle which follows the track on a disc gramophone record.

See **balanced armature— carbon— condenser— electromagnetic— needle—**

pick-up (*Elec. Comm.*). See **a.c. pick-up.**

pick-up well (*Automobiles*). A small petrol reservoir arranged between the metering jet and the spraying tube in some carburettors; it provides a temporarily enriched mixture during acceleration.

Pick's bundle (*Zool.*). A tract of fibres in the medulla oblongata of higher Vertebrates.

Pick's disease (*Med.*). Concato's disease.

picker (*Weaving*). The specially designed implement of leather or textile material which propels the shuttle across a loom.

picker leather (*Leather*). A leather which has been specially prepared for making picker bands (see **picker**).

pick'eringite (*Min.*). Magnesia alum. Hydrated sulphate of aluminium and magnesium, crystallising in the monoclinic system. It usually occurs in fibrous masses, and is formed by the weathering of pyrite-bearing schists.

picket (*Build.*). A narrow upright board in a fence; frequently pointed at the top.

picket (*Surv.*). A short ranging rod about 6 ft. long.

picking (*Textiles*). The operation of removing from the face of a cloth extraneous matters such as hairs, slubs, kemps, etc., by means of burling irons.

picking (*Weaving*). The operation of throwing the shuttle across a loom through the shed formed in the warp threads; it travels along a raceboard, guided by the reed.

picking-up (*Carp.*). Said of wood which on being cut leaves a *fluffy* (q.v.) surface.

pickling (*Eng.*). The process of removing a coating of scale, oxide, tarnish, etc., from metal objects, so as to obtain a chemically clean surface; effected by immersing in an acid bath.

pickling (*Leather*). The treatment of light skins with a dilute solution of sulphuric acid and salt, after dehairing.

picksman (*Mining*). A man who gets coal by hand, not by machine.

Pickwell Down Sandstones (*Geol.*). A series of sandstones found in North Devon and West Somerset; grouped among the Upper Devonian rocks.

pico-farad, pē'ko (*Elec. Eng.*). The same unit as *micro-micro-farad* (q.v.).

pic'olines (*Chem.*). Methyl-pyridines, $CH_3\cdot C_5H_4N$. The three isomers are *α*-picoline, b.p. 129° C.; *β*-picoline, b.p. 142°-143° C.; *γ*-picoline, b.p. 144°-145° C.

pic'otite (*Min.*). A dark-coloured spinel containing iron, magnesium, and chromium.

picric acid (*Chem.*). $C_6H_2(NO_2)_3OH$, 2,4,6-trinitrophenol, yellow plates or prisms, m.p. 122° C., made by nitrating phenol; slightly soluble in water. It is a strong acid and dyes wool and silk yellow. Used for the preparation of explosives; lyddite or melinite is compressed or fused picric acid.

picrite (*Geol.*). A general name for ultramafic coarse-grained igneous rocks, consisting essentially of olivine and other ferromagnesian minerals, together with a small amount of plagioclase.

picrite-basalt (*Geol.*). An unsatisfactory name —used in current geological literature, however— for basalts particularly rich in mafic minerals, thus bearing the same relationship to normal basalts that picrites bear to normal gabbros.

Pictou cattle disease (*Vet.*). Cirrhosis of the liver of horses and cattle, due usually to chronic poisoning through consumption of plants of the *Senecio* group.

picture-chasing circuit (*Television*). A circuit, used in conjunction with intermediate film-scanning systems, in which the film is continuously moving.

picture cycle (*Cinema*). The complete sequence of events during the displacement of one frame and the displacement of the next in a camera or projector.

picture element (*Television*). Any one of the large number of minute uniformly illuminated areas which go to make up a television image. Also called PICTURE POINT.

picture frequency (*Television*). See **frame frequency.**

picture head (*Cinema.*). That part of the projector mechanism which includes the intermittent motion for projecting the picture frames on the screen.

picture point (*Television*). See **picture element.**

picture rail (*Join.*). A decorative moulding around the walls of a room near the ceiling; provided as a means of support for the hanging of pictures.

picture ratio (*Television*). The ratio of the height to the width of a television image.

picture signal (*Television*). That portion of a television signal which carries the information relative to the picture itself, as distinct from the synchronising portions. Also called VIDEO SIGNAL.

picture telegraphy (*Teleg.*). The same as *facsimile telegraphy.*

picture track (*Cinema.*). The part of the width of a sound-film print which is allocated to the picture frames. See **mute** and **sound-track.**

picture traversing circuit (*Television*). The circuit associated with the frame frequency generator which causes the slower of the two motions of the scanning spot.

Pidgeon machine (*Elec. Eng.*). An improved form of the Wimshurst machine having special features, such as embedded sectors.

pie (*Typog.*). To upset type-matter accidentally.

piece (*Artillery*). An artillery weapon is frequently referred to as a *piece of ordnance.* See **ordnance.**

pieces (*Textiles*). Staples, from different types of fleece, accumulated during sorting and sold as mixed lots or otherwise.

piece cart (*Textiles*). A piece of apparatus in which lengths of woollen and worsted fabrics are placed, in the metal-lined paper process of finishing, to be subjected to pressure.

Piedmont glacier, pēd'mont (*Geol.*). A glacier of the ' expanded foot ' type; one which, after being restricted within a valley, spreads out on reaching the flat ground into which the latter opens.

Piedmont gravels (*Geol.*). Accumulations of coarse breccia, gravel, and pebbles brought down from high ground by mountain torrents and spread out on the flat ground where the velocity of the water is checked. Literally, mountain-foot gravels, typical of the outer zone of arid areas of inland drainage such as the Lop Nor Basin in Chinese Turkestan.

piedmontite, pēd'— (*Min.*). A silicate of calcium, aluminium, manganese, and hydrogen, crystallising in the monoclinic system. Also called MANGAN-EPIDOTE.

piedroit, pi-ā-drwa' (*Build.*). A pier projecting from a wall but having neither cap nor base. Cf. *pilaster.*

piend, pēnd (*Build.*). An *arris* (q.v.).

piend check (*Masonry*). The rebate cut along a lower corner of a stone step to enable it to sit upon the step below.

piend rafter (*Carp.*). A hip rafter.

Pieper system (*Elec. Eng.*). See **automixte system.**

pier (*Build.*). (1) The part of a wall between doors and windows.—(2) A *buttress* (q.v.).

pier (*Civ. Eng.*). (1) A breakwater adapted for service as a landing.—(2) A support for an arch, bridge, etc.

pier arch (*Civ. Eng.*). An arch carried on piers.

pier template (*Civ. Eng.*). A stone slab laid on a brickwork pier to ensure that the load is distributed over the full area of the pier.

pierre perdue, pi-ār' per-du' (*Civ. Eng.*). Work consisting of stone blocks deposited at random to form a foundation; e.g. in some breakwater construction.

piezo-, pī-ē'zo (Greek *piczein,* to press). A prefix used in the construction of compound terms; e.g. *piezochemistry* (q v.).

piezochemistry (*Chem.*). The study of the effect of very high pressures on chemical reactions.

piezo-electric crystal (*Radio*). A crystal of quartz, tourmaline, Rochelle salt, or other piezo-electric substance, ground to particular dimensions and cut in a particular orientation with respect to the crystallographic axes; used as an oscillating or resonating standard of frequency.

piezo-electric effect (*Elec. Comm., Phys., Radio*). The phenomenon exhibited by certain crystals (see **piezo-electric crystal**) of expansion along one axis and contraction along another when subjected to an electric field. The converse effect, whereby mechanical strains produce opposite charges on different faces of the crystal, also obtains. The effect is the basis of operation of the piezo-electric resonator, piezo microphone, etc.

piezo-electric resonator (*Radio*). A piezo-electric crystal used as a resonating standard of frequency, in the same manner as a circuit made up of a fixed inductance shunted by a fixed condenser.

piezo microphone (*Acous.*). A microphone in which the generated electromotive force is dependent on the piezo effect in a Rochelle salt crystal unit; made in such a way that the minute acoustic pressures are mechanically transformed by a bending action.

piezo receiver (*Acous.*). A head-telephone receiver, usually grouped in pairs, in which the diaphragm is driven electrostatically through the medium of a Rochelle salt crystal, as in a piezo microphone.

pig (*Glass*). An iron block laid against the pot mouth as a support for the blowing iron.

pig (*Met.*). A mass of metal (e.g. cast-iron, copper, or lead) cast in a simple shape for transportation or storage, and subsequently remelted for purification, alloying, casting into final shapes, or into ingots for rolling.

pig bed (*Met.*). A series of moulds for iron pigs, made in a bed of sand. Connected to each other and to the tap hole of the blast-furnace by channels, along which the molten metal runs.

pig boiling (*Met.*). See **puddling.**

pig iron (*Met.*). The crude iron produced in the blast furnace and cast into pigs, which are used for making steel, cast-iron, or wrought-iron. Principal impurities are carbon, silicon, manganese, sulphur, and phosphorus. Composition varies according to the ores used, the smelting practice, and the purpose for which the iron will be used.

pig-lug (*Plumb.*). A *dog's ear* (q.v.).

pigtail (*Elec. Eng.*). The short length of flexible conductor connecting the brush of an electric machine to the brush-holder.

pigeon-holed (*Build.*). Said of a wall built with regular gaps in it (e.g. a *honeycomb wall*, q.v.).

pigeonite (*Min.*). One of the pyroxenes, intermediate in composition between clino-enstatite and diopside. It is a mixture of two molecules: a silicate of iron and magnesium, and a silicate of calcium and magnesium. Named from Pigeon Point, Minnesota.

pigment (*Paint., etc.*). See **base.**

pigment cell (*Zool.*). A cell containing pigment granules, usually a connective-tissue corpuscle; a chromatophore.

pigment process (*Photog.*). Any process which involves pigment suspended in a tissue, which may be partially dissolved away to form the required image.

pig'mentary colours (*Zool*). Colours produced by the presence of drops or granules of pigment in the integument, as in most Fish. Cf. *structural colours.*

pigmento'sa (*Bot.*). The pigmented part of an eye-spot.

pi'la (*Zool.*). A pillar-shaped structure; as the *pilae antoticae*, pillars of cartilage in the developing chondrocranium.

pilas'ter (*Build.*). A square pier projecting from a wall, having both a cap and a base. Cf. *piedroit.*

pilaster strip (*Build.*). A pilaster without a cap.

Pilcher's Stoprot (*Build.*). A trade-name for a timber preservative.

pile (*Civ. Eng.*). A column or sheeting which is sunk into the ground to support vertical loading or to resist lateral pressures.

pile bridge (*Civ. Eng.*). A bridge whose superstructure is carried on piles.

pile cap (*Civ. Eng.*). (1) A horizontal beam connecting the heads of piles driven in a row.—(2) A *dolly* (q.v.).

pile-drawer (*Civ. Eng.*). An appliance for extracting driven or partly driven piles from the ground.

pile-driver (*Civ. Eng.*). A framed construction erected above the spot where a pile is to be driven into the ground. It is provided with a heavy weight which runs in upright guides and is so arranged that it may fall by gravity on to the head of the pile and drive it in. Also called PILE FRAME.

pile hoop (*Civ. Eng.*). An iron or steel band fitted around the head of a pile to prevent brooming.

pile pier (*Civ. Eng.*). A pier which is supported upon piles.

pile shoe (*Civ. Eng.*). The iron or steel point fitted to the foot of a pile to give it strength to pierce the earth and so assist driving.

pile (*Med.*). See **haemorrhoid.**

pile (*Met.*). A number of wrought-iron bars arranged in an orderly pile which is to be heated to a welding heat and rolled into a single bar.

pile of plates (*Light*). A device for producing plane-polarised light. It consists of a number of parallel glass plates in contact with each other and arranged so that light is reflected from them at the polarising angle—55° for glass.

pile (*Textiles*). A covering on the surface of a fabric, formed by threads that stand out from it. Pile in the form of loops is termed *loop pile* or *terry*; if the loops are cut, it is termed *cut pile*. The latter type is also produced by weaving two or more cloths together face to face, and then cutting them apart.

pileate, pī'le-āt (*Bot.*). (1) Shaped like a cap.—(2) Having a pileus.—(*Zool.*) Crested.

pile'um (*Zool.*). In Birds, the top of the head.

pileus, pī-lē'us (*Bot.*). The widened cap-like portion of an agaric: by extension, the corresponding part of the fruit body of other fungi.

pileus (*Meteor.*). See **cap.**

pilid'ium (*Zool.*). A helmet-shaped larval form of some *Nemertea*, having a prominent apical tuft of cilia and a pair of lateral ciliated lappets.

pi'lifer (*Zool*). One of a pair of lateral projections of the labrum, found in some families of *Lepidoptera.*

pilif'erous (*Bot*). Ending in a delicate hair-like point.

piliferous layer (*Bot.*). The outermost cell layer of a young root, corresponding to the epidermis of a stem. It bears the root hairs.

pi'liform (*Bot*). Resembling a long, zigzag hair.

piling-up (*I.C. Engs.*). Deposition of liquid petrol in the induction manifold of a petrol-engine, due to the engine's being motored round at a small throttle opening (as during the dive of an aircraft), thus leading to an over-rich mixture on opening up.

pillar (*Build.*). A detached column or pier for the support of a superstructure.

pillar (*Elec. Eng.*). A structure of pillar form for containing switch or protective gear. Also called a SWITCHGEAR PILLAR.

See **distribution— terminal— feeder—**

pillar (*Horol.*). Any cylindrical pieces of brass or steel which act as distance pieces to hold the plates of a clock or watch in their correct relative position.

pillar drill (*Eng.*). A drilling machine in which the spindle and table are supported by brackets carried by a pillar, the table bracket usually being slidable thereon.

pillar plate (*Horol.*). In a clock or watch, the plate to which the pillars are fixed.

pillow distortion (*Photog.*). A defect in a photographic lens system characterised by a bending inwards of parallel lines in the image. See **pincushion distortion.**

pillow lava (*Geol.*). A lava-flow exhibiting pillow structure.

pillowphone (*Acous.*). A telephone receiver, concealed in a pillow, for reproducing, without sound radiation, broadcast programmes for a listener.

pillow structure (*Geol.*). A term applied to lavas consisting of ellipsoidal and pillow-like masses which have cooled under submarine conditions. The interspaces between the pillows consist, in different cases, of chert, limestones, or volcanic ash.

pi'locar'pine (*Chem.*). $C_{11}H_{16}O_2N_2$, an alkaloid of the glyoxaline group, obtained from jaborandi leaves (*Pilocarpus* species). It is a colourless oil, b.p. 260° C. (5 mm.), soluble in water, alcohol, chloroform, but almost insoluble in ether and light petroleum.

pi'lomo'tor (*Anat.*). Causing movements of hair.

pi'lose (*Bot.*). Bearing a scattering of simple, moderately stiff hairs.

pilot (*Aero.*). The person who actually operates the flying controls of an aircraft.

pilot (*Elec. Eng.*) In power systems, a conductor used for auxiliary purposes, not for the transmission of energy. Also called PILOT-WIRE.

pilot balloon (*Meteor.*). A small rubber balloon, filled with hydrogen, used for determining the direction and velocity of air currents at high altitudes. The balloon is observed by means of a theodolite after being released from the ground.

pilot carrier (*Radio*). In a suppressed carrier system, such as is used in single sideband working, a small portion of the original carrier wave transmitted to provide a reference frequency with which the local oscillator at the receiving end may be synchronised.

pilot cell (*Elec. Eng.*). A cell of a battery upon which readings are taken in order to give an indication of the state of the whole battery.

pilot cloth (*Textiles*) A heavily milled fabric, with a raised nap, made from fine merino wools; used for uniforms, overcoatings, etc.; lower qualities are mixtures of wool and cotton.

pilot controller (*Elec. Eng.*). A *master controller* (q.v.).

pilot engine (*Rail.*). A separate locomotive preceding a train as a precaution against accidents to the latter.

pilot lamp (*Illum.*). A small lamp connected to a circuit, such as an electric cooker, to indicate when the circuit is alive.—(*Teleph.*) A lamp which indicates that one of a group of circuits is requiring attention; also called PILOT SIGNAL.

pilot nail (*Carp.*). A temporary nail used in fixing shuttering.

pilot pins (*Cinema.*). In a film printer, the detachable pins which are changed over when a double-coated positive is being exposed for the second time.

pilot (or **relay**) **valve** (*Eng.*). A small balanced valve, operated by a governor or by hand, which controls a supply of oil under pressure to the piston of a *servomotor* (q.v.) or relay connected to a large control valve, which it is desired to operate.

pilot voltmeter (*Elec. Eng.*). A voltmeter used in a power station or substation to indicate the voltage at the remote end of a feeder to which it is connected by means of a pilot.

pilot wave (*Elec. Comm.*). A carrier oscillatory current or voltage which is independently amplified in a high-efficiency amplifier independently of the side-frequencies, which are added subsequently.

pilot wire (*Elec. Comm.*). In a multi-core transmission cable, a wire which is solely concerned with detecting deterioration of the main insulation of the cable.—(*Elec. Eng.*) See **pilot.**

pi'lotaxit'ic texture (*Geol.*). The term applied to the groundmass of certain holocrystalline andesitic lavas in which there is a felt-like interweaving of feldspar microlites. Cf. *hyalopilitic texture.*

Piltdown deposits (*Geol.*). A series of gravels found on the South Downs in Southern England, from which remains of the Piltdown Man (*Eoanthropus dawsoni*) were excavated.

pime'lic acid (*Chem.*). HOOC·$(CH_2)_5$·COOH, a saturated dibasic acid of the oxalic acid series, crystals, m.p. 105° C.

pimple (*Acous.*). A defect in a gramophone record caused by a dent in the stamper, the dent being due to some hard impurity in the record stock.

pin (*Carp., Join., etc.*). (1) A small wooden peg or nail.—(2) The male part of a dovetail joint.

pin barrel (*Horol.*). A cylindrical piece on the periphery of which are short vertical pins for lifting the hammers in a chiming clock, or for lifting the comb in a musical clock.

pin cop (*Cotton Spinning*). A small cop or package of yarn made of suitable size for a loom shuttle.

pincushion distortion (*Light*). A type of distortion produced by a lens by which the image of a square appears with sides curved inwards, giving a shape similar to a pincushion. The defect is caused by placing a stop on the image side of a lens suffering from spherical aberration. See **barrel distortion, pillow distortion.**

pin-eyed (*Bot.*). Having the throat of the corolla more or less closed by a stigma shaped like a pin head; applied to the primrose and its relatives.

pin hinge (*Join.*). A form of butt hinge which has a removable pin connecting the two leaves.

pinhole photography (*Photog.*). Photography involving the use of a pinhole instead of a lens to form an image on a camera plate.

pinholes (*Hosiery*). In knitted fabrics, defects, such as irregular texture, which may be due to the use of too dry or inelastic yarns.

pinholes (*Photog.*). A photographic defect during development, whereby air-bells or dust particles prevent access of developer to the emulsion, causing lack of density.

pinholing (*Paint.*). A varnishing defect in which the surface becomes pitted with small holes.

pin insulator (*Elec.*). An insulator which is supported from the cross-arm by a pin. Suitable up to 33 kV.

pin joint (*Struct.*). A joint between members in a structural framework in which moments are not transmitted from one member to another.

pin knot (*Carp., etc.*). A knot which does not exceed ½in. in diameter.

pin mark (*Typog.*). A mark near the top of the type shank, made in casting.

pin pallet escapement (*Horol.*). An escapement in which the pallets are vertical pins of steel or jewels. The impulse is derived entirely from the teeth of the escape wheel. Used extensively for inexpensive watches, alarm clocks, and small drum movements.

pin rail (*Join.*). A wooden rail fitted with pegs for the hanging of hats and coats.

pin tongs (*Horol.*). Small hand-vices with a split draw-in chuck.

pin wheel (*Horol.*). A wheel having pins, fixed at right-angles to the plane of the wheel, which lift the hammer of a striking clock.

pin wheel escapement (*Horol.*). An escapement, used in turret clocks, in which semicircular or D-shaped pins standing at right-angles to the plane of the wheel give impulse to the pallets. The action of the escapement is similar to that of the dead-beat.

pinac'ocytes (*Zool.*). The flattened epithelial cells forming the outer part of the dermal layer in Sponges.

pin'acoid (*Crystal.*). An open crystal form which consists of two parallel faces.

pinac'oline (*Chem.*). CH_3·CO·$C(CH_3)_3$, methyl *tertiary* butyl ketone, produced by the action of dilute sulphuric acid upon *pinacone* (q.v.). A colourless liquid, b.p. 106° C., sp. gr. 0·800 at 16° C.

pin'acone (*Chem.*). $(CH_3)_2$:C(OH)·C(OH):$(CH_3)_2$, tetramethyl-ethylene glycol, crystallises with 6 H_2O. The anhydrous substance has a m.p. 38° C., b.p. 172° C., and is obtained by the reduction and condensation of acetone by the action of metallic sodium. Pinacone forms *pinacoline* (q.v.) by the elimination of water and intramolecular transformation in the presence of dilute acids. It is the simplest member of a series of tetra alkyl glycols known as *pinacols.*

pin'atype (*Photog.*). A process involving the differential dyeing of soft portions of the gelatine portions of the image.

pincers (*Zool.*). Claws adapted for grasping; as chelae, chelicerae.

pinch (*Acous.*). An effect due to the variation in the width of the groove cut by a stylus in gramophone recording; the tip of the round reproducing needle rises in the groove when it crosses the mean track.

pinch effect (*Elec. Eng.*). A constriction which occurs when a liquid conductor such as mercury or molten metal is made to carry a heavy current; it is caused by the magnetic attraction between adjacent elements of the conductor.

pinched post (*Paper*). A size of writing paper, 14¾ × 18½ in.

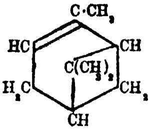
pi'neal eye (*Zool.*). See **parapineal body.**

pineal gland (or **body**) (*Zool.*). In Vertebrates, a dorsal outgrowth of the roof of the thalamencephalon arising between the habenular ganglion and the posterior commissure.

pinealec'tomy (*Surg.*). Surgical removal of the pineal gland.

pinealo'ma (*Med.*). A tumour of the pineal gland.

pi'nene (*Chem.*). There are four terpenes known as pinenes. α-Pinene, $C_{10}H_{16}$, is the chief constituent of turpentine, eucalyptus, juniper oil, etc.; b.p. 146° C. It has the formula:



It forms a hydrochloride, $C_{10}H_{17}Cl$, a white crystalline mass, of camphor-like odour, m.p. 131° C. As it contains a double bond it forms a dibromide which can be converted into a glycol.

pinguecula, pin-gwek'— (*Med.*). A yellow, triangular patch on the conjunctiva covering the sclera, occurring usually in elderly people.

pinion (*Eng.*). The smaller of a pair of high-ratio toothed spur-wheels.—(*Horol.*) A small-toothed wheel, which normally has less than 12 teeth (leaves). In a clock or watch the pinions act as followers.

pinion leaf (*Horol.*). A tooth of a pinion.

pinion wire (*Horol.*). Steel or brass wire drawn to the section of a pinion.

pin'ite (*Min.*). A hydrous silicate of aluminium and potassium which is usually amorphous. It is an alteration product of cordierite, spodumene, feldspar, etc., approximating to muscovite in composition.

pink disease (*Med.*). See **erythroedema.**

pink-eye (*Med.*). Acute mucopurulent conjunctivitis (the inflammation of the conjunctiva making it red), due to infection with various bacteria.—(*Vet.*) See **influenza (equine).**

pinking (*I.C. Eng.*). See **knocking.**

pinking (*Jewel.*). A method of changing colourless, yellow, or brown precious stones to red by exposure to heat.

pinna (*Bot.*). (1) A leaflet, when part of a pinnate compound leaf.—(2) A branch of a thallus, when these are arranged in opposite rows.

pinna (*Zool.*). In Fish, a fin: in Mammals, the outer ear: in Birds, a feather or wing.

pinnate (*Bot.*). (1) Said of a compound leaf having leaflets arranged in two ranks, one on each side of the rachis.—(2) Said of a thallus having branches arranged on each side of a middle axis.

pinnate (*Zool.*). Feather-like: bearing lateral processes.

pinnat'ifid (*Bot.*). Said of a leaf-blade which is cut, about half-way towards the midrib, into a number of pinnately arranged lobes.

pinnat'iped, pinn'iped (*Zool.*). Having the digits of the feet united by flesh or membrane. Cf. *fissiped.*

pinnat'isect (*Bot.*). Pinnatifid but with the cuts reaching nearly to the midrib.

pinning-in (*Masonry*). The operation of inserting small splinters of stone in the joints of coarse masonry.

pinnule (*Bot.*). One of the lobes or segments when a leaflet of a pinnate leaf is itself more or less divided into parts in a pinnate manner.

pinnule (*Zool.*). One of the branchlets borne by the arms in *Crinoidea.*

pino'leum blind (*Build.*). An outside blind composed of narrow splines of cane or pine woven into a fabric; used as a protection from the sun.

Pinskey Gill Beds (*Geol.*). A series of grits and shales found in Westmorland; they constitute the oldest beds in the Carboniferous System in this district.

pinta (*Med.*). Caraate. Mal de los pintos. A contagious skin disease, characterised by patches of coloured pigmentation; probably due to infection with various fungi; occurs in tropical America.

pintle (*Eng., etc.*). (1) The pin of a hinge.—(2) The king pin of a wagon.—(3) An iron bolt on which a chassis turns.—(4) One of the metal braces on which a rudder swings, supported by a *dumb-pintle* at its heel.—(5) The plunger or needle of an oil-engine injection valve, opened by oil pressure on an annular face, and closed by a spring.

pintle chain (*Eng., etc.*). A sprocket chain.

Pioneer (*Plast.*). A proprietary plaster setting with a hard face.

pioneer community (*Bot.*). The first plant community to become prominent on a piece of ground which has been stripped of its vegetation and is being reoccupied by plants.

pioneer species (*Bot.*). A species of which the members tend to be among the first to occupy bared ground; these plants are often intolerant of competition, and especially of shading, and may be crowded out as the community develops.

pi'onnote (*Bot.*). A continuous layer of fungal spores, often slimy.

pi'oscope (*Chem.*). An instrument in which the fat content of milk is estimated colorimetrically.

pipe. A tube for the conveyance of fluids.

pipe (*Acous.*). A musical instrument, mainly used in organs, in which the note is produced by longitudinal resonance of an air column when excited by an edge-tone at one end. The timbre of the emitted note depends on the scale, taper, and material of the pipe, since these determine the relative responses to overtones.

See **closed— open— reed—**
flue— pitch— stopped organ—

pipe (*Horol.*). A tubular boss or extension.

pipe (*Met.*). A conical cavity formed in the top central portion of ingots. It arises because the solid occupies less volume than the molten metal and solidification proceeds from the sides and bottom towards the top and centre, where the effects of the liquid-solid contraction are concentrated.

pipe coupling (*Plumb.*). A short collar with female threads at both ends into which screw the ends of successive lengths of piping which are to be connected co-axially.

pipe moulding (*Foundry*). The production of cast-iron pipes either by moulding in green sand, using split patterns, or by the process of *centrifugal casting* (q.v.).

pipe resonance (*Acous.*). Acoustic resonance of a pipe when the length, allowing for a constant end-correction, is an integral number of half-wavelengths when it is open at both ends, and odd multiples of a quarter-wavelength when it is closed at one end.

pipe resonator (*Acous.*). An acoustic resonator in the form of a pipe, which may be open at one or both ends, as in organ pipes, or entirely closed. Resonance arises from the stationary waves set up by a plane-progressive wave being reflected at the ends, open or closed.

pipe stopper (*San. Eng.*). An expanding form of drain plug for closing the outlet of drain pipes which are to be tested.

pipe-ventilated (*Elec. Eng.*). Said of an electric machine so constructed that a supply of ventilating air can be drawn from and returned to a source at some distance from the machine itself; used where the surrounding air is too dirty for ventilating purposes.

pipe work (*Acous*). The collection of pipes in ranks in an organ.

pipe wrench (*Plumb*). A tool adapted to turning a pipe or rod about its axis. Also called a CYLINDER WRENCH.

pipeclay (*Geol.*). A white clay, nearly pure and free from iron, occurring in England (in the Eocene Reading and Bagshot Beds and in the Miocene Bovey Tracey Beds) in thin laminae, but occasionally in deposits extensive enough to be exploited in the pottery industry.

pipeless organ (*Acous.*). A musical instrument, operated by a normal console, in which the emitted sounds are generated by a loudspeaker, the driving currents being synthesised, by the manuals, pedals, and registers, from fundamental frequencies generated by electrostatic, electromagnetic, mechanical, photo-electric, or other electronic means. Such organs may generate sounds not normally obtainable from pipe organs, such as harpsichord tones or bells.

piper'azine (*Chem.*). Diethylene-diamine, a cyclic compound of the formula  colourless crystals, m p. 104° C., b.p. 145° C. It is a strong base and has the property of forming with uric acid salts which are easily soluble in water; it is therefore used in medicine.

piper'idine (*Chem.*). $C_5H_{11}N$, a heterocyclic reduction product of pyridine, having the formula  It is a colourless liquid, of peculiar odour, b.p. 106° C. It is soluble in water and alcohol, has strong basic properties, and forms salts. It is a secondary amine, and the imino hydrogen is replaceable by alkyl or acyl radicals.

pip'erine (*Chem.*). An optically inactive alkaloid occurring in pepper, $C_5H_{10}N{\cdot}C_{12}H_9O_3$, piperylpiperidine, which crystallises in prisms, m.p. 129° C.

pip'eronal (*Chem.*). $CH_2O_2{:}C_6H_3{\cdot}CHO$, methyleneprotocatechuic aldehyde, a phenolic aldehyde of very pleasant odour, used as a perfume under the name of HELIOTROPIN.

pipette' (*Chem.*). Laboratory apparatus consisting of a glass tube which is calibrated to deliver a measured amount of a liquid. The liquid is usually drawn into the tube by suction.

pipless lamp (*Illum.*). An electric lamp in which the sealing-off tip of the bulb is inside the cap.

piqué, pē-kā (*Textiles*). A cotton fabric of good quality which has a plain face weave and has cords running across from selvedge to selvedge. Used for men's dress waistcoats, dress ties, etc.

pirn (*Weaving*). A small wooden bobbin which fits the shuttle of a loom and carries weft.

piroplasmo'sis (*Vet.*). Infection of the blood of animals by the unicellular protozoan, *Piroplasma.*

Pirquet's reaction, pĕr-kā (*Med.*). The reaction of scarified skin to the presence on it of tuberculin; a local inflammatory swelling—positive reaction—indicates that a tuberculous lesion, not necessarily active, exists in the body.

Pisces, pis'ēz (*Astron.*). Fishes. Twelfth sign of the *Zodiac* (q.v.).

Pisces (*Zool.*). A class of aquatic *Craniata* breathing by gills, having a biting mouth with well-developed jaws, paired fins, and a skeleton largely composed of bone; a bony gill-cover is always present. Bony Fishes.

piscic'olous (*Zool.*). Living within a Fish, as certain parasites.

pisciv'orous (*Zool.*). Fish-eating.

pisé de terre, pē-zā de tār (*Build.*). A kind of cob wall used sometimes in cottage construction, the cob usually being moulded between forms.

pisiform, piz'—(*Zool.*). Pea-shaped; as one of the carpal bones of Man.

pi'solite (*Geol.*). A type of limestone built of rounded bodies similar to oöliths, but of less regular form and 2 mm. or more in diameter. See **Pea Grit.**

pisolit'ic (*Geol.*). A term descriptive of the structure of certain sedimentary rocks containing pisoliths (see **pisolite** above). Calcite-limestones, dolomitic limestones, laterites, iron-ores, and bauxites may be pisolitic.

pis'tacite (*Min.*). Epidote.

pistil (*Bot.*). See **gynaeceum.**

pis'tillar (*Bot.*). Club-shaped.

pis'tillate (*Bot.*). Said of a flower which has a gynaeceum, but in which the stamens are lacking or non-functional.

pistillid'ium (*Bot.*). Archegonium.

pis'tillode (*Bot.*). An abortive or non-functional pistil.

pistil'lum (*Zool.*). In *Siphonophora*, the central tube of an aurophore.

pistol (*Small Arms*). A weapon which can be discharged with one hand. See **revolver.**

piston. A cylindrical metal piece which moves or reciprocates in a cylinder, either under fluid pressure, as in engines, or to displace or compress a fluid, as in pumps and compressors. Leakage is prevented by spring rings, leather packing, hat leather, etc. See **bucket** (1), **hat-leather packing, piston ring, plunger, slipper piston, trunk piston.**

piston (*Acous.*). (1) In brass musical instruments, a valve mechanism which alters the effective length of the resonating air-column and thereby permits the voicing of extra notes in the scale.—(2) A push key arranged with others in a row between the manuals on an organ console. It is for operation by the thumb, so that a combination of stops, previously selected on a commutator board, can be operated simultaneously. See **toe piston.**

piston mechanism (*Bot.*). A device, found in some flowers, in which the pollen is shed into a tube from which it is pushed by the style, thus coming into contact with an insect visitor.

pistonphone (*Acous.*). A device in which a rigid piston is vibrated, so that, by measurement of its motion, acoustic pressures and velocities can be calculated.

piston pin (*I.C. Engs.*). See **gudgeon pin.**

piston ring (*Eng.*). A cast-iron ring, of rectangular section, fitted in a circumferential groove in a piston, and springing outward against the cylinder wall to prevent leakage. It is cut through at one point to increase its springiness and allow of fitting. See **junk ring, mitre-cut piston ring, scraper ring.**

piston rod (*Eng.*). The rod connecting the piston of a reciprocating engine with the crosshead.

piston rod gland (*Eng.*). The gland in the stuffing box in the cylinder end of an engine through which the piston rod passes.

piston slap (*I.C. Engs.*). The light knock caused by a worn or loose piston slapping against the cylinder wall when the connecting-rod thrust is reversed.

piston valve (*Eng.*). A steam-engine slide-valve in which the sealing or sliding surfaces of the valve are formed by two short pistons attached to the valve-rod, working over cylindrical port faces in the steam chest; commonly used on steam locomotives.

pit (*Bot.*). (1) A thin localised area in the wall of a cell or other element of plant structure.—(2) The two opposite thin areas in the walls of two cells or vessels in contact.—(3) A local thin spot in the wall of the oögonium of some *Oömycetes.*

pit cavity (*Bot.*). The excavation in the wall where the thinning is apparent.

pit membrane (*Bot.*). The thin sheet of unbroken wall between two opposite pit cavities.

pit (*Eng.*). A small opening or chamber formed in a floor, either to accommodate the moving parts of a large engine (e.g. a *crank-pit*) or to facilitate inspection of the underside of a machine or vehicle.

pit (*Mining, etc.*). (1) A place whence minerals are dug.—(2) The shaft of a mine.

pit-brow (*Mining*). See **brow.**

pitmen (*Mining*). Men employed in shaft sinking or shaft inspection and repair.

pit-saw (*Tools*). A large two-handled rip-saw used for cutting logs. Also called a CLEAVING SAW.

pit work (*Mining*). The moving beams and balance bobs actuated in a shaft by a Cornish pump or beam engine.

Pitanco (*Build.*). A proprietary insulating compound in plastic form.

pitch. A dark-coloured, fusible, more or less solid material, containing bituminous or resinous substances, insoluble in water, soluble in several organic solvents. Usually obtained as the distillation residue of tars.

pitchblende (*Min.*). Uraninite. Radium was first discovered in this mineral. This and helium are due to the disintegration of uranium.

pitch pine (*Timber*). A strong, heavy wood coming from the south of the U.S.A. Commonly used for heavy framing and for piles, as well as for internal joinery.

pitchstone (*Geol.*). A glassy igneous rock which has a pitch-like (resinous) lustre and contains crystallites and microlites. It is usually of acid to subacid composition, and contains a notable amount of water (4% or more).

pitch (*Acous.*). The subjective property of a simple or complex tone which enables the ear to allocate its position on a frequency scale. If the fundamental of a complex tone is absent, the pitch of this fundamental is still recognised, because of subjective difference tones amongst the partials. See **concert pitch.**

pitch pipe (*Acous.*). A pipe, somewhat remote from an organ, which is tuned to a standard frequency and then used for adjusting pipes in the organ, its remoteness being necessary to obviate acoustic coupling and the pulling of the frequency of emitted sounds from pipes which are slightly mistuned.

pitch (*Build.*). The ratio between the rise and the span of a roof, or the angular slope to the horizontal.

pitch (*Cinema.*). The distance between perforations (sprocket holes) on the edges of cinematograph film.

pitch (*Elec. Eng.*). A term used in connexion with electrical machines to denote the distance measured along the armature periphery between various parts.

See **pole— slot— winding—**

pitch, angle of (*Aero.*). Of an aircraft in flight, the angle between the plane of its horizontal axes and the direction of the wind relative to the aircraft.

pitchboard (*Join.*). A triangular board used as a templet for setting out stairs, the sides of the triangle corresponding to the *rise*, the *going*, and the *pitch* of the steps.

pitch circle (*Eng.*). In a toothed wheel, an imaginary circle along which the tooth pitch is measured, and with respect to which tooth proportions are given. For two wheels in mesh, the pitch circles roll in contact.

pitch cone (*Eng.*). A conical surface through the teeth of a bevel wheel, corresponding to the pitch circle of a spur gear. For two bevels in mesh, their pitch cones roll together.

pitch control (*Television*). Control of the number of lines per unit length in a television image.

pitch face (*Masonry*). A stone surface left with a rough finish produced by the hammer.

pitch line (*Eng.*). The line along which the pitch of a rack is marked out, corresponding to the pitch circle of a spur wheel.

pitch of organ pipe stops (*Acous.*). The pitch of a stop, which potentially brings into action a rank of pipes, is known as the *footage* (q.v.). The footages are related, in terms of frequency, as follows:

Relative Frequency.	Name of Relative Pitch.	Name of Manual Stop Pitch.
$\frac{1}{2}$ f	*sub-octave, double, contra* . . .	16 ft.
f	*unison, prime* . .	8 ft.
$1\frac{1}{2}$ f	*sub-third octave, quint*	$5\frac{1}{3}$ ft.
2 f	*octave, principal* .	4 ft.
3 f	*nazard* or *12th* . .	$2\frac{2}{3}$ ft.
4 f	*double octave* or *15th* .	2 ft.
5 f	*tierce* or *17th* . .	$1\frac{3}{5}$ ft.
6 f	*larigot* or *19th* . .	$1\frac{1}{3}$ ft.
7 f	*septième* or *20th* .	$1\frac{1}{7}$ ft.
8 f	*3rd octave* or *22nd* .	1 ft.
9 f	*nonième* . . .	$\frac{8}{9}$ ft.

For pedals the unison is 16 ft., the other pitches of pedal stops being in accordance.

pitched roof (*Build., Civ. Eng.*). A roof having a sloping surface or surfaces.

pitched work (*Masonry*). Stone facing work for the slopes of jetties, breakwaters, etc., executed by pitching the stones into place with some regularity. Cf. *pierre perdue, coursed masonry.*

pitcher (*Bot.*). An urn-shaped or vase-shaped modification of a leaf, or part of a leaf, developed by certain plants; it serves as a means of trapping insects and other small animals, which are killed and digested.

pitcher (*Civ. Eng.*). A term applied to a granite sett used in paving.

pitcher (*Pot.*). A fired earthenware mould formed from a block mould.

pitching. The angular motion of a ship or aircraft in a vertical plane about a lateral axis.

pitching (*Brew.*). The process of mixing the yeast intended to ferment a brew of beer with a small quantity of wort, in the fermenting vat, previous to admitting the remainder of the wort. This induces rapid fermentation.

pitching (*Civ. Eng.*). The foundation layer of well-rammed and consolidated broken stone upon which a road surfacing of setts is built.

pitching fold (*Geol.*). A fold whose crest or trough line is not horizontal when traced in the general direction of strike, because the fold varies in amplitude.

pitching moment (*Aero.*). The component of the couple about the lateral axis, acting on an aircraft in flight.

pitching period (*Ships*). The phenomenon of a ship's behaviour in waves, wherein she changes her trim. The time of complete reversal of trim from forward to aft (or vice versa) is the *pitching period*.

pitching-piece (*Carp.*). See **apron piece.**

pitching tool (*Masonry*). A chisel with a very blunt edge, used to knock off superfluous stone.

pith (*Bot.*). A cylinder of cells, chiefly parenchymatous, lying centrally in an axis and surrounded by vascular tissue.

pith (*Horol.*). The pith of elderwood used in cleaning watches and clocks.

pith (*Timber*). The central core of a log.

pith-ball electroscope (*Elec. Eng.*). An apparatus consisting of two pith balls suspended by silk threads. When charged, the balls repel each other and can therefore be used for detecting the presence of electric charges.

pith ray (*Bot.*) See **vascular ray.**

pith ray fleck (*Bot.*). A dark spot in timber, composed of cells which have filled a cavity resulting from the attacks of insects on the cambium.

pithed (*Zool.*). Having the central nervous system (spinal cord and brain) destroyed.

pithi'atism (*Med.*). Those phenomena of hysteria which can be produced by suggestion and removed by persuasion.

Pitot tube, pē-tō (*Aero, etc.*). A tube with an open end facing the relative air current or direction in which it is being carried.

pitted (*Bot., etc.*). (1) Having pits in the walls.—(2) Having the surface marked by small excavations.

pitted vessel (*Bot.*). A vessel with pits in its walls.

pitting (*Build.*). See **blowing.**

pitting (*Eng.*) (1) Corrosion of metal surfaces, as boiler plates, due to local chemical action.—(2) A form of failure of gear teeth, due to imperfect lubrication under heavy tooth pressure.

pitting (*Varn.*). Varnished work disfigured by small holes. See **pinholing.**

pitu'itary body (*Zool.*). An endocrine gland of Vertebrates formed by the union of a ventral outgrowth of the floor of the diencephalon and an ectodermal diverticulum; hypophysis.

pityri'asis (*Med.*). A term common to various skin diseases in which branny scales appear.

pivot. See **fulcrum.**

pivot (*Horol.*). The reduced end of an arbor or staff which runs in a hole, jewel, or screw. It may be parallel, shouldered, or conical.

pivot bridge (*Struct.*). A form of swing bridge in which the vertical pivot is located at the middle of the length of the bridge.

pivot jaw (*Elec. Eng.*). A fixed jaw to which the blade of a switch is pivoted.

pivot joint (*Zool.*). An articulation permitting rotary movements only.

pivoted brace (*Horol.*). A form of hooking for the mainspring to the barrel. The brace or post is pivoted into holes in the barrel and barrel cap, the end of the spring being looped round the centre portion of the brace.

pivoted detent (*Horol.*). A detent which is carried on pivots, as distinct from a spring detent such as is used in English chronometers.

place bricks (*Build.*). See **grizzle bricks.**

placen'ta (*Bot.*). (1) The portion of the carpel wall, often somewhat fleshy, to which the ovules are attached.—(2) Any mass of tissue to which sporangia or spores are attached.

placenta (*Zool.*). In *Eutheria*, a flattened cake-like structure formed by the intimate union of the allantois and chorion with the uterine wall of the mother; it serves for the respiration and nutrition of the growing young.—*adjs.* **placen'tal, placentate, placentif'erous, placentig'erous.**

placenta vera (*Zool.*). A deciduate placenta in which both maternal and foetal parts are thrown off at birth. Cf. *semiplacenta.*

placental scale (*Bot.*). See **ovuliferous scale.**

Placenta'lia (*Zool.*). See **Eutheria.**

placentation (*Bot.*). The arrangement of the placentae in an ovary, and of the ovules on the placentae.—(*Zool.*) The method of union of the foetal and maternal tissues in a placenta.

placen'tiform (*Bot.*). Like a flat cake or cushion.

placers, placer deposits, plas'er (*Geol.*). Superficial deposits, chiefly of fluviatile origin, rich in heavy ore minerals such as cassiterite, native gold, platinum, which have become concentrated in the course of time by long-continued disintegration and removal from the neighbourhood of the lighter associated minerals. See also **auriferous deposits.**

placing plant (*Build., Civ. Eng.*). A mast up which concrete can be hoisted to a given height, to be then discharged to any desired position on the site down an inclined flume.

placode (*Zool.*). Any plate-like structure: in Vertebrates, an ectodermal thickening contributing to a dorsal nerve-ganglion in the head region.

placo'dioid (*Bot.*). Said of the thallus of a lichen which is rounded in outline and has that outline edged by small scales.

placo'dium (*Bot.*). A hardened hyphal layer surrounding the openings of the ostioles of perithecia embedded in a stroma.

placoid (*Zool.*). Plate-shaped; as the scales and teeth of *Selachii.*

plac'ula (*Zool.*). A flattened blastula with reduced segmentation cavity occurring in the development of some *Urochorda.*

plafond, pla-fon^{g} (*Arch.*). The under surface of the corona in an entablature.

plagio- (Greek *plagios*, slanting, oblique). A prefix used in the construction of compound terms; e.g. *plagiocephaly* (q.v.).

pla'gioceph'aly, plagioceph'alism (*Med.*). An asymmetrical and twisted condition of the head.

pla'gioclase feldspars (*Min.*). An isomorphous series of triclinic minerals which consist of albite and anorthite combined in all proportions, ranging from pure soda feldspar to pure lime feldspar. See **feldspar**; also **albite, andesine, anorthite, labradorite, oligoclase.**

pla'giotrop'ic, pla'giotrop'ous (*Bot.*). Said of members which become oriented in a position at right-angles across the direction in which a stimulus is acting.

plague (*Med.*). A disease of rodents due to infection with the *Bacillus pestis*, transmitted to man by rat-fleas, epizootics in rats invariably preceding epidemics. In Man the disease is characterised by enlargement of lymphatic glands (*bubonic plague*), severe prostration, a tendency to septicaemia, and occasional involvement of the lungs.

pla'gula (*Zool.*). A chitinous plate of the prosoma of *Solifugae.*

plaid (*Textiles*). A woollen shawl or wrap, usually with a kind of check pattern, once worn in Scotland.

plain antenna system (*Radio*). An early form of spark transmission system in which the spark gap was included in the antenna circuit itself.

plain conduit (*Elec. Eng.*). See **plain steel conduit.**

plain coupler (*Elec. Eng.*). A short length of tubing serving to connect the end of two adjacent pieces of plain steel conduit in line with each other in an electrical installation. Also called a SLEEVE.

plain loom (*Weaving*). A machine designed for the production of cloth of plain weave.

plain muscle (*Zool.*). See **unstriated muscle.**

plain Oxford (*Textiles*). See **Oxford shirting.**

plain steel conduit (*Elec. Eng.*). Conduit consisting of light-gauge steel tubing not having the ends screwed; used for containing the conductors in electrical installations. Cf. *screwed steel conduit.* Also called PLAIN CONDUIT.

plain tile (*Build.*). The ordinary flat tile, usually 10½ × 6½ × ⅜-½ in., with two nibs for hanging from the battens.

plain weave (*Weaving*). The simplest interlacing of warp and weft threads. Each warp thread is alternately over and under the weft, while adjacent warp threads work opposite to each other. Also called CALICO (or TABBY) WEAVE.

planceer′ or **plancier′** (*Build.*). A soffit, especially the under surface of the corona in a cornice.

planceer piece (*Build.*). A horizontal timber to which the soffit boards of an overhanging eave are fastened.

Planck's constant (*Phys.*). A universal constant, defined as the ratio of a quantum of radiant energy of a particular frequency to the frequency. Its value is $6{\cdot}547 \times 10^{-27}$ erg-sec. Symbol ***h***.

Planck's quantum of action (*Phys.*). See **Planck's constant.**

Planck's radiation formula (*Phys.*). An expression for the quantity of energy of frequency ν radiated per second from unit area of a black body at absolute temperature T:

$$E_\nu = \frac{h\nu^5}{c^3\left(e^{\frac{h\nu}{kT}} - 1\right)},$$

where c is the velocity of light, h is Planck's constant, k is Boltzmann's constant, and e is the base of natural logarithms.

plane (*Aero.*). (1) A colloquial abbrev. for *aeroplane* or *airplane.*—(2) MAIN PLANES, the principal supporting surfaces of an aeroplane, including the ailerons.—STUB PLANE, a short length of plane which projects from the body of an aeroplane and forms the connexion for the main planes. In flying-boats, one of the projections from the hull, just above the waterline, which gives lateral stability on the water.—TAIL PLANE, a horizontal plane forming part of the tail unit, serving to control the longitudinal stability of an aeroplane.

plane (*Carp., Join.*). A wood-working tool used for the purpose of smoothing surfaces.

plane ashlar (*Masonry*). A block of stone which has the marks of the tool dressed out.

plane, focal (*Optics, Photog.*). See **focal plane.**

plane-iron (*Carp., etc*). The cutting part of a plane, which actually shapes the work.

plane of saturation (*Civ. Eng.*). The natural level of the *ground water* (q.v.).

plane of section (*Bot.*). The direction in which a plant member is cut, or assumed to be cut, for purposes of elucidating its structure. In radially symmetrical members, the plane may be *transverse* (i.e. at right-angles to the longitudinal axis), *longitudinally radial* (i.e. along one of the radii), or *longitudinally tangential* (i.e. parallel to a tangent to the surface). In a flower, the plane may be *median* or *anterior-posterior* (i.e. passing through the bract and axis), *lateral* (i.e. parallel to the ground), or neither of these, when it is *oblique.*

plane of symmetry (*Crystal.*). In a crystal, an imaginary plane on opposite sides of which faces, edges, or solid angles are found in similar positions. One half of the crystal is hence a mirror image of the other.

plane of the ecliptic (*Astron.*). See **ecliptic.**

plane polarisation (*Radio*). The state of polarisation of an electromagnetic wave when the electric (and magnetic) field at any point does not vary in direction (except for reversal) over a cycle.

plane stock (*Carp., etc.*). The body of a plane, holding the plane-iron in position.

plane surveying (*Surv.*). Surveying applied to areas of small extent, where the effect of the curvature of the earth's surface is negligible and it may be assumed that the mean surface is plane.

plane table (*Surv.*). A drawing-board mounted on a tripod so that the board can be levelled and also rotated about a vertical axis and clamped in position. An alidade completes the essential parts of a plane table.

plane tabling (*Surv.*). A method of surveying in which the fieldwork and plotting are executed simultaneously.

plane-tile (*Build.*). See **crown-tile.**

planer (*Typog.*). A flat piece of wood which is placed on a forme of type and tapped with a mallet to level the surface.

planer tools (*Eng.*). Planing machine cutting-tools, similar to those used for turning, clamped vertically in a block pivoted in the *clapper box* (q.v.) on the head.

planet (*Astron.*). (Greek *planētēs*, wandering.) The name given in antiquity to the seven heavenly bodies, including the sun and moon, which were thought to travel among the fixed stars. The term is now restricted to those bodies, including the Earth, which revolve in elliptic orbits about the sun; in the order of distance they are: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto. The two planets, Mercury and Venus, which revolve within the Earth's orbit are designated *inferior planets.*

plan′etary gear (*Eng.*). Any gear-wheel whose axis describes a circular path round that of another wheel, e.g. the bevel wheels carried by the crown wheel of an automobile *differential gear* (q.v.).

planetary nebulae (*Astron.*). A class of small nebulae of regular shape and outline, so called because they generally show a sensible disc when seen in the telescope.

planetes′imal hypothesis (*Astron.*). A theory of the evolution of our solar system which postulates a non-rotating spherical mass of gas, so affected by the tidal action of a passing star as to emit two opposite jets of matter while also beginning to rotate, the spiral arms so formed condensing into planets by the larger condensations annexing the smaller (called *planetesimals*).

planid′ium (*Zool.*). A larval type of certain *Hymenoptera*, of active habit and possessing chitinised segmental plates and locomotor spines.

planim′eter (*Eng., etc.*). A form of integrator for measuring mechanically the area of a plane surface, e.g. the area of an indicator diagram. A tracing point on an arm is moved round the closed curve, whose area is then given to scale by the revolutions of a small wheel supporting the arm.

planing machine (*Eng.*). A machine for producing large flat surfaces. It consists of a gear-driven reciprocating work-table sliding on a heavy bed, the stationary tool being carried above it by a saddle, which can be traversed across a horizontal rail carried by uprights. See **clapper box, planer tools.**

plank (*Timber*). A piece of timber of thickness 2-6 in. and of width from 11 in. upwards.

plank root (*Bot.*). A root which is very markedly flattened so that it stands out from the base of the stem like a plank set edgeways to the surface of the ground; plank roots give additional support to the plant.

plank truss (*Carp.*). A roof or bridge truss constructed of planks.

plankton (*Ecol.*). Animals and plants floating in the waters of seas, rivers, ponds, and lakes, as distinct from animals which are attached to, or crawl upon, the bottom; especially minute organisms and forms, possessing weak locomotor powers.

plankton-pulse (*Ecol.*). Periodic variation in the abundance of plankton in any particular area, due to various ecological factors.

plan'oblast (*Zool.*). A free-swimming Medusa.

planogam'ete (*Bot., Zool.*). A motile or wandering gamete; a zoogamete.

planogam'ic (*Bot.*). Having motile gametes.

plan'ont (*Zool.*). In some *Neosporidia*, an initial amoebula phase liberated from a spore within the body of the host.

plan'osome (*Cyt.*). An odd chromosome resulting from non-disjunction of a pair during meiosis.

plan'ospore (*Bot.*). See **zoospore.**

planozy'gote (*Bot.*). A motile zygote.

plant (*Bot.*). An organism which has little or no power of dealing with solid food, and which therefore takes in all or most of the material used in nutrition in solution in water.

plant community (*Bot.*). See **community.**

plant formation (*Bot.*). See **association.**

plant indicator (*Bot.*). See **indicator.**

plant pathology (*Bot.*). See **phytopathology.**

plant (*Eng., etc.*). (1) The machines, tools, and other appliances requisite for carrying on a mechanical or constructional business; the term sometimes includes also the buildings and the site, and, in the case of a railway, the rolling stock.—(2) The permanent appliances needed for the equipment of an institution.

plant (*Horol.*). To locate, to set out, e.g. *to plant the train*, to set out the various centres for the pivot holes on the plates.

plant load-factor (*Elec. Eng.*). The ratio of the total number of kWh supplied by a generator or generating station to the total number of kWh which would have been supplied if the generator or generating station had been operated continuously at its maximum continuous rating.

planta (*Zool.*). The sole of the foot in land Vertebrates: the flat apex of a proleg in Insects.—*adj.* **plantar.**

plantation (*Build.*). A slate size, 13 × 11 in.

Planté plate, plahn^{g}-tā (*Elec. Eng.*). See **formed plate.**

planted (*Dec.*). Said of an isolated ornament, etc., applied by partly sinking into a base (wood panel, plaster, etc.).

planted moulding (*Join.*). A moulding cut out of a separate strip of wood of the required section and secured to the surface which it is intended to decorate.

plan'tigrade (*Zool.*). Walking on the soles of the feet, as Man.

planting (*Join.*). The operation of forming a *planted moulding* (q.v.).

plan'tula (*Zool.*). See **pulvillus.**

plan'ula (*Zool.*). A larval form of some Invertebrates, especially *Coelenterata*; it consists of an outer layer of ciliated ectoderm and an inner mass of endoderm cells.

plashing (*Build., Civ. Eng.*). The process of intertwining branches in forming gabions, hurdles, etc.

Plaskett's star (*Astron.*). The star whose catalogue designation is B.O. 6° 1309; first studied by Plaskett; it is remarkable for its high luminosity, which is 30,000 times that of the sun; its absolute magnitude is −6·4.

plasma-, plasmo- (Greek *plasma*, gen. *plasmatos*, anything moulded). A prefix used in the construction of compound terms; e.g. *plasmacytoma.*

plasma (*Min.*). A bright-green translucent variety of cryptocrystalline silica (chalcedony). It is used as a semi-precious gem.

plasma (*Thermionics*). The region in a gaseous discharge where there is no resultant charge, the number of positive ions and negative ions being equal, in addition to unionised molecules.

plasma, plasm (*Zool.*). Protoplasm, especially in compound terms, as *germ-plasm*: a body-fluid such as the fluid part of such tissues as blood and lymph.—*adj.* **plasmatic.**

plasma membrane (*Bot., Zool.*). See **plasmalemma.**

plasmacyto'ma (*Med.*). A tumour appearing in bone and composed of cells closely resembling plasma cells.

plasmalem'ma (*Bot.*). A very thin layer of specialised protoplasm, forming the outer boundary of the protoplast where that is in contact with the cell wall.—(*Zool.*) An extremely thin membrane enclosing the apparently naked protoplasm of forms like *Amoeba.* Also PLASMA (or PLASMATIC) MEMBRANE.

plas'matopa'rous (*Bot.*). Said of a spore which, in the earliest stage of germination, emits its contents as a naked protoplast, which then forms a wall and puts out a germ tube.

plas'mocyte (*Zool.*). See **leucocyte.**

plasmoder'ma (*Bot.*). A very thin specialised layer of protoplasm around a vacuole.

plas'modesm (*Bot.*). An extremely delicate strand of protoplasm passing through a fine perforation in a cell wall, and, with many other plasmodesms, providing a connexion between the protoplasts of contiguous cells.

plasmo'diocarp (*Bot.*). A sporangium, formed by some *Myxomycetes*, which is of irregular or sinuous form.

plas'moditro'phoblast (*Zool.*) In the Mammalian placenta, a syncytium formed by the thickening of the upper part of the trophoblast which is in contact with the uterine wall.

plasmo'dium (*Bot.*). A thallus having the form of a naked multinucleate mass of protoplasm which can creep in amoeboid manner and take in solid food material.—(*Zool.*) A syncytium formed by the union of uninucleate individuals without fusion of their nuclei.—*adj.* **plasmodial.**

plasmog'amy (*Biol.*). Fusion of cytoplasm as distinct from fusion of nucleoplasm (karyogamy); plastogamy.—*adj.* **plasmog'amous.**

plasmol'ysis (*Biol.*). The process of removal of water from a cell by osmotic methods with resultant shrinking.

plasmo'ma (*Med.*). See **plasmacytoma.**

plas'mosome (*Cyt.*). A small cytoplasmic granule: a type of nucleolus which stains with acid dyes and disappears during mitosis without mingling with the chromosomes.

plasmot'omy (*Zool.*). Fission, by division of cytoplasm only, of multinucleate *Protozoa* to form multinucleate offspring.

plaster. A general name for plastic substances which are used for coating wall surfaces, and which set hard after application. See also **acoustic plaster.**

plaster board (*Build.*). A building-board made of plaster with paper facings.

plaster of Paris (*Chem., etc.*). Dehydrated gypsum, $2CaSO_4, H_2O$. When mixed with water, it evolves heat and quickly solidifies, expanding slightly; hence its use for making casts.

plaster slab (*Build.*). A block, frequently perforated, made from plaster of Paris and coarse sand; used in the construction of partitions.

plasterer's putty (*Plast.*). A preparation similar to *fine stuff* (q.v.), made by dissolving pure lime in water and passing it through a fine sieve.

plastic bronze (*Met.*). Bronze containing a high proportion of lead; used for bearings. Composition: 72-84% copper, 5-10% tin, and 8-20% lead plus zinc, nickel, and phosphorus.

plastic clay (*Build.*). See **foul clay.**

plastic deformation (*Met.*). Permanent change in the shape of a piece of metal, or in the constituent crystals, brought about by the application of mechanical force.—(*Geol.*) Also said of certain minerals, e.g. *calcite*, so affected during metamorphism.

plastic effect (*Television*). A fault in a reproduced television image due to phase distortion; it gives an erroneous three-dimensional appearance.

plastic material (*Bot.*). Any substance which is used up in growth processes.

plastic rail-bond (*Elec. Eng.*). A rail-bond made by inserting plastic conducting material between the rail itself and the fishplate.

plastic setting (*Textiles*). The setting of woollen yarn, previously placed under tension, by the influence of moisture at high temperature in order to avoid the curl which tends to develop in certain types.

plastic sulphur (*Chem.*). Formed when sulphur is distilled into water. Unstable and changes to the rhombic form.

plastic surgery (*Surg.*). That branch of surgery which deals with the repair and restoration of damaged or lost parts of the body.

plastici'sers (*Chem*). High-boiling liquids used as ingredients in lacquers; they do not evaporate but preserve the flexibility and adhesive power of the cellulose films. Well-known plasticisers are triphenyl phosphate, tricresyl phosphate, high-boiling glycol esters, etc.

plastics. A generic name for synthetic condensation or polymerisation substances, also for certain natural substances, which under heat and pressure become plastic, and can then be shaped in a mould, extruded as rod, tube, etc, or used in the formation of laminated products. Plastics are *thermoplastic* (q.v.) or *thermosetting* (q.v.). They are marketed under a great many proprietary names, the principal of which are given in their alphabetical position in this work. Plastic products are of wide application in the mechanical, electrical, radio, gramophone, aeroplane, automobile, building, paint and varnish industries, and have manifold domestic uses.

plastid (*Bot.*). Any small dense protoplasmic inclusion in a cell. Plastids are probably special centres of chemical activity, and many of them, when exposed to light, become pigmented and become chloroplasts.

plastids (*Zool.*). Small specialised granules occurring in certain *Protozoa*; concerned with the synthetic functions of the cell.

plas'tidome (*Bot.*). The total outfit of plastids in a cell.

plastin (*Cyt.*). An acidophil substance occurring in masses in the nuclei of cells.—*adj.* **plas'tinoid.**

plastochon'dria (*Zool.*). See **mitochondria.**

plas'tochrone (*Bot.*). The period of time that elapses between the formation of one leaf primordium and the next, on the growing point of a shoot in which there is a stable spiral phyllotaxis.

plas'tocont (*Bot., Zool.*). See **chondriocont.**

plastog'amy (*Zool.*). Union of individual *Protozoa* without fusion of their nuclei.

plastone'ma (*Bot.*). Deeply staining peripheral cytoplasm in sporogenous tissue in mosses.

plas'tosome (*Cyt.*). Lightly staining internal cytoplasm in the cells of sporogenous tissue in mosses.—(*Zool.*) See **mitochondria.**

plastron (*Anat.*). The sternum and the costal cartilages.—(*Zool.*) The ventral part of the bony exoskeleton in *Chelonia*: any similar structure.—*adj.* **plastral.**

platband (*Build.*). (1) An *impost* (q.v.).—(2) A flat projecting moulding, which projects from the general wall surface by an amount less than its own breadth.—(3) A door or window lintel.

plate or platt (*Carp.*). The top horizontal timber of a wall, supporting other parts of the structure.

plate (*Elec. Eng.*). (1) The electrode of an accumulator cell. See **formed plate, pasted plate.**—(2) One of the conducting surfaces of a condenser.

plate (*Photog.*). Glass used as a support for sensitive emulsions during exposure and processing. See **dry-plate, wet-plate process.**

plate (*Print.*). (1) An electrotype or stereotype.—(2) An illustration, especially one that is printed separately from the book which it illustrates.

plate (*Thermionics*). An obsolescent synonym for *anode*.

plate (*Zool.*). See **plax.**

plates (*Furs*). A number of furs sewn together.

plates (*Horol.*). The circular or rectangular plates of brass which form the framework of a watch or clock and which are drilled to receive the pivots of the train, etc.

plate battery (*Elec. Comm.*). Another name for a *B-battery* (q.v.).

plate clutch (*Eng.*) See **disc** (or **plate**) **clutch.**

plate-frame (*Elec. Eng.*). The nickel-plated framework for supporting the perforated steel tubes of the electrode of a nickel-iron accumulator.

plate gauge (*Eng.*). A limit gauge or single external gauge formed by cutting slots of the required gauge width in a steel plate, the surfaces of which are hardened. See **limit gauge.**

plate girder (*Struct.*). A built-up steel girder consisting of a single web-plate along each edge of which is riveted, as a flange, a pair of angles. In the larger sizes, flange-plates are riveted to the angles.

plate glass (*Glass*). Glass of superior quality, originally cast on an iron bed and rolled into sheet form, and afterwards ground and polished. Modern methods have to a large extent superseded this, save for special kinds of glass.

plate glazing (*Paper*). The operation of passing paper and polished metal sheets between heavy rolls, the process being repeated until a sufficiently smooth surface has been imparted to the paper.

plate-group (*Elec. Eng.*). The complete unit, consisting of an accumulator plate or plates, terminal bar and terminal lug, forming the electrode of an accumulator cell. Also called a PLATE-SECTION.

plate-lug (*Elec. Eng.*). A projection on an accumulator plate used for connecting it to a terminal-bar.

plate moulding (*Moulding*). A method of mounting the halves of a split pattern on opposite sides of a wood or metal plate, placed between the cope and drag, thus eliminating the making of the joint faces.

plate proof (*Print.*). A proof taken from a plate.

plate rack (*Build.*). An open frame in a kitchen or scullery, into which plates may be placed vertically so that they may drain after they have been washed.

plate screws (*Surv.*). The screws directly connecting the head of a theodolite or level with its tripod, and serving as a means of adjustment for bringing the head to a level position. Also called FOOT SCREWS.

plate-section (*Elec. Eng.*). See **plate-group.**

plate shelf (*Join.*). A narrow shelf round the walls of a room near the ceiling, often used to carry and exhibit ornamental plates.

plate-support (*Elec. Eng.*). A support from which the plates of an accumulator are suspended, or upon which they rest.

plateau-basalts (*Geol.*). Basic lavas of basaltic composition occurring as thin, widespread flows, forming extensive plateaux (e.g. the Deccan in India).

plateau-building movements (*Geol.*). See **epeirogenic earth movements.**

plateau eruptions (*Geol.*). Volcanic eruptions by which extensive lava-flows are spread in successive sheets over a wide area and eventually build a plateau; as in Idaho. See **fissure eruptions.**

plateau gravel (*Geol.*). Deposits of sandy gravel occurring on hill-tops and plateaux at heights above those normally occupied by river terrace gravels. Originally deposited as continuous sheets, plateau gravel has been raised by earth movements to its present level and deeply dissected. Of Pliocene or early Pleistocene age in the main.

plated carbon (*Illum.*). An arc-lamp carbon upon which a layer of copper has been deposited by electroplating, in order to improve its conductivity and ensure good contact with the holder.

plated fabrics (*Hosiery*). Fabrics produced by arranging two threads in a knitting machine so that one appears on the face of the fabric and the other on the back; e.g. cotton on wool.

plat'en (*Eng.*). The work table of a machine tool, usually slotted for clamping bolts.

platen machine (*Print.*). A printing machine in which the impression is taken with a flat surface not a cylinder. Small commercial work is usually printed on platen machines.

platform (*Carp.*). In halls, etc., a relatively small area of floor raised above the general floor-level.

platform escapement. (*Horol.*). An escapement mounted on an independent plate.

platform gantry (*Build.*). A gantry formed of square timbers strongly braced together to support a platform on which is erected a scaffold used for the handling of materials, for which purpose it bears a crab or winch.

plat'inates (*Chem.*). See **platinic hydroxide.**

plating (*Bind*). The operation of inserting *plates* (see **plate,** *Print.*, 2) in a volume, e.g. by attaching them to guards.

plating (*Elec. Eng.*).
See **barrel—** **close—** **parcel—**
bright— **electro—**

plating generator (*Elec. Eng.*). A d.c. generator designed to give the heavy currents at low voltages required by electroplating cells.

platin'ic hydroxide (*Chem.*). $Pt(OH)_4$. Dissolves in acids to form platinic salts and in bases a series of salts called *platinates.* A type of compound formed by the other members of the platinum group of metals.

platinic oxide (*Chem.*). PtO_2. Dark grey powder formed when platinic hydroxide is heated. Also called PLATINUM DIOXIDE.

platinic salts (*Chem.*). See **platinic hydroxide.**

platinised asbestos (*Chem.*). Asbestos permeated with finely divided platinum.

plat'inite (*Met.*). Alloy containing iron 54-58%, and nickel 42-46%. Has the same coefficient of expansion as platinum, and is used to replace it in electric-light bulbs.

plat'inoid (*Met.*). Alloy containing copper 60%, zinc 24%, nickel 14%, tungsten 2%. Has high electrical resistance and is used for resistances and thermo-couples.

plat'inotype (*Photog*). Obtained by the reduction of a platinum salt to platinum by ferrous oxalate, after the latter has been reduced from ferric oxalate during exposure.

plat'inous hydroxide (*Chem.*). $Pt(OH)_2$. Soluble in the haloid acids (hydrochloric acid, etc.), forming platinous salts.

platinous oxide (*Chem.*). PtO. Formed when platinous hydroxide is gently heated.

plat'inum (*Met.*). A metallic element in the eighth group of the periodic system. Symbol, Pt. At. no. 78, at. wt. 195·23, sp. gr. at 20° C. 21·4, spec. elec. restivity at 20° C. 9·97 microhms per cm. cub., m.p. 1773° C., Brinell hardness 47. Platinum is the most important of a group of six closely related rare metals, the others being osmium, iridium, palladium, rhodium, and ruthenium. It is heavy, soft, and ductile, immune to attack by most chemical reagents and to oxidation at high temperatures.—(*Min.*) Native platinum is usually alloyed with iron, iridium, rhodium, palladium, or osmium, and crystallises in the cubic system. It is rare and the only common ore of platinum, occurring as an accessory mineral in noritic and ultrabasic igneous rocks. The most important district yielding platinum is the Ural Mountains.

platinum ammines (*Chem.*). Compounds of platinum and ammonia. See **ammines.**

platinum black (*Chem*). Platinum precipitated from a solution of the tetrachloride by reducing agents. A velvety-black powder.

platinum chloride (*Chem.*). See **chloroplatinic acid.**

platinum dichloride (*Chem.*). $PtCl_2$. Obtained by heating chloroplatinous acid. Also formed when platinum is exposed at a high temperature in chlorine gas. When heated strongly, decomposes into platinum and chlorine.

platinum dioxide (*Chem.*). See **platinic oxide.**

platinum sponge (*Chem.*). See **spongy platinum.**

platinum tetrachloride (*Chem.*). $PtCl_4$. Formed by dissolving platinum in aqua regia. Similar chlorides are formed with the other platinum metals.

platinum thermometer (*Phys.*). A means of measuring temperature by determining the resistance of a coil of platinum wire enclosed in a protecting tube placed in the enclosure whose temperature is required. Up to 1200° C. temperatures may be measured with an accuracy of a tenth of a degree.

platt (*Carp.*). See **plate.**

platting (*Build.*). The top course of a brick clamp.

plat'y- (Greek *platys*, broad, flat). A prefix used in the construction of compound terms; e.g. *platycephalic* (q.v.).

platyba'sic (*Zool.*). Said of the chondrocranium of developing Vertebrates which has the trabeculae wide apart.

platycephal'ic, platyceph'alus (*Anat.*). Having a flattened or broad head, with a breadth-height index of less than 70.

Platyco'pa (*Zool.*). An order of *Ostracoda* in which the shell lacks an antennal notch, there are four pairs of postoral limbs, and the caudal furcae have styliform or vestigial rami.

Platycte'na (*Zool.*). An order of *Tentaculata* which includes a number of aberrant forms of flattened creeping habit, having much-reduced tentacles.

platydac'tyl (*Zool.*). Having the tips of the digits flattened.

Platyhelmin'thes (*Zool.*). A phylum of bilaterally symmetrical, triploblastic *Metazoa*; usually dorsoventrally flattened; the space between the gut and the integument is occluded by parenchyma; the excretory system consists of ramified canals containing flame-cells; there is no anus, coelom, or haemocoele; the genitalia are usually complex and hermaphrodite. Flat Worms.

plat'yphyl'lous (*Bot.*). (1) Broadly lobed.—(2) Having wide leaves.

platys'ma (*Zool.*). A broad sheet of dermal musculature in the neck region of Mammals.

plat'ysperm (*Bot.*). A seed which is flattened in transverse section.

platytra'bic (*Zool.*). Platybasic.

plauenite, plow'en-it (*Geol.*). A name sometimes applied to the well-known Dresden syenite, consisting essentially of orthoclase, hornblende, some oligoclase, and a little quartz.

plax (*Zool.*). A flat plate-like structure, as a lamella or scale.

play-back (*Acous.*). The immediate reproduction from a wax recording with a very flexible pick-up; used for testing the quality of the reproduced sound before actual records are made, or as a check on other types of recording.

player-type (*Photog.*). The direct printing of normal prints on slow bromide paper, using gas-light and a green-glass filter.

pleasure (*Psychol.*). The feeling-tone which accompanies the emotional satisfaction of any one instinct.

pleasure-pain principle (*Psycho-an.*). According to Freud, the principle dominating instinctual life, in which the activities of the organism are directed entirely towards the seeking of pleasure and the avoidance of pain. Essentially unconscious.

pleated diaphragm loudspeaker (*Acous.*). A loudspeaker in which the radiating element is a pleated diaphragm, the pleats being radial and the rim clamped. It is driven by a pin at the centre.

Plecop'tera (*Zool.*). An order of *Exopterygota* the members of which are usually sombre, sluggish flies having both pairs of wings membranous, the fore wings narrow, the hind wings broad; the antennae are long, and anal cerci usually occur; the mouth-parts are adapted for biting but are feebly developed; the immature stages are aquatic and show many curious adaptations for obtaining a supply of air. Stone-flies.

plec'tenchy'ma (*Bot.*). Pseudoparenchyma formed by the interweaving of hyphae.

plectenchy'matous, plectenchy'mic, plectenchy'moid (*Bot.*). *Adjs.* from *plectenchyma.*

Plectog'nathi (*Zool.*). An order of marine *Neopterygii* having poisonous flesh; the pelvic fins are reduced, the bones of the upper jaw firmly united, and the skeleton incompletely ossified; there is a soft dorsal fin with or without a spinous fin; many species show very grotesque forms. Trigger-fishes, File-fishes, Trunk-fishes, Globe-fishes, Sun-fishes.

plei-, pleio-, pleo-, plio-. Prefix. (Greek *pleiōn*, more.)

Pleiades, The, plē'a-dēz *or* pli— (*Astron.*). The name given to the open cluster in the constellation *Taurus*, of which the seven principal stars, forming a well-known group visible to the naked eye, each have a separate name.

pleian'drous (*Bot.*). Having a large and indefinite number of stamens.

pleiocha'sium (*Bot.*). A cymose inflorescence in which each branch bears more than two lateral branches.

plei'omer'ous (*Bot.*). Having a large number of parts or organs.

pleion, plī'on (*Meteor.*). An area over which some weather element, such as temperature, is above the normal average. The reverse is *antipleion.*

plei'ospo'rous (*Bot.*). Many-spored.

plei'otax'y (*Bot.*). An increase in the number of whorls in a flower.

plei'oto'my (*Bot.*). Multiple apical division with the formation of multiplets.

plei'otropism (*Gen.*). The condition when one factor has an effect simultaneously on more than one character in the offspring.

Pleis'tocene Period (*Geol.*). The period of geological time which followed the Pliocene. It was during this period that an ice-sheet covered the greater part of N. Europe and N. America, hence it has been called the *Great Ice Age.*

plenal'via (*Vet.*). Impaction of the rumen of cattle.

Plenum system (*Build.*). An air-conditioning system in which the air propelled into the building is maintained at a higher pressure than the atmosphere. The conditioned air is usually admitted to rooms from 8 to 10 ft. above floor-level, while the vitiated air is extracted at floor-level on the same side of the room.

Plenus Marls (*Geol.*). Grey marls found in the Lower Chalk of Britain, containing the belemnite *Actinocamax plenus.* They are of Cretaceous age.

pleo-. Prefix. See **plei-.**

pleocho'lia (*Med.*). Excessive formation of bile pigment.

pleochro'ic halos (*Min.*). Dark-coloured zones around small inclusions of radio-active minerals which are found in certain crystals, notably biotite. The colour and pleochroism of the zones are stronger than those of the surrounding mineral, and result from radio-active emanations during the conversion of uranium or thorium into lead. Their characters have been closely studied as providing evidence of the age of the rocks containing them.

pleoch'roism (*Min.*). The property of a mineral by which it exhibits different colours in different crystallographic directions on account of the selective absorption of transmitted light.

pleocyto'sis (*Med.*). An increase in the number of white-blood cells, especially in the cerebrospinal fluid.

ple'omor'phous (*Zool.*). Polymorphic.

ple'on (*Zool.*). In *Crustacea*, the abdominal region. Cf. *pereion.*

ple'onaste (*Min.*). Oxide of magnesium, iron, and aluminium, crystallising in the cubic system. It is a member of the spinel group and may be dark-green, brown, or black in colour. Also called CEYLONITE.

ple'opha'gous (*Bot.*) Said of a parasite which attacks several species of host plant.

ple'opod (*Zool.*). In *Arthropoda* (especially *Crustacea*), an abdominal appendage adapted for swimming.

plerer'gate (*Zool.*) A worker ant which stores, in its distended gaster, liquid food for the community.

plerocer'coid (*Zool.*). A solid elongate metacestode, in which the scolex is directly derived from the onchosphere.

plerocer'cus (*Zool.*). A solid spherical metacestode, in which the scolex is directly derived from the onchosphere.

plerome (*Bot.*). The central region of an apical meristem, from which the stele is ultimately formed.

plessite (*Min.*). A eutectic alloy of iron and nickel occurring in some iron meteorites; appears as dark areas on the polished surface.

pleth'ora (*Med.*). An increase, above normal, in the volume of the blood, with or without an increase in the total number of red cells.

plethys'mograph (*Med.*). An apparatus for measuring variations in the size of bodily parts and in the flow of blood through them.

pleur-, pleuro- (Greek *pleura*, side). A prefix used in the construction of compound terms; e.g. *pleurocerebral*, pertaining to the pleural and cerebral ganglia of *Mollusca.*

pleu'ra (*Zool.*). The serous membrane lining the pulmonary cavity in Vertebrates.—*adj.* **pleural.**

pleurac'rogen'ous (*Bot.*). Produced at the tip and also laterally.

pleural membrane (*Zool.*). In Arthropods, the lateral wall of a somite when it is membranous.

pleurapoph'ysis (*Zool.*). A lateral vertebral process; usually applied to the true ribs.

pleureth'moid (*Zool.*). A bone of some Fish, representing the fused ectethmoid and prefrontal.

pleu'risy (*Med.*). Inflammation of the pleura, which may be either dry or accompanied by effusion of fluid into the pleural cavity.

pleurites (*Zool.*). Chitinous plates forming the lateral wall of a somite, especially a thoracic somite in Insects.

pleuri′tis (*Med.*). Pleurisy.

pleurobranc′hiae (*Zool*). In *Arthropoda* (especially the higher *Crustacea*), gills which arise from the pleura.

pleurocar′pous (*Bot.*). Having the fruit in a lateral position.

pleuroccipital, —ok-sip′— (*Zool.*). Exoccipital.

pleurocen′trum (*Zool.*). A lateral element of the centrum in some of the lower Vertebrates.

pleu′rodont (*Zool.*). Having the teeth fastened to the side of the bone which bears them, as in some Lizards.

pleurodyn′ia (*Med.*). Fibrositis of the muscles between the ribs, or of other muscles attached to the ribs, with pain in the chest on breathing or coughing.

pleurogen′ous, *or* plūr-oj′— (*Bot.*). Borne in a lateral position.

pleurogenous, pleurogen′ic (*Med.*). Having origin in the pleura; e.g. *pleurogenous* cirrhosis of the lung.

pleuron (*Zool.*). In some *Crustacea*, a lateral expansion of the tergite: more generally, in *Arthropoda*, the lateral wall of a somite.—*pl.* **pleura.**—*adj.* **pleural.**

pleu′ropericardi′tis (*Med.*). Concurrent inflammation of the pleura and of the pericardium.

pleuropneumo′nia (*Med.*). Combined inflammation of the pleura and of the lung.—(*Vet.*) A contagious disease of cattle due to infection by a filterable virus; characterised by an exudative fibrinous pneumonia and pleurisy.

pleurop′odite (*Zool*). A basal joint preceding the coxa in some *Crustacea.*

pleurorhi′zal (*Bot.*). Said of an embryo when the radicle is placed against the edges of the cotyledons.

pleurosphe′noid (*Zool.*). Sphenolateral.

pleu′rospo′rous (*Bot.*). Having the spores borne in a lateral position.

pleurothot′onos, pleurothot′onus (*Med.*). Forced bending of the body to one side as a result of muscular spasm, as in tetanus.

Pleurotre′mata (*Zool.*). An order of *Euselachii* characterised by the possession of five or more laterally placed gill clefts, an elongate and rounded body, and the presence of an anal fin. Sharks and Dogfish.

plexi′tis (*Med.*). Inflammation of the components of a nerve plexus.

plexus (*Zool.*). A network: a mass of interwoven fibres; as a *nerve plexus.*—*adj.* **plexiform.**

pli′ca (*Zool.*). A fold of tissue: a fold-like structure.—*adjs.* **plicate, pliciform.**

pli′cate (*Bot.*). Folded in longitudinal plaits.

plicate aestivation (*Bot.*). A type of valvate aestivation in which the perianth segments are plicate.

plinth (*Build.*). (1) The projecting course or courses at the base of a building.—(2) The cuboidal base of a column or pedestal.—(*Furn.*) The base of a bookcase, wardrobe, etc.

plinth block (*Carp.*). An *architrave block* (q.v.).

plinth course (*Masonry*). A projecting course laid at the base of a wall.

plio-. Prefix. See **plei-.**

Pli′ocene Period (*Geol.*). The period of geological time which followed the Miocene and preceded the Pleistocene. Rocks of this age are found in East Anglia and Southern England. See **Red Crag, Weybourne Crag, Coralline Crag, Lenham Beds.**

pliody′natron (*Radio, Thermionics*). A multi-electrode tube for obtaining negative resistance by means of secondary emission: an oscillator circuit using such a tube.

Ploïma, plō-im′a (*Zool.*). An order of *Rotifera*; the adults swim freely; the tail is forked and may be retractile; a lorica may be present or absent.

Plombière's douche, plon^{g}-byăr′ (*Med*). Lavage of the colon by the slow injection of, for example, salt solution, through a soft rubber tube inserted into the rectum.

plot (*Build.*). A ground plan.

plotting (*Surv.*). The operation of drawing on paper from the field notes of the surveyor.

plough or **plow** (*Agric. Mach.*).

See **digger—**
disc—
mouldboard—
tractor—
breast
coulter
landside
share
skim coulter
slade.

plough (*Carp., Join.*). (1) A form of grooving plane which has an adjustable fence and is capable of being fitted with various irons.—(2) To cut a groove.

plough (*Elec. Eng.*). A current-collector used on the conduit system of electric street traction. Also called UNDERGROUND COLLECTOR.

plough carrier (*Elec. Eng.*). The frame under a tram, which carries the plough used in the conduit system. The arrangement is such that the plough can slide laterally, so that it may follow any variations in the relative positions of the conduit and the track rails.

plough groove (*Join.*). A groove cut with the grain of the wood by means of a plough.

plough pit (*Elec. Eng.*). A special pit through which the plough used in the conduit system of a street tramway can be removed.

ploughed-and-tongued joint (*Join.*). A joint formed between the square butting edges of two boards, each having a plough groove into which a common tongue is inserted.

plow. A variant spelling of *plough.*

plucked (*Textiles*). The term used to denote uneven thickness in a top, roving, or yarn, generally caused by excessive draft.

plucked wool (*Textiles*). Wool obtained from a sheep that has been dead a few days; occasionally, wool from slaughtered sheep.

plug (*Build.*). A wooden piece driven into a hole cut in surface brickwork and finished off flush, so as to provide a material to which joinery or fittings may be nailed.

plug (*Elec. Comm.*). See **selector plug, plugging-up.**

plug (*Elec. Eng.*). A device containing two metal contacts arranged for inserting into a socket-outlet in order to provide a connexion to portable electrical apparatus. See **lampholder plug.**

plug (*Geol.*). A roughly cylindrical orifice through which igneous rock is injected. It frequently is filled with igneous rock which constitutes the plug proper.

plug (*Teleph.*). The terminal of a multiple flexible cord, which allows separate contact of its wires with the relevant springs of a jack into which the plug is inserted.

plug adaptor (*Elec. Eng.*). See **lampholder plug.**

plug centre bit (*Carp.*). A form of centre bit in which the projecting central point is replaced by a plug of metal, adapting the bit for use in holes already drilled.

plug cock (*Eng., Plumb.*). A simple valve in which the fluid passage is a hole in a rotatable plug fitted in the valve body. Rotation of the plug through a right-angle stops the flow by opposing to it the undrilled diameter of the plug.

plug fuse (*Elec. Eng.*). A form of fuse in which the fuse-link is contained in a plug which can be inserted into a suitable socket.

plug gauge (*Eng.*). A gauge, made in the form of a plug, used for testing the diameter of a hole; in a *plug limit guage* two plugs are provided, a 'go' and a 'not go.' See **limit gauge.**

plug-in coil (*Radio*). An inductance coil fitted with a system of contact pins on the base, thus enabling it to be fitted into a socket for ease in changing.

plug tap (*Eng.*). (1) The final tap required to finish an internal thread in a blind hole.—(2) A *plug cock* (q.v.).

plug tenon (*Carp., Join.*). A *stub tenon* (q.v.).

plugging (*Build.*). The operation of drilling a hole in the mortar of a brickwork joint, or elsewhere, and driving in a wall plug.

plugging (*Elec. Eng.*). A method which provides for the braking of an electric motor by arranging the connexions so that it tends to run in the reverse direction.

plugging-up (*Teleph.*). The transference of a faulty line from its normal connexions to the test-desk, at which position the test-clerk can apply suitable tests to ascertain the fault and issue instructions for its removal.

plum (*Civ. Eng.*). A large undressed stone embedded with others in mass concrete on large work, such as dams, in order to save concrete.

plu'mae (*Zool.*). Feathers having a stiff shaft and a firm vexillum, and usually possessing hamuli; they appear on the surface of the plumage and determine the contours of the body in addition to forming the remiges and rectrices.—*adjs.* **plumate, plumous, plumose, plumigerous.**

plu'masite (*Geol.*). A very rare rock type consisting essentially of oligoclase and corundum only.

plumb (*Build., Civ. Eng.*). Vertical.

plumb-bob (*Surv.*). A small weight or 'bob,' hanging at the end of a cord, which under the action of the weight takes up a vertical direction. Also called a PLUMMET.

plumb rule (*Build.*). A narrow board used for determining verticals; it has at one end a point of suspension for a plumb-bob, which is free to swing in an egg-shaped hole at the other end of the board.

plumba'go (*Chem.*). *Graphite* (q.v.); used for the making of crucibles because of its refractory qualities. The scaly graphite is used for this purpose, mixed with refractory clay and sand.

plumber's solder (*Plumb.*). A lead-tin alloy of varying ratio from 1 : 1 to 3 : 1 for different classes of work, the melting-points being always considerably lower than that of lead itself.

plumbing (*Build.*). (1) The craft of working lead for structural purposes, or for the installation of domestic water-supply systems, sanitary fittings, etc.—(2) The operation of arranging vertically.

plumbing fork (*Surv.*). An accessory for the plane-table when large-scale work is being done, enabling the point on the paper representing the plane-table station to be located exactly above the corresponding point on the ground. It consists of a U-shaped piece having two long equal limbs, one of which rests on the board to mark, with its end, the point on the paper, while the other passes under the board and carries at its end a plumb line.

plumbism (*Med.*). Lead poisoning.

plumbites (*Chem.*). See **lead hydroxide.**

plumbojar'osite (*Min.*). A basic hydrous sulphate of lead and iron, crystallising in the trigonal system. See **jarosite.**

plumbo-solvency (*Chem.*). A term usually applied to the solvent action of potable water on lead.

plumbum (*Chem.*). See **lead.**

plume (*Bot.*). A light, hairy or feathery appendage on a fruit or seed, serving in wind dispersal.

plume (*Meteor.*). Snow blown over the ridge of a mountain.

plume (*Zool.*). A feather: any feather-like structure.

plumed disseminule (*Bot.*). A fruit or seed bearing a plume.

plu'miped (*Zool.*). A Bird having feathered feet.

plummer block (*Eng.*). A journal bearing for line shafting, etc., consisting of a box-form casting holding the bearing brasses, split horizontally to take up wear; lubrication is usually by an *oiling ring* (q.v.).

Plummer-Vinson syndrome (*Med.*). The association of difficulty in swallowing, chronic inflammation of the tongue, achlorhydria, and anaemia.

plummet (*Surv.*). A plumb-bob.

plummet level (*Masonry, etc.*). An instrument for establishing a vertical direction; it consists of a plumb-bob suspended from one end of a long straightedge and swinging in a hole near the other end, to which is attached a short piece at right-angles.

plu'mose (*Bot., Zool.*). Hairy: feathered.

plumping (*Leather*). The swelling of a pelt, or leather, during the process of manufacture. See **liming.**

plu'mulae (*Zool.*). Feathers having a soft shaft and vane and lacking hamuli; in some cases the shaft is entirely lacking; they form the deep layer of the plumage.—*adjs.* **plumulate, plumula'ceous.**

plu'mule (*Bot.*). The first apical bud on the embryo in the seed; it is the rudimentary shoot.

plunger (*Eng.*). The ram or solid piston of a force-pump.

plunger key (*Teleph.*). A telephone key with spring contacts which are opened or closed by pressing a small plunger in line with the springs. Used in keysenders.

plur-, pluri- (Latin *plus*, gen. *pluris*, more, several). A prefix used in the construction of compound terms; e.g. *pluricellular* (q.v.).

plural gel (*Chem.*). A gel formed from two or more sols.

pluricel'lular (*Biol.*). Composed of two or more cells.

pluriglan'dular (*Med.*). Pertaining to, affected by, or affecting, several (ductless) glands.

pluriloc'ular (*Bot.*). Said of a sporangium or an ovary which is divided by septa into several compartments.

plurispo'rous (*Bot.*). Having two or more spores.

pluriva'lent (*Cyt.*). (In certain types of cell-divisions) said of compound chromatin rods formed of more than two chromosomes.

plus strain (*Bot.*). Often written (+) *strain.* One of the two strains of a heterothallic mould, often distinguished from the corresponding (−) *strain* by its stronger growth.

plush (*Textiles*). A fabric with cut pile on one or both sides of the ground texture. Warp pile is generally made by weaving two cloths together, with a pile warp common to both, which is afterwards cut.

plush copper ore (*Min.*). Chalcotrichite.

plu'teus (*Zool.*). In *Echinoidea* and *Ophiuroidea*, a pelagic larval form, being a modification of the *dipleurula* (q.v.), in which the ciliated band remains continuous, forming only a small preoral lobe, the postanal region is greatly developed and the arms are supported by calcareous rods.

Pluto (*Astron.*). The ninth planet in the solar system in order of distance from the sun, and the most recently discovered. It has not been sufficiently long under observation to have had all its elements determined with certainty, but its sidereal period is known to be 247·7 years, and its mean distance from the sun 39·46 astronomical units, or 3666 million miles.

pluton'ic intrusions (*Geol.*). A term applied to large intrusions which have cooled at great depth beneath the surface of the earth. Cf. *minor intrusions.*

plu′tonites (*Geol.*). A term, of American origin, applicable to all rocks occurring in major (plutonic) intrusions. More precisely restricted to such igneous rocks as fall within the limits of the coarse grain-size group.

Pluvex (*Build.*). A proprietary bituminous material, with a lead lining, used to form damp-proof courses in building construction.

pluviom′eter (*Meteor.*). A *rain-gauge* (q v.).

Plymouth Limestone (*Geol.*). Massive limestone, occurring near Plymouth; of Middle to Upper Devonian age.

Plynlim′on Beds (*Geol.*). The highest division of the Ordovician rocks (of Bala age) in Mid-Wales, lying conformably beneath the Silurian shales and mudstones.

plywood (*Timber*). A board consisting of a number of thin layers of wood glued together so that the grain of each layer is at right-angles to that of its neighbour. See **multi-ply.**

P.M. (*Build.*). Abbreviation for *purpose-made.*

P.M.C. (*Build.*). Abbreviation for *plaster-moulded cornice.*

P.M.X. (*Teleph.*). Abbreviation for *private manual exchange.*

P.M.B.X. (*Teleph.*). Abbreviation for *private manual branch exchange.*

pn (*Chem.*). A symbol for *propylenediamine*, $CH_3\cdot CH(NH_2)\cdot CH_2NH_2$.

pneum-, pneumo-, pneumat-, pneumato-, nū— (Greek *pneuma*, gen. *pneumatos*, breath). Prefix used in the construction of compound terms; e g. *pneumogastric, pneumatocyst* (qq v.).

pneu′mathode (*Bot.*). A more or less open outlet of the ventilating system of a plant, usually some loosely packed cells on the surface of the plant; through it exchange of gases between the air and the interior of the plant is facilitated.

pneumat′ic (*Eng., etc.*). Operated by, or relying on, air-pressure or the force of compressed air. See specific uses below.

pneumatic (*Zool.*). Containing air; as, in physostomous Fish, the *pneumatic duct* leading from the gullet to the air-bladder, and, in Birds, those bones which contain air-cavities.

pneumatic brake (*Eng*) A continuous braking system, used on some railway trains, in which air-pressure is applied simultaneously to brake cylinders throughout the train. See **air brake** (1), **continuous brake.**

pneumatic conveyor (*Eng.*). A system by which loose material is conveyed through tubes by air in motion, the air velocity being created by the expansion of compressed air through nozzles.

pneumatic drill (*Eng.*). A hard rock drill in which compressed air is arranged to reciprocate a loose piston which hammers the shank of the bit or an intermediate piece, or in which the bit is clamped to a piston rod.

pneumatic keys (*Teleg*). The keys which control high-frequency currents in a high-power telegraph radio-transmitter; operated by compressed air to ensure adequate rapidity of operation of contacts in making and breaking heavy currents.

pneumatic motor (*Acous.*). The small bellows which, when air is admitted or exhausted, acts as a driving force against a spring, for the operation of air paths in organs.

pneumatic pick (*Eng.*). A road contractor's tool in which, by mechanism similar to that of a *pneumatic drill* (q.v.), a straight pick is hammered rapidly by a reciprocating piston driven by compressed air.

pneumatic riveter (*Eng.*). A high-speed riveting machine similar in arrangement to a *hydraulic riveter* (q.v.) but in which a rapidly reciprocating piston driven by compressed air delivers 1000-2000 blows per minute.

pneumatic tools (*Eng.*). Hand tools, such as riveters, scaling and chipping hammers, and drills, driven by compressed air. See **pneumatic drill, pneumatic pick, pneumatic riveter.**

pneumatic trough (*Chem.*). A vessel used, in chemical laboratories, for the collection of gases.

pneumatic tube conveyor (*Eng.*). A system in which small objects enclosed in suitable containers are transported along tubes, the container acting as a moving piston which is impelled either by means of pressure or vacuum.

pneumatically operated switch (or **circuit-breaker**) (*Elec. Eng.*). A switch (or circuit-breaker) in which the force for closing is obtained from a piston operated by compressed air. Cf. *motor-operated switch, solenoid-operated switch.*

pneumaticity, —tis′it-i (*Zool.*). The condition of containing air-spaces, as the bones of Birds.

pneumato-, nū-mat′ō *or* nū′ma-to. Prefix. See **pneum-.**

pneumatocele (*Med.*). (1) A hernial protrusion of lung through some defect in the chest wall.—(2) Any air-containing swelling.

pneumatocyst (*Zool.*). (1) Any air-cavity used as a float.—(2) In Fish, the *air-bladder* (q.v.).—(3) The cavity of a pneumatophore.

pneumatol′ysis (*Geol.*). The destructive after-action of the concentrated volatile constituents of a magma, effected after the consolidation of the main body of magma. See **greisenisation, kaolinisation, tourmalinisation.**

pneumatophore (*Bot*) A specialised root which grows vertically upwards into the air from roots embedded in mud, and, being of loose construction, makes possible the access of air to the buried roots.

pneumatophore (*Zool.*). In *Siphonophora*, an apical float containing gas; it possibly represents a modified medusoid.

pneumatopyle (*Zool.*). In certain *Siphonophora*, the aperture by which the cavity of a pneumatophore communicates with the exterior.

pneumatu′ria (*Med.*). The passing of urine containing gas or air.

pneumec′tomy (*Surg.*). See **pneumonectomy.**

pneumo-. Prefix. See **pneum-.**

pneumoconiosis (*Med.*). See **pneumonokoniosis.**

pneumogas′tric (*Zool.*). A term applied to the tenth cranial or *vagus* (q.v.) nerve in Vertebrates because it sends branches to the lungs and stomach.

pneumohae′mopericar′dium (*Med.*). The presence of air and blood in the pericardial sac.

pneumohae′motho′rax (*Med*). The presence of air and blood in the pleural cavity.

pneumohy′dropericar′dium (*Med.*). The presence of air and a clear effusion in the pericardial sac.

pneumohy′drotho′rax (*Med.*). The presence of air and a clear effusion in the pleural cavity.

pneumokoniosis (*Med.*). See **pneumonokoniosis.**

pneu′molith (*Med.*). A concretion in the lung, formed usually as a result of calcification of a chronic tuberculous focus.

pneumol′ysis (*Surg.*). The operation of freeing the outer layer of the pleura from the chest wall (*external pneumolysis*), or of dividing adhesions between the outer layer of the pleura and that covering the lung (*internal pneumolysis*); both measures used for producing or increasing collapse of the lung.

pneumon-, pneu′mono- (Greek *pneumōn*, gen. *pneumonos*, lung). A prefix used in the construction of compound terms; e.g. *pneumonia, pneumonectomy* (qq.v.).

pneumonec′tomy (*Surg.*). Surgical removal of lung tissue.

pneumonia (*Med.*). A term generally applied to any inflammatory condition of the lung accompanied by consolidation of the lung tissue; more especially, *lobar pneumonia*, in which the consolidation affects one or more lobes of the lung.

pneumoni'tis (*Med.*). Pneumonia.

pneumonoko'nio'sis (*Med.*). A term applied to various dust diseases of the lung caused by the inhalation of particles in such occupations as coal-mining, an excess of fibrous tissue usually forming in the lungs round the dust particles.

pneumonomyco'sis (*Med.*). A term applied to disease of the lung caused by any one of a number of various fungi.

pneumo-oil switch (or **circuit-breaker**) (*Elec. Eng*). A switch or circuit-breaker in which the operation is carried out partly by pneumatic means, and partly by hydraulic means using oil as the medium.

pneumopericar'dium (*Med.*). The presence of air in the pericardial sac.

pneumoperitone'um (*Med.*). (1) The presence of air or gas in the peritoneal cavity.—(2) The injection of air into the peritoneal cavity for radiographic purposes.

pneumopy'opericar'dium (*Med.*). The presence of air and pus in the pericardial sac.

pneumopy'otho'rax (*Med.*). The presence of air and pus in the pleural cavity.

pneu'mostome (*Zool.*). In *Pulmonata*, the aperture of the mantle-cavity: in *Arachnida*, the aperture by which the cavity of a lung-book communicates with the exterior.

pneumota'xis (*Biol.*). (1) Response or reaction of an organism to the stimulus of carbon dioxide in solution.—(2) Response to the stimulus of gases generally.—*adj.* **pneumotactic.**

pneumotho'rax (*Med.*). (1) The presence of air or gas in the pleural cavity.—(2) The therapeutic injection of air or gas into the pleural cavity for the purpose of collapsing diseased lung (artificial pneumothorax).

pneumotro'pism (*Biol.*). Pneumotaxis.

Po (*Chem.*). The symbol for *polonium*.

P.O. box (or **bridge**) (*Elec. Eng.*). See **post office box.**

pock (*Med.*). A pustule; any small elevation of the skin, containing pus, occurring in an eruptive disease (especially small-pox).

pocket (*Join.*). The hole in a pulley stile through which the counterpoise weights are passed into the box of a sash and frame.

pocket chisel (*Join.*). A *sash chisel* (q.v.).

pocket chronometer (*Horol*). A pocket watch fitted with the chronometer escapement. On the continent of Europe the term is used for any high-precision pocket watch.

pocket watch (*Horol.*). A watch for carrying in the pocket.

Po'cono Sandstones (*Geol.*). Arenaceous rocks, including quartz conglomerates, occurring in the Lower Mississippian of eastern Pennsylvania; regarded as alluvial fan deposits.

pocu'liform (*Bot.*). Cup-shaped.

pod (*Bot.*). A dry fruit formed from a single carpel, having a single loculus containing one (rarely) to several seeds, and usually opening at maturity by splitting along both ventral and dorsal sutures. The pea-pod is a good example.

pod-auger (*Tools*). An auger having a straight groove cut in its length to hold the chips.

pod-, podo- (Greek *pous*, gen. *podos*, foot). A prefix used in the construction of compound terms; e.g. *podotheca*, a structure covering the foot.

podag'ra (*Med.*). Gout.

po'dal (*Zool.*). Pedal.

Podaxo'nia (*Zool.*). A term formerly used to denote a phylum of aquatic animals distinguished by lack of segmentation, sedentary habit, approximation of mouth and anus, U-shaped gut, and a *lophophore* (q.v.); it included the *Sipunculoidea, Phoronidea, Polyzoa*, and *Brachiopoda*, which are now classed as separate phyla.

po'deon (*Zool.*). See **petiole.**

pode'tium (*Bot.*). A stalk-like, cup-like, or much-branched erect thallus formed by some lichens.

po'dex (*Zool.*). The anal region.—*adj.* **podical.**

po'dical plates (*Zool.*). In *Insecta*, a pair of small sclerites in the anal region, representing the eleventh abdominal somite.

po'dite (*Zool.*). A walking leg of *Crustacea*.

po'dium (*Arch.*). A continuous low wall under a row of columns.

podium (*Zool.*). (1) In land Vertebrates, the third or distal region of the limb; manus or pes; hand or foot.—(2) Any foot-like structure, as the locomotor processes or tube-feet of Echinoderms. —*pl.* **podia.**—*adj.* **podial.**

podobran'chiae (*Zool*). In *Crustacea*, gills arising from the coxopodites of the legs.

po'docarp (*Bot.*). A stalk to a carpel.

Podoc'opa (*Zool.*). An order of *Ostracoda*; the shell lacks an antennal notch, there are five pairs of posteral limbs, and the caudal furcae have styliform or vestigial rami.

po'doderm (*Zool.*). The dermal layer of a hoof lying within the keratinous layers.

pododermati'tis (*Vet*). Laminitis.

Podogona (*Zool*). See **Ricinulei.**

po'domere (*Zool.*). In *Arthropoda*, a limb segment

podophthal'mite (*Zool.*). In *Crustacea*, the distal segment of the eye-stalk: the eye-stalk itself.

podoso'ma (*Zool.*). In *Acarina*, the region of the body composed of leg-bearing segments.

poecilitic (*Geol.*). *Poikilitic* (q v).

poecilogeny, pē-sil-oj'en-i (*Zool.*). Larval polymorphism, as in some *Diptera* (*Oligarces, Miastor*).

Poggendorff cell (*Elec. Eng.*). A single-fluid form of the bichromate cell.

Poggendorff compensation method (*Chem*). A method of measuring an unknown e m.f. by finding the point at which it just opposes the steady fall of potential along a wire.

poikil-, poikilo- (Greek *poikilos*, many-coloured). A prefix used in the construction of compound terms; e.g. *poikilocyte* (q.v.).

poikilit'ic (*Geol.*). Said of a texture in igneous rocks in which small crystals of one mineral are irregularly scattered in larger crystals of another—e.g. small olivines embedded in larger pyroxenes, as in some peridotites. The term has also been applied to the Permian System of rocks.

poikiloblas'tic (*Geol.*). A textural term applicable to metamorphic rocks in which small crystals of one mineral are embedded in large crystals of another. The texture is comparable with the *poikilitic* of igneous rocks.

poi'kilocyte (*Med.*). A malformed red blood cell.

poikilocyto'sis (*Med.*). Presence of malformed red cells in the blood, e.g. in severe anaemia.

poikilother'mal (*Zool.*). Cold-blooded.

Poilite (*Build.*). A weather-proof, fire-safe form of asbestos-cement sheeting, made from British Portland cement and mineral flax, and marketed in the form of sheets and tiles.

point (*Elec. Eng.*). In electric-wiring installations, a termination of the wiring for attachment to a lighting fitting socket-outlet or other current-consuming device.

point (*Typog.*). The unit of measurement for type and materials; 72 points are approximately 1 inch. The old type names have been largely discarded, and sizes previously known as *nonpareil, brevier, pica*, etc., have as their approximate equivalents 6-point, 8-point, 12-point, etc. See also **points** below.

points (*Print.*). (1) The general term for all punctuation marks.—(2) See **machine points.**

points (*Rail.*). See Supplement.

points (*Textiles*). The parts of a lace machine which carry the twists of bobbin and warp threads to the position where the lace is actually made.

point bar (*Lace*). A horizontal bar which supports the points at the back and front of a lace machine; it has a motion related to the swing of the carriages.

point d'esprit, pwan^{g} des-prē′ (*Lace*). A narrow spotted traverse net.

point draft (*Textiles*). An order for the drawing-in of warp threads, e.g. from shafts 1 to 8 and then from 8 to 1.

point-gap (*Elec. Eng.*). See **needle-point gap.**

point holes (*Print.*). Punctures made in the printed sheet by the spurs of the register points.

point net (*Lace*). A twisted thread net used as ground for tambour lace.

point paper or **design paper** (*Textiles*). Ruled paper upon which the interlacing of the threads in a fabric is shown. The paper has lines ruled both vertically and horizontally. The space between two vertical lines represents a warp thread, that between horizontal lines a weft thread. Small squares are formed by the vertical and horizontal rulings, in which a mark may be placed to indicate warp over weft, or vice versa.

point-plate rectifier (*Elec. Eng.*). A high-voltage rectifier making use of the fact that the breakdown voltage of a gap between a needle point and a flat plate depends on the polarity of the needle.

point screws (*Print.*). Screws for fastening *machine points* (q.v.) on the feedboard of a printing machine.

point source (*Acous.*). The hypothesis that sound is radiated from a point. This cannot occur in practice, but is approximated to when the size of the source is small in comparison with any distance from which it is observed.

point tie (*Textiles*). An arrangement of the harness in a jacquard machine, in which one section is tied up from left to right, or from right to left, and the next section conversely.

pointal (*Carp.*). A king-post.

pointed arch (*Build.*). An arch which rises on each side from the springing to a central apex.

pointed ashlar (*Masonry*). A block of stone whose face-markings have been done with a pointed tool.

pointer (*Build.*). A tool used for raking out old mortar from brickwork joints prior to pointing.

Pointers (*Astron.*). The name used in popular language for the two stars of the Great Bear, α and β Ursae Majoris; they are roughly in line with the Pole Star and so help to identify it.

pointilliste, pwan^{g}-tē-yēst′ (*Photog.*). A French system of painting in which colours are obtained by the juxtaposition of the requisite number of dots of the primary colours.

pointing (*Build., Civ. Eng.*). The process of raking out the exposed jointing of brickwork and refilling with, preferably, cement mortar.

pointing (*Furs*). The adding of silver or white hairs to self-coloured furs to imitate natural pointed fur.

Point'olite (*Illum.*). Trade-name for an incandescent lamp in which a knob of tungsten is heated by an arc originated by temporary ionisation by a heated wire. The light is designed to have a very small light source, in order to be suitable for projection purposes.

poise (*Chem.*). To maintain the oxidation-reduction potential of a solution constant by the addition of a suitable compound.

poise (*Horol.*). Equilibrium. A balance is said to be *in poise* when, supported horizontally by its pivots on knife edges, it has no tendency to rotate, or if rotated, no tendency to take up any set position.

poise (*Lubricants*). The unit of absolute viscosity of a fluid, signifying that a force of one gram will maintain unit rate of shear of a film of unit thickness between surfaces of unit area. Otherwise one dyne-second per sq. cm. (Named from the physicist Poiseuille). See **viscosity.**

Poiseuille's formula, pwa-zé′ē (*Phys.*). An expression for the volume of liquid, Q, which flows per second through a capillary tube of length L and radius R, under a pressure P, the viscosity of the liquid being η:

$$Q=\frac{\pi PR^4}{8L\eta}.$$

poising callipers (*Horol.*). See **callipers (poising).**

poising tool (*Horol.*). A tool with adjustable knife edges, for testing poise, e.g. of a balance.

poison. Any substance or matter which, introduced into the body in any way, is capable of destroying life. Poisons include products of decomposition or of bacterial organisms, and the viruses of contagious diseases. Generally classified as *irritants* (e.g. cantharides) and *corrosives* (e.g. strong mineral acids, caustic alkalis); *narcotics* (e.g. opium, alcohol, henbane); *narcotic-irritants* (e.g. nux vomica, hemlock). Among gases, carbonic acid, carbonic oxide, sulphuretted hydrogen, sulphide of ammonium and numerous others are of significance in industry. See also **war gas*.**

Poisson's ratio, pwa-son^{g}′ (*Phys.*) One of the elastic constants of a material. It is defined as the ratio of the lateral contraction per unit breadth to the longitudinal extension per unit length, when a piece of the material is stretched. For most substances its value lies between 0.2 and 0·4. The following is the relation between Poisson's ratio σ, Young's modulus E, and the rigidity n:

$$\sigma=\frac{E}{2n}-1.$$

poi'trail (*Carp.*). A petrail.

pol (*Cyt.*). The pole of a resting nucleus which lies nearest to the centrosome. Cf. *gegenpol.*

polar. *Adj.* from *pole.* See Supplement.

polar axis (*Astron.*). That diameter of a sphere which passes through the poles of the sphere: the axis of the earth about which it rotates: the axis of the celestial sphere about which it appears to rotate.

polar axis (*Crystal.*). A crystal or symmetry axis to which no two- or four-fold axes are normal; thus the arrangements of faces at the two ends of such an axis may be dissimilar. The principal axis of tourmaline is a polar axis of three-fold symmetry, the top of the crystal being terminated by pyramid faces, the bottom end by a single plane in some cases.

polar body (*Biol.*). One of two small cells detached from the ovum during the maturation divisions.

polar bond (*Chem.*). See **electrovalence.**

polar cap (*Cyt.*). A group of fine plasmatic strands formed early in division at the pole of a dividing nucleus and contributing to the formation of the spindle.

polar caps (*Astron.*). The two white regions round the poles of the planet Mars; visible in a telescope and presumably analogous to the ice and snow surrounding the poles of the earth.

polar curve (*Illum.*). A curve, drawn in polar co-ordinates, showing the light distribution around a light source.

polar diagram (*Radio*). A diagram showing the relative effectiveness of transmission or reception of an antenna system in different directions. It may be considered as a contour of equal field strength around a transmitting antenna; or, in the case of a receiving antenna, a contour path of a mobile transmitter producing a constant signal at the receiver.

polar distance (*Astron.*). A term (generally preceded by *North* or *South*, and written initially —N.P.D., S.P.D.) denoting the angular distance of a heavenly body from the pole of the celestial sphere; hence it is equal to the complement of the body's declination.

polar field (*Zool.*). See **polar plate.**

polar fusion nucleus (*Bot.*). The nucleus formed in the embryo sac by the union of the two polar nuclei; later it unites with a male nucleus and gives the first endosperm nucleus.

polar molecule (*Diel.*). A molecule having an electric moment. Polar molecules affect the dielectric constant and loss, there being a marked peak of both at a certain frequency at any given temperature.

polar nuclei (*Bot.*). Two nuclei in the embryo sac which unite to give the polar fusion nucleus.

polar plate (*Zool.*). In *Ctenophora*, one of two ciliated areas forming part of the aboral sense-organ.

polar pyrenoid (*Bot.*). A pyrenoid which is not wholly enveloped in a sheath of starch grains.

polar response (*Acous.*). The response of a microphone or loudspeaker when measured at a single frequency for all directions round a circle.

polar response curve (*Acous.*). The curve which indicates the distribution of the radiated energy from a sound reproducer for a specified frequency. Also the relative response curve of a microphone for various angles of incidence of a sound-wave for a given frequency. Generally plotted on a radial decibel scale.

polar sequence (*Astron.*). The name given to the adopted scale for determining photographic stellar magnitudes. It consists of a number of stars near the North Pole which are used as a standard of comparison; they range from Polaris to the faintest observable.

polar siderostat (*Astron.*). See **siderostat.**

polar'iloc'ular spore (*Bot.*). A two-celled spore with a very thick median septum traversed by a canal.

polarim'eter (*Chem.*). An instrument in which the optical activity of a liquid is determined by inserting Nicol prisms in the path of a ray of light before and after traversing the liquid.

polarim'etry (*Chem.*). The measurement of optical activity, especially in the analysis of solutions of sugars.

polarinu'cleate (*Bot.*). Said of a spore which has an oil drop (*nucleus*) at each end.

Polar'is (*Astron.*). The name given to the star α Ursae Minoris, near enough to the north celestial pole to mark it for rough observations, its North Polar Distance being less than 2°.

polarisation (*Chem.*). The separation of the positive and negative charges of a molecule.

polarisation (*Diel.*). See **displacement.**

polarisation (*Elec. Eng.*). A phenomenon, occurring in primary cells, by virtue of which a reduction takes place in the e.m.f. after current has been flowing for some time, owing to the collection of certain products of electrolysis on the electrodes. The effect can be minimised by the use of a depolariser.

polarisation (*Radio*). The direction of inclination of the components of an electromagnetic wave.

See **circular—** **plane—**
elliptic— **vertical—**
horizontal—

polarisation error (*Radio*). Error in determining the direction of arrival of radio-waves by a direction-finder when the desired wave is accompanied by downcoming components which are out of phase. Formerly termed NIGHT ERROR (or EFFECT).

polar'iscope (*Light*). An instrument for showing phenomena connected with polarised light. It may consist of a polariser and an analyser, with facilities for placing transparent specimens between them. The analyser is usually a Nicol prism. The polariser may be also a Nicol prism or a *pile of plates* (q.v.).

polarised light. In plane-polarised light the vibrations in the light-waves are confined to a single direction or plane. Polarised light may be obtained by reflecting ordinary light from a plane surface at the angle of polarisation, or by passing the light through a *Nicol prism* (q.v.). See **Brewster's law, circular polarisation, quarter-wave plate.**

polarised relay (*Elec. Comm.*). A relay in which there is a permanent flux, generally sustained by a permanent magnet, which makes the operation depend on the direction of the current and on its magnitude.

polarised waves (*Radio*). Although all electromagnetic waves are polarised in some manner, the term is generally applied to plane-polarised waves.

polariser (*Light*). A device for producing polarised light. It may be a pile of plates, a Nicol prism, or a 'Pola' disc or plate of Polaroid.

polar'ity (*Elec.*). The distinction between the north and south poles of a magnet, or between the north and south poles of an electric machine or circuit. Precisely, a pole is the location where a flux leaves or enters a surface of discontinuity.

polarity (*Zool.*). Existence of a definite axis.

polarity indicator (*Elec. Eng.*). An instrument for determining the polarity of one or more electric terminals.

polar'ogram (*Chem.*). A current-voltage curve obtained with a polarograph. The height of a current 'wave' is proportional to the concentration of a substance, and the corresponding voltage indicates its nature.

polar'ograph (*Chem.*). An apparatus for the automatic electroanalysis of a solution by means of the dropping mercury cathode.

polder (*Civ. Eng.*). A piece of low-lying land reclaimed from the water.

pole (Greek *polos*, hinge, axis). Generally, the axis or pivot on which anything turns: one of the ends of the axis of a sphere, especially of the earth.

pole (*Astron.*). See **celestial— terrestrial—**

pole (*Zool.*). Point: apex: an opposite point (as *aboral pole*): axis.

pole (*Bot.*). One end of an elongated spore.—(*Cyt.*) One end of the achromatic spindle, where the spindle fibres come together.

pole (*Carp.*). A long piece of timber of circular section and small in diameter.

pole (*Elec. Eng., etc.*). A wooden, steel, or concrete column for supporting the conductors of an overhead transmission or telephone line.

See **A-type—** **H-type—**
anchor— **terminal—**

pole plate (*Carp.*). A horizontal member supporting the feet of the common rafters and carried upon the tie-beams of the trusses.

pole-top switch (*Elec. Eng.*). A switch which may be mounted at the top of a transmission-line pole; arranged for hand-operation by some mechanical device.

pole (*Elec.*). (1) The part of a magnet, usually near the end, towards which the lines of magnetic flux apparently converge or from which they diverge, the former being called a *south pole* and the latter a *north pole.* See **unit pole.**—(2) That part of an electric machine which carries one of the exciting windings. See **salient pole.**—(3) A term sometimes used to denote one of the terminals of a d.c. generator, battery, or electric circuit, e.g. *negative pole, positive pole*.—(4) The term sometimes used in connexion with an electric arc to denote the extremity of either of the electrodes between which the arc burns.

pole arc (*Elec. Eng.*). The length of the pole face of an electric machine measured circumferentially around the armature surface.

pole bevel (*Elec. Eng.*). A portion of the pole face of an electric machine, near the pole tip, which is made to slope away from the armature surface instead of being concentric with it, the object being to obtain a more satisfactory shape of flux wave.

pole-changing control (*Elec. Eng.*). A method of obtaining two or more speeds from an induction motor, the connexions of the stator winding being altered so that it sets up different numbers of poles.

pole core (*Elec. Eng.*). See **pole shank.**

pole end-plate (*Elec. Eng.*). A thick plate placed at each end of the laminations of a laminated pole.

pole face (*Elec. Eng.*). That surface of the pole piece of an electric machine which faces the armature.

pole-face loss (*Elec. Eng.*). Iron losses which occur in the iron of the pole face of an electric machine on account of the periodic flux variations caused by the armature teeth.

pole-finding paper (*Elec. Eng.*). A paper prepared with a chemical solution, which, when placed across the two poles of an electric circuit, causes a red mark to be made where it touches the positive pole.

pole horn (*Elec. Eng.*). The portion of the pole shoe of an electric machine which projects circumferentially beyond the pole shank.

See **leading— trailing—**

pole piece (*Elec. Eng.*). A specially shaped piece of magnetic material forming an extension to a magnet, e.g. the salient poles of a generator or motor.

pole pitch (*Elec. Eng.*). The distance between the centre-lines of two adjacent poles on an electric machine; it is measured circumferentially around the surface of the armature of the machine.

pole-shading (*Elec. Eng.*). See **shaded-pole.**

pole shank (*Elec. Eng.*). The part of a pole piece around which the exciting winding is placed. Cf. *pole shoe.*

pole shim (*Elec. Eng.*). See **shim.**

pole shoe (*Elec. Eng.*). That portion of the pole piece of an electric machine which faces the armature; it is frequently detachable from the pole shank.

pole strength (*Elec. Eng.*). The force, in dynes, exerted by a particular magnet pole upon a unit pole supposed situated at a unit distance away from it. The term is used in theoretical work on magnetism.

pole tip (*Elec. Eng.*). The edge of the pole face of an electric machine which runs parallel to the axis of the machine. Hence *leading pole tip, trailing pole tip.*

polecat (*Furs*). See **fitch.**

Po'lian vesicle (*Zool.*). In some *Echinodermata*, a small stalked sac attached to the water-vascular ring.

po'lianite (*Min.*). Dioxide of manganese, crystallising in the tetragonal system. It is distinguished from *pyrolusite* (q.v,) by its hardness and anhydrous character.

poling (*Met.*). In the fire-refining of copper, the impurities are eliminated by oxidation and the oxygen is in turn removed by the reducing gases produced when logs (*poles*) are burned in the molten metal. If the final oxygen content is too high the metal is *underpoled*, if too low *overpoled*, and if just right *tough pitch* (q.v.).

poling boards (*Civ. Eng.*). Rough vertical planks used to support the sides of narrow trenches after excavation; placed in pairs on opposite sides of the trench at intervals along its length, each pair being wedged apart by wooden struts.

polio- (Greek *polios*, grey). A prefix used in the construction of compound terms; e.g. *poliomyelitis* (q.v.).

po'lioencephali'tis (*Med.*). Inflammation of the grey matter of the brain.

po'lioenceph'alomyeli'tis (*Med.*). Inflammation of the grey matter both of the brain and of the spinal cord.

po'liomyeli'tis (*Med.*). Inflammation of the grey matter of the spinal cord. Often used as a synonym for *acute anterior poliomyelitis*, or *infantile paralysis*, due to infection, chiefly of the motor cells of the spinal cord, with a filter-passing virus; characterised by fever and by variable paralysis and wasting of muscles.

po'lioplasm (*Biol.*). Granular protoplasm.

polished face (*Civ. Eng.*). A fine surface finish produced on granite by rubbing down a sawn face with iron sand, fine grit, and polishing powder in turn.

polished plate (*Build.*). A good quality sheet-glass over $\frac{3}{16}$ in. thick, much used for shop-window glazing.

polishing (*Cinema.*). The cleaning of negative film after a number of positives have been printed, during which process particles of dust, taken up by electrostatic attraction, are removed.

polishing lathe (or head) (*Eng.*). A headstock and spindle carrying a polishing wheel or mop rotated at high speed by belt drive or built-in motor; used for buffing and polishing.

polishing stake (*Horol.*). A flat polished piece of steel on which materials for polishing are mixed. It should be kept in a container to exclude dust.

polishing stick (*Eng.*). A stick of wood, one end of which is charged with emery or rouge, used for finishing small surfaces. It is twisted in the hands or held in the chuck of a drilling machine.

polishing wheel (*Eng.*). See **polishing lathe.**

polissoir, po-lē-swar' (*Glass*). A polishing pad used in polishing plate glass after the grinding process.

polit'zerisa'tion (*Med.*). Inflation of the middle ear by means of a special bag devised by Politzer.

polje, pol'jē (*Geol.*). The name applied to a large depression found in some limestone areas, due in part to subsidence following underground solution.

poll (*Tools*). The blunt end of a hammer or axe.

poll-adze (*Tools*). An adze having a blunt head opposite to the cutting edge.

poll-evil (*Vet.*). Inflammation of the bursa of the ligamentary nuchae of the horse.

Pollard's theorem (*Elec. Comm.*). An alternative name for *Thévénin's theorem.*

pollen (*Bot.*). The dusty or sticky material produced in anthers; it consists of many pollen grains each of which ultimately contains two male nuclei which are equivalent to male gametes.

pollen chamber (*Bot.*). The cavity formed in the apex of the nucellus in Gymnosperms, in which pollen grains lodge after pollination has occurred. The pollen grains slowly develop there and ultimately bring about fertilisation.

pollen flower (*Bot.*). A flower which produces no nectar, but liberates large amounts of pollen, which attracts insects.

pollen sac (*Bot.*). A cavity in an anther in which pollen is formed.

pollen tube (*Bot.*). A tubular outgrowth from the pollen grain, which grows to and into the embryo sac and conveys the male nuclei to the neighbour of the egg nucleus.

pollex (*Zool.*). The innermost digit of the anterior limb in *Tetrapoda*.

pollination (*Bot*). The transfer of pollen from an anther to a stigma; the process is a preliminary to fertilisation.

pollin'ium (*Bot.*). A mass of pollen grains united by a sticky or other substance and transported as a whole in pollination.

pollino'dium (*Bot.*). An old name for an *antheridium*.

Pollopas (*Plastics*). A proprietary thermosetting plastic of the urea-thiourea-formaldehyde type; sp. gr. 1·48-1·55, moulding temp. 300-360° F., tensile strength 4000-7000 lb. per sq. in.

pollu'cite (*Min.*). A rare alumino-silicate of caesium, occurring as clear colourless cubic crystals in Maine, U.S A.; used as a gemstone.

pollution carpet (*Ecol*). In stagnant and polluted waters, a slimy layer occurring on the bottom; it consists mainly of bacteria, detritus-feeding protozoa and fungi.

polly (*Cinema.*). An undesired echo on the sound stage in sound-film production.

po'locyte (*Zool.*). Polar body.

polo'nium (*Chem.*). Symbol, Po. A radioactive element in the sixth group of the periodic system, with a half-life of 136·5 days. It is identical with RaF. At. no. 84, at. wt. 210. Polonium is the last stage element before the formation of lead in the radioactive disintegration of radium.

poly- (Greek *polys*, many). A prefix used in the construction of compound terms; e.g. *polythalamous*, many-chambered (as Shells).

poly- (*Chem.*). Containing several atoms, groups, etc.

polyadel'phous (*Bot.*). Said of an androecium in which the stamens are joined by their filaments into several separate bundles.

polyan'dry (*Bot.*). The condition of having a large and indefinite number of stamens.

polyandry (*Zool.*). The practice of a female animal consorting with more than one male.—*adj.* **polyandrous.**

pol'yarch, —ark (*Bot.*). Said of a stele having many protoxylem strands.

polyarthri'tis (*Med.*). Inflammation affecting several joints at the same time

polyas'ter (*Zool.*). A complex mitotic figure formed in an ovum after polyspermy.

polyax'on (*Zool.*). Having many axes; said of Sponge spicules.

polyba'sic acids (*Chem.*). Acids containing two or more replaceable hydrogen atoms in the molecule.

polyba'site (*Min.*). Sulphide of silver and antimony, crystallising in the monoclinic system. It is found in many silver veins.

pol'yblast (*Zool.*). A type of phagocytic cell.

pol'ycarp (*Zool.*). In some *Urochorda*, a form of gonad occurring on the inner surface of the mantle.

polycarpel'lary (*Bot.*). Consisting of many carpels.

polycar'pic (*Bot.*). Able to fruit many times in succession.

polycar'pous (*Bot.*). Having an apocarpous gynaeceum.

polycer'coid (*Zool.*). See **echinococcus.**

polycer'cous (*Zool.*). Having many tails or scolices, as an *echinococcus* (q.v.).

Polychaeta, —kē'ta (*Zool.*). A class of *Annelida* of marine habit, having locomotor appendages (parapodia) bearing numerous setae; there is usually a distinct head; the perivisceral cavity is subdivided by septa; the sexes are generally separate, with numerous gonads; and development is by metamorphosis. Marine Bristle-worms.

polycha'sium (*Bot.*). A cymose inflorescence in which the branches arise in sets of three or more at each node.

polychlamyd'eous chimaera (*Bot.*). A periclinal chimaera in which the skin is more than two layers of cells in thickness.

polychroma'sia (*Med.*). The diffuse bluish staining of the young immature red blood corpuscles with eosin and methylene blue. Also called POLYCHROMATOPHILIA.

Polyclad'ida (*Zool.*). An order of marine *Turbellaria* in which the gut has many branches which may ramify or anastomose.

polycli'nal chimaera (*Bot.*). A chimaera which is made up of more than two components.

polycor'mic (*Bot.*). Said of a woody plant having several strong vertical trunks.

polycotyle'donous (*Bot.*). Having more than two cotyledons.

polycy'clic (*Bot.*). Said of a stele in which there are two or more concentric rings of vascular strands.

polycyclic (*Chem.*). Containing more than one ring of atoms in the molecule.

polycyclic (*Zool.*). Said of Shells having numerous whorls.

polycys'tic (*Med.*). Containing many cysts; e.g. a *polycystic* kidney.

polycythae'mia, polycythe'mia (*Med.*). An increase in the number of red corpuscles per unit of circulating blood. See also **erythraemia.**

polydac'tylism, polydac'tyly (*Med.*, *Zool.*). Having more than the normal number of digits.—*adj.* **polydactylous.**

polydip'sia (*Med*). Excessive thirst.

pol'ydisc strobilisation (*Zool*). The production of more than one ephyra at a time by a scyphozoan hydratuba.

polyem'bryony (*Bot.*). The production of more than one embryo in one ovule; consequently, the presence of more than one embryo in a seed.—(*Zool.*) The production of more than one embryo from a single fertilised ovum.

polyener'gid (*Biol.*). Coenocytic.

polyenergid nucleus (*Cyt.*). A nucleus possessing several sets of chromosomes.

polyg'amous *or* pol'i-gam'us (*Bot.*). Said of a species which has staminate, pistillate, and hermaphrodite flowers on the same and on distinct individual plants.—(*Zool.*) Said of an animal which mates with more than one of the opposite sex during the same breeding season.—*n.* **polygamy.**

polygas'tric (*Zool.*). Having several gastric cavities, as a Siphonophoran colony.

polygenet'ic (*Chem.*). Producing two or more shades with different mordants.

polygon of forces (*Mech.*). If several forces are in equilibrium at a point and a polygon is drawn with sides parallel to the directions of the forces (the directions being cyclic round the polygon), the lengths of the sides of the polygon are proportional to the corresponding forces.

polyg'onal roof (*Build.*). A roof which in plan forms a figure bounded by more than four straight lines.

polygonal rubble (*Masonry*). A form of rag-work in which the rubble wall is built up of stones having polygonal faces.

pol'ygoneu'tic (*Zool.*). Having several broods in a year.

polygy'nous, *or* —lij'en-us (*Bot.*). Said of a flower having several distinct styles.

polygynous (*Zool.*). Said of a male animal which consorts with more than one female.

polyhy'dric (*Chem.*). Containing a number of hydroxyl groups in the molecule; e.g. *polyhydric alcohols*, alcohols with three, four, or more hydroxyl groups; *polyhydric acids*, acids containing a number of hydroxyl groups in the molecule, apart from the carboxyl group.

polymas'tia, polymas'tism (*Med.*, *Zool.*). The presence of supernumerary breasts.

Polymastigi′na (*Zool.*). An order of *Zoomastigina* the members of which have usually more than three flagella.

polymas′tigote (*Zool.*). Having a tuft of flagella.

polymas′tism. See **polymastia.**

polyme′lus (*Med.*). A foetal monster with more than the normal number of limbs.

polym′eric (*Gen.*). Said of factors which are not allelomorphic but which affect the same character in the offspring and cause it to develop in the same way.

polymerisa′tion (*Chem.*). The combination of several molecules to form a more complex molecule having the same empirical formula as the simpler ones. It is often a reversible process.

pol′ymery (*Bot*). The condition when a whorl consists of many members.

polymeth′ylene derivatives (*Chem.*). Cyclic compounds containing three or more methylene groups in the ring.

polymor′phic (*Zool.*). Showing a tendency to division of labour among the members of a colony. See also **polymorphism.**

polymorphic transformation (*Met.*). A change in a pure metal from one form to another, e.g. the change from gamma to alpha iron.

polymor′phism (*Min.*). The property possessed by certain chemical compounds of crystallising in several forms which are genetically distinct: thus TiO_2 occurs as the mineral species *anatase*, *brookite*, and *rutile*.

polymorphism (*Zool.*). The occurrence of different structural forms at different stages in the life-cycle of an individual: the occurrence of morphologically different types of individuals within the same species.—*adjs.* **polymorphic, polymorphous.**

polymor′phonu′clear leucocyte (*Physiol.*). See **neutrophil.**

polymyosi′tis haemorrha′gica (*Med.*). A form of *dermatomyositis* (q.v.) in which haemorrhages occur in and between the muscles.

polyneuri′tis (*Med.*). Multiple neuritis. A widespread affection of many peripheral nerves with flaccid paralysis of muscles and/or loss of skin sensibility, due to infection or poisoning with various agents, such as lead, alcohol, arsenic, diphtheria toxin, etc.

polynu′cleate (*Biol.*). Multinucleate; having many nuclei.

polyoestrous, pol-i-ēs′trus (*Zool.*). Exhibiting several oestrous cycles during the breeding season. Cf. *monoestrous.*

polyoi′cous (*Bot.*). Said of *Bryophyta* in which antheridia and archegonia may occur on the same plant or on separate plants.

pol′yorrhomeni′tis (*Med.*). Concato's disease.

pol′yoses (*Chem.*). Polysaccharoses.

polyox′ybion′tic (*Ecol.*). Requiring a copious oxygen supply.

polyp (*Zool.*). An individual of a colonial animal.

polypep′tides (*Chem.*). Protein derivatives obtained by the condensation of amino acids.

Polypet′alae (*Bot.*). A group of dicotyledons in which the corolla consists of separate petals.

polypet′alous (*Bot.*). Said of a corolla made up of distinct petals.

pol′ypha′gous, *or* pol-if′— (*Bot.*). Said of a fungal parasite which attacks several host cells at the same time.—(*Zool.*) Feeding on many different kinds of food; as *Sporozoa* which exist in several different cells during one life-cycle, or phytophagous Insects with many food-plants.

pol′yphase (*Elec. Eng.*). Said of a.c. systems or pieces of apparatus in which there are two or more circuits containing voltages displaced from one another in phase, usually by approximately equal portions of a period. See **single phase, two phase, three phase.**

polyphase motor (*Elec. Eng.*). An electric motor designed to operate from a polyphase supply.

polyphylet′ic (*Gen*). Descended from diverse ancestors: showing characters derived from several ancestral types: convergent.

pol′yphyl′lous (*Bot.*). Consisting of members which are separate from one another.

pol′yphy′ly (*Gen.*). Presumed descent from several distinct sources.

polyphy′odont (*Zool.*). Having more than two successive dentitions.

pol′ypide (*Zool.*). A polyp: an individual of a colonial animal: in *Polyzoa*, that part of an individual excluding the zooecium or body-wall. Also POLYPITE.

Pol′yplacoph′ora (*Zool*). A subclass of *Amphineura* in which the foot occupies the whole ventral surface of the body, the shell consists of eight transverse dorsal plates, and the branchiae form a row on each side between the mantle and the foot; sluggish marine animals living among rocks and stones and feeding on algae; mainly shallow-water forms but a few are bathic. Coat-of-Mail Shells.

pol′yploid (*Cyt.*). Having more than twice the normal haploid number of chromosomes.

polypneu′stic (*Zool.*). Having many respiratory apertures; as in certain dipterous larvae.

pol′ypod (*Zool*). Said of a phase in the development of larval Insects in which the abdomen is completely segmented and bears the full number of appendages.

polypo′sis (*Med.*). The development of many polypi in a part, as in the intestine.

polypro′todont (*Zool.*). Having numerous pairs of small subequal incisor teeth: pertaining to the *Polyprotodontia.* Cf. *diprotodont.*

pol′ypus (*Med.*). A smooth, soft, pedunculated tumour growing from mucous membrane.

polysac′charoses (*Chem.*). Polyoses; a group of complex carbohydrates such as starch, cellulose, etc. They may be regarded as derived from x monose molecules by the elimination of x molecules of water. Polysaccharoses can be hydrolysed step by step, ultimately yielding a monose.

polysap′robe (*Biol.*). An organism able to live in heavily contaminated water.

polysep′alous (*Bot.*). Said of a calyx consisting of separate sepals.

polyserosi′tis (*Med.*). Concato's disease.

polysi′phonous (*Bot.*). Said of an algal thallus consisting of a central row of elongated cells surrounded by one or more layers of peripheral cells.

polysper′mous (*Bot.*). Containing many seeds.

pol′ysper′my (*Zool.*). Penetration of an ovum by several sperms.

pol′yspon′dyly (*Zool.*). The condition of having more than two vertebral centra corresponding to a single myotome.—*adjs.* **polyspon′dylic, polyspon′dylous.**

pol′yspore (*Bot.*). A multicellular spore.

pol′yspo′ry (*Bot.*). The formation of more than the normal number of spores.

pol′ystele (*Bot.*). See **dictyostele.**

polyste′lic (*Bot.*). Having more than one stele.

polystem′onous (*Bot.*). Polyandrous.

polystichous, —stik′us (*Bot.*). Arranged in several to many rows.

polysto′matous (*Zool.*). Having many apertures, as *Porifera*: having more than one mouth-opening, as certain *Discomedusae.*

polysty′renes (*Plastics*). See **styrene resins.**

polythal′amous (*Zool.*). In *Protozoa*, said of a shell or test which has two or more chambers.

polythe′lia (*Med.*). The occurrence of supernumerary nipples.

polyto'kous (*Zool.*). Bringing forth many young at a birth; prolific; fecund.—*n.* **polytoky.**

polyto'mous (*Bot.*). Having several branches arising at the same level.

polytro'phic (*Zool.*). In *Insecta*, said of ovarioles in which nutritive cells alternate with the oöcytes: more generally, obtaining food from several sources.

polyu'ria (*Med.*). Excessive secretion of urine.

polyva'lent (*Chem.*). Having a valency greater than unity.

polyvi'nyl resins (*Plastics*). See **vinyl resins.**

Polyzo'a (*Zool.*). A phylum of small non-metameric aquatic *Coelomata* of colonial habit; they have a simple circular or U-shaped lophophore; there is no vascular system; the anus is dorsal and close to the mouth; asexual reproduction by budding usually occurs at some stage of the life-history.

polyzo'ic (*Zool.*). Having many zooids, as a hydroid colony: containing many sporozoites, as a spore.

pome (*Bot.*). A compound fleshy fruit containing a number of seeds inside a papery core formed from the inner walls of the united carpels; e.g. an apple.

pommel (*Build.*). (1) An ornament in the shape of a ball, e.g. a ball finial.—(2) A *punner* (q.v.).

pom'miform (*Bot.*). Apple-shaped.

pomol'ogy (*Bot.*). The study of cultivated fruits and fruit trees.

pom-pom (*Artillery*). A colloquialism applied to various types of gun. Particularly, a multi-barrelled small-shell gun firing a spread of shells; used as an anti-aircraft weapon.

pomum Adami (*Zool.*). Adam's apple.

Ponceaux, pon-sō (*Chem.*). A group of dyestuffs prepared by the interaction of various diazo-salts with naphthol-sulphonic acids.

Pon'celet wheel (*Eng.*). An undershot water-wheel with curved vanes; of higher efficiency than the flat-vane type. See **undershot wheel.**

pond (*Hyd. Eng.*). A reach or level stretch of water between canal locks. Also called a POUND.

pongee' (*Textiles*). A fine cotton cloth, generally dyed and mercerised; made for Eastern markets. Originally made from silk.

pons (*Zool.*). A bridge-like or connecting structure: a junction.—*pl.* **pontes.**—*adj.* **pontal.**

pons Varo'lii (*Zool.*). In Mammals, a mass of transversely coursing fibres joining the cerebellar hemispheres.

Pont Erwyd Beds (*Geol.*). A group of dark shales found in Central Wales, of Lower Silurian age. See **Plynlimon Beds.**

pontal flexure (*Zool.*). The flexure of the brain occurring in the same plane as the cerebellum; it bends in the reverse direction to the primary and nuchal flexures and tends to counteract them.

Pontesford'ian Series (*Geol.*). A series of volcanic rocks of Pre-Cambrian age which form Pontesford Hill in Shropshire. See **Uriconian Rocks.**

Pon'tiac Series (*Geol.*). See **Timiskaming Group.**

pontie, pontil (*Glass*). See **punty.**

pontoon (*Civ. Eng.*). A floating vessel for the support of plant, materials, and men; used in constructional work at sea or in rivers.

pontoon bridge (*Civ. Eng.*). A temporary bridge thrown across a river and carried on numerous floating supports, or *pontoons*, resembling small boats.

pony girder (*Struct.*). A secondary girder carried across side-by-side cantilevers.

pony motor (*Elec. Eng.*). A name sometimes given to an auxiliary motor used to bring synchronous machinery up to speed before synchronising.

poor lime (*Build.*). Lime in which the proportion of impurities insoluble in acids is in excess of 15%.

P.O.P. (*Photog.*). Abbrev. for *printing-out paper*, i.e. any photographic paper, for normal printing, which does not require development.

pop valve (*Eng.*). A boiler safety-valve in which the head of the wing valve is so shaped as to cause the steam to accelerate the rate of lift when a small lift occurs, giving rapid pressure release.

poplin (*Textiles*). A cotton fabric of plain weave, with fine lines or cords running across the piece (due to the ends per inch greatly exceeding the picks per inch); usually mercerised. Used for shirtings, pyjamas, and dresses. Formerly, poplin fabrics were made from a combination of silk, worsted, and cotton.

poplite'al (*Zool.*). In *Tetrapoda*, pertaining to the region above the cruro-femoral articulation.

poppet valve (*I.C. Engs.*). The mushroom or tulip-shaped valve, made of heat-resisting steel, commonly used for inlet and exhaust valves. It consists of a circular head with a conical face which registers with a corresponding seating round the port, and a guided stem by which it is lifted from its seating by the rocker or tappet. See **valve inserts, valve spring, mushroom valve, stellited valves.**

poppets (*Ship Constr.*). Temporary structures erected beneath a ship's hull to transfer the weight to the sliding ways, prior to and during launching.

popping (*Plast.*). A defect in plasterwork resulting from the use of a lime which has not been properly slaked.

popping-back (*I.C. Engs.*). An explosion through the inlet pipe and carburettor of a petrol engine, due to a weak, slow-burning mixture.

poradeni'tis vene'rea (*Med.*). See **lymphogranuloma inguinale.**

poran'drous (*Bot.*). Said of stamens which open by pores, not by slits.

por'celain (*Pot.*). Fine pottery with a hard, close-grained, translucent or semi-translucent body. The true hard-paste porcelain is composed of china stone and china clay; artificial, or soft-paste, porcelain has a body composed of glass or frit and white clay.—(*Diel.*) For dielectrical uses porcelain is made from china clay (aluminium silicate) with quartz as filler and feldspar as flux. Hard porcelain only is used, the proportions being two of china clay, one of quartz, and one of feldspar.

porcelain insulator (*Elec. Eng.*). An insulator for supporting high-voltage electric conductors; and made of a hard quality of *porcelain* (q.v.).

See **bushing—** **post—**
pin— **suspension—**

Porcel'la (*Paint.*). A trade-name for a paint having fire-resisting qualities.

porch (*Build.*). An exterior entrance to a building, covered with a separate roof.

porcupine roller (*Lace*). A roller, covered with wire carding, which draws the lace fabric over the facing bar on to the work roller.

porcupine system of drawing (*Textiles*). A method of producing worsted roving in a rounded form without twisting; effected by passing the sliver between oscillating rubbing leathers. Also known as CONTINENTAL (or FRENCH) SYSTEM.

pore (*Bot.*). (1) The aperture of a stoma.—(2) The ostiole in *Pyrenomycetes*.—(3) One of the tubular cavities lined by basidia in the pore-bearing fungi.—(*Zool.*) A small aperture.—*adjs.* **porif'erous, porous, poriform.**

pore plate (*Zool.*). The perforated portion of the central capsule in certain *Radiolaria*: the madreporite of *Echinodermata*.

porenceph'aly, poren'cepha'lia (*Med.*). The presence, in the substance of the brain, of cysts or cavities containing colourless fluid; due to a defect in development.

porici′dal (*Bot.*). Said of anthers which open by pores.

Porif′era (*Zool.*). A phylum of *Parazoa* composed of sessile and aquatic animals with a single cavity in the body lined in part or in whole by choanocytes; water enters the cavity by numerous pores in the body-wall and leaves it by one or more larger openings. Sponges.

por′ocyte (*Zool.*). In *Porifera*, a conical cell extending through from the dermal layer to the paragaster and pierced from base to apex by a tube through which water passes to the paragaster.

po′rogam′y (*Bot.*). The entry of the pollen tube through the micropyle in early stages of fertilisation.

poroid (*Bot.*). Having more or less obvious pores.

porom′eter (*Bot.*). An instrument for measuring the rate at which air can be drawn through a portion of a leaf; it is a means of measuring the degree to which the stomata are open.

porose (*Bot.*). Said of cell walls which are pierced by pores.

poros′ity (*Build.*). The percentage of pore space in a material.

porosity (*Diel.*). (Of a solid sheet—usually paper) the ease with which air or liquids can pass through the sheet.

porosity (*Geol.*). (Of rocks) the ratio, usually expressed as a percentage, of the volume of the pore space to the total volume of the rock.

porous dehiscence (*Bot.*). The liberation of pollen from anthers, and of seeds from fruits, by means of pores in the wall of the containing structure.

porous pot (*Elec. Eng.*). An unglazed earthenware pot serving as a diaphragm in a two-fluid cell.

porous screen (*Cinema.*). A perforated screen (see **screen**).

por′pezite (*Min.*). A variety of gold which contains up to 10% of palladium.

por′phyrite (*Geol.*). An unsatisfactory term, though widely used, for microdiorite or porphyritic *microdiorite* (q.v.).

porphyrit′ic texture (*Geol.*). The term applied to the texture of igneous rocks which contain isolated euhedral crystals larger than those which constitute the groundmass in which they are set.

porphyroblas′tic (*Geol.*). A textural term applicable to metamorphic rocks containing conspicuous crystals in a finer groundmass, the former being analogous with the phenocrysts in a normal igneous rock, but having developed in the solid.

por′phyry (*Geol.*). A general term used rather loosely for igneous rocks which contain relatively large isolated crystals set in a fine-grained groundmass; e.g. *granite-porphyry*. It is better used as a textural qualifier combined with a specific rock name; e.g. *porphyritic microgranite*, a medium- to fine-grained rock of granitic composition with porphyritic texture.

por′poising (*Aero.*). Recurring movements of a seaplane, flying-boat, or amphibian, when taxiing: instability on the water, as distinct from instability under air-borne conditions.

porrect′ (*Bot.*). Extending forwards.

port (*Cinema.*). An observation window for the recordist or control engineer in a sound-film studio.

port (*Eng.*). An opening, generally valve-controlled, by which a fluid enters or leaves the cylinder of an engine, pump, etc.

See **piston valve** **sleeve valve**
poppet do. **slide** do.

Port Ewen Limestone (*Geol.*). See **Oriskany Stage.**

porta (*Zool.*). Any gate-like structure.—*adj.* **portal.**

portable accumulator (*Elec. Eng.*). An accumulator mounted in a box with a handle for carrying, with suitable arrangements to prevent the acid from spilling.

portable electrometer (*Elec. Eng.*). A portable form of the absolute attracted-disc type of electrometer.

portable engine (*Eng.*). A steam or I.C. engine carried on road wheels but not self-propelled thereby.

portable instrument (*Elec. Eng.*). An electrical measuring instrument specially designed for carrying about for testing purposes. Cf. *switchboard instrument, substandard instrument.*

portable lamp (*Illum.*). See **hand-lamp.**

portable photometer (*Illum.*). A photometer which can be easily carried about; used for measuring illumination values.

portable substation (*Elec. Eng.*). A substation comprising the converting or transforming plant and the necessary switch and protective gear, mounted on a railway truck or other vehicle in order that it can be quickly moved to any site for dealing with special loads or other emergency conditions.

Portage Group (*Geol.*). Marine strata of Upper Devonian age typically exposed at Portage, N.Y., where they comprise grey and black shales capped by sandstones; equivalent to the non-marine *Oneonta Group* (q.v.) in western New York.

portal (*Build., Civ. Eng.*). (1) A structural frame consisting essentially of two uprights connected across the top by a third member.—(2) An arch spanning a doorway or gateway.

portal jib crane (*Eng., etc.*). A jib crane mounted on a fixed or movable structure which permits the passage of wagons, etc., through an opening directly under the crane.

portal system (or **circulation**) (*Zool.*). A vein which breaks up at both ends into sinusoids or capillaries; as (in Vertebrates) the *hepatic portal system*, in which the hepatic portal vein collects from the capillaries of the alimentary canal and passes the blood into the sinusoids and capillaries of the liver.

porte-lumière, —lūm-yăr′ (*Surv.*). A simpler form of *heliostat* (q.v.), worked by hand.

porter (*Brew.*). A beer partaking of the character of mild ale and stout; usually it has a sweet flavour.

porter (*Textiles*). A basic measure in linen manufacture. The *porter* consists of 20 splits or openings, and the reed may be gauged by the number of porters in a width of 37 in. Cf. *beer.*

Porter governor (*Eng.*). A pendulum-type governor in which, usually, the ends of two arms are pivoted to the spindle and sleeve respectively, and carry heavy balls at their pivoted joints. The sleeve carries an additional weight. See **pendulum governor.**

portico (*Build.*). A colonnade at one side of a building (usually the entrance side).

Portland Beds, Portlandian Stage (*Geol.*). A group of sands (below) and limestones (above) found in the Upper Jurassic rocks of southern England. It includes the famous Portland Stone (an oölitic freestone), much used for building purposes.

Portland blast-furnace cement (*Build., Civ. Eng.*). A cement differing from a Portland cement in that it contains a proportion (usually not exceeding 65%) of blast-furnace slag.

Portland cement (*Build., Civ. Eng.*). A much-used cement made by intimately mixing clay and chalk in proportions varying between 3 : 7 and 1 : 4, and afterwards burning the mixture in a kiln.

port′landite (*Min.*). Calcium hydroxide, $Ca(OH)_2$, occurring as hexagonal plates in the Chalk-dolerite contact-zone at Scawt Hill, Co. Antrim. Occurs also in Portland cement, hence the name.

Portmad′oc Beds (*Geol.*). A series of thick feldspathic slates found in N. Wales; of Upper Cambrian age.

Portscath′o Beds (*Geol.*). A series of slates of

Devonian age found in Cornwall. They are almost unfossiliferous and are known as *killas* by the miners. Now combined with the Grampound Beds as the *Gramscatho Group*.

position (*Teleph.*). The location of an operator such that she has full control of a telephone call passing through her section of the switchboard. See **A—**
B—
call-indicator—
filter-record—
monitor—
phonogram—
special control—
testing—
trunk—
trunk-record—
A-position keysending
B-position do.

position, adjusted for (*Horol.*). A watch is said to be *adjusted for position* when it has been so regulated as to give the best performance in the different positions.

position angle (*Astron.*). A measure of the orientation of a point on the limb of a heavenly body referred to a fixed meridian through the body; as of the sun's axis of rotation referred to the north point of the limb: (of double stars) the angle between the line joining them and the declination circle through the principal star.

position, circle of (*Astron.*). A small circle on the earth's surface obtained by any single observation of the altitude of a known star as the locus of the observer's position; the radius of the circle in nautical miles being the zenith distance of the body in minutes of arc, and its centre the substellar point.

position-finding (*Radio*). The determination of the location of a transmitting station (e.g. an aeroplane) by taking a number of bearings by direction-finders which receive a signal from the transmitter. The location of the transmitter is transmitted back to the operator.

position head (*Hyd.*). See **elevation head.**

position meter (*Teleph.*). A meter, which counts the calls handled at an operator's position; operated manually or automatically.

position tests (*Horol.*). Tests used to determine the performance of a watch in different positions, i.e. *horizontal tests*: dial up, dial down; *vertical tests*: pendant up, pendant right, pendant left.

positional astronomy (*Astron.*). The branch of astronomy that is concerned with the position of the heavenly bodies regarded as points on the observer's celestial sphere. It is the oldest form of the science, being essentially geocentric in outlook, even in modern times. It comprises all diurnal and seasonal phenomena and the precise assignment of co-ordinates to the heavenly bodies. Also called SPHERICAL ASTRONOMY.

positive (*Elec.*). A particular point or electrode is said to be *positive* with respect to another point when it is at a higher electric potential than the other point.

positive (*Photog.*). An image in the same scale of contrast as the original, i.e. black for black and white for white, as contrasted with a *negative* (q.v.), where the scale is reversed, i.e. white for black and black for white, with intervening gradations.

positive (*Weaving*). Said of movement in any part of a loom that is due to mechanical means; *negative* movement is that achieved by using springs or weights.

positive after-image (*Optics*). The continued image perceived after visual fatigue in the retina, when the object is replaced by a dark surface or the eye is closed.

positive cyanotype (*Photog.*). A positive blue-printing process in which the iron is included in a viscous sensitising liquid, while the ferrocyanide is provided in the developer.

positive electricity (*Elec.*). A body is said to possess positive electricity when it gives rise to certain well-recognised phenomena, this state arising from a deficiency of electrons on the body. Cf. *negative electricity*.

positive emulsion (*Photog.*). Fine-grain emulsion of the ortho-type used for printing positives and for registering photographic sound-tracks; not required to be specially sensitive to a variety of coloured rays.

positive feeder (*Elec. Eng.*). A feeder connected to the positive terminal of a d.c. supply.

positive film stock (*Cinema.*). The unexposed film on which positive rush and release prints are made. It is also used in sound-cameras for exposing for the sound-track negative, because of its fine grain as compared with the pan stock used in the picture-cameras.

positive ion (*Thermionics*). A molecule or atom of gas which has become positively charged through the loss of one or more electrons.

positive mineral (*Crystal.*). A mineral in which the ordinary ray velocity is greater than that of the extraordinary ray; that is, μ_0 is less than μ_e. Quartz is a positive mineral for which $\mu_0 = 1{\cdot}544$ and $\mu_e = 1{\cdot}553$. See **optical sign.**

positive phase sequence, positive phase-sequence component (*Elec. Eng.*). See **phase sequence.**

positive rays (*Phys.*). Streams of positively charged atoms or molecules which take part in the electrical discharge in a rarefied gas; they have been studied by allowing them to pass through a perforated cathode on to a photographic plate, being deflected by magnetic and electrostatic fields (*Thomson's parabola method*), and by means of Aston's *mass spectrograph* (q.v.). Sometimes called CANAL RAYS.

positive ray parabolas (*Phys.*). See **parabolas (positive ray).**

positive reaction (*Bot.*). A tactism or tropism in which the plant moves, or the plant member grows, from a region where the stimulus is weaker to one where it is stronger.

positive stagger (*Aero.*). See **stagger.**

positive video signal (*Television*). A video signal in which increasing amplitude corresponds to increasing light-value in the transmitted image. White is regarded as 100%, and the black level made about 30% of the maximum amplitude in the signal.

positive wire (*Elec. Eng., etc.*). Any wire in a circuit which is connected to the positive, or earthed, end of the battery.

positivism. The conception which regards natural phenomena as being the only reality demonstrable by experiment, without reference to the human mind—apart from the human senses which are necessary to observe such phenomena as are available. The opposite of *idealism*. See also **empiricism.**

positron (*Phys.*). The positive electron, discovered by Anderson. The mass and charge are of the same magnitude as for the electron, but the charge is positive.

post (*Build.*). (1) An upright member in a frame.—(2) A column or pillar.

post and pan (or pane), post and petrail (*Build.*). A term applied to half timbering formed with brickwork or lath and plaster panels.

post-head (*Elec. Eng.*). A post or pillar at which cables supplying a third-rail traction system may be terminated and connexion made to the conductor-rail.

post insulator (*Elec. Eng.*). A porcelain insulator built in the form of a post; used for supporting bus-bars, etc. in a high-voltage outdoor substation.

post (*Paper*). A standard size of printing paper, 15½ × 19 in.

postcard (*Paper*). A standard size of cut card, 3½ × 5½ in.

post office box (or **bridge**) (*Elec. Eng.*). A Wheatstone bridge in which the resistances making up the arms are contained in a box and varied by means of plugs. Frequently abbreviated to P.O. BOX (or BRIDGE).

post- (Latin *post*, after). A prefix used in the construction of compound terms; e.g. *posthepatic*, posterior to the liver.

postabdomen (*Zool.*). In Scorpions, the narrow posterior part of the abdomen; metasoma.

postal (*Paper*). A standard board size, 22½ × 28½ in.

postcar'dinal (*Zool.*). Posterior to the heart; as the *postcardinal* sinus of *Selachii*.

postca'val vein (*Zool.*). In higher Vertebrates, the posterior vena cava conveying blood from the hind parts of the body and viscera to the heart. Also called INFERIOR VENA CAVA.

postclav'icle, postclavic'ula (*Zool.*). See **postcleithrum.**

postcleithrum, —klīth'rum (*Zool.*). A bone of the pectoral girdle in Fish, situated behind the cleithrum. Also called POSTCLAVICLE, POSTCLAVICULA.

poster (*Print.*). A large sign printed on paper, for advertisement or propaganda purposes; generally in colour and pictorial in nature. Posters are usually printed by lithography, offset or direct, very large ones being executed in convenient sections.

poster stick (*Typog.*). A long wooden composing stick adapted for setting up the large letters, usually wooden, used in type-set poster work.

posterior (*Bot.*). (1) Inserted on the back of another organ.—(2) The part of the flower nearest to the axis.—(3) The rear.—(*Zool.*) In a bilaterally symmetrical animal, further away from the head region; behind. Cf. *anterior.*

postern (*Build.*). A private door or gate, generally at the back or side of a building.

postfertilisation stages (*Bot.*). The developmental processes which go on between the union of the gametic nuclei in the embryo sac and the maturity of the seed.

post-floral movement (*Bot.*). A change in position of the flower stalk or inflorescence stalk after fertilisation has occurred, bringing the young fruits into a more favourable position for development, or placing the seeds in good conditions for germination.

postfrontal (*Zool.*). In some Vertebrates, a paired lateral membrane bone of the skull.

postganglion'ic fibre (*Zool.*). An *excitor* (q.v.) neurone.

posthet'erokine'sis (*Cyt.*). A form of reduction division in which the sex-chromosome passes undivided to one pole in the second spermatocyte division.

posthitis, pos-thī'tis (*Med.*). Inflammation of the prepuce.

pos'tical (*Bot.*). Relating to or belonging to the back or lower part of a leaf or stem.

pos'ticous (*Bot.*). Outward or behind.—(*Zool.*) Extrorse.

postmeiot'ic division (*Cyt.*). The first nuclear division after meiosis has been completed.

postmin'imus (*Zool.*). A rudimentary extra digit of some Vertebrates.

postno'tum (*Zool.*). In the wing-bearing segments of adult Insects, a narrow sclerite behind the notum arising in the intersegmental membrane.

postorbi'tal (*Zool.*). In some Vertebrates, a paired lateral membrane bone of the orbital region of the skull.

postpari'etal (*Zool.*). In some Vertebrates, a paired membrane bone of the skull, lying between the parietal and the interparietal.

post-partum (*Med.*). Occurring after childbirth; e.g. *post-partum* haemorrhage.

postpata'gium (*Zool.*). In Birds, a cutaneous expansion between the upper arm and the trunk.—*adj.* **postpatagial.**

postreduction (*Cyt.*). Disjunction in the homotype division; postheterokinesis.

post-scoring (*Cinema.*). In motion-picture production, the recording of sound, such as a musical accompaniment or special noise effects, after the cinematograph pictures have been made.

postscutel'lum (*Zool.*). See **postnotum.**

post-synchronisation (*Cinema.*). The addition of a sound-track to a photographed motion-picture, the latter generally being projected in front of the conductor of the musicians whose sounds are being recorded.

Post-Tertiary (*Geol.*). The name assigned to geological events which took place after the close of the Tertiary era; i.e. during Pleistocene and Recent times.

post-tremat'ic (*Zool.*). Posterior to an aperture; as, in *Selachii*, that branch of the ninth cranial nerve which passes posterior to the first gill-cleft.

postventit'ious (*Bot., Zool.*). Delayed in development.

postzy'gapoph'ysis (*Zool.*). A facet or process on the posterior face of the neurapophysis of a vertebra, for articulation with the vertebra next behind. Cf. *prezygapophysis.*

pot annealing (*Met.*). See **close annealing.**

pot furnaces (*Glass*). Furnaces in which are set a number of *pots*. They may be: (*a*) direct-fired from below, as with the Frisbie feed; (*b*) gas-fired from below through a central opening in the circular siege, using the recuperative principle; (*c*) fired through ports in the siege or in the walls, the waste gases escaping through similar openings. In the last-named process, which holds generally for non-circular furnaces, the regenerative principle may be employed.

pot still (*Chem.*). A still consisting of a boiling vessel with condenser attached. The use of a fractionating column is optional. Pot stills are only suitable for batch distillation.

pot'sherds (*Glass*). The remains of old glass-melting pots which are ground and added to the new clay used in the making of new pots.

potstone (*Min.*). A massive variety of *talc* (q.v.), more or less impure.

po'table. Suitable for drinking purposes.

pot'amoplank'ton (*Ecol.*). The plankton of rivers and streams.

pot'amous (*Ecol.*). Living in rivers and streams.

potash alum (*Chem.*). See **alums.**

potash, caustic (*Chem.*). See **caustic potash.**

potash feldspar (*Min.*). Silicate of aluminium and potassium, $KAlSi_3O_8$, occurring in two distinct crystalline forms—*orthoclase* (monoclinic) and *microcline* (triclinic). Both are widely distributed in acid and intermediate rocks, especially in granites and syenites and the fine-grained equivalents. See **feldspar, glassy feldspar, sanidine.**

potash mica (*Min.*). See **muscovite, sericite.**

potash-syenite (*Geol.*). A syenitic rock characterised by a large excess of potash-feldspar or feldspathoid over soda-feldspar.

potas'sium (*Chem.*). Symbol, K. At. wt. 39·096, at. no. 19. A very reactive alkali metal, m.p. 62·5°, b.p. 762° C. In the form of the element it has little practical use, although its salts are used extensively. In combination with other elements it is found widely in nature.

potassium alum (*Min.*). A hydrous sulphate of aluminium and potassium, crystallising in the cubic system. It is found in connexion with volcanoes and also as a result of the action of ascending acid waters.

potassium amalgams (*Chem.*). Potassium appears to form a number of compounds or amalgams with mercury, frequently with the development of heat.

potassium antimonyl tartrate (*Chem.*). See **tartar emetic.**

potassium bicarbonate (*Chem.*). $KHCO_3$.

potassium bromide (*Chem.*). KBr. Used in medicine and photography.

potassium carbonate (*Chem.*). K_2CO_3. Solution alkaline. Gives off carbon dioxide when treated with an acid. Anhydrous.

potassium chlorate (*Chem.*). $KClO_3$. Detonates with heat; used in the manufacture of matches, fireworks, and explosives, and in the laboratory as a source of oxygen.

potassium chloride (*Chem.*). KCl. Occurs extensively in nature With sodium chloride, it is extracted on a commercial scale from the waters of the Dead Sea.

potassium chloroplatinate (*Chem.*). K_2PtCl_6. Results from the reaction of chloroplatinic acid and potassium chloride.

potassium cyanide (*Chem.*). KCN. In the fused condition is a powerful reducing agent. Used in chemical analysis and in metallurgy.

potassium dichromate (*Chem*). $K_2Cr_2O_7$. Used in analytical chemistry. Mixed with sulphuric acid it is used as a cleanser of laboratory vessels, particularly after contamination with organic matter.

potassium ferricyanide (*Chem.*). $K_3Fe(CN)_6$. Used in chemical analysis. Gives characteristic colour reactions.

potassium halides (*Chem.*). Compounds of potassium with the halogens—potassium chloride, bromide, iodide.

potassium hydride (*Chem.*). KH. Formed when potassium is heated in hydrogen.

potassium hydrogen fluoride (*Chem.*). KHF_2. A double salt. Formed when potassium fluoride is dissolved in hydrofluoric acid and the solution evaporated.

potassium iodate (*Chem.*). KIO_3. Potassium salt of iodic acid.

potassium iodide (*Chem.*). KI. Used in chemical analysis.

potassium monoxide (*Chem.*). K_2O. Combines readily with water, with evolution of heat, to form the hydroxide.

potassium nitrate (*Chem.*). KNO_3. Salt of potassium and nitric acid. Strong oxidising agent. Known also as NITRE, SALTPETRE.

potassium oxalate (*Chem.*). The normal salt, $K_2C_2O_4 \cdot H_2O$, is soluble in water. The acid salt, KHC_2O_4, is less soluble and occurs in many plants. A compound of these two, potassium quadroxalate, $K_3HC_4O_8 \cdot 2H_2O$, known as *salts of sorrel*, is used for removing ink-stains and iron-moulds.

potassium permanganate (*Chem.*). $KMnO_4$. Strong oxidising agent. Used in analytical chemistry and as a disinfectant.

potassium titanate (*Chem.*). K_2TiO_3. Formed by the fusion of potassium hydroxide and titanium dioxide.

potato-stone (*Geol.*). An old term for rounded secretions in igneous rocks (usually called *geodes*), often partly filled with well-crystallised minerals.

potcher (*Paper*). A mixing or washing machine used for circulating the fluid pulp without modifying it in any mechanical way.

potence (*Horol.*). An inverted cock; a bracket for supporting the lower pivot.

potential (*Zool.*). Latent.

potential (*Elec.*). When a point is said to be 'at a certain potential,' the meaning is that there is a potential difference of that amount between the point and earth.

potential attenuator (*Elec. Comm.*). An attenuating potentiometer arranged with steps which correspond to known voltage attenuations, as contrasted with power attenuations in normal attenuators.

potential difference (*Elec.*). A difference in the electrical states existing at two points, which causes a current to tend to flow between them. It is measured by the work done in transferring a unit charge of electricity from one point to the other.

potential divider (*Elec. Eng.*). See **voltage divider.**

potential energy (*Phys.*). Energy possessed by a body in virtue of its position. A body of mass *m* at a height *h* above the ground possesses potential energy *mgh*, since this is the amount of work it would do in falling to the ground. A body in a state of tension or compression (e.g. a coiled spring) also possesses potential energy. See **energy.**

potential fuse (*Elec. Eng.*). A fuse used to protect the voltage circuit of a measuring instrument or similar device.

potential galvanometer (*Elec. Eng.*). A galvanometer having a resistance sufficiently high to enable it to be used as a voltmeter.

potential gradient (*Elec. Eng.*). The potential difference per unit length along a conductor or through a dielectric. It is equal to the slope of the curve relating potential and distance.

potential-indicator (*Elec. Eng.*). An instrument serving to show whether a conductor is alive. Also called a CHARGE-INDICATOR.

potential mediator (*Chem.*). A substance which is added to an oxidation-reduction system in order to accelerate the establishment of a definite potential.

potential temperature (*Heat*). The temperature which a specimen of air would have if it were brought to standard pressure adiabatically. The potential temperature is given by the expression:

$$\theta = T\left(\frac{P_0}{P}\right)^{\frac{\gamma-1}{\gamma}}$$

where T is the absolute temperature and P the pressure of the air, P_0 is the standard pressure, and γ is the ratio of the specific heats (=1·40 for air).

potential transformer (*Elec. Eng.*). See **voltage transformer.**

potentiom'eter (*Elec. Eng.*). An instrument for the accurate measurement of potential differences. The potential difference to be measured is balanced against that produced by a current passing through a resistance.

potentiometer-braking (*Elec. Eng.*). A braking method used for series motors; the series field and a rheostat are connected in series across the supply, and the armature is connected across the field and a variable proportion of the rheostat.

potentiometer-braking controller (*Elec. Eng.*). A controller making the necessary connexions for potentiometer-braking of a series motor.

potentiometer-type field rheostat (*Elec. Eng.*). A field rheostat which is connected across the supply, the field winding being connected between one pole of the supply and a variable tapping on the rheostat. See **reversible—.**

potentiomet'ric analysis (*Chem.*). See **electrometric titration.**

potette' (*Glass*). A hood shaped like a pot, but with no bottom, which is placed in a tank furnace so that it reaches below the glass level. It protects the man gathering glass on his pipe or iron from furnace gases; also, the glass here is somewhat cooler than that in the main part of the furnace, where melting is taking place.

Potier construction, pō-tyā (*Elec. Eng.*). A graphical construction for determining the reactance, armature reaction, and regulation of a synchronous generator from the open-circuit, short-circuit, and zero-power factor characteristics.

Potier reactance (*Elec. Eng.*). The reactance of a synchronous machine as determined by the Potier construction.

Poto'mac Beds (*Geol.*). Strata occurring in the Cretaceous trough east of the Appalachians, containing fossil plants and reptilian remains; equivalent to the English Wealden rocks.

potom'eter (*Bot.*). An instrument for measuring the rate at which a plant takes in water.

Potsdam Sandstone (*Geol.*). The basal member of the Croixian Series, consisting of sand, derived from the Pre-Cambrian, redeposited by the waters of the Upper Cambrian seas in the interior of the U.S.A. and in Canada.

pott (*Paper*). A size of paper, 12½ × 15 in.

Pott's disease (*Med.*). Spinal caries. Tuberculous infection of the spinal column.

Pott's fracture (*Surg.*). Fracture-dislocation of the ankle-joint, the lower parts of the tibia and of the fibula being broken.

potters' clay. See **ball clay.**

potter's wheel (*Pot.*). A rotating circular table, mounted on a vertical pillar, on which hollow-ware is made by the thrower.

pottery. (1) A branch of the ceramics industry.—(2) Articles of burnt clay, other than porcelain.

Pottsville Series (*Geol.*). A thick formation of sandstone and quartz-conglomerate, of torrential origin and containing coal-seams, which occurs at the base of the Pennsylvanian in the Appalachian region and in Virginia. Locally reaches a thickness of 15,000 ft. See also **Kanawha Series.**

pouce (*Linen*). The name applied in the linen trade to particles of cortex formed in roughing the flax.

pouch (*Zool.*). Any sac-like or pouch-like structure; as the abdominal *brood-pouch* of marsupial Mammals.

Poulsen arc (*Radio*). An arc discharge maintained between electrodes of carbon and water-cooled copper enclosed in an atmosphere of hydrogen, and situated in a powerful magnetic field. Used for the generation of continuous waves.

pound (*Civ. Eng., Mining*). See **tamp.**

pound (*Hyd. Eng.*). See **pond.**

pound. The unit of mass in the British and American system of units. Defined as the mass of the *imperial standard pound*, a platinum cylinder kept at the Board of Trade Standards Office. 1 lb. = 453·592 gm. Abbrev. **lb.**

pound-calorie (*Eng.*). An engineering heat unit, often now called *Centigrade heat unit* (C.H.U.). Defined as 1/100 part of the heat required to raise the temperature of 1 lb. of water from 0° C. to 100° C. (= approx. 1·8 B.Th.U.). Abbrev. **lb.-cal.**

poundal (*Mech.*). The unit of force in the foot-pound-second system of units. It is that force which will produce an acceleration of 1 foot per sec. per sec. in a mass of 1 lb. on which it acts. 32·2 poundals = 1 pound-weight.

pous'sieroid (*Cyt.*). Said of a stage of meiotic division, prior to prophase, in which the chromatin is distributed as dust.

powder-down feather (*Zool.*). A down-feather the end of which readily breaks off, forming a fine dust.

powder method (*Min.*). A method of X-ray analysis of minerals in which powder is used instead of a single crystal. It is a useful method for any type of crystalline substance, though the results are difficult to interpret.

powder of Algaroth (*Chem.*). An old name for antimony oxychloride when used in medicine.

powder process (*Photog.*). A printing process which depends on the differential hardening of sticky material on exposure to light; an image can be produced by subsequent dusting with powdered pigment, which adheres in proportion to non-exposure. See **dusting-on process.**

Powell-Wood process (*Build.*). A timber-preserving process involving impregnation of the timber with a saccharine compound.

power (*Mech.*). Rate of doing work. The foot-pound-second unit of power is the *horse-power*, which is a rate of working equal to 550 ft.-lb. per second. The electrical power unit, the *watt*, is equal to 10^7 c.g.s. units, that is 10^7 ergs per sec. or 1 joule per sec. 1 horse-power is equivalent to 746 watts.

power amplifier, power unit (*Elec. Comm.*). The thermionic stage designed to deliver the output power of an amplifier. It may be separate from other parts of the same amplifier, and may contain its own power-supply unit. Designed to give the required power output with a specified degree of non-linear distortion, gain not being considered, which may in some cases be negative as far as voltage is concerned.

power circuit (*Elec. Eng.*). That portion of the wiring of an electrical installation which is used to supply apparatus other than lighting.

power component (*Elec. Eng.*). See **active component.**

power dive (*Aero.*). See **dive (terminal nose).**

power drag line (*Eng.*). An excavator comprising a large scraper pan or bucket which is dragged through the material towards the machine and below its level.

power factor (*Acous.*). See **acoustic power factor.**

power factor (*Elec. Eng.*). The ratio of the total power (in watts) flowing in an electric circuit to the total equivalent volt-amperes flowing in that circuit. In single- and balanced three-phase systems it is equal to cos ϕ, where ϕ is the phase angle between the voltage and current in a single-phase circuit, or between the phase voltage and phase current in a balanced three-phase circuit.—(*Diel.*) In normal dielectrics it is exactly equal to $G/\sqrt{G^2+\omega^2C^2}$ (for G and C see **capacitance** and **conductance**), and thus nearly equal to $G/\omega C$.

power-factor meter (or **indicator**) (*Elec. Eng.*). An instrument for measuring the phase angle between the voltage and current in an electric circuit; it is usually calibrated in power factor cos ϕ. Also called PHASE METER INDICATOR.

power gas (*Fuels*). See **producer gas.**

power hammer (*Eng.*). Any type of hammer which is operated, either continuously or intermittently, by power; e.g. by directly coupling the hammer to a steam or pneumatic cylinder.

power level (*Elec. Comm.*). The same as *transmission level.* See also Supplement.

power level diagram (*Elec. Comm.*). A diagram indicating how the maximum power levels vary at different points of a transmission channel, and thereby indicating how various losses are neutralised by appropriate gains.

power line (*Elec. Eng.*). See **bus-line.**

power loading (*Aero.*). The maximum flying weight of an aeroplane divided by the rated horse-power of the engines.

power navvy (*Eng.*). See **power shovel.**

power of lens (*Photog.*). The relative focusing power of a lens, measured in dioptres, which is the reciprocal of the focal-length in metres.

power pack (*Elec. Comm.*). The power-supply unit for an amplifier, e.g. in a radio or television receiver, wherein the requisite steady voltages are obtained by rectifiers from a.c. mains. The word is sometimes held to include the last or power stage of an amplifier when this is integral with the power supply proper.

power ringing (*Teleph.*). The generation of ringing current by a machine (as in an exchange), as contrasted with the hand-operated magneto generator.

power shovel (or **navvy**) (*Eng.*). An excavator consisting of a jib carrying a radial arm to the end of which a large bucket or scoop is attached. The bucket makes a radial cut, digging above the level of the excavator. Used for making cuttings for roads and railways.

power unit (*Elec. Comm.*). See **power amplifier.**

power valve (*Radio*). See **output valve.**

pox (*Med.*) *Pl.* of *pock* (q.v.); hence popular names for diseases characterised by pustules, *chickenpox*, *smallpox*: specifically (vulgar), syphilis.

pox (*Vet.*). Variola. A febrile infectious disease, characterised by an eruption of papules and vesicles on the skin and mucous membranes, due to infection by a filterable virus.

Poynting's theorem (*Radio*). A theorem which shows that the rate of flow of energy, in ergs per second per square centimetre, through a surface is equal to the Poynting's vector formed by the components of field lying in the plane of the surface. Used for calculating the power radiated from an antenna.

Poynting's vector (*Radio*). The vector formed by the product of the mutually perpendicular components of the electric and magnetic fields at any point, multiplied by $C/4\pi$, where C is the velocity of light in centimetres per second.

pozzuolan'a, pozzolan'a, pot'swo—, pot'so— (*Civ. Eng.*, *Geol.*). A volcanic dust, first discovered at Pozzuoli in Italy, which has the effect, when mixed with mortar, of enabling the latter to harden anywhere—in air or under water.*

P.P.C. (*Build.*). Abbrev. for *plain plaster cornice.*

p.p.m. (*Chem.*). An abbrev. for *parts per million.*

PPQ bar (*Zool.*). See **pterygo-palato-quadrate bar.**

Pr (*Chem.*). (1) The symbol for *praseodymium.*—(2) The propyl radical C_3H_7—.

prae-. Prefix. See **pre-.**

For	**prae-abdomen**	see	**pre-abdomen**
	praemaxilla		**premaxilla**
	praemorse		**premorse**
	praepubic		**prepubic**
	praepuce, praeputium		**prepuce**
	praetarsus		**pretarsus.**

praeco'ces (*Zool.*). Birds which when hatched have a complete covering of down and are able at once to follow the mother on land or into water to seek their own food. Cf. *altrices.*

praetar'sus (*Zool.*). A terminal outgrowth of the tarsus in some Insects.

prase (*Min.*). A translucent and dull leek-green variety of *chalcedony* (q.v.).

pra'seodym'ium (*Chem.*). Symbol, Pr. A metallic element, a member of the rare earth group. At. no. 59, at. wt. 140·9, sp. gr. 6·475, m.p. 940° C. It closely resembles neodymium and occurs in the same minerals.

Pratt truss (*Struct.*). See **Whipple-Murphy truss.**

pre-, prae- (Latin *prae*, before). A prefix used in the construction of compound terms; e.g. *prehepatic*, anterior to the liver. See also under **prae-.**

pre-abdomen (*Zool.*). In Scorpions, the broad anterior part of the abdomen. Cf. *post-abdomen.*

pre-amplifier (*Acous.*). An amplifier, of one or two thermionic stages, immediately following the output of a high-quality microphone, and sometimes integral with it. The output power-level of high-quality microphones is too low to be transmitted over a line, or to be mixed with other channels, induced noise or clicks being liable to occur. See **P.E.C. amplifier.**

Pre-Cambrian (*Geol.*). The era of geological time which preceded the Cambrian age, being the oldest yet defined. Also ARCHAEAN, EOZOIC.

pre-cast (*Civ. Eng.*). Said of concrete blocks, etc. which are cast separately before they are fixed in position.

pre-cast stone (*Civ. Eng.*). *Reconstructed stone* (q.v.).

pre-combustion chamber (or **antechamber**) (*I.C. Engs.*). A small chamber formed in the cylinder-head of some compression-ignition engines into which the oil fuel is injected at the end of the compression stroke. The high pressure caused by the partial combustion of the fuel expels the rich mixture through a neck or perforated throat plate into the engine cylinder, where combustion is completed. Derived from the original oil engine of Akroyd Stuart (1892).

pre-conscious (*Psycho-an.*). (1) That part of the mind containing mental processes of which the individual is not actually aware at a given moment, but which can be brought into consciousness by mental effort.—(2) That part of the mind which is in contact with reality and obeys the reality principle.

pre-distorting network (*Elec. Comm.*). A network which anticipates subsequent frequency distortion in the transmission path, as along a line, so that the line distortion has not entirely to be compensated at the receiving end.

pre-distortion (*Elec. Comm.*). The principle of altering the response of a circuit to compensate, fully or partially, anticipated distortion; the aim is to make transmission as high as practicable above the anticipated noise-level, e.g. on a programme circuit.

pre-echo (*Acous.*). A defect which occurs in gramophone-record manufacture because of surface-flow of matrices during pressing, this causing one track to modulate slightly an adjacent track. It may arise also from the flow of the surface of the original wax in the act of cutting.

pre-ignition (*I.C. Engs.*). The ignition of the charge in a petrol-engine cylinder before normal ignition by the spark; caused by overheated plug-points, the presence of incandescent carbon, etc.

pre-scoring (*Cinema.*). In motion-picture production, the use of previously recorded sound, such as a musical sequence, for cueing the action of dancers or singers.

pre-selection (*Radio*). The use of selective circuits in the early stages of a super-heterodyne receiver, prior to the frequency changer, to reduce second channel interference and cross-modulation.

pre-selector gear box (*Automobiles*). A gear box, generally epicyclic, in which the gear ratio is selected, before it is actually required, by a small lever, being afterwards engaged by pressure on a pedal.

pre-synchronisation (*Cinema.*). The recording of a sound-track for use in cueing artists motion-pictures of whom are to be fitted to the sound-track during the process of editing.

preadaptation (*Zool.*). Change of structure preceding appropriate change of habit.

preamble (*Civ. Eng.*). The introductory clauses to a bill of quantities, embodying any necessary instructions and references to the obligations intended to be imposed by the documents on which the tender is to be based.

préavis call, prā-a-vē' (*Teleph.*). In international telephony, previous notice to the telephone service that a call is desired to a distant subscriber, who is notified.

preca'val vein (*Zool.*). The anterior vena cava conveying blood from the head and neck to the right auricle.

precession (*Cyt.*). The tendency sometimes shown by the sex-chromosomes to pass to the poles of the meiotic spindle before the autosomes.

precession of the equinoxes (*Astron.*). A phenomenon (discovered by Hipparchus in 160 B.C., but first mathematically explained by Newton as due to the equatorial bulge of the earth) characterised by the fact that the earth's axis slowly revolves in a small circle about the pole of the ecliptic in a period of 25,800 years, causing the equinoctial points to move retrograde in the ecliptic by an annual amount of 50″·26, thus altering the co-ordinates of stars in various ways.

prechor'dal (*Zool.*). Anterior to the notochord or to the spinal cord.

precipitation (*Chem.*). The formation of an insoluble solid by a reaction which takes place in solution. It is widely employed for the separation and identification of substances in chemical processes and analyses.—*n.* and *v.* **precip'itate.**

precipitation (*Meteor.*). Moisture falling on the earth's surface from clouds; it may be in the form of rain, hail, or snow.

precipitation (*Sewage*). The process of assisting the settlement of suspended matters in sewage by the addition of chemicals to the sewage before admission to the sedimentation tanks.

precipitation hardening (*Met.*). The phenomenon which results in an increase in hardness with time at atmospheric or elevated temperature. The increase is due to a change in structure associated with precipitation of a constituent from solid solution. See **ageing, temper-hardening.**

precip'itin (*Chem., Med.*). An antibody substance analogous to *agglutinin* (q.v.), its action, however, being characterised by clouding and precipitation.

precipitin'ogen (*Chem., Med.*). The substance which, introduced into the blood plasma, calls forth the specific precipitin.

precise levelling (*Surv.*). Particularly accurate levelling in which the allowable discrepancy between two determinations of the level difference between two bench marks M miles apart is very low—of the order of 0 012 $\sqrt{M}$ feet or less.

precision grinding (*Eng.*).
See **centreless grinding** **thread grinding**
form do. **grinding machine**
internal do. **surface grinding**
profile do. **machine.**

precision instrument (*Elec. Eng.*). An instrument having a high degree of accuracy, used for testing work.

precor'acoid (*Zool.*). An anterior ventral bone of the pectoral girdle in Amphibians and Reptiles, corresponding to the epicoracoid of Monotremes.

precor'dial (*Anat.*). Situated or occurring in front of the heart.

precox'a (*Zool.*). See **pleuropodite.**

predaz'zite, pencatite, brucite-marble (*Geol.*). Mixtures of brucite, calcite, periclase, and hydromagnesite, found originally at Predazzo, Italy; formed from magnesian limestone by contact-metamorphism. See separate articles at **brucite-marble** and **pencatite.**

predictor (*Armaments*). A complicated device used in anti-aircraft defence; it mechanically interprets data, such as the height, speed, and direction of aircraft, into elevation and direction for the anti-aircraft gun, and indicates the timing of the fuse or detonator, which information is transmitted automatically to the gun crew.

Preece's formula (*Elec. Eng.*). A formula stating that the fusing current of a wire is proportional to the 1·5 power of the current.

preen gland (*Zool.*). See **oil gland.**

preferential mating (*Zool.*). The theory, postulated by Darwin, that if there are two or more rival males unequally endowed, the female will exercise the prerogative of selection.

preferential motions of stars (*Astron.*). See **star streaming.**

preferred orientation (*Met.*). During slip, metal crystals change their orientation; when a sufficient amount of deformation has been performed, the random orientation of the original crystals is converted into an arrangement in which a certain direction in all the crystals is parallel to the direction of deformation.

prefloration (*Bot.*). Aestivation.

prefoliation (*Bot.*). Vernation.

pre'form (*Plastics*). A piece of moulding composition a little larger than the finished moulding and of approximately the same shape.

prefron'tal (*Zool.*). In some Vertebrates, a paired lateral membrane bone of the orbital region of the skull.

preganglion'ic fibre (*Zool.*). See **association neurone.**

pregnancy (*Med.*). Gestation. The state of being with child.

prehal'lux (*Zool.*). In *Amphibia* and *Mammalia*, a rudimentary additional digit of the hind limb.

prehal'teres (*Zool.*). See **squama.**

prehensile (*Zool.*). Adapted for grasping.

prehet'erokine'sis (*Cyt.*). A form of reduction division in which the sex-chromosome passes undivided to one pole in the first spermatocyte division. Cf. *postheterokinesis.*

prehnite, prā'nit (*Min.*). A pale-green and usually fibrous acid orthosilicate of calcium and aluminium, crystallising in the orthorhombic system. It occurs, with zeolites, in geodes in altered igneous rocks.

preischiopodite, prē'isk-i-op'ō-dit (*Zool.*). The distal one of two joints into which the basipodite of *Crustacea* is sometimes divided.

prelacte'al (*Zool.*). In Mammals, said of teeth developed prior to the formation of the milk dentition.

preliminary matter (*Typog.*). The pages of a book preceding the actual text. The order should be half-title, frontispiece or 'advertisement,' title (at the back of this number of editions, imprint, etc.), dedication, preface, contents, list of illustrations, introduction. Frequently abbrev. to PRELIMS.

Preller's leather (*Leather*). A name formerly used for *crown leather.*

premaxil'lary (*Zool.*). A paired membrane bone of the Vertebrate skull which forms the anterior part of the upper jaw: anterior to the maxilla. Also PREMAXILLA.

premeiot'ic mitosis (*Cyt.*). The nuclear division immediately preceding the organisation of nuclei which will divide by meiosis.

premo'lars (*Zool.*). In Mammals, the anterior grinding or cheek teeth, which are represented in the milk dentition.

premorse' (*Bot.*). Looking as if the end had been bitten off.

prena'sal (*Zool.*). A small bone at the tip of the nose in Pigs and a few other forms.

preoper'culum (*Zool.*). In Fish, an anterior membrane bone forming part of the gill-cover.

preorbi'tal (*Zool.*). In some Fish, a membrane bone situated in front of the orbit: anterior to the orbit.

prepared (*Lace*). Said of bobbin yarn which has been passed, in a hank, between rollers.

prepata'gium (*Zool.*). In Birds, a cutaneous expansion between the forearm and the upper arm.—*adj.* **prepatagial.**

prepayment meter (*Elec. Eng., etc.*). A meter used in connexion with electricity or gas supplies. It is designed so that the insertion of a coin or coins operates a switch or other device, and allows a certain predetermined quantity of electrical energy or gas to be used.
See **load-rate—** **step-rate—**
minimum two-part— **two-circuit—**
single-rate— **two part—**
two-part step-rate—
two-rate two-part—

prepol'lex (*Zool.*). In some Vertebrates (*Amphibia, Mammalia*), a rudimentary extra digit of the fore limb.

prepo'tency (*Bot.*). The ability of some pollen to bring about fertilisation more readily than other pollen.—(*Zool.*) The capacity of one parent to transmit more characteristics to the offspring than the other parent.—*adj.* **prepotent.**

prepu'bic (*Zool.*). Pertaining to the anterior part of the pubis: in front of the pubis; as bony processes in some Marsupials and Rodents.

prepu'bis (*Zool.*). In some Fish, an anterolateral process of the pubis.

pre'puce (*Zool.*). In Mammals, the loose flap of skin which protects the glans penis.—*adj.* **preputial.**

prepu'pa (*Zool.*). In Insects, an instar intervening between the last larval and the pupal stadia; characterised by various structural changes and by a period of quiescence.

pre'reduction (*Cyt.*). Disjunction in the heterotype division: preheterokinesis.

pres'byope (*Med.*). One suffering from presbyopia.

presbyo'pia (*Med.*). Long-sightedness and impairment of vision due to loss of accommodation of the eye in advancing years.

prescu'tum (*Zool.*) In Insects, the most anterior of three sclerites into which the notum is typically subdivided.

Presdwood (*Build.*). Trade-name for a strong building-board having water-resisting properties.

presentation (*Med.*). The relation which the long axis of the foetus bears to that of the mother; various presentations are defined in terms of the presenting part, as *shoulder presentation, breech presentation*, etc.

presentation time (*Biol.*). The shortest period during which an organism must be exposed to a stimulus in order that response may subsequently occur.

preservatives (*Foods*). Substances added to food-stuffs to inhibit decay, legislation has greatly restricted their use.

Presotim (*Build.*). Trade-name for a wood preservative.

presphe'noid (*Zool.*). A medium cartilage bone of the Vertebrate skull forming part of the floor of the brain-case in front of the basisphenoid.

press (*Eng.*). See **hydraulic press.**

press (*Print.*). (1) A hand machine used for proofing or printing small jobs. It may be of the platen type (as the Albion press), or of the cylinder type, in which the impression is made by a heavy cylinder rolled by hand.—(2) A general term for the printing stage of a job; exemplified in such phrases as 'going to press,' 'in the press.'

press-and-blow machines (*Glass*). Machines in which the *parison* (q.v.) is formed by the pressing action of a plunger forced into a mass of plastic glass dropped in a parison mould; the parison is then blown to the shape of the finished ware in another mould.

pressboard (*Diel.*). Compressed paper in thick sheets. See **Elephantide pressboard.**

press proof (*Print.*). The last proof checked over before going to press.

press rolls (*Paper*). Heavy cylinders of the paper-making machine which press out moisture from the wet web. Before the last pressing, the web is reversed in order to remove felt-marks.

presswork (*Print.*). Work done on the hand press, including proofing and the printing of small jobs.

presse-pâte (*Paper*). A machine which converts half-stuff into a web of pulp, so that the material can be handled more conveniently.

pressed amber (*Min.*). See **ambroid.**

pressed brick (*Build.*). A high-quality brick moulded under pressure, as a result of which it has sharp arrises and a smooth face, making it especially suitable for exposed surface work.

pressel-switch (*Elec. Eng.*). See **pendant switch.**

pressing (*Acous.*). A disc record formed by pressure, with or without heat; the negative of the recording on a stamper is transferred to a large number of *pressings* for distribution. See also **cold pressing, hot pressing.**

pressing (*Pot.*). A process by which bats or lumps of clay are pressed by hand or machinery into moulds.

pressing (*Textiles*). The final process in finishing woollen and worsted fabrics, the object being to consolidate fabrics and enhance their lustre. The work is done by various types of presses heated by steam or electricity.—(*Lace*) The process of compression and pressure-steaming to which brass bobbins are subjected as soon as they are wound.

pressing boards (*Print.*). Glazed boards used for removing the impression from printed sheets.

pressing machine (*Glass*). A machine in which the whole forming operation is carried out by pressing the plastic glass by a plunger forced into a die or mould. The machine may be operated by hand or it may be fully automatic.

pressor (*Zool.*). Causing a rise of arterial pressure.

Presspahn (*Elec. Eng.*). A fibrous insulating material made from wood-pulp; used, in thin sheets, for the insulation of electrical equipment; an early variety of pressboard.

pressure (*Acous.*).

See **acoustic—** **radiation—**
excess— **sound—**

pressure, atmospheric (*Phys.*). See **atmosphere (pressure of).**

pressure, barometric (*Meteor.*). The pressure of the atmosphere as read by a barometer. It is usually expressed as the barometric height, that is, so many centimetres or inches of mercury.

pressure cable (*Cables*). Ordinary 'solid' cable is put in steel pipes and a hydrostatic pressure of 180-220 lb. per sq. in. is applied by means of nitrogen. This causes a diminution of ionisation, so that a normal 33 kV cable can be used at 66 kV.

pressure capsule (*Eng.*). See **sylphon bellows.**

pressure circuit (*Elec. Eng.*). A voltage circuit.

pressure diecasting (*Met.*). A process by means of which precision castings of various alloys are made by squirting liquid metal under pressure into a metal die. See **diecasting.**

pressure drag (*Aero.*). See **form drag.**

pressure forging (*Eng.*). See **drop forging.**

pressure-gauge. A flattened tube bent to a curve, which tends to straighten under internal pressure, thus indicating, by the movement of an indicator over a circular scale, the fluid pressure applied to it. Also called BOURDON GAUGE.

pressure governor (*Gas Fittings*). A gas governor which operates so as to supply gas at a constant pressure.

pressure-gradient microphone (*Acous.*). A microphone which offers so little obstruction to the passage of a sound-wave that the diaphragm, in practice a ribbon, is acted on by the difference in the excess pressures on the two sides, and therefore tends to move with the particle velocity in the wave.

pressure head (*Aero.*). A combination of a static and a Pitot tube which is connected to opposite sides of a differential pressure-gauge, for giving a visual reading corresponding to the speed of an air current.

pressure head (*Hyd.*). The energy possessed per unit weight of a fluid, due to its pressure. If at a given point the pressure is p lb. per square foot, the pressure head at this point is $\frac{p}{w}$, w being the weight per cubic foot of the fluid.

pressure microphone (*Acous.*). Any type of microphone which is operated by the excess pressure in a sound-wave, as distinct from a *pressure-gradient microphone*.

pressure pad (*Photog.*). The device which keeps the film in a gate so that it remains exactly in focus.

pressure tube, static (*Aero.*). A tube with openings cut laterally, so that when the air is moving past it the pressure inside shall be static and equal to the pressure of the air outside.

prester'num (*Zool.*). In *Anura*, an anterior element of the sternum, of paired origin and doubtful homologies: the reduced sternum of whalebone whales: the anterior part of the sternum.

presystol'ic (*Med.*). Pertaining to, or occurring just before, the beginning of the systole of the heart; e.g. *presystolic* murmur.

pretar'sus (*Zool.*). In some Insects, a terminal outgrowth of the tarsus.

pretremat'ic (*Zool.*). Anterior to an aperture, as (in *Selachii*) that branch of the ninth cranial nerve which passes anterior to the first gill-cleft.

pre'ventit'ious bud (*Bot.*). A dormant bud which may, if conditions allow, produce an epicormic branch.

preventive choke-coil (*Elec. Eng.*) A choking coil connected between the two halves of the moving-contact used in varying the tapping of a transformer or battery; its purpose is to reduce the circulating current which flows owing to the short-circuiting of the turns or cells between adjacent tappings by the moving-contact as it travels from one fixed-contact to the next.

preventive resistance (*Elec. Eng.*). A resistance connected between the two halves of the moving-contact used in varying the tapping of a transformer or battery; its purpose is to reduce the circulating current which flows owing to the short-circuiting of the turns or cells between adjacent tappings as the moving-contact travels from one fixed-contact to the next.

prever'nal (*Bot.*). Flowering early in the year.

prevernal aspect (*Bot.*). The condition of the vegetation of a community very early in the year.

prevo'mer (*Zool.*). In Monotremes, a median dumb-bell-shaped membrane bone of uncertain homologies lying in the floor of the nasal cavities. Also called DUMB-BELL BONE, PARADOXICAL BONE.

prezy'gapoph'ysis (*Zool.*). A facet or process on the anterior face of the neurapophysis of a vertebra, for articulation with the vertebra next in front. Cf. *postzygapophysis*.

pri'apism (*Med.*). Abnormally persistent erection of the penis unaccompanied by sexual desire; due either to a lesion of the penis or to nervous disorder.

Priap'uloi'dea (*Zool.*). A phylum of non-metameric worm-like animals having a very primitive nervous system not separate from the ectoderm; the mouth is anterior and terminal, the anus posterior and terminal; the sexes are separate; the relationships of the group are obscure; marine forms, living in sand and mud.

Price's guard-wire (*Elec. Eng.*). A conductor placed around the edge of a piece of insulating material under test; it is arranged to be at the same potential as the surface of the material in order to prevent leakage current from the surface to earth.

prick (*Vet.*). An injury of the sensitive portion of the horse's foot by misdirected nails during shoeing.

prick post (*Carp.*). An intermediate post in a framework.

prick punch (*Horol.*). A punch used to locate the centre of holes in a plate prior to drilling.

pricking-up (*Plast.*). The operation of scoring the surface of the first coat to provide a key for the next: the whole operation of laying and scoring such a coat.

prickle (*Bot.*). A hard epidermal appendage resembling a thorn but not containing woody tissue.

prickle cells (*Zool.*). In stratified epithelium, the cells of the deeper layers, which are connected to one another by inter-cellular fibrils giving them a prickly appearance.

prickly heat (*Med.*). See **miliaria.**

pri'ma (*Print.*). The first word of the page (or sheet) next to the one being read. [Now rare.]

primary (*Bot., Zool.*). Original, first-formed; as *primary meristem, primary body-cavity*: principal, most important; as *primary feathers, primary axis.*

primary (*Chem.*). A substance which is obtained directly, by extraction and purification, from natural raw material; e.g. benzene, phenol, anthracene are coal-tar *primaries.* Cf. *intermediate.*

primary (*Elec. Eng.*). See **primary winding.**

Primary (*Geol.*). An obsolete synonym for *Palaeozoic.*

primaries (*Zool.*). In Birds, the remiges attached to the manus.

primary acids (*Chem.*). Acids in which the carboxyl group is attached to the end carbon atom of a chain, i.e. to a $-CH_3$ group.

primary alcohols (*Chem.*). Alcohols containing the group $-CH_2{\cdot}OH$. On oxidation they form aldehydes and then acids containing the same number of carbon atoms as the alcohol.

primary amines (*Chem.*). Amines containing the amino group $-NH_2$. Primary amines are converted into the corresponding alcohol by the action of nitrous acid, nitrogen being eliminated.

primary axis (*Bot.*). (1) The main shoot of a plant.—(2) The main stalk of an inflorescence.

primary body (*Bot.*). That part of the plant body formed directly from cells cut off from the apical meristems.

primary body cavity (*Zool.*). The blastocoele or segmentation cavity formed during cleavage, or that part of it which is not subsequently obliterated by mesenchyme.

primary bow (*Meteor.*). See **rainbow.**

primary cell (*Elec.*). A voltaic cell in which the chemical energy of the constituents is changed to electrical energy when an electric circuit is connected to its terminals so that current is permitted to flow. A primary cell cannot be recharged electrically because of the irreversibility of the chemical reaction occurring therein. Cf. *secondary cell.*

primary cell wall (*Bot.*). The cell wall that surrounds the protoplast until that is approximately mature. It is thin, usually non-stratified, contains much pectin material and not so much cellulose, and later persists as the middle lamella.

primary coil (*Elec. Eng.*). A coil, forming part of an electrical machine or piece of apparatus, in which flows a current setting up the magnetic flux necessary for the operation of the machine or apparatus.

primary colours (*Paint.*). These are, for pigments, red, yellow, and blue.—(*Photog.*) The red, green, and blue which are selected as forming the basis, by addition by lumination (not pigments), of all colours. They are suggested by the spectral response of the eye, and form the basis of perfected colour photography.

primary constant (*Elec. Comm.*). The inductance, resistance, capacitance, or leakance of unit-length (one mile) of a uniform transmission line.

primary constriction (*Cyt.*). The place where a chromosome is attached to the spindle.

primary current (*Elec. Eng.*). The current in the primary winding of a transformer or induction motor.

primary current (*Thermionics*). The current carried by primary electrons.

primary electrons (*Thermionics*). A term used to distinguish the electrons incident on a body from the secondary electrons emitted therefrom by the bombardment.

primary flexure (*Zool.*). The flexure of the mid-brain by which, in Vertebrates, the fore-brain and its derivatives are bent at a right-angle to the axis of the rest of the brain.

primary gneissic banding (*Geol.*). This is exhibited by certain igneous rocks of heterogeneous composition produced by the admixture of two magmas only partly miscible; or, in other cases, by magma intimately admixed with country-rock into which it has been injected, along bedding or foliation planes.

primary increase (*Bot.*). Increase in the size of a stem or root not brought about by the addition of cells from a cambium.

primary lamella (*Bot.*). The first-formed layer of the wall of a spore.

primary luminous standard (*Illum.*). A standard of luminous intensity which is reproducible from a given specification.

primary medullary ray (*Bot.*). A vascular ray passing radially from the pith to the cortex.

primary meristem (*Bot.*). A meristem derived immediately from a promeristem and giving rise to cells which build up the primary body of the plant.

primary nitro-compounds (*Chem.*). Nitro-compounds containing the group $-CH_2{\cdot}NO_2$.

primary node (*Bot.*). The node at which the cotyledons are inserted.

primary phloem (*Bot.*). The phloem formed from a procambial strand and present in a primary vascular bundle. It consists of protophloem and metaphloem.

primary sere (*Bot.*). A plant succession beginning on land which has never borne vegetation in recent geological time.

primary solid solution (*Met.*). A constituent of alloys that is formed when atoms of an element *B* are incorporated in the crystals of a metal *A*. In most cases solution involves the substitution of *B* atoms for some *A* atoms in the crystal structure of *A*, but in a few instances the *B* atoms are situated in the interstices between the *A* atoms.

primary standard. A standard agreed upon as representing some unit (e g. length, mass, e.m.f.) and carefully preserved at a national laboratory. Cf. *secondary standard.*

primary succession (*Bot.*). A succession starting from bare soil.

primary thickening (*Bot.*). The first layers of wall material to be laid down on the very young cell wall, often rich in pectin materials.

primary tissue (*Bot.*). Tissue formed from cells derived from primary meristems.

primary trisomic (*Bot.*). A plant which has the ordinary diploid chromosome complement, together with one extra chromosome.

primary valve (*Eng.*). A valve fitted on the suction side of a pump to assist in priming.

primary vascular bundle (*Bot.*). A vascular bundle formed from a procambial strand.

primary voltage (*Elec. Eng.*). The voltage applied to the primary winding of a transformer or induction motor.

primary winding (*Elec. Eng.*). (1) The winding of a transformer which is on the input side.—(2) The input winding, usually on the stator, of an induction motor. Sometimes called **PRIMARY**.

primary wood (or **xylem**) (*Bot.*). The xylem formed from a procambial strand and present in a primary vascular bundle. It consists of protoxylem and metaxylem.

Primates, prī-mā̆'tēz (*Zool.*). The highest order of *Mammalia*; plantigrade, usually pentadactyl, forms with complete dentition, including two pairs of incisors in each jaw; the orbit is closed behind by the union of the frontal and jugal; collarbones are always present; the brain is exceptionally highly developed. Lemurs, Monkeys, Apes, and Man.

prime cost (*Civ. Eng.*). The net sum entered in a bill of quantities by the engineer as the sum provided to cover the cost of, or to be paid by the contractor to merchants or others for, specific articles or materials to be supplied or work to be done, after deducting all trade discounts and any discount for cash in excess of 2½%.

prime mover (*Eng.*). An engine or other device by which a natural source of energy is converted into mechanical power.

See **gas engine**
internal-combustion engine
oil engines
petrol engine
steam engine
steam turbine
water turbine.

prime vertical (*Astron.*). The great circle passing through the zenith and cutting the observer's horizon in the east and west points.

primer (*Ammunition*). Used for igniting the propellant in a cartridge case. It is usually filled with gunpowder and fired by means of a cap. See **detonator.**

pri'migrav'ida (*Med.*). A woman who is pregnant for the first time.

pri'mine (*Bot.*). The outer integument of an ovule.

priming (*Eng.*). (1) The delivery by a boiler of steam containing water in suspension, due to violent ebullition or frothing.—(2) The operation of filling a pump intake with fluid to expel the air.—(3) The operation of injecting petrol into an engine cylinder to assist starting.

priming (*Paint.*). The first coat of paint, consisting usually of a mixture of red-lead and white-lead ground in linseed oil; applied to woodwork to fill the pores of the wood and form a hard, opaque surface.

priming illumination (*Photo-electric Cells*). A steady illumination applied to a photo-cell in order to bring it to the most sensitive condition.

primip'ara (*Med.*). A woman who gives, or has given, birth to a child for the first time.

primitive (*Bot.*, *Zool.*). Original, first-formed, of early origin; as the *primitive streak.*

primitive groove (*Zool.*). A shallow groove running along the median line of the primitive streak.

primitive knot (*Zool.*). A small elevation in front of the primitive pit representing the dorsal lip of the blastopore.

primitive pit (*Zool.*). A small depression at the front end of the primitive streak.

primitive streak (*Zool.*). In developing Birds and Reptiles, a thickening of the upper layer of the blastoderm along the axis of the future embryo; represents the fused lateral lips of the blastopore.

primor'dial (*Bot.*, *Zool.*). Primitive.

primordial cell (*Bot.*). A cell which has not yet formed a cell wall.

primordial germ cells (*Zool.*). In the early embryo, cells which will later give rise to the gonads.

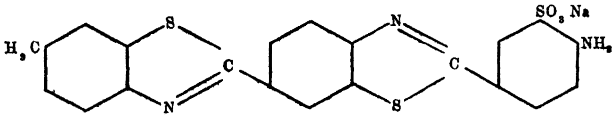
primordial leaf (*Bot.*). (1) The next leaf formed after the cotyledons.—(2) The very small protuberance from which a leaf starts its development.

primordial meristem (*Bot.*). See **promeristem.**

primordial utricle (*Bot.*). In a mature cell, the peripheral layer of protoplasm, and the vacuole which it encloses.

primor'dium (*Bot., Zool.*). The earliest recognisable rudiment of an organ or structure in development; also called ANLAGE.—*adj.* **primordial.**

prim'uline (*Chem.*). A thiazole colouring-matter, obtained by heating sulphur with *p*-toluidine, which dyes cotton directly in primrose-yellow shades. Its formula is:



On being diazotised and coupled with β-naphthol, it yields primuline red.

primuline process (*Photog.*), See **diazotype.**

princess (*Build.*). A slate size, 24 × 14 in.

princess posts (*Carp.*). Additional vertical ties on each side of the queen-posts, introduced to give extra support to the tie-beam in roofs of greater span than about 45 ft.

principal (*Build., Civ. Eng.*). See **roof truss.**

principal axis of a lens (*Light*). A straight line passing through the centres of curvature of the faces of a lens.

principal focus (*Light*). See **focus.**

principal planes of a lens (*Light*). Planes drawn through the principal points, at right-angles to the principal axis.

principal points of a lens (*Light*). Two points on the principal axis of a lens or system of lenses such that, if the object distance u be measured from one of them, and the image distance v from the other, the simple lens formula $\frac{1}{f}=\frac{1}{v}-\frac{1}{u}$ may be used to give the equivalent focal-length f of the lens. See **nodal points.**

principal rafter (*Build., Civ. Eng.*). A rafter forming part of the roof truss proper and supporting the purlins.

principle of least action (*Phys.*). See **least action (principle of).**

principle of least time (*Light*). See **Fermat's principle of least time.**

principle of Le Chatelier and Braun (*Chem.*). See **Le Chatelier-Braun principle.**

principle of the equipartition of energy (*Chem.*). The total energy of a molecule in the normal state is divided up equally between its different capacities for holding energy, or degrees of freedom.

print (*Pattern-making*). See **core-prints.**

print (*Photog.*). The positive obtained by exposing a negative image—either by contact or by projection in an enlarger—on film, or paper, or glass (for preparing lantern slides), with subsequent development.

See **answer— release—**
contact— step—
duped— balancing.

printer or **Burnley printer** (*Cotton Weaving*). A plain grey cloth made in various qualities, subsequently printed and shipped to Eastern markets.

printer light (*Cinema.*). The light source in a cinematograph printer, the intensity of which is regulated by holes punched on the side of the negative film, so that each strip of negative which has been exposed on different occasions is given suitable exposures.

printer plate (*Photog.*). The support for an emulsion which is exposed, and differentially hardened with special developers, while it is being formed into a matrix for three-colour printing.

printer's ream (*Paper*). 516 sheets, the extra allowance being for spoilage and make-ready. The printer is thus enabled to deliver 500 perfect sheets of printed matter to the ream.

printing. Any process of producing copies of designs or lettering by transferring ink or pigment to paper (or other material) from a printing surface. Printing is divided into three classes according to the method of the application of the ink to the printing surface: (1) *relief*, or *letterpress*, printing surfaces have the ink-carrying parts in relief, so that rollers deposit ink on these parts only, as in printer's type; (2) *surface*, or *planographic*, printing surfaces are prepared so that parts accept the ink from the rollers and other parts reject it, though there is no difference in level; the ink parts may be greasy and the rest moist, utilising the mutual repulsion of grease and water, as in lithography; (3) *intaglio* printing surfaces have the ink-carrying portions hollowed out; the whole surface is covered with ink and then cleaned off, leaving the hollows filled with ink, which is lifted out when the paper is pressed into contact. Relief and surface methods deposit an even layer of ink; intaglio gives a layer which varies as the depth of the hollows. All classes can be adapted for use with a cylindrical printing surface which can be printed at high speed by continuous rotation against another cylinder, with the paper to be printed running between them. Flat printing surfaces are more adaptable and are generally used, but they necessitate a reciprocating motion, which limits the speed of the output.

printing (*Photog.*). The exposing of a negative image on sensitive emulsion (with subsequent development), either by hand manipulation in a frame, or in an automatic machine for cinematograph film.

See **blue— heads-and-feet—**
carbon— intermittent—
contact— optical—
continuous— phosphate—
double—

printing ink. A mixture of carbon black, or colouring matter, and mineral oil or linseed oil, etc. Drying is partly by penetration into the paper, and partly by oxidation.

printing-out paper (*Photog.*). See **P.O.P.**

printing papers. The numerous types and grades of paper used in printing. For letterpress printing, the most common are M.F. (*machine-finish*), S.C. (*supercalendered*), and featherweight papers; for newspaper and certain magazine work, *newsprint* (q.v.) is used. Commonly abbreviated to PRINTINGS.

printing telegraph (*Teleg.*). A telegraph system in which the received signals are translated and operate a printing machine, giving a readable message. See **multiplex printing.**

pri'sere (*Bot.*). A primary succession.

prism (*Crystal.*). A hollow (open) crystal form consisting of three or more faces parallel to a crystal axis.

prism (*Light, etc.*). Triangular prisms made of glass and other transparent materials are used in a number of optical instruments. Equilateral prisms are used at minimum deviation in spectroscopes for forming spectra, 90° prisms are used for totally reflecting a ray through a right-angle in binoculars, periscopes, and range-finders.

See **block— double-image—**
comparison— objective—
Cornu— angle of minimum
direct-vision— deviation.

prism drum (*Television*). A mechanical scanning device comprising a series of prisms mounted on a rotating drum.

prism light (*Build.*). A pavement light in which the glass blocks are prisms, in order to refract the light.

prism square (*Surv.*). A form of *optical square* (q.v.) in which the fixed angle of 90° between the lines of sight is obtained by reflection from the surfaces of a suitably shaped prism.

Prisma process (*Photog.*). A two-colour subtractive colour film system, in which alternate frames are allocated to the two selected colours by rotating filters, the film being exposed twice the normal number of frames per second.

prismat'ic. Prism-shaped; composed of prisms.

prismatic astrolabe (*Surv.*). An instrument for observing stars at an altitude of 60° (in some instruments, 45°) at different azimuths around the horizon, these observations being made as a basis for the computation of latitude and local time.

prismatic camera (*Astron.*). See **objective prism.**

prismatic compass (*Surv.*). A hand form of surveyor's compass in which the eye vane carries a prism reflecting, to an eye placed opposite the sighting slit, a view of a graduated ring, attached to and moving round with the compass needle.

prismatic layer (*Zool.*). In a Molluscan shell, a layer formed of minute prisms of calcium carbonate separated by thin layers of conchiolin, lying between the periostracum and the mother-of-pearl layer.

prismatic spectrum (*Optics*). A spectrum formed by refraction in a prism, as contrasted with a *grating spectrum* formed by diffraction.

prismatic sulphur (*Chem.*). The crystalline form of sulphur obtained when sulphur which has been melted is allowed to cool. Unstable and changes to the rhombic form.

prismatic system (*Crystal.*). See **orthorhombic system.**

prismoid. A body which has plane parallel ends and is bounded by plane sides.

prismoidal formula (*Civ. Eng.*). A formula used in the calculation of earthwork quantities. It states that the volume of any prismoid is equal to one-sixth its length multiplied by the sum of the two end-areas plus four times the mid-area.

prison ashlar (*Masonry*). A block of stone dressed so that the faces are wrought into holes.

privacy equipment (*Teleph.*). See **secrecy system.**

private automatic branch exchange (*Teleph.*). A small automatic exchange on a subscriber's premises, for internal telephone connexions, with extensions over the public telephone system through lines to the local exchange. Abbrev. **P.A.B.X.**

private automatic exchange (*Teleph.*). An automatic exchange on private premises; not connectable with the public telephone system. Abbrev. **P.A.X.**

private branch exchange (*Teleph.*). An automatic or manual exchange on a subscriber's premises which is used for internal connexions, with extension through the local exchange to the public telephone system. Abbrev. **P.B.X.**

private branch exchange final selector (*Auto. Teleph.*). See **P.B.X. final selector.**

private exchange (*Teleph.*). An exchange in a private establishment, which is not connected in any way with the public telephone service. Abbrev. **P.X.**

private manual branch exchange (*Teleph.*). A small manually operated exchange on a subscriber's premises for establishing internal connexions and extensions, and external connexions over lines to the local exchange. Abbrev. **P.M.B.X.**

private manual exchange (*Teleph.*). A manually operated exchange, not connected with the public telephone service. Abbrev. **P.M.X.**

private wire (*Auto. Teleph.*). See **P-wire.**

pro- (Greek and Latin *pro*, before in time or place). A prefix used in the construction of compound terms, in the senses of 'earlier,' 'more primitive,' 'placed before,' and 'pertaining to the prothorax of *Insecta*'; e.g. *propupa*, a stage in the development of an Insect preceding the pupa stage; *promitosis*, a primitive type of mitosis; *prosternum*, the sternum of the prothorax in Insects.

proam'nion (*Zool.*). In the embryos of higher Vertebrates, an area of blastoderm in front of the head, formed of ectoderm and endoderm only.

proat'las (*Zool.*). In *Sphenodon*, Crocodiles, and Chameleons, a median bone intercalated between the occipital region of the skull and the atlas vertebra.

probable error. The small fraction r of a measurement, such that the residual accidental error in making the measurement gives a result which is equally likely to be within or without the range $\pm r$. If $x_1, x_2, x_3 \ldots x_n$ are n observations of a quantity, all corrected for known errors, whose mean is y, then the probable error is defined as

$$r = 0{\cdot}6745\sqrt{\frac{\Sigma(x-y)^2}{n-1}}.$$

probasip'odite (*Zool.*). The proximal one of two joints into which the basipodite of *Crustacea* is sometimes divided.

probe (*Surg.*). A surgical instrument, with a blunt end, used for exploring wounds, sinuses, and cavities.

pro'bertite (*Min.*). Hydrated oxide of sodium, calcium, and boron, crystallising in the monoclinic system.

Proboscidea, —sid'ē-a (*Zool.*). An order of large eutherian Mammals having a long prehensile proboscis with the nostrils at the tip, large lophodont molars, and a pair of incisors of the upper jaw enormously developed as tusks; semi-plantigrade; forest-living herbivorous forms of Africa and India. Elephants.

probos'cis (*Zool.*). An anterior trunk-like process: in *Turbellaria* and *Polychaeta*, the protrusible pharynx: in *Nemertinea*, a long protrusible muscular organ lying above the mouth: in some *Insecta*, the suctorial mouth-parts: in *Hemichorda*, a hollow club-shaped or shield-shaped structure in front of the mouth: in *Proboscidea*, the long flexible prehensile nose.—*adj.* **proboscid'iform.**

pro'buds (*Zool.*). In *Cyclomyaria*, reproductive bodies (blastozooids) which break free from the stolon and migrate across the body of the parent to become attached to the cadophore.

procam'bial strand (*Bot.*). An elongated group of meristematic cells, derived from an apical meristem, and by division giving rise to the xylem and phloem of a vascular bundle; if the whole of the strand is used up in this way, the bundle contains no cambium, and is closed; if a thin strip of cambium remains between xylem and phloem, the bundle is open.

pro'carp (*Bot.*). The multicellular female organ of the *Rhodophyta*, consisting of an archicarp and a trichogyne.

procar'tilage (*Zool.*). An early stage in the formation of cartilage in which the cells are still angular in form and undergoing constant division; embryonic cartilage.

Pro'cellarifor'mes (*Zool.*). An order of *Colymbomorphae* having powerful wings and well-developed flight feathers; the palate is schizognathous; the feet are webbed, the hallux being reduced or absent; wandering ocean forms with great powers of flight; cosmopolitan. Petrels and Albatrosses.

procer'coid (*Zool.*). A larval stage of some *Cestoda*, occurring in the secondary host.

process (*Bot.*, *Zool.*). A general term for an extension or projection.

process block (*Print.*). A metal plate prepared by some photo-mechanical process and mounted to type-height.

processing (*Photog.*). The chemical sequences involved from the exposing of the negative in the camera to the obtaining of the final positive for use.

prochlo'rite (*Min.*). A silicate of magnesium and aluminium with chemically combined water, crystallising in the monoclinic system. It occurs in metamorphic rocks.

prociden'tia (*Med.*). A falling down or prolapse, the term is strictly applied to complete prolapse of the uterus outside the pelvis.

procoelous, —sē'lus (*Zool*). Concave anteriorly and convex posteriorly; said of vertebral centra.

proct-, procto- (Greek *proktos*, anus). A prefix used in the construction of compound terms; e.g. *proctalgia* (q.v.).

proctal (*Zool.*). Anal.

proctal'gia (*Med.*). Neuralgic pain in the rectum.

proctec'tomy (*Surg.*). Surgical removal of the rectum.

procti'tis (*Med.*). Inflammation of the rectum.

proctoc'lysis (*Med.*). The slow injection of large amounts of fluid into the rectum (the Murphy drip method).

proctodae'um (*Zool.*). That part of the alimentary canal which arises in the embryo as a posterior invagination of ectoderm; cf. *stomodaeum*, *mid-gut*.—*adj.* **proctodae'al.**

proctodyn'ia (*Med.*). Pain in or around the anus.

proc'toscope (*Med.*). An instrument for inspecting the mucous membrane of the rectum.

proc'tosigmoidi'tis (*Med.*). Inflammation of the rectum and of the sigmoid flexure of the colon.

proctot'omy (*Surg.*). Surgical incision of the anus or rectum for the relief of stricture.

procum'bent (*Bot.*). Said of a stem which lies on the ground for all or most of its length.

Prodorite (*Build.*). A material and method for rendering all kinds of industrial structures acid-proof.

prod'romal (*Med.*). Premonitory of disease.

prods (*Foundry*). See **dabbers.**

producer-gas (*Fuels*). A low-grade gas made by the partial combustion of coal, coke, or anthracite, in a mixed air-steam blast. Combustible constituents are (per cent.) CO 24 to 30, H_2 10 to 14, CH_4 0·2 to 3·5; balance, CO_2 3 to 5, N_2 50 to 53. Calorific value 135 to 155 B.Th.U. per cu. ft. Used chiefly for furnaces and production of power.

Proell governor, prŏ'el (*Eng.*). A *pendulum governor* (q.v.) of the Porter type in which the balls are attached to upward prolongations of the sleeve links, instead of to the pivoted connexion between these and the upper links.

proem'bryo (*Bot.*). The group of cells, few in number, formed as the zygote begins to divide, and from one or some of which the embryo proper is organised.

proen'zyme (*Bot.*, *Zool.*). See **zymogen.**

proepip'odite (*Zool.*). In *Crustacea*, an epipodite borne upon the pleuropodite.

profile (*Surv.*). A longitudinal section, usually along the centre line of a proposed work such as a railway.

profile drag (*Aero.*). The two-dimensional drag of any lifting surface; the sum of the surface-friction and form (or pressure) drag.

profile grinding (*Eng.*). The grinding of cylindrical work without traversing the wheel, whose periphery is profiled to the form required and extends over the full length of the work.

profile paper (*Civ. Eng.*). A drawing paper ruled with horizontal and vertical lines spaced according to certain scales; used for plotting profiles of proposed engineering works.

profile position (*Bot.*). A position assumed by chloroplasts and by leaves when the edge of the structure is turned towards the position from which the brightest light is coming.

profilom'eter (*Civ. Eng.*). See **roughness integrator.**

profun'dus (*Zool.*). In Vertebrates, a cranial nerve representing the dorsal root of the first somite, and corresponding to the oculomotor ventrally.

progametan'gium (*Bot.*). A fungal hypha from which a gametangium is subsequently cut off by a transverse septum.

proge'ria (*Med.*). Premature old age. Occurring in children, the condition is characterised by dwarfism, falling out of hair, wrinkling of the skin, and senile appearance, due, it is believed, to a destructive lesion of the pituitary gland.

proglot'tis (*Zool*). One of the reproductive segments forming the body in *Cestoda*; produced by strobilisation from the back of the scolex.

progna'thous (*Zool.*). Having protruding jaws: having the mouth-parts directed forwards.

progno'sis (*Med.*). A forecast of the probable course of an illness: the art of making such a forecast.

progo'nal (*Zool*). Said of that anterior portion of the genital ridge which does not contribute to the gonad.

programme (or **program**) **line** (*Elec. Comm.*). A transmission line, of superior propagation characteristics, for relaying broadcasting programmes between a studio and transmitters, or between control points of broadcasting administrations.

programme repeater (*Elec. Comm.*). An amplifier which is of sufficiently high-grade performance for insertion into programme lines for relaying broadcasting programmes, with or without automatic means for reversing its direction of operation.

progress certificate (*Build.*, *Civ. Eng.*). A certificate made out by the engineer or architect during the progress of works on a contract, to enable the contractor to obtain payment on account from the employer.

progress chart (*Build.*, *Civ. Eng.*). A chart forming a continuous record, which is kept up to date, of the amount of work done by the various trades during the course of constructional work.

progression (*Surv.*). See **traversing.**

progressive metamorphism (*Geol.*). The progressive changes in mineral composition and texture observed in rocks within the aureole of contact metamorphism round igneous intrusions; also in rocks which have experienced regional metamorphism of varying degrees of intensity. The particular degree of metamorphism in the latter case is indicated by the 'metamorphic grade' of the rock.

progressive proofs (*Print.*). In colour-printing, a set of proofs supplied to the printer as a guide to colour and registration, each colour being shown both separately and imposed on the preceding ones.

progressive provisioning (*Zool.*). In Insects and Spiders, the supply of food by the parent to the larva or young form at regular intervals throughout its development. Cf. *mass provisioning*.

progressive stain (*Micros.*). A stain which cannot be modified by a differentiating reagent and with which, therefore, care must be taken not to overstain. Cf. *regressive stain*.

projected-scale instrument (*Elec. Eng.*). An instrument in which an image of the scale or the pointer is projected on to a screen.

projection (*Cinema.*). The use of a positive cinematograph print in a projection machine to obtain the final picture on the screen.

projection (*Maths.*). One figure is the projection of another when there is a (*1, 1*) correspondence between the lines and points in the two figures.—(*Geog.*) See Supplement.

projection (*Psycho-an.*). The process whereby we ascribe to other people and to the outside world mental factors and attributes really in ourselves.

projection booth (*Cinema.*). The sound-proof, but ventilated, booth from which *back-projection* (q.v.) motion-pictures are projected on a paper or ground-glass screen.

projection distance (*Cinema.*). The distance between the projector and the screen in a cinema.

projection lamp (*Cinema.*). The source of illumination for projecting the image of a cinematographic film on to the screen.

projection lantern (*Light*). A 'two-lens' optical system for projecting on to a screen a magnified image of a transparency or 'lantern slide.' The condenser, a lens whose function is to illuminate the slide evenly, forms an image of the source of light on the projection lens, the slide being placed in the converging beam of light between the two lenses in such a position that the projection lens forms on the screen a real inverted image of it.

projection lens (*Cinema.*). The objective lens in a cinema projector, which projects the image on the film in the gate on to the screen.

projection period (*Cinema.*). That fraction of the complete time-cycle, expressed in degrees, during which the frame is effectively projected on to the screen. See **period.**

projection room, projection box (*Cinema.*). The enclosure containing cinematograph projectors in a cinema or studio; from it motion-pictures are projected through windows.

projectionist (*Cinema.*). One who operates the projector and the sound-reproducing equipment in a cinema.

projector (*Cinema.*). The machine which projects the motion-picture on the screen and reproduces the recorded sound from the sound-track. See **continuous projector.**

projector (*Illum.*). A special form of reflector designed to throw a strong beam of light in a particular direction.

See **floodlight— searchlight—**

projector-type filament-lamp (*Illum.*). An electric filament-lamp in which the filament is arranged in a concentrated form, so that it can be focused for projection purposes.

prolam'ines (*Chem.*). A group of alcohol-soluble proteins which are insoluble in water and in strong alcohol but soluble in 70-90% alcohol.

prolapse (*Med.*). The falling out of place or sinking of an organ or part of the body.

prolate (*Bot.*). Somewhat globular, but flattened equatorially.

pro'leg (*Zool.*). One of several pairs of fleshy conical retractile projections borne by the abdomen in lepidopterous larvae; used in locomotion.

proletarian (*Bot.*). A plant having little or no reserves of food material.

proleu'cocytes (*Zool.*). Cells which will develop into leucocytes.

proliferation, prolification (*Bot.*). (1) A renewal of growth in a mature organ after a period of inactivity.—(2) The production of vegetative shoots from a reproductive structure.—(3) The formation of a sporangium inside the empty walls of a previously discharged sporangium.—(4) The production of offshoots, which may become detached and established as new plants.—(*Med.*) Growth or extension by the multiplication of cells.

prolif'erous (*Bot.*). (1) Bearing offshoots.—(2) Producing abnormal or supernumerary outgrowths.—(3) Producing progeny by means of offshoots.—(4) Showing excessive development in some respect.

prolification (*Bot.*). The development of buds in the axils of sepals and petals. See also under **proliferation.**

pro'line (*Chem.*). Pyrrolidine-2-carboxylic acid, a cleavage product of certain proteins.

prolonged (*Bot.*). Drawn out into a long point which is not hollowed along its sides.

promenade deck (*Ship Constr.*). On a passenger ship, the upper deck on which passengers walk.

promenade tile (*Build.*). See **quarry tile.**

promer'istem (*Bot.*). The meristem in an embryo and at the growing points.

prominences (*Astron.*). Huge tongues of flame standing out from the sun's disc, sometimes reaching to a height of thousands of miles; first discovered during total solar eclipses, but now observable at any time by means of the spectroscope.

promito'sis (*Zool.*). See under **pro-.**

promontory (*Zool.*). A projecting structure: a small ridge or eminence.

promoter (*Chem.*). A substance which increases the activity of a catalyst.

prompt side. The side of a stage, behind the proscenium, from which prompting is done. Usually to the right of the audience, but sometimes on the other side, if the stage controls (scenery and lighting) are on that side.

promyce'lium (*Bot.*). A short germ tube, put out by some fungal spores, on which other spores of different type are developed.

pronation (*Zool.*). In some higher Vertebrates, movement of the hand and forearm by which the palm of the hand is turned downwards and the radius and ulna brought into a crossed position; cf. *supination.*—*adj.* **pronate.**

prona'tor (*Zool.*). A muscle which by its contraction brings about pronation.

proneph'ros (*Zool.*). In *Craniata*, the anterior portion of the kidney, functional in the embryo but functionless and often absent in the adult. Also called FORE-KIDNEY, HEAD-KIDNEY.—*adj.* **pronephric.**

prono'tum (*Zool.*). The notum of the prothorax in Insects.—*adj.* **pronotal.**

Pron'tosil (*Chem.*). Trade-name for certain of the sulphonamide drugs. See **sulphonamides*.**

pronu'cleus (*Zool.*). The nucleus of a germ cell after the maturation divisions.

Pro'ny brake (*Eng.*). An absorption dynamometer consisting of a pair of friction blocks bolted together across a brake drum, the torque absorbed being balanced by weights at the end of a torque arm attached to the blocks.

pro-oestrus, —ēs'trus (*Zool.*). In Mammals, the coming on of heat in the oestrus cycle.

proof. In alcoholometry, a designation (*proof-spirit*) for spirituous liquid containing 49·28 per cent. of real alcohol by weight, 57·10 per cent. by volume, with sp. gr. of 0·920 at 15·6° C. *

proof (*Typog.*). Impression taken from type matter or blocks for checking and correction only, not as representative of the finished appearance and quality of the work.

proof corrections (*Typog.*). Additions or emendations to a proof. They should be made in ink, and clearly indicated in the margin. A certain amount of correcting is usually allowed for in the estimated price, corrections in excess of this being charged separately.

proof plane (*Elec. Eng.*). A piece of conducting material, mounted on an insulating handle, which may be used for receiving or removing charges in electrostatic experiments.

proof reader (*Typog.*). See **reader.**

proof stress (*Met.*). The stress required to produce a certain amount of extension in metals which do not exhibit a sudden yield point. Usually it is the stress producing an extension of 0·1 or 0·5%. It is frequently called the *yield point* (q v.).

proofed tape (*Cables*). Cotton cloth coated with a rubber compound, wrapped round rubber-insulated cables.

pro-o'tic (*Zool.*). An anterior bone of the auditory capsule of the Vertebrate skull.

prop (*Build.*). A post, usually relatively short and made of timber, used as a strut.

prop drawer (*Mining*). One who removes props from under the roof of a coal seam, to allow the roof to settle down.

prop root (*Bot.*). A root formed from the stem, usually close to the ground; it helps to hold the stem erect.

propagation (*Bot.*). Increase in the number of plants by vegetative means.

propagation constant (*Elec. Comm*). The measure of the diminution in magnitude and retardation in phase experienced by a current of specified frequency in passing along unit section (one mile) of a transmission line. See **attenuation constant, phase constant, decibel, néper.**

propag'ulum (*Bot*). A small vegetative outgrowth which becomes detached from the parent and grows into a new plant.

pro'pane (*Chem.*). C_3H_8, a paraffin hydrocarbon, a colourless gas, b.p. −45° C.; found in crude petroleum. It burns in air to carbon dioxide and water.

pro'panol (*Chem.*). *n*-Propyl alcohol.

propar'gyl alcohol (*Chem.*). $HC \vdots C{\cdot}CH_2{\cdot}OH$, propinyl alcohol, a monohydric unsaturated alcohol, a mobile liquid of agreeable odour, lighter than water, b p. 114° C.

propargyl'ic acid (*Chem.*). See **propiolic acid.**

propellant (*Ammunition*). The term used for the filling of all cartridges. It includes gunpowder, ballistite, cordite, etc. See **cartridge.**

propeller. See **airscrew, marine screw propeller.**

propeller fan (*Eng.*). A fan consisting of an impeller or rotor carrying several blades of air-screw form, working in a cylindrical casing sometimes provided with fixed blades; usually driven by a direct-coupled motor.

propeller shaft (*Automobiles*). The driving shaft which conveys the engine power from the gearbox to the rear axle of a motor vehicle. It is usually connected through universal joints to permit vertical displacement of the rear axle on the springs.

propeller-type water turbine (*Eng.*). A water turbine having a runner similar to a four-bladed ship's propeller. It gives a high specific speed under low heads, thus reducing the size of a direct-coupled generator. See **Kaplan water turbine.**

pro'peltid'ium (*Zool.*). The conspicuously swollen head of *Solifugae*.

propene (*Chem.*). Propylene.

pro'penol (*Chem.*). Allyl alcohol.

proper exciple (*Bot.*). A hyphal layer around the fructification of a lichen which contains no algal cells.

proper motion (*Astron.*). That component of a star's own motion in space which is at right-angles to the line of sight, so that it constitutes the apparent change of position of the star on the celestial sphere.

pro'phase (*Cyt.*). The preliminary stages of mitosis or meiosis leading up to the formation of the astroid.

prophylac'tic (*Med.*). Tending to prevent or to protect against disease, especially infectious disease: any agent which does this.

prophylax'is (*Med.*). The preventive treatment of disease.

pro'phyll (*Bot.*). A bracteole.

pro'pine (*Chem.*). Allylene, $CH_3{\cdot}C \vdots CH$.

propiol'ic acid (*Chem.*). $CH \vdots C{\cdot}COOH$, acetylene-carboxylic acid; also called PROPARGYLIC ACID or PROPINE ACID; silky crystals, m p. 6° C., b p. 144° C., soluble in water and alcohol; it forms an explosive silver salt.

propion'ic acid (*Chem.*). $CH_3{\cdot}CH_2{\cdot}COOH$, a monobasic fatty acid, a colourless liquid, m.p. −36° C, b p. 141° C. The acid is a constituent of pyroligneous acid; it is formed in certain fermentations.

pro'pionyl group (*Chem.*). The monovalent radical $CH_3{\cdot}CH_2{\cdot}CO-$.

proplas'tid (*Bot.*). A minute inclusion in the cytoplasm from which a plastid may develop.

propneus'tic (*Zool.*). (Of *Insecta*) having the prothoracic spiracles only open, as in pupal *Culicidae*.

propo'deum, propo'deon (*Zool.*). In certain *Hymenoptera*, the first somite of the abdomen which becomes fused with the metathorax; epinotum.

pro'podite (*Zool.*) In some *Crustacea*, the fourth joint of the endopodite of the walking-legs or maxillipeds.

propo'dium (*Zool.*). In *Gastropoda*, the anterior part of the foot projecting beneath the head.

propo'doso'ma (*Zool.*). In *Acarina*, the segments of the first and second pairs of legs.

pro'priocep'tor (*Zool.*). A sensory nerve-ending receptive to internal stimuli; interoceptor.—*adj.* **proprioceptive.**

pro'priospi'nal (*Zool.*). Arising within and confined to the spinal cord; said of certain endogenous fibres of the dorsal and ventrolateral columns of the spinal cord which are derived from cells in the grey matter of the cord itself.

propterygium, prō-pter-ij'i-um (*Zool.*). In *Selachii*, the outermost or most anterior of the three basal cartilages of the pectoral fin.

propto'sis (*Med.*). Displacement forwards or protrusion of a part of the body, especially of the eye.

propu'pa (*Zool.*). See **prepupa.**

propygid'ium (*Zool.*). In some Insects, a sclerite anterior to the pygidium.

pro'pyl alcohol (*Chem.*). $C_3H_7{\cdot}OH$, a monohydric aliphatic alcohol, existing in two isomers: (*a*) *n*-propyl alcohol, $CH_3{\cdot}CH_2{\cdot}CH_2{\cdot}OH$, b.p. 97° C, sp. gr. 0·804, obtained from fusel oil, miscible with water in all proportions; (*b*) *iso*propyl alcohol, $CH_3{\cdot}CH(OH){\cdot}CH_3$, b.p. 81° C., sp. gr. 0·789, which can be prepared by the reduction of acetone with sodium amalgam, or by the hydrolysis of propylene sulphate obtained by the absorption of propylene in sulphuric acid.

pro'pylene (*Chem.*). Propene. C_3H_6, $CH_2{:}CH{\cdot}CH_3$, an olefine hydrocarbon, a gas, b.p. −48° C.

pros- (*Chem.*). Containing a condensed double aromatic nucleus substituted in the 2.3 positions.

proscap'ula (*Zool.*). See **clavicle.**

prosce'nium (*Build.*). The stage frame in a theatre, fitted with curtains and a steel safety-curtain to cut off the stage from the auditorium in case of fire.

proscenium lights (*Illum.*). Rows of incandescent lamps for illuminating the stage of a theatre; they are placed around the back of the proscenium arch.

prosco'lex (*Zool.*). See **bladderworm.**

prosector (*Med.*). One who dissects dead bodies for the purpose of anatomical demonstration and teaching.

prosenceph'alon (*Zool.*). In *Craniata*, that part of the fore brain which gives rise to the cerebral hemispheres and the olfactory lobes.

prosenchy'ma (*Bot.*). A tissue composed of elongated cells with pointed ends; the cells are often empty, and are concerned with affording support and with conducting material.—*adj.* **prosenchy'matous.**

prosi'phon (*Zool.*). In some decapod *Mollusca* with a spiral chambered shell, a tube passing through the initial chamber.

prosocoele, prŏ'sō-sēl (*Zool*). In *Craniata,* the cavity of the fore brain or first brain-vesicle in the embryo; fore ventricle.

prosodet'ic (*Zool.*). Anterior to the beak (in Bivalves).

proso'dus (*Zool.*). In *Porifera,* a canal leading from an incurrent canal to the flagellated chamber.

proso'ma (*Zool.*). In *Arachnida,* the region of the body comprising all the segments in front of the segment bearing the genital pore: in *Acarina,* the gnathosoma together with the podosoma.

pro'soplec'tenchy'ma (*Bot.*). A false tissue of elongated fungal hyphae.

proso'pothor'acop'agus (*Med*). A monstrosity in which twin foetuses are joined at the faces, necks, and chests.

pro'sopyle (*Zool.*). In *Porifera,* a pore or aperture opening from an incurrent canal into a flagellated chamber.

prospo'ry (*Bot.*). The formation of sporangia on very young plants.

pros'tate (*Zool.*). In *Oligochaeta,* said of glands of unknown function associated with the male genitalia: in *Cephalopoda,* said of a gland of the male genital system associated with the formation of spermatophores: in eutherian Mammals (except *Edentata* and *Cetacea*), said of a gland associated with the male urogenital canal.—*adj.* **prostatic.**

prostatec'tomy (*Surg.*). Surgical removal of the prostate gland.

pros'tatism (*Med.*). The concurrence of mental irritability, eroticism, and frequent micturition in elderly men, usually indicative of abnormal enlargement of the prostate gland.

prostati'tis (*Med.*). Inflammation of the prostate gland.

pros'tatorrhoe'a, prostatorrhea (*Med.*). Chronic gleety or mucous discharge from the prostate.

prosternum (*Zool.*). See under **pro-.**

pros'thesis (*Surg.*). The supplying of an artificial bodily part in place of one which is deficient or absent: the artificial part supplied.—*adj.* **prosthetic.** See also **dentistry.**

prosthet'ica (*Surg.*). That branch of surgical science concerned with prosthesis.

pros'thomere (*Zool.*). A pre-oral somite.

prosto'mium (*Zool.*). In annelid Worms, that part of the head region anterior to the mouth.—*adj.* **prostomial.**

prostrate (*Bot.*). Procumbent.

protae'sthesis (*Zool.*). A hypothetical primitive generalised sensilla from which the various sense-organs of Insects might have been derived.

pro'tamines (*Chem.*). The simplest proteins, e.g. salmine, sturine, etc. They are only found, in combination with nucleic acid, in fish testicles. Strong bases, they can be precipitated by alcohol from their sulphuric acid solution. They are not coagulated by heat, but can be precipitated with NaCl or with ammonium sulphate. They are laevo-rotatory.

protan'drous (*Bot., Zool.*). Said of organisms in which the male germ-cells ripen before the female germ-cells. Cf. *protogynous.*

protease, prŏ'tē-āz (*Chem.*). A term for any protein-splitting enzyme. Proteases include pepsin, trypsin, erepsin, rennin, and several plant proteases, e.g. papain and bromelin.

protected-type (*Elec. Eng.*). Said of electrical machinery or other apparatus in which any internal rotating or live parts are protected against accidental mechanical contact in such a way as not to impede ventilation. See **screen-protected motor.**

protection cap (*Elec. Eng.*). See **fender.**

protective coating (*Chem.*). A layer of a relatively inert substance, on the surface of another, which diminishes chemical attack of the latter.

protective colloid (*Chem.*). A lyophilic colloid whose presence in small amounts stabilises a lyophobic solution.

protective device or **protector** (*Elec. Eng, Teleph., etc.*). A device designed to protect a piece of electrical equipment against some abnormal condition (e.g. excess current, excess voltage, lightning).

protective gap (*Elec. Eng.*). A spark gap arranged between an electric circuit and earth, or across a piece of apparatus, so adjusted that should the voltage across the gap exceed a certain safe value the gap breaks down, thereby limiting the voltage appearing across the part of the circuit being protected to the breakdown voltage of the gap.

protective gear (*Elec. Eng.*). The apparatus associated with a protective system, e.g. relays, instrument transformers, pilots, etc.

protective layer (*Bot.*). A layer of suberised cells lying across the place where a leaf comes away at leaf fall; it checks both loss of water from within the plant and also the entry of parasites.

protective system (*Elec. Eng.*). An arrangement of apparatus designed to isolate a piece of electrical apparatus should a fault occur on it.

See **balanced—**
discriminating—
impedance—
leakage—
overload—

proteg'ulum (*Zool.*). Embryonic shell (Brachiopods).

pro'teins (*Chem.*). Complex nitrogenous substances composed mainly of α-amino-acid residues joined by the 'peptide linkage' which is formed when water is eliminated from the carboxyl group of one amino-acid molecule and the amino group of another. Proteins have molecular weights which tend to be approximate multiples of 17,600. Most form colloidal solutions in water or dilute salt solutions. They are odourless, tasteless, difficultly crystallisable, decomposed by heat without definite melting points, hydrolysable by acids, alkalis, or certain enzymes. Some are conjugated—i.e. contain a relatively simple group such as haematin in haemoglobin, or nucleic acid in nucleoprotein. They are essential constituents of the living cell, and must be provided in the food to make good tissue wastage and allow of growth.

proteolyt'ic, proteoclas'tic (*Zool.*). Said of enzymes which cause the breakdown of proteins into simpler substances; e g. trypsin.

pro'teoses (*Chem.*). Protein derivatives, soluble in water, not coagulated by heat, but precipitated by saturation with ammonium or zinc sulphate.

proter-, protero- (Greek *proteros,* before, former). A prefix used in the construction of compound terms; e.g. *proteroglyph* (q.v.).

pro'teran'dry, pro'teran'drous (*Bot., Zool.*). See **protandry, protandrous.**

pro'teroglyph (*Zool.*). Having specialised canine teeth in the upper jaw.

pro'terogy'ny, pro'terogy'nous (*Bot.*). See **protogyny, protogynous.**

pro'teroso'ma (*Zool.*). In *Acarina,* the region of the body comprising the gnathosoma and the propodosoma.

Proterozo'ic (*Geol.*). A division of the Pre-Cambrian comprising the less ancient rocks of that system, and lying above the Archaeozoic.

Protex (*Build.*). Trade-name for an emulsion used for damp-proofing.

prothal'lial cell (*Bot.*). A small cell present in pollen grain of Gymnosperms, representing a last reminiscence of a male prothallus.

prothal'lus, prothal'lium (*Bot.*). (1) A small plant derived from a spore, and bearing the antheridia and archegonia, occurring in the life-cycles of ferns and related plants. The zygote and young spore-bearing plant develop at the expense of the prothallus, which dies as the spore-bearing plant enlarges. The term prothallus is extended to cover homologous stages in the life-cycle of Gymnosperms, where the relations are less clear — (2) The very earliest stages in the development of the lichen thallus.

prothe'ca (*Zool.*). The calyx rudiment in coral formation.

prothe'cium (*Bot.*). A primitive or rudimentary perithecium.

protho'rax (*Zool.*). The first or most anterior of the three thoracic somites in Insects.

prothrom'bin (*Chem.*). A protein-like substance present in blood plasma. In shed blood it is converted to *thrombin* (q.v.) by the action of thromboplastin (thrombokinase), which is liberated from the blood platelets or is derived from tissue fluid. Calcium is concerned in the process.

Protis'ta (*Bot.*, *Zool.*). A large group of simple organisms, which show at least some characters common to plants and animals. The more plant-like are placed in the *Protophyta*, the more animal-like in the *Protozoa*. Two classes of *Protista* (*Flagellata* and *Mycetozoa* or *Myxomycetes*) are claimed by the zoologists as animals and by the botanists as plants. That these forms fit so neatly into both zoological and botanical classifications seems to point to the fact that they are among the most primitive forms of life, evolved before the animal and plant kingdoms began to diverge However, while this is probably true for the *Flagellata*, there are reasons for considering the *Myxomycetes* to be a somewhat specialised group.

proto- (Greek *protos*, first). A prefix used in the construction of compound terms; e.g. *protocephalon*, the first somite of the head in *Insecta*.

protoactinium (*Chem.*). Symbol, Pa. A radioactive element in the fifth group of the periodic system, with a half-life of 2×10^4 years. At. no. 91.

Protobran'chia (*Zool.*). A small order of primitive *Pelecypoda* in which the gills are simple bipectinate structures with free, flat, non-reflected filaments; the foot is flat and the byssus gland only slightly developed; ciliary feeders.

protocer'cal (*Zool.*). See **diphycercal.**

protocer'ebron, protocer'ebrum (*Zool.*). In higher *Arthropoda* (as *Insecta* and *Crustacea*), the fused ganglia of the first somite of the head, forming part of the 'brain.'

Protochorda'ta (*Zool.*). A division of *Chordata* comprising the *Hemichorda*, *Urochorda*, and *Cephalochorda*, which are distinguished by the absence of a cranium and of specialised anterior sense-organs. Cf. *Craniata.*

protocnemes, prŏ'tō-nēmz (*Zool.*). In *Zoantharia*, the six primary pairs of mesenteries.

pro'toconch, —konk (*Zool.*). In *Mollusca*, the larval shell.

pro'tocone (*Zool.*). In Mammals, the inner cusp of an upper molar tooth.

protoco'nid (*Zool.*). In Mammals, the inner cusp of a lower molar tooth.

pro'tocorm (*Bot.*). A tuber-like structure formed in the early stages of club mosses and some other plants which appear to live in close relations with fungi in youth.

pro'toderm (*Bot.*). See **dermatogen.**

pro'togam'y (*Biol.*). Union of gametes without fusion of their nuclei.

protogen'ic (*Chem.*). Capable of supplying a hydrogen ion (proton).

pro'togy'nous (*Bot.*, *Zool.*). Said of organisms in which the female germ-cells ripen before the male germ-cells; cf. *protandrous.*—*n.* **protogyny.**

pro'toly'sis (*Bot*). The decomposition of chlorophyll by light.

pro'toma'la (*Zool.*). In *Myriapoda*, the mandible.

protom'erite (*Zool.*). In some *Gregarinidea*, the part of the body intervening between the epimerite and the nucleus.

Pro'tomonadi'na (*Zool.*). An order of *Zoomastigina* the members of which have one or two flagella and never show active amoeboid movement over the whole surface of the body.

pro'ton (*Phys.*). A positively charged particle of mass $1{\cdot}66 \times 10^{-24}$ gm. and charge equal and opposite to that on an electron. The proton, being about 1840 times as massive as the electron, makes the main contribution to the mass of an atom. See **atom, nucleus** (*Phys.*).

pro'tone'ma (*Bot.*). (1) A branched filamentous plantlet, looking like an alga, produced when a moss spore germinates; from it the leafy moss plants arise by the development of lateral buds.—(2) The early filamentous stages of some algae, which differ in form from the adult plants.

Pro'tonemerti'ni (*Zool.*). An order of *Dimyaria* in which the mouth is behind the brain, the proboscis lacks stylets, and the cerebral ganglia and lateral nerves lie outside the muscles of the body-wall; marine forms.

pro'tonephrid'ial system (*Zool.*). The excretory system of *Platyhelminthes*, consisting of flame-cells and ducts.

pro'tonephrid'ium (*Zool.*). A larval nephridium, usually of the flame-cell type.

protophilic (*Chem.*). Capable of combining with a hydrogen ion (proton).

pro'tophlo'em (*Bot.*). The first phloem to be formed from the procambial strands; it may be generalised in structure, with poorly formed sieve tubes and no companion cells.

pro'tophyll (*Bot.*). A sterile leaf.

pro'tophyte (*Bot.*). A unicellular plant of simple characters.

pro'toplasm (*Biol.*). The material basis of all living matter, a greyish semitransparent semi-fluid substance, of complex chemical composition, within which physical, chemical, and electrical changes are constantly taking place.—*adj.* **pro'toplas'mic.**

protoplasmic circulation (*Biol.*). The streaming motion that may be seen in the protoplasm of a living cell.

protoplasmic respiration (*Bot.*). Respiration going on at the expense of protein materials in a starved plant.

pro'toplast (*Zool.*). See **energid.**

pro'topod (*Zool.*). Said of a phase in the development of larval Insects in which the abdomen is imperfectly segmented and bears no appendages.

protop'odite (*Zool.*). The basal portion of a typical arthropod limb.

pro'tosome (*Gen.*). A hypothetical central body in a gene, itself a hypothetical structure.

Protospon'dyli (*Zool.*). An order of *Neopterygii* having thin cycloid or rhombic scales, a long low dorsal fin, and a rounded tail-fin; voracious carnivorous forms occurring in the fresh waters of North America. Bow-fins.

pro'tostele (*Bot.*). A stele in which the vascular tissue forms a solid core, with centrally placed xylem surrounded by phloem.

protostig'mata (*Zool.*). In a Craniate embryo, the primary pair of gill-slits.

protosty'lic (*Zool.*). Having the lower jaw connected with the cranium throughout life by the dorsal portion of the original mandibular arch, as in Lung-fish.

pro'tothal'lus (*Bot.*). The first stages in the formation of the thallus of a lichen, often before the fungus and alga have become associated. The name is also applied to fringes of hyphae growing out from the edges of a mature thallus.

Protothe'ria (*Zool.*). A subclass of *Mammalia* of oviparous habit; it includes only a few scarce Australasian forms. Spiny Ant-eater, Duck-billed Platypus.

Pro'totra'chea'ta (*Zool.*). A class of terrestrial *Arthropoda* having a soft cylindrical body and a pair of unjointed legs to each somite; respiration is by tracheae; the perivisceral cavity is haemocoelic; the head bears a pair of jointed antennae, a pair of jaws, and a pair of oral papillae; primitive Arthropods closely allied to the *Annelida*; sluggish, carnivorous, viviparous forms, found in damp, shady places in S. Africa, S. America, and Australia.

pro'totroch, —trŏk (*Zool.*). In a trochophore larva, the pre-oral circlet of cilia.

protot'ropy (*Chem.*). The formation of tautomeric ions by the splitting off of hydrogen ion from a compound.

pro'totype (*Zool.*). An ancestral form: an original type or specimen.

prototype filter (*Elec. Comm.*). A basic type of filter which has the specified nominal cut-off frequencies, but which must be developed into derived forms to obtain further desirable characteristics, such as constancy of image impedance with frequency.

pro'tover'tebra (*Zool.*). In a Craniate embryo, the dorsal portion of a mesoderm band or mesoblastic somite, bordering the central nervous system and notochord.

protox'ide of iron (*Chem.*). Ferrous oxide.

pro'toxylem, —zi'lem (*Bot.*). The first xylem to be formed from the procambial strand; it has annular, spiral, and loose scalariform vessels or tracheids, and these are usually of much smaller diameter than the corresponding elements of metaxylem and secondary xylem.

Protozo'a (*Zool.*). A subkingdom and phylum of the animal kingdom, comprising those non-cellular animals in which no nucleus is ever in sole control of a specialised part of the cytoplasm. Cf. *Metazoa, Parazoa.*

protozoaea, —zō-ē'a (*Zool.*). In decapod *Crustacea*, a larval stage preceding the *zoaea* (q.v.), in which the abdominal region shows as yet no trace of segmentation.

Protozo'ic (*Geol.*). An obsolete term meaning 'first life,' applied to the rocks containing the first recognisable traces of organic remains. If used at all today it would refer to rocks other than those to which it was applicable in earlier times.

protractor (*Instruments*). An instrument used by the draughtsman for measuring or setting out angles on paper, etc.

protractor (*Zool.*). A muscle which by its contraction draws a limb or a part of the body forward or away from the body. Cf. *retractor.*

Protre'mata (*Zool.*). An order of *Testicardines* in which the shell is usually plano-convex and the animal is attached by the flat ventral valve; the eggs are incubated in a ventral brood pouch.

Protu'ra (*Zool.*). An order of minute *Apterygota* having twelve abdominal somites; antennae are lacking; three pairs of abdominal appendages usually occur; usually found under bark, leaves, and stones, or in moss.

proustite, proost'it (*Min.*). Sulphide of silver and arsenic which crystallises in the trigonal system. It is commonly associated with other silver-bearing minerals. Cf. *pyrargyrite.* Also called RUBY SILVER ORE, LIGHT-RED SILVER ORE.

proventric'ulus (*Zool.*). (1) In Birds, the anterior thin-walled part of the stomach, containing the gastric glands.—(2) In *Oligochaeta* and *Insecta*, the gizzard—a muscular thick-walled chamber of the gut posterior to the crop.—(3) In *Crustacea*, the stomach or gastric mill.

provisional sum (*Civ. Eng.*). A sum of money fixed by the engineer, and included in the bill of quantities, to provide for work not otherwise included therein or for any unforeseen contingency arising out of the contract.

prox'imal (*Biol.*). Pertaining to or situated at the inner end, nearest to the point of attachment. Cf. *distal.*

proximity effect (*Radio*). The increase in the effective high-frequency resistance of a conductor which occurs when it is brought into the proximity of other conductors, owing to eddy currents induced in the latter. It is especially prominent in the adjacent turns of an inductance coil.

prozy'mogen (*Zool.*). Chromidial substance: a substance which will give rise to zymogen.

pru'ina (*Bot.*). A powdery bloom or secretion on the surface of a plant.

pru'inose (*Bot.*). (1) Covered with a waxy or powdery bloom.—(2) Covered with minute points which give a frosted appearance to the surface.

pru'niform (*Bot.*). Shaped like a plum.

pruriginous, proo-rij'— (*Med.*). Of the nature of prurigo.

pru'rigo (*Med.*). A term common to various skin diseases the chief characteristic of which is a papular eruption and intense itching.

pruri'tus (*Med.*). Intense itching of the skin.

Prussian blue (*Chem.*). Ferric ferrocyanide, $Fe_4[Fe(CN)_6]_3$. A blue pigment obtained through reactions between solutions of iron salts and alkaline ferro- or ferri-cyanides. Known by a variety of other names, e.g. BERLIN BLUE.

prussic acid (*Chem.*). A solution of *hydrogen cyanide* (q.v.) in water.

ps. The English transliteration of the Greek letter **ψ.** In English it is commonly pronounced as **S.**

ψ- (*Chem.*). A symbol for *pseudo-.*

psalte'rium (*Zool.*). In ruminant Mammals, the third stomach; omasus; manyplies.

psammit'ic gneiss (*Geol.*). A gneissose rock which has been produced by the metamorphism of arenaceous sediments.

psammitic schists (*Geol.*). Schists formed from arenaceous sedimentary rocks. Cf. *pelitic gneiss, pelitic schist.*

psammo'ma (*Med.*). A tumour arising from the meninges, composed of fibrous tissue and endothelial cells and 'brain sand' (areas of calcification).

psam'mophile (*Bot.*). A plant which inhabits sandy soils.

psam'mophyte (*Bot.*). A plant which occurs only on sand.

pseud-, pseudo-, sūd'(ō) (Greek *pseudēs*, false). A prefix used in the construction of compound terms; e.g. *pseudodont*, having false teeth.

pseudap'ogam'y (*Bot.*). A replacement of a normal fusion of sexual nuclei by a fusion of two female nuclei, or of a female nucleus and a vegetative nucleus, or of two vegetative nuclei.

pseudapo'semat'ic (*Zool.*). Said of characters which serve to aid protective mimicry.

pseudap'ospo'ry (*Bot.*). The formation of a spore without meiosis, the spore being diploid.

pseudaut'osty'ly (*Zool.*). A type of jaw suspension in which the upper jaw is fused with the ethmoidal, orbital, and otic regions of the cranium; cf. *autostyly.*—*adj.* **pseudautostylic.**

pseudax'is (*Bot.*). See **monochasium.**

pseudep'isemat'ic (*Zool.*). Alluring by false resemblance.

pseudhae'mal (*Zool.*). Said of the so-called vascular system of *Echinodermata*.

pseudholop'tic (*Zool*). (Of *Diptera*) having the condition of the compound eyes between holoptic and dichoptic.

pseudo- (*Chem.*). A prefix which is sometimes used to indicate a tautomeric, isomeric, or closely related compound. Symbol, ψ-.

pseudo-acid (*Chem.*). A substance which can exist in two tautomeric forms, one of which functions as an acid.

pseudo-alums (*Chem.*). A name sometimes given to double sulphates of the alum type, where there is a bivalent element in place of the univalent element of ordinary alums.

pseu'doamito'sis (*Bot.*). An irregular nuclear division caused by treating cells with poisons.

pseudoangi'na (*Med.*). Angina innocens. The occurrence of symptoms of angina pectoris in the absence of organic disease of the heart.

pseudo-asymmetry (*Chem.*). The asymmetry of an atom which results from the attachment thereto of two enantiomeric groups.

pseudo-base (*Chem.*). A substance which can exist in two tautomeric forms, one of which functions as a base.

pseu'doberry (*Bot.*). A fleshy fruit which looks like a berry, but in which some of the succulent material is derived from the enlarged, persistent perianth.

pseudobra'chium (*Zool.*). In some Fish, an appendage used for propulsion along a substratum or on dry land; formed by modification of the pectoral fin.

pseu'dobranch (*Zool.*). A non-functional or vestigial gill, as the spiracular gill of *Selachii*.

pseu'dobulb (*Bot.*). A swollen stem internode formed by some orchids.

pseu'docarp (*Bot.*). A false fruit.

pseudocaud'al (*Zool.*). Said of a type of tail-fin found in some bony Fish which is contributed to by the dorsal and ventral median fins.

pseudocel'li (*Zool*). In *Collembola* and *Protura*, sense-organs of unknown function distributed over various parts of the body.

pseudocil'ium (*Bot.*). A very thin, motionless, elongated outgrowth from an algal cell.

pseu'docoele, —sēl (*Zool.*). In higher Vertebrates, a space enclosed by the inner walls of the closely opposed cerebral hemispheres; the fifth ventricle.

pseu'docolony (*Zool*). In *Protozoa*, a collection of individuals united only by non-living material.

pseu'docone (*Zool.*). In Insects, said of compound eyes in which there is no true crystalline cone in each ommatidium, its place being taken by a transparent viscous fluid.

pseudoconjugation (*Zool.*). In some *Sporozoa*, temporary union of individuals without fusion or exchange of nuclear material.

pseudo-cubic, pseudo-tetragonal, pseudo-hexagonal, etc. (*Min.*). See **pseudosymmetry.**

pseudocye'sis (*Med.*). Spurious pregnancy. The condition in which women desiring offspring imagine themselves to be pregnant, the abdomen often being considerably enlarged owing to rapid accumulation of fat or to gas in the intestines.—(*Zool.*) See **pseudopregnancy.**

pseu'docyst (*Zool.*). An animal cell in which there is no definite nucleus but chromatin is scattered through the cytoplasm.

pseudodeltid'ium (*Zool.*). In some *Brachiopoda*, a plate partially or entirely closing the deltidial fissure of the ventral valve.

pseu'doderm (*Zool.*). In some Sponges, a compact outer layer of tissue resembling skin.

pseu'dodont (*Zool.*). Having horny pads or ridges in place of true teeth, as Monotremes.

pseu'dogamy (*Bot.*). A union between two vegetative cells which are not closely related.

pseudogas'ter (*Zool.*). In some Sponges, a false gastric cavity into which true oscula open.

pseudogas'trula (*Zool*). In experimental embryology, an abnormal type of gastrula, produced artificially, in which there is invagination of the ectoderm.

pseu'dogyne (*Zool.*). An ant which has the characters of the worker combined with those of the female.

pseudohaemophil'ia hepatica (*Med.*). A haemorrhagic state resembling that of haemophilia, occurring in disease of the liver.

pseudoheart (*Zool.*). In *Oligochaeta*, one of a number of paired contractile anterior vessels by which blood is pumped from the dorsal to the ventral vessel: in *Echinodermata*, the axial organ.

pseudohypertroph'ic paralysis (*Med.*). A grave form of paralysis in children, in which progressive muscular weakness is associated with enlargement of certain groups of muscles (such as the calves, the buttocks, the muscles of the shoulder-blade), and wasting of others.

pseudoidiospore, sū-dō-id'— (*Zool.*). See **amoebula.**

pseudomal'achite (*Min.*). Phosphate and hydroxide of copper which resembles malachite and is thought to crystallise in the monoclinic system.

pseudo-marine (*Ecol.*). Applied to fresh-water forms bearing a superficial resemblance to marine types, but not necessarily closely related to them.

pseudom'erism (*Chem.*). A form of tautomerism in which only one tautomer is known, although derivatives corresponding to both forms can be prepared.

pseudometam'erism (*Zool.*). The condition of repetition of parts, found in some *Cestoda*, which bears a superficial resemblance to metamerism.

pseudomito'tic (*Zool.*). See **diaschistic.**

pseu'domix'is (*Biol*). Fusion between two vegetative cells, or between cells which are not differentiated as gametes.

pseudomonotro'pic (*Chem.*). Existing in two forms stable under all conditions, but such that the transition between them takes place in only one direction.

pseu'domorph (*Min.*). A mineral whose external form is not the one usually assumed by its particular species, the original mineral having been subjected to molecular replacement by another substance or substances.

pseu'domycorrhi'za (*Bot*). An association between a fungus and a higher plant in which the fungus is distinctly parasitic.

pseu'donavicel'la (*Zool.*). In some *Sporozoa*, a small boat-shaped spore containing sporozoites.

pseudono'tum (*Zool.*). See **postnotum.**

pseu'donucleo'lus (*Cyt.*). A net knot.

pseu'doparenchy'ma (*Bot.*). A mass of closely interwoven hyphae, appearing very like parenchyma, in prepared sections.

pseudoper'ianth (*Bot.*). A cup-like envelope surrounding the archegonia in some *Hepaticae.*

pseudoperid'ium (*Bot.*). A sheath of sterile hyphae surrounding the aecidium of the *Uredinales.*

pseudo-pest (*Vet.*). Newcastle disease.

pseudoplasmodium (*Bot.*). A mass of closely associated myxamoebae which have not united to form a true plasmodium.

pseu'dopod (*Zool.*). A foot-like process of the body-wall, characteristic of some Insect larvae.

pseudopo'diospore (*Zool.*). See **amoebula.**

pseudopo'dium (*Bot.*). (1) A leafless branch formed by some mosses, bearing gemmae.—(2) The stalk of the capsule in the bog mosses.

pseudopodium (*Zool.*). In *Sarcodina* and phagocytic cells of *Parazoa* and *Metazoa*, a temporary protrusion of cytoplasm serving for locomotion or prehension.

pseudopregnancy (*Med.*). See **pseudocyesis.**—

(*Zool.*). In some Mammals, uterine changes following oestrus and resembling those characteristic of pregnancy.

pseudopterygium, sū'do-pter-ij'i-um (*Med.*). The adherence of a tip of a fold of oedematous conjunctiva to a corneal ulcer, thus simulating a pterygium.

pseudopu'pa (*Zool.*). A coarctate pupa.

pseudorace'mic (*Chem.*). Consisting of mixed crystals of the dextro-rotatory and laevo-rotatory forms of a compound.

Pseudo-Scorpionidea (*Zool.*). See **Chelonethi.**

pseudos'culum (*Zool.*). In some Sponges, the external opening of a *pseudogaster* (q.v.).

pseudosemat'ic (*Zool.*). Serving as a false warning or signal, as *pseudosematic colours.*

pseudosep'tum (*Bot.*). A septum which is perforated by one or more pores; found in some lower fungi.

pseudoses'sile (*Zool.*). (In certain hymenopterous Insects) having a very short petiole so that the abdomen appears to be directly joined to the thorax.

pseudo-solution (*Chem.*). A colloidal solution or suspension.

pseu'dosperm (*Bot.*). A small indehiscent fruit which looks like a seed.

pseudostip'ule (*Bot.*) An appendage at the base of a leaf stalk, which looks like a stipule but is really part of the lamina.

pseudosymmetry (*Min.*). A term applied to minerals whose symmetry elements place them on the border-line between two crystal systems; e.g. a mineral with the C-axis very nearly equal to the B- and A-axes might, on casual inspection, appear cubic, though actually tetragonal. It would be described as possessing *pseudo-cubic symmetry.* The phenomenon is due to slight displacement of the atoms from the positions which they would occupy in the class of higher symmetry.

pseudotach'ylyte (*Geol.*). Flinty crush-rock, resulting from the vitrification of rock powder produced during faulting under conditions involving the development of considerable heat by friction, as in the Glencoe cauldron subsidence.

pseudotra'cheae (*Zool.*). Trachea-like food-channels in the labium of higher *Diptera.*

pseudotuberculosis (*Vet.*). A disease of sheep due to infection by *Corynebacterium pseudotuberculosis ovis*; characterised by caseous lymphadenitis and bronchopneumonia.

pseudove'lum (*Zool.*). In *Scyphozoa*, an internal flange occupying the same position as the true velum of *Hydrozoa* but lacking muscles and a nerve ring.

pseudovil'li (*Zool.*). Projections from the surface of the trophoblast in some *Mammalia,* distinct from the true villi, which are definite outgrowths.

pseudovitel'lus (*Zool.*). In some hemipterous Insects, an abdominal mass of cells which contains symbiotic micro-organisms; see also **mycetocytes.**

pseudo'vum (*Zool.*). A partheno-genetic ovum, capable of development without fertilisation.

pseudozoaea, —zō-ē'a (*Zool.*). In stomatopod *Crustacea*, a larval stage characterised by suppressed development of the thoracic appendages.

pseudozy'gospore (*Bot.*). See **azygospore.**

psilom'elane (*Min.*). An oxide of manganese which contains varying amounts of barium, potassium and sodium oxides and water. It is to be regarded as colloidal manganese dioxide, and is used as an ore of manganese.

psilo'sis (*Med.*). See **sprue.**

psit'tacinite (*Min.*). Vanadate and hydroxide of lead and copper, crystallising in the orthorhombic system.

psittaco'sis (*Med., Vet.*). Parrot disease. A contagious disease of parrots due probably to a filter-passing virus and communicable to man, in whom the symptoms of the disease resemble those of typhoid fever, accompanied by inflammation of the lungs.

Psocop'tera (*Zool.*). An order of minute soft-bodied *Exopterygota* having two pairs of membranous wings, the hindwings being slightly smaller; the mouth-parts are adapted for biting, and the maxilla bears a curious chisel-like structure used for gouging wood; they are widely distributed and are found on tree-trunks and in birds' nests; they feed on animal and vegetable refuse matter. Book Lice, Death Watches.

psophom'eter (*Elec. Comm.*). The line-noise measuring device standardised by the C.C.I.F. It is of two forms, one correcting for the apparent effect on the ear through a telephone receiver for normal telephone use, the other correcting for the ear only and operating over the greater frequency range required for programme transmission over music lines.

psori'asis (*Med.*). A chronic disease of the skin in which red scaly papules and patches appear, especially on the outer aspects of the limbs.

psych-, psycho- (Greek *psychē*, soul, mind). A prefix used in the construction of compound terms; e.g. *psycho-analysis* (q.v.).

psychasthe'nia (*Psycho-path.*). A severe functional mental disorder, characterised by fixed ideas, ruminative states, and hypochondriacal conditions.

psyche, sī'kē (*Psychol.*). The principle of mental and emotional life, consisting of conscious and unconscious processes. Used by Jung as synonymous with *soul.*

psychi'atry. That branch of medical science which deals with disorders and diseases of the mind, in particular, with such as arise from physical and organic causes.

psychic determinism (*Psycho-an.*). The Freudian theory that mental processes are determined by unconscious motivations.

psy'chism (*Biol.*). The doctrine that living matter possesses attributes not recognised in non-living matter; the distinctive attributes or 'mentality' of living things.

psycho-analysis. The method of treatment of functional nervous disorder introduced by Freud. It consists in bringing unconscious conflicts into consciousness by the methods of free association, dream-analysis, and use of the transference situation.

psychogalvan'ic reflex (*Zool.*). The decrease in the electrical resistance of the skin under the stimulation of various emotional states.

psychogen'ic (*Med.*). Having a mental origin.

psychog'raphy (*Photog.*). The supposed registration of optical images on sensitive surfaces susceptible to subsequent development.

psy'choid (*Zool.*). Applied to the inexplicable regulating element of a developing embryo; morphaesthetic.

psychology. The science of the mind. The general term is used to include all the observations, investigations, and recordings of the mind and its functions, normal and abnormal. Psychology is divided into four main groups of study, viz., (*a*) *academic psychology*, which investigates the normal functioning of the mind; (*b*) *medical psychology*, which investigates the abnormal functioning of the mind; (*c*) *social psychology*, which investigates mental functioning in relation to society and the outside world; (*d*) *industrial psychology*, which investigates the problems of mental functioning in relation to industry.

psychoneuro'sis (*Psycho-path.*). Functional disorder of the mind in a legally sane person who shows insight into his condition; the term includes such conditions as hysteria, obsessional states, and anxiety states. Freud distinguishes psychoneurosis from the real or actual *neuroses* (q.v.). In both there is a derangement of the normal ways of gratification of the *libido* (q.v.), but in psychoneurosis this is always accompanied by unconscious mental conflict between the ego and the id, giving rise to symptoms and pathological states which are capable of being relieved by psychotherapy.

psy′chopath (*Psychol.*). An individual who shows a pathological degree of congenital emotional instability, and who is definitely abnormal, although not suffering from a true organic mental disorder. In general the intellectual functions are not affected.

psychopathology. That branch of psychology which deals with the abnormal working of the mind.

psycho′sis (*Med.*). A grave disorder of the mind, characterised by such phenomena as illusions, delusions, hallucinations, mental confusion, etc, with absence of insight into his condition on the part of the patient; the term includes such conditions as manic-depressive psychosis, dementia praecox, paranoia, etc.

psychother′apist. An individual, usually a physician, but not always so at present, who practises *psychotherapy* (q.v.).

psychother′apy. The treatment of functional (and even so-called organic) psychic disorder. Methods: the different forms of analysis, as psycho-analysis (Freud), and its modifications, known as Jungian, Adlerian, Stekelian, and direct reductive analysis (Hadfield); explanation, persuasion, re-education, progressive relaxation, suggestion, hypnosis; occupational therapy.

psychrom′eter (*Meteor.*). The *wet and dry bulb hygrometer* (q.v.).

psychrophi′lic (*Bot.*). Growing best at a low temperature.

pt-. A common consonantal combination in words derived from the Greek. In English it is commonly pronounced **T** at the beginning of a word.

Ptd. A. (*Build.*). Abbrev. for *pointed arch.*

pter-, ptero- (Greek *pteron*, feather). A prefix used in the construction of compound terms; e.g. *pteropaedes* (q.v.).

ptera′lia (*Zool.*). See **axillary.**

pterer′gate (*Zool.*). A worker or soldier ant with vestigial wings, but otherwise unmodified.

Pteria Contorta Shales (*Geol.*). A series of black shales containing the lamellibranch *Pteria contorta*, found in the Lower Rhaetic rocks of England and S. Wales.

Pter′idophy′ta (*Bot.*). (Greek *pteris*, gen. *pteridos*, fern). The ferns, horsetails and club-mosses, together with a few smaller groups. Vascular plants showing well-marked alternation of generations, with independent gametophytes bearing antheridia and/or archegonia, from which the spore-bearing plants develop. A very old group with many ancient fossil representatives.

Pter′idosper′mae (*Bot.*). An ancient group of plants known from fossils but having no living representatives. They were fern-like in some respects, but produced seeds, often apparently on the edges of their leaves.

Pterobranc′hia (*Zool.*). A class of *Hemichorda* the members of which have the collar modified to form tentacles; colonial forms living in secreted tubes at considerable depths.

pteropae′des (*Zool.*). Young Birds which are able to fly as soon as they are hatched.

pterope′gum (*Zool.*). In Insects, the socket for the insertion of the wing.

pteropleu′ron (*Zool.*). In *Diptera*, a thoracic sclerite lying between the root of the wing, the sternopleuron, and the mesopleuron.

pter′opod ooze (*Geol.*). A calcareous deep-sea deposit which contains a large number of pteropod remains.

Pterop′sida (*Bot.*). A comprehensive name for the *Filicales*, *Gymnospermae*, and *Angiospermae*, plants having in general large leaves, and invariably having leaf gaps in the stele.

pterostig′ma (*Zool.*). In Insects, an opaque cell on the wing.

pterothe′ca (*Zool.*). In the pupal stage of some Insects, the wing-case.

ptero′tic (*Zool.*). A bone of the lateral wall of the auditory capsule of the skull in some Vertebrates.

pteryg-, pterygo- (Greek *pteryx*, gen. *pterygos*, wing). A prefix used in the construction of compound terms in the sense of 'pertaining to the pterygoid'; e.g. *pterygomandibular*, pertaining to the pterygoid and the mandible.

pterygial, ter-ij′ĭ-al (*Zool.*). In Fish, an element of the fin-skeleton: pertaining to a fin: pertaining to a wing.

pterygium (*Med.*). The encroachment on to the cornea from the side of a thickened, vascular, wing-shaped area of the conjunctiva.

pterygium (*Zool.*). In Vertebrates, a limb: in some *Coleoptera*, a process of the prothorax.

pterygo′da (*Zool.*). See **tegula.**

pter′ygoid (*Zool.*). A paired cartilage bone of the Vertebrate skull, formed by the ossification of the front part of the PPQ bar: a membrane bone which replaces the original pterygoid in some Vertebrates: more generally, wing-shaped.

pter′ygopal′atoquad′rate bar (*Zool.*). In Fish with a cartilaginous skeleton, the rod of cartilage forming the upper jaw and known as the PPQ bar.

pter′ygophore, pteryg′iophore (*Zool.*). A cartilaginous ray of a median fin.

pter′ylae (*Zool.*). The tracts of contour feathers on the body of a Bird.

ptili′num (*Zool.*). In certain *Diptera* (*Cyclorrhapha*), an expansible membranous cephalic sac by which the anterior end of the puparium is thrust off at emergence.

Ptolema′ic system (*Astron.*). The final form of Greek planetary theory as described in Claudius Ptolemy's treatise. In this the earth was the centre of the world, the planets, including the sun and moon, being supposed to revolve round it in motions compounded of eccentric circles and epicycles; the fixed stars were supposed to be attached to an outer sphere concentric with the earth.

ptomaines, tō-mānz (*Chem.*). Poisonous amino compounds produced by the decomposition of proteins, especially in dead animal matter. The ptomaines include substances such as putrescine, cadaverine, choline, muscarine, neurine. Few of the ptomaines are known to be poisonous by mouth, food poisoning being caused by specific bacteria, e.g. *Bacillus botulinus.*

pto′sis (*Med.*). (1) Paralytic dropping of the upper eyelid.—(2) Downward displacement of any bodily organ.

pty′alin (*Zool.*). A digestive ferment, found in saliva, which changes starch into sugar.

pty′alism (*Med.*). Excessive secretion of saliva.

ptyxis, tix′is (*Bot.*). The manner in which an individual leaf is folded in bud.

pu′berty. Sexual maturity.

puberu′lent (*Bot.*). Feebly pubescent.

pubes′cence (*Bot.*). A covering of downy hairs closely pressed on to the surface bearing them.—(*Zool.*) A covering of fine hairs or down.—*adj.* **pubes′cent.**

pubiot′omy (*Surg.*). The operation of cutting the pubic bone to one side of the mid-line, so as to facilitate childbirth in difficult labour.

pubis (*Zool.*). In *Craniata*, an element of the pelvic girdle.—*pl.* **pubes.**—*adj.* **pubic.**

public call office (*Teleph.*). A telephone station for public use, with an attendant or coin-box for the collection of charges. Also called PAY STATION.

pucherite, poohh'— (*Min.*). Vanadate of bismuth, crystallising in the orthorhombic system.

pucking cutter (*Mining*). A man employed in a coal-mine to cut the floor in cases of creep or upheaval towards the roof.

puddingstone (*Geol.*). A popular term for *conglomerate.* Hertfordshire puddingstone, consisting of rounded flint pebbles set in a siliceous sandy matrix, is a good example.

puddle (*Civ. Eng.*). See **clay puddle.**

puddled ball (*Met.*). The mass of iron intimately mixed with slag which is formed by the process of puddling pig-iron. See **puddling.**

puddled bar (*Met.*). Bars of wrought-iron which have been rolled from the puddled ball, after squeezing the ball to compact it and eliminate some of the slag. See **puddled ball.**

puddling (*Met.*). The agitation of a bath of molten pig-iron, by hand or by mechanical means, in an oxidising atmosphere, in order to oxidise most of the carbon, silicon, and manganese and thus produce wrought-iron.

puddling furnace (*Met.*). A small reverberatory furnace in which iron is puddled.

puden'dum (*Zool.*). See **vulva.**

Pudlo (*Build.*). Trade-name for a substance, sold in powder form, which is used as a waterproofing agent for concrete surfaces.

puering (*Tanning*). The process of steeping skins in a warm fermenting solution containing pancreatic enzymes, in order to soften them before tanning. See **bating.**

puer'peral (*Med.*). Pertaining to or ensuing upon childbirth.

puerpe'rium (*Med.*). Strictly, the period between the onset of labour and the return to normal of the generative organs: usually, the first five or six weeks after the completion of labour.

puffing (*Bot.*). The simultaneous and violent discharge of ascospores from many asci at the same time.

pug (*Mining*). In metalliferous mining, the parting of soft clay which sometimes occurs between the walls of a vein and the country rock.*

pug lifter (*Mining*). One who removes coal left adhering to the floor by a coal-cutting machine.

pug piles (*Civ. Eng.*). Dovetailed piles.

pugging (*Build.*). A special mixture carried on boards between the floor joists, serving to insulate the room against sounds from below.

pugio'niform (*Bot.*). Shaped like a dagger.

Pulas'ki Shales and Sandstones (*Geol.*). The main member of the Upper Mississippian succession in Virginia.

pu'legone (*Chem.*). $C_{10}H_{16}O$, occurs in oil of pennyroyal, a ketone of the terpene series.

Pulfrich refractometer, pool'frihh (*Chem.*). An instrument for measuring the refractive index of oils and fats.

pull (*Typog.*). A proof slip, a galley proof.

pull-off (*Elec. Eng.*). A fitting used in connexion with the overhead contact-wire of an electric traction system for retaining the contact-wire in the correct position above the track on curves.

pull-out (*Acous.*). A common defect in the pressing of gramophone records, a small portion of the pressing being pulled away from the disc and remaining on the stamper.

pull-out (*Aero.*). The transition from a dive or spin to substantially normal flight.

pull-out torque (*Elec. Eng.*). (1) The value of the torque at which a synchronous motor falls out of synchronism.—(2) The maximum torque of an induction motor.

pull-over mill (*Met.*). A rolling-mill using a single pair of rolls. The metal, after passing through the rolls, is pulled back over the top roll in order to be fed through the mill a second time.

pull switch (*Build.*). See **ceiling switch.**

pulled coil (*Elec. Eng.*). An armature coil wound with parallel sides on a suitable former and then pulled out to the correct coil span.

pulley (*Eng.*). A wheel on a shaft having a crowned or cambered rim for carrying an endless belt, or grooved for carrying a rope or chain. A *fast pulley* is one that is keyed to the shaft and revolves with it; a *loose pulley* is not attached to the shaft. The term 'pulley' is also applied to a small grooved wheel over which a sash-cord, etc. runs.

pulley mortise (*Join.*). A form of joint between the end of a ceiling joist, which is tenoned, and the binding joist, which is mortised, so as to let in the ceiling joist in a position such that the lower faces of both are in the same plane.

pulley-stile (*Join.*). One of the upright sides of the frame of a double-hung window, to which is secured the pulley over which the sash-cord passes.

pulling focus (*Cinema.*). The alteration of focus during a shot, e.g. during a pan or tracking shot, so that the same or different objects remain in focus in spite of varying distance.

pullo'rum infection (*Vet.*). Bacillary white diarrhoea.

pullula'tion (*Bot.*). Budding, sprouting.

pulmo- (Latin *pulmo,* lung). A prefix used in the construction of compound terms; e.g. *pulmogastric,* pertaining to the lungs and stomach. See **pulmones.**

pul'mobranch (*Zool.*). See **lung book.**

pul'monary (*Zool.*). In land Vertebrates, pertaining to the lungs: in pulmonate *Mollusca,* pertaining to the respiratory cavity.

Pulmona'ta (*Zool.*). An order of *Euthyneura,* of terrestrial or fresh-water habit, in which the mantle and its cavity form a lung, the shell is often reduced, and the opening of the mantle cavity is diminished by fusion of the mantle-border with the 'neck' True Snails, Fresh-water Snails, Land Slugs, etc.

pul'monate (*Zool.*). Possessing lungs or lung-books; air-breathing.

pulmonec'tomy (*Surg.*). Pneumonectomy.

pulmones (*Zool.*). Lungs.—*sing.* **pulmo.**—*adj.* **pulmonary.**

pulmoni'tis (*Med.*). Inflammation of lung tissue; pneumonia.

pulp. See **wood-pulp.**

pulp (*Zool.*). A mass of soft spongy tissue situated in the interior of an organ, as *spleen pulp, dental pulp.*

pulp boards (*Paper*). See **cardboards.**

pulp-saver (*Paper*). A machine through which water from the paper-making machine passes to avoid wastage of fibrous materials.

pulpwood (*Join.*). A board composed of wood-pulp and adhesive pressed into sheets; used for panelling, partitions, etc.

pulpy kidney disease (*Vet.*). An acute toxaemia of lambs due to *Clostridium welchii, type D* (*B. ovitoxicus*).

pulsa'tance (*Elec. Eng.*). A term used to denote the product $2\pi\times$frequency of an alternating quantity; generally represented by the symbol ω.

pulsating current (*Elec. Eng.*). An electric current which periodically changes in magnitude but not in direction.

pulsating vacuole (*Zool.*). See **contractile vacuole.**

pulsa'tor (*Agric. Mach.*). A piece of apparatus attached to a milking machine which causes alternations of suction and release on the cow's teats when the machine is in operation; the pulsations range from 50-60 a minute.

pulse (*Med.*). The periodic expansion and elongation of the arterial walls which follows each contraction of the heart.

pulse (*Radio*). A signal of very short duration, such as a single dot.

pulsel'lum (*Zool.*). A posterior flagellum of *Mastigophora* which pushes the organism in front of it. Cf. *tractellum.*

pulsom'eter pump (*Eng*). A steam pump in which an automatic ball-valve, the only moving part, admits steam alternately to a pair of chambers, so forcing out water which has been sucked in by condensation of the steam after the previous stroke.

pulverised-coal burners (*Eng.*). See **fantail burner, turbulent burner.**

pulverised fuel (*Fuels*). Fuel that has been subjected first to crushing, and then reduced to an impalpable dust by pulverisers. The latter are usually air-swept, the velocity of the air being so regulated that particles of fuel when sufficiently reduced are carried away from the mill.

pulveru'lent (*Bot.*). Appearing as if covered with dust.

pulvil'lus (*Zool*). One of a pair of pads situated beneath the tarsal claws in Insects.—*adjs.* **pulvillar, pulvilliform.**

pul'vinate (*Bot.*). Shaped like a cushion.

pulvinated (*Carp.*). Said of a frieze which presents a bulging face.

pul'vinule (*Bot.*). The small pulvinus of a leaflet.

pulvi'nus (*Bot.*). A swollen leaf base, often capable of changes of form, bringing about movement of the leaf.

pul'viplume (*Zool.*). See **powder-down feather.**

Pumecrete (*Build.*). Trade-name for a pumice stone used in the construction of fire-safe floors and partitions.

pumice (*Geol.*). An 'acid' vesicular glass, formed from the froth on the surface of some particularly gaseous lavas. The sharp edges of the disrupted gas-vesicles enable pumice to be used as an abrasive.

pummel (*Build*). A *punner* (q.v.).

pump. A machine driven by some prime mover, and used for raising fluids from a lower to a higher level, or for imparting energy to fluids.

See **air—**
air-lift—
centrifugal—
force—
pulsometer—
rotary—

pump-line (*Elec. Eng.*). A term used to denote a cable extending throughout the length of an electric train for the control of auxiliary apparatus such as air-compressors.

pumping (*Phys.*). The motion of mercury in a barometer arising from the movement of a ship or from fluctuations of air pressure in a varying wind.

punch (*Civ. Eng.*). A follower placed on the head of a pile in any case where the pile has been driven in beyond the stroke of the monkey.

punch (*Eng.*). A steel tool for making holes in metal by shearing out a circular wad under pressure, the work being supported on a die the hole in which is slightly larger than the diameter of the punch.

puncheon (*Carp.*). A short post giving intermediate support to a beam carried between principals, especially in trussed partitions.

punching (*Elec. Eng.*). See **lamination.**

punching machine (*Eng.*). A machine for punching holes in plates, the punch being driven either mechanically by a crank and reciprocating block, or by a hydraulic ram.

punctate basiphilia (*Med.*). See under **basophilia.**

punctum (*Zool.*). A minute aperture: a dot or spot in marking.—*adj.* **punctate.**

punctured (*Masonry*). A term applied to a variety of rusticated work distinguished by holes picked in the faces of the stones, either in lines or irregularly.

pungent (*Bot.*). Ending in a sharp, hard point.

punner (*Build., Civ. Eng.*). A heavy-headed tool, with a long upright handle, used in the operation of punning, the tool being repeatedly lifted and dropped on to the surface to be consolidated.

punning (*Build., Civ. Eng.*). The operation of ramming or consolidating the surface of hardcore, earth, etc, with repeated blows from a heavy-headed tool.

punty, puntee, pontie, pontil (*Glass*). A short iron rod, at one end of which is either a button of hot glass or a suitably shaped piece of metal, which is applied hot to the end of a partially formed glass article in order that (*a*) it may be cracked off the blowpipe and manipulated on the punty, or (*b*) in the case of tube drawing, the mass of glass may be drawn out between punty and blowpipe.

pu'pa (*Zool.*). An inactive stage in the life-history of an Insect during which it does not feed and reorganisation is taking place to transform the larval body into that of the imago.—*adj.* **pupal.**

pupa'rium (*Zool.*). The hardened and separated last larval skin which is retained to form a covering for the pupa in some *Diptera.*

pupil (*Zool.*). The central opening of the iris of the eye.—*adj.* **pupillary.**

Pupin cable (*Elec. Comm.*). A cable in which the conductors are coil-loaded at intervals, with resulting attenuation, which is uniform up to a cut-off frequency and then increases rapidly.

Pupin loading, Pupin coil (*Elec. Comm.*). The loading coil, devised by Pupin, in which the reduction in attenuation, due to the inductance inserted in the transmission line, is not more than offset by the additional attenuation due to dissipation. The two legs of the circuit are taken through equal coils wound on a toroid core.

pupip'arous (*Zool.*). Giving birth to offspring which have already reached the pupa stage, as some two-winged Flies.

Purbeck Beds, Purbeckian Stage (*Geol.*). A series of limestones, largely non-marine, dirt-beds, and 'marbles,' found in the Upper Jurassic rocks of Southern England, following directly upon the Portlandian Stage.

Purdy's solution (*Chem.*). A modified Fehling's solution containing sufficient ammonium hydroxide to redissolve the cuprous oxide as it is formed. Similar to Pavy's solution.

pure clay (*Build.*). See **foul clay.**

pure continuous waves (*Radio*). Waves which are not modulated or broken up into trains except by keying, as distinguished from *interrupted continuous waves.*

pure culture (*Bot.*). A culture containing a pure stock of one species of plant, especially of lower plants.

pure line (*Zool.*). (1) A homogenous collection of individuals within a species, resulting from autogamous reproduction.—(2) A population consisting of individuals whose descent can be traced to a single ancestor.

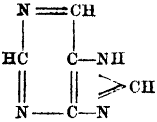
pure metal (*Met.*). Theoretically, an absolutely pure metallic element, but as such are not obtainable the term is applied in practice to metals of high purity.

pure metal crystals (*Met.*). The crystals of which a solid pure metal is composed. Each crystal in a given metal has a similar structure consisting of the same atoms arranged in the same way, and one crystal differs from another in orientation.

pure tone (*Acous.*). A sound-wave of a single frequency, so-called to distinguish it from a *complex tone.*

Purimachos (*Build.*). Trade-name for a fireclay cement for forming heat-resistant joints.

pu'rine group (*Chem.*). A group of cyclic diureides derived from one molecule of a dibasic hydroxy acid and two molecules of urea. The simplest member of this group is *purine*, of the formula:



Purkinje cells, poor′kin-ye (*Zool.*). Large flask-shaped cells lying between the two layers of grey matter in the cortex of the cerebellum in higher Vertebrates.

Purkinje effect (*Illum*). A phenomenon associated with the human eye, making it more sensitive to blue light when the illumination is poor (less than about 0·1 lumen per sq. ft.) and to yellow light when the illumination is good.

Purkinje fibres (*Zool.*). A network of large beaded trabeculae lying under the endocardium in some animals.

purl (or **pearl**) **fabrics** (*Hosiery*). Knitted fabrics in which the reverse side stitches are brought to the surface for effect; used extensively for ladies' pull-overs, etc.

Purley Shales (*Geol.*). A group of shaly rocks, of Middle Cambrian age, found near Nuneaton.

purlin (*Build., Civ. Eng.*). A member laid horizontally on the principal rafters and supporting the common rafters.

purlin post (*Carp.*). A post placed beneath a purlin to support it against sagging.

purple copper ore (*Min.*). Bornite.

purple of Cassius (*Chem.*). Produced by adding a mixture of stannic and stannous chlorides to a very dilute solution of gold chloride; hydrated stannic oxide is precipitated and the gold chloride reduced to metal. The red-to-violet colour is due to the precipitation of finely divided gold on the stannic hydroxide.

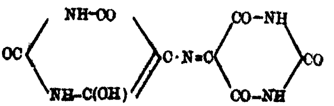
purpose-made brick (*Build.*). A brick which has been specially moulded to a shape suiting it for use in a particular position, e.g. an arch brick shaped like the voussoir of an arch.

purposiveness (*Zool.*). Correlation of individual reactions to a definite end.

pur′pura (*Med.*). The condition in which spontaneous haemorrhages appear beneath the skin and the mucous membranes, forming purple patches; these may occur as a result of infection, or the cause may be unknown. See also **Henoch's purpura** and **peliosis rheumatica.**—*adj.* **purpuric.**

purpura haemorrhagica (*Med.*). Haemogenia. Essential thrombooytopenia. Werlhof's disease. A disease characterised by purpuric haemorrhages in the skin, bleeding from mucous membranes, and abnormal diminution of the platelets in the blood (thrombocytopenia).—(*Vet.*) An acute non-contagious disease of horses characterised by haemorrhages and oedema in the subcutaneous connective tissues and mucous membranes.

purpu′ric acid (*Chem.*). Barbituryl iminoalloxan, of the formula:



The ammonium salt is *murexide* (see **murexide test**).

pu′rulent (*Med.*). Forming or consisting of pus: resembling or accompanied by the formation of pus: of the nature of pus.

pus (*Med.*). Matter. The yellowish fluid formed by suppuration, consisting of serum, pus cells (white blood cells), bacteria, and the debris of tissue destruction.

pushbutton (*Elec. Eng.*). A device, carrying a small current, which closes or opens an electric circuit by means of the pressure of the finger on a small button.

pushbutton control (*Elec. Eng.*). The control of electric motors or other apparatus by means of pushbuttons situated at one or more convenient points, not necessarily adjacent to the motor itself.

pushbutton receiver (*Radio*). A receiver the tuning of which can be automatically switched to one or more predetermined frequencies by the operation of a corresponding number of pushbutton switches.

pushbutton switch (*Elec. Eng.*). A switch operated by a pushbutton. Also called BUTTON SWITCH.

push piece (*Horol.*). (1) A small cylindrical plunger which projects just beyond the band of a watch case and is pressed in when it is required to set the hands.—(2) The button and stem of a hunting watch, which, on being pressed, causes the opening of the case.

push-pull amplifier (*Elec. Comm.*). Two thermionic valves so connected that when the grid of one is positive (with respect to its mean potential) that of the other is negative, and vice versa. Used for the reduction of harmonic distortion in amplifiers, and in short-wave oscillators and amplifiers, etc.

push-pull microphone (*Acous.*). A carbon microphone in which two carbon-granule cells are mounted on either side of a stretched diaphragm, so that amplitude distortion arising in one is largely balanced out by the opposite phase amplitude distortion in the other.

push-pull sound-track (*Cinema.*). A system of sound recording on film in which the two halves of recorded waves are made transparent and displaced, there being no transmitted light with zero modulation.

push rod (*I.C. Engs.*). A rod through which the tappet of an overhead-valve engine operates the rocker arm, when the camshaft is located in the crankcase.

pusher (*Aero.*). See **tractor.**

pusher-on (*Mining*). The man in charge of haulage hands in a coal-mine. Also called MASTER HAULIER.

pus′tule (*Bot.*). A mass of fungal spores and the hyphae bearing them.

pustule (*Med.*). A small elevation of the skin containing pus.—*adj.* **pus′tular.**

pu′sule (*Bot.*). A small vacuole present in the protoplast of some lower plants, which is able to expand and contract.—(*Zool.*) In *Dinoflagellata*, a non-contractile vacuole discharging to the exterior by a duct.

pu′tamen, *or* pū-tā′men (*Bot.*). The hard endocarp of a drupe, such as the stone of a plum.

putamen (*Zool.*). In Birds, the shell membrane of the egg: in higher Vertebrates, the lateral part of the lentiform nucleus of the cerebrum.

putlog (*Build.*). A transverse bearer which, in the case of a bricklayer's scaffold, is lashed at one end to the ledger and at the other end is wedged into a hole left by the bricklayer in the wall; used to support the scaffold boards.

putres′cine (*Chem.*). $H_2N{\cdot}(CH_2)_4{\cdot}NH_2$, tetramethylene-diamine, crystals, m.p. 27° C., formed during the putrefaction of flesh.

putter (*Mining*). A man employed in a coal-mine to take empty tubs from a flat or siding to the working face, and to bring back full ones. Also called KIBBLER.

putter and filler (*Mining*). A man employed in a coal-mine as a putter and also to fill the tubs.

putter-out (*Mining*). See under **hanger-on.**

putty (*Build.*).

See **glazier's— painter's— plasterer's—**

putty and plaster (*Plast.*). See **gauged stuff.**

putty knife (*Build.*). See **stopping knife.**

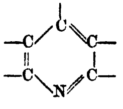
putty powder (*Build.*). Tin oxide, used for polishing glass.

puy, pwē (*Geol.*). The name given to a small volcanic cone, especially in the Auvergne, France.

puzzolan'o, poot-sō— (*Build., Civ. Eng.*). See **pozzuolana.**

P.X. (*Teleph.*). Abbrev. for *private exchange.*

Py (*Chem.*). A symbol for the pyridine nucleus



py-, pyo- (Greek *pyon*, pus). A prefix used in the construction of compound terms; e.g. *pyaemia*, *pyorrhoea* (qq.v.).

pyae'mia (*Med.*). The condition in which infection of the blood with bacteria, from a septic focus, is associated with the development of abscesses in different parts of the body.—*adj.* **pyaemic.**

py'castyle (*Build.*). See **pycnostyle.**

pycn-, pycno-, pykn-, pykno- (Greek *pyknos*, compact, dense). A prefix used in the construction of compound terms; e.g. *pycnoxylic wood* (q.v.).

pycnid'iospore (*Bot.*). A spore formed within a pycnidium.

pycnid'ium (*Bot.*). A roundish fructification formed by many species of fungi, usually with an opening, and having a general resemblance to a perithecium. It contains fertile hyphae and pycnidiospores, but no asci, and has apparently no connexion with any sexual act, real or modified.

pyc'niospore (*Bot.*). A term used, chiefly in America, to denote the spermatium in *Uredinales.*

pyc'nium (*Bot.*). A term used, chiefly in America, to denote the spermogonium of the *Uredinales.*

pyc'noconid'ium (*Bot.*). A conidium formed inside a pycnidium.

Pycnogo'nida (*Zool.*). A class of marine *Arthropoda* having no specialised respiratory apparatus; the head is reduced and modified; the appendages are uniramous; there are no antennae; the legs are enormous in proportion to the body, there being four or more pairs. Sea Spiders.

pycno'sis (*Bot.*). The formation of a perithecium, under the cover of the tissue of a stroma.—(*Cyt.*) The shrinkage of the stainable material of a nucleus into a deeply staining knot.

pyc'nospore (*Bot.*). (1) A spore formed inside a pycnidium.—(2) See **spermatium** (*Uredinales*).

pyc'nostyle (*Build.*). A colonnade in which the space between the columns is equal to one-and-a-half times the lower diameter of the columns.

pycnoxylic wood, —zi'lik (*Bot.*). The compact wood characteristic of pine trees, with little or no parenchyma.

pyeli'tis (*Med.*). Inflammation of the pelvis of the kidney. (Greek *pyelos*, trough.)

py'elocysti'tis (*Med.*). Inflammation of the pelvis of the kidney and of the bladder.

pyelog'raphy (*Med.*). Radiography of the pelvis of the kidney and the ureter, after these have been filled with a substance opaque to X-rays.

py'elolithot'omy (*Surg.*). The operation for removal of a stone from the pelvis of the kidney.

pyelonephri'tis (*Med.*). Inflammation of the kidney and of its pelvis.

pye'mia (*Med.*). See **pyaemia.**

py'gal (*Zool.*). Pertaining to the posterior dorsal extremity of an animal: in *Chelonia*, a posterior median plate of the carapace. (Greek *pygē*, rump.)

pygid'ium (*Zool.*). In Insects, the tergum of the last abdominal somite; the suranal plate.—*adj.* **pygid'ial.**

py'gochord (*Zool.*). In some *Hemichorda*, a median ventral ridge-like outgrowth of the intestinal epithelium.

py'gostyle (*Zool.*). In Birds, a bone at the end of the vertebral column formed by the fusion of some of the caudal vertebrae.

pykn-. Prefix. See **pycn-.**

pyk'nic type (*Psychol.*). One of Kretschmer's three types of individual, characterised by short squat stature, small hands and feet, domed abdomen, round face, and short neck, the limbs being short in relation to the trunk. People in this group are extravert individuals with happy jovial temperaments, tending to develop manic-depressive psychosis if any breakdown occurs.

pyk'nolepsy (*Med.*). A form of epilepsy in which there are sudden attacks of momentary loss of consciousness; eventually the attacks disappear.

pyknom'eter (*Chem.*). A small, graduated glass vessel, of accurately defined volume, used for determining the specific gravity of liquids.

py'lephlebi'tis (*Med.*). Inflammation of the portal vein (the vein formed by veins running from the spleen, stomach, and intestines, and entering the liver) with or without thrombosis; in suppurative pylephlebitis abscesses form in the liver.

py'locyte (*Zool.*). See **porocyte.**

py'lome (*Zool.*). In some *Sarcodina*, an opening through which pseudopodia can be protruded and food-particles taken in.

py'lon (*Struct.*). A slender vertical structure which is self-supporting; also called a TOWER. Cf. *mast.*—(*Elec. Eng.*) See **steel tower.**

pylorec'tomy (*Surg.*). Excision of the pylorus.

py'loroplasty (*Surg.*). An operation for widening the lumen of the pylorus when this has been pathologically narrowed.

pylor'ospasm (*Med.*). Spasm of the circular muscle of the pyloric part of the stomach.

pylor'us (*Zool.*). In Vertebrates, the point at which the stomach passes into the intestine.

pyo-. Prefix. See **py-.**

py'ocolpos (*Med.*). A collection of pus in the vagina, the result of infection of a *haematocolpos* (q.v.) which has been inadequately treated.

pyogen'ic (*Med.*). Having the power to produce pus.

pyome'tra (*Med.*). A collection of pus in the cavity of the uterus.

pyonephro'sis (*Med.*). Accumulation of pus in the pelvis of the kidney.

pyopneumotho'rax, pī'ō-nū— (*Med.*). The presence of pus and air or gas in the pleural cavity.

pyorrhoe'a, pyorrhe'a (*Med.*). (Lit., a flow of pus.) The term now used as a synonym for *pyorrhoea alveolaris*, a purulent inflammation of the periosteum round a tooth.

py'osalpingi'tis (*Med.*). Purulent inflammation of a Fallopian tube.

pyosal'pinx (*Med.*). Accumulation of pus in a Fallopian tube.

py'osepticae'mia of sucklings (*Vet.*). Infectious disease of new-born animals, characterised by pyaemia and septic arthritis, resulting from infection via the umbilicus. Also called NAVEL-ILL.

pyr-. Prefix. See **pyro-.**

pyramid (*Crystal.*). A crystal form with three or more inclined faces which cut all three axes of a crystal. See also **bipyramid.**

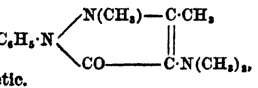
pyramid (*Zool.*). A conical structure; as part of the medulla oblongata in Vertebrates.—*adj.* **pyram'idal.**

pyramid, colour (*Photog.*). See **colour pyramid.**

pyramid of numbers (*Zool.*). The relative decrease in numbers at each stage in a food-chain characteristic of animal communities.

pyram'idal system (*Crystal.*). See **tetragonal system.**

Pyramidone (*Chem.*). A trade-name for 4-dimethyl amino-antipyrine,



$$C_6H_5\cdot N\begin{cases} N(CH_3)-C\cdot CH_3 \\ \qquad\qquad\quad \| \\ CO-\!-\!-\!-C\cdot N(CH_3)_2 \end{cases}$$

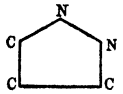
a valuable antipyretic.

pyrar'gyrite (*Min.*). Sulphide of silver and antimony which crystallises in the trigonal system. It is commonly associated with other silver-bearing minerals; cf. *proustite.* Also called RUBY SILVER ORE, DARK-RED SILVER ORE.

pyr'azines (*Chem.*). Six-membered heterocyclic rings containing two nitrogen atoms in the *para* position.

pyr'azole (*Chem.*). $C_3H_4N_2$, long needles, m.p. 70° C., b.p. 185° C. It is a weak secondary base. Fuming sulphuric acid forms a sulphonic acid. Pyrazole and its derivatives can be halogenated, nitrated, diazotised, and generally treated in a similar way to benzene or pyridine.

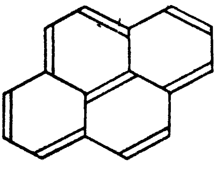
pyrazoles (*Chem.*). Heterocyclic compounds containing a five-membered ring consisting of three carbon and two nitrogen atoms arranged thus:



Pyrazole derivatives are formed by the condensation of hydrazines with compounds containing two CO groups, or a CO and a COOH group, in the *beta* position, or which contain a CO or COOH group attached to a doubly linked carbon atom. Pyrazoles have a similar chemical character to benzene and pyridine.

pyrene, pī-rēn (*Bot.*). A small hard body containing a single seed, comparable with the stone of a plum except that pyrenes often occur several together in one fruit.

pyrene (*Chem.*). A tetracyclic hydrocarbon obtained from the coal-tar fraction boiling above 360° C.



$= C_{16}H_{10}$

Colourless, monoclinic crystals, m.p. 148° C.; soluble in ether, slightly soluble in alcohol, and insoluble in water.

pyre'nocarp (*Bot.*). See **perithecium.**

py'renoid (*Bot.*). A small mass of refractive protein occurring singly or in numbers in or on the chromatophores of some algae and *Bryophyta*, and concerned in the formation of carbohydrates.—(*Zool.*) A centre of starch formation in some *Mastigophora.*

Pyre'nomyce'tes (*Bot.*). One of the major subdivisions of the *Ascomycetes*, including some 12,000 species, mostly of small fungi. The characteristic fructification is a perithecium, either formed single on the hyphae or developed in groups in a mass of hyphae known as a stroma, which assumes many forms. In general the perithecia are dark-brown or black, though some are brightly coloured.

pyret'ic (*Med.*). Pertaining to, or of the nature of, fever.

py'retother'apy (*Med.*). The treatment of disease by artificially increasing beyond normal the temperature of the body.

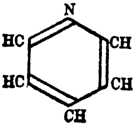
Pyrex glass. A general name for a whole family of glasses developed by the Corning Glass Co., Corning, N.Y., U.S.A., as heat-resisting glasses, and as line insulators. Those generally known by this name are used for chemical apparatus and for domestic cooking ware. The glass is essentially a soda-alumina-borosilicate glass, having very little alkali and a high silica content.

pyre'xia (*Med.*). An increase above normal of the temperature of the body; fever.—*adj.* **pyrexial.**

pyrhe'liom'eter (*Meteor.*). An instrument for measuring the rate at which heat energy is received from the sun. The earlier forms employed mercury thermometers; more modern types embody a bolometer or a thermo-couple to measure the rate of rise of temperature of a black surface heated by the sun. See **solar constant.**

pyrid'azines (*Chem.*). Six-membered heterocyclic rings containing two nitrogen atoms in the *ortho* position.

pyr'idine (*Chem.*). A heterocyclic compound containing a ring of five carbon atoms and one nitrogen atom, having the formula C_5H_5N,

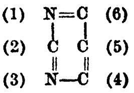


It occurs in the coal-tar fraction with a boiling range between 80° and 170° C.; a colourless liquid of pungent, characteristic odour, b.p. 114° C.; a very stable compound and resists oxidation strongly.

pyr'iform (*Bot., Zool.*). Pear-shaped; as the *pyriform organ* of a *Cyphonautes* larva.

pyriform organ (*Zool.*). In the larval stage of some *Polyzoa*, a mass of cells in close relation to the ectodermal groove, believed to be of sensory function.

pyrim'idine nucleus (*Chem.*). A heterocyclic ring with the following atomic arrangement:



$$\begin{array}{ccccc} (1) & N & = & C & (6) \\ & | & & | & \\ (2) & C & & C & (5) \\ & \| & & \| & \\ (3) & N & - & C & (4) \end{array}$$

pyrimidines (*Chem.*). Six-membered heterocyclic rings containing two nitrogen atoms in the *meta* position.

py'rite, py'rites (*Min.*). See **iron pyrite.**

pyrit'ic smelting (*Met.*). Blast-furnace smelting of sulphide copper ores, in which heat is mainly supplied by oxidation of iron sulphide.

pyritohe'dron (*Crystal.*). A crystal form of the cubic system, consisting of twelve pentagonal faces; particularly characteristic of pyrite, hence the name. Also called PENTAGONAL DODECAHEDRON.

pyro-, pyr- (Greek *pyr*, gen. *pyros*, fire). A prefix used in the construction of compound terms; e.g. *pyrogenic, pyrheliometer* (qq.v.).

pyro- (*Chem.*). A prefix used to denote an acid (and the corresponding salts) which is obtained by heating a normal acid, and thus contains relatively less water; e.g. *pyrosulphuric acid*, $H_2S_2O_7$.

pyro (*Photog.*). Abbrev. for *pyrogallol* (q.v.).

pyrobo'rates (*Chem.*). Generally known as **borates.**

pyrobo′ric acid (*Chem.*). See **boric acid.**

pyrocat′echin (*Chem*). See **catechol.**

py′rochlore (*Min.*). Chiefly a niobate of the cerium metals, calcium, and other bases, with titanium, thorium, and fluorine; crystallises in the cubic system. It is found in nepheline-syenites.

pyrochro′ite (*Min*). Hydroxide of manganese, crystallising in the trigonal system. It is very similar to brucite.

pyroclas′tic rocks (*Geol*). A name given to fragmental deposits of volcanic origin.

pyrocondensation (*Chem.*). A molecular condensation caused by heating to a high temperature, e.g. the formation of biuret from urea.

pyro-electric effects (*Diel.*). Effects due to the generation of heat by the dielectric losses.

pyro-electricity (*Min.*). Positive and negative charges of electricity which simultaneously develop on different parts of the same crystal when its temperature is suitably changed, e.g. in tourmaline.

pyrogal′lol (*Chem.*). Pyrogallic acid, 1,2,3-trihydroxy-benzene, $C_6H_3(OH)_3$, white plates, m.p. 132° C.; it sublimes without decomposition, is soluble in water, and is a strong reducing agent. It is much used as a photographic developer and as an absorbing agent for oxygen in gas analysis.

pyrogen′ic (*Chem.*). Resulting from the application of a high temperature, e.g. red-heat.

Pyrok (*Build.*). Trade-name for a bituminous substance used for surfacing flat roofs.

pyrolig′neous acid (*Chem.*). An aqueous distillate obtained by the destructive distillation of wood, which contains acetic acid, methyl alcohol, acetone, and other products.

pyrolu′site (*Min.*). Dioxide of manganese, commonly containing a little water, and crystallising in the orthorhombic system. It often occurs as a pseudomorph after manganite, and is used as an ore of manganese, as an oxidiser, and as a decoloriser. Cf. *polianite.*

pyrol′ysis (*Chem.*). The decomposition of a substance by heat.

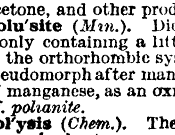
pyrom′eride (*Geol.*). An anglicised French term for nodular rhyolite. It is a quartz-felsite or devitrified rhyolite containing spherulites up to several inches in diameter which impart a nodular appearance to the rock.

pyrom′eter (*Heat*). An instrument for determining high temperatures from a distance.
See **optical— radiation— Seger cones.**

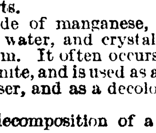
pyromor′phite (*Min.*). Phosphate and chloride of lead, crystallising in the hexagonal system. It is a mineral of secondary origin, frequently found in lead deposits; a minor ore of lead.

pyron detector (*Radio*). A crystal detector formed by a contact between iron and iron pyrites.

pyrones (*Chem.*). Six-membered heterocyclic compounds containing a ring of five carbon atoms and one oxygen atom, one of the former being oxidised to a CO group. According to the position of the CO and the O in the molecule, there are α-pyrones and γ-pyrones.



α-pyrone



γ-pyrone

py′rope (*Min.*). The fiery-red garnet; silicate of magnesium and aluminium, crystallising in the cubic system. It is often perfectly transparent and then prized as a gem, being ruby-red in colour.

py′rophi′lous (*Bot.*). Growing on ground which has been recently burnt over.

pyropho′ric powders (*Chem.*). Finely divided powders which take fire or oxidise extremely rapidly when exposed to the air; usually a metal, or a mixture of a metal and its oxide.

pyrophyl′lite (*Min.*). A clay mineral; silicate of aluminium with chemically combined water, crystallising in the orthorhombic system. It occurs in metamorphic rocks; often resembles talc.

py′rophyte (*Bot*). A plant which is protected by a thick bark from permanent damage by forest fires.

Pyropruf (*Build.*). Trade-name for a material similar to Pyrok but fire-resistant.

Pyrosomat′ida (*Zool.*). An order of *Thaliacea* in which the larval stage is lacking; the oözooid is degenerate and retained within the parent; a cylindrical colony is formed from the blastozooids by budding.

pyrostibnite (*Min*). See **kermesite.**

py′rotechny (*Chem.*). The study and manufacture of fire-works.

Pyrotenax (*Cables*). Trade-name for a magnesia insulation used for low-voltage cables. It is very tough, non-inflammable, and heat-resisting.

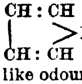
pyrox′ene group (*Min.*). A number of mineral species which, although falling into different systems (orthorhombic, monoclinic, and triclinic), are closely related in form, composition, and structure. They are metasilicates of calcium, magnesium, iron with manganese, and less often with sodium, potassium, zirconium, and fluorine. See **acmite, aegirine, augite, diallage, diopside, enstatite, hypersthene.**

pyrox′enite (*Geol*). A coarse-grained, holocrystalline igneous rock, consisting chiefly of pyroxenes. It may contain biotite, hornblende, or olivine as accessories. See **diallagite, enstatite, hypersthenite.**

pyrox′ilins (*Chem.*). Nitrocelluloses with a low nitrogen content, containing from two to four nitrate groups in the molecule. Used in an alcohol-ether solution to form collodion. Pyroxilin is a synonym for *guncotton* (q.v.).

pyr′rhotite (*Min.*) Ferrous sulphide which contains variable amounts of dissolved sulphur; it crystallises in the hexagonal system. Often contains nickel, and then it becomes a valuable ore. Also called MAGNETIC PYRITE.

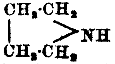
pyrrole (*Chem.*). A heterocyclic compound having a ring of four carbon atoms and one nitrogen atom,



$$\begin{array}{l}CH:CH\\ \mid \quad > NH\\ CH:CH\end{array}$$

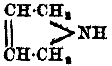
, a colourless liquid of chloroform-like odour, b.p. 131° C., sp. gr. 0·984. Pyrrole is a secondary base, and is a constituent of coal-tar. It is obtained chiefly from bone-oil. Numerous important natural colouring matters are derivatives of pyrrole, e.g. chlorophyll and haemoglobin.

pyrrol′idine (*Chem.*). The final reduction product of pyrrole, a colourless, strongly alkaline base, b.p. 86° C, having the formula:



$$\begin{array}{l}CH_2{\cdot}CH_2\\ \mid \qquad > NH\\ CH_2{\cdot}CH_2\end{array}$$

pyr′roline (*Chem.*). A reduction product of pyrrole obtained by treating it with zinc and glacial acetic acid. It is a colourless liquid, b.p. 91° C., and is a strong secondary base. It has the formula:



$$\begin{array}{l}CH{\cdot}CH_2\\ \parallel \qquad > NH\\ CH{\cdot}CH_2\end{array}$$

Pyruma (*Build.*). Trade-name for a fireclay cement used in forming heat-resistant joints.

pyu′ria (*Med.*). The presence of pus in the urine.

pyx′idate (*Bot.*). Having a lid.

pyxid′ium (*Bot.*). A capsule which dehisces by means of a transverse circular split, so that the upper part of the pericarp forms a lid.

q **(*Chem.*).** A symbol for the quantity of heat which enters a system.

Q (*Radio*). The accepted symbol for the ratio of the reactance of an inductance coil to its resistance. This factor determines the selectivity and resonance step-up of the coil when tuned by a condenser having no losses. Sometimes called MAGNIFICATION FACTOR.

Q point (*Elec. Comm.*). The quiescent condition of a valve without excitation, as represented by a point on its characteristic curves.

Q.F. guns (*Artillery*). Quick-firing guns. These may be guns, or howitzers, that are loaded with ammunition having brass cartridge cases, either attached to the shell or separate.

qibli, kib'lē (*Meteor.*). A sirocco-type wind blowing from the south in Tripoli.

Q.P. (*Carp.*). Abbrev. for *quartered partition.*

Q.P.P. (*Elec. Comm*). Abbrev. for *quiescent push-pull.*

Q.S. (*Build.*). Abbrev. for *quick sweep.*

Qu (*Chem.*). A symbol for the quinine molecule, $C_{20}H_{24}O_2N_2$.

quad (*Paper*). A prefix used in the names of standard paper sizes to denote a size four times the single and twice the double size; e.g. *demy*, 17½×22½ in.; *double-demy*, 22½×35 in.; *quad demy*, 35×45 in. *Double quad demy* would be 45×70 in. Similarly with other basic sizes, e.g. *quad crown, quad royal*, etc.

quad (*Typog.*). See **quadrat.**

quad (or **star-quad**) **cable** (*Cables*). Lead-covered cable in which the unit group is four paper-insulated conductors twisted together, opposite conductors forming the go and return circuits of a four-wire channel respectively.

quadra (*Arch.*). A plinth at the base of a podium.

quadrant (*Civ. Eng.*). A special granite sett, usually 18×18×8 in. deep, shaped like a sector of a circle enclosing 90°.

quadrant (*Eng.*). A slotted segmental guide through which an adjusting lever (e.g. a reversing lever) works. It is provided with means for locating the lever in any desired angular position. See **link motion.**

quadrant (*Furn.*). A type of hinge or controlling device resembling a sextant, used in flap-closed writing-tables, etc.

quadrant (*Surv.*). An angle-measuring instrument of the sextant type, but embracing an angle of 90° or a little more.

quadrant (*Zool.*). A section of a segmenting ovum originating from one of the four primary blastomeres.

quadrant dividers (*Carp.*). A form of dividers in which one limb moves over an arc fixed rigidly to the second limb, and may be secured to it by tightening a binding screw.

quadrant electrometer (*Elec. Eng.*). An electrometer in which a flat metal needle is arranged to swing within or near four quadrants connected in pairs and subjected to a difference in potential. Also called KELVIN ELECTROMETER.

quadran'tal bearing (*Surv.*). See **reduced bearing.**

quadrantal deviation (*Ships*). The error introduced into the reading of a ship's compass by the magnetism induced in the steel hull of the ship by the earth's field. The error is corrected by placing soft iron spheres on each side of the compass.

quadrat (*Bot.*). A square area of vegetation marked off for study.

quadrat or **quad** (*Typog.*). A piece of metal used for spacing. It is less than type height.

quadrate (*Bot*). Square to squarish in cross-section or in face view.

quadrate (*Zool.*). A paired cartilage bone of the Vertebrate skull formed by the ossification of the posterior part of the PPQ bar, or the corresponding cartilage element prior to its ossification; except in Mammals, it forms part of the jaw-articulation.

quadratic system (*Crystal.*). The tetragonal system.

quadra'toju'gal (*Zool.*). In some Vertebrates, a paired membrane bone of the skull, lying between the quadrate and the jugal.

quad'rature (*Astron.*). The position of the moon or a superior planet in elongation 90° or 270°; that is, when the lines drawn from the earth to the sun and the body in question are at right-angles.

quadrature component (*Elec. Eng.*). See **reactive component.**

quadrature reactance (*Elec. Eng.*). A term used in the two-reaction theory of synchronous machines to denote the ratio which the synchronous reactance drop produced by the quadrature component of the armature current bears to the actual value of the quadrature component.

quadrature transformer (*Elec. Eng.*). A transformer designed so that the secondary e.m.f is 90° displaced from the primary e.m.f.

quadra'tus (*Zool*). A muscle of rectangular appearance; e.g. *quadratus femoris.*

quad'riceps (*Zool.*). A muscle having four insertions, as one of the thigh muscles of Primates.

quadrigem'inal bodies (*Zool.*). See **corpora quadrigemina.**

quadrilateral speed-time curve (*Elec. Eng.*). A simplified form of speed-time curve used in making preliminary calculations regarding the energy consumption and average speed of electric trains. The acceleration and coasting portions of the curve are sloping straight lines and the braking portion is neglected, so that the curve becomes a quadrilateral. Cf. *trapezoidal speed-time curve*

quad'rimolec'ular (*Chem.*). Associated with four molecules.

quadripartition (*Bot.*). The division of a spore mother cell to yield four spores.

quadripen'nate (*Zool.*). See **tetrapterous.**

quadriple'gia (*Med.*). Paralysis of both arms and both legs.

quadriplex (*Gen.*). Containing four dominant genes.

quadripo'lar spindle (*Bot.*). An achromatic spindle with four poles, seen in preparations of spore mother cells in course of division.

quadrituber'culate (*Zool.*). (Of tuberculate cheek-teeth) having four cusps.

quadriva'lent (*Chem.*). Tetravalent.

quadrivalent (*Cyt.*). A nucleus having two pairs of homologous chromosomes: an organism plant containing such nuclei.

quadru'manous (*Zool.*). (Of Vertebrates) having all four podia constructed like hands, as in Apes and Monkeys.

quadruped (*Zool.*). (Of Vertebrates) having all four podia constructed like feet, as Cattle.

quadruple-expansion engine (*Eng.*). A steam engine in which the steam is expanded successively in four cylinders of increasing size, all working on the same crankshaft. See **multiple-expansion engine, triple-expansion engine.**

quadruple-phantom circuit (*Teleph.*). A telephone circuit using two double-phantom circuits in parallel for both go and return speech channels.

quadruple point (*Chem.*). A point on a concentration-pressure-temperature diagram at which a two-component system can exist in four phases.

quadruplex (*Gen.*). A tetraploid organism having four doses of a dominant factor.

quadruplex (*Teleg.*). A system in which two channels are operated in both directions over a single telegraph line.

quagginess (*Timber*). A term used to indicate the defective condition of timber having shakes at the heart of the log.

qualitative analysis (*Chem.*). The identification of the constituents of a material irrespective of their amount. In the case of inorganic mixtures, the metals and the acid radicals are tested for separately. In the case of organic mixtures, a preliminary determination of the elements present is made. The components of a mixture may often be separated by distillation, extraction, etc., and tests applied for the detection of certain groups of atoms. The melting-point and the boiling-point are of great value in the identification of an organic compound.

quality (*Acous.*). In sound reproduction, the degree to which a sample of reproduced sound resembles a sample of the original sound. The general description of freedom from various types of acoustic distortion in sound-reproducing systems. See **high-fidelity.**

quality (*Photog.*). (Of light or of radiation) the general assessment of the spectral distribution of components in a complex colour or lighting.

quality number, spinning number (*Textiles*). The number assigned to worsted tops to indicate the counts for which they are suitable; e.g. 58's and downwards are crossbred qualities, 60's and upwards Botany. In yarns and noils, this number indicates the material from which they are derived.

quality terms (*Textiles*). Terms applied to worsted and woollen fabrics to indicate the type of wool and the system of yarn spinning employed in their manufacture. *Botany* indicates merino wool, spun on the worsted system. *Crossbred* denotes a worsted cloth made from crossbred wool. *Saxony* means composed of merino wool, spun on the woollen system. *Cheviot* is applied to cloth made from Cheviot quality wool, spun on the woollen system.

quantitative analysis (*Chem.*). The determination of the amounts in which the various constituents of a material are present. Apart from purely chemical methods of analysis (see **gas analysis, gravimetric analysis, volumetric analysis**), the measurement of physical properties, such as specific gravity, refractive index, thermal conductivity, etc., is of great value, particularly in binary mixtures.

quantity of electricity (*Elec. Eng.*). The product of the flow of electricity (current) and the time during which it flows. The term may also refer to a charge of electricity.

quantity of light (*Illum.*). The product of luminous flux and the time during which it is maintained; usually stated in lumen-hours.

quantity sensitivity (*Elec. Eng.*). The throw, in millimetres, produced on a scale one metre from a measuring instrument designed to measure the quantity of electricity.

quantum (*Phys.*). See **quantum theory.**

quantum efficiency (*Chem.*). The number of molecules decomposed per quantum of light absorbed in a photochemical reaction.

quantum theory (*Phys.*). The conception of energy as being 'atomic' in nature, that is, not variable continuously but only in multiples of a minimum indivisible quantity called a *quantum*. For radiant energy (for example, light) of frequency ν, the quantum is equal to $h\nu$ where h is *Planck's constant* (q.v.). See **Planck's radiation formula, Bohr theory.**

quaquaver'sal fold (*Geol.*). A dome-like structure of folded sedimentary rocks which dip uniformly outwards from a central point. See **dome.**

Quarella Sandstone (*Geol.*). A sandstone which forms part of the Rhaetic series of the Jurassic System and is quarried extensively near Bridgend (Glamorgan).

quarrel (*Build.*). The diamond-shaped pane of glass used in *fret-work* (q.v.).

quarries (*Build.*). *Quarry tiles* (q.v.).

quarry. (1) An open working or pit for granite, building-stone, slate, or other rock.—(2) (*Mining*) An underground working in a coal-mine for stone to fill the goaf.

quarry-faced (*Masonry*). A term applied to a building-stone whose face is hammer-dressed before leaving the quarry.

quarry-pitched (*Masonry*). A term applied to stones which are roughly squared before leaving the quarry.

quarry sap (*Civ. Eng., etc.*). The moisture naturally contained in building-stone freshly cut from the quarry.

quarry-stone bond (*Masonry*). A term applied to the arrangement of stones in rubble masonry.

quarry tile (*Build.*). The common unglazed, machine-made paving tile not less than ¾ in. in thickness. Also called a PROMENADE TILE.

quartan (*Med.*). The term is now used to denote *quartan malaria*, in which the febrile paroxysm recurs every fourth day (i.e. at an interval of 72 hours). Quartan malaria is due to infection with the parasite *Plasmodium malariae*.

quarter (*Astron.*). The term applied to any of the (four) positions of the moon when in quadrature, her *first quarter* being when her elongation is 90°, and *third quarter* when it is 270°; the two other quarters, theoretically corresponding to *full moon* and *new moon*, are no longer so called.

quarter (*Carp.*). A rough vertical timber in the framework of a stud partition.

quarter bend (*Plumb.*). A bend, as in a piece of pipe, connecting two parts whose directions are mutually at right-angles.

quarter bond (*Build.*). The ordinary brickwork bond obtained by using a 2¼-in. closer.

quarter-bound (*Bind.*). A term applied to a book having its back and part of its sides covered in one material and the rest of its sides in a different one.

quarter elliptic spring (*Automobiles*). One half of a semi-elliptic spring, anchored to the frame at the thick end and to a shackle on the axle at the free end; a true *cantilever spring* (q.v.) and also known as such.

quarter ill, quarter evil (*Vet.*). See **blackleg.**

quarter lines (*Ship Constr.*). The aggregation of waterlines, buttocklines, sections, and diagonals indicative of a ship's form, drawn on a scale of ¼ in. = 1 ft. See **fairing.**

quarter-pace landing (*Build.*). A *quarter-space landing* (q.v.).

quarter-phase systems (*Elec. Eng.*). See **two-phase systems.**

quarter rack (*Horol.*). The rack of the striking work of a clock or repeater-watch which regulates the striking of the quarters.

quarter sawing (*Timber*). A mode of converting timber, adopted when it is desired that the growth rings shall all be at least 45° to the cut faces. Also called RIFT SAWING.

quarter screws (*Horol.*). Four screws in the rim of a compensating balance, one placed at either end of the arms, and the other two at right-angles to the arm. Used for rating the watch but not for compensation purposes.

quarter snail (*Horol.*). The snail in a chiming clock or repeater-watch which controls the number of teeth picked up on the quarter rack.

quarter-space landing (*Build.*). A landing extending across only half the width of a staircase.

quarter stuff (*Carp.*). A board ¼ in. thick.

quarter turn (*Join.*). A wreath subtending an angle of 90°.

quarter-wave antenna (*Radio*). An antenna whose overall length is approximately a quarter of the free-space wavelength corresponding to the frequency of operation. Under these conditions it is oscillating in its first natural mode.

quarter-wave plate (*Light*). A plate of quartz, cut parallel to the optic axis, of such thickness that a retardation of a quarter of a period is produced between ordinary and extraordinary rays travelling normally through the plate. By using a quarter-wave plate, with its axis at 45° with the principal plane of a Nicol prism, circularly polarised light is obtained.

quartered partition (*Carp.*). A partition built with quarterings.

quartering (*Civ. Eng.*). A method of obtaining a representative sample of an aggregate with occasional shovelfuls, of which a heap or cone is formed. This is flattened out and two opposite quarter parts are rejected. Another cone is formed from the remainder which is again quartered, the process being repeated until a sample of the required size is left.

quartering (*Timber*). A piece of timber of square section between 2 and 6 in. side.

quartet, quartette (*Bot*). The group of four related nuclei or cells formed as a result of meiosis.—(*Zool.*) A set of four related cells in a segmenting ovum.

quarto (*Print.*). A book having eight pages to the sheet. Often abbrev. to 4to, and used as a prefix along with the particular size of sheet used, e.g. *demy* 4*to*, *crown* 4*to*.

quartz (*Min.*). Crystalline silica occurring either in prisms capped by rhombohedra (low-temperature, α-quartz); or in hexagonal bipyramidal crystals (high-temperature, β-quartz). Widely distributed in rocks of all kinds—igneous, metamorphic and sedimentary; usually colourless and transparent (rock crystal), but often coloured by minute quantities of impurities as in citrine, cairngorm, etc.; also finely crystalline in the several forms of chalcedony, jasper, etc. See also **tridymite, cristobalite.**—(*Diel.*) Quartz retains its high resistivity at high temperatures and is used for mercury-vapour lamps, radio transmitting-valves, etc.

quartz crystal (*Radio*). A disc or rod cut in the appropriate directions from a specimen of piezo-electric quartz, and accurately ground so that its natural resonance shall occur at a particular frequency.

quartz-crystal clock (*Horol.*). A synchronous electric clock of great accuracy, having a quartz crystal to control the frequency of the a.c. supply to the motor unit.

quartz-diorite (*Geol.*). A coarse-grained holocrystalline igneous rock of intermediate composition, composed of quartz, plagioclase feldspar, hornblende, and biotite, and thus intermediate in mineral composition between typical diorite and granite. This is the TONALITE of some authors.

quartz-dolerite (*Geol.*). A variety of dolerite which contains interstitial quartz usually intergrown graphically with feldspar, forming patches of micropegmatite. A dyke-rock of world-wide distribution, well represented by the Whin Sill rock in N. England.

quartz-keratophyre (*Geol.*). A type of soda-trachyte carrying accessory quartz.

quartz oscillator (*Radio*). A quartz crystal maintained in mechanical vibration at its natural frequency by means of thermionic valves. Used as a constant-frequency oscillator.

quartz-porphyrite (*Geol.*). A porphyrite carrying quartz as an accessory constituent; the representative in the medium grain-size group of the fine-grained dacite.

quartz-porphyry (*Geol.*). A medium-grained igneous rock of granitic composition occurring normally as minor intrusions, and carrying prominent phenocrysts of quartz. Differs from rhyolite only in the coarser grain of the groundmass.

quartz resonator (*Radio*). A standard of frequency comparison making use of the sharply resonant properties of a piezo-electric quartz crystal.

quartz-syenite (*Geol.*). A potash- or soda-syenite carrying quartz as an accessory constituent, and hence on the borderline between true syenite and granite.

quartz topaz (*Min.*). See **citrine.**

quartz-trachyte (*Geol.*). A soda- or potash-trachyte carrying quartz as an accessory constituent only. Increase in the amount of quartz would convert the rock into rhyolite.

quartzite (*Geol.*). The characteristic product of the metamorphism of a siliceous sandstone or grit. The term is also used to denote sandstones and grits which have been cemented by silica, often in optical continuity with each fragment.

quartzose (*Geol.*). An adjective denoting richness in quartz; applied to sediments and sedimentary rocks.

Quasi-arc welding (*Elec. Eng.*). A system of arc welding in which covered iron electrodes are used, the covering consisting of asbestos yarn impregnated with a fluxing compound. The covering protects the deposited metal from oxidation.

quasi-duplex (*Teleph.*). A circuit which operates apparently duplex, but actually functions in one direction only at a time; e.g. a long-distance telephone or a radio-link, which is automatically switched by speech.

quasi-optical waves (*Radio*). Electromagnetic waves of such short wavelength that their laws of propagation are similar to those of visible light.

quaternary (*Chem.*). Consisting of four components, etc.

quaternary ammonium bases (*Chem.*). Bases derived from the hypothetical ammonium hydroxide $NH_4 \cdot OH$, in which the four hydrogen atoms attached to the nitrogen are replaced by alkyl radicals, e.g. $(C_2H_5)_4N \cdot OH$, tetraethylammonium hydroxide.

Quaternary Era (*Geol.*). The era of geological time which succeeded the Tertiary Era. It includes the Pleistocene and Recent Periods.

quater'nate (*Bot.*). In groups of four.

quay, kē (*Civ. Eng.*). A place on the seacoast or riverside for the loading or unloading of vessels.

quebracho extract, kā-bra'cho (*Chem.*). An aqueous extract of the wood of *Quebracho Colorado*, growing in South America. The wood contains up to 20% of tannin, and the extract is used for tanning.

Queckenstedt's sign, kvek'en-stet (*Med.*). Increase in the pressure of the cerebrospinal fluid when the jugular veins in the neck are compressed; if this manœuvre causes no rise of pressure in the spinal fluid, an obstruction is present at a higher level.

queen (*Build.*). A slate, 36 × 24 in.

queen (*Zool.*). In social Insects, a sexually perfect female.

Queen Anne arch (*Build.*). A combination of a central semi-circular arch with side camber arches carried from the same springings.

queen bee (*Armaments*). A pilotless aircraft, remotely controlled by radio; used as a realistic target in anti-aircraft gun practice.

queen bolt (*Carp.*). A long iron or steel bolt serving in place of a timber queen-post in a roof truss.

queen closer (*Build.*). A half-brick made by cutting the brick lengthwise, each half being 2¼ in. wide.

queen-post (*Carp.*). For roofs of more than about 80 ft. span, the central support given to the tie-beam by the king-post is insufficient, and two other vertical ties, one on each side of the king-post, are required. These are called *queen-posts.*

queen-post roof (*Carp.*). A timber roof having two queen-posts but no king-post.

quench (*Teleph.*). See **absorber.**

quenched spark (*Radio*). An oscillatory spark discharge which is extinguished after the first few oscillations by mechanical or thermal means.

quenched-spark gap (*Radio*). A spark gap in which the discharge takes place between cooled or rapidly moving electrodes.

quenched-spark system (*Radio*). A system of spark transmission in which means are employed to extinguish each spark rapidly, so as to reduce the decrement of the oscillatory currents which it induces in the antenna or closed oscillatory circuit.

quenching (*Met.*). Generally means cooling steel from above the critical range by immersing in oil or water, in order to harden it. Also applied to cooling in salt and molten-metal baths or by means of an air blast. Applied also to the rapid cooling of other alloys after solution treatment. See **oil-hardening, tempering.**

quenching (*Radio*). The suppression of oscillation, particularly periodically, as in a super-regenerative receiver. See **super-regeneration.**

quenching oscillator (*Radio*). An oscillator whose frequency is slightly above the audible limit, and which generates the voltage necessary to quench the high-frequency oscillations in a super-regenerative receiver.

quer'citol (*Chem.*). $C_6H_7(OH)_5$, a polyhydroxy derivative of hexamethylene, found in the oak. Colourless crystals, m.p. 235° C., dextro-rotatory.

Quevenne scale, ke-ven' (*Chem.*). A scale indicating the relationship between the percentages of fat and total solids and the specific gravity. Used in milk analysis.

quick-break switch (*Elec. Eng.*). A switch having a spring or other device to produce a quick break, independently of any action of the operator.

quick-firing guns (*Artillery*). See **Q.F. guns.**

quick gouge (*Carp., etc.*). A gouge having a cutting edge shaped to a small radius of curvature. See **flat gouge, middle gouge.**

quick-levelling head (*Surv.*). A fitting provided on some levels to facilitate setting up the instrument approximately level, the instrument head being usually secured to a ball-and-socket joint for easy adjustment to the desired position, in which it can be fixed by means of a clamping device.

quicklime (*Build.*). See **lime.**

quick make-and-break switch (*Elec. Eng.*). See **snap switch.**

quick return (*Eng.*). A reciprocating motion, for operating the tool of a shaping machine, etc., in which the return is made more rapidly than the cutting stroke, so as to reduce the 'idling' time of the tool.

quick-revolution engine (*Eng.*). A term formerly applied to high-speed steam-engines direct-coupled to generators.

quicksand. Loose sand mixed with such a high proportion of water that its bearing-pressure is very low. Better term, RUNNING SAND.

quick-setting level (*Surv.*). A level fitted with a *quick-levelling head* (q.v.).

quicksilver (*Min.*). See **mercury.**

Quickstryp (*Paint.*). Trade-name for a paint-remover.

quick sweep (*Build.*). A term applied to circular work in which the radius is small.

quiescent antenna (*Radio*). The same as *dummy antenna.*

quiescent push-pull amplifier (*Elec. Comm.*). A thermionic amplifier employing two valves so arranged that only one passes anode current at one time, each valve amplifying one half-cycle of the input voltage

quiescent tank (*Sewage*). A form of sedimentation tank in which the sewage is allowed to rest for a certain time without flow taking place.

quiet-littoral fauna (*Ecol.*). Animals living at the edges of lakes with gently sloping shores.

quill (*Zool.*). See **calamus.**

quill or **quill drive** (*Eng.*). A hollow shaft revolving on a solid spindle. They may be connected by a clutch, or by a flange at one end to provide a flexible drive.—(*Elec. Eng.*) A form of drive used for electric locomotives in which the armature of the driving motor is mounted on a quill surrounding the driving axle, but only connected to it by a flexible connexion. This enables a small amount of relative motion to take place between the motor and the driving axle. See **geared quill drive.**

quill feathers (*Zool.*). In Birds, the remiges and rectrices.

quilt (*Acous.*). See **Cabot— Euphon—**

quinal'dine (*Chem.*). $C_{10}H_9N$, 2-methyl-quinoline, a colourless refractive liquid, b.p. 246° C., which occurs to the extent of 25% in quinoline obtained from coal-tar.

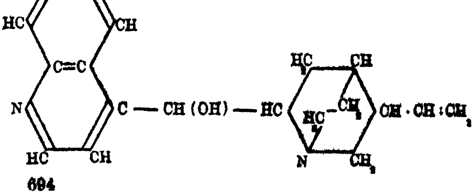
Quincke's disease, kvink'e (*Med.*). **See angio-neurotic oedema.**

quincun'cial aestivation (*Bot.*). A particular type of imbricate aestivation in a five-petalled corolla. Two petals overlap their neighbours by both edges, two are overlapped on both edges, and one overlaps one neighbour and is overlapped by the other.

quinhy'drone (*Chem.*). $C_6H_4O_2+C_6H_4(OH)_2$, an additive compound of one molecule of *p*-quinone and one molecule of hydroquinone. It crystallises in green prisms with a metallic lustre.

quinhydrone electrode (*Chem.*). A system consisting of a clean, polished gold or platinum electrode dipping into a solution containing a little quinhydrone, used for the determination of *p*H-values.

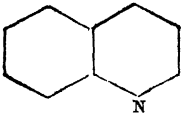
quinine' (*Chem.*). $C_{20}H_{24}O_2N_2 \cdot 3H_2O$, an alkaloid of the quinoline group, present in Cinchona bark. It is a diacid base of very bitter taste and alkaline reaction. It crystallises in prisms or silky needles, m.p. 177° C., and is laevo-rotatory; the hydrochloride and sulphate are a valuable febrifuge and remedy for malaria. Its constitution is:



quiniz'arine (*Chem.*). A synonym for 1,4-dihydroxy-anthraquinone.

quin'ol (*Chem., Photog.*). Hydroquinone, $C_6H_4(OH)_2$, *p*-dihydroxy-benzene, monoclinic plates or hexagonal prisms, m.p. 169° C. It is obtained by the reduction of quinone with sulphurous acid. It is a strong reducing agent and is extensively used as a developer in photography.

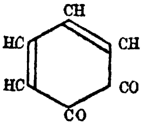
quin'oline (*Chem.*). A heterocyclic compound consisting of a benzene ring condensed with a pyridine ring:



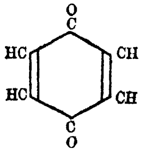
It is a colourless, oily liquid, m.p. −19·5° C., b.p. 240° C., sp. gr. 1·08, of characteristic odour, insoluble in water, soluble in most organic solvents. It is found in coal-tar, in bone oil, and in the products of the destructive distillation of many alkaloids. It can be synthesised by heating a mixture of aniline, glycerine, and nitrobenzene with concentrated sulphuric acid.

quinone' (*Chem.*). See **benzoquinones.**

quinones (*Chem.*). Compounds derived from benzene and its homologues by the replacement of two atoms of hydrogen with two atoms of oxygen. They are characterised by their yellow colour and by being readily reduced to dihydric phenols. According to their configuration they are divided into *ortho*-quinones and *para*-quinones; e.g.



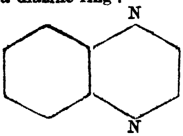
ortho-quinones



para-quinones

quin'onoid formula (*Chem.*). A formula based upon the diketone configuration of *p*-quinone (*benzoquinone*, q.v.), involving the rearrangement of the double bonds in a benzene nucleus; adopted to explain the formation of dyestuffs, e.g. coloured salts of compounds of the triphenyl-methane series.

quinox'alines (*Chem.*). A group of heterocyclic compounds consisting of a benzene ring condensed with a diazine ring:



They can be obtained by the condensation of *o*-diamines with 1, 2-diketones.

quin'quefa'rious (*Bot.*). Said of leaves which are arranged in five ranks.

quinquefo'liolate (*Bot.*) Having five leaflets

quinquemolec'ular (*Chem*). Associated with five molecules.

quin'queva'lent (*Chem.*). Pentavalent.

quinquituber'culate (*Zool.*). (Of tuberculate cheek-teeth) having five cusps.

quinsy (*Med.*). Acute suppurative tonsillitis; peritonsillar abscess. Acute inflammation of the tonsil with the formation of pus around it.

quintocu'bital (*Zool*) In Birds, a term indicating the presence of the fifth secondary remex or fifth flight feather carried by the ulna. Cf. *diastataxy*.

quintuple point (*Chem.*). A point on a concentration-pressure-temperature diagram at which a three-component system can exist in five phases.

quin'tuplinerved, —nervd' (*Bot.*). Having five main veins or ribs in the leaf.

quire (*Paper*). Twenty-four sheets.

quirewise (*Bind.*). Small sections which after printing are folded and inserted one in the other. This method allows the booklet to be stitched instead of stabbed.

quired paper (*Paper*). Reams folded in quires.

quirk (*Join.*). The narrow groove alongside a bead which is sunk into the face of the work so as to be flush with it.

quirk-bead (*Join.*). See **bead-and-quirk.**

quirk float (*Plast.*). A plasterer's trowel specially shaped for finishing mouldings.

quirk moulding (*Join.*). A moulding having a small groove in it.

quirk-router (*Join.*). A form of plane for shaping quirks.

quitclaim (*Mining*). A deed of relinquishment of a claim or portion of mining ground.

quittor (*Vet.*). A chronic suppuration of the lateral cartilage and its surrounding tissues within the horse's foot.

quoin (*Build., Masonry*). A salient angle of a building, especially one formed of large squared corner-stones projecting beyond the general faces of the meeting wall surfaces.

quoin (*Typog.*). A wooden or metal wedge used to lock up formes. Another variety consists of a steel box the sides of which are expanded with a key.

quoin bonding (*Build.*). The mode of arranging the bricks when building a return wall.

quoin header (*Build.*). A brick which is so laid at the external angle of a building that it is a header in respect of the face of the wall proper, and a stretcher in respect of the return wall.

quoin-post (*Hyd. Eng.*). See **heel-post.**

quotations (*Typog.*). Large metal spaces, not less than 4 ems square. They are usually hollow, and are used for filling blanks in pages or formes.

quotation marks, quotes (*Typog.*). See **inverted commas.**

r **(*Chem.*).** (With subscript) a symbol for specific refraction.

r- (*Chem.*). An abbrev. for *racemic.*

ρ- (*Chem.*). A symbol for *pros-*, i.e. containing a condensed double aromatic nucleus substituted in the 2.3 positions.

R. (*Build.*). Abbrev. for *render.*

R (*Chem.*). A general symbol for an organic hydrocarbon radical, especially an alkyl radical.

R (*Chem., Phys.*). A symbol for (1) the *gas constant* (q.v.); (2) the *Rydberg constant* (q.v.).

[*R*] (*Chem.*). (With subscript) a symbol for molecular refraction.

R_H, r_H, *r*H (*Chem.*). See ***r*H-value.**

R-acid (*Chem*). β-Naphthol-3,6-disulphonic acid. It is mostly used in the preparation of azo-dyes for wool.

R-wire (*Teleph.*). In the cord circuit on a telephone switchboard, the ring-wire connected to the ring contacts on the terminating plugs, and eventually to the B-wire of the subscriber's line.

R.A. (*Astron.*). See **right ascension.**

Ra (*Chem.*). The symbol for *radium.*

ra- (*Chem.*). A symbol for *radio-*, i.e. a radioactive isotope of an element; e.g. *ra*Na, *radio*sodium.

rab (*Build.*). A stick for mixing hair with mortar.

rabbet (*Carp.*). A corruption of *rebate.*

rabbet plane (*Join.*). A plane specially adapted to cutting a groove in the corner of a board.

rabbeted lock (*Join.*). A lock which is fitted into a recess cut in the edge of a door.

rabbit (*Furs*). Rabbit skins are marketed as 'coney,' and are dressed to imitate numerous other furs considered to be more valuable.

rabies (*Med.*). Hydrophobia. An acute disease of dogs, wolves, and other animals, due to infection with a filter-passing virus, communicable to man by the bite of the infected animals. In man the disease is characterised by intense restlessness, mental excitement, muscular spasms (especially of the mouth and throat), and paralysis.

raccoon (*Furs*). The dressed skin of the raccoon, an American nocturnal animal related to the bears; the fur is greyish-brown, and the tail has black and white rings.

race (*Build., Geol.*). Fragments of limestone sometimes found in certain brick earths of a hard marly character.

race (*Eng.*). The inner or outer steel rings of a *ball-bearing* or *roller-bearing* (qq.v.).

race (*Hyd. Eng.*). A channel conveying water to or away from a hydraulically operated machine.

race board (*Weaving*). The part of the sley in a loom along which the shuttle travels. Also called SHUTTLE RACE.

race (*Zool.*). A category of variant individuals occurring within a species and differing slightly in characteristics from the typical members of the species: a breed of domesticated animals.

raceme, ra-sēm′ (*Bot.*). An indefinite inflorescence, in which stalked flowers are borne in acropetal succession on an unbranched main stalk. The term is also applied to a group of sporangia similarly arranged.

race′mic acid (*Chem.*). See **tartaric acid.**

racemic compounds (*Chem.*). Compounds consisting of equal quantities of enantiomorphous stereoisomers (*d-* and *l*-forms), which are optically inactive. Racemic compounds are always obtained in the chemical synthesis of substances, but can be resolved into the optically active components by various methods, e.g. by coupling with an optically active substance, such as an alkaloid, and subsequent fractional crystallisation, by the action of lower plant organisms, e.g. bacteria, moulds, yeasts, etc., which attack only one of the isomers, leaving the other one intact.

racemisation (*Chem.*). The transformation of an optically active substance into its racemic inactive form; it may be effected by boiling the active form, resulting in the formation of 50% of the enantiomer, or also by chemical reactions in which a racemic mixture is ultimately obtained.

racemose, ras′— (*Bot.*). (1) Bearing racemes.—(2) Said of an inflorescence which is a raceme.—(*Zool*) Shaped like a bunch of grapes; said especially of glands.

racemule, ras′— (*Bot.*). A small raceme.

rachi-, rachio- (Greek *rhachis*, spine). A prefix used in the construction of compound terms; e.g. *rachianaesthesia* (q.v.).

ra′chianaesthe′sia (*Med.*). Anaesthesia produced by the injection of anaesthetic agents into the space round the spinal cord.

rachil′la (*Bot.*). The axis in the centre of a spikelet of a grass.

ra′chiodont (*Zool.*). Having some of the anterior thoracic vertebrae with the hypapophysis enlarged, forwardly directed and capped with enamel to act as an egg-breaking tooth; as certain egg-eating Snakes.

rachios′tichous (*Zool.*). Having the axis of the fin occupied by a row of somactids, as in *Dipnoi.* Cf. *orthostichous, rhipidostichous.*

ra′chis (*Bot.*). (1) The main axis of an inflorescence.—(2) The central stalk on which the leaflets of a compound leaf are borne.—(*Zool.*) The shaft or axis the shaft of a feather: the vertebral column.—*adj.* **rachidial.**

rachischisis, rā′kis-ki′sis (*Med.*). Spina bifida. A developmental defect of the spinal column, especially in the lower part behind.

rachit′ic (*Med.*). Affected with or pertaining to rickets.

rachi′tis (*Med.*). *Rickets* (q.v.).

rachit′omous (*Zool.*). Temnospondylous.

racial habit (*Zool.*). See **instinct.**

rack (*Elec. Comm.*). A vertical mounting frame made of channel iron of standard dimensions so that individual racks can be joined together by bolts to form bays. Panels of apparatus of standard dimensions can be fixed on one or both sides of each rack.

See **apparatus— special apparatus—**

rack (*Horol.*). A toothed segment; used in the striking and chiming mechanism of a clock or a repeater watch. The number of blows struck by the hammer is controlled by the number of teeth gathered on the rack.

rack (*Photog.*). See **drying rack.**

rack (*Textiles*). The term used in lace manufacture to signify the number of motions concerned in making a piece of lace or net. This varies with the type of machine.

rack-and-pinion (*Eng.*). A method of transforming rotary into linear motion, or vice versa; this is accomplished by means of a pinion or small gear-wheel which engages a straight, toothed rack. See **pitch line.**

rack-and-pinion steering-gear (*Automobiles*). A steering-gear in which a pinion carried by the steering column engages with a rack attached to the divided track rod; used on some Continental vehicles.

rack hook (*Horol.*). Part of the rack-striking work. Just before the hour, the lifting piece lifts the *rack hook*, which allows the rack to fall.

rack mounting (*Elec. Comm.*). The use of standard racks, of varying height but otherwise of standard dimensions, for mounting panels carrying apparatus, such as repeaters or filters, with a uniform scheme of wiring; such mounting gives both accessibility and compactness.

rack railway (*Civ. Eng.*). A form of mountain-railway in which additional adhesion is obtained from a cog-wheel working in some sort of rack laid beside the ordinary rails, the cog-wheel running in bearings carried by a special locomotive.

rack saw (*Carp.*). A saw having wide teeth.

rack rent. Rent equal to the full annual value of the premises.

racked (*Carp.*). Said of temporary timbering which is braced so as to stiffen it against deformation.

racked or **shogged-rib** (*Hosiery*). Terms applied to knitted patterns of the type used extensively for sports sweaters and jerseys. Known also as SHAKER PATTERNS.

racking (*Brew.*). The operation of conveying the beer by hose from the fermenting vat to casks, after removal of the yeast.

racking (*Mining*). The operation of separating ore by washing on an inclined plane.

racking (*Surv.*). See **fixed needle surveying.**

racking back (*Build.*). The procedure adopted when the full length of a wall is not built at once, the unfinished end being stepped or *racked back* at an angle, so that when the remainder of the wall is built there shall not be a vertical line of junction, which might cause cracking of the foundations owing to uneven settlement of the parts.

raddle or **wraithe** (*Weaving*). A comb or half-reed used in beaming to spread the threads to the width of the warp beam.

radial. Radiating out from a common centre: pertaining to a *radius* (q.v.) —(*Zool.*) In *Crinoidea*, a whorl of ossicles supporting the oral disc.

radial commutator (*Elec. Eng.*). A commutator for a d.c. machine in which the commutator bars are arranged radially from the axis to form a disc instead of a cylinder.

radial drill (*Eng.*). A large drilling machine in which the drilling head is capable of radial adjustment along a rigid horizontal arm carried by a pillar.

radial ducts (*Elec. Eng.*). In an electric machine, ventilating ducts which run radially from the shaft.

radial engine (*Aero., Eng.*). An aircraft or other engine having the cylinders arranged radially at equal angular intervals round the crankshaft.

See **double-row— single-row—**
master connecting-rod.

radial feeder (*Elec. Eng.*). See **independent feeder.**

radial fission (*Zool.*). Repeated longitudinal fission in which the daughter individuals remain in position, as in some *Protozoa.*

radial longitudinal section (*Bot.*). A section cut in the radius of the longitudinal axis of an organ.

radial recording (*Acous.*). The same as *lateral recording* (q.v.).

radial symmetry (*Zool.*). The condition in which the body of an animal can be divided into two similar halves by any one of several vertical planes passing through the centre; as in *Echinodermata, Coelenterata.*

radial system (*Cables*). A distribution system in which the cables radiate out from a generating or supply station. If a fault occurs, all consumers beyond the fault are cut off.

radial valve gear (*Eng.*). A steam-engine valve gear in which the slide-valve is given independent component motions proportional to the sine and cosine of the crank angle respectively.

See **Hackworth valve gear.**
Joy's do.
Marshall do.
Walschaert's do.

radial vascular bundle (*Bot.*). A vascular strand having the xylem and phloem on different radii, as is usual in roots.

radial velocity (*Astron.*). See **line of sight velocity.**

radial wall (*Bot.*). An anticlinal wall placed in or across a radius of an organ.

radiale, rā-di-ah'le (*Zool.*). A bone of the proximal row of the carpus in line with the radius.—***pl.*** **radia'lia**, see **somactids.**

radian (*Maths.*). A unit of circular measure defined as the angle subtended at the centre of a circle by an arc equal in length to the radius. 2π radians equal 360°; 1 radian equals 57·2958°; 1° equals ·017453 radian.

radian frequency (*Elec. Comm.*). The same as *angular frequency* or *pulsatance.*

radiant (*Astron.*). The point on the celestial sphere from which a series of parallel tracks in space, such as those followed by the individual meteors in a shower, appears to originate.

radiant (*Bot.*). Radiate.

radiant heat (*Phys.*). Heat communicated to a body by *radiation* (q.v.). It is transmitted by electromagnetic waves of a similar nature to light waves but having a greater wavelength.

radiant-type boiler (*Eng.*). A water-tube boiler having one or more drums and a circulation system consisting of vertical or horizontal inclined banks of tubes, heating surfaces of bare or protected water-tubes forming the walls of the combustion chamber; firing is generally by pulverised fuel.

radiant umbel (*Bot.*). An umbel in which the outermost flowers are much larger than those in the middle.

radiate (*Bot.*). (1) Said of a capitulum which has ray florets.—(2) Said of a flower which spreads like a ray from the periphery of any densely packed inflorescence.—(3) Said of a stigma in which the receptive surfaces radiate outwards from a centre.

radiating brick (*Build.*). See **compass brick.**

radiating circuit (*Radio*). Any circuit capable of sending out power, in the form of electromagnetic waves, into space: especially the antenna circuit of a radio transmitter.

radiating surface (*Heating*). The effective area of a radiator available for the transmission of heat by radiation.

radiation (*Phys.*). Energy emitted in the form of electromagnetic waves. These include, in order of increasing wavelength, cosmic rays, gamma rays, X-rays, ultra-violet radiation, light, infra-red radiation, heat rays, and radio waves. See **black-body radiation, Bohr theory, Planck's radiation formula, spectrum,** etc.—(*Heat*) A process by which heat may be transferred from a source to a receiver without heating of the intervening medium or without the existence of a material medium; e.g. heat received by the earth from the sun. See **radiant heat, solar constant, Stefan-Boltzmann law, Wien's displacement law.**

radiation (*Surv.*). A method of plane table surveying in which a point is located on the board by marking its direction with the alidade and measuring off its distance to scale from the instrument station.

radiation efficiency (*Radio*). The ratio, expressed as a percentage, of the power radiated from an antenna system to that delivered to it from the transmitter.

radiation height (*Radio*). See **effective height of antenna.**

radiation impedance (*Acous.*). The impedance (per unit area), as measured by the complex ratio of the sound-pressure to the velocity, at the surface of a vibrating body which is generating sound-waves.

radiation pressure (*Phys.*). The mechanical pressure exerted by light and other forms of radiation on surfaces on which they are incident. Electromagnetic theory leads to the result that, for a perfect reflector, this pressure should be equal to the total energy density in the medium. This has been confirmed experimentally in spite of the extreme smallness of the pressure (about 10^{-4} dyne per sq. cm. for sunlight).

radiation pyrometer (*Phys.*). A device for ascertaining the temperature of a distant source of heat, such as a furnace, by allowing radiation from the source to face, or be focused on, a thermojunction connected to a sensitive galvanometer, the deflection of the latter giving, after suitable calibration, the required temperature. Suitable for temperatures between about 500° C. and 1500° C.

radiation resistance (*Radio*). That part of the resistive component of the impedance of an antenna which represents the power radiated into space. It is numerically equal (in ohms) to the radiated power (in watts) divided by the mean square current (in amperes) at the base of the antenna.

radiative equilibrium (*Astron.*). An ideal state of a star, postulated in astrophysical researches, implying a control of temperature by the transfer of heat from one part of the star to another by radiation instead of by convection.

radiator (*Acous.*). See **acoustic radiator.**

radiator (*Automobiles, etc*). A device for dissipating the heat absorbed by the jacket cooling water of petrol- and oil-engines. It consists of thin-walled tubes, or narrow passages of honeycomb form, through which the water is conducted, and across which an airstream is induced either by the motion of the vehicle or by a fan.

radiator (*Heating*). A heating unit fed usually by hot water or steam and serving as a source of radiant heat.

radical (*Bot.*). Appearing as if springing from the root at soil-level.

radical (*Chem.*). A group of atoms which passes unchanged through a series of reactions, but is normally incapable of separate existence.

rad'icant (*Bot.*). Rooting.

rad'icate (*Bot.*). Rooted.

radica'tion (*Bot.*). The general characters of the root system of a plant.

rad'icellose (*Bot.*). Bearing rhizoids.

radicico'lous, rad'is-i— (*Bot.*). Said of a parasite which attacks roots.

radicif'erous (*Bot.*). Bearing roots.

radiciform, rad-is'— (*Bot.*). Shaped like a root.

radiciv'orous (*Zool.*). Root-eating.

radicle (*Bot.*). (1) The root of the embryo of a flowering plant.—(2) A rhizoid of a moss.—(3) Any very small root.

radic'ular (*Bot.*). Belonging to, or relating to, a radicle.

radiculec'tomy (*Surg.*). The operation of cutting the roots of spinal nerves.

radiculi'tis (*Med.*). Inflammation of the root of a spinal nerve, especially of that part which lies within the spinal canal.

radic'ulose (*Bot.*). Said of the stem of a moss which bears many rhizoids at its base.

radio- (*Chem.*). A prefix denoting an artificially prepared radioactive isotope of an element.

radio. A generic term applied to methods of signalling through space, without the use of connecting-wires, by means of electromagnetic waves generated by high-frequency alternating currents. Though synonymous with WIRELESS, the term is employed throughout this work as being more logical, and more universal in its currency.

radio altimeter (*Radio*). A form of altimeter depending on the measurement of the time taken by a radio wave emitted from an aircraft to return thereto after reflection from the ground. Also called TERRAIN CLEARANCE INDICATOR.

radio beacon (*Radio*). A stationary radio-transmitter which transmits a steady beam of radiation along certain directions for the guidance of ships or aircraft, or in certain cases one which transmits from an omnidirectional antenna and is used for the taking of bearings.

radio beam (*Radio*). A concentration of electromagnetic radiation within narrow angular limits, such as is emitted from a highly directional antenna.

radio-communication (*Radio*). The transmission of intelligence through space, without the use of intervening conductors or guides, by means of electromagnetic waves of wavelength greater than that of radiant heat.

radio-compass (*Radio*). Any device, such as a directional radio receiver, which can be used for position finding. Particularly one specially calibrated for such indications.

radio direction-finder (*Radio*). See **direction finder.**

radio echo (*Radio*). See **echo.**

radio engineering. The science which deals with the design, construction, and maintenance of apparatus used for radio communication purposes.

radio exchange (*Elec. Comm.*). A radio receiving station, with multiple power amplifiers, for distributing to subscribers radio programmes on a relay basis, via overhead wires, telephone lines, or electric power mains.

radio frequency (*Radio*). A term applied generally to those frequencies used for radio communication, viz. of the order of about ten kilocycles per second or over.

radio-frequency amplifier (*Radio*). An amplifier designed for operation at radio frequencies. Particularly, in a radio receiver, the amplifier which precedes the detector or frequency changer.

radio-frequency resistance (*Radio*). See **high-frequency resistance.**

radio-frequency transformer (*Radio*). A transformer designed for operation at radio frequencies. Generally, the primary or secondary winding, or both, are tuned.

radio goniometer (*Radio*). See **goniometer.**

radiogram (*Radio*). (1) A message transmitted by radio telegraphy.—(2) A radio gramophone.

radio gramophone (*Radio*). A combination of gramophone and radio broadcast receiver, enabling records to be reproduced through the loudspeaker of the radio receiver; contracted to *radiogram*.

radio link (*Radio*). A complete radio communication circuit. It comprises transmitters, receivers, and antennae, and is generally capable of working in both directions. The term is especially applied to such a system when used to join up two landline circuits.

radiophare (*Radio*). A *radio beacon* (q.v.). (French *phare*, beacon.)

radiophone (*Radio*). A telephone system employing radio.

radio-photogram (*Radio*). See **photo-radiogram.**

radio range (*Radio*). See **range beacon.**

radio sounding, radio sondage, son^{g}-dahzh (*Radio*). The technique of releasing sounding balloons fitted with radio transmitting apparatus which transmits information respecting the meteorological conditions during flight.

radio station (*Radio*). The complete equipment for the transmission and/or reception of radio-telegraphy or -telephony, together with the building (or buildings) housing it.

radio-telegraphy (*Radio*). Telegraphy carried on between two remote stations by means of electromagnetic waves, without the aid of connecting wires.

radio-telephony (*Radio*). Telephony carried on by means of electromagnetic waves, without the aid of connecting wires.

radio transmitter. See **transmitter** (*Radio*).

Radiotron (*Thermionics*). Trade-name for a thermionic vacuum tube.

radiovision (*Television*). Television in which the connecting link between the transmitter and receiver is via radio.

radiovisor (*Television*). A former trade-name for a *television receiver.*

radioactin'ium (*Chem.*). A radioactive isotope of thorium, having a half-life of 18·9 days.

radioactivity. The spontaneous disintegration of certain heavy elements (radium, actinium, uranium, thorium) accompanied by the emission of α-rays, which are positively charged helium nuclei; β-rays, which are fast electrons; and γ-rays, which are short X-rays. The ultimate end product of radioactive disintegration is one of the isotopes of lead. See **half-life.**

radiochemistry (*Chem.*). The chemistry of the radioactive elements.

radiogen'ic (*Chem.*). Produced by radioactive disintegration.

radiogram (*Radiol.*). A radiograph or skiagraph.

radiograph (*Radiol.*). The impression made on a sensitive film or plate by the passage of X-rays through an object; an X-ray photograph.

radiog'raphy (*Radiol.*). The technique of making X-ray photographs.

Radiola'ria (*Zool.*). An order of marine *Sarcodina* the members of which have numerous fine radial pseudopodia which do not anastomose; the ectoplasm is vacuolated; there is a central capsule and usually a skeleton of siliceous spicules.

radiola'rian chert, radiola'rite (*Geol.*). A cryptocrystalline siliceous rock in part composed of the remains of radiolaria. Most described examples seem to be of shallow-water origin, such as that which reaches a thickness of 9000 ft. in New South Wales and contains a million radiolaria to the cubic inch.

radiolarian ooze (*Geol.*). A variety of non-calcareous deep-sea ooze, deposited at such depth that the minute calcareous skeletons of such organisms as *Foraminifera* pass into solution, causing a preponderance of the less soluble siliceous skeletons of *Radiolaria.* Confined to the Indian and Pacific Oceans, and passes laterally into red clay.

radiolarite (*Geol.*). See **radiolarian chert.**

radiology. That branch of medical science which deals with the examination of the body by means of X-rays, with the interpretation of radiographs, and with the treatment of disease by the use of radiant energy.

Radiometal (*Met.*). An alloy of permalloy type. Contains iron 50%, nickel 45%, and copper 5%. Used because of high magnetic permeability and low hysteresis loss.

radiom'eter, Crookes's (*Phys.*). A small mica 'paddlewheel' which rotates when placed in daylight in an evacuated glass vessel. Alternate faces of the mica vanes are blackened and the slight rise of temperature of the blackened surfaces caused by the radiation which they absorb warms the air in contact with them and increases the velocity of rebound of the molecules, the sum of whose impulse constitutes the driving pressure.

ra'diosperm (*Bot.*). A seed which is approximately circular in cross-section: by extension, a plant bearing such seeds, especially some fossil plants.

radiother'apy (*Med.*). The treatment of disease by radiant energy.

radiothor'ium (*Chem.*). A disintegration product and isotope of thorium, with a half-life of 1·90 years.

radio-ul'na (*Zool.*). The shaft-bone of the fore-arm in some *Amphibia*, in which the two elements are fused.

radium (*Chem.*). Symbol, Ra. A radioactive metallic element in the second group of the periodic system, one of the alkaline earth metals. At. no. 88, at. wt. 226·05, half-life 1580 years. The metal is white and resembles barium in its chemical properties; m.p. 700°. It occurs in broggerite, cleveite, carnotite, pitchblende, in certain mineral springs, and in sea water. Pitchblende and carnotite are the chief sources of supply. Radium is remarkable for spontaneous and uncontrollable disintegration. See **radon.**

radium emanation (*Chem.*). See **radon.**

radius (*Bot.*). The group of ray flowers in a capitulum.

radius (*Zool.*). In land *Vertebrata*, the pre-axial bone of the antebrachium: one of the veins of the wing in *Insecta*: in *Echinodermata*, one of the primary axes of symmetry.—*adj.* **radial.**

radius brick (*Build.*). See **compass brick.**

radius of action (*Aero.*). Half the range in still air; the *total range* is out and home again.

radius of atom (*Phys.*). See **atomic diameters.**

radius of curvature (*Phys.*). The radius of the circle of which a curve is a part, or the radius of the sphere of which a surface is a portion; the point of intersection of the normals drawn through neighbouring points in a curve or surface.

radius of gyration (*Phys., etc.*). The square root of the moment of inertia of a body about a given axis, divided by its mass. The radius of gyration is usually denoted by k, so that $I = mk^2$.

radius rod (*Build.*). A rod pivoted at one end and carrying a marking point at the other end so that, as the rod is swung around, a circle or part of a circle, of radius equal to the length of the rod, may be marked out.

radius rod (*Eng.*). A rod attached to the die or block of a *Walschaert's valve gear* (q.v.) for transmitting its motion to the end of the combination lever pivoted to the valve rod.

radius vector (*Astron.*). The line joining the focus to the body which moves about it in an elliptic orbit, as the line from the sun to any of the planets.

ra'dix (*Zool.*). The root or point of origin of a structure, as the *radix aortae.*

ra'don (*Chem.*). Rn. A zero-valent, radioactive element, the heaviest of the noble gases. At. no. 86, at. wt. 222, half-life 3·82 days. It is a colourless gas; m.p. −110° C., density 9·73 gms. per litre at N.T.P. It is formed by the disintegration of radium and is used in the non-surgical treatment of cancer.

Radstockian Series (*Geol.*). The highest series in the Westphalian stage of the Carboniferous System which comprises the upper coal measures of Somerset (Radstock) and the Keele Series of North Staffordshire.

rad'ula (*Zool.*). In *Mollusca*, a strip of horny basement membrane bearing numerous rows of horny or chitinous teeth.—*adjs.* **radular, radulate, raduliform.**

radula sac (*Zool.*). The ventral diverticulum of the buccal cavity, in which the radula is formed.

Raeberry Castle Group (*Geol.*). A group of mudstones and grits with shelly fossils found in Southern Scotland, belonging to the Wenlockian Series of the Silurian System.

RaEm (*Chem.*). A symbol for *radium emanation* or *radon*.

raffia. See **bast.**

raf'finose (*Chem.*). Melitriose, $C_{18}H_{32}O_{16}+5H_2O$, a trisaccharose found in the sugar-beet, in molasses, in cotton-seed cake, etc. It is tasteless, dextrorotatory, and does not reduce Fehling's solution.

raft bridge (*Civ. Eng.*). A bridge somewhat similar to a pontoon bridge but supported on rafts instead of on boats.

raft foundation (*Build.*). A layer of concrete, usually reinforced, extending under the whole area of a building and projecting outside the line of its walls; used to provide a foundation in cases where the ground is unduly soft or the loading to be put upon it is unduly heavy.

rafter (*Build., Civ. Eng.*). A member in a roof framework extending from the ridge to the eaves.

rag-bolt (*Eng.*). A foundation bolt with a long tapered head of increasing size towards its end, and having jagged points projecting from its surface. The bolt is secured in a hole at the anchorage by molten lead poured around it.

rag frame (*Mining*). A broad, slightly inclined wooden plane, for partially concentrating slimes; used in series.

rag stone (*Build.*). A general term for coarse-grained sandstone, often with a calcareous cement, e.g. Kentish rag

rag-work (*Masonry*). A term applied to wall construction in which undressed flat stones of about the thickness of a brick are built up into a wall the outer faces of which are left rough.

ragging (*Mining*). Rough concentration or washing, for a low ratio of concentration.

ragging-off (*Mining*). Getting coal down.

raglan, raglin (*Carp.*). A slender ceiling joist.

raglet (*Plumb.*). A narrow groove cut into a masonry or brickwork surface, for receiving the edge of a lead flashing which is to be fixed to it.

rags (*Build.*). A slate size, 36 × 24 in.

Ragusa (*Build.*). Trade-name for a form of asphalt.

raies ultimes, rāz ül-tēm′ (*Chem.*). The strongest lines in the spectrum of an element, which therefore serve for its detection by spectrum analysis Also called by the English equivalent, ULTIMATE LINES.

rail (*Civ. Eng.*). A steel bar, usually of special section, laid across sleepers to provide a track for the passage of rolling stock with flanged wheels. The standard section for main line rails in Great Britain is the 95 lb. (per yard) rail of 60 feet length, made in accordance with specification of the B.S.I.

rail (*Join.*). (1) A horizontal member in framing or panelling.—(2) The upper member in a balustrade.

rail bender (*Eng.*). A short stiff steel girder with claws at the ends and a central boss carrying a heavy screw; used by plate-layers for bending rails to the required curvature.

rail bond (*Elec. Eng.*). An electrical connexion between two adjacent lengths of track or conductor-rail on a tramway or railway.

See **conductor—**
track—
continuity bond
cross bond
impedance bond.

rail chair (*Rail.*). See **chair.**

rail gauge. See **gauge** (5), **standard gauge, broad gauge, narrow gauge.**

rail guard (*Rail.*). See **check rail.**

rail post (*Build.*). A newel post.

railroad. The American term for *railway*.

railroad disease (*Vet.*). A disease of pregnant or fattened cows during, or at the end of, a long journey by rail; characterised by paresis and loss of consciousness.

rail test (*Eng.*). A drop test for ductility in which a tup weighing 1 ton is allowed to fall from varying heights on to a rail carried on supports 3 ft. apart.

railing (*Build., etc.*). An open form of fence made of upright iron rods secured in line, side-by-side, by horizontal bars passing across them.

railway (*Civ. Eng.*). A way, laid with rails, used for the passage of rolling stock; especially, a system of such rails, with all appurtenances (stations, lands, etc.), traversed by locomotives.

railway curve (*Instruments*). A drawing instrument similar to a French curve but cut at the edge to an arc of large radius. Used for drawing arcs when these are too large for beam compasses. Supplied in sets covering a wide range of radii.

railway transit (*Surv.*). A transit theodolite unequipped with means for measuring vertical angles.

rain (*Meteor.*). Rain is due to the condensation of excess water vapour when moist air is cooled below its dew-point. Rain falls when droplets increase in size until they form drops whose weight is equivalent to the frictional air resistance. The greater proportion of raindrops have a diameter of 0·2 cm. or less; in torrential rain a small proportion reach a diameter of 0·4 cm.

rain-band (*Meteor.*) An absorption band in the solar spectrum on the red side of the D lines, produced by water vapour in the earth's atmosphere.

rainbow (*Meteor., Phys.*). A rainbow is formed by sunlight which is refracted and internally reflected by raindrops, the concentration of light in the bow corresponding to the position of minimum deviation of the light. The angular radius of the primary bow is 42°, this being equal to 360° minus the angle of minimum deviation for a spherical drop. The colours, red outside, violet inside, are due to dispersion in the water. See **secondary bow.**

rainbow negative (*Cinema.*). The orthochromatic red-dyed green-sensitive negative film used as the front negative in the Multi-colour process.

rain cloud (*Meteor.*). A *nimbus cloud* (q.v.).

rain gauge (*Meteor.*). An instrument for measuring the amount of rainfall over a given period, usually 24 hours. The usual form consists of a sharp-rimmed funnel, 5 in. in diameter, leading into a narrow-necked collecting vessel which may be graduated so as to read the rainfall directly in inches or centimetres.

rain, geological action of. Rain effects important geological work by assisting in the mechanical disintegration of rocks; also chemically, in bringing about solution of carbonates, etc.; and, through the agency of running water, in redistributing the products of erosion and disintegration.

rain prints (*Geol.*). More or less circular, vertical, or slanting pits occurring on the bedding planes of certain strata; believed to be the impressions of heavy rain-drops falling on silt or clay, hard enough to retain the impression before being covered by a further layer of sediment.

rain-wash (*Geol.*). The creep of soil and superficial rocks under the influence of gravity and the lubricating action of rain.

rainwater pipe (*Build.*). A *downpipe* (q.v.).

Rainey's corpuscles (*Zool.*). In certain *Sarcosporidia*, sickle-shaped spores occurring encysted in muscle.

Rainey's tubes (*Zool.*). See **Miescher's tubes.**

raise (*Mining*). A shaft or winze excavated upwards.

raised bands (*Bind.*). Bands which show on the back of a book when bound. This indicates that the book has been sewn 'flexible.' See **bands, flexible.**

raised beach (*Geol.*). Beach deposits which are found above the present high-water mark; due to the relative uplift of the land or to a falling sea-level. See **eustatic movements.**

raised datum (*Surv.*). The datum line for the representation on plan of a section, when for convenience in drawing this is not shown in reference to the datum used for levelling but in reference to another datum parallel to it.

raised oil (*Leather*). Oil recovered by warming the wash waters, to which an acid has been added; used in the manufacture of chamois leather.

raised panel (*Join.*). A panel whose surface stands proud of the general surface of the framing members. Cf. *panel.*

raiser (*Build.*). See **riser.**

raising (*Leather*). The process by which oil is recovered from the wash waters in the manufacture of chamois leather.

raising (*Textiles*). A process carried out by means of card wire or by mechanically operated teazles, usually after milling, in order to produce a pile surface on certain woollen and worsted fabrics and on cotton blankets, flannelettes, etc.

See **raw-thread— dry— wet—**

raising-plate (*Carp.*). A horizontal timber resting on part of a structure and supporting a superstructure. See **wall plate** (2), **pole plate.**

rake (*Build.*). A long-handled tool with projecting teeth at one end, used for mixing plaster.—(*Mining*) A forked tool for loading coal underground.

rake. Generally, an angle of inclination.—(*Eng., etc.*) Angular relief, e.g. *top-rake, side-rake,* given to the faces of cutting tools to obtain the most efficient cutting angle.—(*Ship Constr.*) A term used in shipbuilding to denote *not perpendicular to the datum line.* See also **batter.**

rake (*Build.*). In a theatre, the upward slope, from the horizontal, of both the stage and the auditorium.

rake (*Mining*). An irregular vein of iron-stone: in Derbyshire, any transverse fissure vein.

raker (*Build.*). A *pointer* (q.v.).

raker (*Carp.*). See **raking shore.**

raking bond (*Build.*). A form of bond sometimes used for very thick walls, or for strengthening the bond in footings carrying heavy loads. The courses are built diagonally across the wall, successive courses crossing one another in respect of rake; triangular bats are added to enable square facework to be completed. Also called DIAGONAL BOND. See also **herring-bone bond.**

raking cornice (*Arch.*). A cornice decorating the slant sides of a pediment.

raking flashing (*Plumb.*). A *flashing* (q.v.) much used where a masonry chimney projects from a sloping roof, the upper edge of the flashing being cut to the same slope as the roof.

raking pile (*Civ. Eng.*). A pile which is not driven in vertically.

raking prop (*Mining*). An inclined timber support.

raking shore (*Carp.*). An inclined baulk of timber one end of which rests upon the ground while the other presses against the wall to which temporary support is to be given.

raking-out (*Build.*). The operation of preparing mortar joints in brickwork for pointing.

râle, rahl (*Med.*). A bubbling or crackling sound produced in a diseased lung by the passage of air over or through secretions in it; heard during auscultation.

ram (*Civ. Eng.*). (1) The monkey of a pile-driver.—(2) To consolidate the surface of loose material by punning.

ram (*Eng.*). See **hydraulic ram.**

ra'mal, ra'meal (*Bot.*). Relating to a branch.

Raman effect, rah'— (*Light*). Appearance of additional lines in the spectrum of the light scattered by a substance when illuminated by monochromatic light. The so-called 'Raman lines' appear close to and on each side of the exciting radiation-line. They are caused by the increase or decrease of frequency due to the incident light quanta losing energy to, or gaining it from, a vibrating molecule. See **Compton effect.**

rambler (*Bot.*). A weak-stemmed plant which leans on and scrambles over surrounding vegetation.

ramenta'ceous (*Bot.*). Covered with ramenta.

ramen'tum (*Bot.*). A thin brownish scale, one cell-layer thick, occurring on the stems, petioles, and leaves of ferns.—*pl.* **ramenta.**

ram'icole (*Bot.*). Living on twigs.

ram'icorn (*Zool.*). (Of Insects) having branched antennae.

ramification (*Bot., Zool.*). Branching, a branch; as of the shoot of a plant or of a nerve or blood-vessel.

ramisec'tion, ramisec'tomy (*Surg.*). The operation of cutting the sympathetic nerves between their origin from the spinal cord and the sympathetic ganglia.

ram'melsbergite (*Min.*). Essentially composed of di-arsenide of nickel, but with isomorphous diarsenide of iron; crystallises in the orthorhombic system.

rammer (*Build.*). A *punner* (q.v.).

rammer (*Moulding*). A hand tool, which may take various forms, for packing the sand of a mould evenly round the pattern.

Ramm'stedt's operation (*Surg.*). Incision of the pylorus down to the mucous membrane, done in the treatment of congenital hypertrophy of the pylorus.

ram'ose (*Bot.*). Much branched.

ramp (*Civ. Eng.*). An inclined surface provided in lieu of steps: especially, a sloping end to a railway platform.

ramp (*Join.*). A sudden rise in a handrail when it is concave upwards. Cf. *knee.*

ramp (*San. Eng.*). A short length of sewer laid locally at a much steeper gradient than the normal.

ramp & twist (*Masonry*). A term applied to work in which a surface both twisting and rising has to be or is produced.

rampant arch (*Civ. Eng.*). An arch whose abutments are not in the same horizontal line.

rampant centre (*Carp.*). A centre for a rampant arch.

Ramsay and Young's rule (*Chem.*). The ratio of the boiling-points of two liquids of similar chemical character is approximately independent of the pressure at which they are measured.

Ramsay Sound Series (*Geol.*). A group of schistose and slaty rocks with tuffs found in Pembrokeshire; of Pre-Cambrian age.

Ramsden eyepiece (*Light, Surv.*). An eyepiece often used in an optical instrument in which cross-wire measurements are to be made. It consists of two similar plano-convex lenses separated by a distance equal to two-thirds the focal length of each, and having their convex faces towards each other. The focal plane is just outside the system.

ramshorn test (*Eng.*). A test for determining the suitability of iron and steel bar for forging; the heated bar is flattened, split, and the halves bent in opposite directions through 180°.

ram'ular (*Bot.*). Relating to a branch.

ram'ulus (*Bot.*). A very small branch of a stem or of a leaf.—(*Zool.*) See **hydrocladia.**—*pl.* **ramuli.**

ra'mus (*Zool.*). The barb of a feather: in *Vertebrata*, one lateral half of the lower jaw, the mandible: in *Rotifera*, part of the trophi: any branch-like structure; a ramification.

rance (*Build.*). A shore.

random (*Masonry*). Said of rubble masonry in which the stones are of irregular shape and the work is not coursed.

random (*Typog.*). A composing frame used for making-up, and for holding standing matter or matter awaiting distribution.

random response (*Acous.*). The same as the *reverberation response* of a microphone.

random slates (*Build.*). Slates of odd sizes.

random-tooled ashlar (*Masonry*). A block of stone finished with groovings irregularly cut, usually with a broad tool.

random winding (*Elec. Eng.*). See **mush winding.**

range (*Aero.*). The maximum distance that an aircraft can travel without refuelling. Measured in air miles, or in still air. See **radius of action.**

range (*Bot.*, *Zool.*). The area over which a species grows or feeds, and breeds in the wild state.

range (*Build.*). A *kitchener* (q.v.).

range (*Radio*). The distance over which signals can be reliably transmitted.

range (*Surv.*). To fix points, either by eye or with the aid of an instrument, to be in the same straight line.—(*Typog.*) To set in vertical alignment, e.g. in tabulation work.

range beacon (*Radio*). A radio beacon used for the guidance of aircraft, in which the course is marked by the region of equal fields from two directional antennae, which transmit different signals on the same wavelength and at the same power. Also called RADIO RANGE.

rangefinder (*Armaments*). An instrument used for finding the range to the target before opening fire with guns or small arms.

range of a tide. The vertical distance between consecutive high- and low-water levels at a place.

range of stress (*Met.*). The range between the upper and lower limit of a cycle of stress such as is applied in a fatigue test. The mid-point of the range is the *mean stress.*

ranging rod (*Surv.*). A wooden pole used to mark stations conspicuously, or to assist in ranging lines.

rangs (*Textiles*). See **tier.**

ran'ine (*Zool.*). Pertaining to, or situated on, the under surface of the tongue.

raniv'orous (*Zool.*). Feeding on frogs.

rank of coal (*Geol.*). This is determined by the extent to which the original 'mother substance' of the coal has been modified by heat, pressure, and chemical change after burial. Thus brown coal is of *low rank*, anthracite of *high rank.*

rank of selectors (*Auto. Teleph.*). The whole set of selectors which are concerned with a specified stage in setting up a call through an exchange.

Rankine cycle (*Eng.*). A composite steam plant cycle used as a standard of efficiency, comprising introduction of water by a pump to boiler pressure, evaporation, adiabatic expansion to condenser pressure, and condensation to the initial point.

Rankine efficiency (*Eng.*). The efficiency of an ideal engine working on the *Rankine cycle* (q.v.), under given conditions of steam pressure and temperature.

Rankine's formula (*Civ. Eng.*). An empirical formula giving the collapsing load for a given column. It states that

$$P=\frac{f_c.A}{1+a\left(\frac{l}{k}\right)^2}$$

where P=the collapsing load, f_c=safe compressive stress for very short lengths of the material, A=area of cross-section, l=the length of the pin-jointed column, k=the least radius of gyration of the section, a=a constant for the material$=\frac{f_c}{\pi^2.E}$ where E is Young's modulus for the material.

ran'ula (*Med.*). A cyst formed in the gland under the tongue.

ranun'cula'ceous (*Bot.*). Having the characters of a buttercup.

Ranvier's nodes, rahn^{g}vyā (*Zool.*). Constrictions of the neurolemma occurring at regular intervals along the course of peripheral medullated nerve-fibres.

Raoult's law, ra-ool' (*Chem.*). For dilute solutions, the relative lowering of the vapour pressure of a liquid by a dissolved substance is approximately equal to the mol fraction of the latter, independently of the temperature and of the nature of both the solvent and the solute.

Rap'akivi Granite, —kē've (*Geol.*). A type of granite described from a locality in Finland, characterised by the occurrence of rounded pink crystals of orthoclase surrounded by a mantle of whitish sodic plagioclase. As a textural term, applicable to all granites showing this anomaly, *Rapakivi* has a wide use.

Rapaloid (*Paint.*). Trade-name for a cellulose enamel.

raphe, rāf (*Bot.*). (1) An elongated mass of tissue, containing a vascular strand, and lying on the side of an anatropous ovule, between the chalaza and the attachment to the placenta.—(2) A line running longitudinally on the valve of a diatom indicating the position of a narrow slit in the wall; it bears a nodule at each end and one in the middle.

raphe (*Zool.*). A broad junction; as the junction between the two halves of the brain in Vertebrates.

ra'phide (*Bot.*). A long needle-shaped crystal, usually of calcium oxalate, occurring singly, or more often in rounded masses, or in sheafs, in plant cells.

rapidity of lenses (*Photog.*). The so-called speed of a lens is measured by the ratio of the working aperture diameter to the focal-length. See ***f*-number.**

rapping (*Moulding*). The process of loosening a pattern in a mould to facilitate its withdrawal. A spike or lifting screw is inserted in the pattern and tapped smartly in every direction.

rapport, ra-pōr' (*Psychol.*). The emotional bond or atmosphere existing between analyst and patient, which is conducive to *suggestion* (q.v.).

Rap-rig (*Build.*). Trade-name for a form of light scaffolding capable of being speedily erected; it is especially convenient for interior use.

rap'tatory, rapto'rial (*Zool.*). Adapted for snatching or robbing, as birds of prey.

rare earths (*Chem.*). The oxides (M_2O_3) of the rare earth elements.

rare earth elements (*Chem.*). A group of metallic elements so similar in their chemical properties that they are generally considered as occupying the position of a single element in Group III of the periodic system. Their separation, involving the repeated fractional crystallisation and decomposition of their salts, is a very long and tedious process. They all form a basic oxide, M_2O_3 (an 'earth'), but some of them are relatively abundant. Strictly, the rare earth group consists only of the elements with atomic numbers from 57 to 71 (lanthanum, cerium, praseodymium, neodymium, illinium, samarium, europium, gadolinium, terbium, dysprosium, holmium, erbium, thulium, ytterbium, lutecium), but scandium (21) and yttrium (39) are generally included on account of their similarity to the above elements. See Periodic Table in *Appendix*.

rare gases (*Chem.*). The elements of Group O of the periodic system, helium, neon, argon, krypton, xenon, and radon. They show practically no tendency to combine with other elements and, with the exception of radon, can all be obtained from the atmosphere.

rarefaction (*Med.*). Abnormal decrease in the density of bone as a result of absorption from it of calcium salts, as in infection of bone.

Rar'itan Sandstones (*Geol.*). Lignitic sands of aeolian origin occurring in the Cretaceous of the Atlantic Plain, succeeding the Comanchean; equivalent to the Dakota Sandstone of the Great Plains.

Raschel (*Hosiery*). The name for the two-bar warp loom, fitted with latch needles.

rashing (*Mining*). A thin layer of shale or inferior coal, sometimes found between the coal-seam and the roof.

raso'rial (*Zool.*). Adapted for scratching.

rasorite (*Min.*). See **kernite.**

rasp (*Eng.*). A coarse file

rastel'lus (*Zool.*). In Spiders which dig burrows, a rake-like row of stout teeth on the outside lower edge of the first joint of the chelicerae.

raster (*Television*). The pattern of closely spaced parallel lines formed on the fluorescent screen of a cathode ray tube when the frame and line-scanning currents or voltages are applied simultaneously, as for reception of the picture. The image is formed by modulating the brightness of the different parts of the raster.

rat-bite fever (*Med.*). See **sodoku.**

rat-trap bond (*Build.*). A form of bond in which a 9-in. wall is built up of bricks on edge, so arranged as to enclose a 9 × 3 in. cavity.

ratch (*Spinning*). The distance between the nip of the front and back rollers in a drawing machine.

ratchet brace (or **drill**) (*Eng.*). A drilling brace in which the drill spindle is rotated intermittently by a ratchet wheel engaged by a pawl on a hand-lever; used in confined spaces, repair work, etc.

ratchet time base (*Television*). The time base used for generating the framing frequency current or voltage in a system employing ratcheting. The current or voltage must change in a series of equal steps uniformly spaced in time, and then return to its original value.

ratchet-toothed escape wheel (*Horol.*). An escape wheel with fine-pointed teeth; used in English lever watches.

ratchet wheel (*Eng.*). A wheel with inclined teeth for engaging with a *pawl* (q.v.), so as to allow of forward motion only and arrest backward running.—(*Horol.*) A wheel with specially shaped pointed teeth which engage with a click; used on the barrel arbor to prevent it turning back when the spring is being wound.

ratcheting (*Television*). Formation of the raster in such a manner that the deflection of the spot in the vertical (frame-frequency) direction remains constant during the scanning of each line, being altered during the flyback periods of the line frequency.

ratching (*Cotton Spinning*). The operation of attenuating the rovings between the front rollers and spindles of a mule spinning machine, by stopping the front roller delivery before the carriage carrying the spindles has completed its outward run.

rate of climb (*Aero.*). Generally, the rate of ascent from the earth. In performance testing, the vertical component of the air path of an ascending aircraft, corrected for the standard atmosphere.

rated altitude (*Aero.*). The height, measured in the *standard atmosphere* (q.v.), at which a supercharged engine delivers its maximum power at normal boost.

rated blowing-current (*Elec. Eng.*). The current at which a fuse-link is specified by the maker to melt and break the circuit.

rated breaking-capacity (*Elec. Eng.*). The r.m.s. current, or the kVA at the rated voltage, which a circuit-breaker is specified by the maker to interrupt without damage.

rated input (or **output**) (*Elec. Eng.*). The input (or output) of an electrical machine or transformer specified as the maximum permissible by the maker, under certain given conditions. Also called RATED CAPACITY, RATED CONSUMPTION, RATED LOAD.

rated making-capacity (*Elec. Eng.*). The maximum asymmetrical current which a circuit-breaker can make at the rated voltage.

Rathke's pocket, rat'ke (*Zool.*). In developing Vertebrates, a small pit situated on the dorsal side of the oral cavity, which marks the point of invagination of the hypophysis and itself gives rise to the transitory hypophysial duct.

ratine, —tēn' (*Textiles*). A dress fabric with a rough surface, and either plain, fancy, or stripe effects; made from worsted or cotton yarns.

rating (*Elec. Eng.*). The maximum output or input of a piece of electrical apparatus as specified by the maker.

See **continuous— intermittent—**

rating nut (*Horol.*). A milled nut which supports the pendulum bob. By rotating it the bob is raised or lowered, thus altering the time of vibration of the pendulum.

ratio (*Acous.*). See **acoustic ratio.**

ratio arms (*Elec. Eng.*). Two adjacent arms of a Wheatstone bridge, the resistances in which can be made to have one of several fixed ratios.

ratio, aspect (*Aero.*). See **aspect ratio.**

Ratio-balance protective system (*Elec. Eng.*). A name given to a special form of impedance protective system in which discrimination is obtained by a measurement of the reactance between a particular relay and the fault.

ratio error (*Elec. Eng.*). A departure of the ratio between the primary and secondary voltages or currents of a voltage or current transformer from the rated value.

ratio of compression (*Eng.*). See **compression ratio.**

ratio of slenderness (*Struct.*). The ratio between the length or height of a pillar and its least radius of gyration.

ratio of specific heats (*Phys.*). The ratio of the specific heat of a gas at constant pressure to that at constant volume has a constant value of about 1·67 for monatomic gases, 1·4 for diatomic gases, and values which approach unity for polyatomic gases. This ratio, denoted by γ, enters into the *adiabatic equation* (q.v.).

ratio of transformation (*Elec. Eng.*). See **transformation ratio.**

rational horizon (*Surv.*). See **true horizon.**

rationalisation (*Psychol.*). The attempt to substitute conscious reasoning for unconscious motivations in explaining or excusing behaviour.

Ratlinghope Group (*Geol.*). A series of red and purple grits and shales, with conglomerates of Pre-Cambrian age, occurring in the West of the Longmynd in Shropshire.

rattle (*Acous.*). The perception of a large number of echoes, which are distinct but received at very short intervals of time.

rattle (*Paper*). The crackling noise when paper is handled. It indicates the degree to which the pulp or fibre has been hydrated in the process of beating, and can be augmented by the addition of starch.

rattle (*Zool*.). The series of horny rings representing the modified tail-tip scale in Rattlesnakes (*Colubridae*).

rattle echo (*Acous.*). An unmusical multiple echo, generally associated with thunder, which is formed by near-by flashes giving rise to a sharp acoustic impulse which is reflected between mountains or strata of air.

Rauber's cells, row'ber (*Zool.*). In *Mammalia*, cells of the trophoblast situated immediately over the embryonic plate.

raw (*Photog.*). Said of any sensitive emulsion which has not been exposed.

raw hide (*Tanning*). A hide which has been dried or treated with a preservative in order to prevent putrefaction prior to tanning.

rawhide hammer (*Eng.*). A hammer the head of which consists of a close roll of hide projecting from a short steel tube; used by fitters to avoid injuring a finished surface.

raw silk (*Textiles*). The natural material from which silk yarns are made. The filaments from 4, 5, 6, or more cocoons are reeled to form 'single' threads, which are converted into yarns by throwing.

raw thread raising (*Textiles*). A process of raising which produces a soft pile on fabrics; usually carried out after scouring.

Rawlplug (*Build.*). Trade-name for a small tube of tough compressed fibre for insertion in a hole, to provide a fixing plug into which a screw may be turned.

ray (*Bot.*). See **vascular ray.**

ray (*Phys.*). A line which represents the direction in which light is travelling. A ray forms a normal to a wave-surface. Sometimes, a beam of light of small cross-section. See Supplement; also **geometrical optics.**

ray (*Zool.*). A skeletal element supporting a fin: a sector of a radially symmetrical animal.

ray floret (*Bot.*). One of the small flowers radiating out from the margin of a capitulum or other dense inflorescence.

ray initial (*Bot.*). One of the cells of the cambium which takes part in the formation of a vascular ray.

ray tracheide (*Bot.*). A somewhat thick-walled cell which, with many other similar cells, occurs in the vascular rays of pine trees; it has bordered pits, and conducts aqueous solutions horizontally.

ray tube. Contraction for *cathode ray tube.*

Rayleigh disc (*Acous.*). A small disc, with a vertical diameter, hung by a fine thread of glass or quartz. If placed at an angle to a progressive sound-wave, the disc experiences a torque which depends on the square of the velocity of the molecules in the medium.

Rayleigh refractometer (*Light*). An instrument for measuring the refractive index of a gas by an optical interference method. Each of two interfering light beams passes through a tube which may contain air or gas or be evacuated. By observing the shift of the interference fringes when one of the tubes is evacuated and the other contains gas, the refractive index of the gas may be calculated from the expression $\mu=1+\frac{s\lambda}{l}$ where l is the length of tube and s the number of fringes shifted.

Raynaud's disease, rā-nō (*Med.*). A paroxysmal disorder of the arteries of the fingers and toes characterised by attacks of pain in them, the fingers (or toes) going white and then blue; gangrene may supervene.

rayon (*Textiles*). 'Artificial silk.' Filaments formed from solutions of modified cellulose, made by various processes. After passing through the spinneret or spinning jet, the filaments are combined to form yarn. In the viscose and copper processes of making rayon, the filaments pass through a bath which coagulates them. In acetate manufacture, spinning is a dry process.

See **acetate—** **viscose—**
cuprammonium (or **copper**)**—**

raze (*Build., Civ. Eng.*). To demolish (see **demolition**).

Rb (*Chem.*). The symbol for *rubidium.*

R.C. (*Build.*). Abbrev. for *rough cutting.*

RdAc (*Chem.*). The symbol for *radioactinium,* an isotope of thorium.

RdTh (*Chem.*). The symbol for *radiothorium,* a disintegration product and isotope of thorium.

Re (*Chem.*). The symbol for *rhenium.*

reach (*Hyd. Eng.*). A clear uninterrupted stretch of water.

reactance (*Acous.*). See under **acoustic impedance.**

reactance (*Elec. Eng.*). The component of the impedance of an a.c. circuit which is due to inductance or capacitance in the circuit.

See **leakage—** **synchronous—**
quadrature— **transient—**

reactance coil (*Elec. Eng.*). See **inductor, reactor.**

reactance coupling (*Radio*). Coupling between two circuits by means of a reactance common to both, particularly when the reactance is that of an inductance coil.

reactance drop (or **rise**) (*Elec. Eng.*). The decrease or increase in the available voltage at the terminals of a circuit caused by the reactance voltage set up within that circuit.

reactance relay (*Elec. Eng.*). An impedance relay which operates as soon as the reactance of the circuit to which it is connected falls below a predetermined value.

reactance theorem (*Elec. Comm.*). See **Foster's reactance theorem.**

reactance voltage (*Elec. Eng.*). The voltage produced by current flowing through the reactance of a circuit; equal to the product of the current (amps) and the reactance (ohms).

reactants (*Chem.*). The substances taking part in a chemical reaction.

reaction (*Bot., Zool.*). Any change in behaviour of an organism in response to a stimulus.

reaction (*Chem.*). (1) See **chemical reaction.** —(2) The acidity or alkalinity of a solution.

reaction (*Radio*). The result of coupling between the anode and grid circuits of a thermionic valve or valves whereby an initially small voltage on the grid is reinforced by the amplified currents flowing in the anode circuit. Used for reducing the effects of resistance losses in a resonant circuit. A preferable term is *retroaction.*

reaction chain (*Chem.*). See **chain reaction.**

reaction circuit (*Radio*). That part of the anode circuit of a thermionic valve through which passes the current that reacts on the grid circuit.

reaction coil (*Radio*). A coil included in the anode circuit of a thermionic valve and inductively coupled to the grid circuit.

reaction condenser (*Radio*). A variable condenser for controlling the degree of reaction.

reaction coupling (*Radio*). Coupling between the anode and grid circuits of a thermionic valve for obtaining reaction.

reaction formation (*Psycho-an.*). The development of a character trait which is usually the exact opposite of the original simple character trait. Formed as a reaction against the environment or from endogenous causes, or both, e.g. the character trait of submissiveness in place of the original one of aggression.

reaction generator (*Elec. Eng.*). A special form of synchronous generator excited by alternating current.

reaction isochore (*Chem.*). See **van't Hoff's reaction isochore.**

reaction isotherm (*Chem.*). See **van't Hoff's reaction isotherm.**

reaction order (*Chem.*). See **order of reaction.**

reaction pair (*Geol.*). Two minerals of different composition which exhibit the reaction relationship (see **reaction principle**). Thus forsterite at high temperature is converted into enstatite at a lower temperature, by a change in the atomic structure involving the addition of silica from the magma containing it. Forsterite and enstatite form a *reaction pair.*

reaction principle (*Geol.*). The conversion of one mineral species stable at high temperature into a different one at lower temperatures, by reaction between the crystal phase and the liquid magma containing it. The change may be continuous over a wide temperature range (*continuous reaction*), or may take place at certain fixed temperatures only (*discontinuous reaction*).

reaction products (*Chem.*). The substances formed in a chemical reaction.

reaction rate, specific (*Chem.*). See **velocity constant.**

reaction rim (*Geol.*). The peripheral zone of mineral aggregates formed round a mineral or rock fragment by reaction with the magma during the consolidation of the latter. Thus, quartz caught up by basaltic magma is partially resorbed, at the same time being surrounded by a reaction rim of granular pyroxene.

reaction time (*Bot., Zool.*). The time interval between a stimulus and the appropriate reaction.

reaction turbine (*Eng.*). A steam turbine in which the steam expands progressively in passing alternate rows of fixed and moving blades, the kinetic energy continuously developed being absorbed by the latter.

reactivation (*Chem.*). The restoration of an atom, molecule, or substance to an activated state.

reactive (*Chem.*). Readily susceptible to chemical change.

reactive component (*Elec. Eng.*). A term often used to denote the component of the vector representing an alternating quantity which is in quadrature (at 90°) with some reference vector; e.g. *reactive component of current,* commonly called *reactive current.* Also called QUADRATURE COMPONENT, WATTLESS COMPONENT, IDLE COMPONENT. See **reactive voltage, reactive volt-amperes.**

reactive current (*Elec. Eng.*). The component of a vector representing the current in an a.c. circuit which is in quadrature (at 90°) with the voltage.

reactive factor (*Elec. Eng.*). The ratio of the reactive volt-amperes in a circuit to the total volt-amperes.

reactive iron (*Elec. Eng.*). Iron inserted in the leakage-flux paths of a transformer in order to increase its leakage reactance.

reactive load (*Elec. Eng.*). A load in which the current lags behind or leads on the voltage applied to its terminals.

reactive power (*Elec. Eng.*). The reactive volt-amperes, i.e. the product of the voltage of a circuit and the reactive component of the current.

reactive volt-amperes (*Elec. Eng.*). The product of the reactive voltage and the current, or the voltage and the reactive current, in an a.c. circuit. Commonly abbreviated to **var** (*volt-ampere-reactive*).

reactive volt-ampere-hour (*Elec. Eng.*). A unit employed in measuring the product of reactive volt-amperes in a circuit and the time during which they have been passing.

reactive volt-ampere-hour meter (*Elec. Eng.*). An integrating meter which measures and records the total number of reactive volt-ampere-hours which have passed in the circuit to which it is connected.

reactive voltage (*Elec. Eng*). That component of the vector representing the voltage of an a c. circuit which is in quadrature (at 90°) with the current.

reactor (*Elec. Eng*) A piece of apparatus used in an electric circuit, primarily on account of its reactance.

See **current-limiting—** **earthing—**

reader (*Typog*) One who reads and corrects printers' proofs, comparing them with the original copy.

Reading Beds (*Geol.*). A group of sands, mottled clays, and gravels of Eocene age, occurring in the London and Hampshire basins; of fluviatile origin in the west, passing into deltaic deposits and ultimately into the marine Woolwich Beds of the same age in the east.

reading (or **shunted**) **condenser** (*Teleg.*). A resistance shunted with a condenser; inserted in a telegraph line to improve the definition of received signals over great distances.

reading microscope (or **telescope**) (*Phys.*, etc.). See **cathetometer.**

reading-off (*Textiles*). The operation of converting a lace pattern draft into a figure sheet or other form from which jacquard cards, etc. can be punched.

reagent (*Chem.*). A substance or solution used to produce a characteristic reaction in chemical analysis.

real image (*Light*). See **image.**

realgar, re-al'ger (*Min.*). A bright-red monosulphide of arsenic, which crystallises in the monoclinic system.

realism (*Photog.*). See under **impressionism.**

ream (*Paper*). Twenty quires, or 480 sheets. A *printer's ream* is 516 sheets.

reamer (*Eng.*). A hand- or machine-tool for finishing drilled holes. It consists of a cylindrical or conical shank on which cutting edges are formed by longitudinal or spiral flutes, or in which separate teeth are inserted. See **expanding reamer.**

reany (*Textiles*). A yarn made by doubling together a single thread and a twofold thread.

rearranged twills (*Textiles*). Fancy weaves made by rearranging the ends of a regular twill.

reason-piece (*Carp.*). A *raising-plate* (q.v.).

Réaumur malleable cast-iron, rā'ō-mür (*Met.*). See **malleable cast-iron.**

Réaumur scale (*Phys.*). A temperature scale in which the fixed points are 0° R. (freezing-point of water) and 80° R. (boiling-point of water). Sometimes used on the Continent.

re-balsaming (*Photog., etc.*). The process of separating and re-cementing lens elements with Canada balsam, after deterioration of the latter.

rebate (*Build.*). A shallow recess, in which door or window frames are to be fitted, formed with small projections in the jambs of external walls.

rebate (*Carp.*). A groove cut into the edge of a piece of timber.

recales'cence (*Met.*). The evolution of heat which occurs when iron or steel cools through the critical range. This causes a retardation of the cooling, which is shown on cooling curves and can be seen by the eye in a darkened room. Cf. *de-calescence.*

recapitulation (*Biol.*). Reflection of ancestral characteristics in the developmental stages of the individual.

rece'dent (*Gen.*). A term applied either to the genom or to the plasmon when these are of subsidiary importance in heredity.

receiver (*Elec. Comm.*). The equipment which receives signals in an electrical form and converts them into the form desired; e.g. a radio *receiver*, or a telephone *receiver*.

See **all-wave—**
Bell—
broadcast—
loudspeaking—
moving-coil—
piezo—
telephone—
thermal—

receiver response (*Acous.*). The response of a telephone receiver operating into a real or artificial ear; expressed as the ratio of the square of the excess-pressure in the specified cavity to the electrical power applied to the receiver.

receptacle (*Bot.*). A term of wide application and diverse meaning. It may mean:—(1) In fungi, a spore-bearing structure, especially if more or less concave; (2) in algae, a swollen end of a branch containing reproductive organs; (3) in liverworts, a cup containing gemmae; (4) in mosses, a group of sexual organs surrounded by leaves; (5) in ferns, the cushion of tissue bearing the sporangia; (6) in flowering plants, (*a*) the more or less enlarged end of the flower stalk bearing the parts of the flower (also known as TORUS, THALAMUS), (*b*) the enlarged end of the peduncle, bearing the flowers of a crowded inflorescence.

receptac'ulum (*Zool.*). (1) A receptacle: a sac or cavity used for storage.—(2) A sac in which ova are stored, as in some *Oligochaeta.*

receptaculum sem'inis (*Zool.*). A sac in which spermatozoa are stored, as in many Invertebrates; a spermatheca.

reception wall (*Build.*). A *retention wall* (q.v.).

receptive papilla (*Bot.*). In some *Phycomycetes*, a small outgrowth, from the oögonium into the antheridium, to which the antheridium becomes attached.

receptive spot (*Bot.*). A clear area in the eggs of some fungi and algae through which the sperm enters.—(*Zool.*) The point on the surface of an ovum at which the sperm enters.

receptiveness (*Bot.*). The condition of the stigma when effective pollination is possible.

receptivity (*Bot.*). See **susceptibility.**

receptor (*Med.*). See **side-chain theory.**

receptor (*Zool.*). An element of the nervous system specially adapted for the reception of stimuli; as a sense-organ or sensory nerve-ending.

recess (*Build.*). A niche or alcove in a wall.

recess (*Zool.*). A small cleft or depression; as the *optic recess.*

recessed arch (*Build.*). A *compound arch* (q.v.).

recessed pointing (*Build.*). A method of pointing designed to prevent any peeling off; the mortar at all joints both vertical and horizontal is pressed back about ¼ in. from the face of the wall.

recessed switch (*Elec. Eng.*). See **flush-switch.**

recessive character (*Gen.*). Of a pair of allelomorphic characters, the one which will not be manifested if both are present. Also known briefly as RECESSIVE.

reciprocal cross (*Bot.*). A cross between two plants in which each plant receives pollen from the other.

reciprocal diagram (*Struct.*). See **force diagram.**

reciprocal hybrids (*Zool.*). A pair of hybrids obtained by crossing the same two species, in which the male parent of one belongs to the same species as the female parent of the other; e.g. mule and hinney.

reciprocal innervation (*Zool.*). Innervation of an organ by two sets of nerves having opposite effects; e.g. the innervation of the arteries by vasoconstrictor and vasodilator fibres.

reciprocal levelling (*Surv.*). The operation of finding the difference of level between two points as the mean of the differences of level found by reading on staffs held on the two points from (1) a level set up near the first point, and (2) a level set up near the second point. This process eliminates instrumental error and corrects errors due to curvature and refraction.

reciprocal networks (*Elec. Comm.*). Two networks are said to be *reciprocal* when the product of their impedances remains a constant at all frequencies; thus an inductance is reciprocal to a condenser.

reciprocal proportions (*Chem.*). See **law of equivalent** (or **reciprocal**) **proportions.**

reciprocal theorem (*Struct.*). The statement, enunciated by Clerk Maxwell, that on any elastic structure, if a load W applied at a point A causes a deflection y at another point B, then, if the loading be taken off A and applied at B, it will cause a deflection y at A, provided that W acts at B along the line in which y was measured, and that the deflection at A is measured along the original line of action of W at A.

reciprocal translocation (*Cyt.*). A mutual interchange of portions between two chromosomes.

reciprocating engine (*Eng.*). Any engine which employs a piston working in a cylinder, the piston being caused to oscillate by the periodic pressure of the working fluid.

reciprocation (*Elec. Comm.*). The operation of finding a reciprocal network to a given network. Used in the design of electric wave filters.

reciprocity (*Struct.*). The principle enunciated in the *reciprocal theorem* (q.v.).

reciprocity theorem (*Elec. Comm.*). The interchange of electromotive force at one point in a network and the current produced at any other point produces the same current for the same electromotive force.

Recklinghausen's disease (*Med.*). See **molluscum fibrosum**; also **fibrocystic disease** (2).

reclaimed rubber (*Rubber*). Rubber recovered from waste or used rubber goods. The most extensively used method of reclamation is that of heating ground scrap with a dilute solution of caustic soda at a temperature of about 180° C. for 12 to 20 hours.

recli'nate (*Bot.*). Bent back: curved downwards.

recoil escapement (*Horol.*). A clock escapement (invented by Hooke, 1635-1703) in which the acting faces of the pallets are arcs of circles, and at the end of each swing of the pendulum the pallets push the escape wheel backwards a small amount, causing the recoil. This escapement (also known as the ANCHOR ESCAPEMENT) is used largely for domestic clocks. Although departing from the requirements of the ideal escapement, it gives very satisfactory results, as it tends to be self-correcting; i.e. if there is any tendency for the arc of vibration to increase, there is a proportionally greater recoil, which reduces the arc.

recoil gear (*Artillery*). The whole recoil mechanism, embracing both buffer and recuperator.

recolonisation (*Bot.*). The re-establishment of vegetation on an area which has been stripped of plants.

recombination (*Cyt.*, *Gen.*). Regroupings of linked characters caused by crossing-over.

re-combing (*Textiles*). A second combing of worsted tops, to remove further noil and ensure a better yarn.

recon'naissance (*Surv.*). The process of preliminary examination, by the surveyor, of the ground which he is to survey, so that he may decide on the best way of arranging the work.

reconstructed stone (*Civ. Eng.*). Artificial stone made of concrete blocks faced to resemble natural stone.

reconstruction (*Zool.*). The reconstitution of the structure of an organ or organism from a series of sections.

record (*Acous.*). The popular name for a gramophone record in disc form. Made by die-pressing, under high pressure and temperature, a plastic compound (based on shellac and a filler) between two stampers. Each stamper is formed by electrodeposition processes from an original wax blank, on which a track has been cut by a stylus operated by currents amplified from a microphone. The term strictly applies to any sound record from which the original sounds can be reproduced at any time.

See **cylindrical—**
disc—
film—
laminated—
paper-surface—
shellac—
unbreakable—

Recordak (*Photog.*). A machine for making routine photographic records of documents on micro-film, for subsequent reference by projection on a ground-glass plate.

recorder (*Acous.*). A machine for registering a sound, either magnetically, photographically, or on wax.

See **film—**
home—
magnetic—
photographic—
wax—

recorder (*Elec. Eng.*). See **graphic instrument.**

recording (*Acous.*). The art, practice, and science of registering wave-forms arising from sound sources, so that they can be re-created at any arbitrary subsequent time, with allowance for delay necessitated by processing.

See **acoustic—**
constant-velocity—
contour—
cross—
disc—
electric—
film—
hill-and-dale—

lateral—
magnetic—
noiseless—
photographic—
radial—
variable-area—
variable-density—
vertical—

recording amplifier (*Acous*). The thermionic amplifier preceding the recording heads of wax cutters.

recording drum (*Cinema.*). The smooth wheel which carries the unexposed film as it is being subjected to the modulated light-beam in a sound-film recorder.

recording head (*Acous.*). (1) The electromechanical device to which modulation currents are applied to operate the cutting stylus in a wax recorder.—(2) The registering device, containing magnetising coils and pole-pieces, through which magnetic tape is drawn in magnetic recording.

recording instrument (*Elec. Eng.*). See **graphic instrument.**

recor'dist (*Elec. Comm.*). The operator of the controls which determine the amplitude of electric currents which control a sound-recording device. See **control** (*Acous.*), **monitor-man.**

recovery voltage (*Elec. Eng.*). The normal frequency or d.c. voltage which appears across the contacts of a switch, circuit-breaker, or fuse after it has interrupted the circuit.

recovery, water (*Aero.*). See **water recovery.**

recrystallisation (*Chem.*). The process of the reforming of crystals, usually by dissolving them, concentrating the solution, and thus permitting the crystals to reform. Frequently performed in the process of purification of a substance.—(*Met.*) The replacement of deformed crystals by a new generation of crystals, which begin to grow at certain points in the deformed metal and eventually absorb the deformed crystals. This process leads to the elimination of strain-hardening.

recrystallisation temperature (*Met.*). The temperature at which recrystallisation occurs. It is sometimes defined as the temperature at which the new generation of crystals first appears on heating, but is more usually the range of temperature in which the strain-hardening disappears rapidly. Lead, tin, and zinc can recrystallise at air temperature; iron, copper, aluminium, and nickel have to be heated.

rectal gland (*Zool.*). In *Selachii*, a small dorsal glandular diverticulum of the rectum; of unknown function.

rectangular notch (*Civ. Eng.*). A notch plate having a rectangular notch cut in it; used for the measurement of large discharges.

recti- (Latin *rectus*, straight). A prefix used in the construction of compound terms; e.g. *rectirostral*, having a straight beak.

rectification (*Chem.*). The purification of a liquid by redistillation.

rectification (*Elec. Eng.*). The conversion of an alternating current into a direct current by means of some form of rectifier or rectifying apparatus. See **half-wave rectification, full-wave rectification.**—(*Radio*) Usually, the conversion of radio frequency into audio frequency in a radio receiver (also called DETECTION, DEMODULATION). See **linear rectification.**

rectified current (*Radio*). The low-frequency current output from a rectifier.

rectifier (*Elec. Eng.*). A device for converting an alternating current into a direct current by the inversion or suppression of alternate half-waves.

See **arc—**
copper-oxide—
electrolytic—
ignitron—
jet-wave—
mechanical—
point-plate—
thermionic—

rectifier cell (*Photo-electric Cells*). A cell comprising an intimate contact surface between a metal and its oxide. In addition to its photo-electric properties, it exhibits unidirectional conductivity. A typical example is the *Photox cell.*

rectifier instrument (*Elec. Eng.*). An a.c. instrument in which the current to be measured is rectified and measured on a d.c. instrument.

rectifying detector (*Radio*). A detector of electromagnetic waves which depends for its action on the rectification of high-frequency currents, as opposed to one employing thermal, electrolytic-breakdown, or other similar effects.

rectifying valve (*Radio, Thermionics*). Any thermionic valve in which direct use is made of the unilateral or asymmetrical conductivity effects, as opposed to one used primarily for amplification; e.g. a diode used as a rectifier for the anode voltage supply to a receiver, or a triode used as a detector.

rectilinear lens (*Photog.*). A lens which provides images with no distortion, as far as parallel lines are concerned.

rec'tinerved (*Bot.*). Having straight or parallel veins.

rec'tipet'aly (*Bot.*). The tendency of a plant member to grow in a straight line.

rectiros'tral (*Zool.*). Having a straight beak.

rectise'rial (*Bot.*). Arranged in straight rows.

recto (*Typog.*). The right-hand page of a book, bearing an odd page-number.

recto-. A prefix used in the construction of compound terms having reference to the *rectum* (q.v.); e.g. *rectogenital*, pertaining to the rectum and the genitalia.

rec'tocele, —sēl (*Med.*). A prolapse or protrusion of the lower part of the posterior vaginal wall, carrying with it the anterior wall of the rectum.

rec'trices, —tris-ēz (*Zool.*). In Birds, the stiff tail feathers used in steering.—*sing.* **rectrix.**—*adj.* **rectri'cial.**

rectum (*Zool.*). (Latin *rectum intestinum*, straight intestine.) The posterior terminal portion of the alimentary canal leading to the anus.—*adj.* **rectal.**

rectus (*Zool.*). A name used for various muscles which are of equal width or depth throughout their length; e.g. the *rectus abdominis* in Vertebrates.

recuperative air-heater (*Eng.*). An air-heater in which heat is transmitted from hot gases to the air through metallic walls, the flows of gas and air being continuous and unidirectional.

recuperator (*Artillery*). A system of springs or compressed air which returns the gun to its firing position. See **buffer.**

recuperator (*Met*). An arrangement of flues which enables the hot gases leaving a furnace to be utilised in heating the incoming air (and sometimes gas). Outgoing hot gases and incoming cold gases pass in opposite directions through parallel flues and heat is transferred through the dividing walls.

recurrent (*Bot.*). Said of the smaller veins of a leaf when they bend back towards the midrib.—(*Zool.*) Returning towards the point of origin.

recurrent sensibility (*Zool.*). In Vertebrates, sensibility shown by the ventral roots of the spinal nerves (motor) due to the sensory fibres of the dorsal roots.

recurrent vision (*Photog.*). The perception of repeated images of brightly illuminated objects when the source of illumination is suddenly removed.

recurved (*Bot.*). Bent or curved backwards.

recur'viros'tral (*Zool.*). Having the beak bent upwards.

red algae (*Bot.*). See **Rhodophyta.**

red body (*Zool.*). See **red gland.**

red brass (*Met.*). Copper-zinc alloy containing approximately 15% zinc; used for plumbing pipe, hardware, condenser tubes, etc.

Red Chalk (*Geol.*). A thin bed of brick-red chalk occurring in the Cretaceous rocks of Lincolnshire and Norfolk. It is equivalent in age to the Gault Clay of Southern England, and separates the Carstone from the White Chalk above.

red clay (*Geol.*). A widespread deep-sea deposit restricted to the oceanic abysses; essentially a soft, plastic clay consisting dominantly of insoluble substances which have settled down from the surface waters; these substances are partly of volcanic, partly of cosmic origin, and include nodules of manganese and phosphorus, crystals of zeolites, and rare organic remains such as shark's teeth.

red-conscious (*Television*). Said of an electron camera which is unduly sensitive to light of long wavelengths. This results in inartistic enhancement of the relative brightness of areas of the image which are red.

red corpuscle (*Zool.*). See **erythrocyte.**

Red Crag (*Geol.*). A local group of richly fossiliferous sands which accumulated as shell banks in land-locked bays in the Pliocene Sea; restricted in distribution to parts of Norfolk and Suffolk.

red deal (*Timber*). A light-yellow soft wood obtained from the Scots fir; commonly used for timbering trenches, heavy framing, piles, joinery, etc.

red fever (*Vet.*). See **swine erysipelas.**

red gland (or body) (*Zool.*). In some Fish, a structure found on the wall of the air-bladder, consisting of a network of blood capillaries and a number of tubular glands, which open into the cavity of the bladder and are believed to be responsible for the secretion or absorption of gas.

Red Head Series (*Geol.*). A group of thin-bedded sandstones and shales passing into thicker sandstone with volcanic rocks, ascribed to the Dittonian stage of the Old Red Sandstone of Devonian age in the Midland Valley of Scotland.

red-lead (*Chem.*). Pb_3O_4. Formed by heating lead monoxide in air at approximately 450° C. It occurs as red and yellow crystalline scales. Commercial varieties contain up to approximately 35% PbO_2.

red light (*Cinema.*). In motion-picture production, any light which is illuminated over the period during which a take is in operation, in order to warn persons not to make a noise.

red marls (*Geol*). A lithological term applied to red silts and calcareous clays, which in some cases may have accumulated in the same way as loess, i.e. as wind-driven desert dust, but in other cases red marls were water deposited. They occur as the most extensive deposit in the Old Red Sandstone of parts of England and Wales, and in the Keuper Series.

red marrow (*Zool.*). The reddish vasoformative tissue occupying the cavities of some of the bones in Mammals.

red muscles (*Zool.*). In Vertebrates, muscles which perform long-continued actions and are therefore rich in sarcoplasm and haemoglobin, and are of a red colour.

red nucleus (*Zool.*). An aggregation of nerve-cells in the *tegmentum* (q.v.).

red oxide of copper (*Min.*). See **cuprite.**

red oxide of zinc (*Min.*). See **zincite.**

red-short (*Met*). See **hot-short.**

red silver ore (*Min.*). For *dark-red silver ore*, see **pyrargyrite**; for *light-red silver ore*, see **proustite.**

red snow (*Bot.*). Snow stained by a surface growth of unicellular algae rich in haematochrome; sometimes seen on mountains.

red spot (*Astron*). A marking on the surface of the planet Jupiter first observed in 1878, since when it has faded almost entirely; it is therefore thought to have been due to some violent eruption.

redwater (*Vet*). See **Texas fever.** EUROPEAN REDWATER, a disease of cattle in Europe, due to infection of the blood by piroplasms (*Babesia bovis*), transmitted by ticks (*Isodes ricinus*).

red wood (*Timber*). A name given to *red deal* (q.v.) in the north of England.

Redalon (*Build.*). Trade-name for a retarder applied to concrete surfaces which are to be plastered.

reddle (*Eng.*). A mixture of red lead and oil which is wiped over one of two surfaces to be bedded together to indicate the high spots to be removed by scraping.

reddle (*Min.*). A red and earthy variety of haematite, with a certain admixture of clay.

re-development (*Photog.*). The second development of a film or plate after bleaching, antecedent to reversal or intensification.

Redhill Beds (*Geol.*). A group of olive-green mudstones referred to the Caradoc Series of the Ordovician System; found in western South Wales.

re'dia (*Zool.*). The secondary larval stage of a *Trematode*, possessing a pair of locomotor papillae and a rudimentary pharynx and intestine, and capable of paedogenetic reproduction.

redistilled zinc (*Met.*). Zinc from which the impurities have been eliminated by selective distillation. The process takes advantage of the different boiling-points of zinc (907° C.) and the impurities lead (1620° C.) and cadmium (778° C.). Metal over 99·99% zinc is produced.

redox (*Chem.*). Abbrev. for *oxidation-reduction*.

redruthite (*Min.*). A name frequently applied to the mineral *chalcocite* on account of its occurrence, among other Cornish localities, at Redruth.

reduced (*Bot.*). Simplified in structure as compared with some probable ancestral form.

reduced apogamy (*Bot.*). The development of a sporophyte from a cell or cells of a gametophyte, without any fusion of gametes, giving a plant whose nuclei have the gametic number of chromosomes.

reduced bearing (*Surv.*). The horizontal angle, less than 90°, between any survey line and the magnetic meridian. Also called QUADRANTAL BEARING.

reduced fertilisation (*Biol.*). The substitution for a normal sexual fusion between male and female gametes or nuclei of some other union, as for instance, the union of two female nuclei.

reduced level (*Surv.*). The elevation of a point above or below datum. See also **altitude.**

reducer (*Photog.*). A solution which acts on the silver image and dissolves it away by chemical or abrasive action, thus reducing contrast.

See **Baskett's—** **Farmer's—**
Belitzski's—

reducer (*Plumb.*). See **reducing socket.**

reducing (*Textiles*). An operation carried out previous to spinning in certain textile industries, in order to attenuate the sliver and roving.

reducing agent (*Chem.*). A substance which is capable of bringing about the chemical change known as reduction.

reducing flame (*Chem.*). The luminous tip of a small Bunsen flame.

reducing screen (*Illum.*). A transparent screen used in photometry to absorb a certain predetermined fraction of the luminous flux falling on it.

reducing socket (or **pipe-joint**) (*Eng.*, *Plumb.*). A pipe socket for connecting pipes of different diameter, the two ends being threaded internally to standard sizes; e.g. 1 in. to ¾ in. gas.

reducing surface (*Illum.*). A prepared surface, used in photometry, which reflects only a certain predetermined proportion of the luminous flux falling on it.

reduc'tases (*Chem.*). Enzymes which bring about the reduction of organic compounds.

reduction (*Chem.*). Any process in which an electron is added to an atom or an ion. Three common types of reduction are the removal of oxygen from a molecule, the addition of hydrogen to a molecule, and the diminution of the positive valency of an atom or ion.

reduction (*Mining*). The extraction of gold from an ore. The *reduction officer* is the official in charge of the mill and extraction plant. [South Africa.]

reduction (*Photog.*). In a negative or print, the reduction of excessive contrast or density that has arisen from over-exposure or over-development.

reduction division (*Cyt.*). See **meiosis.**

reduction factor (*Illum.*). The ratio of the mean spherical candle-power of a light-source to its mean horizontal candle-power.

reduction in area (*Met.*). As applied to the tensile test, a synonym for *contraction in area*. The term is also used in connexion with working operations, to indicate the amount of work performed.

reduction intensity (*Chem.*). See **rH-value.**

reduction of levels (*Surv.*). The process of computing reduced levels from the staff readings made when levelling.

reductive analysis (*Psychol.*). See **direct reductive analysis.**

redundant (*Struct.*). A term applied to a structural framework having more members than it requires in order to be perfect. Also OVER-RIGID.

reduplicate aestivation (*Bot.*). Valvate aestivation in which the edges of the segments are turned outwards.

redu'viid, —vi-id (*Zool.*). Said of Insect eggs in which the micropyle is protected by a porch-like structure.

reed (*Acous.*). A vibrating tongue of wood or metal, for generating air-vibrations in musical instruments. Metal reeds are generally used in organ reed-pipes and cane wood for tongue action, as in the clarinet.

reed (*Weaving*). A comb-like arrangement of flattened steel wires or dents fixed in a frame. Its functions are to keep the warp threads in position, to form a guide for the shuttle, and to beat up the weft to the fell of the cloth. The reed also determines the number of warp threads per inch; a 90 reed usually means 90 threads per inch—an indication of the quality of a fabric.

reeds (*Join.*). A moulding in the form of several side-by-side beads sunk below the general surface.

reed-counting systems (*Textiles*). See **sett systems.**

reed loudspeaker (*Acous.*). A small loudspeaker with a driving mechanism in which the essential element is a magnetic reed, which is drawn into the gap between pole-pieces on a permanent magnet by the currents in the driving coils.

reed marks (*Weaving*). Marks running lengthwise in a piece of cloth; a fault due to the tendency of the warp threads to run in groups, especially when there are three or four ends in a dent.—*adj.* **reedy.**

reed pipe (*Acous.*). An organ pipe in which the pitch of the note is determined by the vibration of a reed, the associated pipe reinforcing the generated note by resonance.

reed (*Zool.*). See **abomasum.**

reef (*Mining*). Originally an Australian term for a *lode* (q.v.). Now used for a gold-bearing tubular deposit or quartz vein.

reef, coral (*Geol.*). See **coral reef.**

reef knolls (*Geol.*). Large masses of limestone formed by reef-building organisms; found typically in the Craven district of Yorkshire where they have weathered out as rounded hills above the lower ground on the shales. These are of Carboniferous age.

reel (*Cinema.*). (1) The standard length of cinematograph film supplied for exposure or for projection in a theatre. The length is 1000 ft., and takes about 11 minutes to project.—(2) By analogy, the length of sub-standard film which takes about 11 minutes to project.

See **feed—** **spiral—** **take-up—**

reel (*Textiles*). A machine consisting of two collapsible frames on which yarn from cops or bobbins is wound in skeins or hanks.

reeling (*Textiles*). (1) The operation of unwinding the silk filaments from a number of cocoons and combing them to form a silk thread.—(2) The operation of winding yarn from cops or bobbins on to a reel to form skeins.

re-entrant (*Surv.*). A term applied to an internal angle. Cf. *salient*.

re-entrant horn (*Acous.*). A horn for coupling a sound-reproducing diaphragm with the outer air. To conserve space, the horn divides at a distance from the throat and, after convolutions, unites before expanding to the flare.

re-entrant winding (*Elec. Eng.*). A term used in connection with armature windings for d.c. machines; a *singly* (or *doubly*) *re-entrant winding* is one containing one (or two) independent closed circuits. The majority of windings are singly re-entrant.

reference equivalent (*Teleph.*). The number of decibels by which a given piece of telephonic apparatus differs from the standardised piece of apparatus in the master transmission reference system.

reference mark (*Surv.*). See Supplement.—(*Typog.*) See **mark of reference.**

reference system (*Teleph.*). See **master telephone transmission reference system.**

reference tone (*Acous.*). See **reftone.**

refined iron (*Met.*). Wrought-iron made by puddling pig-iron.

refiner (*Paper*). See **perfecting machine.**

refining of metals (*Met.*). Operations performed after the crude metals have been extracted from their ores, in order to obtain them in a condition of higher purity. See, e.g., **electrolytic copper, Hoopes process.**

reflected (*Zool.*). Said of a structure, especially a membrane, which is folded back on itself.

reflected ray (*Radio*). See **indirect ray.**

reflecting galvanometer (*Elec. Eng.*). A galvanometer in which the deflection is observed by the reflection of a beam of light projected on to a mirror mounted on the moving element.

reflecting layer (*Radio*). A layer of ionised air existing in the upper atmosphere which reflects radio waves. See **Appleton layer, Heaviside layer.**

reflecting level (*Surv.*). An instrument, used for levelling, which employs the principle that a ray of light which strikes a reflecting plane at right-angles is reflected back in the same direction. In its practical forms, it usually consists of a hanging mirror which takes up a position in the vertical plane, and has an unsilvered part through which a distant staff may be seen and also a reference horizontal line upon it. When the eye is in such a position that the image of the pupil is bisected by the horizontal line, the line of sight to the staff is horizontal.

reflecting telescope (*Astron.*). A form of telescope invented by Newton to overcome the difficulties of chromatic aberration; in it the light is reflected from a polished and figured surface, brought to a focus, and the image there formed magnified by an eye-piece. The three principal forms are named (1) Newtonian, (2) Cassegrainian, (3) Gregorian.

reflection (*Radio*). A phenomenon which occurs when an electromagnetic wave encounters a conductor or a dielectric having a permittivity appreciably different from unity, when a portion of the wave has its direction of propagation deviated. Cf. *refraction.*

reflection factor (*Elec. Comm.*). The ratio which the power flowing into an impedance from a source bears to that which would flow if the impedance of the load matched that of the source.—(*Illum.*) The ratio which the luminous flux reflected from a surface bears to that falling upon it; also called COEFFICIENT OF REFLECTION.

See **regular—** **diffuse—**

reflection gain (*Elec. Comm.*). The gain in power received in a load from a source because of the introduction of a matching network, such as a transformer; measured in decibels.

reflection, laws of (*Phys.*). When a ray of light is reflected at a surface, the reflected ray is found to lie in the plane containing the incident ray and the normal to the surface at the point of incidence. The angle of reflection equals the angle of incidence.

reflection loss (*Elec. Comm.*). The loss, in decibels, of power obtainable from a source into a load because the latter is not matched in impedance to the source.

reflection point (*Elec. Comm.*). The point at which there is a discontinuity in a transmission line, and at which partial reflection of the transmitted electric wave takes place.

reflector (*Illum.*). A device consisting of a bright metal surface shaped so that it reflects in a desired direction light or heat falling upon it.

See **asymmetric—**
concentrating—
industrial—
parabolic—
standard—

reflector arc (*Cinema.*). The same as *mirror arc.*

reflex (*Zool.*). Involuntary; automatic; not under the control of the will.

reflex action (*Zool.*). An automatic or involuntary response to a stimulus.

reflex arc (*Zool.*). A functional unit of the nervous system. It consists of an afferent neurone by which sensory impulses pass to the nerve-centre, and an efferent neurone by which motor impulses pass to some peripheral effector organ, such as a muscle.

reflex camera (*Photog.*). A camera in which the focusing is performed while observing the image formed by the lens on a ground-glass plate, the rays of light being deflected from their path towards the sensitive surface by a mirror, which is removed automatically during exposure.

reflex circuit (*Radio*). A circuit, sometimes employed in radio receivers, in which one or more valves are used for simultaneous high- and low-frequency amplification. Also called DUAL-AMPLIFICATION CIRCUIT.

reflexed (*Bot.*). Turned back abruptly.

reflores'cence (*Bot.*). See **double flowering.**

reflux valve (*Civ. Eng.*). A non-return type of valve used in pipe-lines at rising gradients to prevent water which is ascending the gradient from flowing back in the event of a burst lower down.

refracted (*Bot.*). Bent abruptly backwards from the base.

refracting telescope (*Astron.*). The original form of telescope, invented in the sixteenth century, in which the light from a distant object passes through a converging lens (now always compound) and is brought to a focus on the principal axis, the image being then magnified by a system of diverging lenses (the *eye-piece*).

refraction (*Light*). When a ray of light passes from one medium to another it generally changes its direction, and is therefore said to suffer *refraction* or be *refracted.* The refracted ray lies in the plane containing the incident ray and the normal to the surface separating the two media. The ratio of the sine of the angle of incidence to the sine of the angle of refraction is constant for a given pair of media, and is known as the *index of refraction.* See **aplanatic—*.**

refraction (*Radio*). A phenomenon which occurs when an electromagnetic wave passes from one medium to another having a different permittivity or permeability, when the direction of propagation is altered. Cf. *reflection.*

refraction correction (*Astron.*). That small amount which is to be subtracted from the observed altitude of a heavenly body to allow for the refraction of light by the earth's atmosphere, which so bends the rays that all bodies appear higher than they are by an amount which is a maximum at the horizon and zero at the zenith.

refractive index (*Light*). See **index of refraction.**

refractivity (*Chem.*). *Specific refraction* (q.v.).

refractom'eter (*Light*). An instrument for measuring refractive indices. Refractometers used for liquids, such as the Pulfrich instrument, usually measure the critical angle at the surface between the liquid and a prism of known refractive index. See **Rayleigh refractometer.**

refractor (*Illum.*). A device by which the direction of a beam of light is changed by causing it to pass through the boundary between two substances of different densities; the principle is used in certain types of lighting fittings.

refractories (*Met.*). Materials used in lining furnaces, etc. They have to resist high temperatures, changes of temperature, the action of molten metals, and slags and hot gases carrying solid particles. China clay, ball clay, and fireclay are all highly refractory, the best qualities fusing at above 1700° C. Other materials are silica, magnesite, dolomite, alumina, and chromite. See **silica.**

refractory cement (*Build.*). A form of cement capable of withstanding very high temperatures.

refractory clay (*Geol.*). See **refractories.**

refractory period (*Zool.*). The time interval during which an excitable tissue is incapable of response to a second stimulus, applied after a previous one.

refrigerants. Substances suitable for use as working agents in a refrigerator; e.g. ammonia, carbon dioxide, sulphur dioxide, methyl chloride, etc. See **mechanical refrigerator.**

refrigeration. The artificial production of cold, for food preservation, etc.; most commonly effected by compressing a vapour, condensing it by cooling, and throttling to the original pressure, when it absorbs latent heat at a low temperature. See **refrigerants, throttling.**

refrigerator (*Eng.*). A machine or plant by which mechanical or heat energy is utilised to produce and maintain a low temperature.

See **absorption—** **mechanical—**

refringent (*Bot.*). Refractive.

reftone (*Acous.*). Abbrev. for *reference tone*, the 1000-cycles-per-second tone used as an adjustable reference in measuring the loudness level of noises and other sounds.

refuge (*Civ. Eng.*). See **street refuge.**

refusal (*Civ. Eng.*). A term applied to the resistance offered by a pile to continued driving.

regain (*Textiles*). (1) The increase in the length of a thread taken from a cloth; e.g. if in 100 yards of cloth the warp length is 105 yards owing to its interlacement with the weft, the *regain* is 5%.—(2) The gain in weight of yarn or cloth, previously too dry, by the absorption of moisture when exposed in an atmosphere of normal temperature and humidity.

regattas (*Textiles*). Twill cotton fabrics, generally with blue and white stripes; used for aprons, summer dresses, etc.

regela'tion (*Heat.*). The process by which ice melts when subjected to pressure and freezes again when the pressure is removed. Regelation operates in the forming of a snowball by pressure, in the flow of glaciers, and in the slow cutting through of a block of ice by a weighted loop of wire.

regeneration (*Radio*). See **reaction.**

regeneration (*Zool.*). Renewal or replacement of an organ or structure which has been lost or damaged.

regenerative air heater (*Eng.*). An air heater in which heat-transmitting surfaces of metallic plates or bricks are exposed alternately to the heat-surrendering gases and to the air.

regenerative braking (*Elec. Eng.*). A method of braking for electric motors in which the motors are operated as generators, by the momentum of the equipment being braked, and return energy to the supply.

regenerative furnace (*Eng., Met.*). A furnace in which the hot gases pass through chambers containing fire-brick structures, to which the sensible heat is given up. The direction of gas flow is reversed periodically, and the cold incoming gas is pre-heated in the chambers.

regional metamorphism (*Geol.*). All those changes in the mineral composition and texture of rocks due to compressional and shearing stresses, and to the rise of temperature occasioned by intense earth movements. The characteristic products are the crystalline schists and gneisses.

register (*Build.*). A metal damper to close a chimney.

register (*Photog., Print.*). Exact correspondence of superimposed work, e.g. when the separate colours in colour photography are printed or projected together in order to reproduce the original picture. When two or more colours coincide without overlapping, or when pages, etc., back one another accurately on the paper, they are said to be *in register*. Conversely, faultily superimposed work is said to be *off register* or *out of register*.

register sheet (*Print.*). The sheet used in obtaining correct register or position.

registering instrument (*Elec. Eng.*). A term occasionally used to denote either an integrating instrument or a graphic instrument.

registering pins (*Photog.*). Pins used to register the separate negatives when printing a multi-colour photographic process.

registration (*Acous.*). The selection of stops (*registers*) by an organist while playing.

reg'let (*Arch.*). (1) A flat narrow rectangular moulding.—(2) A *fillet* or *facette* (qq.v.).

reglet (*Typog.*). A thin strip of wood used for spacing; usually six or twelve points in thickness (known as *nonpareil reglet* and *pica reglet* respectively).

reglette (*Surv.*). The short graduated scale attached at each end of the special measuring tape or wire used in base-line measurement.

reg'ma (*Bot.*). A fruit which, when ripe, breaks up into rounded one-seeded portions.

Regnault's hygrometer, ren-yō (*Meteor.*). A type of hygrometer in which the silvered bottom of a vessel containing ether is cooled by bubbling air through the ether, the temperature of which is indicated by a thermometer. The dew-point is the temperature at which dew appears on the silvered surface.

regrating (*Masonry*). The operation of re-dressing the faces of old hewn stone work.

regression (*Biol.*). A tendency to return from an extreme to an average condition, as when a tall parent gives rise to plants of average stature.

regression (*Psycho-an.*). A return to an earlier stage of development, whereby the libido takes up earlier modes of expression and gratification in accordance with the particular phase to which it has regressed; e.g. a regression from adolescence to childhood.

regression coefficient (*Maths.*). The product of the correlation coefficient and the ratio of the standard deviations of two variables which are apparently dependent on each other in some degree.

regressive stain (*Micros.*). A stain with which the best results are obtained by overstaining and subsequent modification, or partial removal of the stain by a differentiating reagent. Cf. *progressive stain.*

regular (*Bot.*). Said of a flower which has its parts so arranged that it can be divided into halves by several longitudinal planes passing through the centre; symmetrical, actinomorphic.

regular-coursed (*Masonry*). Said of rubble walling which is built up in courses of the same height.

regular reflection (*Illum.*). Reflection in which a beam of light appears, after reflection, to proceed from an image of the light source in the reflecting surface, and is reflected at an angle equal to the angle at which the beam falls on the surface. Also called SPECULAR REFLECTION.

regular reflection factor (*Illum.*). The ratio which the luminous flux regularly reflected from a surface bears to the total flux falling on that surface.

regular system (*Crystal*). The *cubic system* (q.v.).

regular transmission (*Illum*). Transmission of light through a surface in such a way that the beam of light, after transmission, appears to proceed from the light source.

regular transmission factor (*Illum*). The ratio which the luminous flux regularly transmitted through a surface bears to the total luminous flux falling on the surface.

regulating switch (*Elec. Eng.*). A switch used for switching the regulating cells of a battery in and out of circuit.

regulation, regulation up (*Elec. Eng.*). The change in voltage which occurs when full rated load, at the rated power factor, voltage, and speed or frequency, is thrown off an electric generator or transformer.

regulation down (*Elec. Eng.*). The change in voltage which occurs when full load is put on to a previously unloaded electric generator or transformer, all other conditions being maintained normal.

regulator (*Elec. Eng.*).
See **field—** **voltage—**

regulator (*Horol.*). (1) A precision long-case clock with a seconds pendulum. The dial has independent hands and zones for the hours, minutes, and seconds.—(2) See **index.**

regulator (*Mining*). A door to regulate the ventilation in underground workings.

regulator cell (*Elec. Eng.*). One of several cells which are arranged at the end of a battery of accumulator cells and are connected to a regulating switch so that they can be cut in or out of circuit in order to adjust the voltage of the battery as a whole. Also called END-CELL.

regulator mixture (*Chem.*). See **buffer solution.**

regulator valve (*Eng*). A valve which is placed in the dome or steam space of a locomotive and operated by a handle in the cab, and serves for controlling the steam supply to the cylinders.

reguline deposit (*Elec. Eng.*). Good electrodeposited metal, as opposed to a burnt deposit.

regulus of antimony (*Met.*). Commercially pure metallic antimony.

regurgitation (*Med.*). (1) The bringing back into the mouth of (undigested) food which has been swallowed.—(2) The flowing of blood in the reverse direction of the circulation in the heart as a result of valvular disease; e.g. *aortic regurgitation.*

reheating, re-superheating (*Eng.*). The process of passing steam, which has been partially expanded in a steam turbine, back to a superheater before subjecting it to further expansion.

reheating furnace (*Met.*). The furnace in which metal ingots, billets, blooms, etc. are heated to bring them to the temperature required for hot-working.

Rehfuss test, rā-foos (*Med.*). Fractional test meal. The analysis of the contents of the stomach at quarter-hourly intervals after the swallowing of a pint of oatmeal mixture, the contents being removed by a small stomach tube.

Reichert-Meissl number, rī'hhert mīsl (*Chem.*). A standard used in butter analysis. A Reichert-Meissl number of *n* means that the soluble volatile fatty acids liberated from 5 gm. of butter fat under specified conditions require *n* cc. of *N*/10 barium hydroxide solution for their neutralisation.

Reil's island, rīl (*Zool.*). In Mammals, a small lobe of the cerebrum situated at the bottom of the Sylvian fissure.

Reimer-Tiemann reaction (*Chem.*). See **Tiemann-Reimer reaction.**

rein (*Civ. Eng.*). See **springer.**

Reinartz circuit, rī'narts (*Radio*). A circuit employing reaction controlled by a variable condenser; used for the reception of short waves.

reinforced concrete (*Civ. Eng.*). Concrete work in which steel bars (*reinforcement*) are embedded in order to provide increased strength.

reinforcement (*Acous.*). The use of a public-address system to augment the loudness of speech in adverse acoustic surroundings.

Reis microphone (or **transmitter),** rīs (*Elec. Comm.*). A primitive speech transmitter in which electric currents were modulated by a make-and-break contact operated by a diaphragm.

Reissner's fibre, ris'ner (*Zool.*). In *Vertebrata,* a wire-like fibre of unknown function running from its attachment at the posterior end of the nerve-tube to the posterior commissure in the roof of the mid-brain, via the cavity of the nerve-tube.

Reissner's membrane (*Zool.*). In Mammals, a delicate connective-tissue membrane which cuts off the outer lower portion of the scala vestibuli of the cochlea.

Reisz microphone, rīs (*Elec. Comm*). A carbon transmitter in which a large quantity of carbon granules between a cloth or mica diaphragm and a solid backing, such as a block of marble, is subjected to the applied sound-wave. Characterised by high damping of the applied vibrational forces, and freedom from carbon noise by virtue of packing amongst the granules.

reiteration (*Surv*). A method of checking angular measurements made with a theodolite (and of securing greater accuracy) by repeating the observations after reversing face. Cf. *repetition.*

reiteration (*Typog*). The second side of a sheet to be printed, usually the outer forme.

rejection filter (*Elec. Comm.*). See **band elimination filter.**

rejector circuit (*Radio*). A parallel combination of inductance and capacity, tuned to the frequency of an interfering transmission, to which it offers a high impedance when placed in series with the antenna circuit of a receiver.

rejointing (*Build., Civ. Eng.*). *Pointing* (q.v.).

rejuvenation (*Geol.*). A term applied to the action of a river system which, following uplift of the area drained by it, is able to resume downcutting, in the manner characteristic of a younger stream, in attempting to attain to the new base level.

rejuvenes'cence (*Biol.*). (1) The conversion of the contents of a cell into one or more cells of a different and usually more active character.—(2) Renewal of growth from old or injured parts.

relapse (*Med.*). The falling back into an illness after an apparent or partial recovery.

relapsing fever (*Med.*). Spirochaetosis. A term applied to a number of diseases which are transmitted by lice or by ticks and are due to infection with various spirochaetes; characterised by recurrent attacks of fever and by enlargement of the liver and spleen.

relative density (*Chem.*). The ratio of the density of a gas to that of hydrogen under similar conditions of pressure and temperature.

relative efficiency (*Eng.*). In an internal-combustion engine, the ratio of the actual indicated thermal efficiency to the efficiency of some ideal cycle, such as the *air standard cycle* (q.v.), at the same compression ratio.

relative hearing loss (*Acous.*). The percentage of the range of hearing which is not appreciated by a deaf ear.

relative humidity (*Meteor.*). The ratio of the amount of water vapour in the air to the amount which would saturate it at the same temperature; or the ratio of the pressure of water vapour present to the saturated vapour pressure at the same temperature. Cf. *humidity*, and see **hygrometer.**

relative sexuality (*Bot.*). The occurrence in a species of strains giving gametes able to fuse with those produced by either of the normal strains.

relative visibility factor (*Light*). The ratio of the apparent brightness of a monochromatic source to that of a source of wavelength 5500 A.U. having the same energy.

relativity, principle of (*Phys.*). A universal law of nature which states that the laws of mechanics are not affected by a uniform rectilinear motion of the system of co-ordinates to which they are referred. Einstein's relativity theory is based on this principle, and on the postulate that the observed value of the velocity of light is constant and is independent of the motion of the observer.

relaxation oscillation (*Radio, Television*). Oscillation which is characterised by a relatively slow variation of current or voltage during a part of the cycle, followed by a much faster return to the starting point. A typical example is that generated by a linear time base.

relay (*Elec. Comm.*). Any piece of apparatus in which a small electrical power is used to control larger electrical power; as a telephone relay which works on magnetic principles, or mercury or neon-filled thermionic valves, which operate on the ionisation principle.

See **differential—**
double-acting—
fast-acting—
jockey—
locking—
neutral-tongue—
non-polarised—
polarised—
shunt-field—
slow-acting—
telephone—
thermionic—
trigger—
two-step—
voice-frequency—

relay (*Elec. Eng.*). A device which, when operated, usually electromagnetically, by the current in one circuit, causes contacts to close or open to control the current in another circuit.

See **balanced-beam—**
differential—
directional—
gas-filled—
impedance—
load-levelling—
over-current—
thermal—
vane—

relay (*Eng.*). See **servomotor.**

relay, band (*Elec. Comm.*). See **band relay.**

relay-set (*Auto. Teleph.*). A group of relays mounted together for a combined purpose, generally with facility for quick detachment and replacement if found faulty.

relay spring (*Elec. Comm.*). The flexible part of a relay which keeps it in an unoperated condition. It is stressed on operation, and restores the relay to normal on cessation of the operating current.

relay system (*Elec. Comm.*). A system which uses a central radio receiver for accepting broadcast programmes, which are then distributed to subscribers. See **radio exchange.**

relay-type graphic instrument (*Elec. Eng.*). A graphic instrument in which the marking device is operated by an auxiliary source of supply controlled by the current to be measured.

release (*Photog.*). The trigger arrangement for releasing the shutter and effecting exposure in a camera. See **antinous release.**

release (*Teleph.*). In automatic telephony, the release of apparatus which has been seized for establishing a connexion. In manual telephony, the positive disengagement of apparatus on cessation of a conversation.

See **called-party—**
calling-party—
calling-subscriber—
first subscriber—
last subscriber—

release print (*Cinema.*). A print of a cinematograph film for public use in cinemas.

release wire (*Auto. Teleph.*). An extra wire in the exchange circuits which is sometimes used solely for releasing selectors and switches when a connexion is to be broken down.

releasing key (*Civ. Eng.*). A tapered piece used to ease shuttering away from the concrete after it has set.

relict (*Ecol.*). A species, whether terrestrial, marine, or fresh-water, which occurs at the present time in circumstances different from those in which it originated.

relief block (*Print.*). A printing block (e.g. line, half-tone) which can be used with normal printing type.

relief process (*Photog.*). Any colour process using matrices.—(*Print.*) See **printing.**

relieving arch (*Build., Civ. Eng.*). One built on the spandrel of a main arch, in order to distribute the load, or over a lintel, to relieve it of the weight of wall above.

relish (*Join.*). The projection of the shoulder from the flanks of the tenon.

reload (*Photog.*). To remove exposed film and insert unexposed film in a camera or magazine in a dark-room or under light-tight conditions (e.g. in a changing bag).

reluctance (*Elec. Eng.*). The ratio which the magnetomotive force acting round a magnetic circuit bears to the flux which it produces.

reluctance, unit of (*Elec. Eng.*). See **oersted.**

reluctivity (*Elec. Eng.*). A term sometimes used to denote the reciprocal of permeability.

Remak's fibres (*Zool.*). In *Vertebrata*, amyelinate fibres occurring in peripheral nerves.

rem'anence (*Elec. Eng.*). The magnetic flux density remaining in a substance after the magnetising force has been removed. Also called RETENTIVITY.

remiges, rem'i-jēz (*Zool.*). In Birds, the large contour feathers of the wing.—*sing.* **re'mex.**

rem'iped (*Zool.*). Having the feet adapted for paddling, as many aquatic Birds.

remission (*Med.*). An abatement (often temporary) of the severity of a disease: the period of such abatement.

remittent (*Med.*). (Of a fever) characterised by remissions in which the temperature falls, but not to normal: remittent fever (malaria).

Remos (*Acous.*). An acoustic absorbing material, consisting of porous boards made from a certain type of dried moss.

remote (*Bot.*). Said of the gills of agarics which do not reach the stipe but leave a free space around it.

remote control (*Elec. Eng.*). The control of apparatus by means of one or more switches, usually of the pushbutton type, situated at some distance from the apparatus.

removes (*Typog.*). Quotations, etc., set in smaller type than the main text. The difference in size is usually two points. Thus a book the text of which is set in 12-point or pica should have its quotations set in 10-point.

re'nal (*Zool.*). Pertaining to the kidneys.

renal portal system (*Zool.*). In some lower Vertebrates, that part of the venous system which brings blood from the capillaries of the posterior part of the body and passes it into the capillaries of the kidneys.

render and set (*Plast.*). Two-coat work on walls.

render, float, and set (*Plast.*). Three-coat work on walls.

rendered (*Plast.*). A term applied to laths which are split rather than sawn, so as to conserve the maximum strength.

rendering (*Plast.*). The operation of covering brick or stonework with a coat of coarse stuff: the coating itself.

ren'iform (*Bot.*). Kidney-shaped, either solid or flat, and having the outline of a kidney cut longitudinally.

rennet (*Zool.*). See **abomasum.**

Rennie dock (*Civ. Eng.*). See **sectional pontoon dock.**

rennin (*Chem.*). An enzyme found in the gastric juice, causing the clotting of milk.

reno- (Latin *renes*, kidneys). A prefix used in the construction of compound terms; e.g. *renopericardial*, pertaining to the kidneys and the pericardium.

rep, repp (*Textiles*). A fabric with a corded surface of cotton, silk, wool, or of silk and wool.

re'pand (*Bot.*). Having a slightly wavy edge.

repeated emergence (*Bot.*). A condition in fungi in which the zoospores, after swimming for a time, encyst and then emerge from the cysts without any change in morphology.

repeater (*Horol.*). A watch which 'repeats the time' by striking a sequence of blows on gongs when a slide that projects from the band of the case is pushed. In a *quarter repeater* the last hour (as shown by the watch) is struck, followed by the number of quarters; a *minute-repeater* strikes, in addition, the number of minutes since the last quarter struck.

repeater (*Teleph.*). The special type of thermionic amplifier for insertion into a telephone circuit at intervals. One of its functions is to overcome the distributed loss in the line.—2·1 REPEATER, a repeater which uses one amplifier only.—2·2 REPEATER, a repeater for two-way operation, in which there are two separate amplifiers for the two directions, the currents in the two directions being separated by hybrid coils.

See **broadcasting—** **impulse—**
cord-circuit— **programme—**
four-wire— **two-wire—**

repeater balance (*Teleph.*). The balancing network associated with the hybrid-coil in a two-way repeater. See **line balance.**

repeater, band (*Elec. Comm.*). See **band relay.**

repeater gain (*Teleph.*). The power delivered by a repeater divided by the power which would be delivered in the absence of the repeater; expressed in decibels.

repeating coil (*Teleph.*). A transformer of low ratio (generally unity) for separating telephonic circuits; e.g. repeaters from their external lines.

repeating selector (*Auto. Teleph.*). A selector which is operated by the first train of impulses received, and also repeats all received impulses for operating further selectors.

repeating work (*Horol.*). The chiming mechanism of a repeater watch.

re'pent (*Bot.*). Lying on the soil and rooting.

repetition (*Surv.*). A method of checking angular measurements made with a theodolite by repeating the observation after unclamping the lower plate and sighting on the back station so that the vernier reading is unaltered, and then sighting forward to get a new reading on the vernier, which should be double the previous reading. Cf. *reiteration.*

repetition compulsion (*Psycho-an.*). A factor in mental life which compels early patterns of behaviour to be repeated, irrespective of the pleasure-displeasure thereby experienced by the individual.

repetition rate (*Teleph.*). The number of times repetition is demanded in a telephone conversation, this being related to the line or transmitter noise, amplitude distortion, and the frequency response of the system.

replaceable hydrogen (*Chem.*). Those hydrogen atoms in the molecule of an acid which can be replaced by atoms of a metal on neutralisation with a base.

re'plete (*Zool.*). See **plerergate.**

rep'licate (*Bot.*). Folded back, as when the edge of an apothecium is turned outwards and downwards.

replicate septum (*Bot.*). A septum in some algae which bears a collar-like appendage projecting into the cavity of the cell.

replic'atile (*Zool.*). Said of a wing which folds over on itself in the resting position.

rep'lum (*Bot.*). A thin wall dividing the fruit into two chambers, formed by an ingrowth from the placentas, and not a true part of the carpellary walls.

report call (*Teleph.*). A call made to ascertain whether a desired subscriber is available for connexion.

repp (*Textiles*). See **rep.**

repression (*Psycho-an.*). The unconscious mental mechanism by which complexes are kept out of consciousness. According to Freud, this repression is formed by the superego or primitive unconscious.

reproduction (*Acous.*).

See **acoustic—** **electrical—**

reproduction (*Biol.*). The process of generation of new individuals whereby the species is perpetuated.—*adj.* **reproductive.**

reproductive organ (*Zool.*). See **gonad.**

reproductive system (*Zool.*). See **genitalia.**

rep'tant (*Bot.*) Repent.

reptile skins (*Leather*). The term includes alligator, crocodile, lizard, and snake skins; these are used, after tanning or tawing, for uppers of ladies' shoes and fancy goods.

Reptilia (*Zool.*). A class of *Craniata* having a scaly integument, cold blood, a right and left aortic arch, a partially divided heart, a single occipital condyle, pulmonary respiration, and pentadactyl limbs.

Reptilian Sandstone (*Geol.*). See **Lossiemouth Beds.**

repug'nato'rial glands (*Zool.*). In *Arthropoda*, glands, usually abdominal in position, which produce a repellent secretion of an odoriferous, pungent, or corrosive nature which can be used in self-defence.

repulsion (*Gen.*, *Cyt.*). The tendency shown by dominant characters to separate.

repulsion-induction motor (*Elec. Eng.*). A single-phase induction motor having, in addition to the squirrel-cage winding on the rotor, a commutator winding with its brushes short-circuited, so that the motor starts as a repulsion motor with a high starting torque and runs with the characteristics of an induction motor.

repulsion motor (*Elec. Eng.*). A type of single-phase commutator motor in which power is supplied to the stator winding, and the armature winding is short-circuited through the brushes. See **compensated repulsion motor.**

repulsion-start induction motor (*Elec. Eng.*). A repulsion motor having a centrifugal device which short-circuits all the commutator bars when the motor reaches a certain speed, so that it runs as a single-phase induction motor, and starts as a repulsion motor with a high starting torque.

requisition. A written order for the supply of materials.

re-radiation (*Radio*). A phenomenon which occurs when a receiver employing reaction on to the antenna circuit is adjusted to the point of oscillation. The signal strength for nearby receivers is thereby increased.

rere arch (*Build.*). A flat soffit arch laid over splayed jambs.

re-recording (*Cinema.*). The practice of using reproduced sound from a record to make a new record, e.g. when an edited film is re-recorded to adjust the levels of the recorded sound so that they may be consistent, although taken on separate occasions; or when a disc record is dubbed up from other previous recordings.

réseau, rā-sō (*Astron.*). A network of parallel lines photographed on to the plates used in certain branches of stellar photography, to facilitate the subsequent measurement of star positions.

réseau (*Photog.*). The mosaic resulting from ruling coloured lines, when making a screen on an emulsion.

resection (*Surg.*). The cutting off of a part of a bodily organ, especially the ends of bones and other structures forming a joint.

resection (*Surv.*). The operation in plane-tabling by which the point located is the station occupied by the table.

reserve buoyancy (*Aero.*). The potential buoyancy of a seaplane or amphibian which is excess of that required for normal floating. The downward force required for complete immersion.

reserve cellulose (*Bot.*). Cellulose present in endosperm or other storage tissues, and subsequently used in the nutrition of the plant.

reserves (*Mining*). Sampled ore, developed, blocked out, or exposed on not less than three sides.

reservoir (*Civ. Eng.*). A basin for the storage of water which is later to be used for purposes of irrigation, or for supply to towns and cities.

reservoir (*Zool.*). In some *Mastigophora*, a non-contractile vacuole which opens into the gullet.

reshabar′ (*Meteor.*). A dry, squally, north-east wind blowing down some mountain ranges of southern Kurdistan.

residual affinity (*Chem.*). The chemical attractive forces which remain after saturation of the normal valencies of the atoms in a molecule. They are responsible for the formation of molecular compounds and for chemisorption.

residual current (*Chem.*). The small current which may be passed through an electrolyte without apparent change at the electrodes.

residual deposits (*Geol.*). Accumulations of rock waste resulting from disintegration *in situ*. They cover the whole range of grain size, from residual boulder beds to residual clays.

residual errors. Errors which remain in an observation despite all attempts to eliminate them.

residual field (*Elec. Eng.*). The magnetic field remaining in a magnetic circuit after the removal of the magnetising force.

residual gas (*Thermionics*). The small amount of gas which inevitably remains in a 'vacuum' tube after pumping. If present to excess, it causes erratic operation of the tube.

residual magnetism (*Elec. Eng.*). The magnetism remaining in a substance after the magnetising force has been removed.

residual voltage (*Elec. Comm.*). The balance of interfering voltage in a communication circuit due to an adjacent power-line, after both lines have been effectively transposed.

residues (*Photog.*). The used photographic solutions, including those of old emulsions, from which noble metals can be recovered economically.

resilience (*Eng.*). The stored energy of a strained material, or the work done per unit volume of an elastic material by a bending moment, force, torque, or shear force, in producing strain.

resilient escapement (*Horol.*). An escapement in which the banking pins yield to any excess pressure due to over-banking, allowing the impulse pin to pass the lever, which has no horns; or one in which the teeth of the escape wheel are so formed as to provide a recoil.

resil′ium (*Zool.*). The elastic hinge joining the halves of a shell in a Bivalve.

resin (*Chem.*). The product from the secretion of the sap of certain plants and trees. Resins are hard, fusible, and more or less brittle, insoluble in water, soluble in certain organic solvents. They consist of resinous matter, i.e. certain highly polymerised acids and neutral substances mixed with terpene derivatives. See also **rosin** and **synthetic resins.**

resin canal (*Bot.*). An intercellular space, often bordered by secreting cells, containing resin or turpentine.

resin esters (*Chem.*). *Ester gums* (q.v.).

resin flux, resino′sis (*Bot.*). An abnormal escape of resin from a plant due to parasitic attack.

resin soaps (*Chem.*). See **soaps.**

resinates (*Chem.*). The calcium, magnesium, aluminium, iron, nickel, cobalt, zinc, tin, manganese, and lead salts of rosin, obtained by the fusion of rosin with the metal oxides. They effect the hardening of the rosin, and are used as driers for varnishes.

resinogenet′ic, resinogen′ic (*Bot.*). Giving rise to resin.

res′inophore groups (*Chem.*). Groups occurring in the molecule of certain substances which make them readily susceptible to polymerisation and resin formation. Resinophore groups are, e.g.

$$-\mathrm{N{:}C{:}N}-$$
$$-\mathrm{CO{\cdot}CH{:}CH}-$$
$$-\mathrm{N{:}\underset{|}{P}{:}N}-$$

resinosis (*Bot.*). See **resin flux.**

resinous electricity (*Elec. Eng.*). An obsolete name for *negative electricity*, derived from the fact that it can be produced by friction on resinous bodies (e.g. sealing-wax).

resinous substances (*Chem.*). A term applied to (*a*) true resins, (*b*) substances resembling true resins in their physical properties.

resist (*Photog.*). A coating of chemically neutral substance placed over a surface when the latter has to be protected at some stage in processing, as in etching or selective dyeing.

resistance (*Acous.*). See **acoustic resistance.**

resistance (*Biol., Med.*). The whole of the characters or properties of an organism which enable it to resist the attacks of a parasite or disease.

resistance (*Elec.*). (1) The property of a substance by virtue of which it resists the flow of an electric current through it.—(2) See **resistor.**

aerial (antenna)—*

resistance (*Psycho-an.*). An unconscious barrier in the mind against making unconscious processes conscious. Manifested in psycho-analysis by reluctance and opposition on the part of an individual to accept interpretations from the analyst concerning his unconscious processes.

resistance box (*Elec. Eng.*). A box containing a number of resistors connected to blocks at the top, and arranged so that any of the coils can be included in the circuit by inserting suitable plugs into sockets formed in the blocks.

resistance butt-welding (*Elec. Eng.*). A resistance welding process in which the two parts to be joined are butted together.

resistance-capacity coupling (*Radio*). A form of resistance coupling in which a condenser is interposed between the coupling resistance and the grid of the succeeding valve, to remove the steady component of the P.D. across the resistance from the grid, whilst passing the alternating components. Cf. *battery coupling.*

resistance-coupled amplifier (*Radio*). An amplifier employing resistance coupling between successive stages.

resistance coupling (*Radio*). Coupling between successive stages of an amplifier employing thermionic valves, by which the changes in anode current of one valve produce changes of potential across a resistance included in the circuit, such changes of potential being impressed on the grid of the succeeding valve.

resistance drop (*Elec. Eng.*). The voltage drop produced by a current flowing through the resistance of a circuit; equal to the product of the current and the effective resistance.

resistance flash-welding (*Elec. Eng.*). A resistance welding process in which an arc is struck and maintained between the parts until the correct temperature is attained, after which the current is cut off and the parts are forced together by mechanical pressure.

resistance frame (*Elec. Eng.*). A frame containing a number of resistors connected to a multiple-contact switch at the top, so that any desired number of them can be included in the circuit in which the frame is connected.

resistance furnace (*Elec. Eng.*). See **resistance oven.**

resistance grid (*Elec. Eng.*). A resistance unit generally used for heavy currents. Made up of a cast-iron grid designed so that current enters one end and passes through all the sections in series, before leaving at the other end.

resistance oven (*Elec. Eng.*). An oven in which the heating is carried out by means of heating resistors. Also called a RESISTANCE FURNACE.

resistance percussive welding (*Elec. Eng.*). A resistance welding process in which a heavy electric current is discharged momentarily across the electrodes, and a momentary mechanical force is applied simultaneously.

resistance pyrometer (*Elec. Eng.*). A pyrometer the operation of which depends upon the variation of the resistance of a wire with temperature. Also called a RESISTANCE THERMOMETER.

resistance seam-welding (*Elec. Eng.*). A resistance welding process in which the welding electrodes consist of two rollers, having mechanical pressure between them, moving along the seam to be welded.

resistance spot-welding (*Elec. Eng.*). A resistance welding process in which the electrodes consist of two points and cause welding to take place at a single spot.

resistance thermometer (*Elec. Eng.*). See **resistance pyrometer, platinum thermometer.**

resistance welding (*Elec. Eng.*). Pressure welding, in which the heat to cause fusion of the metals is produced by the welding current flowing through the contact resistance between the two surfaces to be welded, these being held together under mechanical pressure.

See **resistance butt-welding**
resistance flash-welding
resistance percussive welding
resistance seam-welding
resistance spot-welding.

resistant (*Biol., Med*). Not readily attacked by a parasite or disease.

resistivity (*Elec. Eng.*). A term denoting *volume resistivity*, i.e. the resistance of a block of the material in question having unit length and unit cross-sectional area; also called SPECIFIC RESISTANCE. See **mass resistivity.**

resistor (*Elec. Eng.*). A piece of apparatus used on account of its possessing resistance. Also called a RESISTANCE.

See **charging—**
earthing—
heating—
inductive—
non-inductive—

resolution (*Chem.*). The separation of an optically inactive mixture or compound into its optically active components.

resolution (*Med.*). Retrogression of the phenomena of inflammation; the subsidence of inflammation.

resolve (*Med.*). To remove inflammation by resolution.

resolving power (*Light*). The ability of a microscope or telescope to separate the images of close objects, or of a spectroscope to distinguish between nearly equal wavelengths. The limit of resolution in a good instrument is determined by the diffraction fringes surrounding each point in the image; it is therefore dependent on the aperture of the instrument.

resolving power of the eye (*Photog.*). The angle subtended by a small object which can just be determined visually.

resolving power of a lens (*Photog.*). The ability of a lens to register fine detail on a fine-grained emulsion. Measured by the circle of confusion.

resonance (*Acous.*). The phenomenon of minimum mechanical or acoustical impedance as the frequency of the applied disturbing force is varied, resulting in a maximum velocity of motion. Rods or plates are potentially vibrating systems with several modes of vibration, the frequencies of resonance generally not being exactly harmonic. The sharpness of resonance is measured by the ratio of the dissipation to the inertia of the system, a coefficient which also measures the rate of decay of the motion of the vibrating system when it is impulsed. See **decay factor.**

See also **acoustic—**
cavity—
current—
electrical—
Helmholtz—
mechanical—
pipe—
voltage—

resonance (*Chem.*). A state of a molecule which is intermediate between those represented by two bond formulae which are theoretically possible; e.g. the benzene molecule shows resonance.

resonance (*Eng.*). In any vibrating system, such as an engine-driven generator or screw propeller, the synchronism of some harmonic of the forcing impulses, due to non-uniform driving torque, with the natural frequency of vibration of the system. This leads to excessive vibration amplitudes which may result in shaft failure. See also **critical speed.**

resonance (*Radio*). A state of balance between positive (inductive) and negative (capacitative) reactance of a circuit. It is accompanied by the appearance of large currents and voltages resulting from relatively small e.m.f.'s.

resonance amplifier (*Radio*). An amplifier using the frequency-selective and magnifying properties of a resonant circuit.

resonance curve (*Radio*). A curve showing the variation of current in a resonant circuit connected in series with a generator of e.m.f., as the relation between the resonance frequency and the frequency of the generator is varied through unity, the e.m.f. of the generator remaining constant.

resonance radiation (*Light*). A case of *fluorescence* (q.v.) in which the exciting radiation is of the same frequency as that of fluorescence. If sodium D light is passed through a vessel containing sodium vapour at a low pressure, the path of the beam is seen to glow with light which is found, by spectroscopic examination, to give the D lines.

resonance step-up (*Radio*). The ratio of the voltage appearing across the condenser of a parallel tuned circuit to the e.m.f. acting around the circuit (usually induced in the coil) when the circuit is resonant at the applied frequency. See **Q.**

resonant circuit (*Radio*). A circuit comprising an inductance coil and a condenser in series or parallel. The series circuit has an impedance which falls to a very low value at the resonant frequency, whilst that of the parallel circuit rises to a very high value.

resonant frequency (*Radio*). The frequency at which the reactances of a series resonant circuit, or the susceptances of a parallel resonant circuit, balance out. It is numerically equal to $1/2\pi\sqrt{LC}$ cycles per second, where L is the inductance in henries and C the capacitance in farads.

resonant line (*Radio*). A parallel wire or concentric transmission line open or short-circuited at the ends and an integral number of quarter-wavelengths long. Used for stabilising the frequency of short-wave oscillators, and in antenna systems.

resonant shunt (*Elec. Eng.*). A tuned circuit placed in parallel with certain pieces of apparatus, in order to absorb harmonic currents of the frequency for which the circuit is tuned.

resonator (*Acous.*). Any acoustic enclosure, such as a pipe or cavity, which exhibits acoustic resonance, particularly if the latter is sharp.

See **Helmholtz—**
pipe—

resonator (*Radio*). Any device exhibiting a sharply defined resonance effect, such as a piezo-electric crystal or resonant circuit. Originally, a circular wire ring containing a small spark-gap, used by Hertz for the detection of electromagnetic waves.

resor′cinol or **resor′cin** (*Chem.*). $C_6H_4(OH)_2$, *m*-dihydroxy-benzene, a dihydric phenol, colourless crystals, m.p. 119° C., b.p. 276° C. Used as a lotion in certain skin diseases.

resorption (*Geol.*). The partial or complete solution of a mineral or rock fragment by a magma, as a result of changes in temperature, pressure, or composition of the latter.

respiration (*Bot.*, *Zool.*). The interchange of oxygen and carbon dioxide associated with katabolic processes in an aerobic organism: the corresponding processes in an anaerobic organism.

respiratory cavity, respiratory chamber (*Bot.*). A large intercellular space lying immediately beneath a stoma.

respiratory centre (*Zool.*). In Vertebrates, a nerve-centre of the hind-brain which regulates the respiratory movements.

respiratory chromogen (*Bot.*) A colourless substance which gives rise to a coloured substance on oxidation or reduction and may play a part in respiration.

respiratory heart (*Zool.*). In Birds and Mammals, the auricle and ventricle of the right side of the heart, which supply blood to the lungs. Cf. *systemic heart*.

respiratory index (*Bot.*). The number of milligrams of carbon dioxide set free from one gram of plant material (weighed as dry) when the temperature is 10° C., when the amount of respirable material is unlimited, and when oxygen is present in the same proportions as in the ordinary atmosphere.

respiratory movements (*Zool.*). The muscular movements associated with the supply of air or water to the respiratory organs.

respiratory organs (*Zool.*). The specialised structures which enable an organism to obtain a sufficient supply of oxygen for its needs.

respiratory pigment (*Zool.*). A substance contained in the blood of an organism by whose agency a sufficient amount of oxygen is conveyed to the tissues. See **chlorocruorin, haemocyanin, haemoglobin.**

respiratory quotient, respiratory ratio (*Bot.*, *Zool.*). The ratio between the volume of carbon dioxide given off and that of oxygen taken in, during a given time. It is approximately unity when an organism is respiring at the expense of carbohydrates, but is less than unity when fatty material is being utilised.

respiratory system (*Zool.*) See **respiratory organs.**

respiratory trees (*Zool.*). In *Holothuroidea*, a pair of elaborate tubular diverticula of the cloaca, the ultimate branches of which end in small spherical ampullae; believed to have a respiratory and hydrostatic function.

respiratory trumpets (*Zool.*). In the pupae of *Culicidae* (Mosquitoes, etc.), a pair of tubes projecting from the thorax which allow air to pass to the spiracles.

respiratory tube (*Zool.*). In some *Cyclostomata*, a median ventral tube by which water passes from the gullet to the gills.

respiratory valve (*Zool.*). In some Fish, e.g. Trout, a pair of transverse membranous folds, one attached to the floor, the other to the roof of the mouth, which prevent water from escaping through the mouth during expiration.

respond (*Build.*). (1) A pilaster which forms a pair with another.—(2) A *reveal* (q.v.).

response (*Elec. Comm., etc.*). The response, for a given frequency, of a transmission system (or a part thereof) is precisely defined as the ratio of the output level to the input level, these being defined in such special ways that the response of the complete system is the sum of the responses of its separate parts, the scale being logarithmic, and the power-levels expressed in decibels.

See **axial—**
frequency—
loudspeaker—
mean-spherical—
microphone—
polar—
random—
receiver—
reverberation—
total—

response curve (*Elec. Comm.*). The curve which exhibits the trend of the response of a communication system or a part thereof, for the range of frequency over which the system or part of the system is intended to operate. The response is expressed in decibels, and, for acoustic purposes, on a logarithmic frequency base.

rest bend (*San. Eng.*). A right-angle bend off a horizontal drain-pipe, fitted with a flat seating for connexion to a vertical pipe.

restiform (*Zool.*). Rope-like.

restiform bodies (*Zool.*). In some Fish, a pair of lateral extensions of the medulla oblongata which lie behind the cerebellum.

resting nucleus (*Cyt.*). A nucleus which is not dividing.

resting period, resting stage (*Bot.*). Any time in the life of a plant, or plant organ, when no growth or other activity appears to be in progress.

resting spore (*Bot.*). A thick-walled spore able to endure drought or other unfavourable conditions, and normally remaining quiescent for some time before it germinates.

restitution, coefficient of (*Mech.*). The ratio of the relative velocity of two elastic spheres after direct impact to that before impact. If a sphere is dropped from a height on to a fixed horizontal elastic plane, the coefficient of restitution is equal to the square root of the ratio of the height of rebound to the height from which the sphere was dropped. See **impact.**

restorative (*Med.*). Capable of restoring to health or to consciousness: any remedy which does this.

restrainer (*Photog.*). A chemical which reduces the rate of action of a developer or reducer in photographic work. Cf. *accelerator*. See also **light restraint.**

restriking voltage (*Elec. Eng.*). The high-frequency transient voltage which appears across the contacts of a switch, circuit-breaker, or fuse immediately after it has interrupted a circuit, and which is superimposed on the recovery voltage.

resue (*Mining*). To mine sufficient barren rock to allow of the subsequent removal of a narrow vein or lode, unmixed with country rock.—*n.* **resuing.**

resultant (*Mech.*). The resultant of two or more forces acting on a body is that single force which, when replacing the original forces, will produce in the body the same effect. Generally the resultant of a number of vector quantities is their vector sum. See **parallelogram of forces.**

resultants (*Chem.*). See **reaction products.**

re-superheating (*Eng.*). See **reheating.**

resu'pinate (*Bot.*). Reversed in position, usually through 180°, so that orientation is abnormal. The fruit bodies of some fungi with the hymenium on the upper surface are regarded as being resupinate, and in some flowers, those of orchids for example, the flower stalks or the ovaries twist during development, so that the open flower is really upside down.

resurgent gases (*Geol.*). Superheated steam and other volatiles which play an active rôle in volcanic action, and which were derived from the water included in sedimentary rocks at the time of their accumulation.

resuscitation (*Med.*). Restoration to consciousness or to life of one who is unconscious or apparently dead.

retaining wall (*Civ. Eng.*). A wall built to support earth at a higher level on the one side than on the other.

retakes (*Cinema.*). Additional takes of a shot, executed because faults have been noticed in the rushes of the regular takes, none of which are acceptable for editing purposes.

retardation (*Med.*). Arrest of mental development: abnormal slowness of mental activity.

retardation coil (*Elec. Comm.*). A coil of high inductance used to separate alternating from direct current, particularly when the latter is taken from a common supply.

retardation, phase (*Elec. Comm.*). See **phase retardation.**

retardation test (*Elec. Eng.*). A method of determining the iron, friction, and windage losses of electrical machinery by determining the rate at which it retards under the influence of these losses after being run up to speed and then disconnected from the supply.

retarded potential (*Radio*). A quantity occurring in electromagnetic wave theory, defined as the instantaneous electric potential at a point due to the distribution of charges and currents at a source which existed at a time x/c seconds earlier, where x is the distance of the point from the source and c the velocity of wave propagation.

retarder (*Build.*). A substance which delays or prevents the setting of cement.

retarder (*Chem.*). A negative catalyst which is added to a reacting system to prevent the reaction from being too vigorous.

retarder or **wagon retarder** (*Rail.*). An arrangement of braking surfaces placed alongside, and parallel with, the running rails in a shunting yard; operated from a signal-box by electric, pneumatic, or hydraulic means.

retarding field (*Thermionics*). An electric field such as exists between a positively charged grid and a negatively charged outer electrode of a three-electrode thermionic vacuum tube. Electrons entering this region from the cathode tend to have their direction of motion reversed.

retarding field detector (*Radio*). A form of detector employing a retarding field tube; particularly used for ultra-high frequencies.

retarding field tube (*Thermionics*). A thermionic tube in which the electrons from the cathode pass through the meshes of a positively charged electrode to enter a region where the electric field is in a direction opposing their forward motion, causing them to return to the electrode.

Retardo (*Build.*). Trade-name for a retarder.

rete, rēt (*Zool.*). A net-like structure.—*pl.* **re'tia.**

rete Malpig'hii (or **muco'sum**) (*Zool.*). See **Malpighian layer.**

rete mirabile, —ab'il-e (*Zool.*). (1) A network of small blood-vessels, as in the so-called *red glands* (q.v.) of Fish.—(2) In *Holothuroidea*, a vascular plexus which connects the dorsal vessel with the intestine.

rete ova'rii (*Zool.*). In the female Mammal, a structure homologous with the rete testis of the male, joining the epoöphoron to the medullary cords.

rete testis (*Zool.*). In Mammals, a network of intercommunicating vessels within the mediastinum.

ret'ene (*Chem.*). $C_{18}H_{18}$, methyl-*iso*propyl-phenanthrene; it occurs in the coal-tar fraction boiling above 300° C. and crystallises in white plates which sublime without decomposition.

retention (*Med.*). The abnormal keeping back in the body of matter (e.g. urine) normally evacuated.

retention wall (*Build.*). A thin wall built alongside an external wall of a building so as to leave a ½ in. to 1 in. cavity between, which is later filled with waterproofing material to form a vertical damp-proof course.

retentivity (*Elec. Eng.*). See **remanence.**

retic'ular (*Med., Zool.*). Resembling a net: of or pertaining to the reticulo-endothelial system, e.g. reticular cells.

reticular tissue (*Zool.*). A form of connective tissue in which the intercellular matrix is replaced by lymph; it derives its name from the network of collagenous fibres which it shows.

retic'ulate (*Bot., Zool.*). (1) Forming a network.—(2) Having the surface marked by a network of fine upstanding ridges.

retic'ulated (*Masonry*). A term applied to a variety of rusticated work distinguished by irregularly shaped sinkings separated by narrow margins of regular width.

reticulated (*Pot.*). Said of pottery having a surface decoration of false pierced work, produced either by impasto overclay (deep), addition of slip (shallow), or by stamping.

ret'icule (*Surv.*). A cell carrying cross-hairs and fitting into the diaphragm of a surveying telescope. Also called a GRATICULE.

retic'ulin (*Chem., Zool.*). A collagen, containing phosphorus, occurring in reticular fibrous tissues.

reticuli'tis (*Vet.*). Inflammation of the reticulum.

retic'ulocyte (*Zool.*). A variety of erythrocyte having a granular or reticular appearance; usually occurring in small numbers, but more numerous in young animals and in adults after haemorrhage.

retic'ulocyto'sis (*Med.*). An increase in the number of reticulocytes in the blood, as in pernicious anaemia.

reticulo-endothe'lial system (*Zool.*). A system of special phagocytic cells which show a special affinity for certain colloidal dyes (such as pyrrhol blue), fine suspended particles, and lipoid matter introduced into the circulation.

retic'ulum (*Zool.*). In ruminant Mammals, the second division of the stomach, or honeycomb bag: more generally, any net-like structure.—*adj.* **reticular.**

ret'iform (*Bot., Zool.*). Having the appearance of being netted.

retiform tissue (*Zool.*). See **reticular tissue.**

ret'ina (*Anat., Zool.*). The light-sensitive layer of the eye in all animals.—*adj.* **ret'inal.**

retinac'ulum (*Zool.*). In *Cirripedia,* a small hooked process which retains the egg-sac: in *Collembola,* the partially fused, rudimentary appendages of the third abdominal somite which retain the furcula in position: in *Lepidoptera,* a locking mechanism of the fore wing which retains the frenulum in position.

retinal fatigue (*Optics*). Retention of images after removal of excitation; due to chemical changes in the retina.

ret'inerved (*Bot.*). Net-veined.

retini'tis (*Med.*). Inflammation of the retina.

retinitis pigmento'sa (*Med*) A familial and hereditary disease in which chronic and progressive degeneration of the choroid occurs in both eyes, with progressive loss of vision.

ret'inoblas'toma (*Med.*). A tumour of the retina composed of small round cells, arising from embryonic retinal cells; it is locally destructive and forms metastases.

ret'inochoroidi'tis (*Med.*). Inflammation of the retina and of the choroid.

ret'inophore (*Zool.*). One of the crystal cells or vitrellae of an ommatidium.

retinos'copy (*Med.*). Skiascopy; shadow test. A method of estimating the refractive state of the eye by reflecting light on to it from a mirror and observing the movement of the shadow across the pupil.

retin'ulae (*Zool.*). In *Arthropoda,* the visual cells of the compound eye, forming the base of each ommatidium.

retort. A vessel used in distillation.—(*Met.*) A metallic or refractory vessel used in the distillation of metals, e.g in extraction of zinc from its ores, and in eliminating mercury from gold amalgams.—(*Gas*) A closed chamber of refractory material, heated by producer gas on the outside, in which charges of coal are carbonised. Retorts are mostly of the continuous vertical type, the other types being horizontal retorts and intermittent vertical retorts.

retort bench (*Gas*). See **bench.**

retouching (*Photog*). The manual manipulation of a negative with suitable pencil-work, in order to alter light and shade and so cover blemishes; applied particularly in portrait work.

retractable radiator (*Aero.*). A liquid cooler for an aero-engine, capable of being withdrawn out of the air stream into a protected part, as a means of controlling the temperature of the cooling liquid.

retrac'tile (*Zool.*). Capable of being withdrawn; as the claws of most *Felidae.*

retrac'tor (*Zool.*). A muscle which by its contraction draws a limb or a part of the body back or towards the body. Cf. *protractor.*

retreating systems (*Mining*). Systems in which the removal of ore or coal is commenced from the boundary of the property.

retree' (*Paper*). Slightly damaged paper from reams. It is marked XX in Gt. Britain and R in the U.S., and is invoiced at a lower rate than 'good.'

retro- (Latin *retro,* backwards, behind). A prefix used in the construction of compound terms; e.g. *retrocaecal,* behind the caecum.

retroaction (*Radio*). See **reaction.**

retrobul'bar neuritis (*Med.*). Inflammation of that part of the optic nerve situated behind the eyeball.

retrocae'cal, retroce'cal (*Med.*). Situated or occurring behind the caecum.

ret'roflexed, ret'rocurved (*Bot.*). Bent backwards.

retroflexed (*Med.*). Said of the uterus when its body is bent back on the cervix.—*n.* **retroflexion.**

retrograde motion (*Astron.*). The term applied to any westward motion in the ecliptic, but specially to the apparent motion of a planet in the sky when, owing to the combined effect of its own motion with that of the earth, it appears to move from east to west among the stars.

retrograde vernier (*Surv.*). A vernier in which n divisions on the vernier plate correspond in length to $(n+1)$ divisions on the main scale.

retrogression (*Zool.*). Degeneration; the assumption of features characteristic of lower forms.

retrogressive metamorphism (*Geol.*). The changes involved in the conversion of a rock of high metamorphic grade to one of lower grade, through the advent of metamorphic processes less intense than those which determined the original mineral content and texture of the rock.

ret'romorpho'sis (*Zool.*). Tendency to degeneration during development.

ret'roperitone'al (*Med*). Situated or occurring behind the peritoneum.

ret'ropharynge'al (*Med.*). Situated or occurring in the tissues behind the pharynx.

retropul'sion (*Med.*). The running backwards of a patient with paralysis agitans or Parkinsonism; the patient's centre of gravity is displaced backwards, the rigidity of his posture making it difficult for him to recover his balance.

retrorse' (*Bot., Zool*). Pointing backwards: pointing or facing contrary to the normal direction; as, in some Birds, feathers which incline forwards when the general direction of the plumage is backward.

retroser'rate (*Bot.*). Having marginal teeth strongly directed backwards.—(*Zool.*) Having backwardly directed teeth.

ret'roverse (*Bot., Zool.*). Retrorse.

retroversion (*Med.*). The abnormal displacement backwards of the uterus, with or without retroflexion.

retting or **rotting** (*Linen*). The process of soaking flax straw in water containing bacteria, in order to loosen the flax fibres from the woody tissue, which is removed later by scutching.

Rettinger's law (*Eng*). The work done in grinding coal or other substances is proportional to the area of the new surface produced; not yet confirmed by experiment.

return (*Weaving*). The same as *point draft.*

return bead (*Join.*). A double-quirk bead formed on the exterior angle of a timber.

return crank (*Eng.*). A short crank which replaces an eccentric in the *Walschaert's valve gear* (q.v.) on outside cylinder locomotives. It is fixed to the outer end of the main crank pin.

return electrons (*Cathode Ray Tubes*). Those electrons which, having impinged on the fluorescent screen, are on their way back to the anode.

return feeder (*Elec. Eng.*). See **negative feeder.**

return line (*Cathode Ray Tubes*). The faint trace formed on the screen of a cathode ray tube by the beam during the flyback period.

return wall (*Civ. Eng.*). A short length of wall built out from one end of a longer wall.

retuse' (*Bot.*). Having a bluntly rounded apex with a central notch.

Ret'zius' fibre-cells (*Zool.*). Thin rigid nucleated cells occurring between the hair-cells of the cochlea.

Reuleaux valve diagram, roo-lō' (*Eng.*). See **valve diagram.**

revalé, re-val-ā (*Masonry*). Said of a cornice, moulding, etc. finished when the work is in position.

reveal (*Build.*). The depth of wall revealed, beyond the frame, in the sides of a door or window opening.

reve′hent (*Zool.*) Carrying back.

reverberation absorption factor (or **coefficient**) (*Acous.*). The sound absorption factor of a large plane uniform surface when the incident sound-wave is of random intensity and direction, as in the reverberant field in an enclosure.

reverberation bridge (*Acous.*). A method of measuring the reverberation time in an enclosure; the rate of decay of the sound intensity is balanced against the adjusted and known decay of the discharge of a condenser through a resistance.

reverberation response (*Acous.*). The response of a microphone for reverberant sound, i e. for the simultaneous arrival of sound-waves of random phase, magnitude, and direction. Substantially equal to the mean-spherical response at each frequency of interest.

reverberation response curve (*Acous.*). The response of a microphone to reverberant sound-waves, as plotted with the response in decibels as ordinates, on a logarithmic frequency-base.

reverberation time (or **period**) (*Acous.*). The time, in seconds, required for the decay of the sound-intensity in an auditorium over an amplitude range of one million, or 60 decibels, there being no emission of sound-power during this decay.

rever′beratory furnace (*Met*). A furnace in which the charge is melted on a shallow hearth by flame passing over the charge and heating a low roof. Firing may be with coal, pulverised coal, oil, or gas. Much of the heating is done by radiation from the roof. Has numerous applications.

reversal of spectrum lines (*Light*). The appearance of a line as a broad, diffuse bright line with a narrow dark line down the centre. The effect is caused by cool vapour surrounding a hot source such as an electric arc, which produces a narrow absorption line on the short range of continuous spectrum given by the same vapour, at a high temperature, at the centre of the arc. Only certain lines are thus affected.

reversal process (*Photog.*). A method whereby the original film, which otherwise would be a negative, is reversed in black and white chemically, and so becomes a positive transparency suitable for projection; useful and economical in amateur cinematography.

reverse (*Bot.*). The under side of a fungal colony.

reverse (*Build.*). A *templet* (q.v.); so called from the fact that it is cut to the reverse profile of the work for which it is to be used as a reference.

reverse coupling (*Radio*). See **reverse reaction, negative feedback.**

reverse-current relay (*Elec. Eng.*). A relay for use in electric circuits, arranged to operate when the current is in the opposite direction to normal.

reverse curve (*Surv.*). A curve composed of two arcs, of the same or different radii, having their centres on opposite sides of the curve.

reverse feedback (*Radio*). See **negative feedback.**

reverse grid current (*Thermionics*). Current which flows away from the grid of a thermionic tube through the external circuit in the direction of the cathode, i.e. in the opposite way to the normal direction of current flow. It is caused by electronic emission from the grid, due to heating or bombardment, or by the presence of positive ions in the interelectrode space.

reverse plating (*Hosiery*). An arrangement made in a knitting machine to effect the transference of threads of different kinds or colours from the back to the front of the fabric so as to form the desired pattern or effect. See **plated fabrics.**

reverse-power relay (*Elec. Eng.*). An electric-circuit relay which operates when power is flowing in the direction opposite to normal.

reverse reaction (*Radio*). Reaction in such a way as to oppose the production of self-oscillation; sometimes used to neutralise the effects of inter-electrode capacity coupling.

reversed (*Zool.*). Inverted, as a spiral shell with a sinistral coil instead of a dextral coil, or vice versa.

reversed arch (*Civ. Eng.*). An *inverted arch* (q.v.).

reversed-charge (*Teleph.*). The practice of charging the whole or part of the fee for a trunk or toll-call to the called subscriber, instead of to the calling subscriber, which is normal practice.

reversed cleavage (*Zool.*). See **spiral cleavage.**

reversed drainage (*Geol.*). A phenomenon associated with river-capture, manifested by the flowing of a stream in a direction contrary to that which would be normally consistent with the existing geological structure.

reversed fault (*Geol.*). A type of *fault* (q.v.) in which compression has forced the strata on the side towards which the fracture is inclined to over-ride the strata on the downthrow side. Cf. *normal fault.*

reversed image (*Television*). An image in which the picture appears white where it should be black, and vice versa (*negative image*); or in which the left-hand (or upper) portions appear at the right-hand (or lower) side, and vice versa (*lateral inversion*).

reversed negative (*Photog*). In some mechanical photographic processes the negative has to be reversed, or turned from left to right, so that the final print is correctly orientated. Such a negative is termed a *reversed negative.*

reversed ogee (*Arch.*). A *cyma reversa* (q.v.).

reverser (*Elec. Eng.*). On traction vehicles, the switch used for altering the connexions of the traction motors in order to reverse the direction of running.

reversible absorption current (*Diel.*). A current which decreases with time much less rapidly than the 'geometrical' charging current (which is exponential), and is returned on short-circuiting the electrodes.

reversible cell (*Chem.*). A galvanic cell in which the interconversion of chemical and electrical energy is a reversible process.

reversible colloid (*Chem.*). See **lyophilic colloid.**

reversible level (*Surv.*). A form of level whose distinguishing characteristic is that the line of sight of the telescope may be reversed end for end.

reversible pistons (*Acous.*). Button- or toe-keys on an organ console which are used for reversing the position of couplers.

reversible potentiometer-type field rheostat (*Elec. Eng*). A potentiometer-type field rheostat used for controlling the field current of an electric machine and arranged so that the field current may be reversed.

reversible reaction (*Chem.*). A chemical reaction which can take place in both directions, and which is therefore incomplete, a mixture of reactants and reaction products being obtained, unless the equilibrium is disturbed by removing one of the products as rapidly as it is formed. Examples of reversible reactions are the formation of an ester and water from an alcohol and an acid, the dissociation of vapours, e.g. ammonium chloride, and the ionic dissociation of electrolytes.

reversing commutator (*Elec. Eng.*). Any form of reversing switch, but more particularly the type in which the contacts form two halves of a cylinder upon which bear two brushes.

reversing face (*Surv.*). The process of transiting a theodolite telescope, thereby changing its position from face left to face right, or vice versa.

reversing field (*Elec. Eng.*). In a commutator machine, a field of opposite polarity to that in which an armature coil had previously been moving; designed to produce a reversed e.m.f. to assist commutation. The field may be produced by a compole, or by shifting the brushes from the neutral axis.

reversing gear (*Eng.*). See **Joy's valve-gear, link motion, Walschaert's valve-gear.**

reversing layer (*Astron.*). The name given to the lower part of the sun's chromosphere where the absorption lines of the solar spectrum are formed by 'reversal' from bright emission lines to dark absorption lines.

reversing mill (*Met.*). A type of rolling-mill in which the stock being rolled passes backwards and forwards between the same pair of rolls, which are reversed between each pass. See **continuous mill, pull-over mill, three-high mill.**

reversing switch (*Elec. Eng*). A switch for reversing the connexions in an electrical circuit.

reversion, reversionary (*Biol.*). See **atavism, atavistic.**

reverting call (*Teleph.*). A call between subscribers on a party line or on a remotely operated local automatic telephone exchange. So called because it has to be established by impulsing back over a junction to a switching centre.

rever'tose (*Chem.*). A disaccharose obtained by the action of maltase on *d*-glucose.

revet'ment (*Civ. Eng.*). A retaining wall.

revise (*Typog.*). A second or third proof supplied in order that corrections made on the preceding proof may be checked over: to prepare and submit such a proof.

revivification (*Chem.*). The reactivation of charcoal.

rev'olute (*Bot.*). Rolled backwards and, usually, downwards, as the apex or margins of a leaf.

revolution (*Astron.*). The term generally reserved for orbital motion, as of the earth about the sun, as distinct from *rotation* (q.v.) about an axis.

revolution (*Geol.*). A period (usually regarded as of relatively short duration) of intense change in the disposition of sea and land, and of the surface configuration. The chief revolutions in the geological history of Britain were the *Caledonian, Armorican,* and *Alpine* (qq.v.).

revolver (*Small Arms*). A pistol in which the ammunition is carried by a rotating magazine, having its axis parallel to the bore.

revolving boilers (*Paper*). Large vessels in which rags, wood pulp, etc., are digested. Non-cellulose portions are thereby loosened and removed.

revolving flats (*Cotton Spinning*). An endless chain in a revolving-flat carding engine. It consists of metal bars extending across the machine and faced with fine wire teeth set in the opposite direction to those on the main cylinder. The flats move slowly, the cylinder rapidly, both in the same line of direction, while carding the cotton.

rewinding (*Cinema.*). The operation of winding back the reel of film after it has been projected, so that it is ready for the next time of projection. In a cinema, this is done in a *rewinding room*, adjacent to the projection box.

Rexilite (*Build.*). Trade-name for a bituminous roofing felt.

Rexoid (*Build.*). Trade-name for a bituminous roofing felt.

Reynolds' number (*Aero.*). A non-dimensional ratio used for comparing the conditions for similar motions in fluids. The product of any typical length of a body and the velocity, divided by the kinematic coefficient of viscosity of the fluid.

r.f. (*Radio*). Abbrev. for *radio frequency* (q.v.).

R.F.S. (*Build.*). Abbrev. for *render, float, and set.*

Rh (*Chem.*). The symbol for *rhodium.*

_r_H-value (*Chem.*). The logarithm, to the base 10, of the reciprocal of the hydrogen pressure which would produce the same electrode potential as that of a given oxidation-reduction system, in a solution of the same *p*H-value. The greater the oxidising power of a system, the greater the *r*H-value.

rhab'dites (*Zool.*). Small rod-like bodies, of doubtful function, secreted by certain cells of the epidermis or parenchyma in *Turbellaria.*

rhabdi'tiform (*Zool*). (Of *Nematoda*) having a short straight oesophagus with a double bulb.

Rhabdi'tis-form (*Zool.*). A free-living sexual stage in the life-history of certain parasitic *Nematoda*; e.g. *Rhabdonema.*

rhabdi'toid (*Zool*). Resembling *Rhabditis*; said of a type of nematode larva in which the buccal cavity resembles that of *Rhabditis* (i.e. is narrow with parallel sides).

Rhabdocoe'lida (*Zool*). An order of small aquatic *Turbellaria* of carnivorous habit; they have a sac-like gut.

rhab'dolith (*Zool.*). In some *Protozoa*, a small calcareous skeletal rod.

rhab'dom (*Zool.*). In the compound eyes of *Arthropoda*, a rod-like refractive body secreted by the retinulae and forming part of each ommatidium.

rhab'domere (*Zool.*). One of the constituent portions of a rhabdom, secreted by a single visual cell.

rhabdomyo'ma (*Med.*). A tumour composed of voluntary or striped muscle fibres.

rhabdomy'osarco'ma (*Med.*). A malignant rhabdomyoma.

rhachi-, rhachio-. See **rachi-.**

rhachis, rā'kis. See **rachis.**

rhachit'omy (*Zool.*). See **temnospondyly.**

Rhae'tic Series (*Geol.*). The series of marine shales and limestones found at the base of the Jurassic System and above the Triassic rocks. Some writers recognise it as a complete system.

rhagades, rag'a-dēz (*Med.*). Ulcerated fissures or cracks in the skin, especially those at the angles of the mouth occurring in congenital syphilis.

rhagad'iose (*Bot.*). Deeply marked by cracks or fissures.

rha'gon (*Zool.*). A form of Sponge colony in the shape of a flattened pyramid attached by its base, opening at the apex by an osculum, and having flagellated chambers in the upper wall only.

rham'nazin (*Chem.*). 3,5,4′-Trihydroxy-7,3′-dimethoxyflavone, a dye occurring in nature in the form of glucosides.

rham'netin (*Chem.*). 3,5,3′,4′-Tetrahydroxy-7-methoxyflavone, a dye occurring in nature in the form of glucosides.

rham'nose (*Chem.*). *Iso*dulcite, $CH_3\cdot(CHOH)_4\cdot CHO$, a methyl-pentose obtained from several glucosides, which crystallises with 1 H_2O, m.p. 93° C. On distillation with sulphuric acid it yields *a*-methyl-furfuraldehyde.

rham'phoid (*Zool.*). Shaped like a beak.

rham'phothe'ca (*Zool.*). In Birds, the horny coverings ensheathing the upper and lower jaws.

rhaphe (*Bot.*). See **raphe.**

rhe'nic acid (*Chem.*). See **rhenium oxides.**

Rhenish bricks (*Build.*). Very light bricks made of calcareous material bound together with dolomitic lime. Also called FLOATING BRICKS.

rhe'nium (*Chem.*). Symbol, Re. A metallic element in the seventh group of the periodic system, in the sub-group manganese, masurium, rhenium. At. no. 75, at. wt. 186·31. A very rare element, occurring in molybdenum glance, gadolinite, and other ores. The sp. gr. of the metal is 10·4, m.p. about 3450° C. A small percentage increases the electrical resistance of tungsten.

rhenium oxides (*Chem.*). Four oxides of rhenium have so far been found: Re_2O_7, ReO_3, ReO_2, and Re_2O_3. The volatile oxide Re_2O_7 is formed when the metal or its compounds are heated in air. Rhenium trioxide is the anhydride of rhenic acid H_2ReO_4. The heptoxide dissolves in water to form perrhenic acid, which forms metallic perrhenates.

rheomor'phism (*Geol*). Term proposed by H. G. Backlund for the process by which a pre-existing rock is converted into magma by the introduction of migrating volatiles or liquids, with concomitant rise of temperature.

rheoph'ily (*Ecol.*). The tendency shown by some aquatic animals to place themselves in a current, generally facing up it.

rhe'ostat (*Elec. Eng.*). A resistor arranged so that the value of the resistance in circuit may be varied.

See **balancer field—**
field—
field diverter—
potentiometer-type field—
shunt-field—
speed-adjusting—

rheostatic braking (*Elec. Eng.*). A method of braking used with electric motors; the motors are allowed to run as generators supplying power to resistances.

rheostatic controller (*Elec. Eng.*). A controller for varying the amount of resistance in an electric circuit.

rheostatic starter (*Elec. Eng.*) A rheostat arranged for starting an electric motor.

rheostriction (*Elec. Eng.*). See **pinch effect.**

rheotax'is, rheotro'pism (*Biol*). Response or reaction of an organism to the stimulus of a current.—*adj.* **rheotactic.**

rheumatic (*Med.*). Pertaining to or affected with rheumatism.

rheumatic fever (*Med.*). An acute disease characterised by fever, multiple arthritis, and a liability of the heart to be inflamed; due undoubtedly to a microbic infection, although the causative organism has not been isolated.

rheumatism (*Med.*). A term loosely applied to a number of conditions characterised by pain and stiffness of muscles and of joints, some inflammatory and others degenerative in origin.

rheumatoid arthritis (*Med.*). A disease characterised by inflammation and swelling of several joints (especially the small joints of the extremities) affecting the periarticular tissues, synovial membranes, and joint cartilages; it may start as an acute illness, and is probably the result of infection; finally there is much deformity, with stiffness of joints and wasting of muscles.

rhexig'enous (*Bot.*). See **lysigenous.**

rhex'is (*Med.*). Rupture of a bodily structure, especially of a blood-vessel.

rhin-, rhino- (Greek *rhis*, gen. *rhinos*, nose). A prefix used in the construction of compound terms; e.g. *rhinopharyngitis* (q.v.).

rhi'nal (*Zool.*). Pertaining to the nose.

rhinenceph'alon (*Zool.*). The olfactory lobes of the brain in Vertebrates.

rhini'tis (*Med.*). Inflammation of the mucous membrane of the nose.

rhi'nocoele, —sēl (*Zool.*). The cavity of the rhinencephalon; the olfactory ventricle of the craniate brain.

Rhinog Grits, rĕn'og (*Geol.*). A group of massive bedded unfossiliferous grits, arkoses, and conglomerates; part of the Harlech Series of the Cambrian System; seen typically in the Rhinog Mountains in Merioneth, N. Wales.

rhi'nopharyngi'tis (*Med.*). Inflammation of the nose and of the pharynx.

rhi'nophore (*Zool.*). In certain *Mollusca*, an olfactory organ, usually borne on the tentacles, consisting of a patch of sensory epithelium which is sometimes developed into a pit with folded walls.

rhinophy'ma (*Med.*). Overgrowth of the subcutaneous tissue and the skin of the nose as a result of chronic vascular congestion, associated with dyspepsia.

rhi'noplasty (*Surg.*). The repair of a deformed, diseased, or wounded nose by plastic surgery.

rhinorrhoe'a, rhinorrhe'a (*Med.*). Discharge of mucus from the nose.

rhinosclero'ma (*Med.*). A disease, occurring in eastern Europe, in which hard granulomatous swellings appear in the nose, pharynx, and larynx, the characteristic feature of the swellings being the presence of large, round, clear cells, often containing bacilli.

rhi'noscope (*Med.*). A speculum for viewing the interior of the nose.

rhinospo'ridio'sis (*Med.*). A chronic disease due to infection with the vegetable mould (formerly thought to be a protozoon) *Rhinosporidium Seeberi*; characterised by the appearance of polypi in the nose and conjunctiva and of papillomata on the cheek.

rhinothe'ca (*Zool.*). The horny sheath enclosing the upper part of the beak of a Bird.

rhinot'omy (*Surg.*). Incision into the nose.

rhip'idate (*Zool*). Fan-shaped.

rhipid'ium (*Bot.*). A fan-shaped cymose inflorescence.

rhipidos'tichous (*Zool.*). Having the peripheral somactids of the fin arranged in a fan-like manner. Cf. *orthostichous*, *rachiostichous*.

rhiz-, rhizo- (Greek *rhiza*, root). A prefix used in the construction of compound terms; e.g. *rhizanthous* (q.v.).

rhizanth'ous (*Bot.*). Apparently forming flowers from the root.

rhi'zine (*Bot.*). The rhizoid of a lichen; it may be single or it may be a strand of rhizoids.

rhizocar'pic, rhizocar'pous (*Bot.*). Producing flowers underground as well as in the normal position.

rhi'zocaul (*Zool.*). In hydroid colonies, the hydrorhizae or creeping stolons.

Rhizoceph'ala (*Zool.*). An order of *Cirripedia* the members of which are parasitic on other *Crustacea* although there is a free-swimming larva; there is a mantle, but both appendages and alimentary canal are lacking, the latter being replaced by a system of absorptive processes.

rhi'zocorm (*Bot.*). A stout fleshy rhizome.

rhi'zoder'mis (*Bot.*). See **piliferous layer.**

rhizogen'ic, rhizogenet'ic (*Bot.*). Producing roots.

rhi'zoid (*Bot.*). (1) A short fungal hypha serving to attach the fungus to the substratum, and to collect nutritive material.—(2) A short hair-like organ formed by liverworts and mosses, serving the same functions as above.

Rhi'zomastigi'na (*Zool.*). An order of *Zoömastigina*, the members of which have one or two flagella and numerous pseudopodia.

rhi'zome (*Bot.*). An underground stem consisting of more than one year's growth, usually lying horizontally in the soil, having a superficial resemblance to a root, but bearing scale leaves and one or more buds.

rhi'zomorph (*Bot.*). A densely packed strand of fungal hyphae, looking like a root.

rhizoph'agous (*Zool.*). Root-eating.

rhi'zophi'lous (*Bot.*). Growing on roots.

rhi'zoplast (*Bot.*). A very delicate thread running between the centrosome and the blepharoplast.—

(*Zool.*) In *Mastigophora*, a thread, or bunch of threads, connecting the basal granule to the nucleus or to the parabasal body.

rhizopo'dia (*Zool.*). Root-like pseudopodia which branch and anastomose.

rhi'zosphere (*Bot.*). The region in the soil surrounding the root system of a plant and affected by its excretions.

Rhizo'ta (*Zool.*). An order of *Rotifera* in which the adults are of sessile habit and are attached by the truncated end of the non-retractile tail.

rhod-, rhodo- (Greek *rhodon*, rose). A prefix used in the construction of compound terms; e.g. *rhodochrosite* (q.v.).

rho'damines (*Chem.*). Dyestuffs of the triphenylmethane group, closely related to fluorescein. They are obtained by the condensation of phthalic anhydride with *N*-alkylated *m*-aminophenols in the presence of sulphuric acid.

rhodanising. The process of electroplating with rhodium, especially on silver, to prevent tarnishing.

rho'deose (*Chem.*). $C_6H_{12}O_5$, a methyl-pentose sugar, an isomer of rhamnose.

rhodium (*Met.*). A metallic element of the platinum group. Symbol, Rh. At. wt. 102·91, at. no. 45, sp. gr. at 20° C. 12·5, m p. 1966° C.; specific electrical resistivity 5 1 microhms per cm. cub. Alloyed with platinum to form positive wire of the platinum-rhodium-platinum thermocouple. Used for plating silver and silverplate to prevent tarnishing.

rhodochro'site (*Min.*). Carbonate of manganese which crystallises in the trigonal system, occurring as rose-pink rhombohedral crystals. It is a minor ore of manganese. Also called MANGANESE SPAR.

Rhodoid (*Plastics*). A non-thermosetting plastic of the cellulose acetate type. See **Celastoid.**

rho'donite (*Min.*). Metasilicate of manganese, crystallising in the triclinic system. It is rose-coloured, and is sometimes used as an ornamental stone.

rho'dophane (*Zool.*). A coloured oily substance, globules of which are found in the cones of Birds and in parts of the retina in some other forms.

Rho'dophy'ta, Rhodophy'ceae (*Bot.*). A group of algae, mostly marine, distinguished by the prevalence of a red colour masking the chlorophyll. None are known to have motile reproductive organs. Simpler forms are filamentous; larger forms have complicated thalli. Red seaweeds.

rho'doplast (*Bot.*). Chromatophore of red algae.

rhodop'sin (*Chem.*). A purple pigment, believed to be a conjugated protein containing vitamin A, found in the rods of the retina and required for the appreciation of low intensities of light, i.e. for night vision. It is destroyed by bright light. Lack of rhodopsin, due to some congenital defect or to vitamin A deficiency, causes night blindness.

rho'dospo'rous (*Bot.*). Having pink spores.

rhomb-porphyry (*Geol.*). A medium-grained rock of intermediate composition, usually occurring in dykes and other minor intrusions; characterised by numerous phenocrysts of anorthoclase which are rhomb-shaped in cross section, set in a finer-grained groundmass. Related to laurvigite among the coarse-grained, and to kenyte among the fine-grained rocks.

rhomb-spar (*Min.*). An old-fashioned synonym for *dolomite*.

rhomb'enceph'alon (*Zool.*). See **hind-brain.**

rhombic antenna (*Radio*). A directional antenna comprising an equilateral parallelogram of conductors, each several quarter-wavelengths long, usually arranged in a horizontal plane. The wires are connected together through a resistance at one apex at the end of the longer diagonal, and to the transmitting or receiving apparatus at the other end. The maximum directive effect is along the longer diagonal.

rhombic sulphur (*Chem.*). *Octahedral sulphur* (q.v.).

rhombic system (*Crystal.*). See **orthorhombic system.**

rhombohe'dral class (*Crystal.*). A class of the trigonal system, a characteristic form being the *rhombohedron* (q.v.), which is exhibited by crystals of quartz, calcite, dolomite, etc.

rhombohedron (*Crystal.*). A crystal form of the trigonal system, bounded by six similar faces, each a rhombus or parallelogram.

rhomboi'dal (*Bot.*). Quadrangular, but not square, and attached by one acute angle.

rhomboi'deus (*Zool.*). In higher *Vertebrata*, a muscle connecting the scapula with the spinal column.

Rhometal (*Met.*). An alloy of Permalloy type. Contains 64% of iron and 36% of nickel. Used in high-frequency electrical circuits.

rhonchus (*Med.*). A harsh, prolonged sound, heard on auscultation, produced by the passage of air over secretions in the bronchial tubes; indicative of bronchitis.—*adj.* **rhonchal.**

rhone (*Build.*). An eaves gutter. (Local.)

rhum'batron (*Thermionics*). A toroid of one conducting turn, which functions as a tuned circuit of minute inductance and small capacity; used for velocity-modulating a space-current of electrons, which is projected axially through holes in capacity discs which otherwise close the centre. See **buncher.**

rhyac'olite (*Min.*). A glassy type of orthoclase found in the lavas at Vesuvius.

rhyncho-, rink'ō- (Greek *rhynchos*, beak, snout, proboscis). A prefix used in the construction of compound terms; e.g. *rhynchocoel* (q.v.).

Rhynchobdel'lida (*Zool.*). An order of *Hirudinea* the members of which are all marine or fresh-water forms parasitic on Snails, Fish, Reptiles, and aquatic Birds; they lack botryoidal tissue and possess a protrusible proboscis without jaws; the blood is colourless.

Rhynchocepha'lia (*Zool.*). An order of *Reptilia* having amphicoelous vertebrae, upper and lower temporal arcades, an imperforate palate, abdominal ribs, and a pineal eye; New Zealand (islands of Cook Strait). Tuateras.

rhyn'chocoel (*Zool.*). In *Nemertea*, the cavity in which the proboscis lies.

rhyncho'daeum (*Zool.*). In *Nemertea*, that part of the proboscis in front of the brain.

rhyn'chodont (*Zool.*). Having a toothed beak.

rhynchoph'orous (*Zool.*). Having a beak.

rhyn'chostome (*Zool.*). In *Nemertea*, the anterior terminal pore via which the proboscis is everted.

Rhynie Chert (*Geol.*). A silicified peaty bed containing well-preserved plant remains as well as spiders, scorpions, and insects; discovered at Rhynie, Aberdeenshire, in the Middle Old Red Sandstone (i.e. Devonian age).

rhy'olite (*Geol.*). The general name for fine-grained igneous rocks having a similar chemical composition to granite, commonly occurring as lava flows, though occasionally as minor intrusions, and generally containing small phenocrysts of quartz and alkali-feldspar set in a glassy or cryptocrystalline groundmass. Sometimes called LIPARITE. See also **obsidian, pitchstone, pumice, pyromeride** (nodular rhyolite), **nevadite.**

rhythmic crystallisation (*Geol.*). A phenomenon exhibited by rocks of widely different composition but characterised by the development of orbicular structure. See **corsite.**

rhythmic sedimentation (*Geol.*). A regular interbanding of two or more types of sediment or sedimentary rocks due to a seasonal change in the conditions of sedimentation, such as the alternation of wet and dry periods. See, for example, **varve clays.**

rhythmic (or **vernier**) **time-signals** (*Radio*). Special time-signals sent out regularly by high-powered radio stations for the determination, with accuracy, of navigational and surveying data, particularly longitude. The signals differ slightly from the exact second, so that their coincidence with local seconds can be more accurately observed.

rhy'tidome (*Bot.*). An external covering to a plant member made up of alternating sheets of cork and dead cortex or dead phloem.

ria, rē'a (*Geol.*). A normal valley drowned by a rise of sea-level relative to the land. Cf. *fjord*, in the production of which glacial action plays an essential part. A good example of a ria type of coastline is S.W. Ireland, the rias being long synclinal valleys lying between anticlinal ridges.

rib (*Aero.*). A light structural member, of aerofoil shape, which maintains the covering material of a plane or a control surface in the correct form under the pressure of the air load upon it.—COMPRESSION RIB, a rib which also acts as a compression member between the spars of an aeroplane wing structure.

rib (*Bot.*). One of the larger veins of a leaf.

rib (*Build., Civ. Eng*). (1) A curved member of a centre or ribbed arch.—(2) A moulding projecting for purposes of ornamentation from a ceiling or vault surface.

rib (*Textiles*). A prominent line running lengthwise, across, or diagonally in a fabric, and forming a cord effect.

rib (*Zool.*). A small ridge or rib-like structure: in Vertebrates, an element of the skeleton in the form of a curved rod connected at one end with a vertebra; it serves to support the body walls enclosing the viscera.

rib and panel (*Build*). A term applied to a vault formed of separate ribs and panels, the latter being supported upon the former.

rib fabric (*Hosiery*). A type of fabric in which the reverse-side stitches alternate in a vertical direction with the face stitches, forming vertical furrows and rows. This results in contraction of the fabric, but also renders it elastic and suitable for the extremities of garment parts.

rib mesh (*Build., Civ. Eng.*). See **expanded metal.**

rib'and (*Carp.*). A flat rail fixed across posts in a palisade.

ribbed arch (*Civ. Eng.*). An arch composed of side-by-side ribs spanning the distance between the springings.

ribbed flutings (*Build.*). Flutings which are separated by a flat or slightly convex listel.

ribbing (*Dec., Furn.*). Surface ornament consisting of a series of ribs, ridges, and depressions.

ribbon (*Cinema.*). The loop of stretched Duralumin in the light-valve, which is opened by the passage of modulation currents.

ribbon microphone (*Acous.*). A microphone in which an electromotive force is generated by the motion of a thin metallic ribbon in the gap of a magnet, the motion of the ribbon being determined by the pressure-gradient in the applied sound-wave.

ribbon multiple (*Auto. Teleph.*). In the rotary automatic machine-switching system, the multiple in which the multiple wiring between the switches is effected by wires woven in the form of a ribbon, the fabric with which the wires are woven forming the insulation.

ribbon ring (*I.C. Engs.*). A ring fitted round a piston, to retain a floating gudgeon pin without any other locking means (U.S.).

ribbon saw (*Carp.*). A thin, narrow band-saw having a width of not more than two inches.

ribbon strip (*Carp.*). A horizontal timber attached to vertical timbers as a support for joists. Also called GIRT STRIP, LEDGER BOARD.

ribbonite (*Plumb.*). Soft lead in the form of slender ribbons, used for caulking pipe-joints.

Ribmet (*Build.*). A registered form of expanded steel reinforcement used for concrete flooring, roofing, plaster ceilings, partitions, etc.

ri'bose (*Chem.*). $C_5H_{10}O_5$, a pentose, a stereoisomer of arabinose. *d*-Ribose occurs in certain nucleic acids.

Ric'carton Group (*Geol.*). A group of graptolitic shales with conglomerates occurring near Moffat in the Southern Uplands of Scotland and belonging to the Wenlockian stage of the Silurian System.

rice (*Mining*). See **birdseye.**

rice-grain (*Pot*). Decoration formed by pressing rice or other seeds in thin, raw clay objects, then glazing and firing. The seeds are burnt to ashes in the kiln, leaving transparent designs.

rice paper. The finely cut pith of ***Fatsia*** *papyrifera*. It is not a true paper.

rice weaves (*Textiles*). Fancy weaves formed by breaking and reversing certain regular twills, usually the $^{3}—_{3}$ and $^{4}—_{4}$ twills.

rich lime (*Build.*). *Fat lime* (q.v.).

rich mixture (*I.C. Engs.*). A combustible mixture in which the fuel is either in excess of that chemically correct for the air, or exceeds some required ratio thereto.

Ricinulei, ris-in-ū'lē-i (*Zool.*). An order of *Embolobranchiata* having a uniform prosoma and a segmented opisthosoma joined by a hidden pedicle; there is no telson; the pedipalpi are of moderate size, and chelate; there are no eyes; respiration is by tracheae; the metatarsus and tarsus of the third leg of the male are modified as a sexual organ; small tropical forms of limited distribution and great rarity.

rickers (*Timber*). Round timber of less than 2½ in. diameter in the middle.

rickets (*Med.*). A nutritional disease of childhood characterised by defective ossification and softening of bones; due to deficiency in the diet of vitamin D, there being a failure to absorb and utilise calcium salts.

Ricket'tsia (*Med.*). Small bacteria-like bodies found in lice and ticks and in the blood and tissues of patients suffering from typhus and other diseases resembling typhus.

rictal (*Zool.*). (In Birds) pertaining to the mouth aperture.

riddle (*Build., etc.*). A sieve.

ride (*Carp., etc.*). To rock or touch upon another part; e.g. a door which touches the floor in opening.

rider (*Chem.*). A small piece of platinum wire used on a chemical balance as a final adjustment in accurate weighing.

rider (*Mining*). (1) A *horse*, i.e. mass of country rock occurring in a mineral deposit.—(2) A thin seam of coal above a thick one.—(3) A guide for a bowk, in sinking.

rider shore (*Carp.*). An inclined baulk of timber used in a system of raking shores for a high building. It abuts at its lower end against a length of timber laid along the back of the outer raking shore, instead of against the ground.

rider's bone (*Med.*). Ossification at either end of one of the adductor muscles of the thigh, following upon injury as a result of riding.

ridge (*Build., Civ. Eng.*). The summit-line of a roof; the line on which the rafters meet.

ridge-board (*Carp.*). A horizontal timber at the upper ends of the common rafters, which are nailed to it.

ridge capping (or **covering**) (*Build.*). The covering applied over a ridge to protect the intersection of the sloping roof surfaces.

ridge course (*Build.*). The last (i.e. the top) course of slates or tiles on a roof, cut to length as required.

ridge pole, ridge-piece (*Build.*, *Civ. Eng.*). A timber member laid horizontally along the ridge of a roof.

ridge roll (*Build.*). A ridge piece, of rounded section, over which a lead flashing is secured as a covering.

ridge roof (*Build.*). A pitched roof whose sloping surfaces meet to form an apex or ridge.

ridge stop (*Build.*). A piece of sheet-lead shaped over the junction between a roof ridge and a wall; used in cases where the one runs into the other and a watertight joint has to be made

ridge tile (*Build.*). A purpose-made tile specially shaped for use as a covering over the ridge of a roof.

ridging (*Agric.*). The process of forming ridges in the surface soil so that as much as possible of the latter is exposed to weathering.

ridging (*Build.*). The operation of covering the ridge of a roof with specially shaped ridge tiles or other material.

Ridgway Conglomerate (*Geol.*). A conglomerate, varying in thickness from 0 to 1000 ft., occurring in the Old Red Sandstone of the westerly parts of S. Wales, above the typical Dittonian Stage.

riding lamps (*Aero.*). Lamps displayed at night by an aircraft when moored or at anchor. Colours and positions as laid down in the Maritime Code.

riding shore (*Carp.*). See **rider shore.**

Ridley sheeting (*Build.*). A patented form of steel dovetail shuttering capable of being adapted to any kind of circular work.

rie'beckite (*Min.*). Metasilicate of sodium and iron occurring in soda-rich igneous rocks as black monoclinic prismatic crystals.

Riedel's disease (*Med.*). Chronic thyroiditis. A chronic inflammation of the thyroid gland, which becomes enlarged and hard as the result of excessive formation of dense fibrous tissue.

Riedel's lobe (*Med.*). An anomalous downward prolongation of the right lobe of the liver.

Riffel loudspeaker (*Acous.*). A loudspeaker in which the radiating element takes the form of two sheets curved to an edge, on which is located the driving element, the latter being a current-carrying conductor in the longitudinal gap of a magnet. The arrangement provides for radiation in a horizontal plane with restricted vertical radiation.

riffle (*Mining*). A groove in the bottom of a sluice, or a strip of wood fixed across a sluice, or on a table, to catch heavy mineral.

riffler (*Eng.*). (1) A file bent so as to be capable of operating in a shallow depression.—(2) A device for dividing a stream of crushed material, e.g. coal, into truly representative samples.

rifle (*Small Arms*). A firearm having spiral grooves in the surface of the bore as guides for projections on the projectile, to which it imparts rotation for the purpose of increasing the accuracy of the weapon.

rifle grenade (*Ammunition*). A grenade which is projected from a rifle by means of a rod fitted into the barrel, or by means of a detachable discharger cup.

rifling (*Artillery*). The term used for the spiral grooves in the bore of a gun which are engaged by the driving band of a projectile, thus causing rotation of the latter.

rift and grain (*Geol.*). The two directions, approximately at right-angles to one another, along which granite and other massive igneous rocks can be split; rift being the easier of the two.

rift sawing (*Timber*). See **quarter sawing.**

rig (*Textiles*). (1) A division made up the centre of a fleece, for convenience in sorting.—(2) The form given to a piece of cloth by suspending it down the centre, to facilitate cutting. See **rigging and folding machine.**

rigaree (*Glass*). A name given to a broken design produced by a small ridged metal wheel; applied to raised bands or collars of glass as a decoration.

rigging (*Aero.*). (1) The operation of adjusting and aligning the various components of an aeroplane.—(2) In airships and balloons, the system of wires or cords by which the weight to be lifted is distributed over the envelope or gas-bag.

rigging and folding machine (*Woollen*). This consists of a table of triangular section over which cloth is drawn to divide it equally down the centre, before passing to the folding motion where it is cuttled and measured.

rigging angle of incidence (*Aero.*). See **angle of incidence.**

rigging diagram (*Aero.*). The drawing giving the designer's instructions as to the positioning and aligning of the various components of an aeroplane.

rigging position (*Aero.*). The position in which an aeroplane is set up in the workshop for the adjustment and alignment of the various parts, i.e. with the lateral axis and an arbitrarily chosen longitudinal datum line horizontal.

right-angled folding (*Bind.*). *Square folding* (q.v.).

right ascension (*Astron.*). The primary coordinate referred to the celestial equator, of which declination is the secondary; measured eastwards from the First Point of Aries along the equator to the foot of the body's declination circle. It runs from 0° to 360°, or from 0 hours to 24 hours, being generally expressed in time.

right circular cone. See **cone.**

right-hand rule (*Elec. Eng.*). See **Fleming's rule.**

right-hand twine (*Textiles*). See **openband twine.**

rigid arch (*Civ. Eng.*). A continuous arch without hinges or joints, the arch being rigidly fixed at the abutments.

rigid support (*Elec. Eng.*). A support for an overhead transmission line designed to withstand, without appreciable bending, a longitudinal load as well as transverse and vertical loads.

rigidity, modulus of (*Mech.*). See **modulus of rigidity, elasticity of shear.**

rigor (*Bot.*). An inert condition assumed by a plant when conditions for growth are unfavourable.

rigor (*Med.*). A sudden chill of the body, accompanied by a fit of shivering, which heralds the onset of fever.—RIGOR MORTIS, the stiffening of the body following upon death.

rigor (*Zool.*). A state of rigidity and irresponsiveness into which some animals pass on being subjected to a sudden shock; it is the result of *reflex action* (q.v.) and is known popularly as 'shamming dead.'

rill stoping (*Mining*). Overhand, inclined, or pyramidal stoping, such that the miners can rise on the pyramidal heap of broken ore formed.

rim (*Bot.*). The overhanging part of a wall about a bordered pit.

rim-fire cartridge (*Small Arms*). A form of cartridge which is fired by striking the rim and by a central cap.

rim lock (*Join.*). A form of lock distinct from the *mortise lock* (q.v.) in that, in its metal case, it is screwed to the face of the door.

rim rock (*Mining*). The rock round the rim or edge of a placer or alluvial deposit.

rim wheel (or **pulley**) (*Cotton Spinning*). A large pulley on the rim shaft of the mule, which transmits power to the tin roller driving the spindles.

ri'ma (*Zool.*). A narrow cleft.—*adjs.* **rimate, rimose, rimiform.**

rima glot'tidis (*Med.*). The gap in the larynx between the vocal cords in front and the arytenoid cartilages of the larynx behind.

rime (*Build.*). A rung of a ladder.

rimming (or **rimmed**) **steel** (*Met.*). Steel that has not been completely deoxidised before casting. Gas is evolved during solidification and bubbles are entrapped. Ingots contain blowholes but no pipe. See also **killed steel.**

ri'mose (*Bot.*). Having the surface marked by a network of intersecting cracks.—*dim.* **rimulose.**

rind (*Bot.*). (1) The outer layers of the fruit body, or the sclerotium of a fungus.—(2) The outer layers of the bark of a tree.

rinderpest (*Vet.*). An acute contagious disease of cattle due to infection by a filterable virus.

ring (*Bot.*). See **annulus.**

ring (*Teleph.*). The centre one of the three contacts on the terminating plugs of the flexible cords of an operator's cord circuit. See **R-wire.**

rings (*Bot.*). A series of chromosomes arranged end to end so that they form a ring.

ring armature (*Elec. Eng.*). An electric-machine armature having a ring winding. Also called a GRAMME RING ARMATURE.

ring bark (*Bot.*). Bark which splits off in more or less complete rings.

ringbone (*Vet.*). Osteoarthritis of the coronary joint of horses, or exostosis on the os suffraginis above the joint.

ring canal (*Zool.*). (1) The circular canal of a medusa which runs around the periphery of the umbrella.—(2) A circular vessel of the water-vascular system in Echinoderms.

ring complex (*Geol.*). See **ring dyke.**

ring course (*Build.*). The course farthest from the intrados of an arch.

ring doffer (*Spinning*). A junior operative who removes full bobbins from a ring frame, and supplies the empty bobbins required before spinning can proceed.

ring dyke (*Geol.*). An almost vertical intrusion of igneous rock which rose along a more or less cylindrical fault which has an approximately circular outcrop. In certain Tertiary instances (e.g. Ardnamurchan) several successive ring dykes, separated by 'screens' of country rock and approximately concentric, form 'ring complexes.'

ring filament (*Illum.*). The usual form taken by the filament of an electric filament lamp; the ring lies in a plane at right-angles to the axis of the lamp.

ring fire (*Elec. Eng.*). Thin streaks of fire appearing round the commutator of an electric machine; due to small particles of copper or carbon which have become embedded in the mica between the commutator and are raised to incandescence by the current. The presence of ring fire indicates that the commutator needs cleaning.

ring frame (*Cotton Spinning, etc.*). A spinning machine which imparts twist by means of a mechanically driven bobbin and a traveller mounted on a ring on the lifter rail. Used for cotton and worsted yarns; tending to supersede the mule spinning frame. See **ring spinning.**

ring gauge (*Eng.*). A hardened steel ring having an internal diameter of specified size within very small limits of error; used to check the diameter of finished cylindrical work.

ring latch (*Join.*). A latch in which the fall bar is operated by a handle in the shape of a ring, pivoted at the top so that it always falls into the vertical position.

ring main system (*Cables*). A distribution system in which the cables form a closed ring. In the event of a single fault all consumers have a path of supply.

ring-porous (*Bot.*). Said of wood which contains more vessels, or larger vessels, in the spring wood than elsewhere, so that it is marked in cross-section by rings, or portions of rings, of small holes.

ring shake (*Timber*). See **cup shake.**

ring spinning (*Worsted*). A method of spinning which produces a smooth yarn. Twisting is imparted by means of a positively driven bobbin and a metal eyelet or traveller, through which the yarn passes to the bobbin, guided by the lifter rail.

ring traveller (*Cotton Spinning*). A metal eyelet mounted on the ring in the lifter rail of a ring spinning frame.

ring vessel (*Zool.*). A vessel in the form of a ring; as the vessel in the scolex of *Cestoda* which connects the longitudinal excretory trunks.

ring watch (*Horol.*). A watch mounted in a ring for wear on the finger.

ring winding (*Elec. Eng.*). (1) A helical winding arranged on a ring of iron or other material. Also called a TOROIDAL WINDING.—(2) A form of armature winding in which the armature core is a hollow cylinder with each turn of the winding threaded through the centre. Also called a GRAMME WINDING or GRAMME RING WINDING.

ringworm (*Med.*). Tinea. A contagious disease characterised by the formation of ring-shaped patches on the skin; due to infection with moulds, especially of the three genera *Microsporon, Trichophyton,* and *Epidermophyton.*

rings and brushes (*Light*). The name applied to the patterns produced when convergent or divergent plane-polarised light, after passing through a doubly refracting crystal cut perpendicular to the optic axis, is examined by an analyser. Also commonly known as an INTERFERENCE FIGURE.

rings of Saturn (*Astron.*). See **Saturn.**

rin'gent (*Bot.*). Said of a corolla consisting of two distinct, widely gaping lips.

ringers (*Geol.*). See under **Lingula Flags.**

ringing (*Radio*). The persistence of currents in a resonant circuit after the removal of the e.m.f. which originally set them in motion.

ringing (*Teleph.*). The application of alternating current to a telephone circuit, causing the distant operation of apparatus which attracts the attention of operators or subscribers—in the former instance by operating a relay and lighting a lamp, and in the latter by ringing a bell.

See **interrupted— manual—**
keyless— power—
machine—

ringing current (*Teleph.*). The alternating current which is put on a subscriber's line to operate his trembler bell, or which is placed on a trunk line to light a lamp at the distant exchange.—SUPERPOSED RINGING CURRENT, an interrupted alternating current, superposed on a direct current, for ringing purposes.

ringing engine (*Civ. Eng.*). A simple form of *pile driver* (q.v.) for driving small piles.

ringing key (*Teleph.*). The non-locking lever key used by a telephone operator to put ringing current on a subscriber's line.

ringing tone or **ringing signal** (*Teleph.*). See **audible ringing tone.**

Rinmann's green (*Chem.*). The product obtained by adding a solution of cobalt nitrate to zinc oxide and reheating the compound on charcoal with or without sodium carbonate.

rip (*Carp.*). To saw timber along the direction of the grain.

rip-cord (*Aero.*). A cord for releasing a free parachute from its pack. Operated manually by the user of the parachute after falling clear of the aircraft.

rip-rap (*Civ. Eng.*). A foundation formed in water, or on a bed of soft material, by depositing broken stones loosely.

rip-saw, ripping saw (*Carp.*). A saw designed for cutting timber along the grain.

ripa'rian, riparious, riparial (*Bot., Zool.*). Living or growing on the banks of rivers and streams.

ripid'olite (*Min.*). A species of the chlorite group of minerals, crystallising in the monoclinic system. It is essentially a hydrated silicate of magnesium and aluminium with ferrous iron.

ripping saw (*Carp.*). See **rip-saw.**

ripple (*Elec. Eng.*). A term often used to denote the higher harmonics (e.g. 11th or above) in an alternating current or voltage wave, and also similar variations which sometimes occur in direct currents or voltages. See Supplement.

See **commutator—** **slot—**

ripples (*Phys.*). Small waves on the surface of a liquid for which the controlling force is not gravity, as for large waves, but surface tension. The velocity of ripples diminishes with increasing wavelength, to a minimum value which for water is 23 cm. per sec. for a wavelength of 1·7 cm.

ripple cloths (*Textiles*). Plain cotton cloths of low quality, having a nap resembling ripples; used for inexpensive dressing-gowns.

ripple control (*Elec. Eng.*). A method of controlling street lighting or other equipment from some central point by means of a high-frequency ripple superimposed on the current-carrying conductors of an electric power system.

ripple marks (*Geol.*). Undulating ridges and furrows found on the bedding planes of certain sedimentary rocks, due to the action of waves or currents of air or water on the sediments before they were consolidated. Such ripple and rill marks can be seen in the process of formation today on most sandy beaches, on sand dunes, and in deserts.

rippling (*Linen*). Removal of the seed balls and leaves, etc. from flax by means of iron combs.

rise (*Build., Civ. Eng.*). (1) The vertical distance from the centre of span of an arch in the line of the springings to the centre of the intrados. Also called the VERSED SINE.—(2) The vertical height from end supports to ridge of a roof.—(3) The height of a step in a staircase. *

rise (*Mining*). See **raise.**

rise-and-fall pendant (*Illum.*). A pendant lighting fitting the height of which can be adjusted by means of a pulley and counterweight.

rise-and-fall system (*Surv.*). A system of reduction of levels in which the staff reading at each successive point after the first is compared with that preceding it, and the difference of level entered as a *rise* or a *fall*. See **collimation system.**

rise and run (*Carp.*). A term applied to the amount of any given slope quoted as a given *rise* (vertical distance) in a given *run* (horizontal distance).

rise of floor line (*Ship Constr.*). A line joining the extremities of the flat of keel to the ship's bilge curve tangent.

rise of tide. The vertical distance of high-water level, at a given place, above a fixed datum (usually low water of ordinary spring tides at the place).

risen moulding (*Join.*). A moulding decorating a panel and projecting beyond the general surface of the surrounding framing.

riser (*Build.*). The vertical part of a step.

riser (*Elec. Eng.*). See **commutator lug.**

riser (*Foundry*). In a mould, a passage up which the metal flows after filling the mould cavity. It allows dirt to escape, indicates that the mould is full, and supplies metal to compensate for contraction on solidification. Also called OUT-GATE.

rising and setting (*Astron.*). The positions of a heavenly body when it is exactly on the great circle of the observer's horizon, east or west of the meridian respectively.

rising and falling saw (*Carp.*). A circular saw whose spindle can be moved in relation to the position of the working table, so that more or less of the saw can be made to project for cutting grooves of different depths.

rising arch (*Civ. Eng.*). An arch whose springing line is not horizontal.

rising butt hinge (*Join.*). A butt hinge with a loose leaf which, when opened, rises on the centre pin due to helical bearing surfaces on the two leaves. This enables a door, on opening, to rise above a carpet, and to close automatically.

rising front (*Photog.*). A sliding panel for carrying the lens in a camera; used so that pictures of elevated objects may not suffer distortion in perspective when registered.

rising mains (*Elec. Eng.*). In an electrical installation, a mains circuit which runs from one floor of a building to another.

rising shaft (*Civ. Eng.*). A shaft which is excavated from below upward. Cf. *sinking.*

ri'sus sardon'icus (*Med.*). Wrinkling of the forehead and retraction of the angles of the mouth due to spasm of the facial muscles (as in tetanus), giving the appearance of a grin.

Ritter's disease (*Med.*). Dermatitis exfoliativa infantum. Severe pemphigus of infants, in which the horny layer of the skin separates from the underlying layer over wide areas of the body.

river-bottom disease (*Vet.*). *Anaemia* (q.v.) of horses.

river-capture (*Geol.*). The beheading of a stream by a neighbouring stream which has greater power of erosion.

river wall (*Civ. Eng.*). A wall built as a side boundary to the flow of a river, thereby confining it to a definite path.

rivers, geological work of (*Geol.*). This involves (1) corrasion (wearing away) of their banks and beds, largely through the sediment suspended in the water and pushed along their beds; (2) transportation of immense quantities of rock waste produced by the agents of denudation in the high ground drained by the rivers, and of salts carried in solution.

rivet (*Eng.*). A headed shank for making a permanent joint between two pieces. It is inserted in a hole drilled or punched through both pieces, and 'closed' by forming a head on the projecting part of the shank by hammering or other means. The head may be rounded, flat, or pan-shaped.

rivet test (*Eng.*). A rough test for determining the suitability of steel bar for rivets. The bar should stand bending through 180°, and should be able to be riveted over a hard steel plate without cracking.

riveted joint (*Eng.*). See **butt joint, lap joint.**

riveting machine (*Eng.*). See **hydraulic riveter, pneumatic riveter.**

riv'ulose (*Bot.*). Marked with lines, giving an appearance of rivers as shown on a map.

R.M.S. (r.m.s.) load (*Elec. Eng.*). See **R.M.S. value.**

R.M.S. (r.m.s. or rms) value (*Elec. Eng.*). The *root mean square value* of an alternating current or voltage. It is the square root of the mean value of the squares of the instantaneous values taken over a complete cycle. When an alternating current or voltage is specified it is almost invariably the R.M.S. value that is used. The term is sometimes used also in connexion with quantities which alternate periodically over longer periods of time, e.g. a month or year. Also called EFFECTIVE VALUE.

Rn (*Chem.*). The symbol for *radon.*

ro. (*Build.*). Abbrev. for *rough.*

Roach Bed (*Geol.*). A bed of cavernous limestone found in the Portlandian of Southern England; of Upper Jurassic age and full of fossil casts.

road bed (*Rail.*). The foundation carrying the sleepers, rails, chairs, points, and crossings, etc. of a railway track.

road metal (*Civ. Eng*). Broken stone for forming the surfaces of macadamised roads. Also called METAL, METALLING.

road tar (*Civ. Eng.*). See **gas tar.**

roak (*Met.*). A *seam* (q.v.).

roan (*Leather*). Sheepskin, dyed and finished with a smooth grain; used in bookbinding.

roaring (*Vet.*). Inspiratory dyspnoea of horses, due to paralysis of the recurrent laryngeal nerve.

roast-sintering (*Met*). See **blast-roasting.**

roasting (*Met.*). The operation of heating sulphide ores in air to convert to oxide. Sometimes the sulphur-bearing gases produced are used to make sulphuric acid.

roasting furnace (*Met*). A furnace in which finely ground ores and concentrates are roasted to eliminate sulphur. Heat is provided by the burning sulphur. The essential feature is free access of air to the charge. This is done by having a shallow bed which is continually rabbled Many types have been devised; *multiple-hearth* is the most widely used.

robbings (*Worsted*). Wool fibres, longer than noil, removed during combing.

Roberts test (*Chem.*). A test for proteins, the reagent consisting of a mixture of 1 part concentrated nitric acid and 5 parts of a saturated magnesium sulphate solution.

Robeston Wathen Limestone (*Geol.*). A thin limestone found in the Caradocian Series of the Ordovician System in South Wales: one of the Bala Limestones.

Robinson cement (*Build*) A slow- but hard-setting plaster used for interior work. It is fire-resisting and does not expand or contract in setting.

Robinson direction-finder (*Radio*). A rotating-loop direction-finding system having an auxiliary loop, which can be reversed in series with the main loop and so permits an audible signal to be balanced by switching, instead of nodalising the signal amid noise.

Robinson-Adcock direction-finder (*Radio*). A rotating Adcock direction-finding system provided with additional aerials which, by balancing on reversing the signal from one pair of aerials in series with the signal from the main pair, permit the determination of the direction of arrival of a wave by observing an audible signal instead of zero signal.

rocaille, rok-ī′ (*Dec., Furn.*). A style of decoration, painted or in relief, in which rocks, shells, and seaweed predominate.

Rochelle salt, ro-shel′ (*Chem*). Sodium potassium tartrate, $KNaC_4H_4O_6+4H_2O$. Used as a cement for joining two metal surfaces together by applying in the hot plastic condition. See articles under **piezo-.**

roche moutonnée, rosh moo-ton-ā (*Geol.*). A mound of bare rock which is usually smoothed on the upstream side and roughened by plucking on the downstream side, as a result of a moving ice-sheet.

Roche's limit (*Astron.*). A critical value, according to the researches of Roche, for the radius of the secondary star, in a binary system, in terms of that of the primary, to ensure stability.

Rochester Shales (*Geol.*). A member of the Silurian succession typically exposed in the Niagara Gorge, between the Lockport Limestone and Dolomite above and the Clinton Limestone and Shales below. Approximately equivalent to the Wenlock Shales of England.

rock (*Geol.*). An aggregate of mineral particles forming part of the earth's crust (lithosphere). In igneous and metamorphic rocks, it consists of interlocking crystals; in sedimentary rocks, of closely packed mineral grains, often bound together by a natural cement.

rock crystal (*Min*). The name given to colourless quartz, whether in distinct crystals or not; particularly applicable to quartz of the quality formerly used in making lenses.

rock drill (*Civ. Eng.*). A tool specially adapted to the boring of holes through rock.

rock face (*Masonry*). The form of face given to a building-stone which has been *quarry-faced* (q.v.).

rock fever (*Med.*). See **undulant fever.**

rock flour (*Geol.*). A term used for finely comminuted rock material found at the base of glaciers and ice-sheets. It is mud-like and is composed largely of unweathered mineral particles.

rock-forming minerals (*Geol.*). The minerals which occur as the dominant constituents of igneous rocks, including quartz, feldspars, feldspathoids, micas, amphiboles, pyroxenes, and olivine.

rock meal (*Min.*). A white and light variety of calcium carbonate, resembling cotton; it becomes a powder on the slightest pressure.

rock milk (*Min*). A very soft white variety of calcium carbonate which breaks easily in the fingers; it is sometimes deposited in caverns or about sources holding lime in solution. Also called AGARIC MINERAL.

rock-phosphate (*Min.*). See **phosphorite.**

rock salt (*Min.*). See **halite.**

rock soap (*Min.*). Steatite.

rocker (*Mining*). A short rocking trough or cradle for washing concentrates and gold-bearing sand or gravel.

rocker arm (*Eng.*). See **valve rocker.**

rocker gear (*Elec. Eng.*). The hand-wheel or other device whereby the brush rocker of an electrical machine may be moved.

rocket tester (*San. Eng.*). A special rocket giving off clouds of dense smoke when lit. Used inside a drain which is being tested for leaks.

rocking bar (*Horol.*). A pivoted bar carrying the intermediate wheels in a keyless mechanism. It connects the winding stem direct to the barrel for winding, or else to the motion work for hand setting.

Rockwell hardness test (*Met.*). A method of determining the hardness of metals by indenting them with a hard steel ball or a diamond cone under a specified load and measuring the depth of penetration. See **Brinell hardness test.**

Rocky Mountain fever (*Med.*). Blue disease; black fever; spotted fever. A disease, more or less limited to certain States of the U.S.A., characterised by fever, headache, muscular pains, enlargement of the spleen, and a macular eruption on the skin; the disease is spread by a tick and is associated with infection by a Rickettsia organism.

Rocky Point effect (*Thermionics*). An effect of obscure origin occasionally occurring in high-voltage transmitting valves; characterised by a transient but violent discharge between the electrodes. First observed at Rocky Point radio station.

roco′co (*Dec.*). An exaggerated phase of *rocaille* (q.v).

rod (*Bricks*). A unit of brickwork which measures 16½ ft. by 16½ ft. by 1½ brick thick=806 cu. ft. or 11⅓ cu. yd. It contains about 4500 bricks plus about 75 cu. ft. of mortar. Since 1 rod=5 metres, 1 rod of brickwork=25 sq. m. 1½ bricks thick, which is approx. 10 cu. m.

rod-cell (*Zool.*). One of the photosensitive cells of the retina of which the percipient structure is rod-shaped.

rod epithelium (*Zool.*). A form of epithelial tissue in which the cells appear to be striated.

rod fibre (*Zool.*). The fibre with which a retinal rod is connected internally.

rods and cones (*Zool.*). The photosensitive cells of the retina: the percipient structures of these cells.

rodding (*San. Eng.*). The operation of clearing a stoppage in a pipe by inserting a rod to break down the obstruction or remove it.

rodding eye (*San. Eng.*). An *access eye* (q.v.).

rodent ulcer (*Med.*). A slowly growing ulcerating cancer of the skin which usually affects the upper part of the face; arises from the basal cells of the skin and is of low malignancy.

Roden'tia (*Zool.*). An order of small Mammals most of which are terrestrial, though a few are arboreal or aquatic; plantigrade forms with prominent incisor teeth growing from persistent pulps, no canines, and lophodont or bunodont grinding teeth; collar-bones are developed; the glenoid articulation of the lower jaw is longitudinally directed. Squirrels, Beavers, Rats, Mice, Porcupines, Chinchillas, Hares, and Rabbits.

Ro'dinal (*Photog.*). Trade-name for an alkaline solution of *p*-aminophenol containing a little sodium sulphite; used as a photographic developer suitable for all normal purposes.

rodman (*Surv.*). A staffman (U.S.).

Roentgen rays, rent'gen (*Phys.*) See **X-rays.**

Rog (*Paint.*). Trade-name of a paint adapted for use on new cement surfaces.

rogue (*Bot.*). A sport.

Rok (*Build.*). A weatherproof roof-covering material, made from wool-felt saturated with an elastic waterproofing compound and coated with a natural bitumen.

Rokalba (*Build.*). Asbestos-surfaced Rok.

roke (*Met.*). A *seam* (q v.).

Rokitan'sky's tumour (*Med.*). Compound hydrops folliculorum. An ovarian tumour formed by the aggregation of a number of Graafian follicles distended with fluid (see **hydrops folliculi).**

roll (*Aero., Ships*). See **rolling.**

roll (*Plumb.*). A joint between the edges of two lead sheets on the flat, the edges being overlapped over a 2-in. diameter wood roll fastened to the surface to be covered with lead.

rolls (*Bind.*). Tools having small wheels on the periphery of which are engraved designs to be impressed on the cover of a book.

roll boiling (*Textiles*). An old process for producing a permanent lustre on fine woollen fabrics, after raising, by steeping them vertically, wound on a wooden or perforated metal cylinder, in a tank of cold water, to which steam is admitted.

roll-capped (*Build.*). Said of ridge tiles which are finished with a roll or cylindrical projection along the apex.

roll film (*Photog.*). Film, with protecting paper, wound on a spool; much used by amateurs. The opaque paper, fitting closely to the end-cheeks of the spool, excludes light sufficiently to allow of loading and unloading cameras in daylight.

roll holder (*Photog.*). An adapter for using roll film, in the place of plates in slides, in a plate camera.

rolled gold (*Met.*). Composite sheet made by soldering or welding a sheet of gold on to both sides of a thicker sheet of silver, and rolling the whole down to the thickness required.

rolled steel sections (*Eng.*). Steel bars rolled into I-shaped, channel, T, angle, or cruciform cross-sections for different applications in structural work, each section being made in graded standardised sizes. See also **H-beam.**

roller (*Acous.*). In the mechanism of an organ, a cylindrical rod for transmitting motion by rotation, the forces being applied at the ends of radial pegs.

roller-bearing (*Eng.*). A shaft-bearing consisting of inner and outer steel races between which a number of steel rollers are located by a cage; suitable for heavier loads than is the *ball-bearing* (q.v.).

roller blind (*Build.*). An inside blind made of various materials and fitted to roll up around a wooden or sheet-metal drum.

roller chain (*Eng.*). A driving chain in which the links consist of rollers and sideplates, the rollers being mounted on pins which connect the sideplates. See **driving chain.**

roller delivery motion (*Cotton Spinning*). Mechanism for driving the rollers of a mule so as to deliver a short length of yarn as the carriage makes its inward run.

roller, safety (*Horol.*). The roller mounted on the balance staff of a lever escapement, against the edge of which the guard pin acts when the safety action is brought into play.

rolling (*Aero.*). The angular motion of an aircraft tending to set up a rotation about a longitudinal axis. One complete revolution is called a *roll*; one half-revolution (i.e. over on to its back), a *half-roll*; a rapid revolution is a *flick roll.* —(*Ships*) The phenomenon of a ship's behaviour in waves, wherein she changes her angle of heel. The time of complete reversal of heel from port to starboard (or vice versa) is the *rolling period.*

rolling instability (*Aero.*). That form of lateral instability that causes an aircraft to develop increasing oscillations of a rolling type, following a lateral disturbance.

rolling lift bridge (*Struct.*). A type of bascule bridge in which the bascule or cantilever part has, at the shore end, a surface of segmental profile rolling on a flat bearing.

rolling load (*Struct.*). See **moving load.**

rolling locker (*Lace*). A traverse net machine having a double tier of carriages which swing in an arc by means of reciprocating rollers with which they engage.

rolling mills (*Met.*). Sets of rolls used in rolling metals into numerous intermediate and final shapes, e.g. blooms, billets, slabs, rails, bars, rods, sections, plates, sheets, and strip.

rolling moment (*Aero.*). The component of the couple about the longitudinal axis acting on an aircraft in flight.

rolling period (*Ships*). See **rolling.**

rolling stock (*Rail.*). A general and collective term for all coaches, trucks, etc. which run along a railway track.

rolling-up curtain weir (*Civ. Eng.*). A form of frame weir in which the wooden barrier consists of a curtain, composed of a series of horizontal wooden laths increasing in thickness downwards and connected by watertight hinges, which is rolled up from the bottom.

roman (*Typog.*). Ordinary upright type, as distinct from *italic*, or sloping.

Roman cement (*Civ. Eng.*). A natural hydraulic cement made by calcining nodules found in the London Clay which contain about 66% chalk, 25% clay, and some ferrous oxide. It was much used for under-water work but is now largely superseded by Portland cement, whose ultimate strength is two or three times as great. Also called PARKER'S CEMENT.

Roman mosaic (*Build.*). See **tessellated pavement.**

Romberg's sign (*Med.*). This sign is present when a patient, standing with his feet close together and his eyes closed, sways more than when his eyes are open; it indicates disease of the sensory tracts in the spinal cord (as in tabes dorsalis).

ro'meite (*Min.*). Naturally occurring antimonite of calcium.

Röntgen rays, rént'gen (*Phys.*). X-rays.

röntgeno-. A prefix equivalent to *radio-.* See **radiotherapy,** etc.

roof (*Build., Civ. Eng.*). See **roof truss.**

roof boards (*Carp.*). Boards laid on a roof to provide a foundation and an undercovering to the covering materials proper, such as slates, tiles, etc.

roof covering (*Build., Civ. Eng.*). The material applied to the framework of a roof in order to form the outer upper covering of a building.

roof guard (*Build.*). A device fitted to a roof to prevent snow from sliding off it.

roof pendant (*Geol.*). A mass of country rock projecting downwards, below the general level of the roof, into an intrusive rock-body.

roof tree (*Carp.*). A common rafter.

roof truss or **roof** (*Build., Civ. Eng.*). The structural framework built to support the roof covering for a building. Also called a PRINCIPAL.

roofers (*Carp.*). *Roof boards* (q.v.).

roofing slate (*Geol.*). A term widely applied to rocks of fine grain in which regional metamorphism has developed a good slaty cleavage. Cf. *Collyweston Slate, Stonesfield Slate.*

room-noise (*Acous.*). The general ambient noise arising in enclosures, or filtering through from outside. Of importance in telephony, because the local room-noise operates the microphone, and, through side-tone, tends to mask the reproduction of the distant voice in the local receiver. Room-noise is reduced in telephone exchange switch-rooms by treating the ceiling acoustically.

room paper (*Build*) *Wallpaper* (q.v.).

root (*Bot.*). The branching lower portion of the axis of a higher plant; it fixes the plant in the soil, and by means of its tips collects water and mineral material.

root (*Carp.*). The section of a tenon in the plane of the shoulders.

root (*Civ. Eng.*). The part of a dam or weir which runs into the natural ground surface at each end.

root cap (*Bot.*). A hollow cone of cells covering the growing tip of a root and protecting the meristematic cells from damage as the tip is pushed through the soil.

root climber (*Bot.*). A plant which climbs by means of adventitious roots.

root hair (*Bot.*). A tubular outgrowth from a superficial cell of a young root, serving for the absorption of water and mineral salts from the soil. Its cavity is continuous with that of the cell from which the root hair springs.

root-mean-square value (*Elec. Eng.*). See **R.M.S. value.**

root pressure (*Bot.*). A pressure sometimes demonstrable in roots, and shown by the exudation of fluid when the stem is cut just above ground-level.

root pulper (*Agric. Mach.*). A machine comprising a rotating steel disc furnished with cutters, to which roots that have been cleared of soil are fed.

rootstock (*Bot.*). See **rhizome.**

root tuber (*Bot.*). A swollen root containing reserve food material.

root tubercle (*Bot.*). A swelling on a root, inhabited by symbiotic bacteria.

rooter (*Elec. Comm.*). An arrangement of thermionic valves for obtaining an output amplitude which is proportional to the square-root of the input amplitude. Required in compressors for reducing contrast in sound reproduction.

Roots blower (*Eng.*). An air compressor for delivering large volumes at relatively low pressure ratios; in it a pair of hour-glass-shaped members rotate with a small clearance within a casing, no valves being required.

rope brake (*Eng.*). An absorption dynamometer consisting of a rope encircling a brake drum or flywheel, one end of the rope being loaded by weights and the other supported by a spring balance. The effective torque absorbed is obtained by multiplying the drum radius by the difference of the tensions.

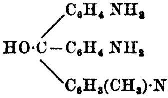
rope-scouring machine (*Textiles*). A machine for scouring woollens and worsteds, in which the ends of the pieces under treatment are sewn together to form an endless band and the material twisted like a rope.

ropy lava (*Geol.*). A lava flow, particularly basalt, the surface appearance of which resembles loose coils of rope. This is the characteristic surface appearance of flows of fluid lava. Cf. *block lava,* which results from consolidation of a very viscous lava from which the included gases had been boiled off before extrusion.

rosacea (*Med*). See **acne rosacea.**

rosa'ceous (*Bot.*). Having the characters of a rose: related to a rose.

rosan'iline (*Chem.*). Triamino-diphenyl-tolyl-hydroxy-methane, a base of the fuchsine dyes. It has the formula



$$\mathrm{HO{\cdot}C}\begin{cases}\mathrm{C_6H_4\,NH_2}\\ \mathrm{C_6H_4\,NH_2}\\ \mathrm{C_6H_3(CH_3){\cdot}NH_2}\end{cases}$$

It is obtained by the oxidation of an equimolecular mixture of aniline, *o*-toluidine and *p*-toluidine.

roscoelite, ros'ko— (*Min.*). This mineral is essentially *muscovite* (q.v) in which vanadium has partly replaced the aluminium. Its colour is clove-brown to greenish-brown.

rose (*Build.*). A decorative circular escutcheon through which the spindle of a door-handle passes.

rose cutter (*Horol.*). A small hollow milling cutter used on the lathe for rapidly producing pivots, screws, etc.

rose opal (*Min.*). A variety of opaque common opal having a fine red colour. Cf. the transparent *fire opal.*

rose-quartz (*Min.*). Quartz of a pretty rose-pink colour, due probably to titanium in minute quantity. The colour is destroyed by exposure to strong sunlight. See also **Bohemian ruby.**

rose-topaz (*Min.*). The yellow-brown variety of topaz changed to rose-pink by heating. These crystals often contain inclusions of liquid carbon dioxide.

rose, wind (*Aero.*). See **wind rose.**

rose window (*Build.*). A circular window with radial bars. Also called CATHERINE WHEEL, MARIGOLD WINDOW.

Rose crucible (*Chem.*). A crucible the lid of which is fitted with an inlet tube. It is used for igniting substances in a current of gas.

Rosebrae Bed (*Geol.*). A fine-grained yellow sandstone, containing fossil fishes, occurring near Elgin, Scotland, in the Upper Old Red Sandstone.

Rosendale cement (*Build.*). A natural cement manufactured from a rock quarried near Rosendale, N.Y.

Ro'senmüller's organ (*Zool.*). See **epididymis.**

rose'ola (*Med.*). Any rose-coloured rash.

rosette (*Bot.*). (1) A group of leaves lying close together on or near the surface of the soil, and radiating out from the apex of a short stem.—(2) Four cells in the embryo of a pine tree, lying just above the suspensor.

rosette (*Zool.*). Any rosette-shaped structure: in some *Oligochaeta,* a large ciliated funnel by which the contents of the vesiculae seminales pass to the exterior: in some *Crinoidea,* a thin calcareous plate (*rosette plate, rosette ossicle*) formed by the coalescence of the basal plates.

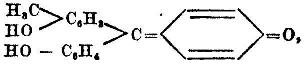
rosin (*Chem.*). Colophony. The residue from the distillation of turpentine. The colour varies from colourless, to yellow, red, brown, and black. Sp. gr. 1·08, m.p. 100°-140° C. Wood-rosin is obtained by the extraction of long-leaf pine wood; chief sources, U.S.A. and France. Used as a soldering flux, in varnish, soap, and size manufacture, and (in the form of resinates) as a drier in paint. See **resinates.**

ros'inates (*Chem.*). *Resinates* (q.v.).

Rosiwal method (*Geol.*). A method used in quantitative petrography involving the estimation of the volumes of the component minerals in a rock by the measurement of aggregate intercepts on a polished surface or on a microscope slide.

Roslin Sandstone (*Geol.*). A yellow sandstone found in the Midland Valley of Scotland; of Carboniferous age, falling partly in the Lower, and partly in the Upper Carboniferous; it is the Scottish equivalent of the English *Millstone Grit.* Named from the type-locality, Roslin Glen, S. of Edinburgh.

rosol'ic acid (*Chem.*). The quinonoid anhydride of *p*-trihydroxydiphenyl-*m*-tolylcarbinol,



an acidic dyestuff of the triphenylmethane series, obtained by oxidising a mixture of phenol and *p*-cresol with arsenic acid and sulphuric acid. Green glistening crystals, insoluble in water, dissolving in alkalis with a red colour.

rostel'lum. A beak-shaped process.—(*Bot.*) A beak-like outgrowth from the column in the flower of an orchid.—(*Zool.*) A small rostrum: in *Cestoda*, the hook-bearing projection at the top of the scolex: in *Cephalopoda*, a process of the shell.—*adjs.* **rostellar, rostellate.**

ros'trate (*Bot.*). Ending in a long, and usually hard, point.

rostrum (*Build.*). A raised platform for speakers.

rostrum (*Zool.*). In Birds, the beak: a beak-shaped process: in *Cirripedia*, a ventral plate of the carapace: in some *Crustacea*, a median anterior projection of the carapace.—*adjs.* **rostral, rostrate.**

ros'ula (*Bot.*). A rosette of leaves.

ros'ulate (*Bot.*). Forming a small rosette.

rot (*Vet.*). See **distomiasis.**

rotagravure (*Print.*). A photogravure printing process effected on a *rotary machine* (q.v.).

ro'taplane (*Aero.*). A heavier-than-air aircraft which derives its lift or support from the aerodynamical reaction of freely rotating rotors which have axes substantially vertical. See **Autogiro.**

rotary arc (*Illum.*). An arc lamp in which one or both carbon electrodes are rotated automatically by a motor, as well as being fed, so that the carbons are consumed regularly and the arc is steady.

rotary convertor (*Elec. Eng.*). See **synchronous convertor.**

rotary discharger (*Radio*). See **rotary spark gap.**

rotary engine (*Aero.*). An early type of aero engine in which the crankcase and radially disposed cylinders revolved round a fixed crank; not to be confused with the modern radial engine.

rotary field (*Elec. Eng.*). See **rotating field.**

rotary machine (*Print.*). A printing machine in which the printing surface is a revolving cylinder. Curved stereo plates are used, and the paper is fed from a roll. Very high speeds are attained on rotary presses. See **printing.**

rotary phase convertor (*Elec. Eng.*). See **phase changer.**

rotary pump (*Eng.*). A pump, similar in principle to a *gear pump* (q.v.), in which two specially shaped members rotate in contact; suited to large deliveries at low pressure. See **Roots blower.**

rotary regenerative heater (*Eng.*). An air heater consisting of a slowly revolving rotor made up of concentric rings of corrugated and flat plates, which pass alternately and continuously through the hot gases and the air drawn across opposite halves of the rotor.

rotary shutter (*Cinema.*). The rotating vanes which cut off the light from the screen while the frames are being moved and located in the picture gate of a projector. To increase the flicker frequency, each frame may also be interrupted once, twice, or, in certain sub-standard projectors, three times.

rotary spark gap (*Radio*). A rotating disc or wheel having a series of projections on its periphery which pass close to two fixed electrodes. A spark, of short duration, takes place from one electrode to the disc and thence to the other electrode each time the projections come opposite to the electrodes. Used in some forms of quenched spark system.

rotary strainer (*Paper*). A machine which removes foreign material from the pulp before it travels on to the paper-making machine.

rotary switch (*Elec. Eng.*). A switch operated by a rotating handle capable of rotation in one direction only.

rotary transformer (*Elec. Eng.*). See **dynamotor.**

rotary valve (*I.C. Engs.*). A combined inlet and exhaust valve in the form of a ported cylinder rotating on cylindrical faces in the cylinder head, usually parallel with the crankshaft.

rotate (*Bot.*). Said of a sympetalous corolla having a very short tube, the petals spreading like the spokes of a small wheel or like a star.

rotating beacon (*Radio*). A radio beacon in which the transmitted beam is slowly revolved by mechanical or electrical means. By transmitting a special signal when the beam points true north, a receiving station can obtain its bearings without the use of direction-finding apparatus.

rotating colour disc (*Cinema.*). The rotary colour filters which turn in synchronism with the frames in a projector, so that alternate frames are projected with their correct colour illumination.

rotating crystal method (*Crystal.*). A widely used method of X-ray analysis of the atomic structure of crystals. A small crystal, less than a millimetre in maximum size, is rotated about an axis at right-angles to a narrow incident beam of X-rays. The diffraction of the beam by the crystal is recorded photographically on a flat plate or on a film bent into a cylinder round the axis.

rotating field (*Elec. Eng.*). A magnetic field produced by polyphase currents flowing in the polyphase winding of an electric machine. The field has a direction which rotates around the axis in the same way as that produced by ordinary rotating field magnets.

rotating field magnet (*Elec. Eng.*). The rotating portion of an electric machine, usually a synchronous motor or generator, in which the field poles rotate and the armature is stationary.

rotating scanner (*Television*). Any form of mechanical scanner in which the moving parts revolve, as in a Nipkow disc, as opposed to one in which the motion is oscillatory.

rotation (*Astron.*). The term generally confined to the turning of a body about an axis passing through itself; e.g. *rotation* of the earth about its polar axis in one sidereal day.

rotation (*Bot.*). The movement of the protoplasm in a cell in a constant direction.

rotation (*Elec. Eng.*). See **curl.**

rotation axes of symmetry (*Crystal.*). Symmetrically placed lines rotation about which caused every atom in a crystal structure, as revealed by X-ray analysis, to occupy identical positions a given number (2, 3, 4, 6) of times. Cf. *screw-axes.*

rotation of the plane of polarisation (*Light*). A property possessed by optically active substances. See **optical activity.**

rotational field (*Elec. Eng.*). A field in which the *circulation* (q.v.) is, in some parts, not always zero.

rotator (*Zool.*). A muscle which by its contraction turns a limb or a part of the body on its axis.

rotatory dispersion (*Light*). The variation of the rotation of the plane of polarised light with wavelength for an optically active substance.

rotatory power (*Phys.*). See **specific rotation.**

Rötheln, rét'eln (*Med.*). German measles. See **rubella.**

Rothera test (*Chem.*). A test for the presence of acetone or diacetic acid, based on the appearance of a dark violet colour in the presence of an ammoniacal solution of sodium nitroprusside.

Rotif'era (*Zool.*). A class of *Trochelminthes* in which the pre-oral region forms a disc or crown with two rings of cilia, the pharynx is modified to form a mastax with chitinous jaws, and the anus, urinary and genital ducts open into a cloaca; there is a long tail; the sexes are separate; fresh-water or marine. Rotifers, Wheel Animalcules.

rotor (*Aero.*). Any system of revolving planes whose air reactions produce lift.

rotor (*Elec. Eng.*). The rotating part of an electric machine; the term is usually applied only to a.c. machines.

rotor core (*Elec. Eng.*). That portion of the magnetic circuit of an electric machine which lies in the rotor.

rotor starter (*Elec. Eng.*). A motor starter used for slip-ring induction motors; it cuts out resistance previously inserted in the rotor circuit.

rottenstone (*Geol.*). A material used commercially for polishing metals; formed by the weathering of impure siliceous limestones, the calcareous material being removed in solution by percolating waters.

rotting (*Linen*). See **retting.**

rot'ula (*Zool.*). In higher *Vertebrata*, the kneecap: in *Echinoidea*, one of five radially directed bars running inwards from the junctions of the epiphyses and forming part of *Aristotle's lantern* (q.v.).

rotund (*Bot.*). Approximately circular.

rotunda (*Build.*). A building or room which is circular in plan and is covered by a dome.

rotun'date (*Bot.*). Orbicular.

rouge. Hydrated oxide of iron in a finely divided state; used as a polish for metals.

Rouget cells, roo-zhā (*Zool.*). In Vertebrates, cells found lying against the walls of the capillaries; the power of contraction of the capillaries was formerly ascribed to these.

rough arch (*Build.*). An arch built of uncut bricks, wedge-shaped joints being used. They are usually segmental, with a rise of about one-eighth of the span.

rough ashlar (*Masonry*). A block of freestone as taken from the quarry.

rough brackets (*Carp.*). Pieces of wood nailed to the sides of the *carriage* (q.v.), to provide intermediate support for the treads of a wooden staircase.

rough-cast (*Plast.*). A rough finish given to a wall by coating it with a plaster containing gravel or small stones.

rough coat (*Plast.*). The first coat of plaster applied to a wall surface.

rough grounds (*Join.*). Unplaned strips of wood used as *grounds* (q.v.) when the attached joinery will entirely cover them.

rough plate (*Glass*). Plate glass that has not been ground and polished after the rolling operation.

rough-string (*Carp.*). See **carriage.**

roughing (*Linen*). The process of straightening and cleaning scutched flax by drawing it in handfuls through a series of pins.

roughing-in (*Plast.*). The first coat of three-coat plaster work applied on brick.

roughing-out (*Carp., etc.*). The preliminary operation of roughly shaping a piece before finally reducing it to the required shape and size.

roughing tool (*Eng.*). A lathe or planer tool, generally having a round-nosed or obtuse-angled cutting edge, used for roughing cuts.

roughness integrator (*Civ. Eng.*). An instrument for measuring the roughness of a road surface. Also called a CORRUGMETER OF PROFILOMETER.

rouleaux, roo-lō (*Zool.*) Aggregations of red blood-corpuscles resembling piles of plates.

roulette' (*Photog.*) A steel wheel, having pointed projections, used for retouching copper plates which have been etched.

roumanite (*Min.*). Opal, of gemstone quality, obtained from Roumania.

round (*Build.*). A rung of a ladder.

rounds (*Join.*). The general name for planes having a concave sole and cutting iron, used for forming rounded surfaces. Cf. *hollows.*

round key (*Eng.*). A circular bar or pin fitted in a hole drilled half in the shaft and half in the boss, parallel to the shaft axis; used for light work to avoid fitting. See **key.**

round of beam (*Ship Constr.*). A synonym for *camber.*

round step (*Build.*). A step finished with a semicircular end.

rounding (*Bind.*). The process of giving the back of a book a convex shape before casing, usually performed along with *backing* (q.v.).

rounding (*Leather*). Removing from the hide, before or after tanning, the shoulder, belly, and neck parts.

rounding plane (*Join.*). See **rounds.**

rounding-up tool (*Horol.*). A tool for correcting the size and shape of the teeth of a toothed wheel.

roup (*Vet.*). Fowl pox.

Rous's sarcoma (*Med.*). A tumour, occurring in fowls, which can be transmitted to other fowls by inoculation of a cell-free filtrate of the tumour, which is therefore thought to be the result of infection with a filter-passer.

Rousay Flags, row'zā (*Geol.*). A group of blue and calcareous flags with sandy beds which belong to the Middle Old Red Sandstone of the Devonian System; found in the North of Scotland and in Orkney.

Rousseau diagram, roo-sō (*Elec. Eng.*). A diagram by the use of which the total output (in lumens) of a light source can be obtained, if the polar curve of the lamp about the vertical axis is known.

Roussin's salts (*Chem.*). Formed when sodium trisulphide is added to a solution of ferrous chloride saturated at −2° C. with nitric oxide, and converted by sodium sulphide into so-called *Roussin's red salt*; by treatment with dilute acids this is converted into *Roussin's black salt.*

rout, rowt (*Carp., Join.*). To cut out wood from the bottom of a sinking with a router plane.

router (*Join.*). (1) A plane adapted to work on circular sash; operated in the manner of a spokeshave.—(2) The side wing of a *centre-bit* (q.v.), which removes the material in forming the hole.

router plane (*Carp.*, *Join.*). A plane having a central projecting cutting iron, adapted to smoothing the bottom of a recess.

routiner, roo-tē'ner (*Auto. Teleph.*). Apparatus which tests, as a routine, all machine-switching apparatus in an exchange, so that faults may be rapidly detected and rectified, and contacts kept clean.

routing machine (*Print.*). A machine having a revolving point which removes unwanted metal from printing plates.

Röver effect (*Eng.*). The stress increase on the inside of the coils of a loaded helical spring, above that deduced by assuming the wire to be in pure torsion.

roving or **rove** (*Textiles*). A thread or strand of textile fibres, in a continuous length, which has been reduced to a size suitable for spinning.

roving frame (*Cotton Spinning*). See **fly frames.**

R.O.W. & P.F. (*Build.*) Abbrev. for *rake out, wedge, and point flashings.*

rowelling scissors (*Vet.*). See **scissors (rowelling).**

Rowland circle (*Light*). A circle having the radius of curvature of a concave diffraction grating as diameter. It has the property that, if the slit is placed anywhere on the circumference of the circle, the spectra of various orders are formed in exact focus also round the circumference of the circle. This fact is used in designing mountings for the concave grating.

rowlock (*Build.*). A term applied to a course of bricks laid on edge.

rowlock-back (*Build.*). A term applied to a wall whose external face is formed of bricks laid flat in the ordinary manner, while the back is formed of bricks laid on edge.

Roxor (*Build.*). A stone-cleaning process involving the use of soft soap and steam.

royal (*Paper*). A standard size of printing paper, 20 × 25 in.; also writing and drawing, 19 × 24 in.

royal pair (*Zool.*). The pair of sexually perfect reproductory individuals which are the founders of a termite colony. See **Isoptera.**

royalette' (*Textiles*). A fabric with a sateen finish, cotton warp and fine Botany worsted weft.

R.R. alloys (*Met.*). Properly HIDUMINIUM R.R. ALLOYS. A series of aluminium alloys of the Duralumin type (sp. gr. approx. 2·75) composed of aluminium with the following elements in percentages varying between the limits shown:—copper 0·8-3·0, magnesium up to 4·0, silicon 0·6-2·8, nickel 0·5-2·0, iron 0·6-1·5, titanium 0·02-0·3.

R.S.F. (*Build.*). Abbrev. for *rough sunk face.*

R.S.J. (*Build.*). Abbrev. *for rolled steel joist.*

R.U. (*Chem.*). An abbrev. for *raies ultimes.*

Ru (*Chem.*). The symbol for *ruthenium.*

Ruabon (*Build.*). A term applied to hard, smooth-surfaced, impervious facing-bricks resembling red terra-cotta.

rubber (*Chem.*). Commercial rubber consists of caoutchouc, a polymerisation product of isoprene, of resin-like substances, nitrogenous substances, inorganic matter, and carbohydrates. The caoutchouc portion of rubber is soluble in CS_2, CCl_4, chloroform or benzene, forming a viscous colloidal solution. When heated, rubber softens at 160° C., and melts at about 220° C. Rubber easily absorbs a large quantity of sulphur either by heating or in the cold by contacting with S_2Cl_2, etc. This process is called *vulcanisation* (q.v.). Carbon black, in a fine state of division, is used as a reinforcing filler; other substances, produced by the condensation of aldehydes with amines, retard the oxidation of vulcanised rubber.—(*Diel.*) Rubber is used for insulating copper wires. A layer of pure rubber is put on the copper and vulcanised; rubber forms the main insulation. See **crepe—*, synthetic—.**

rubber blanket (*Print.*). See **set-off blanket.**

rubber gloves (*Elec. Eng.*). Gloves made of good quality rubber; worn when working on live circuits.

rubber line (*Acous.*). In gramophone disc-record manufacture, the terminating mechanical resistance in the sound-recording mechanism used for driving the stylus in making the wax record. By using concentric tubes of rubber, a substantially pure mechanical resistance over the required range of frequency is obtained.

rubbers (*Build.*). See **cutters.**

rubbing leathers (*Textiles*). Endless leather belts or aprons, one above another, which travel with an oscillating movement and convert the ribbon-shaped slivers in the condenser, or passing from a ring-doffer, into thread-like forms (roving or condensed slivers) suitable for drafting. Also called CONDENSER LEATHERS.

rubbing stone (*Build.*). An abrasive stone on which the bricklayer rubs smooth the bricks which he has cut to a special shape. See **gauged arch.**

rubble (*Masonry*). Rough uncut stones, of no particular size or shape, used for rough work, for filling between facing walls, etc.

rubble concrete (*Civ. Eng.*). A form of masonry often used on massive works such as solid masonry dams; composed of very large blocks of stone set about 6 in. apart in fine cement concrete and faced with squared rubble or ashlar.

rubefa'cient (*Med.*). Producing reddening of the skin: any agent which does this, a counter-irritant.

rubel'la (*Med.*). German measles; Rötheln. An acute infectious disease distinct from measles; characterised by slight fever, enlargement of glands in the neck and at the back of the head, and a pink papular-macular rash.

rubel'lite (*Min.*). The red transparent variety of tourmaline, used as a semi-precious gemstone.

rube'ola (*Vet.*). Swine fever.

Ruberoid (*Build.*). A very light-weight roof-sheeting material, lap-jointed with cement and nails. It is airtight, acid and alkali proof, and unaffected by moist heat.

rubes'cent (*Bot.*). Turning pink or red.

ru'bicelle (*Min.*). A yellow or orange-red variety of spinel; an aluminate of magnesium.

rubid'ium (*Chem.*). Symbol, Rb. A metallic element in the first group of the periodic system, one of the alkali metals. At. no. 37, at. wt. 85·48. The element is widely distributed in nature, but occurs only in small amounts; the chief source is carnallite. The metal is slightly radioactive, m.p. 38·5° C., b.p. 690° C., sp. gr. 1·532.

rubig'enous (*Bot.*). Rust-coloured.

ruby (*Min.*). The blood-red variety of the mineral corundum, the oxide of aluminium (Al_2O_3), which crystallises in the trigonal system. Also called TRUE RUBY (to distinguish it from the various types of *false ruby*, q.v.) and ORIENTAL RUBY, though the adjective *Oriental* is quite unnecessary, since it merely stresses the fact that rubies come from the East (Burma, Siam, Ceylon, Afghanistan). See also **Balas ruby, ruby spinel.**

ruby (*Typog.*). The old name for a type size, about 5½-point.

ruby light (*Photog.*). The so-called safe-light for use when manipulating orthochromatic films in the dark-room.

ruby pin (*Horol.*). The impulse pin of a lever escapement.

ruby silver ore (*Min.*). See **proustite, pyrargyrite.**

ruby spinel (*Min.*). That variety of magnesian spinel, $MgAl_2O_4$, which has the colour, but none of the other attributes, of true ruby. Also known as SPINEL RUBY, a deceptive misnomer.

rudder (*Ship Constr.*). A broad, flat device, varying in form, hinged vertically to, or behind, the stern-post of a vessel; the rudder serves to change the vessel's course when it is moved from a position in line with the keel.—(*Aero.*) A similar movable surface in a vertical plane for control of an aeroplane in angles of yaw (i.e. movement in a horizontal plane about a vertical axis). Usually located at the rear end of the body and controlled by the pilot through a system of rods or wires.

rudder bar (*Aero.*). A foot bar through which the pilot actuates the rudder, so controlling the aeroplane in angles of yaw.

rudder pedals (*Aero*). A device for the pilot's control of the rudder of an aeroplane, sometimes used as an alternative to a rudder bar.

ruden'ture (*Arch.*). A cylindrical moulding carved in imitation of a rope.

ru'deral (*Bot.*). A plant which grows usually on rubbish heaps or waste places.

rudiment (*Bot., Zool.*). The earliest recognisable stage of a member or organ.

rudimentary (*Bot., Zool.*). Incompletely or imperfectly developed; in an early stage of development; vestigial.

Rudis'tes (*Geol.*). A group of heavily built aberrant lamellibranchs characteristic of the Cretaceous rocks formed in the southern ocean (the Tethys) of the period; it includes the genera *Hippurites*, *Requienia*, and *Monopleura*. Rudistids also occur in the Cretaceous Trinity Series of Texas and Mexico.

rufes'cent (*Bot.*). Becoming reddish-brown.

Ruffini's organs, roo-fē̆'nē (*Zool.*). In Vertebrates, a type of sensory nerve-ending in which the nerve gives rise, within a cylindrical capsule, to small ramifications which end in flattened expansions.

ruffling (*Bot.*). A faint crumpling of a leaf attacked by a virus disease.

ru'fous (*Bot.*). Red-brown.

ru'gose (*Biol.*). Having a wrinkled surface.—*dim.* **ru'gulose.**

Ruhmkorff coil (*Elec. Eng.*). An early name for a self make-and-break *induction coil* (q.v.).

rule (*Build.*). See **floating rule.**

rule (*Typog.*). A strip of brass or type metal, of varying thickness and design, and in height equal to that of the type: a dash or score (see **em rule, en rule**).

rule border (*Typog.*). A frame of rules, usually brass, fitted around an advertisement or other displayed matter.

ruling (*Stationery*). The operation of making lines on writing, account-book, and ledger paper, etc.; the paper is conveyed on an endless belt and makes contact with suitably adjusted inked discs or pens.

ruling gradient (*Civ. Eng.*). The maximum gradient permissible for any given section of road or railway.

ru'men (*Zool.*). The first division of the stomach in Ruminants and *Cetacea*, being an expansion of the lower end of the oesophagus used for the storage of food; the paunch.

rumenot'omy (*Vet.*). The operation of cutting into the rumen.

Rumford's photometer (*Light*). A *photometer* (q.v.) consisting of a rod standing vertically in front of a white screen on which are cast shadows of it by the two light sources whose intensities are to be compared. When the shadows are of equal darkness the ratio of the intensities of the sources equals the square of the ratio of their distances from the screen.

ru'minant (*Zool.*). See **rumination.**

ruminate (*Bot.*). Mottled, as if composed of a mixture of two or more differently coloured parts; said of endosperm.

rumination (*Med.*). See **merycism.**—(*Zool.*) The regurgitation of food that has already been swallowed, and its further mastication before re-swallowing.—*adj.* and *n.* **ruminant.**

run (*Build.*). A gangway, especially for the passage of wheelbarrows.

run (*Horol.*). The movement of the lever, in a lever escapement, to the banking pins, due to draw.

run (*Plumb.*). That part of a pipe or fitting which is in the same straight line as the direction of flow in the pipe to which it is connected.

run (*Surv.*). In a level tube, the movement of a bubble with change of inclination.

run (*Textiles*). A batch of material run through the same set of machines.—(2) The American unit of length in counting woollen yarns, viz. 100 yards.

run on (*Typog.*). An indication that a new paragraph is not to be made. Marked in copy and proof by a line running from the end of one piece of matter to the beginning of the next.

run-out (*Cinema*). The end-trailer of a print, i.e. the length of film between the last effective frame and the end.

run-out (*Foundry*). See **break-out.**

runway (*Aero.*). A hard path, suitably surfaced, to facilitate landing and taking off. Laid in the direction of the prevailing wind, if only one is provided.

run'cinate (*Bot.*). Said of a leaf having a lamina composed of lobes with their points backwardly directed.

rung (*Build.*). A bar connecting the two side posts of a ladder and serving as a step.

ru'nic texture (*Geol.*). An alternative term suggested by A. Johannsen for *graphic texture*, since the intergrown quartz and feldspar resemble runic characters.

ru'nite (*Geol.*). A term suggested by A. Johannsen as an alternative to *graphic granite*.

runner (*Bot.*). A prostrate shoot which roots at the end and there gives rise to a new plant.

runner (*Eng.*). The rotor or vaned member of a *water turbine* (q.v.).

runner (*Moulding*). The vertical passage into the interior of a mould through which the metal is poured. Also called RUNNER-GATE. See **in-gate.**

runners (*Civ. Eng.*). A form of sheet pile much used for timbering wide excavations. It consists of short planks shaped to a chisel point at one end and usually shod with thin steel strip, so that as each runner is driven in, it wedges up against its neighbour.

runners (*Furn.*). Devices to assist sliding motion, as in drawers, etc.

runners (*Horol.*). The cylindrical sliding pieces which support the work in a pair of turns.

runner bush (*Moulding*). A small cast-iron box, without a bottom, lined with sand; placed over a runner gate to act as a funnel and reservoir for the metal during pouring.

runner stick (*Moulding*). See **gate stick.**

running (*Plast.*). The operation of forming a plaster moulding, cornice, etc. in situ, by running a horsed mould along the material while it is still plastic.

running bond (*Build., Masonry*). The same as *stretching bond*.

running charge (*Elec. Eng.*). A term commonly used in connexion with the cost of an electricity supply to denote that part of the cost which is approximately proportional to the number of kWh generated or consumed.

running commentary (*Radio*). A broadcast description of an event by an eye-witness.

running-in (*Eng.*). Running a new engine or machine under light load for some time to allow proper clearances to become established and friction-surfaces to be polished.

running rule (*Plast.*). A wood strip fixed temporarily to serve the same purpose as a running screed.

running screed (*Plast.*). A band of plaster laid on the surface of a wall as a guide to the movement of a horsed mould in the process of running a moulding.

running shoe (*Plast.*). The zinc part of a horsed mould, giving protection to the wood and facilitating running.

running trap (*San. Eng.*). See **siphon trap.**

Rupert's drop (*Glass*). A piece of molten glass dropped into water, so that it is rapidly chilled outside. Great stresses are set up inside, but are more or less balanced. If, however, the 'tail' of the drop is pinched off, the release of stress causes such a violent readjustment that the drop is shattered with a loud report.

rupes'cent, rupes'tral (*Bot.*). Growing on walls and rocks.

ru'pia (*Med.*). A syphilitic ulcer of the skin which is covered by a layer of crusts formed by dried secretion and dead tissue.

rupture (*Med.*). (1) Forcible breaking or tearing of a bodily organ or structure.—(2) To break or to burst (said of a blood-vessel or viscus).—(3) *Hernia* (q.v.).

rupturing capacity (*Elec. Eng.*). See **breaking capacity.**

rural automatic exchange (*Teleph.*). A small automatic exchange for a limited area; dependent on a main exchange for its extensions to other areas.

rushes (*Cinema.*). The first prints from the exposed cinematograph film in motion-picture production. These prints are usually made overnight, but it is possible to complete them in a few hours. All editing is done on rushes, and the negative is not cut until the final sequences with rushes are approved.

Rushton Schists (*Geol.*). A quartz-mica-schist found locally in Shropshire; of Pre-Cambrian age.

russel cord (*Textiles*). A dress fabric of plain weave, with a cord effect; made from cotton warp and worsted or mohair weft, the warp being in tapes.

Russell's test (*Elec. Eng.*). A method of determining the insulation resistance of a three-wire d.c. distribution network. The value is obtained by calculation from readings of an electrostatic voltmeter connected between the neutral wire and earth, both with and without a known resistance in parallel.

Russia leather (*Leather*). Formerly a special product of Russia made from calf's skin; now made by tanning skins in the usual way and imparting the familiar smell, by means of birch bark oil, in the finishing processes.

Russian cord (*Textiles*). A cloth with a plain ground which has, at intervals, prominent cords running the length of the piece. The cords are of special type for the production of which a gauze harness is required.

Russian cotton (*Textiles*). A strong cotton of about 1 in. staple, but rather harsh. Used chiefly in Russia. Quality and staple are very variable from year to year.

rust fungi (*Bot.*). See **Uredinales.**

rust joint (*Build.*). A watertight joint between adjoining lengths of guttering or pipes, formed by packing the socket with a mixture of iron filings and crushed sal-ammoniac.

rustic joint (*Masonry*). A sunken joint between adjacent building-stones.

rusticated ashlar (*Masonry*). Ashlar work in which the face stands out from the joints, at which the arrises are bevelled. The face may be finished rough or smooth or tooled in various ways.

rustication (*Masonry*). A general term for a surface treatment of ashlars, in which the faces are left rough, while the joints are sunk so that the stone projects.

rustics (*Build.*). Bricks having a rough-textured surface, often multi-coloured.

rustle (*Acous.*). A low-level random and irregular noise, such as is caused by the movement of leaves on a tree.—(*Cinema.*) See **valve rustle.**

rut (*Zool.*). The noise made by certain animals, as Deer, when sexually excited; oestrus: to be sexually excited, i.e. to be in the oestrous period: to copulate.

Ruth's accumulator (*Eng.*). A steam accumulator of variable pressure type for smoothing fluctuations of demand on a boiler. It consists of a large insulated vessel containing water into which steam is injected at a high pressure, to be liberated later when the pressure is reduced.

ruthe'nium (*Chem.*). Symbol, Ru. A metallic element in the eighth group of the periodic system. At. no. 44, at. wt. 101·7. The metal is silvery-white, hard, and brittle; m.p. above 1950°, sp. gr. 12·06. It occurs with the platinum metals in osmiridium.

ru'tilant (*Bot.*). Brightly coloured in red, orange, or yellow.

rutilated quartz (*Min.*). See **needle stone.**

ru'tile (*Min.*). Dioxide of titanium which crystallises as reddish-brown prismatic crystals in the tetragonal system. It is found in igneous and metamorphic rocks, and is a source of titanium.

Ruysch's penicil'li, rė'us (*Zool.*). In Vertebrates, tufts of capillary arterioles opening into the interstices of the spleen pulp.

R.W.P. (*Build.*). Abbrev. for *rain-water pipe.*

ryb'at (*Masonry*). An inband or outband.

Rydberg constant (*Light*). A constant (R or N) which occurs in the Balmer and Rydberg formulae. For hydrogen, $R_H = 109677{\cdot}8$ cm.$^{-1}$. For an infinitely massive atomic nucleus, the value of the constant would be $R_\infty = 109722{\cdot}4$ cm.$^{-1}$.

Rydberg formula (*Light*). A formula, similar to that of Balmer, for expressing the wave-numbers (ν) of the lines in a spectral series:

$$\nu = R\left[\frac{1}{(n+a)^2} - \frac{1}{(m+b)^2}\right],$$

where n and m are integers and $m > n$, a and b are constants for a particular series, and R is the *Rydberg constant* (q.v.).

s (*Chem.*). A symbol for *solubility.*

s- (*Chem.*). An abbrev. for .—(1) Symmetrically substituted; (2) *secondary*, i.e. substituted on a carbon atom which is linked to two other carbon atoms; (3) *syn-*, i.e. containing the corresponding radicals on the same side of the plane of the double bond between a carbon and a nitrogen atom or between two nitrogen atoms.

σ (*Chem.*). A symbol for the diameter of a molecule.

S (*Chem.*). The symbol for *sulphur.*

S (*Chem.*). In names of dyestuffs, a symbol for *black.*

S-acid (*Chem.*). 1-Amino-8-naphthol-4-sulphonic acid, an intermediate for dyestuffs.

2S-acid (*Chem.*). 1-Amino-8-naphthol-2:4-disulphonic acid, an intermediate for dyestuffs.

S-wire (*Teleph.*). The sleeve-wire which is added to a subscriber's pair in its passage through an exchange; it is connected to the sleeves of the plugs of the cord circuit.

Sa (*Chem.*). An alternative symbol for *samarium.*

Sabellifor'mia (*Zool.*). An order of *Cryptocephala*, of tubicolous habit, in which the palps are large, subdivided, and highly vascular, acting as respiratory and sensory organs.

sabin (*Acous.*). The unit of acoustic absorption; equal to the absorption, considered complete, offered by one square foot of open window to reverberant sound-waves in an enclosure.

Sabine reverberation formula (*Acous.*). The earliest formula for connecting the period of reverberation of an enclosure, *T* seconds, with the volume, *V* in cubic feet, and the total acoustic absorption in the exclosure, *aS* in sabins, where *a* is the coefficient of each area *S* sq. feet. The formula is $T = V/20 \cdot aS$

sab'inene (*Chem.*). A terpene derivative occurring in marjoram oil; b p. 163°-165° C., sp. gr. 0·848, refractive index 1·4675.

Sabinite (*Build.*). Trade-name of a plaster having special acoustic properties.

sable (*Furs*). The dressed skin of the sable, an animal related to the marten. The skins of the true sable come from Siberia and are a dark rich brown; the tail is bushy and the paws are black. The fur of the N. American marten closely resembles sable.

sab'ulose, sab'uline (*Bot.*). Growing in sandy places.

sac (*Bot., Zool.*). Any bag-like or pouch-like structure.

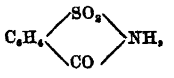
saccate fruit (*Bot.*). A fruit having a bag-like envelope around it.

sac'charase (*Chem.*). See **invertase.**

saccharim'eter (*Chem.*). A special type of polarimeter adapted for use with white light; used in sugar analysis.

saccharim'etry (*Chem.*). The estimation of the percentage of sugar present in solutions of unknown strength, especially by measurements of optical activity.

sac'charin (*Chem.*). *o*-Sulpho-benzimide,



$$C_6H_4\langle{}^{SO_2}_{CO}\rangle NH,$$

a white crystalline powder, three hundred times as sweet as sugar, not very soluble in water. The imido-hydrogen is replaceable by Na, forming a salt which is readily soluble in water. It is used in medicine in cases where sugar is harmful, e.g. in diabetes.

saccharine (*Bot.*). Having a surface covered with shining grains and looking as if sprinkled with sugar.

saccharobi'ose (*Chem.*). Cane-sugar or sucrose.

saccharoi'dal textures (*Geol.*). Granular textures which resemble loaf sugar; found especially in limestones and marbles.

saccharolyt'ic (*Bacteriol.*). Said of bacteria which use simple carbohydrates and starches as sources of energy.

saccharom'eter (*Chem.*). A hydrometer which is used to determine the concentration of sugar in a solution.

sac'charoses (*Chem.*). *Carbohydrates* (q.v.), which according to their complexity are usually divided into *mono-*, *di-*, *tri-*, and *poly-saccharoses.*

saccif'erous, sac'ciform, sak-sif— (*Bot., Zool.*). *Adjs.* from *sac* (q.v.).

saccule, sac'culus (*Zool.*). A small sac: the lower chamber of the auditory vesicle in *Vertebrata.*—*adj.* **sac'culate.**

saccu'liform (*Biol.*). Shaped like a little bag.

saccus (*Zool.*). A sac or pouch-like structure: in male Insects, the ninth abdominal sternite.

sack-pusule (*Bot.*) See **pusule.**

sacr-, sa'cro- (Latin *sacer*, sacred). A prefix used in the construction of compound terms; e.g. *sacro-caudal*, pertaining to the sacrum and the tail region.

sa'cral ribs (*Zool.*). Bony processes uniting the sacral vertebrae to the pelvis, distinct in *Reptilia* but fused to the transverse processes in other *Tetrapoda.*

sacral'gia (*Med.*). Pain in the sacral region.

sacralisation (*Med.*). A developmental anomaly in which one or both transverse processes of the fifth lumbar vertebra become abnormally large and strong, thus appearing to form part of the sacrum.

sa'crum (*Zool.*). The vertebrae to which the pelvic girdle is attached —*adj.* **sa'cral.**

sacs (*Furs*). The term for a number of furs sewn together.

saddening-down (*Paint.*). Loss of gloss or brilliance in a painted or varnished surface.

saddle (*Civ. Eng.*). A block surmounting one of the towers of a suspension bridge, providing bearing or fixing for the suspension cables.

saddle (*Elec. Eng.*). A U-shaped cleat for securing screwed or other lighting conduit to a flat surface.

saddles (*Pot.*). Supports placed in saggars for holding articles to be fired in the glost oven.

saddle-back board (*Join.*). A narrow board, chamfered along each of the upper edges, which is fixed on the floor across the threshold of a doorway so that the gap beneath the door shall be small when the latter is shut and large enough when it is open to accommodate a carpet.

saddle-back coping (*Masonry*). A coping-stone whose upper surface slopes away on both sides from the middle.

saddle bar (*Build.*). A metal bar fixed across a window to give support to glazing secured in lead cames.

saddle boiler (*Build.*). An inverted U-shaped boiler fitted in a kitchener to supply the hot-water system.

saddle coils (*Cathode Ray Tubes*). Rectangularly formed coils which are bent around the neck of a cathode ray tube; used for magnetic deflection of the beam.

saddle key (*Eng.*). A key sunk in a key-way in the boss, but having a concave face which bears on the surface of the shaft, which it grips by friction only. See **key.**

saddle scaffold (*Build.*). A scaffold erected over a roof from standards on both sides of the building; used for repair work on, for example, a chimney at the middle of the roof.

saddle-stitching (*Bind.*). A method of wire-stitching in which the book is placed astride a saddle-shaped support and stitched through the back.

saddle stone (*Build.*). An apex stone.

sa'dism (*Psycho-path.*). Sexual perversion in which physical gratification is obtained by inflicting pain, mental or physical, on another person. In this condition, as also in masochism, there is a high degree of fusion between the sexual and aggressive instincts. (Named from the Marquis de Sade, 1740-1814, who both practised and wrote on sadism.)

safeguard (*Rail.*). A *check-rail* (q.v.).

safe-lights (*Photog.*). Special light-filters used for lighting dark-rooms, the colour passed being adjusted to the types of emulsions employed. The filters may be of glass, gelatine, or dye solutions in glass boxes.

safe load (*Eng.*). See **factor of safety.**

safety action (*Horol.*). The action in a lever escapement that ensures that the notch in the lever is always in its correct position for the reception of the impulse pin.

safety arch (*Build.*). A *discharging arch* (q.v).

safety cage (*Mining*). A cage fitted with a 'safety catch' to prevent it from falling if the hoisting-rope breaks.

safety coupling (*Eng.*). A friction coupling adjusted to slip at a predetermined torque, to protect the rest of the system from overload.

safety cut-out (*Elec. Eng.*). An overload protective device in an electric circuit.

safety factor (*Eng.*). See **factor of safety.**

safety (or **non-flam**) **film** (*Cinema.*). Negative or positive film with cellulose acetate base. Obligatory for sub-standard sizes, but not used in sound-film studios or theatres, because it is not quite so transparent and does not wear so well as the nitrate film. So called because of its inability to flare up when ignited; after several years of dry storage, however, acetate film loses its non-flam properties.

safety finger (*Horol.*). The pin or finger attached to the end of the lever adjacent to the notch. It butts against the edge of the safety roller if the escapement is subject to a jerk, or when setting the hand back, in the case of a watch. Also called GUARD PIN and sometimes DART.

safety fuse (*Demolitions*). A train of slow-burning gunpowder, enclosed in waterproofing composition, by means of which detonators can be fired from a distance.

safety fuse (*Elec. Eng.*). A protective fuse in part of an electric circuit.

safety glass (*Glass*). (1) Laminated glass, formed of a sandwich of a 'plastic' material such as cellulose nitrate or acetate between two glass sheets, certain intermediate layers being used to facilitate adhesion.—(2) Toughened glass, formed by heating a sheet of glass to the point of incipient softening and then chilling it rapidly to a certain extent, but not sufficiently to cause fracture. The glass is in fact a kind of Rupert drop. The stresses have the effect of importing a considerably greater resistance to shock.—(3) Glass reinforced with wire mesh incorporated in the body.

safety island (*Civ. Eng.*). See **street refuge.**

safety lamp (*Mining*). A miners' lamp which will not immediately ignite firedamp or gas in a coal-mine; e.g. a *Davy lamp.* Also used for detecting gas.

safety lintel (*Build.*). A lintel doing the work of a relieving arch, and serving to protect another more decorative lintel used for architectural reasons.

safety plug (*Eng.*). See **fusible plug.**

safety rail (*Rail.*). See **check-rail.**

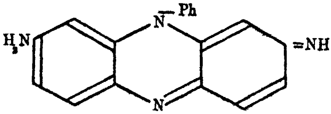
safety roller (*Horol.*). See **roller (safety).**

safety switch (*Elec. Eng.*). See **emergency stop.**

safety valve (*Eng., etc.*). A valve, spring or dead-weight loaded, fitted to a boiler or other pressure vessel, to allow steam to escape to the atmosphere when the pressure exceeds the maximum safe value.

safflo'rite (*Min.*). Essentially, diarsenide of cobalt (cf. *smaltite*) but with usually a considerable amount of iron and more rarely a small amount of nickel. It crystallises in the orthorhombic system.

saf'ranines (*Chem.*). A group of azine dyestuffs. They are 2,8-diamino derivatives and have also a phenyl or a substituted phenyl group attached to the nitrogen in position 10. Phenosafranine has the formula:



safranine (*Photog.*). A basic dye used for desensitising emulsions, so that they can be developed with appreciable light.

saftcanal'chen, —hhen (*Zool.*). See **trophospongium.**

sag. To bulge downwards under load (as a surveying tape under its own weight): to hang downwards (as a door whose supports have yielded): the amount of such movement: the vertical distance between the lowest point on an overhead line and a point of suspension.

sag correction (*Surv.*). A correction applied to the observed length of a base line, to correct for the sag of the measuring tape.

sagger or **saggar** (*Pot.*). A fire-clay box in which pottery is packed for firing in biscuit and glost ovens.

sagging moment (*Ships*). The moment of the stress to which a ship is subjected when the ends are water-borne and the hollow of the wave lies amidships.

sagit'ta (*Civ. Eng.*). (1) *Keystone* (q.v.).—(2) *Versed sine* (q.v.).

sagittal, saj'— (*Zool.*). Elongate in the median vertical longitudinal plane of an animal; as the *sagittal* suture between the parietals, the *sagittal* crest of the skull; used also of sections.

Sagitta'rius (*Astron.*). Archer. Ninth sign of the *Zodiac* (q.v.).

sagittate, saj'— (*Bot.*). Having the form of a barbed arrow-head, with two basal lobes pointing backwards.

Sahara sandals (*Boots and Shoes*). Shoes of this type are made from a very wide-cut sole which is moulded to form a complete covering for the foot.

sail-over (*Build.*). To project over. See **over-sailing courses.**

sailing course (*Build.*). An *oversailing course* (q.v.).

St. Andrew's Cross bond (*Build.*). *Dutch bond* (q.v.).

St. Anthony's fire (*Med.*). *Erysipelas* (q.v.).

St. Bees Sandstone (*Geol.*). Pebbly sandstones of considerable thickness (up to 2000 ft.), of Bunter facies and Triassic age, occurring in northern England west of the Pennines, particularly in Cumberland; also in the Isle of Man and probably Arran.

St. Elmo's fire (*Meteor.*). A glow that appears at the ends of masts and spars of ships during thunder-storms at night. The effect is caused by an electrical brush discharge between the ship and a charged thunder-cloud.

St. Erth Beds (*Geol.*). Small patches of sand and gravel occurring east of Land's End in Cornwall; most probably belonging to the Pliocene System.

St. Louis Limestone (*Geol.*). A marine limestone, containing abundant corals and echinoids, resting upon continental beds of Middle Mississippian age in the Mississippi valley.

St. Petersburg standard (*Timber*). See **Petersburg standard.**

St. Vitus dance (*Med.*). *Chorea* (q.v.).

saixe (*Tools*). A *sax* (q.v.).

sal ammoniac (*Min*). Chloride of ammonium, which crystallises in the cubic system. It is found as a white encrustation around volcanoes such as Etna and Vesuvius. It is used in chemical analysis, in medicine, in dry batteries, as a soldering flux, and in textile printing.

sal volatile, vō-lat′il-e (*Chem.*). Ammonium carbonate.

Salamander (*Build*) Trade-name of a fire-resisting decorative building-board made from pulped asbestos.

Salem (or **Spergen**) **Limestone** (*Geol*). A member of the Middle Mississippian Series of the Mississippi valley, consisting partly of oölites, partly of cross-bedded lime-sand (dune-limestone)

sal′empores (*Textiles*). Cotton fabrics, with bars of colour across the piece; made for S American and African markets

sal′icin (*Chem*), $C_{13}H_{18}O_7$ A glucoside found in varieties of *Salix*. It is hydrolysed to saligenin and dextrose.

salicyl′ic acid (*Chem.*). $HO\ C_6H_4{\cdot}COOH$, *o*-hydroxybenzoic acid, colourless four-sided, monoclinic prisms, m.p. 155° C., insoluble in cold water, soluble in hot water. Ferric chloride colours its aqueous solution violet. It is an antiseptic and an important intermediate for a number of derivatives, e.g. aspirin. It can be prepared by heating sodium phenolate to 180°-220° C. in a stream of CO_2.

salient (*Surv.*). (1) A jutting-out piece of land.—(2) A term applied to an external angle. Cf *re-entrant*.

salient pole (*Elec. Eng*). A type of field pole protruding beyond the periphery of the circular yoke in the case of a stator field system, or the circular core in the case of a rotor field system.

salient-pole generator (*Elec. Eng.*). An alternating-current generator whose rotor field system is of the salient-pole type, e.g. in the case of slow-speed water-turbine-driven generators.

Salientia, sā-li-en′shi-a (*Zool.*). An order of *Amphibia* lacking scales, a tail, gills, or gill-slits in the adult state; having four pentadactyl limbs. Frogs and Toads.

saligenin, sal-ij′— (*Chem.*). See **phenolic alcohols.**

saline lakes (*Geol.*). See **salt lakes.**

Salin′ian (or **Sali′na**) **formation** (*Geol.*). A series of non-marine strata which succeed the Niagara Stage in the Silurian System of N. America. Red shale and lime-mud deposits containing rock salt and gypsum are included; these form the basis of the salt industry in New York (Syracuse), Michigan, and Pennsylvania.

salinom′eter (*Phys.*). A *hydrometer* (q.v.) for measuring the density of sea water, the stem being scaled in arbitrary units; used by engineers for estimating the amount of dissolved solids in feed-water.

sali′va (*Zool.*). The secretion, produced by the salivary glands, which facilitates the swallowing of the food, and sometimes also contains digestive ferments; in Mammals it consists of a dilute watery solution of mucin and enzyme (ptyalin).

sali′vary glands (*Zool.*). Glands present in many land animals, the ducts of which open into or near the mouth. See **saliva.**

Salkowski's test, —kov′ske (*Chem.*). A colour test for cholesterol, based on the appearance of a red colour in chloroform and of a green colour in concentrated sulphuric acid when these liquids are shaken up in the presence of cholesterol.

sally (*Carp.*). A re-entrant angle cut into the end of a timber, so as to allow it to rest over the arris of a cross-timber.

salmine (*Chem.*). A protamine isolated from fish testicles.

salmon ladder (*Civ. Eng.*). A special construction provided at a dam site to enable salmon to pass upstream for breeding purposes.

salmonello′sis (*Vet*). Disease of animals and birds due to infection by the *Salmonella* group of bacteria.

Sal′ol (*Chem.*). Trade-name for phenyl salicylate, $HO{\cdot}C_6H_4{\cdot}CO{\cdot}OC_6H_5$, colourless crystals, m.p. 42° C., used as an antiseptic.

Salopian (*Geol.*). The name which is sometimes applied to the Middle and Upper Series of the Silurian System. This is now subdivided into the Wenlockian and Ludlovian Series.

Sal′pida (*Zool.*). An order of *Thaliacea* having a free tailed larval stage, a free well-formed oözoid, soft gelatinous test, pharynx without lateral walls; the muscular rings of the body-wall are usually incomplete ventrally.

salping-. A prefix from the Greek *salpinx* (gen. *salpingos*), trumpet. See **salpinx.**

salpingec′tomy (*Surg*). Surgical removal of a Fallopian tube.

salpingi′tis (*Med.*). Inflammation of a Fallopian tube.

salpingo-oöphorec′tomy (*Surg.*) Surgical removal of a Fallopian tube and of the ovary on the same side.

salpingo-oöphori′tis (*Med*). Inflammation of both the Fallopian tube and the ovary.

salpingor′rhaphy (*Surg.*).· The suturing of a Fallopian tube to the ovary on the same side, after a part of the latter has been removed.

salpingos′tomy (*Surg*). The operative formation of an opening into a Fallopian tube whose natural opening has been closed by disease.

salpingot′omy (*Surg.*). Surgical incision into a Fallopian tube.

sal′pinx (*Anat., Zool.*). The Eustachian tube: the Fallopian tube: a trumpet-shaped structure.—*adj.* **salpin′gian.**

salsu′ginous (*Bot.*). Growing on a salt marsh.

salt (*Chem.*). A compound which results from the replacement of one or more hydrogen atoms of an acid by metal atoms or electropositive radicals. Salts are generally crystalline at ordinary temperatures, and form positive and negative ions on dissolution in water, e.g. chlorides, nitrates, carbonates, sulphates, silicates, and phosphates. For *common* or *rock salt* see **halite.**

salt bath (*Met.*). A bath of molten salts used for heating steel, for hardening or tempering. Salt baths give uniform heating and prevent oxidation. Certain salts are employed only to transmit heat to the immersed material, and different salts are used for different temperatures. For *tempering* baths, sodium and potassium nitrate are used. For *hardening* baths, sodium cyanide, and sodium, potassium, barium, and calcium chlorides are used. An electric salt-bath furnace is a conductor-type electric furnace in which the salt is melted by the passage of the current.

salt gland (*Bot.*). A hydathode from which a saline exudation oozes, the salts drying on the outside of the leaf.

salt glaze (*Pot., etc.*). The glaze on drain pipes and similar types of earthenware. Produced by covering the article with salt in the kiln. The salt volatilises and attacks the surface of the clay article, producing a glass-like covering.

salt (or saline) lakes (*Geol.*). Enclosed bodies of water in areas of inland drainage, whose concentration of salts in solution is much higher than in ordinary river water. See **soda lakes.**

saltant (*Biol.*). A changed form of a species, developed suddenly, and differing from the original in morphology or in physiological properties.

saltation (*Biol.*). A sudden discontinuous variation; a sport; a mutation.

saltato'rial, sal'tatory (*Zool.*). Used in, or adapted for, jumping; as the third pair of legs in Grasshoppers.

sal'tigrade (*Zool.*). Progressing by jumps, as Grasshoppers.

salting (*Photog.*). When printing papers are being prepared before sensitisation, the preliminary soaking in a solution of a chloride, with added size or colloid, to regulate the subsequent contrast.

salting-out (*Chem.*). The removal of an organic compound from an aqueous solution by the addition of a salt.

saltpetre, —pē'ter (*Min.*). See **Chile nitre, potassium nitrate, soda nitre.**

salvage. The whole of the operations involved in rescuing a ship or cargo or a property from wreck, fire, etc.: the compensation paid for such rescue.

salvage (*Mining*). A layer or parting of clay or pug occurring on the wall of a vein.

Sal'varsan (*Chem.*). 3,3'-Diamino-4,4'-dihydroxyarsenobenzene hydrochloride, a yellow, crystalline powder, easily soluble in water, methyl alcohol, and glycerine. It is easily oxidised by exposure to the air to the more toxic amino-hydroxyphenylarsine oxide. It is of great therapeutic value, especially against syphilis. Known as No. 606.

salver-shaped (*Bot.*). Said of a corolla which has the lower part long and tubular and the upper part spreading horizontally; hypocrateriform.

samar'a (*Bot.*). A single-seeded, dry, indehiscent fruit, bearing a wing-like extension of the pericarp; ash keys provide a familiar example.

samar'iform (*Bot.*). Winged, like an ash key.

sama'rium (*Chem.*). Symbol, Sm or Sa. A metallic element, a member of the rare earth group. At. no. 62, at. wt. 150·4; found in allanite, cerite, gadolinite, and samarskite. The metal is hard and brittle; m.p. above 1300°, sp. gr. 7·7.

sam'el bricks (*Build.*). See **grizzle bricks.**

sand (*Geol.*). A term popularly applied to loose, unconsolidated accumulations of detrital sediment, consisting essentially of rounded grains of quartz. Restricted in sedimentary petrology to sediments whose grains lie between 1 mm. and 0·1 mm. diameter; cf. *grits.* (See Supplement.) In Coral Sand the term implies a grade of sediment the individual particles of which are fragments of coral, not quartz.

sand (*Moulding*). See **moulding sands.**

sands (*Met.*). Particles of crushed ore of such a size that they settle readily in water and may be leached by allowing the solution to percolate. See also **slimes.**

sand binder (*Bot.*). A plant which forms a mat of rhizomes and roots, and holds sand down so that it is not readily moved by the wind.

sand-blasting. A method of cleaning metal surfaces by means of sand, steel shot, or grit directed from a nozzle at high velocity; also used for forming a key on the surface of various materials requiring a finish, such as enamel.

sand-calcites (*Geol.*). See under **Fontainebleau Sands.**

sandcrack (*Vet.*). A fissure of the horse's hoof.

sand culture (*Bot.*). An experimental method of determining the mineral requirements of plants; the latter are grown in purified sand to which various solutions are added.

sand cushion (*Civ. Eng.*). A bag of sand placed beneath a helmet to protect the top of the pile from damage due to impact of the monkey when it is being driven.

sand dunes (*Geol.*). Rounded or crescentic mounds of loose sand which have been piled up by wind action on seacoasts or in deserts. See also **barkhans.**

sandfly fever (*Med.*). Phlebotomus fever. An acute disease due to infection with a filter-passer conveyed by the bite of a sand-fly *Phlebotomus papatasii*; characterised by a three days' fever, pains in the joints and the back, diarrhoea, and a slow pulse.

sand-lime bricks (*Build.*). Bricks made from a mixture of damp sand and approximately 6% slaked lime moulded under pressure in a steam chamber.

sandpaper (*Carp., etc.*). Stout paper or cloth with a thin coating of fine sand glued on to one side, for use as an abrading material. Cf. *glass-paper.*

sand pump (*Civ. Eng*). See **sludger.**

sand-pump dredger (*Civ. Eng.*). A long pipe reaching down from a vessel into the sand, the latter being raised under the suction of a centrifugal pump and discharged into the vessel itself or an attendant barge. Also called a SUCTION DREDGER.

sandslinger (*Foundry*). A machine for reproducing the action of a moulder in filling a mould by hand. Sand is delivered in wads at high speed by centrifugal force, and directed by the operator into the mould as required.

sandstones (*Geol.*). Compacted and cemented sedimentary rocks, which consist essentially of rounded grains of quartz, between the diameters of 1 mm. and 0·1 mm., with a variable content of 'heavy mineral' grains. According to the nature of the cementing material, the varieties *calcareous sandstone, ferruginous sandstone, siliceous sandstone* may be distinguished; *glauconitic sandstone, micaceous sandstone,* etc. are so termed from the presence in quantity of the mineral named.

sand trap (*Paper*). An inclined trough across which bars are set at intervals. During the passage of the pulp to strainers, any heavy particles such as sand sink to the bottom and are retained by the bars.

sands-and-slimes process (*Met.*). A process in the cyanidation of gold ores which involves separation of two portions in a classifier, and separate treatment of sands by percolation and slimes by agitation.

sandal bricks (*Build.*). A local term for *grizzle bricks.*

Sandgate Beds (*Geol.*). A division of the Lower Greensand of the Weald in Southern England, comprising variable clayey sands, sandy loams (often glauconitic), fullers' earth (at Nutfield, in Surrey), and rock bands, the chief of which occur in the *Bargate Beds* (q.v.).

sanding (*Carp., etc.*). The operation of cleaning up wood surfaces by rubbing with sandpaper.

Sandmeyer's reaction (*Chem.*). The replacement of the diazo group, —N:N—, in a diazonium compound by chlorine, bromine, or the cyanogen radical, which is effected by heating a solution of the diazonium compound with, e.g., a concentrated solution of cuprous chloride in hydrochloric acid. In this case the —N.N— group is replaced by Cl, with evolution of gaseous N_2.

sandwich beam (*Build.*). A *flitch beam* (q.v.).

sandwich film (*Photog.*). A film which has two emulsions, one on each side of the base, with an intervening dyed layer; used for release prints in the Multi-color system.

sandy clay (*Build.*). See **loam.**

sanguic'olous (*Zool.*). Living in blood.

sanguif'erous (*Zool.*). Blood-carrying.

sanguin'eous (*Bot.*). Blood-red.

sanguiv'orous (*Zool.*). Blood-feeding; as Fleas.

san'idine (*Min.*). A form of potash feldspar identical in chemical composition with orthoclase, but physically different, formed under different conditions and occurring in different rock types. It is the high-temperature form of orthoclase, into which it inverts at 900° C. Occurs in lavas and dyke-rocks.

sanies, sā'ni-ēz (*Med.*). A thin, offensively smelling discharge of pus, mixed with blood or with serum, from a wound or ulcer.—*adj.* **sa'nious.**

San'io's band (or **beam**) (*Bot.*). See **trabecula.**

sanitary wallpapers (*Dec.*). Wallpapers having designs printed in oil colours, and varnished papers; can be sponged.

sanitary ware (*San Eng.*). Glazed earthenware used for some sanitary fittings.

sanser'if (*Typog.*). A type face without serifs; e.g. gill sans.

Santorin, —rēn' (*Build., Civ. Eng.*). A natural pozzuolana or volcanic ash from the Isle of Santorin.

Santorini's duct, —rē'ni (*Zool.*). The dorsal or accessory pancreatic duct of Mammals. Cf. *Wirsung's duct.*

sap (*Bot.*). An aqueous solution of mineral salts, sugars, and other organic substances, present in the xylem of plants.

sap cavity (*Bot.*). The large vacuole filled with fluid, occupying the middle of an adult cell.

sapstain (*Timber*). A discoloration produced in the sapwood of felled timber by the growth of certain fungi.

sapwood (*Bot.*). The layer of recently formed secondary wood forming a sheath over the whole of the surface of the xylem of a woody plant; it contains living cells, is able to conduct sap, and is usually light-coloured. Also called ALBURNUM.

saphir d'eau (*Min.*). French 'water sapphire.' An intense-blue variety of the mineral cordierite, occurring in water-worn masses in the river gravels of Ceylon; used as a gemstone.

sapling (*Bot.*). A young tree.

sapona'ceous (*Bot.*). Slippery, as if soaped.

sapon'ifica'tion (*Chem.*). The hydrolysis of esters into acids and alcohols by the action of alkalis or acids, or by boiling with water, or by the action of superheated steam. It is the reverse process to *esterification* (q.v.).

saponification number (*Chem.*). The number of milligrams of potassium hydroxide required to saponify 1 gm. of a fat or oil.

sap'onite (*Min.*). An amorphous silicate of magnesium and aluminium, occurring as soft soapy masses in cavities in serpentine. BOWLINGITE is the same substance.

sapphire (*Acous.*). The cutter which shaves the surface of wax blanks before a record is cut with a stylus.

sapphire (*Min.*). The fine blue transparent variety of crystalline corundum, of gemstone quality; obtained chiefly from Ceylon, Kashmir, Siam, and Australia. See also **Brazilian.**

sapphire needle (*Acous.*). A gramophone-record reproducing needle ground from natural sapphire; by virtue of its hardness in comparison with that of the record surface, it does not wear comparably with normal steel needles.

sapphire quartz (*Min.*). A very rare indigo-blue variety of silicified crocidolite occurring at Salzburg; used as a semi-precious gemstone. Also known as AZURE QUARTZ and SIDERITE.

sapph'irine (*Min.*). A rare alumino-silicate of magnesium occurring at Fiskernäs (Greenland) as disseminated blue grains and occasional monoclinic crystals.

sappy wool (*Textiles*). Wool which contains an excessive amount of grease.

sapr-, sapro- (Greek *sapros*, rotten, rancid). A prefix used in the construction of compound terms; e.g. *sapraemia* (q.v.).

saprae'mia, sapre'mia (*Med.*). The presence in the blood of toxic products resulting from the putrefactive action of saprophytes on dead tissue (e.g. on retained discharges and placental tissue in the uterus): the condition (intoxication) that results from this.

sap'robe (*Bot.*). A plant growing in foul water.

saprobiot'ic (*Biol.*). Feeding on dead or decaying animals or plants.

saprogen'ous (*Bot.*). Growing on decaying matter.

sapropel'ic (*Zool.*). Said of aquatic organisms which live in the decaying organic matter of a muddy bottom.

sapropel'ite (*Geol.*). A term applied by H. Potonié to coals derived from algal materials. Cf. *humite.*

sap'rophile (*Ecol.*). An animal not properly characteristic of stagnant and polluted waters, but capable of breeding therein by reason of its ability to resist or overcome oxygen-scarcity.

saprophi'lous (*Bot.*). Saprogenous.

sap'rophyte (*Biol.*). An organism which obtains its food from dead organic material.—(*Bacteriol.*) Any bacterium which breaks up dead animal and vegetable matter and does not produce disease in the animal or plant which it inhabits.

saprophyt'ic (*Biol.*). Feeding on dead or decaying organic materal.—*n.* **saprophytism.**

sap'roplankton (*Bot.*). Plankton growing in foul water.

saprozo'ic (*Biol.*). Feeding on dead or decaying organic material.

S.A.R. (*Teleph.*). Abbrev. for *special apparatus rack.*

sarc-, sarco- (Greek *sarx*, gen. *sarkos*, flesh). A prefix used in the construction of compound terms; e.g. *sarcosoma*, the fleshy part of the soma.

sarcen'chyma (*Zool.*). A form of parenchyma occurring in Sponges, characterised by closely packed granular cells in a reduced gelatinous matrix.

sarcin'iform (*Bot.*). In the form of small packets.

sar'coblast (*Zool.*). An elongate multinucleate muscle-cell.

sar'cocarp (*Bot.*). The fleshy part of the pericarp of a drupe.

sar'cocyte (*Zool.*). A middle layer of the ectoplasm in some *Protozoa.*

sarcod'ic, sarcod'ous, sar'coid (*Zool.*). Pertaining to or resembling flesh.

Sarcodi'na (*Zool.*). A class of *Protozoa* comprising forms which are generally free-living, possess the power of thrusting out pseudopodia in the principal phase, and lack always a meganucleus and generally an investing membrane.

sar'cody (*Bot.*). Conversion into something of fleshy texture.

sarcolem'ma (*Zool.*). The extensible sheath of a muscle fibre enclosing the contractile substance.

sar'colytes (*Zool.*). In the histolysis which accompanies metamorphosis in some Insects, fragments of muscle fibres.

sarco'ma (*Med.*). A malignant tumour of connective tissue origin (e.g. of fibrous tissue, bone, cartilage), consisting of round cells and/or spindle-shaped cells and newly formed blood-vessels; the tumour invades adjacent tissue and organs, and metastases are formed via the blood-stream. —*pl.* **sarco'mata.**

sarcoma (*Zool.*). The fleshy portion of an animal body as opposed to the skeletal portion.

sarcomato'sis (*Med.*). The presence of many sarcomata in the body.

sarco'matous (*Med.*). Pertaining to, of the nature of, or resembling sarcoma.

sar'comeres (*Zool.*). The serial portions into which a muscle fibril is divided by the membranes of Krause.

sarcoph'agous (*Zool.*). Flesh-eating.

sar'coplasm (*Zool.*). The interfibrillar protoplasm of muscle fibres.

sar'cosine (*Chem.*). Monomethyl-glycocoll, $H_3C\cdot HN\cdot CH_2\cdot COOH$. It is obtained by the decomposition of creatine or caffeine. Crystals, m.p. 212° C., readily soluble in water. It may be synthesised from chloracetic ester and methylamine, or by hydrolysis with baryta of methylaminoacetonitrile.

Sarcosporid'ia (*Zool*). An order of *Neosporidia* the members of which are parasitic in the muscle cells of Vertebrates; the spores possess neither cases nor polar capsules.

sarcosporidio'sis (*Vet.*). Infection of the muscles of swine, sheep, horses, cattle, goats, and birds by *Sarcosporidia* (q v.).

sar'costyle (*Zool.*). One of the fibrillae or longitudinal contractile elements of a muscle fibre: a *nematophore* (q.v).

sarcotes'ta (*Bot.*). A fleshy layer in a testa.

sarcothe'ca (*Zool.*). The cup-like expansion of the perisarc which surrounds a nematophore.

sar'cous (*Zool.*). Pertaining to flesh: pertaining to muscle tissue.

sarcous element (*Zool.*). The dark area occupying the middle of each sarcomere.

sar'donyx (*Min.*). A form of chalcedony in which the alternating bands are brown and white. Cf. *onyx*

sari (*Textiles*). A light cotton cloth of plain weave with fancy borders in colours, or decorated with rayon. Saris resemble dhooty and are made for the Indian market, being worn by women.

sarking felt (*Build.*). A bituminous underlining placed beneath slates or tiles.

sar'mentose (*Bot.*). Having a stem which arises in a small arch from the root, and then becomes prostrate.

sarongs (*Textiles*). Coloured cotton cloths with borders and white selvedges. Used for natives' garments in the Straits Settlements, Java, and Burma.

sa'ros (*Astron.*). A cycle of 18 years 11 days, which is an integral number of synodic months and also of synodic revolutions of the moon's nodes, so that after such a period the relative positions of sun, moon, and node recur; known to the ancient Babylonians, it was used throughout antiquity to predict eclipses.

saro'thrum (*Zool.*). The pollen-brush of a honey-bee, i.e. the first tarsal joint of the third leg, bearing stiff straight bristles.

sarsen (*Geol.*). Irregular masses of hard sandstones which are found in the Reading and Bagshot Beds of the Tertiary System in Southern England. They often persist as residual masses after the softer sands have been entirely denuded away.

sartorius (*Zool.*). A thigh-muscle of *Tetrapoda* which by its contraction causes the leg to bend inwards.

sash (*Carp.*). A framing for window panes.

sash and frame (*Join.*). A cased frame in which counterweighted sashes slide vertically.

sash bar (*Join.*). A transome or a mullion.

sash centres (*Join.*). The points about which a pivoted sash is moved.

sash chisel (*Join.*). A strong-bladed chisel with a narrow edge, used for cutting the pocket in the pulley stile of a sash and frame.

sash door (*Join.*). A door which has its upper part glazed.

sash fastener (or lock) (*Join.*). A fastening device secured to the meeting rails of the sashes of a double-hung window, serving to fix both sashes in the shut position.

sash fillister (*Join.*). A special plane for cutting grooves in stuff for sash bars.

sash rail (*Join.*). A *transom* (q.v.).

sash-saw (*Join.*). A saw similar to the tenon saw but slightly smaller and finer; used for making window sashes.

sash stuff (*Join.*). The timber prepared for use in the making of sashes.

sash weights (*Join.*). Weights used as counterpoises in balancing the sashes of windows.

sas'solite (*Min.*). See **boric acid.**

sat'ara (*Textiles*). A woollen cloth with a dress-face finish; made from fine quality wools, with a series of ribs across the fabric.

sateen' (*Textiles*). A cloth with a weft surface, with only one interlacing of each warp and weft thread in the weave repeat. Made in numerous qualities and used chiefly for linings and dress goods Complementary to a satin which has a warp surface.

sat'ellite (*Astron.*). The name given to a smaller body revolving round another, generally a planet; e.g. the moon, which is the earth's *satellite*,

satellite (*Bot.*). A small part of a chromosome, attached to one end of the main body of the chromosome by a fine thread-like connexion. Also called TRABANT.

satellite exchange (*Auto. Teleph.*). A small automatic-telephone exchange which is dependent on a main automatic exchange for completion of its calls to subscribers other than those connected to it.

See **discriminating—** **full—**

satin (*Textiles*). A silk fabric with a smooth lustrous surface devoid of pattern; four-fifths of the warp usually appears on the face.

satin drill (*Textiles*). A cotton cloth, bleached or dyed, which is worn by Europeans in tropical countries. Cloths of this type, dyed to suitable colours, are used as overalls.

satin leather (*Leather*). Leather with a perfectly smooth finish and without grain marks.

satin spar (*Min.*). The name given to the fine fibrous varieties of both calcite and gypsum, the former being harder than the latter.

satinet', satinette' (*Textiles*). Similar to satin and sateen, but with weaves which repeat on only 4 ends and 4 picks. Formed by breaking and reversing the 3-and-1 twill every 2 ends.

saturated calomel electrode (*Chem.*). A calomel electrode containing saturated potassium chloride solution.

saturated compounds (*Chem.*). Compounds which do not contain any free valencies and to which no hydrogen atoms or their equivalent can be added, i.e. which contain neither a double nor a triple bond.

saturated diode (*Cathode Ray Tubes, Thermionics*). A diode valve having a tungsten filament giving a limited emission; used for charging or discharging a condenser at a constant rate in some forms of linear time base.

saturated solution (*Chem.*). A solution which can exist in equilibrium with excess of the dissolved substance.

saturated steam (*Eng.*). Steam at the same temperature as the water from which it was formed as distinct from steam subsequently heated. See **dry steam.**

saturated vapour (*Phys.*). A vapour which is sufficiently concentrated to exist in equilibrium with the liquid form of the same substance.

saturated vapour pressure (*Phys.*). The vapour pressure at saturation. This increases with rise of temperature. See **vapour pressure, saturation of the air.**

saturation (*Acous.*). See **acoustic saturation.**

saturation (*Elec. Eng.*). The property of a magnetic material whereby successive increments of magneto-motive force produce less and less magnetic flux in the material once a certain flux density has been reached.

saturation (*Photog.*). The purity of a colour, or freedom from mixture with white or grey; the measure of hue.

saturation (*Thermionics*). (1) The condition obtaining in a thermionic vacuum tube when all the electrons emitted from the cathode are swept away to the anode or other electrodes, so that further increase in anode potential produces no corresponding increase in anode current.—(2) A similar condition in a screened-grid or pentode valve when all the electrons which pass the screen grid go on to the anode, although in this case the cathode emission is not the limiting factor.

saturation coefficient (*Build.*). The ratio between the natural capacity of a material (such as a building-stone) to absorb moisture and its porosity.

saturation current (*Elec. Comm.*). The steady current in a winding of an iron-cored transformer which causes the inductance of the winding to be seriously reduced.

saturation current (*Thermionics*). The maximum total current which can flow from the cathode when saturation occurs. Also called TOTAL EMISSION.

saturation curve (*Elec. Eng.*). The characteristic curve relating magnetic flux density to the strength of the magnetic field.

saturation factor (*Elec. Eng.*). The ratio of the increase of field excitation to the increase of generated voltage which it produces.

saturation limit (*Elec. Eng.*). The maximum flux density economically attainable.

saturation of the air (*Meteor.*). The air, at a given temperature, can contain water vapour up to a limit known as the *saturation point.* The quantity of water vapour which will saturate a given volume of air increases with the temperature; and if, therefore, saturated air is cooled, the excess water vapour condenses in the form of mist. See **dew-point, vapour pressure.**

Saturn (*Astron.*). The sixth planet of the solar system in order of distance from the sun, unique for its system of rings, visible only in a telescope; it has ten satellites; its mass is 95·2 times that of the earth, and its sidereal period is 29·46 years.

sat'urnism (*Med.*). Chronic lead poisoning; plumbism.

saucer (*Hyd. Eng.*). A flat form of camel, used for raising a vessel in shallow waters.

saucisse, saucisson, sō-sēs', —ong (*Civ. Eng.*). A bundle of brushwood of stouter and longer material than in a *fascine* (q.v.) but used for the same purposes.

saur'ian (*Zool.*). Lizard-like.

saurog'nathous (*Zool.*). In Birds, said of a type of palate; the vomers are fine and rod-like and the maxillopalatines scarcely extend inwards from the maxillaries; the palatines and pterygoids articulate with the basisphenoid rostrum.

sausage antenna (*Radio*). An antenna comprising a number of wires connected in parallel, and arranged in a parallel formation around circular spreaders.

sausage poisoning (*Med.*). Botulism.

saussu'rite (*Min.*). Formerly thought to be one mineral, *saussurite* consists of an aggregate of albite, zoisite, prehnite, with other calcium aluminium silicates and calcite. It results from the alteration of feldspars.

saussuritisation (*Geol.*). The name given to the processes which lead to the alteration of the plagioclase feldspars of basic igneous rocks into an aggregate of 'saussurite.'

Savi's ampulla (*Zool.*). In *Selachii*, a long tube expanding internally into an ampulla and opening externally on the surface of the head, containing mucus and innervated by a branch of the lateralis.

saw (*Eng.*).
See **band—** **hack—**
circular— **hot—**
cold—

saw-tooth generator (*Cathode Ray Tubes*). Another name for a *linear time base*; so called because of the shape of the voltage wave-form therefrom.

saw-tooth roof (*Struct.*). A roof formed of a number of north light trusses, presenting a serrated profile when viewed from the end.

saw-tooth truss (*Eng.*). A truss used for small-span roofs of saw-tooth form, braced by vertical and diagonal members.

sax (*Tools*). An axe used for shaping slates; it has a pointed peen for piercing the nail-holes. Also called SLATE AXE.

saxica'vous (*Zool*) Rock-boring.

sax'icole, saxico'lous (*Bot.*). Growing on rocks or stones.

sax'onite (*Geol.*). A coarse-grained, ultramafic igneous rock, consisting essentially of olivine and orthopyroxene, usually hypersthene. A hypersthene-peridotite.

Saxony (*Textiles*). The name applied to woollen yarns or cloth, made from wool of good quality; at one time largely imported from Saxony. The cloth has a soft finish.

Saxony finish (*Textiles*). A type of finish in which a slight nap is produced on the face of a cloth, making it soft to handle.

say-cast (*Textiles*). The coarse part of a fleece, at the tail end.

Sayers winding (*Elec. Eng.*). A type of armature winding in which commutator sparking is prevented by means of additional coils influenced by auxiliary commutating poles.

Sb (*Chem.*). The symbol for *antimony.*

S.B. (*Radio*). Abbrev. for *simultaneous broadcasting* (q.v.).

SB alloy (*Elec. Eng.*). A resistance material having a low temperature coefficient of resistance.

S.B.C. lamp cap (*Elec. Eng.*). Abbrev. for *small bayonet lamp cap.*

S.C. (*Paper*). Abbrev. for *supercalendered paper.*

Sc (*Chem.*). The symbol for *scandium.*

scab (*Vet.*). See **mange.**

scabbling (*Masonry*). The operation of rough-dressing a stone face with an axe, prior to smoothing it.

scabbling hammer (*Masonry*). The pointed hammer used in the rough-dressing of a nigged ashlar.

scabel'lum (*Zool.*). In *Diptera*, the dilated basal portion of a haltere.

scabies, skā'bi-ēz (*Med.*). A contagious skin disease caused by the acarine parasite *Sarcoptes scabiei*, the female of which burrows in the horny layer of the skin.—(*Vet.*) See **mange.**

scab'rid (*Bot.*). Having a surface rough like a file.

scab'rous (*Bot.*). Having a surface roughened by small wart-like upgrowths.—*dim.* **scaber'ulous.**

Scaffixer (*Build.*). Trade-name for a form of chain-fastening device used to lash scaffold poles together.

scaffold, scaffolding (*Build.*). A temporary erection of timber or steelwork, used in the construction, alteration, or demolition of a building, to support or to allow of the hoisting and lowering of workmen, their tools and materials.

scaffold poles (*Build.*). Round timber from 2½ to 6 in. diameter in the middle.

scagliola, skal-yō'la (*Plast.*). An imitation marble made by adding colouring matters and marble chips to a hard cement such as Keene's.

scala (*Zool.*). A ladder-like structure; as the canals in the cochlea of the Mammalian ear known as the *scala vestibuli*, the *scala tympani*, and the *scala media*.—*pl.* **scalae.**

scalae (*Zool.*). See **scapal organ.**

scalar product (*Elec. Eng.*). In multiplying vector quantities, the product obtained by multiplying the magnitudes or moduli of the vectors, together with the cosine of the angle between them. When the vectors represent graphically sinusoidal variations of current and voltage, respectively, in the same circuit, the scalar product gives the power, the cosine of the angle between the vectors being the power-factor. See **vector product.**

scalar quantity (*Phys.*). A quantity which is completely specified by its magnitude, as distinct from a vector quantity which needs also its direction to be stated. Temperature and energy are scalar quantities.

scalar'iform (*Bot.*). Ladder-like.

scalariform cell, scalariform tracheide, scalariform vessel (*Bot.*). A cell, tracheide, or vessel having wall-thickenings which give a ladder-like pattern.

scale (*Acous.*). The ratio of the length to the diameter of an organ pipe, a factor which, amongst others, determines the timbre of the note.

scale (*Photog.*). The range of densities over which a constant gamma is obtained when an emulsion is normally processed; it measures the acoustic contrast obtainable when the emulsion is used for photographic recording.

scale effect (*Aero.*). The effect of a change in Reynolds number upon the measured results in the performance of aerodynamic bodies.

scale (*Bot.*). (1) A thin, flat, semi-transparent plant member, usually of small size, and green only when very young, if then.—(2) A hardened, usually non-green bract of a catkin.

scale (*Zool.*). A small exoskeletal outgrowth of tegumentary origin, of chitin, bone or some horny material, usually flat and plate-like.

scale bark, scaly bark (*Bot.*). (1) Bark which becomes detached in irregular patches.—(2) Rhytidome.

scale hair (*Bot.*). A multicellular flattened hair.

scale leaf (*Bot.*). A leaf, usually reduced in size, membranous, of tough texture, and ordinarily protective in function.

scale, musical (*Acous.*). The selected sequence of notes adhered to in a musical composition. See **natural scale, tempered scale.**

scalene, ska-lēn′ (*Zool.*). In higher Vertebrates, applied to a pair of muscles of the body-wall passing from the ribs along the side of the neck.

scaling (*Acous.*). The adjustment of the notes of a musical instrument to a specified scale; e.g. natural scale or tempered scale. See **aliquot scaling.**

scaling hammer (*Eng.*). See **boilermaker's hammer, boiler scale.**

scalloped (*Bot.*). Said of a margin bearing rounded teeth.

scalpel'la (*Zool.*). In *Diptera*, a pair of pointed processes belonging to the mouth-parts.—*sing.* **scalpellum.**

scalpel'liform (*Bot.*). Shaped like the blade of a pen-knife.

scal'priform (*Zool.*). Chisel-shaped, as the incisor teeth of Rodents.

scaly bark (*Bot.*). See **scale bark.**

scaly bulb (*Bot.*). A bulb, such as that of the lily, made up of a number of overlapping swollen leaf bases which do not form complete circles in cross-section.

scaly leg (*Vet.*). Scabies or mange of the feet and legs of birds, due to *Cnemidocoptes mutans.*

scan area (*Television*). The area swept out on the screen by the scanning beam.

scandent (*Bot.*). Climbing.

scandium (*Chem.*). Symbol, Sc. A metallic element in the third group of the periodic system, usually classed with the rare earth metals. At. no. 21, at. wt. 45·10. It has been found in cerite, orthite, thortveitite, wolframite, and euxenite; discovered in the last named. Scandium is the least basic of the rare earth metals.

scanning (*Television*). The repeated traversing of the surface of a television picture by a beam of light or electrons for the purpose of transmitting or reproducing the image.

See **circular—** **sequential—**
interlaced— **spiral—**
line—

scanning aperture (*Television*). A hole in a scanning disc through which the scanning beam passes.

scanning beam (*Television*). The beam of light or electrons which scans a television image.

scanning disc (*Television*). A rotating disc carrying a series of apertures, lenses, mirrors, or other optical devices, used for mechanical scanning.

scanning hole (*Television*). See **scanning aperture.**

scanning line (*Television*). The trace of a single traverse of the picture by the scanning spot from side to side in the case of horizontal scanning, or vertically in the case of vertical scanning.

scanning speech (*Med.*). A disturbance of speech in which the utterance is slow and halting, the words being broken into syllables; a sign of a lesion in the nervous system, as in disseminate sclerosis.

scanning spot (*Television*). The spot of light formed by the scanning beam on the screen of the reproducer, or in the case of some forms of transmission, on the object being televised.

scansion (*Television*). The operation of scanning.

scanso'rial (*Zool.*). Adapted for climbing trees.

scantling (*Masonry*). Stones more than 6 ft. long.

scantling (*Timber*). A piece of timber of thickness from 2 to 4 in. and of width from 2 to 4½ in.

scapal organ (*Zool.*). A sensory structure situated in the expanded base of a haltere in *Diptera.*

scape (*Bot.*). A peduncle, quite or nearly leafless, arising from the middle of a rosette of leaves, and bearing a flower, several flowers, or a crowded inflorescence; the dandelion furnishes a familiar example.

scape (*Build.*). An *apophyge* (q.v.).

scape (*Zool.*). The basal joint of the antenna in Insects.

'scape pinion, 'scape wheel (*Horol.*). See **escape pinion, escape wheel.**

scaph-, scapho- (Greek *skaphē*, boat). A prefix used in the construction of compound terms; e.g. *scaphocerite* (q.v.).

sca'phium (*Zool.*). (1) In *Ostariophysi*, one of the Weberian ossicles.—(2) In male *Lepidoptera*, part of the genital apparatus.—(3) More generally, any boat-shaped structure.

scaphocephal'ic (*Med.*). Having a keel-shaped head.

scaphoce'rite (*Zool.*). In decapod *Crustacea*, the boat-shaped exopodite of the second antenna.

scaphog'nathite (*Zool.*). In decapod *Crustacea*, the exopodite of the second maxilla, the movements of which cause water to flow through the branchial chamber.

sca'phoid (*Bot., Zool.*). Boat-shaped.

Scaphop'oda (*Zool.*). A class of bilaterally symmetrical *Mollusca* in which the foot is trilobed or with a terminal disc, and the mantle forms a tube enclosed by the tubular univalve shell. Tusk Shells.

scapigerous, —pij'er-us (*Bot.*). Possessing a scape or scapes.

scap'olite or wernerite (*Min.*). A group of minerals forming an isomorphous series, varying from silicate of aluminium and calcium with calcium carbonate, to silicate of aluminium and sodium with sodium chloride. Common scapolite is intermediate in composition between these two minerals. It crystallises in the tetragonal system and is associated with altered lime-rich igneous and metamorphic rocks. A transparent honey-yellow variety is cut as a gemstone.

scappling (*Masonry*). A variant of *scabbling*.

scap'ula (*Zool.*). In Vertebrates, the dorsal portion of the pectoral girdle: the shoulder-blade: any structure resembling the shoulder-blade.—*adj.* **scap'ular.**

scap'ulars (*Zool*). In Birds, small feathers attached to the humerus, and lying along the side of the back.

scapulodyn'ia (*Med.*). Pain in the region of the shoulder-blade.

sca'pus (*Build.*). An *apophyge* (q.v.).

scapus (*Zool.*). The stiff axial rod of a contour feather.

Scarab (*Plastics*). A proprietary urea moulding powder; thermosetting.

scarcement (*Build.*). A ledge formed at a place where part of a wall is set back from the general face of the wall; especially the footing of a stone wall.

scarf (*Carp.*) A joint between timbers placed end to end, notched and lapped, and secured together with bolts or straps.

scarfed joint (*Elec. Eng.*). A cable joint in which the conductor ends are bevelled off so that, after soldering, there is no appreciable increase in conductor diameter at the joint.

scarifier (*Civ. Eng.*). A spiked mechanical picking appliance for breaking up road surfaces as a preliminary to re-metalling.

sca'riose, sca'rious (*Bot.*). Dry, thin, more or less transparent, and usually brownish as if scorched, especially at the tip and along the edges.

scarlatina, —tĕ'na (*Med.*). *Scarlet fever* (q.v.).

scarlatin'iform (*Med*). Resembling or having the form of (the rash of) scarlet fever.

scarlet fever (*Med.*). An acute infectious fever due to infection of the throat with a haemolytic streptococcus; characterised by sore throat, headache, raised temperature, and a punctate erythema of the skin, which subsequently peels. Also called SCARLATINA.

scarp face (*Geol.*). See **escarpment.**

Scarpa's ganglion (*Zool.*). In higher Vertebrates, a ganglion of the vestibular division of the eighth nerve.

scattered (*Bot.*). Inserted singly, apparently without any special order, and spaced out.

scattering (*Radio*). The general re-radiation of wave-energy when a ray is incident on an obstacle or when it enters an irregularly ionised region.

scavenging (or **scavenger**) **pump** (*I.C. Engs.*). An oil-suction pump used to return used oil to the oil tank from the crank-case of an engine using the dry sump system of lubrication.

scavenging stroke (*I.C. Engs.*). See **exhaust stroke.**

Scawfell Tuff (*Geol.*). A volcanic tuff found near Scawfell in the English Lake District; it forms part of the Borrowdale Volcanic Series of Ordovician age.

scawtite (*Min.*). A silicate and carbonate of calcium occurring as minute monoclinic crystals in vesicles at the contact of dolerite and chalk at Scawt Hill, Co. Antrim.

s.c.c. (*Elec. Eng.*). Abbrev. for *single cotton-covered* (*wire*).

scenar'io (*Cinema.*). The script, or 'shooting script,' for the detailed making of a motion-picture; in it all the dialogue and directions for movements are given for the interpretation of the director during the actual shooting.

scenarisa'tion (*Cinema.*). The working up of a scenario in motion-picture production.

Sce'neograph (*Cinema.*). An effects projection machine for projecting coloured slides on to screens.

sce'nograph (*Build.*). A drawing showing a general view of a building or part of a building.

scent scales (*Zool.*). See **androconia.**

scent test (*San. Eng.*). A test sometimes applied to drain-pipes suspected of leakage. The ends are plugged, and a liquid with a pungent odour, e.g. oil of peppermint, is introduced into the pipe, which is watched for any escape.

Schäfer's method, shā'fer (*Med.*). A method of artificial respiration in which the patient lies prone, the head supported on one forearm, and the operator, his knees on either side of the patient's hips, exerts pressure with each hand over the lower ribs at the back at intervals of from three to five seconds.

schap'pe (*Textiles*). The name given to silk thread from which a certain proportion of the natural gum, sericin, has been removed by the process of schapping, i.e. fermentation by steaming.

schedule of dilapidations (*Build.*). A list showing the repairs which require to be done to premises after a period of tenancy.

schedule of prices (*Civ. Eng.*). The same as *bill of quantities.*

schedule speed. The average speed of a train between two termini when the time of intermediate stops is included in the overall time taken from start to stop.

Scheele's green, shā'le (*Chem.*). Copper hydrogen arsenite.

scheel'ite (*Min.*). An ore of tungsten formed under pneumatolytic conditions. It occurs in association with granites, having the composition tungstate of calcium, and crystallises in the tetragonal system.

Scheiner film-speed (*Photog.*). See **Weston-Scheiner film-speed.**

scheme arch (*Civ. Eng.*). See **skene arch.**

Schenk's scarlet phosphorus (*Chem.*). A scarlet-red powder which separates from a solution of red phosphorus in phosphorus tribromide when boiled for some time.

Scher'bius advancer (*Elec. Eng.*). An expedor type of phase advancer, comprising an a.c. motor coupled to a d.c. exciter, for use with slip-ring induction motors.

Schering bridge, shā'ring (*Diel.*). A bridge used to measure the power factor of dielectrics or cables. This method is the most suitable for high-voltage measurements, because the high voltage is borne by the test sample and a standard condenser only; the resistances in the bridge have only low voltages across them.

Schick's test (or **reaction**) (*Med.*). The reaction of the skin to an intradermal injection of a measured amount of diphtheria toxin of known potency. If the skin reacts by redness and swelling (as compared with a control injection of heated toxin) the subject is susceptible to diphtheria.

Schiehall'ion Series (*Geol.*). A massive feldspathic quartzitic grit with a boulder bed at the base, which forms the upper part of the Dalradian System of Pre-Cambrian age in Scotland.

Schiff's bases (*Chem.*). A term for benzylidene anilines, e.g. $C_6H_5 \cdot CH{:}N \cdot C_6H_5$.

Schiff's reagent (*Chem.*). A reagent, consisting of a solution of fuchsine decolorised by sulphurous acid, for testing the presence of aldehydes. Aldehydes give a red-violet colour.

Schiff's test (*Chem.*). A test for cholesterol.

When ferric chloride and concentrated sulphuric acid are heated with cholesterol a violet residue is obtained on careful evaporation to dryness.

schif'fle machine (*Textiles*). See **Swiss machine.**

Schilder's disease (*Med.*). See **encephalitis periaxialis.**

schillerisa'tion (*Geol.*). A play of colour (in some cases resembling iridescence due to tarnish) produced by the diffraction of light in the surface layers of certain minerals. The diffraction is due to regularly orientated rods of opaque iron ores in labradorite and bronzite, and to a microscopic interlamination of two different mineral species in diallage.

schill'erspar (*Min.*). See **bastite.**

Schimm'elbusch's disease (*Med*). A condition characterised by the formation of cysts in the breast, and by hyperplasia of the epithelium of the glandular tissue of the breast.

schindyle'sis (*Zool*). A form of articulation in which a thin plate of skeletal material fits into a narrow cleft.

schist (*Geol.*). The name given to a group of metamorphic rocks which have a tendency to split on account of the presence of foliae of flaky and elongated minerals, such as mica, talc, and chlorite. These rocks are formed from original sedimentary or igneous rocks by the action of combined heat and pressure.

schista'ceous, schist'ose (*Bot.*). Slate-coloured.

schistos'ity (*Geol.*). The tendency in certain rocks to split easily along weak planes produced by regional metamorphism and due to the abundance of mica or other cleavable minerals lying with their cleavage planes parallel.

schistosomi'asis (*Med.*). *Bilharziasis* (q.v.). Invasion of the human body by the blood flukes of the family *Schistosomidae*, giving rise, among other disturbances, to the passage of blood in the urine and in the faeces.

schizo-, skiz'ō *or* skī'zō (Greek *schizein*, to cleave). A prefix used in the construction of compound terms; e.g. *schizogenesis* (q.v.).

schi'zocarp (*Bot.*). A dry fruit, formed from more than one carpel, and separating when ripe into a number of one-seeded parts which do not dehisce.

schi'zocoel, —sēl (*Zool.*). Coelom produced within the mass of mesoderm by splitting or cleavage; cf. *enterocoel*.—*adj.* **schi'zocoelic.**

schizocot'yly (*Bot.*). The forking of cotyledons.

schizog'amy (*Zool.*). In *Polychaeta*, a method of reproduction in which a sexual form is produced by fission or germination from a sexless form.

schizogen'esis (*Zool.*). Reproduction by fission.—*adj.* **schizogenet'ic.**

schizogenet'ic (or **schizogen'ic**) **space** (*Bot.*). An intercellular space formed by the splitting of cell walls.

schizogen'ous gland (*Bot.*). A glandular cavity formed by the separation of cells by splitting of the common middle lamellas.

schizog'nathous (*Zool.*). In Birds, said of a type of palate in which the maxillopalatines do not meet the vomer or each other, and the vomers are fused anteriorly to form a point; the palatines and pterygoids articulate with the basisphenoid rostrum.

schizog'ony (*Zool.*). In *Protozoa*, vegetative reproduction by fission.

schizoid (*Psychiatry*). Showing qualities of a schizophrenic personality, such as asocial behaviour, introversion, tendency to phantasy, but without definite mental disorder.

schizoly'sigen'ous cavity (*Bot.*). An intercellular space formed in part by the separation, in part by the breakdown, of cells.

Schizomyce'tes (*Bot.*). See **Bacteria.**

schi'zont (*Zool.*). In *Protozoa*, a mature trophozoite which is about to reproduce by schizogony.

schizont'ocyte (*Zool.*). In some *Sporozoa*, a cytomere or stage in the life-cycle produced by division of the schizont and itself giving rise by further fission to merozoites.

schizopel'mous (*Zool.*). Having the toes provided with two separate flexor tendons, as in some Birds.

schizophre'nia (*Med.*). The term applied by Bleuler to *dementia praecox* (q.v.).

Schizophy'ceae (*Bot.*). See **Myxophyceae.**

Schizophy'ta (*Bot.*). A group of plants, doubtless artificial, including *Bacteria* and *Myxophyceae*; these multiply by fission, have no well-defined nucleus, and do not appear to have a sexual process.

schi'zopod (*Zool.*). Having the limbs split, i.e. having each limb provided with an endopodite and an exopodite, as in the mysis larva of higher *Crustacea.*

schizorhi'nal (*Zool*). Having the posterior margin of the nares slit-like.

schizothe'cal (*Zool.*). Having horny scales on the tarsus.

schizothy'mia (*Psychiatry*). Manifestation of schizoid traits within normal limits (Kretschmer).

schizotryp'anosomi'asis (*Med.*). Chagas' disease. A disease, occurring in parts of South America, due to infection of the muscles, heart, and brain of Man with the protozoal parasite *Trypanosoma cruzi*, the infection being conveyed by the bite of a bug.

schizozo'ite (*Zool.*). A merozoite; a stage in the life-cycle of a *Sporozoan* produced by schizogony.

Schlen'ke loudspeaker (*Acous.*). A loudspeaker with a large stretched duralumin diaphragm driven eccentrically by a current-carrying coil located freely in the circular gap of a pot magnet.

Schlip'pe's salt (*Photog.*). Sodium sulphantimoniate; a salt much used for re-development in sulphide toning and for intensification with mercury.

Schloemilch detector, shlē'milhh (*Radio*). See **electrolytic detector.**

Schmidt's test (*Chem.*). A test for bilirubin and hydrobilirubin with a concentrated aqueous solution of bichloride of mercury. Bilirubin will eventually become stained green, whereas hydrobilirubin will appear red.

Schneider furnace, shnī'der (*Elec. Eng.*). A type of high-frequency induction furnace.

Schneide'rian membrane (*Zool.*). In Vertebrates, the olfactory mucous membrane.

Schönherr process, shĕn'hār (*Elec. Eng.*). A process for direct fixation of atmospheric nitrogen, employing a single-phase high-pressure arc furnace.

Schönlein's disease, shĕn'līn (*Med.*). See **peliosis rheumatica.**

Schön-Punga motor (*Elec. Eng.*). A compensated single-phase induction motor having a double rotor, one being an auxiliary running concentrically with the main rotor between the latter and the stator.

schorl-rock (*Geol.*). A rock composed essentially of aggregates of black tourmaline (schorl) and quartz. A Cornish term for the end-product of tourmalinisation. See also **luxulyanite.**

Schotter's apparatus (*Chem.*). Apparatus of particular design used for the absorption of carbon dioxide in chemical analysis.

Schottky effect (or **noise**) (*Thermionics*). Strictly, noise in the anode current of a thermionic valve due to random variations in the surface condition of the cathode. Frequently extended to include *shot noise* (q.v.).

Schrag'e motor (*Elec. Eng.*). A variable-speed induction motor employing a commutator winding on the rotor from which an e.m.f. is collected and injected into the stator winding.

Schreiner finish, shrī'ner (*Textiles*). A lustrous finish obtained on cotton satins and sateens by rollers engraved with fine lines which, by means of heat and pressure, are imprinted on the fabrics.

Schrott effect (*Thermionics*). See **shot noise.**

Schultz-Charlton reaction (*Med.*). The local blanching of the scarlet-fever rash when scarlatinal antitoxin is injected into the skin.

Schumann plates (*Phys.*). Photographic plates having little or no gelatine; used for photographing spectra in the ultra-violet below wavelength 2000 A.U., where gelatine is strongly absorbent.

Schwann's sheath (*Zool.*). See **neurolemma.**

schwanno'ma (*Med*). A tumour growing from the sheath of a nerve (neurofibroma) and containing cells resembling those of the neurilemma.

Schweinfurt green, shwin'foort (*Chem.*). See **Paris green.**

Schweitzer's reagent, shvit'ser (*Chem.*). A reagent for cellulose. It consists of a 0·3% solution of precipitated cupric hydroxide in a 20% ammonium hydroxide solution. This mixture is a solvent for cellulose, which can be re-precipitated by the addition to the solution of mineral acids.

sciat'ic (*Zool.*). Situated in, or pertaining to, the ischial or hip region.

sciat'ica (*Med*). Inflammation of the fibrous elements of the sciatic nerve, resulting in pain and tenderness along the course of the nerve in the buttock and the back of the leg: less strictly, pain along the course of the sciatic nerve, from whatever cause.

science. The ordered arrangement of ascertained knowledge, including the methods by which such knowledge is extended and the criteria by which its truth is tested. The older term *natural philosophy* implied the contemplation of natural processes *per se*, but modern science includes such study and control of nature as is, or might be, useful to mankind, and even proposes control of the destiny of man himself. *Speculative science* is that branch of science which suggests hypotheses and theories, and deduces critical tests whereby unco-ordinated observations and properly ascertained facts may be brought into the body of science proper.

scientific alexan'drite (*Min*). A misnomer for artificial corundum coloured with vanadium oxide and resembling true alexandrite in some of its optical characters.

scientific emerald (*Min.*). An imitation in which the colour resembles that of true emerald, but actually the material is a beryl glass coloured with chromic oxide.

scintillation of stars (*Astron.*). The twinkling of stars, a phenomenon due to the deflection, by the strata of the earth's atmosphere, of the light-rays from what are virtually point-sources. The effect increases towards the horizon; it is not observable in the planets.

scintling (*Bricks*). The operation, when bricks are being dried in the open, of placing the half-dry raw bricks diagonally and a little distance apart, so as to admit air between them.

sci'ograph (*Build.*). A drawing showing a sectional view of a building.

sci'on (*Bot.*). (1) A portion of a plant, usually a piece of young stem, which is inserted into a rooted stock in grafting.—(2) A young plant formed at the end of, or along the course of, a runner.—(3) A stolon.

sciophyl'lous (*Bot.*). Having leaves which can endure shading.

sci'ophyte (*Bot.*). A plant which grows in shady situations.

scirocco (*Meteor.*). See **sirocco.**

scir'rhous carcinoma (*Med.*). A hard cancer, in which there is an abundance of connective tissue and few cells.

scir'rhus (*Med.*). A scirrhous carcinoma.

scirrhus cord (*Vet.*). See **botryomycosis.**

Scirtop'oda (*Zool.*). An order of *Rotifera* in which the adults can swim freely, but also move by a skipping motion effected by means of special setose appendages; the tail is usually absent.

scis'sile (*Bot*). Capable of being split.

scissors, rowelling (*Vet.*). An instrument for incising the skin of animals when a seton is to be threaded.

scissors truss (*Carp.*). A type of truss used for a pitched roof, consisting of two principal rafters braced by two other members, each of which connects the foot of a rafter to an intermediate point in the length of the other rafter.

scler-, sclero- (Greek *skleros*, hard). A prefix used in the construction of compound terms; e.g. *sclerocorneal* (q.v.).

scle'ra (*Zool.*). The tough fibrous outer coat of the Vertebrate eye.—*adj.* **sclerot'ic.**

scleran'thium (*Bot*). A dry one-seeded fruit enclosed in the hardened remains of the calyx.

scleratogenous, —toj'en-us (*Zool*). Skeleton-forming.

sclere, sklēr (*Zool.*). A skeletal structure: a sponge spicule.

scler'eide (*Bot.*). (1) A general term for a cell with a thick, lignified wall, i.e. any sclerenchymatous cell.—(2) A thick-walled cell mixed with the photosynthetic cells of a leaf, giving them mechanical support.—(3) A stone cell.

sclere'ma neonato'rum (*Med*). A disease of newborn infants in which there is symmetrical hardening of the subcutaneous fat in certain parts of the body.

scleren'chy'ma, *or* —en-kī'ma (*Bot.*). A tissue composed of cells with thick lignified walls and with little or no living contents. The cells are elongated, with pointed ends which often interlock, or less often short and blunt-ended. Sclerenchyma supports and protects the softer tissues of the plant.—(*Zool.*) Hard skeletal tissue, as of Corals.

scler'ite (*Zool.*). A hard skeletal plate or spicule.

scleri'tis (*Med.*). Inflammation of the sclera of the eye. See also **episcleritis.**

sclero-. Prefix. See **scler-.**

scler'oblast (*Zool.*) In *Porifera*, a spicule-forming cell.

scleroblast'ic (*Zool.*). See **scleratogenous.**

sclerocaul'ous (*Bot*). Having a hard, dry stem.

scler'ocoel, —sēl (*Zool.*). The cavity of a sclerotome.

sclerocor'neal (*Zool.*). Pertaining to the sclerotic and the cornea.

sclerodactyl'ia (*Med.*). Sclerodermia of the hands, the skin being drawn tightly over the fingers.

scler'oderm (*Zool*). A hard integument.

scleroder'matous (*Zool.*). Possessing exoskeletal structures.

scleroder'mia, scleroder'ma (*Med.*). A condition of hardness and rigidity of the skin as a result of overgrowth of fibrous tissue in the dermis and subcutaneous tissue, the fat of which is replaced by the fibrous tissue.

scleroder'mite (*Zool.*). The exoskeleton of an Arthropodan somite.

sclero'ma (*Med.*). A condition in which hard nodules of granulomatous tissue appear in the nose, or occasionally in the trachea.

scleronych'ia (*Med.*). Thickening and dryness of the nails.

Scleropa'rei (*Zool.*). An order of *Neopterygii* in which one of the suborbital bones extends across the cheek towards the pre-operculum; carnivorous forms with pointed teeth; marine. Mail-cheeked Fishes, Scorpion-fishes, Rock-perches, Gurnards, Sticklebacks, Greenlings.

scler'ophyll (*Bot.*). A hard, stiff, and tough leaf, with a strongly cutinised epidermis.

sclerophyll vegetation (*Bot.*). Woody plants with hard, tough, and generally small leaves, characteristic of dry places.

sclerophyll'ous (*Bot.*). Having sclerophylls.

scleroproteins (*Chem.*). Insoluble proteins forming the skeletal parts of tissues, e.g. keratin from hoofs, nails, hair, etc., chondrin and elastin from ligaments. See **albuminoids.**

scler'oscope hardness test (*Met.*). The determination of the hardness of metals by measuring the rebound of a diamond-tipped hammer dropped from a given height.

scler'osed, sclerot'ic (*Bot.*). Having hard, usually lignified walls.—(*Med.*) Affected with sclerosis.

sclero'sis (*Bot.*). The hardening of cell walls or of tissues by thickening and lignification.—(*Med.*) An induration or hardening, as of the arteries. See also **disseminated sclerosis.**

sclerotes'ta (*Bot.*). A hard layer in the testa of a seed in which a sarcotesta is also present.

sclerot'ic (*Bot., Med.*). Sclerosed.

sclerotic (*Zool.*). The sclera of the eye: pertaining to the sclera.

sclerotic cell (*Bot.*). See **sclereide, stone cell.**

sclerotic ossicles (or **bones**) (*Zool.*). A ring of small membrane bones, derived from the sclera of the eye in some Reptiles and Birds.

sclero'tiform, sclero'tioid (*Bot.*). Resembling a sclerotium.

sclero'tium (*Bot.*). A hard mass of fungal hyphae, usually black on the outside, crust-like to globular, and serving as a resting stage from which fructifications are formed later.—(*Zool.*) The resting or encysted stage in the life-cycle of *Mycetozoa*, in which the organism is represented by a number of multinucleate cellulose cysts.—*adj.* **sclero'tial.**

scler'otome (*Zool.*). One of the metamerically arranged masses of mesenchyme which give rise in part to the axial skeleton in developing Vertebrates.

sclerot'omy (*Surg.*). Operative incision of the sclera.

scobic'ular, sco'biform (*Bot.*). Looking like sawdust.

sco'binate (*Bot.*). Said of a surface which feels as if it has been roughened with a coarse file.

scoin'son arch (*Build.*). See **squinch.**

Scolecifor'mia (*Zool.*). An order of *Phanerocephala*, most of which are burrowing forms; the parapodia are reduced or absent; the buccal region is eversible, but the pharynx is not armed; tentacles and palps are usually lacking and the peristomium is without cirri. Includes the Lug-Worms.

sco'lecite (*Bot.*). An old name for an *archicarp*.

scolecite (*Min.*). A member of the zeolite group of minerals; a hydrated silicate of calcium and aluminium, occurring usually in fibrous or acicular groups of crystals.

sco'lecospor'ous (*Bot.*). Having thread-shaped or worm-shaped spores.

sco'lex (*Zool.*). The terminal organ of attachment of a tapeworm (Cestode).—*pl.* **scolices.**—*adjs.* **sco'lecid, scolec'iform.**

scoliokypho'sis (*Med.*). Abnormal curvature of the spine in which scoliosis is combined with kyphosis.

scolio'sis (*Med.*). Abnormal curvature of the spine laterally.

scolo'pale (*Zool.*). A hollow rod-like structure forming part of a scolophore in Insects.

scol'ophore (*Zool.*). A spindle-shaped nerve-ending in Insects, auditory in function and consisting essentially of a bipolar nerve cell.

scolus (*Zool.*). A thorn-like process of the body-wall, characteristic of some Insect larvae.

sconce (*Furn.*). A wall bracket, usually one designed for illuminating purposes.

scon'tion (*Masonry*). An inside quoin, as laid in a splayed jamb. Also called SCONCHEON.

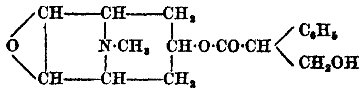
scoop (*Cinema.*). One or more suspended broadsides, which are special types of incandescent flood-lights for use in motion-picture studios.

scoop (*Civ. Eng.*). See **bucket.**

scoop (*Surg.*). A spoon-like instrument for clearing out cavities.

sco'pa (*Zool.*). The pollen brush of Bees, consisting of short stiff spines on the posterior metatarsus.

scopol'amine (*Chem.*). A coca-base alkaloid, present in *Datura meteloides*. It is the scopoline ester of tropic acid, i.e.



scop'ula (*Zool.*). A small tuft of hairs; as in some Spiders (*Tengellidae, Pycnothelidae*, etc.), a small tuft of tarsal hairs of use in climbing: a rod-like sponge spicule with a number of rays at one end.

scop'ulate (*Bot.*). Resembling a brush.

scorbu'tic (*Med.*). Of, or pertaining to, scurvy: proceeding from, or affected with, scurvy.

scorbu'tus (*Med.*). See **scurvy.**

score (*Typog.*). See **em rule, en rule.**

sco'ria (*Geol.*). A cavernous mass of volcanic rock which simulates a clinker.

scorification (*Chem.*). The separation of gold or silver from an ore by heating it to a high temperature with granulated lead and a little borax, in a scorifier. The impurities form a slag with the lead oxide which is produced, while the gold or silver dissolves in the molten lead, which sinks to the bottom of the vessel.

scorifier (*Chem.*). A crucible of bone ash or fireclay used in assaying and in the metallurgical treatment of precious metals. See also **scorification.**

scoring (*Cinema.*). The preparation of the sound-script, in which are described all music and noises to be introduced into a motion-picture, before the shooting commences in the studio. See **scoring stage, pre-scoring, post-scoring.**

scoring stage (*Cinema.*). A special sound stage set apart in sound-film studios for the use of orchestras when they are required to record sound under good conditions, or to record sound in time with a projected motion-picture, no cinematograph pictures being taken.

Scorpio (*Astron.*). Scorpion. Eighth sign of the *Zodiac* (q.v.).

scor'pioid cyme (*Bot.*). A cymose inflorescence in which the branches develop alternately right and left, but do not all lie in one plane; in bud, the axis of the inflorescence is coiled.

Scorpionid'ea (*Zool.*). An order of large *Embolobranchiata* having the prosoma, mesosoma, and metasoma distinct; possessing large chelate pedipalps and a pair of ventral, comb-like, tactile organs (*pectines*); the tail ends in a post-anal sting provided with poison glands; respiration is by lung-books; nocturnal predaceous forms found in warm climates. Scorpions.

scotch (*Build.*). See **scutch.**

Scotch beaming (*Textiles*). See **Scotch dressing.**

Scotch boiler (*Eng.*). See **marine boiler.**

Scotch bond (*Build.*). *English garden-wall bond* (q.v.).

Scotch carpet (*Textiles*). See **Kidderminster carpet.**

Scotch crank (or **yoke**) (*Eng.*). A form of crank, used on a *direct-acting pump* (q.v.), in which a square block, pivoted on the overhung crank pin, works in a slotted crosshead carried by the common piston rod and ram.

Scotch dressing or **dresser sizing** (*Textiles*).

(1) A method of sizing cotton yarns of extra fine count; they are passed from the warper's beam through a size box, then brushed, dried by hot air, and again brushed.—(2) A method of producing a striped warp by running yarns of different colours from a number of warper's beams on to the weaver's beam, according to the colour design. This is called SCOTCH DRESSING, SCOTCH BEAMING, or DRY TAPING. The term *dresser sizing* (q.v.) relates only to (1).

Scotch hearth (*Met.*). A furnace for smelting high-grade lead ores without previous roasting. Air is blown through a shallow layer of sulphide concentrates mixed with coke. Sulphide is oxidised to oxide by the air, and this in turn is reduced to lead by the coke. Furthermore, lead oxide and sulphide react to form lead and sulphur dioxide. The process requires much poking and shovelling, hence *Newnam hearth* (q.v.) and *Federal hearth* (q.v.).

Scotch staff (*Surv.*). A form of self-reading staff in which three separate lengths of solid staff are fitted together, by means of brass socketed joints and set-screws, to form a longer staff.

Scotch topaz (*Min.*). A term applied in the gemstone trade to yellow transparent quartzes, resembling Brazilian topaz in colour, used for ornamental purposes. See **citrine, cairngorm.**

Scotch yoke (*Elec. Eng.*). A triangular framework used in certain types of electric tractor for coupling two traction motors to the driving-wheel system.—(*Eng.*) See **Scotch crank.**

sco'tia (*Arch.*). A *cavetto* (q.v.).

scoto'ma (*Med.*). (1) A blind or partially blind area in the visual field, the result of disease of the retina or optic nerve.—(2) The appearance of a black spot in front of the eye, as in choroiditis. —*pl.* **scotomata.**

scotom'eter (*Med.*). An instrument for detecting and measuring *scotomata* (1).

scot'ophyte (*Bot.*). A plant which lives in the dark.

Scott connexion (*Elec. Eng.*). A method of connecting two single-phase transformers so as to convert a three-phase three-wire a.c. supply to a two-phase three-wire supply, and vice versa.

Scott-Bentley discriminator (*Elec. Eng.*). In series motors requiring a wide range of speed, a field divertor arrangement for obtaining light-load speeds above normal.

scourer (*Eng.*). A flour-milling machine in which the wheat, for cleaning purposes, is subjected to the action of revolving beaters in a ventilated casing.

scouring (*Hyd. Eng.*). Said of the eroding action of water flowing at high velocity.

scouring (*Textiles*). (1) A process to which raw wool and manufactured woollen fabrics are subjected, raw wool to remove natural grease and impurities, yarns and cloth to remove oil and dirt.—(2) A process by which the natural gum is removed from silk yarns prior to dyeing.

scrambler (*Bot.*). A plant which develops long shoots which grow loosely over and above other plants.

scrambler (*Radio*). A device used to obtain secrecy in radiotelephone conversations. Its action is to transfer the different frequency components of the transmitted speech to other parts of the frequency spectrum, high frequencies being moved lower, and so on. A similar device at the receiving end reverses the process and restores the original sounds.

scraper (*Carp.*). A thin flat steel blade with a square straight edge on which a burr is raised; used to pare wood from a surface which is being finally dressed.

scraper ring (*I.C. Engs.*). A ring usually fitted on the skirt of a petrol- or oil-engine piston, to prevent excessive oil consumption. It may have a bevelled upper edge or a slotted groove, the oil being scraped off the cylinder wall and led back to the sump through holes in the piston wall.

scratch (*Acous.*). The same as *surface noise.*

scratch-coat (*Plast.*). The first of three coats applied in plastering. It consists of coarse stuff.

scratch filter (*Radio*). A low-pass filter, with a cut-off at about 7000 cycles, which can be inserted into the low-frequency amplifier of a radio receiver, when the latter is used for the reproduction of gramophone records, to eliminate noise due to the needle scratching the bottom of the grooves of the record. See **optical scratch, shadow scratch.**

scratch work (*Plast.*). *Sgraffito* (q.v.).

scratched blue (*Pot.*). Incised ornament on unbaked clay, sprinkled with cobalt glass, then fused in the kiln.

scratched figure (*Typog.*). A figure cast with a stroke through it to indicate a cancel, thus : $\cancel{6}$.

scratcher (*Plast.*). A tool used to make scratch marks in a cement surface, in order to provide a grip for a subsequent coat, and enable it to adhere more satisfactorily.

scree or **ta'lus** (*Geol.*). A tumbled mass of angular rock debris strewn on a hillside or at a mountain foot, resulting from frost action or, in arid regions, insolation.

screed (*Plast.*). A band of plaster laid on the surface of a wall as a guide to the thickness of a coat of plaster to be applied subsequently. *

screed-coat (*Plast.*). A coat laid level with the screeds.

screen (*Acous.*). The fine-mesh sieve which is used for passing the materials used in the manufacture of gramophone records.

screen (*Build., Civ. Eng.*). A large sieve used for grading fine or coarse aggregates.

screen (*Cathode Ray Tubes*). See **fluorescent screen.**

screen (*Cinema.*). The white surface on which cinematograph (or other) images are projected. In cinemas it is pierced with a large number of small holes, designed so as to permit the passage of sound-waves from the reproducing loudspeakers with small and uniform attenuation with frequency. For domestic sub-standard projection with limited light, the apparent brilliance of the image is increased by treating the surface so that the reflected light is concentrated to some extent in the normal direction. See also **aerial screen.**—(*Photog.*) See **focusing screen.**

screen (*Photog., Print.*). The meshwork of lines at right-angles, ruled on glass, used to translate the subject of a *half-tone* (q.v.) illustration into dots. Screens are roughly classified according to the number of lines per in., viz. *fine* (e.g. 150), *medium* (e.g. 133), *coarse* (e.g. 85). See also **colour screen.**

screen (*Television*). The surface on which the reproduced picture appears. It may be the screen of a cathode ray tube, or a white reflecting surface in the case of mechanical scanning systems.

screen (*Thermionics*). An electrode consisting of a relatively fine mesh network of wires interposed between two other electrodes, to reduce the electrostatic capacity between them. It is usually maintained at a positive potential, and connected to earth through a condenser.

screen burning (*Cathode Ray Tubes*). The gradual falling off in luminosity, sometimes accompanied by discoloration, which occurs in the fluorescent screen of a cathode ray tube, particularly if operated under adverse conditions.

screen grid (*Thermionics*). The third electrode (starting from the cathode) in a screened grid or pentode valve.

screen memory (*Psycho-an.*). Early childhood impressions and ideas which break through into consciousness, but are distorted and condensed into something which is unrecognisable to the individual.

screen modulation (*Radio*). A system of modulation in which the potential of the screen in a multi-electrode valve is varied in accordance with the impressed modulating currents.

screen-protected motor (*Elec. Eng.*). A protected type of electric motor in which the openings for ventilation are covered with wire-mesh screens.

screened antenna (*Radio*). An antenna fitted with a counterpoise earth connexion, to reduce the eddy current losses in the ground.

screened-grid valve (*Thermionics*). A four-electrode valve comprising a cathode, control grid, screen, and anode, in the order stated. Used as a high-frequency amplifier, where its low grid to anode capacitance is of value. Also called SHIELD GRID VALVE, TETRODE.

screened pentode (*Thermionics*). A pentode valve having a fine-mesh auxiliary grid and consequently small grid-to-anode capacitance, for use at high frequencies.

screening effect (*Elec. Eng.*). The property of a metal envelope to screen an enveloped magnetic field from the outside surroundings.

screening protector (*Elec. Eng.*). See **line choking coil.**

screenings (*Build., Civ. Eng.*). The residue from a sieving operation.

screw-and-nut steering-gear (*Automobiles*). A steering-gear in which a square-threaded screw formed on the lower end of the steering-column engages with a nut provided with trunnions, which work in blocks sliding in a short slotted arm carried by the drop-arm spindle.

screw-auger (*Tools*). An auger having a helical groove cut in its surface so as to carry away the chips from the cutting edge.

screw axes (*Min.*). Axes of symmetry about which the atoms in a mineral are symmetrically disposed. Rotation about a four-fold screw axis, for example, will carry an atom 1 into the positions successively occupied by similar atoms 2, 3, and 4, after rotations of 90°, 180°, 270°, and 360°. Cf. *rotation axes of symmetry.*

screw chases (*Typog.*). Chases used in newspaper work. They are fitted with screws, which obviates the use of separate quoins and sidesticks.

screw chasing (*Eng.*). See **chaser.**

screw composing-stick (*Typog.*). An old type of composing-stick fastened with a thumbscrew. The modern style is fastened at the correct measure by means of a lever.

screw conveyor (*Eng.*). See **worm conveyor.**

screw-cutting lathe (*Eng.*). A metal turning-lathe provided with a lead screw driven by *change wheels* (q.v.), for traversing the pointed tool used in screw-cutting.

screw jack (*Eng.*). See **jack.**

screw micrometer (*Eng.*). See **micrometer gauge.**

screw nail (*Build.*). A nail in whose surface shallow helical depressions are formed, so that as it is driven in place with blows from a hammer it turns like a screw.

screw pile (*Civ. Eng.*). A pile having a wide projecting helix or screw at the foot, useful in alluvial ground.

screw plate (*Eng.*). A hardened steel plate in which a number of screwing dies of different sizes are formed.

screw plug (*San. Eng.*). A drain-plug consisting of a rubber ring held between two steel discs which, on being screwed together, force the ring out to close the drain-pipe in which the plug is placed.

screw propeller (*Eng.*). See **air-screw, marine screw propeller.**

screw shackle (*Struct.*). A long nut screwed internally with a right-hand thread at one end and a left-hand thread at the other, serving to connect the ends of two rods which are to be joined together, and providing a means of adjusting the total length.

screw thread (*Eng.*). A helical ridge of approximately triangular (or V), square, or rounded section, formed on a cylindrical core, the pitch and core diameter being standardised under various systems.

See **acme—**

British Standard Fine—
British Standard Pipe—
British Standard Whitworth—
buttress— **Sellers—**
international— **square—**
metric— **Swiss** (or **Thury**)**—**

screws, temperature (*Horol.*). The screws in the rim of a compensation balance, excluding the quarter screws.

screwed boots (*Boots and Shoes*). Boots in which the sole is attached to the upper by screws, which are made from threaded wire and inserted by machinery; sometimes an outer sole is sewn on to the screwed sole.

screwed steel conduit (*Elec. Eng.*). Light steel tubing, having screwed ends for connecting up in lengths by means of sockets, in which electrical installation wiring is run. Cf. *plain steel conduit.*

screwing die (*Eng.*). An internally threaded hardened steel block, sometimes split in halves, on which cutting edges are formed by longitudinal slots. Held in a stock, lathe, or screwing machine for cutting external threads.

screwing machine (*Eng.*). A form of lathe adapted for the continuous production of screws, or screwed pieces, by means of dies.

screws (*Med.*). See **caisson disease.**

scribbler (*Spinning*). A woollen-trade term for a *carding machine.*

scribbling (*Spinning*). A term used in the woollen trade for *carding.*

scribe-awl (*Carp., etc.*). A *scriber* (q.v.).

scriber (*Carp.*). A pointed steel tool used for making an incised mark on timber, to guide a subsequent cutting operation.

scribing block (*Eng.*). A tool for gauging the height of some point on a piece of work, above a surface plate or machine table. It consists of a base supporting a pivoted column, to which a scriber is slidably clamped. Also called SURFACE GAUGE.

scrieve board (*Ship Constr.*). A formation of portable portions of flat wooden boards whereon are scrieved (or scribed) the ship's transverse frame sections and lines indicative of shell seams, decks, stringers, etc. Scrieve boards are used for setting the soft iron, to which the frames, etc. are turned.

scrim (*Textiles*). A fabric generally made from low quality linen tow, in an open weave. Used as a reinforcement in book-binding, upholstery, plaster work, etc. Also called MULL.

script (*Typog.*). A style of type which imitates handwriting.

scrobe (*Zool.*). In some *Arthropoda*, especially Insects, a groove for the reception of an antenna.

scrobic'ulate (*Bot., Zool.*). Having the surface dotted all over with small rounded depressions: pitted.

scrob'icule, scrobic'ula (*Zool.*). In *Echinoidea*, the smooth area of the test around the boss of a spine.

scrobic'ulus (*Bot., Zool.*). A small pit or rounded depression.

scrof'ula (*Med.*). Caseating tuberculosis of the lymphatic glands.—*adj.* **scrof'ulous.**

scrofuloder'mia, scrofuloder'ma (*Med.*). Tuberculous infection of the skin from the bursting of a deep-seated tuberculous abscess: a subcutaneous tuberculous abscess.

scroll chuck (*Eng.*). A self-centring chuck, having jaws slotted to engage with a raised spiral or scroll on a plate which is rotated by a key, so as to advance the jaws while maintaining their concentricity.

scro'tiform (*Bot.*). Like a bladder.

scro'tum (*Anat., Zool.*). In Mammals, a muscular sac forming part of the ventral body-wall into which the testes descend.—*adj.* **scro'tal.**

scrubbers (*Gas*). In a gas-works plant, the apparatus in which the gas is freed from tar, ammonia, and sulphuretted hydrogen.

scudding (*Leather*). The operation of removing the epidermis hair roots, pigment cells, and lime salts from the grain side of a hide, before tanning.

sculptured (*Bot., Zool.*). Bearing spines, ridges, or other markings standing up from the surface.

scum (*Build.*). A surface formation of lime crystals appearing on new cement work.

scumbling (*Paint.*). The operation of partially removing the finishing coat of paint while it is still wet by dabbing it with a rag or sponge, thereby exposing the previous coat in places and producing a kind of mottled finish.

scurfy (*Bot.*). Having the surface sprinkled with small bran-like scales.

scurvy (*Med.*). Scorbutus. A nutritional disease due to deficiency in the diet of vitamin C (ascorbic acid), characterised by anaemia, debility, apathy, sponginess of the gums, ulceration of the mouth, and haemorrhages from various parts of the body.

scu'tate. See **scute.**

scutch (*Build.*). The bricklayer's cutting tool for dressing bricks to special shapes. Also called SCOTCH.

scutcheon. See **escutcheon.**

scute (*Zool.*). An exoskeleton scale or plate.—*adj.* **scu'tate.**

scutel'lar epithelium (*Bot.*). A layer of elongated cells covering the surface of the scutellum, lying against the endosperm, and producing enzymes which assist in the utilisation of the latter.

scu'tellate (*Bot.*). Rounded and nearly flat; shaped like a saucer.

scutella'tion (*Zool.*). Scale-arrangement; pholidosis.

scutel'lum (*Bot.*). A flattened portion of the embryo of a grass, probably the expanded cotyledon; it is applied to the endosperm and serves as an absorptive organ.

scutellum (*Zool.*). The posterior of three sclerites into which the notum is typically divided in Insects: in Birds, a tarsal scale: more generally, a shield-shaped structure.

scu'tiform (*Bot.*). Shield-shaped.

scu'tum (*Zool.*). In Insects, the middle sclerite of three into which the notum is typically divided. —*adj.* **scu'tal.**

scybalum, sib'— (*Med.*). A round, hard, and dry faecal mass in the intestine.

scyelite, si'— (*Geol.*). A coarse-grained ultramafic igneous rock, named from the original locality at Loch Scye in Sutherlandshire, Scotland; it consists essentially of mafic minerals including serpentine pseudomorphs after olivine set poikilitically in large amphibole crystals associated with large bronze mica crystals. A mica-hornblende-peridotite.

scyphi (*Bot.*). See **scyphus.**

scyphif'erous (*Bot.*). Having scyphi.

scyphis'toma (*Zool.*). In *Scyphozoa*, the segmenting polyp stage. Cf. *hydratuba.*

Scyphomedu'sae (*Zool.*). See **Scyphozoa.**

Scyphozo'a (*Zool.*). A class of *Cnidaria* in which alternation of generations frequently does not occur, the hydroid phase being partially suppressed, but if present it is solitary and gives rise to the medusoid phase by transverse fission (strobilisation) and possesses gastral ridges and filaments; the medusa is large and without a velum and nerve-ring; the gonads are of endodermal origin. Jelly-fish.

scyph'ula (*Zool.*). See **scyphistoma.**

scy'phus (*Bot.*). A cup-like widening of the distal end of the podetium in some lichens.—*pl.* **scy'phi.**

S.E. (*Build.*). Abbrev. for *stopped end.*

Se (*Chem.*). The symbol for *selenium.*

sea. An expanse of salt water on the face of the globe; strictly, one of lesser extent than an ocean. Sea water contains the majority of the common elements in small amounts, the principal ions being chlorine and sodium; others are calcium, magnesium, and potassium; dissolved gases, e.g. oxygen, nitrogen, carbon dioxide. The salinity holds a constant relation to the chlorine content and varies between 32 and 37·4 parts per thousand in the open sea; that of the Red Sea is about 40%. See also **ocean.**

sea anchor (*Ships*). A float to which a ship may be attached by a hawser to ride out a gale. Also called FLOATING ANCHOR.

sea breeze (*Meteor.*). See **land and sea breezes.**

sea earth (*Telcg.*). A sea earth is effected by the removal of the main earth connexion of the termination of a submarine cable to some miles out to sea, instead of making it near the shore, to avoid the earth coupling of a number of such submarine cables. The earth connexion takes the form of an insulated conductor inside the cable, ultimately terminated on the armouring, which is in contact with the sea.

Sea-Island cotton (*Textiles*). A long staple, silky cotton produced in Georgia, Carolina, and N. Florida and the adjacent islands. Now almost superseded by other long-staple cottons.

sea lily (*Geol., Zool.*). See **Crinoidea.**

sea marker (*Aero.*). Any device dropped from an aircraft on to water to make an observable patch from which the drift of the aircraft may be determined. Usually filled with some oily liquid containing a light-coloured powder, which spreads over the water surface.

sea otter (*Furs*). The dressed skin of an amphibious Mammal resembling the otter, found in the North Pacific; the fur is a silvery brown and exceptionally valuable.

seaplane (*Aero.*). An aeroplane fitted with means for taking off and alighting on water. See **float seaplane, flying-boat.**

sea-wall (*Civ. Eng.*). A coastal wall built to afford protection against erosion and/or flooding.

seal (*Furs*). The dressed skin of one of the eared seals that bear fur, e.g. *Callorhinus ursinus* (the Alaska seal) and *Arctocephalus,* both of which are closely protected. The fur is a rich brown (seal brown) and of a velvety texture.

seal, sealing, sealing-in (*Elec. Comm.*). (Of a relay) terms equivalent to *lock* (q.v.).

seal (*San. Eng.*). The water contained in a trap, which prevents the flow of air or gases from one side to the other.

sealed cover (*San. Eng.*). An air-tight cast-iron cover fitting into a frame and used to cover a manhole.

sealing (*Build.*). The operation of closing a joint, or of attaching one piece to another, by means of cement, lead, etc.

sealing box (*Cables*). A box in which the end of a paper-insulated cable is hermetically sealed with a compound.

sealing-in. The making of an air-tight joint between the filament wires and the glass envelope of an incandescent lamp.

sealing-off. The final sealing of the exit to the evacuating pumps of an incandescent lamp bulb.

Sealocrete (*Build.*). Trade-name of a waterproofing agent for cement surfaces.

seam (*Met.*). A surface defect in worked metal, the result of a blowhole being closed but not welded; it remains as a fine crack.

seam (*Mining*). (1) A tabular, generally flat deposit of coal or mineral; a stratum or bed.—(2) A joint or fissure.

seam (*Plumb.*). See **welt.**

seam roll (*Plumb.*). A *hollow roll* (q.v.).

seam welding (*Elec. Eng.*). A continuous electric welding process in which two overlapping sheets of metal are passed between a pair of wheels forming the electrodes that carry the welding current.

seamless tube (*Met.*). Tube other than that made by bending over and welding the edges of flat strip. May be made by extrusion (non-ferrous metals), or by piercing a hole through a billet and then rolling down over a mandrel to form a tube of the required dimensions.

search coil (*Elec. Eng.*). See **exploring coil.**

searchlight projector (*Illum.*). A projector embodying a parabolic reflector; capable of housing a high-intensity arc lamp for producing a parallel beam of light for picking out objects at night at considerable distances.

season (*Astron.*). One of the four divisions of the tropical year taken from the passage of the sun through the equinoctial and solstitial points: *spring*, reckoned from the equinox on March 21, is 92 days 20·2 hours; *summer*, from the solstice on June 21, is 93 days 14·4 hours; *autumn*, from the equinox on Sept. 23, is 89 days 18·7 hours; *winter*, from the solstice on Dec. 22, is 89 days 0·5 hour.

seasonal polymorphism (*Ecol.*). The occurrence of different forms of the same species at different seasons, a phenomenon especially characteristic of lake faunas.

seasoning (*Leather*). The process of coating leather, after dyeing, with some form of liquid albumen, preparatory to glazing and polishing.

seasoning (*Timber*). The process in which the moisture content of timber is brought down to an amount suitable for the purpose for which the timber is to be used.

seat board (*Horol.*). The board or platform that carries the movement of a long case clock.

seat earth (*Geol.*). See **underclay.**

seating (*Eng., etc.*). A surface for the support of another piece, e.g. the end of a girder, or a masonry block.

seba'ceous (*Bot.*). Looking like lumps of tallow.—(*Zool.*) Producing or containing fatty material, as the *sebaceous glands* of the scalp in Man.

sebaceous cyst (*Med.*). A cyst formed as a result of blockage of the duct of a sebaceous gland, often present on the face, scalp, or neck.

sebif'erous (*Zool.*). Conveying fatty material.

sebif'ic (*Zool.*). See **colleterial.**

sebip'arous (*Zool.*). Sebaceous.

seborrhoe'a, seborrhe'a (*Med.*). Overactivity of the sebaceous glands, resulting in an abnormally greasy skin.

seborrhoe'ic (or **seborrhe'ic**) **dermati'tis** (*Med.*). An inflammatory disease of the skin characterised by the presence of reddish patches covered with greasy scales; especially of the scalp, causing 'scurfy head.'

se'bum (*Zool.*). (Latin, 'tallow, suet, grease.') The fatty secretion produced by the sebaceous glands.

Secchi's classification, sek'kē (*Astron.*). The earliest classification of about 4000 stars into spectral types; made by Father Secchi (1818-1878), who divided them into four groups designated by Roman figures, starting with the white, or helium, stars and ending with the reddest.

sec'odont (*Zool.*). Having teeth adapted for cutting.

second. (1) A unit of time equal to 1/60 of a minute, or 1/86400 of the mean solar day.—(2) A unit of angular measure, equal to 1/60 of a minute of arc; indicated by the symbol ″.—(3) In the duodecimal notation, 1/12 of an inch; indicated by ‴.

seconds hand (*Horol.*). The small hand of a clock or watch that makes one turn per minute.

second channel interference (*Radio*). Interference which arises in a supersonic heterodyne receiver owing to insufficient attenuation of signals of image frequency prior to the frequency changing stage.

second contraction (*Cyt.*). Shortening and thickening of the threads in the diplonema stage of meiosis as diakinesis comes on.

second detector (*Radio*). The rectifier or detector which follows the intermediate frequency amplifier in a supersonic heterodyne receiver.

second development (*Photog.*). The second development in a reversal process, after the first image has been removed by bleaching and the remaining silver halide rendered developable by further exposure to light.

second tap (*Eng.*). A tap used, after a taper tap, to carry the full thread diameter further down the hole, or to give the finished size of thread in a through hole.

second ventricle (*Zool.*). In Vertebrates, the cavity of the right lobe of the cerebrum.

seconds (*Build.*). Bricks similar to *cutters* (q.v.), but of a slightly uneven colour.

seconds (*Textiles*). The term applied by woolsorters to the rather coarse wool from the edges of the front of a fleece; also to coarse skirtings from merino fleeces.

secondary (*Zool.*). Arising later: of subsidiary importance: in Insects, the hind-wing: in Birds, a quill feather attached to the forearm.

secondary alcohols (*Chem.*). Alcohols containing the group :CH·OH. When oxidised they yield ketones.

secondary amines (*Chem.*). Amines containing the imino group :NH. They yield with nitrous acid nitrosamines.

secondary association (*Bot.*). The coming together of bivalent chromosomes during meiosis.

secondary beam (*Struct.*). In floor construction, a beam carried by *main beams* (q.v.) and transmitting loads to them.

secondary body cavity (*Zool.*). See **coelom.**

secondary bow (*Meteor.*). A rainbow having an angular radius of 52°, the red being inside and the blue outside, usually fainter than the primary bow. It is produced in a manner similar to the primary bow except that two internal reflections occur in the raindrops. See **rainbow.**

secondary cell (*Elec. Eng.*). A voltaic cell in which the electrochemical action is reversible, so that the cell can be charged and discharged economically. See **primary cell, accumulator.**

secondary cell wall (*Bot.*). The layers of wall material deposited on the primary wall as the cell ages; it usually contains more cellulose and less pectin than the primary wall, and is often pitted.

secondary coil (*Elec. Eng.*). A coil which links the flux produced by a current flowing in another coil (the *primary coil*).

secondary colours (*Paint.*). Colours produced by mixing two or more primary colours.

secondary constant (*Elec. Comm.*). The propagation constant, or the characteristic impedance, of a length of uniform transmission line.

secondary cortex (*Bot.*). See **phelloderm.**

secondary electrode (*Elec. Eng.*). See **bi-polar electrode.**

secondary electrons (*Thermionics*). Those electrons which are emitted from a surface by electronic bombardment, as distinct from the primary bombarding electrons.

secondary emission (*Thermionics*). The emission of electrons from a surface (usually conducting) by the bombardment of the surface by electrons from another source. The number of secondary electrons may exceed that of the primaries, depending on the velocity of the latter.

secondary emission multiplier (*Photo-electric Cells, etc.*). See **electron multiplier.**

secondary enrichment (*Geol.*). The name given to the addition of minerals to, or the change in the composition of the original minerals in, an ore body, either by precipitation from downward-percolating waters or upward-moving gases and solutions. The net result of the changes is an increase in the amount of metal present in the ore at the level of secondary enrichment.

secondary gneissic banding (*Geol.*). A prominent mineral banding exhibited by coarse-grained crystalline rocks which have been subjected to intense regional metamorphism, involving rock-flowage. Cf. *primary gneissic banding.*

secondary growth (*Bot.*) See **secondary thickening.**

secondary hardness (*Met.*) Further increase in hardness produced on tempering high-speed steel after quenching.

secondary leakage (*Elec. Eng.*). The magnetic leakage associated with the secondary winding of a transformer.

secondary meristem (*Bot.*). A meristem formed from permanent tissue.

secondary mycelium (*Bot.*). (1) Hyphae growing down from the developing-fruit body of a fungus and taking up food material for its nutrition.—(2) The mycelium of binucleate segments, bearing clamp connexions, formed by many *Basidiomycetes.*

secondary nitro-compounds (*Chem.*). Nitro-compounds containing the group $:CH \cdot NO_2$.

secondary nucleus (*Bot.*). The nucleus formed in the embryo sac by the union of the two polar nuclei.

secondary petiole (*Bot.*). The petiole of a leaflet of a compound leaf.

secondary phloem (*Bot.*). Phloem formed by the activity of a cambium.

Secondary Rocks (*Geol.*). An obsolete term applied to the rocks which were deposited within the period of geological time which ranges from the Triassic era to the Cretaceous era. See **Mesozoic.**

secondary standard (*Elec. Eng.*). A copy of a *primary standard* for general use in a standardising laboratory.

secondary succession (*Bot.*). A succession arising when the ground has been partly deprived of vegetation by a fire or other accident.

secondary thickening (*Bot.*). The increase in diameter of a stem or root when elongation has ceased and all primary tissues have been differentiated.

secondary tissue (*Bot.*). Tissue formed from a cambium or other secondary meristem.

secondary voltage (*Elec. Eng.*). The voltage at the terminals of the secondary winding of a transformer.

secondary wall layer (*Bot.*). See **secondary cell wall.**

secondary wave (*Radio*). A wave deriving from the main or desired wave forming a communication link but arising when this wave is partially reflected, or refracted, or scattered.

secondary winding (*Elec. Eng.*). A winding which links the flux produced by a current flowing in another winding (the *primary winding*, q.v.).

secondary wood (or xylem) (*Bot.*). Wood formed by the activity of a cambium.

secrecy (or privacy) system (*Teleph.*). Modification of speech-frequencies within the speech-band, so that during transmission from a radio transmitter to a receiver the signal is unintelligible and cannot be tapped. The interchange of frequencies at the transmitter is restored at the receiver. See **scrambler, inverter.**

secret dovetail (*Join.*). An angle joint between two members in which neither shows end grain, the visible external parts being mitred, while the dovetails are kept back from both faces. Also called a DOVETAIL MITRE, MITRE DOVETAIL.

secret nailing (*Carp.*). The operation of uniting two pieces with nails driven in in such a manner that the nail holes are not visible from the outside.

secret switch (*Elec. Eng.*). See **locked cover switch.**

secre'tin (*Zool.*). In Vertebrates, a hormone produced by certain cells forming part of the lining of the intestine when stimulated by hydrochloric acid from the stomach; it passes into the bloodstream and stimulates the pancreas to secretion and apparently also causes a flow of bile into the intestine.

secre'tion (*Physiol.*). A substance elaborated, collected, and discharged by a gland or gland-cell: the process of elaboration of such a substance.

secre'tory (*Zool.*). Secretion-forming.

secretory cell (*Bot.*). A cell in which oils, resins, nectary, etc. are formed; the secretions may be retained in the cell or may exude from it.

secretory duct (or passage) (*Bot.*). An elongated intercellular space in which secretions accumulate.

secretory tissue (*Bot.*). A group of secretory cells.

section (*Bot.*). A division of a genus consisting of a number of closely related species.—(*Micros.*) A thin slice of plant material, sufficiently transparent to be capable of investigation with the compound microscope.

section (*Elec. Comm.*). The elementary part of a complete wave-filter which passes the requisite band of frequency but does not necessarily contribute to all the attenuation features of the filter, which are generally obtained by combining several sections of different types.

section (*Surv.*). The representation to scale of the variations in level of the ground surface along any particular line.

section (*Typog.*). (1) A reference mark (§) directing the reader's attention to a footnote.—(2) A folded sheet of a book. Also called SIGNATURE.

section gap (*Elec. Eng.*). An arrangement for dividing the overhead contact wire of an electric traction system into sections, both electrically and mechanically, without interfering with the smooth passage of the current-collector; usually done by overlapping the ends of the adjacent sections of contact wire in a horizontal plane. Also called AIR GAP, OVERLAP SPAN.

section insulator (*Elec. Eng.*). An insulator forming the joint between two sections of an overhead trolley wire.

section marks (*For.*). Marks denoting places of origin.

section mould (*Carp., etc.*). A templet whose profile corresponds to the shape of the section of a required member. This shape is marked on the ends of a timber and used as a reference in making the member.

section pillar (*Elec. Eng.*). A cable box, in the form of a cast-iron pillar or small kiosk, in which different sections of feeder cables are joined together by removable links.

section switch (*Elec. Eng.*). A switch whose function is to connect or disconnect two sections of an electric circuit, generally two bus-bar sections.

section warping (*Weaving*). The making of a warp in sections. From these sections, when placed side by side, a sheet of warp yarn of full width may be wound on to the loom beam.

sectional pontoon dock (*Civ. Eng.*). A form of *self-docking dock* (q.v.) built up of a number of separate pontoons lying transversely to the length of the dock and carrying its two side walls, which are sufficiently far apart to permit any one of the pontoons to be unbolted and supported by the dock. Also called RENNIE DOCK.

sector (*Geom.*). A plane figure enclosed by two radii of a circle (or of an ellipse) and the arc cut off by them.

sector-pattern instruments (*Elec. Eng.*). Switchboard instruments contained in cases having a sector-shape instead of the usual circular shape; used to save space on the switchboard.

sector regulator (*Civ. Eng.*). A form of drum weir. It consists of a hollow reinforced concrete sector of a cylinder placed transversely across the direction of flow and capable of rotation about a horizontal axis on the downstream side, with accommodation for the sector in a special pit in the bed of the stream.

secto'rial (*Zool.*). Adapted for cutting.

sectorial chimaera (*Bot.*). A chimaera in which the plant consists of two or more distinct types of tissue, arranged in sectors which come to the surface.

sectroid (*Arch.*). The curved surface between adjacent groins on a vault surface.

sectrom'eter (*Chem.*). A potentiometer for electrometric titrations in which the microammeter is replaced by a cathode ray tube.

secular acceleration (*Astron.*). The name applied to a non-periodic but cumulative term in the mathematical expression of the moon's motion, by which the moon is in advance of her theoretical position by about 11″ every century.

secular changes (*Geol., etc.*). Changes which are extremely slow and take many centuries to accomplish; they may apply to climate or levels of land and sea.

secular parallax (*Astron.*). An effect, so slow as to be undetectable, by which, owing to the motion of the solar system as a whole through space, the apparent places of the stars (and hence the shape of the constellations) will in the course of 1 million years entirely change.

sec'und (*Bot.*). Having the lateral members all turned to one side.

secun'dine (*Bot.*). The inner integument when two are present.

Sedenta'ria (*Zool.*). See **Rhizota.**

sedentary (*Zool.*). Said of animals which remain attached to a substratum.

sediment-transporters (*Ocean.*). Aquatic animals which stir up bottom deposits and mix up organic and mineral constituents.

sedimentary rocks (*Geol.*). All those rocks which result from the wastage of pre-existing rocks. They include the fragmental rocks deposited as sheets of sediment on the floors of seas, lakes, and rivers and on land; also deposits formed of the hard parts of organisms, and salts deposited from solution, in some cases with the aid of lowly organisms. Igneous and metamorphic rocks are excluded.

sedimentation (*Chem.*). The settling of solid particles from a liquid, as a result of either gravity or centrifuging.—(*Geol.*) See **deposition.**

sedimentation tank (*Sewage*). A tank into which sewage from the detritus pit is passed so that suspended matters may sink to the bottom, from which they can be removed.

sedimentation test (*Med.*). The measurement of the rate of sinking of red blood cells in drawn blood placed in a tube; the rate is increased in disease and in pregnancy.

se'dohep'tose (*Chem.*). A heptose obtained from the leaves and stems of *Sedum spectabile.*

seed (*Bot.*). A multicellular structure containing the embryo of a higher plant, together with stored food, the whole protected by a testa.

seed coat (*Bot.*). See **testa.**

seed crystal (*Chem.*). A crystal introduced into a supersaturated solution or a supercooled liquid in order to initiate crystallisation.

seed leaf, seed lobe (*Bot.*). A cotyledon in a flowering plant.

seed stalk (*Bot.*). See **funicle.**

seed vessel (*Bot.*). A dry fruit.

seedling (*Bot.*). The young plant from a germinated seed.

seedy (*Textiles*). Said of wools containing grass seeds likely to be difficult to remove.

seedy toe (*Vet.*). A chronic infection of the sensitive laminae of the horse's toe.

seersucker (*Textiles*). A light-weight dress fabric, generally with a check pattern, made in India.

Seessel's pocket, zā-sel (*Zool.*). A pit of unknown significance occurring just behind Rathke's pocket on the dorsal side of the oral cavity in developing Vertebrates.

Seewer governor (*Elec. Eng.*). A hydraulic turbine governor for controlling the speed of high-pressure Pelton wheels; a needle valve varies the divergence of the conical pressure jet issuing from the nozzle.

Seger cones, zā'ger. Small cones of clay and oxide mixtures, calibrated within defined temperature ranges at which the cones soften and bend over. Used in furnaces to indicate, within fairly close limits, the temperature reached at the position where the cones are placed. Also FUSION CONES.

seggar (*Pot.*). A *sagger* (q.v.).

segment (*Bot.*). (1) A multinucleate portion of a hypha or filament, delimited by transverse walls. —(2) A daughter cell cut off by the division of a single apical cell.—(3) A portion of the lamina of a leaf when deeply lobed but not divided into true leaflets.

segment (*Elec. Eng.*). One of many elements, insulated from one another, which collectively form a commutator.

segment (*Geom.*). A plane figure enclosed by the chord of a circle (or of an ellipse) and the arc cut off by it. The segment of a sphere or of an ellipsoid is the portion cut off by a plane.

segment (*Zool.*). One of the joints of an articulate appendage: one of the divisions of the body in a metameric animal: a cell or group of cells produced by cleavage of an ovum.—*adj.* **segment'al.**

segment'al (*Zool.*). In metameric animals, repeated in each somite; as *segmental arteries, segmental papillae.*

segmental apparatus (*Zool.*). The brain-stem of Vertebrates, i.e. that part of the brain which shows the same type of organisation as the spinal cord. Cf. *suprasegmental structures.*

segmental arch (*Civ. Eng.*). An arch having the shape of a circular arc struck from a point below the springings.

segmental core disc (*Elec. Eng.*). An armature core disc made up in segments; used when a disc in a single piece would be so large as to be unwieldy.

segmental duct (*Zool.*). The archinephric or pronephric duct of Vertebrates.

segmental Gothic arch (*Arch.*). An arch whose outline is formed by two segments of circles meeting obtusely.

segmental interchange (*Cyt.*). The exchange of portions between two chromosomes which are not homologous.

segmental organ (*Zool.*). An embryonic excretory organ of a metameric animal.

segmentation (*Zool.*). Meristic repetition of organs or of parts of the body: the early karyokinetic divisions of a fertilised ovum, leading to the formation of a blastula or analogous stage.

segmentation cavity (*Zool.*). See **blastocoele.**

segmentation nucleus (*Zool.*). The nucleus of a fertilised ovum formed by the union of the male pronucleus with the female pronucleus.

segregation (*Gen.*). (1) The process by which a pair of allelomorphic characters become separated out in the pure dominants and the pure recessives of the second and subsequent generations.—(2) The separation of hereditary factors from one another during spore formation.

segregation (*Met.*). Non-uniform distribution of impurities, inclusions, and alloying constituents in metals. Arises from the process of freezing, and usually persists throughout subsequent heating and working operations.

See **inverse—** **normal—**

seiche, sāsh. An apparent tide in a lake (originally observed on Lake Geneva) due to the pendulous motion of the water when excited by wind.

Seidlitz powder, sed'lits (*Chem.*). Effervescent powder. A mixture of sodium bicarbonate with tartaric acid, acid sodium tartrate, or some similar acid or salt.

Seignette salt, sen-yet' (*Chem.*). *Rochelle salt* (q.v.).

seine-net, sān *or* sēn (*Ocean.*). A long shallow net with a buoyed head-rope and a weighted bottom rope; used to surround a certain area of water or ground so that anything within that area may be captured; it may be worked from the shore or from a boat.

seis'mograph. An instrument by means of which earthquake shocks and concussions are registered. (Greek *seismos*, earthquake.)

seismology. The study of earthquake phenomena.

seis'monasty (*Bot.*). Movement by a plant in response to a stimulus provided by mechanical shock.

Seison'ida (*Zool.*). An order of marine *Rotifera* of parasitic habit, having a reduced trochal disc, a long narrow body, and an elongate foot with a perforated disc at the end.

seistan, sēs'tahn (*Meteor.*). The 120-day summer north wind in E. Persia.

seizure or **seizing-up** (*Eng.*). The locking or partial welding together of sliding metallic surfaces normally lubricated, as of a journal and bearing; due to failure of lubrication or insufficient clearance leading to excessive friction.

Sela'chii (*Zool.*). A class of aquatic *Craniata* breathing by gills, having a biting mouth with well-developed jaws, paired fins, and a cartilaginous skeleton; a gill-cover if present is membranous. Sharks, Rays, Skate, Chimaeras.

Selbor'nian (*Geol.*). The stage of rocks in the Cretaceous System which includes the Gault and Upper Greensand of Southern England; approximately equivalent to the Albian Stage of the Cretaceous.

selec'tance (*Radio*). A term sometimes used to express selectivity, especially numerically.

selected areas (*Astron.*). Two hundred and six areas distributed nearly uniformly over the whole sky, and forty-six special areas mostly near the Galaxy, to which intensive research under international co-operation is being applied to extend and complete the statistical work on stellar motions done by Kapteyn.

selection fauna (*Zool.*). Immigrants from one type of habitat which succeed in surviving in a different type of habitat, e.g. forms typical of running freshwaters surviving in stagnant waters.

selective absorption (*Bot.*). The power sometimes said to be possessed by a plant of taking in some substances and rejecting others.

selective absorption (*Light*). Absorption of light, limited to certain definite wavelengths, which produces so-called absorption lines or bands in the spectrum of an incandescent source, seen through the absorbing medium. See **Kirchhoff's law, Fraunhofer lines.**

selective emission (*Elec. Eng.*). The property of an incandescent body whereby it emits radiation, predominantly of one frequency.

selective fading (*Radio*). A phenomenon which is liable to occur in the transmission of short waves over long distances, when different frequency components, although close together in the frequency spectrum, are unequally attenuated, in a manner varying rapidly with time. The resulting distortion cannot be corrected by equalising networks.

selective fertilisation (*Bot.*). Union occurring between some types of gametes but not by all types produced by a species.

selective freezing (*Met.*). A process involved in the solidification of alloys, as a result of which the crystals formed differ in composition from the melt. Thus, in alloys in a eutectic system (except the eutectic alloy), crystals of one metal are formed from a melt containing two, and this continues until the melt reaches the eutectic point.

selective mating (*Zool.*). See **preferential mating.**

selective protection (*Elec. Eng.*). A term applied to methods of protecting power transmission networks in which an automatic disconnexion of the faulty section occurs without disturbance of the remainder of the network.

selective resonance (*Elec. Eng.*). Resonance with a harmonic, instead of the fundamental.—(*Radio*) Resonance which occurs at one or more discrete frequencies, instead of extending over a band of frequencies as in some forms of filter.

selectivity (*Radio*). The ability of a circuit or complete receiver to discriminate between the transmissions of differing frequencies.

selector (*Auto. Teleph.*). The unit device in automatic telephone switching, operated either by the dialled impulses originated by the subscriber, or by self-generated or machine-generated impulses arising in the exchange. See **hunting selector, finding selector, uniselector,**

trunk-offering final—

selector forks (*Automobiles*). In a gear-box, forked members whose prongs engage with grooves cut in the bosses of the gears, which they move along a splined shaft for changing gear. They are secured to a sliding rod operated by the gear-lever.

selector plug (*Auto. Teleph.*). A plug for making connexion to a selector, so that the latter can be taken out of service temporarily for testing, without removal from its shelf.

selector shelf (or **panel**) (*Auto. Teleph.*). A group of selector switches so arranged in a row that their bank wiring is taken out to one terminal strip.

selector switch (*Elec. Eng.*). A switch which prepares the closing of a circuit on any one of two alternative paths by means of a main switch or circuit-breaker.

sel'enite (*Geol.*). The name given to the colourless and transparent variety of *gypsum* (q.v.) which occurs as distinct monoclinic crystals, especially in clay rocks.

selenit'ic cement (or **lime**) (*Build.*). A mixture of a feebly hydraulic lime with approximately 5% of plaster of Paris ground together to suppress the slaking action of the lime ; used for plastering or rendering.

sele'nium (*Chem.*). Symbol, Se. A non-metallic element, in the sixth group of the periodic system. At. no. 34 ; at. wt. 78·96 ; valencies 2, 4, 6. A number of allotropic forms are known. *Red selenium* is monoclinic ; m.p. 180° C. ; sp. gr. 4·45. *Grey* (*metallic*) *selenium*, formed when the other varieties are heated at 200° C., is a conductor of electricity when illuminated ; m.p. 220° C. ; b.p. 688° C. ; sp. gr. 4·80 ; specific electrical resistivity 12 microhms per cm. cub. Selenium is widely distributed in small quantities, usually as selenides of heavy metals. It is obtained from the flue dusts of processes in which sulphide ores are used, and from the anode slimes in copper refining. It is used as a decoloriser for glass, in red glasses and enamels, and in photo-electric cells and rectifiers. Selenium is similar to sulphur in chemical properties, but resembles tellurium more closely still.

selenium cell. A photo-electric cell dependent for its action on the influence of light on the conductivity of selenium.

selenium glass (*Photog.*). A red-orange glass filter used in colour cinematography.

selenium halides (*Chem.*). Selenium has a greater affinity for the halogens than sulphur. Selenium fluoride, SeF_6, is the only hexahalide. Tetrahalides are known. No compounds with iodine.

sele'nodont (*Zool.*). Having cheek teeth with crescentic longitudinal ridges on the grinding surface.

selenog'raphy (*Astron.*). The description and delineation of the moon's surface; the science that treats of the moon in the way in which geography treats of the earth. (Greek *selênê*, moon.)

sele'nophone (*Acous.*). A system of photographically recording sound on paper, the track being reproduced by scanning with a focused slit, the modulated reflected light being received into a photo-electric cell.

self-actor mule (*Spinning*). An automatic spinning machine, used for making cotton or woollen yarns and dry-spun worsted yarns.

self-aligning ball-bearing (*Eng.*). A *ball-bearing* (q.v.) in which the two rows of balls roll between an inner race and a spherical surface in the outer race, thus allowing considerable shaft deviation from the normal.

self-annealing (*Met.*). A term applied to metals such as lead, tin, and zinc, which recrystallise at air temperature and in which little strain-hardening is produced by cold-working.

self-baking electrode (*Elec. Eng.*). An arc-furnace electrode in the form of a hollow tube, into which a paste-like electrode material is continuously fed as it becomes hard-baked and burns away in the furnace.

self-balance protection (*Elec. Eng.*). A method of protecting transformers and a.c. generators from internal faults, based on the fact that the instantaneous sum of the phase currents in a symmetrical three-phase system is always zero.

self-centring (or **universal**) **chuck** (*Eng.*). A lathe-chuck for cylindrical work in which the jaws are always maintained concentric by a scroll, or by radial screws driven by a ring gear operated by a key. See **scroll chuck.**

self-centring lathing (*Build.*). Expanded metal specially manufactured with raised ribs, greatly stiffening the sheet and enabling it to be used for lathing purposes with the minimum of framing. Also called STIFFENED EXPANDED METAL.

self-cleansing (*San. Eng.*). A term applied to a velocity of flow of sewage material sufficient to prevent deposition of solid matters.

self-coloured. Entirely of the same tint.

self-compatible (*Bot.*). Said of a plant forming reproductive organs which will function together ; self-fertile.

self-docking dock (*Civ. Eng.*). A floating dock built up in sections, so that any section can be unbolted and lifted up on to the remainder for repair or maintenance purposes.

self-excitation (*Elec. Eng.*). A form of machine excitation in which the supply to the field system is obtained either from the machine itself or from an auxiliary machine coupled to it.

self-excited oscillator (*Radio*). The normal form of oscillator, in which the excitation of the grid circuit is derived from the alternating current flowing in the anode circuit.

self-faced (*Masonry*). A term applied to stone, e.g. flagstone, which splits along natural cleavage planes, leaving faces which do not have to be dressed.

self-fertilisation (*Zool.*). In a hermaphrodite animal, impregnation of the female elements of an individual by its own male elements. Cf. *cross-fertilisation.*

self-hardening steel (*Met.*). Steel which hardens on cooling in air, i.e. does not require to be quenched in oil or water. The effect is produced by adding alloying elements which lower and retard the normal transformation from austenite to pearlite.

self-heterodyne (*Radio*). See **auto-heterodyne.**

self-incompatible (*Bot.*). Said of a plant producing reproductive organs which will not function together ; self-sterile.

self-induced e.m.f. (*Elec. Eng.*). The e.m.f. induced in an electric circuit as a result of a change in the current flowing in it.

self-inductance (*Elec. Eng.*). The property of a circuit whereby self-induction occurs. It is measured by the rate of change of linkages in a circuit accompanying a rate of change of current in that circuit of one unit per second. Also called INDUCTANCE, COEFFICIENT OF SELF-INDUCTION.

self-induction (*Elec. Eng.*). The property of an electric circuit by which it resists any change in the current flowing in the circuit.

self-oscillation (*Radio*). The generation of continuous oscillations by a regenerative receiver when the degree of reaction is increased beyond a certain limit.

self-pollination (*Bot.*). The transfer of pollen from the anthers to the stigmas of the same flower, or to the stigmas of another flower on the same plant, or to those of a flower on another plant of the same clone.

self-reading staff (*Surv.*). A type of levelling staff on which the graduations are such that the observer at the level may read the value at which his line of sight intersects the staff.

self-restoring coherer (*Radio*). A coherer in which the cohering contact reverts automatically to its original condition after the finish of a signal, without the aid of a decoherer; e.g. a mercury-carbon contact.

self-sealing condenser (*Elec. Comm.*). See **Mansbridge condenser.**

self-starter (*Automobiles*). A small electric motor, fed from the lighting battery, used for starting an automobile engine.

self-starting rotary convertor (*Elec. Eng.*). A synchronous convertor designed to start up from the a.c. supply as an induction motor, thus requiring no separate starting motor.

self-sterility (*Bot., Zool.*). In a hermaphrodite animal or plant, the condition in which self-fertilisation is impossible or ineffective.

self-synchronising (*Elec. Eng.*). A term applied to a synchronous machine that can be switched on to the a.c. supply without being in exact synchronism with it.

self-toning paper (*Photog.*). Printing-out paper having inherent toning qualities which render separate toning unnecessary for normal purposes.

self-winding watch (*Horol.*). A watch that winds itself whilst being worn; the winding may also be performed by the opening or shutting of the case.

selfing (*Bot.*). Pollination of a stigma from the anthers of the same flower or plant.

sella turcica (*Zool.*). In Vertebrates, a pocket in the floor of the chondrocranium in which the pituitary body comes to lie: in some *Crustacea*, part of the endoskeleton of certain posterior somites.

Sellers (or **U.S.S.**) **screw-thread** (*Eng.*). The United States standard thread, having a profile angle of 60°, and a flat crest formed by cutting off ⅛ of the thread height.

Sellmeier's dispersion formula, zel′mi-er (*Light*).

$$\mu^2 = 1 + C_1 \cdot \frac{\lambda^2}{\lambda^2 - \lambda_1^2} + C_2 \frac{\lambda^2}{\lambda^2 - \lambda_2^2} + \ldots$$

An expression giving the refractive index μ of a medium for light wavelength λ; λ_1, λ_2, etc. being the wavelengths of absorption bands in the medium, C_1 and C_2 being constants for a given medium. See **anomalous dispersion.**

Selma Chalk (*Geol.*). An argillaceous sandy limestone some 900 ft. thick, of Upper Senonian age, rich in foraminifera and lamellibranchs (*Exogyra*, as well as the aberrant form *Rudistes*), occurring in the coastal region of the southern U.S.A.

Selsyn motor (*Elec. Eng.*). A small self-synchronising motor (used for transmitting signals) which indicates the position of a switch or reproduces instrument indications at a distance.

sel′vedge (*Textiles*). The distinctive edge of a piece of cloth, generally ½ in. in width on both sides, but usually wider in expensive materials; it improves the appearance of the cloth and sometimes bears a woven trade-mark or name. Also called LISTING, LISTS.

semat′ic (*Zool.*). Warning; signalling; serving for warning or recognition, as *sematic colours*.

semeiol′ogy, sem-i— (*Med.*). The branch of medical science which is concerned with the symptoms of disease. (Greek *sēmeion*, sign.)

semeiot′ic (*Med.*). Pertaining to, or relating to, the symptoms and signs of disease.

se′men (*Zool.*). The fluid formed by the male reproductive organs in which the spermatozoa are suspended.—*adj.* **sem′inal.**

semi- (Latin *semi*, half). A prefix used in the construction of compound terms; e.g. *semitendinous*, half tendinous. In Botany, the prefix also signifies somewhat, more or less.

semi-amplex′icaul (*Bot.*). Said of a leaf base which half clasps the stem.

semi-apogamy (*Bot.*). A union of cells for reproductive purposes, when the cells are not of opposite sexes but when one at least of them is more or less gametic in nature.

semi-automatic (*Elec. Eng.*). Said of an electric control in which the initiation of an operating sequence is manually performed and the sequence of operations proceeds automatically.

semi-automatic exchange (*Teleph.*). An exchange in which the operators set up the desired connexions by means of remotely controlled switches.

semi-automatic tandem working (*Teleph.*). The system which employs a semi-automatic intermediate switching exchange to route calls from a manual exchange either to a manual or an automatic exchange.

semi-automatic telephone system (*Teleph.*). A telephone system in which the operators are assisted in setting up connexions for calls by remotely controlled switches.

semi-beam (*Struct.*). See **cantilever.**

semi-bungalow (*Build.*). A house with walls of only one-storey height, but with a room (or rooms) constructed in the roof space.

semicar′bazide (*Chem.*). $H_2N{\cdot}CO{\cdot}NH\,NH_2$, a base forming salts, e.g. hydrochloride. M.p. 96° C.; may be prepared from potassium cyanate and hydrazine hydrate. It reacts with aldehydes and ketones, forming *semicarbazones* (q.v.).

semicar′bazones (*Chem.*). The reaction products of aldehydes or ketones with semicarbazide. The two amino hydrogen atoms of the semicarbazide react with the carbonyl oxygen of the aldehydes or ketones, forming water, and the two molecular groups then combine to form the semicarbazone.

semi-cell (*Bot.*). One of the two halves of a cell of a desmid.

semicircular arch (*Civ. Eng.*). An arch describing half a circle.

semicircular canals (*Zool.*). In *Craniata*, the canals of the internal ear associated with the equilibristic function.

semicircular deviation (*Ships*). That component of the effect on a ship's compass of the permanent magnetism in the hull which becomes a maximum twice when the ship is rotated through 360°.

semi-closed slot (*Elec. Eng.*). A slot whose width narrows sharply at the top, necessitating the insertion of the conductors from the ends of the slot.

semi-coke (*Fuels*). See **coalite.**

semi-conductor (*Elec. Eng.*). A material having a resistivity which is high, but not high enough for it to be classed as an insulator.

semicyclic bonds (*Chem.*). The double linkage between a carbon atom in a ring and a carbon of a side chain. Such bonds occur frequently in terpene derivatives; they are stable under the influence of heat, but acids effect a migration of the double linkage.

semi-diameter (*Astron.*). Half the angular diameter of a celestial body; the measure always used in expressing the apparent size of bodies with discs, such as the sun and the moon.

semi-elliptic spring (*Automobiles*). A *carriage spring* (q.v.), so called because when a pair is used, one inverted and attached by its ends to the other, the arrangement resembles an ellipse.

semi-enclosed (*Elec. Eng.*). Said of electric motors in which ventilation is provided but access to live parts can only be obtained by opening the case.

semi-girder (*Struct.*). See **cantilever.**

semi-heterotypic division (*Cyt.*). The failure of completion of the first division in meiosis.

semi-immersed liquid-quenched fuse (*Elec. Eng.*). A liquid-quenched fuse in which the fuse link is above the liquid before operation but drawn down into it during or after fusion.

semi-indirect fitting (*Elec.Eng.*). A lighting fitting used for a semi-indirect lighting scheme; more than 60% and less than 90% of the light flux is emitted in the upper hemisphere.

semi-indirect lighting (*Illum.*). A method of illumination by means of translucent bowls surrounding lamps that have no reflectors.

semilu′nar, semilu′nate (*Bot., Zool.*). Crescent-shaped, or in the form of a half moon, as the Gasserian ganglion of Vertebrates.

semimetamorpho′sis (*Zool.*). In Insects, partial or direct metamorphosis in which a pupal stage is wanting and the immature stage is a nymph.

sem′inal receptacle (*Zool.*). See **vesicula seminalis.**

semi-natural vegetation (*Bot.*). Vegetation which is influenced in its occurrence and persistence by human agency, though not planted by man.

seminif′erous (*Bot.*). Seed-bearing.—(*Zool.*) Semen-producing or semen-carrying.

semino′ma (*Med.*). A malignant tumour of the testis arising from the germinal cells.

semiovip′arous (*Zool.*). Giving birth to imperfectly developed young, as marsupial Mammals.

semipal′mate (*Zool.*). Having the toes partially webbed.

semi-permeable membrane (*Chem.*). A membrane which permits the passage of solvent but is impermeable to dissolved substances.

semiplacen′ta (*Zool.*). A non-deciduate placenta in which only the foetal part is thrown off at birth. Cf. *placenta vera.*

semi-polar bond (*Chem.*). A bond in which a pair of electrons supplied by one atom is shared between it and another; both atoms thus become electrically charged and together constitute a dipole.

semi-porcelain (*Pot.*). A superior kind of earthenware, with hard, non-absorbent body.

semisteel (*Met.*). A term once commonly applied to castings made by mixing pig-iron and steel scrap; now rarely used. Admixture with steel scrap is now regarded as one of the methods of obtaining high-duty irons.

semistreptosty′lic (*Zool.*). Having a slightly movable articulation between the quadrate and the squamosal. Cf. ***streptostylic, monimostyly.***

semi-terete (*Bot.*). Half-cylindric.

semi-transparent mirror (*Photog.*). A mirror which partially reflects and partially transmits light-rays without appreciable diffusion.

semi-valence (*Chem.*). A singlet linkage.

semi-water gas (*Chem.*). A mixture of carbon monoxide, carbon dioxide, hydrogen, and nitrogen obtained by passing a mixture of air and steam continuously through incandescent coke. Its calorific value is low, about 125 B.Th.U. per cu. ft.

Semper's rib (*Zool.*). In *Lepidoptera*, a degenerate trachea accompanying the ordinary trachea within the cavity of some of the wing-nervures.

sempervi′rent (*Bot.*). Evergreen.

senarmon′tite (*Min.*). The trioxide of antimony, crystallising in the cubic system.

sender (*Elec. Comm.*). A radio transmitting station for broadcasting.—(*Auto. Teleph.*) The same as *keysender.*

sending end (*Elec. Eng.*). The end of a transmission line from which electrical energy is sent out.

Sen′ecan Stage (*Geol.*). The lower division of the Upper Devonian of N. America; it includes the Portage, Ithaca, and Oneonta Groups.

Senegal gum (*Chem.*). See **gum arabic.**

senes′cent (*Biol.*). Said of that period in the life-history of an individual when its powers are declining prior to death.

senil′ity (*Biol.*). Condition of vital exhaustion or degeneration due to racial or individual old age.

Senni Beds (*Geol.*). A series of sage-green and dull-red micaceous sandstones containing the remains of fossil fishes. They occur between the typical Dittonian Red Marls and the overlying Brownstones in the Old Red Sandstone of the westerly parts of South Wales.

Seno′nian (*Geol.*). The name given to the highest of the three stages into which the British Chalk is divided; equivalent to Upper Chalk of Britain, but succeeded by the Danian stage in Denmark.

sensation (*Psychol.*). An awareness in consciousness of a physical experience.

sensation area (*Acous.*). See **auditory sensation area.**

sensation curves (*Photog.*). Curves which give the relative response of the eye to different colours having the same intensity.

sensation level (*Acous.*). The difference in level of a single-frequency sound, as applied to the ear, from the level which is just audible at the same frequency. The number of decibels a single frequency note has to be attenuated before it becomes just inaudible.

sensation unit (*Acous.*). The former name of the *decibel*; so called because it was erroneously thought that the subjective loudness scale of the ear is approximately logarithmic.

sense (*Radio*). The relative progression along a line, e.g. up or down, left or right, the line not in itself giving this information, which is indicated by an arrow. In radio direction-finding, in which the direction of arrival of a radio-wave is ascertained by directive antennae, the sense of the direction as determined by a simple loop, frame, or Adcock antenna is indeterminate, but it is readily determined by injecting an additional electromotive force depending on the arriving wave and derived from a simple elevated aerial.

sense dome (*Zool.*). In Insects, a campaniform sensilla.

sense-hillocks (*Zool.*). See **neuromasts.**

sense organ (*Bot., Zool.*). A structure specially adapted for the reception of stimuli.

sensibility (*Bot.*). The condition of a plant of being liable to parasitic attack.

sensible horizon (*Surv.*). See **visible horizon.**

sensif′erous, sensig′erous (*Zool.*). Sensitive.

sensil′la (*Zool.*). A small sensory structure.

sensitisa′tion (*Chem.*). The process by which a sol of a lyophilic colloid becomes lyophobic in character, with the result that it may readily be coagulated by electrolytes.

sensitiser (*Chem.*). A substance, other than the catalyst, whose presence facilitates the start of a catalytic reaction.

sensitisers (*Photog.*). Chemicals, usually dyes, used to increase the sensitivity of photographic emulsions, generally or to specific colours. The subsequent exposure is with the dried plate or film, but may be wet.

sensitive (*Zool.*). Capable of receiving stimuli.

sensitive drill (*Eng.*). A small drilling machine in which the drill is fed into the work by a hand-lever attached directly to the drilling spindle, the operator being thus given sensitive control of the rate of drilling.

sensitive flame (*Phys.*). A gas flame which changes its height or shape when sound-waves fall on it. The simplest type, in which the gas, issuing from a fine orifice, burns with a tall narrow flame, is sensitive to very high-pitched sounds, which cause the flame to shorten and roar.

sensitivity (*Elec. Eng.*). The change in deflection of an instrument per unit torque applied.

sensitom′eter, colour (*Photog.*). See **Abney colour sensitometer.**

sensitomet'ric wedge (*Photog*). A wedge having graduated degrees of attenuation for neutral grey transmission; used for attenuating unknown brightnesses to a standard brightness.

sensitom'etry (*Photog.*). The measurement of the response of light-sensitive emulsions to incident light with suitable processing, involving the accurate measurement of density.

senso'rium (*Zool.*). The seat of sensation; the nervous system.—*adj.* **senso'rial.**

sensory (*Zool.*). Directly connected with the sensorium: pertaining to, or serving, the senses.

sentiment (*Psycho-an.*). A psychological constellation formed when instinctive emotions become attached to objects, ideas, persons, etc., in the environment; e.g. the sentiment of patriotism formed around ideas and feelings about a country or nation.

sentinel pile (*Med.*). An oedematous mass of rolled-up anal mucosa situated at the margin of the anus at the lower end of an anal fissure.

sepal (*Bot.*). One of the leaf-like members forming the calyx of a flower.

sep'aline (*Bot.*). Of the nature of a sepal.

sep'alody (*Bot*). An abnormal condition shown by the conversion of some other member of a flower into a sepal.

sep'aloid (*Bot.*). Resembling a sepal.

separable, separating (*Bot.*). Becoming detached in the normal course of events.

separate excitation (*Elec. Eng.*). A form of machine excitation in which the supply to the field system is obtained from a separate direct-current source.

separate-lead-type cable (*Cables*). See **S.L.-type cable.**

separate system (*Sewage*). A system of sewerage in which two sewers are provided in every street, one for the sewage proper, and the other for the rain water. Cf. *combined system.*

separating calorimeter (*Eng.*). A device for mechanically separating and measuring the water associated with very wet steam; used in conjunction with the *throttling calorimeter* (q.v.) in determining dryness fractions.

separating drum (*Eng.*). An auxiliary steam-collecting drum attached by tubes to the upper drum of some water-tube boilers to avoid priming or foaming.

separating weir (*Civ. Eng.*). See **leaping weir.**

separation (*Bot.*). The liberation of a reproductive body from the parent plant.

separation disc (*Bot.*). A biconcave disc of intercellular material, found here and there between the cells of a filament of a blue-green alga, and assisting in the break-up of the filament to form hormogones.

separation doors (*Mining*). Underground ventilating doors between the intake and the return air ways.

separation layer (*Bot.*). See **absciss layer.**

separation of losses (*Elec. Eng.*). The itemising of the individual losses from the combined losses obtained during the testing of an electrical machine.

separator (*Civ. Eng.*). A distance piece, usually of steel or cast-iron, bolted between the webs of parallel side-by-side steel joists to give rigidity and ensure unity of action.

separator (*Elec. Eng.*). A thin sheet of wood or perforated celluloid separating the plates of a secondary cell.

separator (*Mining*). A machine for separating valuable minerals from one another, e.g. magnetically. A *concentrator* separates valuable minerals from gangue or country rock.

separator circuit (*Television*). A circuit, generally employing saturated valves, for separating the line and frame synchronising signals from the picture signal and from each other.

separator valve (*Radio*). An amplifying valve interposed between an oscillator valve and the modulated stages, to prevent the changes of load conditions of the latter from affecting the frequency of the oscillator.

sepia print (*Cinema.*). A release print in which the image is dyed sepia instead of being left black.

se'piolite (*Min.*). See **meerschaum.**

sepsis (*Med.*). The invasion of bodily tissue by non-specific pathogenic bacteria.—*adj.* **septic.**

sept-, septi-, septo-. Prefixes used in the construction of compound terms.—(1) Latin *septum,* partition; e.g. *septonasal,* pertaining to the septum of the nose.—(2) Latin *septem,* seven; e.g. *septavalent* (q.v.).—(3) Greek *sēptos,* rotten; e.g. *septicaemia* (q.v.).

septal neck (*Zool.*). In some *Cephalopoda* having a chambered shell, a tubular extension of a septum supporting the siphuncle.

septa'ria, septa'rian nodules (*Geol.*). Concretionary nodules containing irregular cracks which have been filled with calcite or other minerals.

sep'tate (*Bot.*). (1) Divided into cells or compartments by walls (fungal spores and hyphae, algal filaments).—(2) Divided into two or more chambers by partitions (ovaries of flowering plants).

septate fibre (*Bot.*). A fibre of which the lumen is divided into several compartments by transverse septa.

septation (*Bot.*). The division of a plant member into separate parts by walls (usually transverse).

septava'lent (*Chem.*). See **heptavalent.**

sep'temfid (*Bot.*). Deeply divided into seven parts.

sep'tenate (*Bot.*). Having parts in sevens.

Septibran'chia (*Zool.*). An order of specialised marine *Pelecypoda* in which the gills have been transformed into a horizontal muscular septum, which surrounds and is continuous with the foot and cuts off an upper respiratory chamber from the mantle-cavity; this septum is pierced by paired orifices, and by its contraction pumps water through the respiratory chamber; the byssus gland is rudimentary or absent. Carnivorous or carrion-feeding forms living in deep water.

septic tank (*Sewage*). A tank in which sewage is left for about 24 hours, during which time a scum forms on the surface and the sewage below is to some extent purified by the action of the anaerobic bacteria functioning in the absence of oxygen.

septicae'mia, septice'mia (*Med.*). The invasion of the blood-stream by bacteria and their multiplication therein; associated with high fever, chills, and petechial haemorrhages into the skin.—*adj.* **septicae'mic.**

septicaemia, apoplect'iform (*Vet.*). See **spirochaetosis (avian).**

septicaemia, haemorrha'gic (*Vet.*). See **pasteurellosis.**

septici'dal (*Bot.*). Said of the manner of dehiscence of a fruit composed of several compartments when the split forms through the middle of the partitions.

septicopyae'mia, septicopye'mia (*Med.*). Combined septicaemia and pyaemia.

septifra'gal (*Bot.*). Said of the manner of dehiscence of a fruit when the outer walls of the carpels break away from the partitions.

septum (*Bot.*). (1) A transverse wall in a fungal hypha, an algal filament, or a spore.—(2) A wall between one cell and another.—(3) The partition between two neighbouring chambers of an ovary.—(*Zool.*) A partition separating two cavities.—*adj.* **septal.**

septum (*Photog.*). A dividing piece in a beam-splitting camera, to avoid interference between the two beams because of contiguity of the lenses.

septum transver'sum (*Zool.*). See **diaphragm.**

sequence (*Cinema.*). The unit of the scenario, involving one general idea or happening and a number of scenes, each of which may include a number of shots.

sequence (*Elec. Eng.*). The order in which the several phases of a polyphase alternating-current supply undergo their cyclic variation of e.m.f.

sequence switch (*Auto. Teleph.*). A rotary switch for making complicated circuit changes in a prescribed order.

sequential scanning (*Television*). Scanning in which the spot traverses each line in the same direction, returning rapidly from the end of one line to the beginning of the next. Cf. *oscillatory scanning*

sequestrec'tomy (*Surg.*). The surgical removal of a sequestrum.

seques'trum (*Med.*). A piece of bone dead as a result of infection and separated off from healthy bone.

se'ral community (*Bot.*). Any plant community which is not stabilised, but represents a stage in a succession.

sere (*Bot.*). A series of plant communities making up a succession.

serein, se-ran^{g}' (*Meteor.*). The rare phenomenon of rainfall out of an apparently clear sky.

serge (*Textiles*). Dress and suiting fabrics, generally of twill weave, made from crossbred types of wool spun on the worsted system; also made with worsted warp and woollen weft, and with cotton warp and worsted weft.

serial bud (*Bot.*). A supernumerary bud lying to the side of the axillary bud.

ser'iate (*Bot.*). Arranged in a row.

sericeous, ser-ish'us (*Bot.*). Having a silky sheen.

ser'icite (*Min.*). A white potash-mica, like muscovite in chemical composition and general characters but occurring as a secondary mineral, often as a decomposition product of orthoclase.

series (*Elec. Eng.*). A *series* connexion of two or more electric circuits is one in which the same current traverses all the circuits. They are said to be connected *in series.*

series arm (*Elec. Comm.*). That arm of a wave-filter which is in series with one leg of the transmission circuit.

series capacitor (*Elec. Eng.*). A capacitor connected in series with a transmission line or distribution circuit in order to compensate for the inductive reactance drop and thereby improve the regulation.

series characteristic (*Elec. Eng.*). The characteristic graph relating terminal voltage and load current in the case of a series-wound direct-current machine.

series-characteristic motor (*Elec. Eng.*). An electric motor having a speed torque characteristic similar to that of a d.c. series motor, i.e. one in which the speed falls with an increase of torque.

series field (*Elec. Eng.*). The main field winding of a motor when series connected.

series, Fourier (*Phys., etc.*). See **Fourier series.**

series-gap condenser (*Radio*). Two variable vane condensers, usually with air dielectric, with the moving vanes on the same rotating shaft; used in high-frequency circuits with the two capacitances in series, to obviate taking the current through a rubbing contact or through a pigtail, the latter being inductive.

series modulation (*Radio*). A form of anode modulation in which the modulator and the modulated amplifier valves are connected directly in series, to eliminate the necessity for a modulation transformer or choke coupling.

series motor (*Elec. Eng.*). An electric motor whose main excitation is derived from a series field winding.

series-parallel controller (*Elec. Eng.*). A method of controlling the speed and tractive effort of an electric tractor having one or more pairs of series motors, whereby the motors can be connected either in series or in parallel.

series-parallel winding (*Elec. Eng.*). The same as *multiplex winding*

series regulator (*Elec. Eng.*). A regulating resistance connected in the main circuit of an electric motor.

series, spectral (*Light*). See **spectral series.**

series system (*Elec. Eng.*) The constant current system of d.c. distribution developed by Thury, in which generators and motors are all connected in series to form a single d.c. circuit. Also called THURY SYSTEM.

series transformer (*Elec. Eng.*). A power transformer operating under constant-current instead of constant-voltage conditions. See also **current transformer.**

series winding (*Elec. Eng.*). A field winding connected in series with the armature of the motor.

ser'if (*Typog.*). The short lines at right-angles to, or set across, the beginning and end of a type letter.

ser'ine (*Chem.*). $CH_2OH{\cdot}CH(NH_2)\,COOH$, α-amino-β-hydroxypropionic acid, obtained by the hydrolysis of various proteins.

sero-. Prefix indicating association with *serum* (q.v.).

sero-amniotic connexion (*Zool.*). In a developing embryo of a higher Vertebrate, the point of union between the serous membrane, or chorion, and the amnion.

ser'ophyte (*Med.*). Any micro-organism which will grow in the presence of fresh serum exuding into a wound, such as the streptococcus and the staphylococcus.

seropu'rulent (*Med.*). Said of a discharge or effusion which is both serous and purulent.

se'ropus (*Med.*). Serum mixed with pus.

sero'sa (*Zool.*). See **serous membrane.**

serosi'tis (*Med.*). Inflammation of a serous membrane.

serother'apy (*Med.*). The curative or preventive treatment of disease by the injection into the body of animal or human serums which contain antibodies to the bacteria or toxins causing the disease.

seroti'nal, seroti'nous (*Bot.*). Appearing late in the year.

serous (*Zool.*). Watery: pertaining to, producing, or containing a watery fluid or serum.

serous membrane or **serosa** (*Zool.*). One of the delicate membranes of connective tissue which line the internal cavities of the body in *Craniata*; the chorion.

ser'pentine (*Geol.*). The general name applied to basic and ultrabasic igneous rocks which, as a result of autometamorphism, have had their coloured silicates converted in large measure into serpentine. Such serpentines are usually dark green, streaked and blotched with red iron oxide, whitish talc, etc.

serpentine (*Min.*). A hydrated silicate of magnesium which crystallises in the monoclinic system, but as pseudomorphs only. It is always of secondary origin. The translucent varieties are used for ornamental purposes; those with a fibrous habit are called asbestos. See **asbestos, chrysotile.**

serpentine-jade (*Min.*). A variety of the mineral serpentine, resembling bowenite, occurring in China; used as an ornamental stone.

serpentinisa'tion (*Geol.*). A type of autometamorphism effected by magmatic water, which results in the replacement of the original mafic silicates by the mineral serpentine (bastite, chrysotile) and secondary fibrous amphibole (tremolite, actinolite).

Serpollet boiler, ser-pol'ā (*Eng.*). A *flash boiler* (q.v.) used in the early Serpollet steam cars.

Ser'pulite Grit (*Geol.*). A minor subdivision of the Eriboll Quartzite of Cambrian age in the North-West Highlands of Scotland, characterised by the occurrence of the organism *Serpulites*, by some geologists regarded as a very primitive nautiloid cephalopod, by others as merely a segmented worm.

serrate (*Bot.*). Said of a toothed margin when the teeth are sharp, like those of a saw, and pointing forwards.—(*Zool.*) Saw-like, notched; as *serrate antennae*.

serratu'late, ser'rulate (*Bot.*). Minutely serrate.

serra'tus magnus (*Zool.*). In higher Vertebrates, a muscle connecting the scapula with the anterior ribs.

ser'ricorn (*Zool.*). Having serrate antennae.

ser'rula (*Zool.*). A comb-like ridge on the chelicerae of *Chelonethi*.

Serto'li cells (*Zool.*). Enlarged lining epithelium cells of the seminiferous tubules of higher Vertebrates, associated with groups of developing spermatozoa.

se'rum (*Med., Zool.*). A watery secretion: the watery fluid which separates from blood in coagulation.—*adj.* **se'rous.**

serum albu'min (*Chem.*). An albumin obtained from blood and nutritive fluids. A crystalline, water-soluble substance, which is not precipitated by NaCl, but coagulates at 70°-75° C.

serum sickness (*Med.*). The reaction that sometimes occurs about eight days after the therapeutic injection of serum; characterised by slight temperature, urticaria, and pain in, and swelling of, joints.

Serval (*Build.*). Trade-name of a sarking felt made of asbestos fibre soaked with bitumen.

serval (*Furs*). The dressed skin of an African wildcat; the fur is yellow with black spots, and the tail ringed.

service area (*Radio*). That area surrounding a broadcast transmitter where the signal strength is sufficiently above the interference-level to be of entertainment value.

See **A—** **B—** **C—**

service call (*Teleph.*). A telephone call made by a linesman or operator during the testing of circuits, or for service messages.

service capacity (*Elec. Eng.*). The power output of an electric motor, as specified on the maker's nameplate.

service ceiling (*Aero.*). See **ceiling (service).**

service ell (*Plumb.*). An ell having a male thread at one end.

service, grade of (*Auto. Teleph.*). See **grade of service.**

service mains (*Elec. Eng.*). Cables of small conductor cross-section which lead the current from a distributor to the consumer's premises.

service pipe (*Civ. Eng.*). A branch pipe drawing supplies from a main. Also called **supply pipe.**

service reservoir (*Hyd. Eng.*). A small reservoir supplying a given district, and capable of storing the water which is filtered during the hours of small demand for use when the requirements become greater. Also called DISTRIBUTION RESERVOIR, CLEAR WATER RESERVOIR.

service tanks (*Aero.*). See under **fuel tanks.**

service tee (*Plumb.*). A tee having a female thread on the branch and one end of the run and a male thread on the other end of the run.

service value (*Elec. Eng.*). A term describing the overall efficiency of an electric fan; defined as the number of cubic feet of air moved per minute per watt of input.

serving (*Cables*). (1) A layer of jute, tape, or yarn, impregnated with bitumen or similar substance, to protect the lead sheath or wire-armouring.—(2) The process of covering a cable with some form of mechanically strong insulating and binding tape.

serving hatch (*Build.*). An opening, fitted with a door, in the wall between a kitchen and a dining-room, through which dishes, etc. for a meal may be passed to facilitate serving.

servo control (*Aero.*). An additional mechanism to reinforce or replace the pilot's effort in working the controls of an aeroplane. It may be actuated either by aerodynamic or mechanical relay forces, or by combinations of both.

servomotor (*Eng.*). A device for magnifying a relatively small effort, usually by hydraulic means; e.g. for providing a large force for operating a governor-controlled valve by a governor of small power. See **pilot valve.**—(*Elec. Eng.*) A mechanical relay of the hydraulic type, much used in electric control apparatus. Also called RELAY.

ses'amoid (*Bot.*). Granular.—(*Zool.*) A small rounded ossification forming part of a tendon, usually at, or near, a joint; as the patella.

sesqui- (*Chem.*). Containing two kinds of atom, radical, etc. in the proportions of 2 : 3.

sesquiter'penes (*Chem.*). A group of terpene derivatives of the empirical formula $C_{15}H_{24}$.

ses'sile (*Bot.*). (1) Having no stalk.—(2) Fixed and stationary.

sessile benthos (*Bot.*). Plants growing attached at the bottom of water.

session (*Acous.*). During the recording of gramophone records, or in broadcasting or rehearsals, a continuous period during which there may be a number of repetitions of performance.

seston (*Biol., Ocean.*). Very small plankton organisms which are retained only by the finest nets.

set (*Carp.*). See **nail punch.**

set (*Cinema.*). In a motion-picture studio, the construction specially designed and used as the background for the action of the artists. The walls of the set are generally large standardised flats, covered with hessian canvas; they may be mounted on ladders, for facilitating the movements of electricians, or they may be hung by ropes from the roof of the studio. The set may represent a simple interior, or a whole town built in the open on the lot.

set or **sett** (*Eng.*). See **cold sett.**

set (*Hyd. Eng.*). The direction of a current of water.

set (*Mining*). (1) A frame of timber used in a shaft or tunnel.—(2) A section of a leased mining area in Cornwall.

set (*Plast.*). See **setting coat.**

set (*Typog., etc.*). (1) The width of a type character.—(2) To *compose* (q.v.) type-matter.

set (*Weaving*). See **sett.**

set-hands dial (*Horol.*). A small dial on a turret clock movement the hands of which read the same as the main dial. Used in regulating the clock.

set-hands square (*Horol.*). The square for setting the hands of a key-wound watch.

set noise (*Radio*). Interfering noise which arises in the receiver itself, such as Johnson noise, shot noise, and mains hum.

set of chromosomes (*Cyt.*). A group of chromosomes consisting of one each of the various kinds of chromosomes contained in the nucleus of the gamete.

set-off (*Build.*). *Offset* (q.v.).

set-off (*Typog.*). The smudging of ink from one printed sheet to another, as a result of the ink not being dry. 'Set-off paper' is sometimes placed between the sheets to obviate this.

set-off blanket (*Print.*). In the lithographic offset process the design is transferred from the plate to the rubber *set-off blanket*, which in turn prints it upon the paper.

set, subscriber's (*Teleph.*). See **subset.**

set-up instrument, set-up-scale instrument, set-up-zero instrument (*Elec. Eng.*). See **suppressed-zero instrument.**

set-work (*Plast.*). Two-coat plasterwork on lath.

se'ta (*Bot.*). (1) A single elongated cell or row of cells, with scanty colourless contents, found in some algae.—(2) A long hollow outgrowth from the cell wall.—(3) A thick walled unicellular structure found among the asci in some *Ascomycetes*.—(4) The multicellular stalk which bears the capsule of mosses and liverworts.—(5) A slender, straight prickle.—(6) A bristle.—(*Zool.*) A small bristle-like structure; a chaeta.—*adjs.* **seta'ceous, setif'erous, setig'erous, set'iform, se'tose, set'ulose.**

setigerous sac, se-tij'— (*Zool.*). See **chaeta sac.**

se'ton (*Vet.*). A strip of linen or tape drawn through an incision in the skin, to serve as a counter-irritant or to promote drainage of an abscess.

se'tose (*Bot., Zool.*). Bristly.

sett (*Civ. Eng.*). A kind of *follower* (q.v.) used where a pile has been driven in beyond the immediate reach of the monkey.

sett (*Civ. Eng.*). A small rectangular block of stone 6 in. deep by 3-4 in. wide and from 6-9 in. long; sometimes used for surfacing roads where the traffic is heavy. The best setts are of either Scotch or Welsh granite, although sandstone and whinstone are frequently used.

sett or **set** (*Weaving*). The count or number of a reed, which determines the ends per inch in a fabric.

sett systems (*Textiles*). Systems for arranging, or for expressing, the fineness of cloths, i.e. the number of ends or threads per inch. Systems vary, but fundamentally they are all concerned with the number of ends per inch in a fabric. Better known as REED-COUNTING SYSTEMS.

setter (*Acous.*). On an organ console, a thumb piston under a manual, for setting up temporary stop combinations on the combination pistons.

setting (*Astron.*). See under **rising.**

setting (*Build.*). The name given to the hardening of a lime, cement, mortar, or concrete mixture, or a plaster.

setting (*Furs*). The process of brushing water, etc. on fur to make hairs lie in position.

setting and lustring (*Textiles*). Different processes of finishing by which woollen and worsted fabrics are set and their appearance enhanced. The processes, which may be applied at various stages of finishing, all involve the application of moisture and heat while the fabrics are under tension. See **crabbing, decatising, dry blowing, roll boiling.**

setting coat or **set** (*Plast.*). The finishing coat of plaster—a thin layer, about ⅛ in. thick, of fine stuff.

setting-out (*Leather*). A mechanical process for removing creases and marks from leather, which is stretched out in a wet condition.

setting point (*Chem.*). (1) The temperature at which an oil just ceases to flow when submitted to a pressure equal to a head of 5 cm. of water under defined conditions.—(2) The temperature at which a melted wax, when allowed to cool under definite specified conditions, first shows the minimum rate of temperature change.

setting-point test (*Lubricants*). A test made to ascertain the temperature at which an oil will cease to flow; used in order to determine suitability for use at low temperatures, e.g. in refrigerating machines.

setting rule (*Typog.*). A brass rule with a projecting nose-piece, used by the compositor to facilitate setting up type-matter in the composing stick. See **composing rule.**

setting stick (*Typog.*). A *composing stick* (q.v.).

settlement (*Build., Civ. Eng.*). The subsidence of a wall, structure, etc.

settling tank (*Sewage*). A sedimentation tank.

severy (*Arch.*). See **civery.**

sewage (*San. Eng.*). The drainage and excrementitious matter conveyed in sewers.

sewage farm (*San. Eng.*). A farm on which sewage (especially sewage conveyed from a town) is used as a manure. See **land treatment.**

sewage (or sludge) gas (*Fuels*). A self-generated combustible gas collected from the digesting tanks of sewage sludge. General composition: 66% CH_4 and 33% CO_2, with calorific values ranging from 650 to 750 B.T.U. per cu. ft. The gas has a very slow rate of flame propagation.

sewer (*San. Eng.*). A pipe or closed channel for the conveyance of sewage and surface waters from towns to a place of disposal.

sewing (*Bind.*). The operation of joining the gathered sections of a book by sewing.

sewround (*Shoes*). The term for a single-sole shoe in which the upper and the sole are sewn together by a horizontal seam while the shoe is turned inside out; used for slippers and dancing-shoes. Also called TURNSHOE.

sex- (Latin *sex*, six). A prefix used in the construction of compound terms; e.g. *sex-digitate*, having six digits.

sex (*Biol.*). The sum-total of the characteristics, structural and functional, which distinguish male and female organisms, especially with regard to the part played in reproduction: to determine the sex of a specimen.—*adj.* **sexual.**

sex cells (*Biol.*). See **gametes.**

sex chromosome (*Cyt.*). The chromosome which is responsible for the initial determination of sex. Cf. *autosome*.

sex determination (*Zool.*). The phenomena occurring prior to, and during, the development of an individual which lead to the establishment of its sex.

sex gland (*Zool.*). See **gonad.**

sex-intergrade (*Bot.*). A plant bearing staminate and pistillate flowers, but belonging to a species of which the members are normally dioecious.

sex-limited character (*Bot., Zool.*). A character developed only by individuals which belong to one sex.

sex-linked (*Gen.*). Said of hereditary characteristics borne by the sex chromosome.

sex mosaic (*Zool.*). An individual showing characteristics of both sexes; an intersex.

sex ratio (*Zool.*). The ratio of males to females.

sex reversal (*Zool.*). The gradual change of the sexual characters of an individual, during its lifetime, from male to female or vice versa; as in Crabs parasitised by *Sacculina*.

sex transformation (*Zool.*). See **sex reversal.**

sexan'gular (*Bot.*). Having six angles.

sexfa'rious (*Bot.*). In six rows.

sexiva'lent (*Chem.*). See **hexavalent.**

sexpar'tite (*Bot.*). Divided deeply into six lobes or segments.

sextant (*Surv., etc.*). A reflecting instrument in the form of a quadrant, for measuring angles up to about 120°. It consists essentially of two mirrors: a fixed *horizon glass*, half silvered and half plain glass, and a movable *index glass*, to which is attached an arm moving over a scale graduated to read degrees directly. The index glass reflects an image of one signal, or body, into the silvered part of the horizon glass, and this image is brought into coincidence with the other signal or body as seen through the plain part of the same glass. The sextant is used chiefly for measuring the altitude of the sun at sea, the reflected image of the sun being made to touch the visible horizon.

sextodec'imo (*Print.*). See **sixteenmo.**

sexual cell (*Biol.*). A male or female germ-cell.

sexual coloration (*Zool.*). Characteristic colour difference between the sexes, especially marked at the breeding season.

sexual dimor'phism (*Bot., Zool.*). Structural differences between the males and females of a species, especially differences in superficial characters, such as colour.

sexual organs (*Zool.*). The gonads and their accessory structures; reproductive system.

sexual reproduction (*Bot., Zool.*). The union of gametes or of gametic nuclei, preceding the formation of a new individual.

sexual selection (*Zool.*). A phase of natural selection, based on the struggle for mating, by which some authorities have attempted to explain the existence of the secondary sexual characteristics.

S.F. (*Masonry*). Abbrev. for *sunk face.*

sgraffito or **graffito,** (z)gra-fē'to (*Dec., Pot., etc.*) A mode of surface decoration in which two finishing coats of contrasting colours are applied, one on top of the other. Before the upper one has set, parts are removed according to some design, thus exposing the coat below.

shackle insulator (*Elec. Eng.*). A porcelain insulator whose ends are secured to metal shackles.

shackler (*Mining*). A person employed to couple and uncouple trains of trams on a double forking.

shade (*Paint.*). A gradation of colour.

shade (*Surv.*). A disc of coloured glass capable of being moved into a position across the line of sight of a surveying instrument when the latter is being used for solar observations.

shade chomophyte (*Bot.*). A plant inhabiting shaded rock crevices.

shade plant (*Bot.*). (1) A plant which flourishes only, or grows best, in shade.—(2) A quick-growing plant which is grown to afford shade to crops, and removed when these no longer need protection.

shaded-pole (*Elec. Eng.*). A term applied to the magnet system of induction-type indicating instruments, in which one pole is surrounded by a heavy copper ring.

shadow (*Light*). The shadow of an obstacle cast by a point source of light is the geometrical projection of the obstacle, except for small-scale diffraction effects at the edge. If the source of light is extended, as is the sun or moon, the central dark portion or umbra is surrounded by a lighter diffuse region, called the *penumbra*, where light is received from only a part of the source.

shadow bands (*Astron.*). A phenomenon sometimes occurring just before totality in a solar eclipse, in which parallel striations of light and shade are seen moving rapidly perpendicularly to their length; it is due to the corrugations introduced into the nearby plane wave of light from the sun by irregularities in the earth's atmosphere.

shadow photometer (*Light*). See **Rumford's photometer.**

shadow scratch (*Cinema.*). Defect in a recorded sound-track, similar in appearance to optical scratch.

shadow stripes (*Textiles*). Cotton cloths, of plain or satin weave, in which stripes are produced by using warp yarns of different directions of twist. The shadow effect is due to light being reflected in different directions by the different twists.

shadow test (*Med.*). See **retinoscopy.**

shaft (*Arch.*). The principal portion of a column, between the capital and the base.

shaft (*Civ. Eng., Mining*). A passage, usually vertical, leading from ground-level into an underground excavation, for purposes of ventilation, access, etc.

shaft (*Zool.*). The part of a hair distal to the root: the straight cylindrical part of a long limb bone: the rachis, or distal solid part of the scapus of a feather.

shaft cable (*Mining*). A specially armoured cable of great mechanical strength running down the shaft of a mine.

shaft governor (*Eng.*). A compact type of spring-loaded governor used for controlling the speed of small oil engines, etc.; it is arranged to rotate about the crankshaft axis, and is sometimes housed in the flywheel. See **spring-loaded governor.**

shaft pillar (*Mining*). The area of coal or ore left unworked round the bottom of a shaft or pit for support.

shafting (*Eng.*). See **line shafting.**

shafty wool (*Textiles*). Wool that is dense, of good length, and well grown.

shag (*Textiles*). A nap of long, coarse character on certain types of woollen fabrics.

shaggy (*Bot.*). Covered with long weak hairs.

shagreen' (*Leather*). Leather made from the belly part of a shark skin.

shake (*Horol.*). Side play, as applied to the clearance between a pivot and its hole.—END-SHAKE, the movement between the shoulders of an arbor and its plates, or between the ends of a staff and its end stones.

shake (*Mining*). A cave in limestone: in a coal-mine, a vertical crack in the seam and roof.

shake (*Timber*). A partial or complete separation between adjacent layers of fibres.

shaker patterns (*Hosiery*). See **racked.**

shaking grate (*Eng.*). A grate for a hand-fired boiler furnace in which the pivotally supported fire-bars can be rocked by hand levers in order to break up clinker.

shaking palsy (*Med.*). See **paralysis agitans.**

shale (*Geol.*). A consolidated clay-rock which possesses definite lamination. Cf. *mudstone.* See also **oil-shale.**

shale oils (*Fuels*). Oils obtained by the carbonisation of oil shales, of which the Scottish oil shales form the most important group in Great Britain; the calorific value is lower than that of petroleum oils.

shalloon' (*Textiles*). A woollen fabric of twill weave, usually dyed a dark colour; used for coat lining.

shallow well (*Civ. Eng.*). A shaft sunk nearly to the bottom of a superficial permeable stratum in order to tap the waters in it.

shaly sandstone (*Mining*). *Blaes* (q.v.).

shamal, shah'mal (*Meteor.*). The summer north-west wind in the plain of Mesopotamia.

shank (*Build.*). (1) The shaft of a column, pillar, etc.—(2) The shaft of a tool, connecting the head and the handle.

shantung' (*Textiles*). A plain silk cloth of light brown colour, with a rough surface; made from tussah, the silk produced by the wild silkworm.

Shap Granite (*Geol.*). A well-known granite occurring on Shap Fell in the Lake District of England. Much quarried as a valuable building-stone, distinctive in appearance by reason of the abundant pink phenocrysts of alkali-feldspar which it contains. A valuable indicator of the directions of ice movement in northern England.

Shap Rhyolite Group (*Geol.*). A division of the great Borrowdale Volcanic Series of the Lake District of England, occurring high up in the series and consisting essentially of rhyolitic flows.

shaped-conductor cable (*Elec. Eng.*). A three-phase cable in which the conducting cores are specially shaped so as to give the best utilisation of the total available cross-section of the cable.

shaper rail (*Cotton Spinning*). See **copping rail.**

shaper tools (*Eng.*). Cutting tools similar to those used on planing machines, and similarly supported in a clapper box.

shaping machine (*Eng.*). A machine tool for producing small flat surfaces, slots, etc. It consists of a reciprocating ram carrying the tool horizontally in guide ways, and driven by a *quick return* (q.v.) mechanism. Either the tool or the table may be capable of traverse.

share (*Agric. Mach.*). A pointed wedge-shaped implement of cast-iron or steel which is fixed on the front part of the breast of a plough. It makes the horizontal cut that separates the furrow slice from the undersoil. See **coulter.**

shared-channel broadcasting (*Radio*). See **common-frequency broadcasting.**

sharp (*Build., Civ. Eng.*). Said of sand the grains of which are angular, not rounded.

sharp (*Paint.*) Said of oil paint which contains a large proportion of turpentine.

sharp-bend (*Elec. Eng.*). In electrical installation work, a bend of short radius for joining two lengths of steel conduit which are at 90°.

sharp-edged orifice (*Eng.*). A circular orifice cut in a thin plate; placed in a pipe, or the wall of an air-box, to measure the flow of air or gas.

sharp flutings (*Build.*). Flutings which are so close together as to form sharp arrises.

sharp mouth (*Vet.*) See **mouth (sharp).**

Sharpey's fibres (*Zool.*). Calcified bundles of white fibres and elastic fibres, prolonged from the periosteum into the periosteal lamellae of bone.

sharpness of directivity (*Radio*). The extent to which the radiating or receiving properties of an antenna are concentrated within certain angular limits.

sharpness of resonance (*Acous.*). The rapidity with which resonance phenomena are exhibited as the frequency of excitation of a constant driving force is varied.

sharpness of tuning (*Radio*). A term practically synonymous with selectivity, but referring more directly to the change in circuit adjustment necessary to alter the signal strength from its maximum value to a negligible one.

shaving (*Acous.*). The cutting of the surface of a wax blank by a finely ground shaving-knife, made of sapphire, so that it is perfectly flat and free from irregularities, which would be carried through the processing and appear as defects in the finished gramophone record.

shaving (*Leather*). A process by which skins and hides are brought to an even thickness; formerly done by hand, now by the bank knife splitting machine.

shear (*Eng., Phys., etc.*). A type of deformation in which parallel planes in a body remain parallel but are relatively displaced in a direction parallel to themselves; in fact, there is a tendency for adjacent planes to slide over each other. A rectangle, if subjected to a shearing force, parallel to one side, becomes a parallelogram. See **modulus of rigidity, torsion.**

shears (*Eng.*). See **ways.**

shear-legs (*Eng.*). See **sheers.**

shear mouth (*Vet.*). See **mouth (shear).**

shear stress (*Eng.*). The intensity of shear force per unit area of cross-section, varying in some definite way across the section, e.g. as the radius in a twisted shaft, and parabolically across a beam.

shearing (*Furs*). The shortening of fur by cutting the tops of hairs.

shearing (*Textiles*). The operation of clipping the wool from sheep; carried out by hand or by power. The term is also applied to the removal of projecting fibres from the face of a fabric by cropping or shearing.

shearing of rocks (*Geol.*). Shear zones, which are common in metamorphic rocks, are indicated by bands of crushed rock (cataclasite, etc.) and by the development of such minerals as chlorite. See **strain-slip cleavage.**

sheath (*Bot.*). The leaf base when it forms a vertical coating surrounding the stem.

sheath (*Zool.*). An enclosing or protective structure; as the elytron of some Insects.

sheath-circuit eddies (*Cables*). The paths of currents in the sheaths of separate cables which flow only when the sheaths are bonded. See also **sheath eddies.**

sheath current (*Elec. Eng.*). The eddy current flowing in the metallic sheath of an alternating-current cable.

sheath eddies (*Cables*). Currents which are induced in the sheath of a single cable, and which flow even when the sheaths are isolated from each other.

sheath effects (*Elec. Eng.*). The phenomena associated with the metallic sheaths of cables carrying alternating currents.

sheath of Schwann (*Zool.*). See **neurolemma.**

sheathed-pilot system (*Elec. Eng.*). A system of selective protection employing multicore pilot cables in which each pilot wire is provided, outside its main insulation, with a thin metallic sheath.

sheathing (*Carp.*). Close boarding nailed to the framework of a building to form the walls or the roof.

sheathing paper (*Build.*). A flexible waterproof lining material made from bitumen reinforced with fibre, and faced with stout sheets of kraft paper.

sheaves, bow (*Elec. Comm.*). See **bow sheaves.**

shed (*Build.*). A small outhouse, especially one having a lean-to roof.

shed roof (*Build.*). A *lean-to roof* (q.v.).

shed (*Weaving, etc.*). The horizontal opening formed between the warp threads in a loom, for the passage of the shuttle which carries the weft.

shedding (*Weaving*). Dividing the warp threads in a loom horizontally, so that they form a *shed* or passage for the shuttle. After a pick has been inserted the shed is changed. See **closed shed, open shed.**

sheep pox (*Vet.*). An epidemic disease of sheep, due to infection by a filterable virus, and characterised by fever and a papule-vesicular eruption of the skin and mucous membranes of the respiratory tract and genitalia.

sheep scab (*Vet.*). See **mange (psoroptic).**

sheer lawns (*Textiles*). The name applied to very fine linens, used for ladies' handkerchiefs, etc.

sheers (*Eng.*). A large lifting device used in shipyards, etc., resembling a crane in which a pair of inclined struts take the place of a jib. Also called SHEER-LEGS, SHEAR-LEGS.

sheet (*Print.*). A term applied to any one piece of printing paper, printed or plain.

sheet anchor (*Ships*). A spare anchor, similar to a bower anchor, which can be used in case of emergency when a ship is moored.

sheet glass (*Glass*). Glass used for common glazing purposes; produced by drawing a continuous thin film of glass from a molten bath and, after a suitable time interval for cooling, cutting up the product into sheets. It is not of such good quality, nor so flat, as plate glass, which is ground and polished.

sheet lead (*Build.*). Lead in a form in which it is commonly used in building construction, viz. in the form of sheets. It is the trade practice to refer to it in terms of the weight of 1 sq. ft. of area, e.g. *7 lb. sheet lead*, a standard quality.

sheet lightning (*Meteor.*). Diffuse illumination of clouds by distant lightning of which the actual path of the discharge is not seen.

sheet pavement (*Civ. Eng.*). A road surfacing formed of continuous material such as concrete, and free therefore from the frequent joints associated with *block pavements* (q.v.).

sheet piling (*Civ. Eng.*). Timber or steel sheeting supported in a vertical position by guide piles, and serving to resist lateral pressures.

sheet-work (*Print.*). A term applied to printing in which the required number of sheets is printed on one side from one forme of a section, and then on the other side from the other forme. *Cf. work and turn.*

sheeting (*Civ. Eng.*). Rough horizontal boards used to support the sides of narrow trenches during excavation in very loose soils, each pair of boards on opposite sides of the trench being wedged apart with struts.

sheetings (*Textiles*). Cotton or linen cloths used for bed coverings; cotton cloths are woven grey and then bleached.

sheeting twill (*Textiles*). The 2-and-2 twill.

shelf (*Carp.*). A horizontal board, secured usually to a wall, for the temporary support of articles.

shelf-back (*Bind.*). See **spine.**

shelf nog (*Carp.*). A wooden piece built into a brick wall, so as to leave a projecting part which will serve as a support for a shelf.

shelf, selector (*Auto. Teleph.*). See **selector shelf.**

shell (*Chem.*). A group of electrons in an atom, all of which have the same principal quantum number.

shell (*Zool.*). A hard outer case or exoskeleton of inorganic material, chitin, lime, silica, etc.

shell bark (*Bot.*). See **rhytidome.**

shell gimlet (*Carp.*). A gimlet having a parallel shank.

shell gland (*Zool.*). In some Invertebrates, a glandular organ which secretes the materials for the formation of the shell. Also SHELL SAC.

shell ligament (*Zool.*). The dorsal ligament joining the valves of the shell in lamellibranch *Mollusca.*

shell pump (*Civ. Eng.*). See **sludger.**

shell shake (*Timber*). Part of a cup shake, as exhibited on the surface of converted timber.

shell-shock (*Psychol.*). See **war neurosis.**

shell-type transformer (*Elec. Eng.*). A transformer in which the magnetic circuit surrounds the windings more or less completely.

shells, electron (*Phys.*). See **K, L, M . . . shells, Bohr theory.**

shellac′ (*Chem.*). The purified product of *lac* (q.v.); thin yellow or brown leaflets, which can be bleached. Sp. gr. 1·08-1·13, saponification value 194-213, acid value 48-64, ester value 187-163. Electric strength (one-minute value for a film 0·1 inch thick) is 350-600 kV. per inch. Shellac is a thermoplastic moulding material, and forms the basis of photographic and other varnishes. The normal gramophone disc record is based on shellac, the black colour being obtained by the addition of carbon black as a filler.

shelly (*Timber*). Said of timber exhibiting shell shake.

shelter deck (*Ship Constr.*). A term correctly interchangeable with *awning deck.* Sometimes used in a more casual way to identify a deck above a weather deck.

shepherd's check (*Textiles*). A small check pattern of black and white, or other contrasting colours.

sherardising (*Met.*). The process of coating steel or iron with a corrosion resistant layer of zinc, by heating the object to be coated to a temperature of approximately 300° C. in a closed box containing a powder consisting of zinc dust with some zinc oxide.

Sheraton style (*Furn.*). The style developed by Thomas Sheraton, who flourished in 1790-1810; characterised by delicate curves (kidney writing-tables, lyre-shaped chair backs), concave fronts to chests, the use of choice woods, painting, and inlays.

Sherringham daylight (*Illum.*). An artificial-daylight illumination obtained by means of a special lighting fitting in which an opaque reflector is sprayed with zones of different tints so as to give the correct resultant illumination.

shides (*Build.*). *Shingles* (q.v.).

shield (*Cathode Ray Tubes*). The electrode which controls the intensity of the cathode ray beam. It is usually negatively charged with respect to the cathode, which it surrounds or encloses.

shield (*Civ. Eng.*). A kind of *curb* (q.v.) adapted for use at the working face in driving a tunnel through loose or water-bearing ground. It is driven forward as excavation proceeds by means of hydraulic jacks around its edge.

shield, electrostatic (*Elec. Eng., etc.*). See **electrostatic shield.**

shield grid valve (*Thermionics*). The same as *screened-grid valve.*

shielded-pole instrument (*Elec. Eng.*). An induction instrument having a shaded pole.

shift (*Build.*). *Break joint* (q.v.).

shift (*Cathode Ray Tubes*). Bodily movement of the image or pattern across the fluorescent screen of a cathode ray tube, effected by variation of the steady P.D. between the deflector plates, or of the steady current through the deflector coils.

shift (*Mining*). (1) The period of time for which a miner works in a day.—(2) The men who work in a mine for a given period or purpose; e.g. the *day shift* or the *repair shift.*

shift-phase recording (*Cinema.*). In a light-valve, the separation of currents for the two ribbons, so that the retarded currents in one ribbon neutralise amplitude distortion arising from the comparable velocity of the ribbons and the steady velocity of the film passing normally to them.

shifting of brushes (*Elec. Eng.*). The displacement of the brushes of a commutator motor from the neutral position.

shilling-stroke (or **mark**) (*Typog.*). See **diagonal.**

shim (*Elec. Eng.*). A packing piece consisting of a thin sheet of magnetic material for placing behind a pole piece in a magnetic circuit to adjust an air-gap.

shim′amushi fever (*Med.*). Tsutsugamushi fever; flood fever; Japanese river fever. An acute febrile disease associated with infection by Rickettsia, transmitted by the bite of a larval mite; it is characterised by fever, enlargement of lymphatic glands in the neck, axilla, and groin, conjunctivitis, and a dark-red macular rash.

shimmy (*Automobiles*). See **wheel wobble.**

shin (*Rail.*). A *fish-plate* (q.v.).

shiner (*Masonry*). A thin flat stone laid on edge in a rubble wall, the width of the stone being equal to the depth of at least two courses of the other stones.

Shineton Shales (*Geol.*). A group of shales found in Shropshire, of Upper Cambrian age; the English equivalents of the Tremadoc slates of North Wales.

shingle (*Build.*). A thin, flat, rectangular piece of wood laid in the manner of a slate or tile, as a roof covering or for the sides of buildings. Also called SHIDE.

shingle (*Geol.*). Loose detritus, generally of coarser grade than gravel though finer than boulder beds, occurring typically on the higher parts of beaches on rocky coasts.

shingle trap (*Civ. Eng.*). A low barrier wall built out into flowing water or into the sea to catch the shingle and sand and minimise scour.

shingles (*Med.*). See **herpes zoster.**

ship caisson (*Hyd. Eng*). A floating caisson shaped like a ship, and capable of being floated into position across the entrance to a basin, lock, or graving dock, and then sunk into grooves in the sides and bottom of the entrance.

ship plane (*Aero.*). Any aeroplane with special adaptations for rising from, or alighting upon, the deck of a ship. Sometimes arranged for catapulting off Usually provided with folding wings to facilitate storage below decks.

ship's clock (*Horol*). A lever timepiece specially cased for use on board ship.

shiplap (*Carp*). A term applied to parallel boards having a rebate cut in each edge, the two rebates being on opposite faces. They are especially adapted for use as sheathing.

shippers (*Build.*). Bricks which are sound and hard-burned, but not of good shape.

shivering (*Vet.*). A disease of horses, of unknown cause; characterised by involuntary spasmodic contractions of the muscles of one or both hind limbs and tail, less frequently of other parts of the body.

shives (*Textiles*). Vegetable matter found in wool, exclusive of burrs. See also **shove.**

shoad or **shode** (*Mining*). Float-ore. Water-worn fragments of vein minerals found on the surface away from the outcrop.

shoal (*Hyd. Eng.*). A submerged sand-bank.

shock. See **electric shock.**

shock (*Acous.*). See **acoustic shock.**

shock (*Eng., etc.*). The sudden application of load to a member.

shock absorber (*Automobiles*). A frictional or hydraulic damper, having links attached to the chassis frame and axle respectively, to prevent spring rebound and damp out oscillation.

shock excitation (*Radio*). The excitation of transient currents in an oscillatory circuit at its natural resonant frequency by the sudden application or removal of an e.m.f. having some other frequency. The cause of interference by keying clicks from a continuous wave telegraph transmitter.

shockproof switch (*Elec. Eng.*). A switch having all its external metallic parts covered, or protected by insulating material, in order to guard against the possibility of electric shock. Also called ALL-INSULATED SWITCH, HOME OFFICE SWITCH.

shockproof watch (*Horol.*). A watch provided with a flexible mounting for the balance staff, to avoid damage to the pivots when the watch is subjected to severe shock.

shoddy (*Textiles*). Waste material obtained from woollen fabrics that have not been milled; used again in the production of lower quality materials, either alone or blended with new wool or wool and cotton; used also as agricultural fertiliser.

shoe (*Build.*). The short bent part at the foot of a downpipe, directing the water away from the wall.

shoe (*Civ. Eng.*). (1) The iron point fitted over the driving end of a pile.—(2) The block, plate, or piece giving support to the foot of a rafter or post.

shoe (*Elec. Eng.*). The device by which an electric tractor collects current from a live rail.

shoe (*Mining*). The replaceable steel wearing part of the head of a stamp or muller of a grinding pan.

shogged-rib (*Hosiery*). See **racked.**

Shone ejector (*San. Eng.*). An apparatus employed to force sewage from a low-level sewer into a near-by high-level sewer, under the pressure of compressed air from an air compressor.

shon'kinite (*Geol.*). A coarse-grained basic igneous rock (named originally from the Shonkin Sag Laccolith in Montana, U.S.A.), gabbroic in composition, sodic in character, and, as defined by Rosenbusch, containing nepheline as an essential constituent.

shoot (*Cinema.*). To register a *shot* (q.v.).

shoot (*Hyd.*). A *chute* (q.v.).

shoot (*Weaving*). A thread of *weft* (q.v.).

shooting (*Join.*). The operation of truing with a *jointing plane* (q.v.) the edges of timbers which are to be accurately fitted together.

shooting board (*Join.*). A prepared board used to steady a piece of timber whilst shooting the edges. It has a stop against which the piece of timber abuts endwise, and a guide surface against which the jointing plane runs.

shooting plane (*Join*). See **jointing plane.**

shooting star (*Astron.*). See **meteor.**

shop rivet (*Struct.*). A rivet which is put in when the work is being erected on the floor of the assembly shop prior to delivery to the site.

shop traveller (*Eng.*). See **overhead travelling crane.**

shore (*Build.*). A substantial prop of timber or other material used in direct compression, to give temporary support.

shoring (*Build., Civ. Eng.*). The method of temporarily supporting, by props of timber or other material in compression, the sides of excavations and, especially, unsafe buildings.

short. A term used to indicate that a material, such as iron, rock, or wood, is brittle. *Short coal* means friable coal.

short (*Cinema.*). A short film, in length not more than three reels, as contrasted with a *feature film*, which is generally the attraction in a programme.

shorts (*Mining*). (1) The contents of a wagon of coal containing very much dirt.—(2) The shortage in production under a royalty lease; also called UNDER-GETTINGS.

shorts (*Typog.*). Vowels printed with the short accent over them, thus: ă, ĕ, ĭ, ŏ, ŭ.

short-chord winding (*Elec. Eng.*). An armature winding employing coils whose span is less than the pole pitch.

short-chording (*Elec. Eng.*). A method of armature winding in which the coil span is less than the pole pitch.

short-circuit (*Elec. Eng.*). The electrical condition created when the terminals of a generator, transformer, or other source or conveyor of electrical energy are connected by a conducting path of negligible resistance.

short-circuit characteristic (*Elec. Eng.*). The characteristic graph relating e.m.f. or excitation to load current in the case of a machine operating under short-circuit conditions.

short-circuit current (*Elec. Eng.*). The current flowing in an electrical machine under short-circuit conditions.

short-circuit impedance (*Elec. Comm.*). The driving or input impedance of a network or line when the end is short-circuited or grounded.

short-circuit test (*Elec. Eng.*). The test carried out on an electrical machine with its output terminals short-circuited and full-load current flowing.

short-circuit voltage (*Elec. Eng.*). The e.m.f. necessary to cause full-load current to flow under short-circuit conditions.

short-circuited rotor (*Elec. Eng.*). The same as *squirrel-cage rotor*. See **squirrel-cage motor.**

short-circuiting device (*Elec. Eng.*). A switching device on the rotor of a slip-ring induction motor; operated by a mechanical clutch, which short-circuits the rotor windings when the motor has gained speed.

short coal (*Mining*). See **short.**

short column (*Eng.*). A column the diameter of which is so large that bending under load may be neglected, and in which failure would occur by crushing; commonly assumed as a column of less than 20 diameters.

short-day plant (*Bot.*). A plant in which the onset of flowering is hastened by giving the plant alternating periods of relatively short illumination and relatively long darkness.

short-period comets (*Astron.*). Those comets moving in elliptical orbits of such a size that the comets' returns to the neighbourhood of the sun are repeated at intervals comparable to the sidereal periods of the planets, one such group having periods between three and eight years.

short shoot (*Bot.*). A short branch borne in the axil of a scale leaf and bearing the true foliage leaves of the plant.

short-sightedness (*Med*). See **myopia.**

short stick (*Textiles*). A cotton-trade term to indicate a yard length of exactly 36 in. 120ss means 120 wraps of 36 in. each and a length of 120 yards exactly.

short-time breakdown voltage (*Cables*). The voltage required to break down a cable in a short time (minutes).

short-time rating (*Elec. Eng.*). The output which an electrical machine can deliver for a specified short period (½ hour or 1 hour) without exceeding a specified safe temperature.

short waves (*Radio*). Electromagnetic waves whose wavelength is of the order of 50 metres or less.

shortening condenser (*Radio*). A condenser inserted in series with an antenna to reduce its natural wavelength.

shot (*Cinema.*). The unit in motion-picture production, comprising the sequence of events while the cameras are in operation. For each shot there may be several takes, to ensure a selection of good registrations.

See **angle—**
close—
crane—
long—
medium—
mute—
panning—
tracking—

shot (*Weaving*). See under **weft.**

shot-drilling (*Mining*). Boring deep holes by means of hard steel shot fed down a rotating hollow cylinder.

shot effects (*Textiles*). Effects produced in fabrics in which the weft is a different colour from the warp.

shot-hole (*Civ. Eng.*). A hole bored in rock for the reception of a blasting charge.

shot-hole (*Timber*). A small hole made in timber by a wood-boring insect.

shot-hole disease (*Bot.*). A disease of leaves of various plants, caused by fungi which destroy small patches of tissue, which drop out.

shot noise (*Thermionics*). A noise which occurs spontaneously in the anode current of a thermionic tube, owing to the fact that the current is not truly continuous but is made up of a series of random pulses as each electron arrives at the anode. So called because of the similarity to bullets from a machine-gun directed on a target. Also called SCHROTT EFFECT, SMALL-SHOT EFFECT, and see **Schottky effect.**

Shotover Sands (*Geol.*). A group of sands and clays of fresh-water origin capping Shotover Hill and other hills near Oxford, England, and believed to be of the same age as part of the Wealden Beds of Southern England.

Shottky effect (*Thermionics*). See **Schottky effect.**

shoulder (*Elec. Comm., etc.*). That part of a characteristic curve at which the response tends to fall off, as at the upper limit of thermionic characteristics or the gamma curves of photographic emulsions.

shoulders (*Acous.*). The alteration of the shape of the needle tip during the reproduction from gramophone records causes ridges (*shoulders*) to be formed on the side of the needle, which then slides over the flat surfaces of the disc rather than in the groove.

shoulders (*Carp.*). The abutting surfaces left on each side of a tenon; they abut against the cheeks of the mortise.

shoulder girdle (*Zool*). See **pectoral girdle.**

shoulder nipple (*Plumb., etc.*). A nipple which is not threaded over its full length but only at the two ends.

shouldered arch (*Arch.*). A lintel supported over a door opening upon corbels.

shouldering (*Build.*). The operation of bedding the heads of roofing slates in hair mortar, for added protection when the roof is very exposed.

shove or **shive** (*Textiles*). A waste product consisting of small particles of woody tissue adhering to flax fibres after scutching; removed during hackling and combing.

shower, meteoric (*Astron.*). See **meteoric shower.**

shower-proofing (*Textiles*). The rainproofing woollen and worsted cloths by treating them with metallic salts or insoluble soap; the ventilating properties and the general appearance of a fabric are not affected by this treatment.

shrapnel shell (*Ammunition*). A shell filled with lead bullets, which are ejected forwards by means of a bursting charge ignited by a time fuse.

shread head (*Build.*). A *jerkin head* (q.v.).

shredded wheat (*Cinema*). The term applied to film which has been damaged by running off the sprocket wheels in a projector or camera.

shrink-ring commutator (*Elec. Eng.*). A high-speed type of commutator in which the segments are held together by a steel ring shrunk on over a layer of insulation.

shrinkage (*Civ. Eng.*). The difference in the spaces occupied by material before excavation and after settlement in embankment.

shrinkage (*Textiles*). See **sinkage.**

shrinkage allowance (*Eng.*). The difference in diameter, when both are cold, of two parts to be united by shrinking. See **shrinking-on.**

shrinkage stoping (*Mining*). Whilst excavating (stoping) ore from a vein or lode, the leaving of sufficient broken ore in the stope to keep the walls from falling in. This broken ore is subsequently withdrawn.

shrinking-on (*Eng., etc.*). The process of fastening together two parts by heating the outer member so that it expands sufficiently to pass over the inner and on cooling grips it tightly; e.g. in the attachment of steel tyres to locomotive wheels.

shrinking processes (*Textiles*). Various methods for rendering wool cloths unshrinkable during tailoring and during wear. Cloths are shrunk effectively by the manufacturer before sale. The oldest method is known as *London shrinking*.

shroud or **shrouding** (*Eng.*). (1) Circular webs employed to stiffen the sides of gear-teeth. See **full shroud, half shroud.**—(2) An outer or peripheral strip used to strengthen turbine blading.—(3) A semicircular deflecting wall formed at one side of an inlet port in some I.C. engines to promote air swirl in the cylinder.—(*Radio, etc.*) Extension of metal parts in valves, and other electrical devices subject to high voltages, so that parts of the insulating dielectric are not excessively stressed.

shrub (*Bot.*). A woody plant in which most of the side shoots survive, so that there is no strong development of a main trunk as in a tree.

shuffs (*Build.*). See **chuffs.**

shunt (*Elec. Eng.*). A *shunt* connexion of an electric circuit, with respect to another, is one in which the same e.m.f. is applied to both.

shunt (*Rail.*). To divert a train from a principal to a side track, especially to allow another train to pass along the principal track.

shunt arm (*Elec. Comm.*). That arm of a filter-section which is connected between the two legs of the loop-circuit of a wave-filter.

shunt characteristic (*Elec. Eng.*). The characteristic graph relating terminal voltage and load current in the case of a shunt-wound d.c. machine.

shunt circuit (*Elec. Eng.*). See **voltage circuit.**

shunt-excited antenna (*Radio*). An antenna consisting of a vertical radiator (frequently the mast itself) directly earthed at the base, and connected to the transmitter through a lead attached to it a short way above the ground.

shunt feed (*Radio*). See **parallel feed.**

shunt field (*Elec. Eng.*). The main field winding of a motor when shunt connected.

shunt-field relay (*Elec. Comm.*). A relay with two coils on the opposite sides of a closed magnetic circuit, so that a bridging magnetic circuit takes no flux while the currents in the two coils magnetise the circuit in the same direction; flux passes in this bridging circuit when one current is reversed.

shunt-field rheostat (*Elec. Eng.*). A rheostat for insertion in the shunt-field of a d.c. shunt machine; used to vary the speed of a shunt motor, or to vary the voltage of a shunt generator.

shunt motor (*Elec. Eng.*). An electric motor whose main excitation is derived from a shunt-field winding.

shunt-trip (*Elec. Eng.*). A solenoid-type tripping device, connected in shunt across either the main or an auxiliary supply, by which a circuit-breaker may be tripped by a suitable relay.

shunt winding (*Elec. Eng.*). A field winding connected in shunt across the armature circuit of a motor.

shunted condenser (*Teleg.*). See **reading condenser.**

shute (*Hyd.*). A *chute* (q.v.).

shuting (*Build.*). An *eaves gutter* (q.v.).

shutter (*Build.*). A removable protective covering to the outside or inside of a window.

shutter (*Cinema.*). The rotating device in a camera which exposes the film when it is stationary, and shuts off the light from the source while the film is moved intermittently. Also, in a film projector, the rotating device which cuts off the light from the screen during the time that the film is moving. Each frame may be flashed on to the screen two or three times to reduce the flicker.

See **automatic—** **flicker—**

shutter (*Photog.*). The device in a camera for exposing the sensitised surface to the image of the object during a known time and at will. See **focal plane shutter.**

shutter weir (*Civ. Eng.*). A type of movable weir consisting of a row of large panels hinged at the bottom and inclined slightly downstream towards the top when the weir is closed.

shuttering (*Civ. Eng.*). The general term for temporary works for the support of reinforced concrete while it is setting. Also FORM WORK.

shutting post (*Build.*). The post against which a gate shuts.

shutting stile (*Join.*). The stile of a door further from the hinges. Also MEETING STILE.

shuttle (*Weaving, etc.*). (1) The device which carries the weft or filling (in the form of a cop or pirn bobbin) across a loom, through the upper and lower warp threads. It is made of hard wood, boat-shaped, with a metal tip at each end, and near one end has an eye through which the weft passes.—(2) In a sewing-machine, a sliding or rotating device that carries the lower thread to form a lock-stitch.

shuttle armature (*Elec. Eng.*). A simple form of armature; used on small d.c. machines in which there are only two slots, so that the armature stampings assume an H-shape; the winding is a single coil connected to a two-part commutator. Also called H-ARMATURE.

shuttle box (*Weaving*). A box-like extension at each end of the race board, from which the shuttle is thrown, to and fro, when the loom is working.

shuttle guard (*Weaving*). A guard fixed to the sley of a loom, in such a position that it will deflect and keep low a shuttle which by accident flies out of the loom.

shuttle machine (*Textiles*). See **Swiss machine.**

shuttle race (*Weaving*). See **race board.**

shuttling (*Weaving*). Replenishing the weft by inserting a new cop or pirn bobbin in the shuttle.

Si (*Chem.*). The symbol for *silicon.*

sial (*Geol.*). The discontinuous earth shell of granitic composition which forms the foundation of the continental masses and which is in turn underlain by the sima. So called because it is essentially composed of siliceous and aluminous minerals.

sial'agogue, sial'ogogue (*Med.*) Stimulating the flow of saliva (Greek *sialon*): any medicine which does this.

si'alo-adeni'tis, si'aladeni'tis (*Med.*). Inflammation of a salivary gland.

si'aloid (*Zool.*). Resembling saliva.

si'alolith (*Med.*). A calculus in a salivary gland.

sialorrhoe'a (*Med.*). Excessive secretion of saliva.

sib'ilus (*Med.*). A sibilant or whistling *rhonchus* (q.v.) due to the passage of air over secretions in the smaller bronchial tubes.

sic'cative (*Paint.*). A *drier* (q.v.).

Sicilian (*Textiles*). A plain cloth, made from fine cotton warp and coarse mohair weft; used for dress goods.

sickle-celled anaemia (*Med.*). Drepanocytosis.

sickle-shaped truss (*Eng.*). A truss for roofs of very large span in which the upper and lower chords enclose a crescent or sickle-shaped area, which is triangulated by diagonal members.

side band (*Radio*). The band of frequencies, equal in width to the highest modulating frequency, which extends on either side of the carrier frequency of a modulated wave. A free channel, equal in width to the combined widths of the two side bands, is usual for broadcast transmission.

side-bones (*Vet.*). Ossification of the lateral cartilages of a horse's foot.

side-chains (*Chem.*). Alkyl groups which replace hydrogen in ring compounds.

side-chain theory (*Med.*). A theory propounded by Ehrlich to explain the phenomena of the poisoning and immunity of living cells. It assumes that the molecules of protoplasm possess a cyclic structure and side-chains similar to those found in derivatives of benzene. Molecules of foodstuffs or toxins are incorporated into the cell by attachment to these side-chains or *receptors*. Interaction of toxin molecules with a number of receptors in a cell tends to stimulate overproduction of receptors, which are liberated into the blood, where they act as antibodies.

side circuit (*Teleph.*). The telephone circuit loop which is used as one leg of a phantom, the two wires being effectively in parallel for the phantom circuit.

side-contact rail (*Elec. Eng.*). An electric traction conductor arrangement making use of a special channel-section conductor-rail, contact being made sideways by the collecting-shoe.

side cutting (*Civ. Eng.*). Excavation taken from the side of a railway or canal when the amount of the normal cutting is less than the fill.

side drift (*Civ. Eng.*). An *adit* (q.v.).

side frequency (*Radio*). The frequency of a side wave.

side hook (*Carp.*). A *bench hook* (q.v.).

side keelson (*Ship Constr.*). See under **keelson.**

side pond (*Hyd. Eng.*). A storage space at the side of a canal lock-chamber, the two being interconnected by a sluice, so that the normal loss of water occurring in the process of passing a vessel through the lock may be reduced.

side posts (*Carp.*). *Princess posts* (q.v.).

side rabbet plane (*Join.*). A rabbet plane with its cutting edge on the side, not on the sole, of the tool.

side rail (*Rail.*). A *check-rail* (q.v.).

side-running trolley (*Elec. Eng.*). A trolley-wheel arrangement in which contact is made sideways to the trolley-wire.

side slip (*Aero.*). Motion of an aircraft such that it travels in a direction corresponding to its lateral axis, in addition to its normal forward motion. Most commonly, slipping outwards in an incorrectly banked turn.

side slope (*Civ. Eng.*). The inclination of the earth slopes on each side of a cutting.

side-stick (*Typog.*). A tapering piece of wood placed at the sides of pages when locking them up. Quoins are wedged between them and the sides of the chase.

side-stick (*Vet.*). A cylindrical stick fixed to the head-collar and to the surcingle in order to limit the movement of a horse's head.

side timber (*Carp.*). A roof purlin supporting the common rafters.

side-tone (*Acous.*). The hearing of one's own voice in a reverberant enclosure. Particularly, the audition of one's own voice in a telephone receiver, via the transmitter, at a level which is higher than natural. See **anti-side-tone.**

side tool (*Eng.*). A cutting tool in which the cutting face is at the side, and which is fed laterally along the work.

sidetracking skate (*Aero.*). See **skate (sidetracking).**

sidewalk (*Civ. Eng.*). [U.S.] A raised strip, alongside a road, for the passage of pedestrian traffic only. In Britain usually called a PAVEMENT.

side wave (*Radio*). An isolated frequency component in the side band. Analysis shows that a sinusoidally modulated wave may be decomposed into a carrier wave of frequency ω and two side waves of frequencies $\omega+\rho$ and $\omega-\rho$ respectively, where ρ is the modulating frequency.

side-waver (*Carp.*). A side timber.

side'real day (*Astron.*). See **day (sidereal).**

sidereal month (*Astron.*). The interval (amounting to 27·32166 days) between two successive passages of the moon through the same point in her orbit, relative to the fixed stars.

sidereal moon (*Astron.*). The instant when the First Point of Aries is on the meridian at upper culmination, indicated by 0^h local sidereal time.

sidereal period (*Astron.*). The interval between two successive positions of a celestial body in the same point with reference to the fixed stars; applied to the moon and planets to indicate their complete revolution of the heavens as against their synodic revolution relative to the line joining the earth and sun.

sidereal time (*Astron.*). A method of reckoning intervals based on the rotation of the earth on its axis as the fundamental period; sidereal time at any moment is the hour angle of the First Point of Aries at the moment, and increases from 0 to 24 hours, beginning with sidereal noon.

sidereal year (*Astron.*). The interval between two successive passages of the sun in its apparent annual motion through the same point relative to the fixed stars; it amounts to 365 25636 days, slightly longer than the tropical year, owing to the annual precessional motion of the equinox.

sid'erite (*Geol.*). A general term for meteoric iron, which usually consists of nickel-iron.

siderite (*Min.*). (1) See **chalybite.**—(2) See **sapphire quartz.**

sidero'sis (*Med.*). (1) *Pneumonokoniosis* (q.v.) due to the inhalation of metallic particles by workers in tin, copper, lead, and iron mines, and by steel-grinders.—(2) Excessive deposit of iron in the body tissues.

sid'erostat (*Astron.*). An instrument designed on the same principle as the coelostat to reflect a portion of the sky in a fixed direction; applied specially to a form of telescope called the *polar siderostat*, in which the observer looks down the polar axis on to a mirror.

siding (*Rail.*). A short length of side line on to which one train from the main line may be shunted to allow of the passage of another train on the main line.

Sidol (*Build.*). Trade-name for a timber preservative.

Siebold's organ (*Zool.*). See **crista acustica.**

siege (*Build.*). A mason's *banker* (q.v.).

siege (*Glass*). The floor of a pot furnace upon which the pots rest.

Siegwart (*Build.*). Trade-name for a form of fire-resisting floor, built of reinforced concrete tubes laid close together and grouted in between the joints in the several tubes to complete the floor, ready for any top finish.

Siemens dynamometer (*Elec. Eng.*). The name applied to a dynamometer-type of instrument when arranged for measuring current or power.

Siemens ozone tube (*Chem.*). Apparatus used in the preparation of ozone by the silent discharge of electricity.

Siemens-Marten process (*Met.*). See **open-hearth process.**

sienna (*Paint.*). A natural yellow earth pigment; used 'raw' or 'burnt.'

sieve, siv (*Build., etc.*). An open container fitted with a mesh or gauze bottom.

sieve area (*Bot.*). A limited area on the longitudinal wall of a sieve tube, perforated by numerous fine pores through which material may pass.

sieve field (*Bot.*). One of the perforated areas into which a sieve plate may be divided by a network of thick strands of wall material.

sieve plate (*Bot.*). A perforated area in the lateral or end wall of a sieve tube.

sieve tube (*Bot.*). A long tubular element, enclosed by a thin wall of cellulose and containing living contents but no nucleus, occurring in the phloem of vascular plants. Sieve tubes conduct elaborated food material about the plant, and communicate with one another by means of sieve areas or sieve plates.

sieving, sifting (*Build., etc.*). The operation of shaking loose materials in a sieve so that the finer particles pass through the mesh bottom. By using a number of sieves with different meshes the particles can be graded according to size.

sight (*Optics*). The sensation produced when light waves impinge on the photosensitive cells of the eye.

sight-feed lubricator (*Eng.*). A small glass tube through which oil-drops from a reservoir can be seen, or which is filled with water so that oil from the pump rises in visible drops on its way to the oil-pipe.

sight lines (*Cinema.*). The extreme angles from which the screen can be seen in a cinema.

sight rail (*Surv*). An above-ground horizontal wooden rail fixed to two upright posts, one on each side of a trench excavation for a sewer, drain, etc. Used with others to establish a reference line from which the sewer, etc., may be laid at the required gradient.

sight rule (*Surv.*). See **alidade.**

sig'moid (*Bot., Zool., etc.*). Curved like the letter S.

sigmoid flexure (*Zool*) An S-bend.

sigmoidec'tomy (*Surg*). Excision of part of the sigmoid flexure of the colon.

sigmoid'oscope (*Med.*). A tube fitted with a lamp for viewing the mucous membrane of the rectum and pelvic colon.

sigmoidos'tomy (*Surg*). The surgical formation of an opening (artificial anus) in the sigmoid flexure of the colon.

sign (*Med.*). Any objective evidence of disease or bodily disorder, as opposed to a *symptom* (q.v.), which is a subjective complaint of a patient.

signal (*Elec. Comm.*). The modification of an electrical effect having a variation wave-form or coding which represents the intelligence transmitted. The modulation of a carrier is the signal, not the carrier itself, which, if properly modulated, remains unchanged. The carrier, essential for modulation, if not sent, must be reinserted for demodulation purposes at the receiving end.

audible ringing tone.

signal (*Surv.*). A device, such as a ranging rod, heliostat, etc., used to mark a survey station.

signal coloration (*Zool.*). Distinctive markings for the recognition of other members of the same species.

signal lamp (*Elec. Eng.*). An indicating lamp on a switch- or control-board.

signal/noise ratio (*Radio*). The ratio, usually expressed in decibels, of the strength of a wanted signal to that of the interfering noise present.

signal plate (*Cathode Ray Tubes, Television*). The electrode which carries the mosaic in an Iconoscope.

signature (*Bind., Typog.*). See **section (2).**

signature mark (*Bind., Typog.*). A number or letter of the alphabet placed on the first page of a signature as a guide to the binder in *gathering* (q.v.) the sections.

signing (*Acous.*). The manual sign-language used by deaf-mutes and by those who address them.

Sikes hydrometer (*Chem.*). A hydrometer used for determining the strengths of mixtures of alcohol and water.

sikyot'ic (*Bot.*). Parasitic by fusion of the plasma of host and parasite.

silanes (*Chem.*). A term given to the *silicon hydrides.*

silencer (*Automobiles*). See **exhaust silencer.**

silent discharge (*Diel.*). An obsolescent term for *corona.*

silhouette (*Photog.*). An image in which the elements are exhibited in black against a white background, or vice versa.

sil'ica (*Met., Min., etc.*). Dioxide of silicon, SiO_2, which occurs in the crystalline forms as quartz, cristobalite, tridymite; as cryptocrystalline chalcedony; as amorphous opal; and as an essential constituent of the silicate groups of minerals. Used in the manufacture of glass and refractory materials. Refractory materials containing a high proportion of silica (over 90%) are known as *acid refractories* (e.g. ganister), and are used in open-hearth and other metallurgical furnaces to resist high temperatures and attack by acid slags.

silica glass (*Min.*). Fused quartz, occurring in shapeless masses on the surface of the Libyan Desert, in Moravia, in parts of Australia, and elsewhere; believed to be of meteoric origin. See **tektites.**

silica valve (*Thermionics*). A valve in which the envelope is made of fused silica in order to withstand high temperatures.

sil'icane (*Chem.*). SiH_4. A gas formed by the action of concentrated hydrochloric acid on magnesium silicide. Also known as SILICO-METHANE and SILICON HYDRIDE.

sil'icates (*Min.*). The salts of the silicic acids, the largest group among minerals; of widely different, and in some cases extremely complex, composition, but all containing silica as an essential component. The micas, amphiboles, pyroxenes, feldspars, and garnets are examples of groups of rock-forming silicates.

silic'eous clay (*Geol.*). A clay rock with an admixture of silica in a finely divided state.

siliceous deposits (*Geol.*). Those sediments, encrustations, or deposits which contain a large percentage of silica in one or more of its modes of occurrence. They may be chemically or mechanically formed, or may consist of the siliceous skeletons of organisms such as diatoms and radiolaria. See also **silification.**

siliceous sinter (*Geol.*). Cellular quartz or translucent to opaque opal, found as incrustations or fibrous growths and deposited from thermal waters containing silica or silicates in solution.

silic'ic acid (*Chem.*). An acid formed when alkaline silicates are treated with acids. Amorphous, gelatinous mass. Dissociates readily into water and silica.

sil'icides (*Chem.*). Compounds formed by the combination of silicon with other elements, chiefly metals.

silicification (*Geol.*). The process by which silica is introduced as a cement into rocks after their deposition, or as an infiltration or replacement of organic tissues or of other minerals such as calcite. See also **novaculite.**

sil'icle, silic'ula, sil'icule (*Bot.*). A capsule derived from two united carpels, divided internally by a replum; contains many seeds, and is short (never more than four times as long as broad, and often not longer than broad).

sil'ico-manganese steel (*Met.*). See **manganese alloys.**

silico-methane (*Chem.*). See **silicane.**

sil'icole (*Bot.*). A plant which grows on soils rich in silica, and usually acid in reaction.

silico'lous (*Bot.*). Growing on rocks containing much silica.

sil'icon (*Chem.*). Symbol, Si. A non-metallic element in the fourth group of the periodic system. At. no. 14, at. wt. 28·06, valency 4. Amorphous silicon is a brown powder; sp. gr. 2·35. Crystalline silicon is grey; sp. gr. 2·42, m.p. 1420° C., b.p. 2600° C. This element is the second most abundant, silicates being the chief constituents of many rocks, clays, and soils. Silicon is manufactured by reducing silica with carbon in an electric furnace, and is used in making certain alloys.

silicon carbide (*Chem.*). SiC. Formed by fusing a mixture of carbon and sand or silica in an electric furnace at a very high temperature. Used as an abrasive and refractory. Also known as CARBORUNDUM and CARBON SILICIDE.

silicon dioxide (*Chem.*). *Silica* (q.v.).

silicon hydrides (*Chem.*). Four volatile hydrides, SiH_4, Si_2H_6, Si_3H_8, and Si_4H_{10}. See also **silicane.**

silicon iron (*Met.*). Iron or low carbon steel to which 0·75-4·0% silicon has been added. Has low magnetic hysteresis. Used for sheets for transformer cores. Typical composition: silicon 4%, manganese under 0·1%, phosphorus 0·02%, sulphur 0·02%, carbon 0·05%.

silicon nitride (*Chem.*). Formed by the combination of silicon and nitrogen.

silicon tetrachloride (*Chem.*). $SiCl_4$. Formed by the action of chlorine on a mixture of silica and carbon or silicon. Liquid.

silicon tetrafluoride (*Chem.*). SiF_4. A gaseous compound formed by the action of hydrofluoric acid on silica. Readily decomposes into silica and hydrofluoric acid.

silico'sis (*Med.*). *Pneumonokoniosis* (q.v.) due to the inhalation of particles of silica by masons and by miners who work in the presence of silica (e.g. gold-miners); tuberculosis of the lung is a common complication.

sil'iqua, silique, sil-ēk' (*Bot.*). A capsule having the general characters of a silicle, but at least four times as long as it is broad.

siliqua (*Zool.*). A pod-shaped structure; as the *siliqua olivae* of the Mammalian brain, a tract of fibres investing the olive.

Silit resistor (*Elec. Eng.*). A tubular resistance element made from a mixture of silicon carbide and silicon.

silk. A fabric made from the natural product of the silkworm, of which there are many varieties, both wild and cultivated. The best known of the cultivated type is the genus *Bombyx.* Of the wild varieties, the worm of the moth *Antheraea mylitta* produces the thread from which tussah or tussur silk is made. See **reeling, throwing, spun silk, schappe, rayon.** See also **silk** (*Zool.*) below. Natural silk is specially useful for the insulation of very fine wires not immersed in oil. Electric strength is about 400V per mil. For *artificial silk* see **rayon.**

silk (*Min.*). A sheen resembling that of silk, exhibited by some corundums, including ruby, and due to minute tubular cavities in parallel orientation. The colour of such stones is paler than normal by reason of the inclusions.

silk (*Photog.*). The silk stretched on a frame which is placed in front of a lens to soften the image registered on the negative.

silk (*Zool.*). A fluid substance secreted by various *Arthropoda.* It is composed mainly of fibroin, together with sericin and other substances, and hardens on exposure to air in the form of a thread. Used for spinning cocoons, webs, egg-cases, etc.

silk, artificial (*Textiles*). See **rayon.**

silky (*Bot.*). Said of a surface covered by fine hairs which lie down and glisten like silk.

sill (*Build.*). A timber or stone forming the lower boundary of a door or window opening.

sill (*Geol.*). A concordant minor intrusion of igneous rock injected as a tabular sheet between, and more or less parallel to, the bedding planes of rocks.

sill (*Hyd.*). The top level of a weir, or the lowest level of a notch.

sill-high (*Build.*). Reaching from floor- or ground-level to the level of the window sill.

sil'limanite (*Min.*). See **fibrolite.**

si'lo (*Civ. Eng.*). A tall construction, usually of reinforced concrete, serving as a container for the storage of loose materials, especially grain.

sil'oxen (*Chem.*). A crystalline substance resembling graphitic acid. Polymerised silicon analogue. Obtained by the action of hydrochloric acid on calcium silicide in the absence of air.

Silox'icon (*Chem.*). Trade-name for a material obtained by heating a mixture of silica with carbon at about 2500° C.; used as a refractory.

silt (*Geol.*). See **silt grade.**

silt (*Hyd. Eng.*). Material of an earthy character deposited in a finely divided form by flowing water. *

silt box (*San. Eng.*). A removable iron box placed at the bottom of a gulley; serves to accumulate the deposited silt, which can be taken away periodically.

silt grade (*Geol.*). Fine-grained sediments, the individual particles of which have the limiting diameters of 0·1 and 0·01 mm. This grade is sometimes subdivided into *coarse silt* (from 0·1 to 0·05 mm.) and *fine silt* (from 0·05 to 0·01 mm.).

Sil'umin (*Met.*). See **Alpax.**

silu'minite (*Diel.*). A substance made from cement and asbestos fibres with oil or bitumen impregnation. Used in place of slate for insulating panels.

Silu'rian System (*Geol.*). The rocks which succeed the Ordovician System and precede the Devonian System. They consist essentially in Great Britain of dark shales with interbedded fossiliferous limestones. Found in Wales, the Lake District, Shropshire, and the Southern Uplands of Scotland. Named by Sir R. I. Murchison after the ancient British tribe, the Silures. See also **Siluric.**

Silu'ric (*Geol.*). Equivalent to *Silurian.* See **Clinton, Medina, Monroan, Niagara, Salinian.**

silver (*Met., Min.*). A pure-white metallic element in the first group of the periodic system. Chem. symbol Ag, at. wt. 107·88, at. no. 47, sp. gr. at 20° C. 10·5, m.p. 960° C., b.p. 1955° C., casting temp. 1030-1090° C., Brinell hardness 37, specific electrical resistivity 1·62 microhms per cm. cub. The metal is not oxidised in air. Occurs massive, or assumes arborescent or filiform shapes. Native silver often has variable admixture of other metals—gold, copper, or sometimes platinum. Used in coinage (50% silver, the remainder nickel with a little copper) and jewellery, and for certain components in food and chemical industry where cheaper metals fail to withstand corrosion.

silver amalgam (*Min.*). A solid solution of mercury and silver, which crystallises in the cubic system. The percentage of silver is usually about 26%, but in the variety *arquerite* reaches 86%. It is of rare occurrence, and is found scattered either in mercury or silver deposits.

silver bromide, silver chloride, silver fluoride (*Chem.*). See **silver halides.**

silver glance (*Min.*). See **argentite.**

silver grain (*Bot.*). The light-greyish, shining flecking seen in oak timber, caused by vascular rays exposed in preparing the timber when it is cut radially through the centre of a log. Also seen in beech.

silver halides (*Chem.*). Silver fluoride, AgF; silver iodide, AgI; silver chloride, AgCl; and silver bromide, AgBr. The bromide and chloride are sensitive to light and are of basic importance in photography.

silver iodide (*Chem.*). See **silver halides.**

silver lead ore (*Min.*). The name given to galena containing silver. When 1% or more of silver is present it becomes a valuable ore of silver. Also called ARGENTIFEROUS GALENA.

silver oxide (*Chem.*). See **argentic oxide, argentous oxide.**

silver solder (*Met.*). See **brazing solders.**

silver voltameter (*Elec. Eng.*). An electrolytic cell used for determining accurately the average value of a current from the quantity of silver deposited from the silver nitrate solution forming the electrolyte.

silver white (*Paint.*). A paint base composed of pure white lead imported from Paris in drops. Also called FRENCH WHITE.

silvering (*Glass*). This process is carried out on a perfectly clean surface of glass by pouring on to it an ammoniacal silver solution, mixed with Rochelle salt, or with a nitric-acid–cane-sugar alcohol mixture. The silver film so formed is washed, backed with varnish, and then painted.

si'ma (*Geol.*). The continuous basaltic shell which underlies both the continental masses beneath the sial and the ocean floors. Samples at ground-level are afforded by the plateau basalts, the world-wide product of fissure eruptions.

sim'ian (*Zool.*). Pertaining to, or resembling, the anthropoid Apes.

Simmonds' disease (*Med.*). Hypophysial cachexia. A rare disease due to destruction of the pituitary gland; characterised by cachexia, atrophy of the skin and the bones, premature senility, loss of hair, and loss of sexual function. *Progeria* is thought to be an example of Simmonds' disease.

simoom' (*Meteor.*). A hot dry wind or whirlwind of brief duration, occurring in the African and Arabian deserts. It usually carries quantities of sand.

simple (*Bot.*). (1) Consisting of one piece.—(2) Unbranched.

simple curve (*Surv.*). A curve composed of a single arc connecting two straights.

simple eye (*Zool.*). See **ocellus.**

simple fruit (*Bot.*). A fruit formed from one pistil.

simple harmonic motion (*Phys.*). A type of vibration which may be represented by projecting on to a diameter the uniform motion of a point round a circle. A characteristic of simple harmonic motion is that the acceleration (and therefore also the restoring force) is proportional to the displacement of the vibrating body from its position of rest.

simple leaf (*Bot.*). A leaf in which the lamina consists of one piece, which, if lobed, is not cut into separate parts reaching down to the midrib.

simple sorus (*Bot.*). A sorus made up of a single sporangium.

simple steam-engine (*Eng.*). An engine with one or more cylinders in which the steam expands from the initial pressure to the exhaust pressure in a single stage.

simple tissue (*Bot.*). A tissue made up of cells all of the same kind.

simple umbel (*Bot.*). An umbel in which the flower stalks arise directly from the apex of the main stalk.

simple venation (*Bot.*). A type of venation in which the midrib alone is clearly visible.

simplex channel (*Elec. Comm.*). A channel of communication which transmits signals in one direction only at a time; complete reversal of apparatus is required for sending signals in the reverse direction. Cf. *duplex channel.*

simplex dialling (*Auto. Teleph.*). In subscriber dialling, use of the two line-wires in parallel, with earth return, to get the maximum change in current for impulsing.

simplex group (*Cyt.*). The haploid complement of chromosomes and factors.

Simplex piling (*Civ. Eng.*). A system of piling in which a cast-iron point is driven to the required depth by means of a steel pipe. The pipe is then filled with concrete and afterwards slowly withdrawn, the concrete filling adapting itself to the irregularities in the ground.

simplex system (*Teleg.*). A telegraph system which uses signals transmitted in one direction only.

simplex winding (*Elec. Eng.*). An armature winding through which there is only one electrical path per pole.

Simpson's rule (*Surv., etc.*). A rule for the estimation of the area of an irregular figure, which for this purpose is divided into an even number of strips of equal width. The lengths of the boundary ordinates of the strips are measured, and the area calculated from the rule which states that the area is equal to one-third the common widths of the strips multiplied by the sum of the first and last ordinates, plus four times the even ordinates, plus twice the odd ordinates.

Sims speculum (*Surg.*). A speculum, shaped like a duck's bill, for viewing the lining of the vagina and the cervix uteri.

simulation (*Zool.*). Mimicry; assumption of the external characters of another species in order to facilitate the capture of prey or escape from enemies.—*v.* **simulate.**

simultaneous broadcasting (*Radio*). Transmission of the same programme simultaneously from two or more transmitters. Abbrev. **S.B.**

si'napism (*Med.*). A mustard plaster.

Sindan'yo (*Elec. Eng.*). A synthetic insulating material of the vulcanite type, taking a very high polish, and consequently much used in place of slate for switch-board panels. *Ebony Sindanyo* is composed of cement and asbestos, with oil or bitumen impregnation.

sine bar (*Eng.*). A hardened steel bar carrying two plugs of standard diameter accurately spaced to some standard distance; used in setting out angles to close limits.

sine condition (*Optics*). A condition which must be satisfied by a lens if it is to form an image free from aberrations (other than chromatic). It may be stated $\mu_1 l_1 \sin \alpha_1 = \mu_2 l_2 \sin \alpha_2$, where μ_1 and μ_2 are the refractive indices of the media on the object and image sides of the lens respectively, l_1 and l_2 are the linear dimensions of the object and image, and α_1 and α_2 are the angles made with the principal axis by the conjugate portions of a ray passing between object and image.

sine galvanometer (*Elec. Eng.*). A galvanometer in which the coil and scale are rotated to keep the needle at zero. The current is then proportional to the sine of the angle of rotation. The arrangement can be made more sensitive than the tangent galvanometer.

sine wave (*Phys.*). A wave in which the particles execute transverse vibrations of a simple harmonic type. A sine wave may be represented by the general equation

$$y = a \sin 2\pi\left(\frac{t}{T} - \frac{x}{\lambda}\right),$$

in which y is the displacement of a particle at a distance x from the origin, the wave having travelled this distance in time t; a is the amplitude, T the period, and λ the wavelength. See **waves.**

singeing (*Textiles*). Removing outstanding fibres from the face of a cloth to increase the lustre; effected by passing the cloth over gas flames or over incandescent plates or rollers.

singing (*Elec. Comm.*). The continuous oscillation of audio frequency which is set up in a telephone circuit by energy feed-back round the circuit of a repeater; due to inexact impedance balancing of the lines to which the repeater is connected.

singing point (*Teleph.*). The degree of stability, as measured by the gain of a repeater, which is just possible before the repeater provides sufficient feed-back power to sustain self-oscillation; basically due to unbalance of the impedances supposed to match the connected lines in both directions. In a line, taken as a whole, the singing point is determined by the increased loss necessary to overcome the reflection of power by the distributed irregularities.

singing spark system (*Radio*). The same as *musical spark system.*

single-acting engine (*Eng.*). A reciprocating engine in which the working fluid acts on one side of the piston only, as in most I.C. engines.

single-beat escapement (*Horol.*). An escapement in which the balance receives impulse only at every alternate vibration, e.g. the chronometer and duplex escapements.

single block (*Teleg.*). A large condenser at the receiving end only of a submarine cable, to improve the definition of the received fluctuation of current. See **double block.**

single-break switch (*Elec. Eng.*). A switch having only one pair of main contacts.

single bridging (*Carp.*). Bridging in which a pair of diagonal braces are used to connect adjacent floor-joists at their middle points.

single-catenary suspension (*Elec. Eng.*). A catenary suspension system in which the conductor wire is hung from a single catenary or bearer wire.

single-channel (*Elec. Comm.*). Said of a transmission system when it carries one channel of communication only, although there is the possibility of carrying many more.

single-core cable (*Elec. Eng.*). A cable having only one conductor.

single current (*Teleg.*). In a telegraph system, the use of line-currents which are of one polarity for mark, and zero for spacing.

single-cylinder machine (*Paper*). A machine in which the wet paper is pressed on a polished heated cylinder and dried during one revolution. A high glaze is imparted to one side of the paper, while the other side remains rough. Also known as YANKEE MACHINE, M.G. MACHINE.

single-electrode system (*Elec. Eng.*). The electrode of an electrolytic cell and the electrolyte with which it is in contact. Also called HALF-CELL, HALF-ELEMENT.

single Flemish bond (*Build.*). A form of bond combining English bond for the body of the wall with Flemish bond for the facework.

single floor (*Carp.*). A floor in which the bridging joists span the distance from wall to wall without intermediate support.

single flower (*Bot.*). A flower with one set of petals and no indications of doubling.

single-hung window (*Build.*). A window having top and bottom sashes, of which only one (usually the bottom sash) is balanced by sash cord and weights so as to be capable of vertical movement.

single laths (*Build.*). Wood laths 1 in. by $\frac{1}{8}$ in. to $\frac{3}{16}$ in. thick in section.

single-layer winding (*Elec. Eng.*). A type of armature winding in which there is only one coil-side per slot.

single measure (*Join.*). Joinery work which is square on both sides.

single-needle system (*Teleg.*). A telegraph system which uses indicating galvanometers with single needles, deflections to the left or right indicating the coded signal.

single-phase (*Elec. Eng.*). A method of a.c. supply utilising only two conductors.

single-phase induction regulator (*Elec. Eng.*). An induction regulator for use on a single-phase circuit; the arrangement is such that the voltage on the secondary side is always in phase with that on the primary side. Cf. *three-phase induction regulator.*

single-pivot instrument (*Elec. Eng.*). An instrument in which the moving element is supported at its centre of gravity on a single pivot.

single-plate clutch (*Eng.*). A *friction clutch* (q.v.) in which the disc-shaped or annular driven member, fabric-faced, is pressed against a similar face on the driving member by springs, being withdrawn against them through a thrust collar; used in automobiles.

single-pole switch (*Elec. Eng.*). A switch for opening or closing one only of the two leads to an electric circuit.

single quotes (*Typog.*). See **inverted commas.**

single-rate prepayment meter (*Elec. Eng.*). A prepayment meter in which the circuit is broken and the supply cut off after a predetermined number of units have been consumed.

single-retort underfeed stoker (*Eng.*). An *underfeed stoker* (q.v.) consisting of a retort along the bottom of which coal is fed by a steam-driven ram or a screw conveyor, air being supplied through tuyeres round the upper edge of the retort and into the sealed ash-pit below.

single-row radial engine (*Eng.*). A *radial engine* (q.v.) in which the cylinders are disposed in one plane, operating on a common crank-pin.

single side-band system (*Radio*). A system of radio communication in which means are employed to remove either the upper or lower side-band from an amplitude-modulated transmission, with a view to reduction in the channel width occupied and improvement in the signal noise ratio.

single side-band transmission (*Elec. Comm.*). The transmission of one side-band, usually the lower side-band, as the minimum necessary frequency band-width for telephonic speech. The carrier and the other side-band are eliminated by filters after modulation, and before transmission with other similar channels, which occupy other frequency-bands.

single-sole shoes (*Shoes*). Generally, light-weight shoes, with the sole attached directly to the upper by some method of sewing.

single switch call (*Teleph.*). In international telephony, a transit call which involves two international circuits. See **double switch call.**

single transfer process (*Photog.*). The carbon process in which a single transfer is performed. Cf. *double transfer process.*

single-turn coil (*Elec. Eng.*). An armature coil consisting of a single turn of copper bar.

single-turn transformer (*Elec. Eng.*). A current transformer in which the primary winding takes the form of a single straight conductor of heavy cross-section, to which the cable or bus-bar is connected.

single-wave rectification (*Radio*). See **half-wave rectification.**

single-wire feeder (*Radio*). A feeder for an antenna, similar to an ordinary downlead, but connected to the antenna in such a manner that it is terminated in its characteristic impedance, so that no standing waves are formed on it.

single-wire system (*Elec. Eng.*). A method of d.c. distribution making use of a single outgoing conductor and using the earth as the return conductor.

singles (*Build.*). Small roofing slates about 12 × 8 in.

singles (*Textiles*). Threads of raw silk, as reeled from the cocoons, which consist of a small number of strands, slightly twisted.

singlet (*Chem.*). A chemical bond which consists of a single shared electron.

sin'istrorse (*Zool.*). Twisting in a spiral from right to left; said of gastropod shells. Cf. *dextrorse.*

sink (*Cinema.*). See **synchronisation.**

sink (*Horol.*). A recess: the spherical depression around a pivot hole for holding the oil.

sink (*San. Eng.*). A trough serving as a receptacle for dirty water, kitchen wastes, etc., fitted with an outlet to a trapped waste-pipe discharging to the drains.

sinkage (*Textiles*). The term used to indicate the losses in weight which occur in wool materials during the different processes of scouring and finishing. Also called SHRINKAGE.

sinker (*Bot.*). An absorbing organ formed by mistletoe, which penetrates the wood of the host.

sinker (*Hosiery*). The mechanism in a knitting machine that pushes a length of thread over the spring needles to form a new course of loops.

sinker bar (*Mining*). A heavy bar attached to the cable above the drilling tools used in percussive drilling.

sinking (*Civ. Eng.*). The operation of excavating for a shaft, pit, or well.

sinking (*Join.*). A recess cut below the general surface of the work.

sinter (*Chem.*). To coalesce into a single mass under the influence of heat, without actually liquefying.—(*Min.*) A concretionary deposit of opaline silica which is porous, incrusting, or stalactitic in habit; found near geysers, as at Yellowstone Park (U.S.A). Also called GEYSERITE.

sintering (*Elec. Eng.*). The process of consolidating the filament of an electric lamp by passing a relatively high current through it when in a vacuum.

sintering (*Met.*). The fritting together of small particles to form larger particles, cakes, or masses; in case of ores and concentrates, it is accomplished by fusion of certain constituents; in case of metal powders, by welding of the particles by heat and pressure. See **sintered carbides***.

sin'uate (*Bot.*). (1) Said of gills of agarics which show a sudden curvature as they reach the stipe. —(2) In general, having a margin divided into wide irregular teeth or lobes, separated by shallow notches.

sin'uose (*Bot.*). Waved from side to side.

sinuous flow (*Hyd.*). See **eddy flow.**

sinupal'liate (*Zool.*). (Of *Pelecypoda*) having a distinct indentation of the pallial line posteriorly, owing to the presence of a siphon.

si'nus (*Bot.*). A depression or notch in a margin between two lobes.—(*Zool.*) A cavity or depression of irregular shape.

sinus pocula'ris (*Zool.*). See **uterus masculinus.**

sinus rhomboida'lis (*Zool.*). In an early Vertebrate embryo, the posterior part of the neural groove before the medullary folds have closed over it: the wide diamond-shaped cavity of the lumbar region of the spinal cord into which this develops later.

sinus veno'sus (*Zool.*). In a Vertebrate embryo, the most posterior chamber of the developing heart: in lower Vertebrates, the tubular chamber into which this develops and which receives blood from the veins or sinuses and passes it into the auricle.

sinusi'tis (*Med.*). Nasal sinusitis. Inflammation of any one of the air-containing cavities of the skull which communicate with the nose.

sin'usoid (*Zool.*). In Vertebrates, a sinus-like blood space connected usually with the venous system and lying between the cells of the surrounding tissue or organ.

sinusoid'al (*Elec. Eng.*). An alternating quantity is said to be *sinusoidal* when its trace, plotted to a time base, is a sine wave.

si'pho-, sipho'no- (Greek *siphōn*, gen. *siphōnos*, tube). A prefix used in the construction of compound terms; e.g. *siphorhinal* (q.v.).

siphon (*Bot.*). An elongated cell which extends the whole length of a joint in some red algae.

siphon (*Civ. Eng.*). (1) A pipe line full of water connecting two reservoirs, and rising above the hydraulic gradient but not above the absolute hydraulic gradient, so that flow can take place under the action of atmospheric pressure.—(2) A pipe or aqueduct crossing a valley and rising again to somewhat less than its inlet-level, so as to have the necessary hydraulic gradient. More correctly called an INVERTED SIPHON.

siphon (*Zool.*). A tubular organ serving for the intake or output of fluid, as the pallial siphons of many bivalve *Mollusca*.—*adj.* **si'phonate.**

siphon spillway (*Civ. Eng.*). A siphon connecting the upstream and the downstream sides of a reservoir dam, thus enabling flood waters to pass as in the case of a *bye-channel* (q.v.).

siphon trap (*San. Eng.*). A trap having a double bend like an S on its side, the lower bend containing the water seal preventing reflux of foul gases. Fitted to closets and sinks.

Siphonap'tera (*Zool.*). An order of *Endopterygota* in which wings are lacking; the mouth-parts are adapted for piercing and sucking; the antennae are three-jointed, and the eyes, when present, are simple; the larvae are legless but active, and feed on organic debris; the adults are intermittent parasites of Mammals or Birds. Fleas.

sipho'neous (*Bot.*). Tubular.

si'phonet (*Zool.*). The cornicle or honeydew tube of an Aphid.

sipho'nium (*Zool.*). In *Loricata*, a membranous tube connecting the air-passages of the quadrate with an air-space in the os articulare of the mandible.—*adj.* **sipho'nial.**

si'phonogam (*Bot.*). A plant in which the contents of the pollen grain pass into the embryo sac through a pollen tube.

si'phonoglyph (*Zool.*). In *Anthozoa*, a longitudinal ciliated groove of the stomodaeum.

Siphonoph'ora (*Zool.*). An order of *Hydrozoa* the members of which form free-swimming colonies without skeletal structures developed from an original medusiform individual; the medusae usually remain attached, and polymorphism of both hydroid and medusoid persons occurs.

si'phonostele (*Bot.*). A hollow tube of vascular tissue, enclosing a pith and embedded in ground tissue.

siphonosto'matous (*Zool.*). Having a tubular mouth: (of *Gastropoda*) having the anterior end of the shell-aperture produced into a spout.

siphonozo'oid (*Zool.*). In *Alcyonaria*, a type of polyp lacking tentacles and gonads and having filaments only on the dorsal mesenteries. Cf. *autozooid.*

siphorhi'nal (*Zool.*). Having tubular nostrils.

si'phosome (*Zool.*). The lower part of a siphonophoran colony, to which the nutritive and reproductive individuals are attached.

si'phuncle (*Zool.*). In Aphids, the honeydew tube: in *Nautiloidea*, a narrow vascular tube extending from the visceral region of the body through all the chambers of the shell to its apex.—*adj.* **siphun'culate.**

Sippy treatment (*Med.*). The treatment of gastric ulcer by diet and by administering alkalies in order to neutralise the hydrochloric acid of the gastric juice.

Sipunculoi'dea (*Zool.*). A phylum of non-metameric worm-like *Coelomata*, bearing a simple circular retractile lophophore anteriorly and having a dorsal anus close to the mouth; there is a closed vascular system; solitary marine forms living in the sand or mud of the ocean floor.

Sir'apite (*Build.*). A proprietary form of gypsum plaster made by calcining certain gypsums naturally containing bitumen. Much used in two-coat work in place of three-coat lime plaster.

siren (*Acous.*). A powerful source of noise of a more or less pure tone; the noise is usually generated by the periodic escape of compressed air through a rotary shutter.

Sire′nia (*Zool.*). An order of large aquatic Mammals of herbivorous habit; the fore limbs are fin-like, the hind limbs lacking; there is a horizontally flattened tail-fin; the skin is thick with little hair, there are two pectoral mammae, and the neck is very short. Sea Cows, Manatees, and Dugongs.

sirenome′lus (*Med.*). A foetal monster with fused legs but no feet.

siroc′co, sciroc′co (*Meteor.*). A warm moist wind from the south or south-east, which blows before the eastward passage of a depression in Mediterranean regions.

sisal hemp (*Bot.*). A fibrous material used extensively for cordage and binder-twine. The chief source is *Agave sisalana*, which grows on waste ground in the Yucatan district and Mexico.

Sisalcraft (*Build.*). Trade-name for a sheathing paper.

sister cell (*Biol.*). One of the two cells formed by the division of a pre-existing cell.

sister nucleus (*Biol.*). One of the two nuclei formed by the division of a pre-existing nucleus.

site (*Build., Civ. Eng.*). An area of ground which is to be the location of engineering or building works.

site error (*Radio*). A stable error in direction-finding due to the presence of reflecting obstacles, or of a coast, near the site of the receiving antennae.

site rivet (*Struct.*). A *field rivet* (q.v.).

sit′fast (*Vet.*). A small hard lump on the skin of a horse's back.

sitos′terol (*Chem.*). $C_{29}H_{50}O$, a sterol derivative, found in corn oil, which resembles closely cholesterol.

sitotro′pism (*Zool.*). Reaction or response to the stimulus of food.

six-phase (*Elec. Eng.*). A term applied to circuits or systems of supply making use of six alternating voltage phases, vectorially displaced from each other by $\pi/3$ radians.

Six's thermometer (*Heat*). A form of *maximum and minimum thermometer* (q.v.) consisting of a bulb containing alcohol joined to a capillary stem bent twice through 180°. A long thread of mercury is in contact with the alcohol in the stem, and this mercury moves as the alcohol in the bulb expands and contracts. Each end of the mercury thread pushes a small steel index in front of it, one of which registers the maximum temperature and the other the minimum.

sixteen′mo (*Print.*). A book whose sheets are folded into sixteen leaves (thirty-two pages). Also called SEXTODECIMO and written 16*mo*.

sixty-fourmo (*Print.*). A sheet folded into sixty-four leaves.

size (*Paint., etc.*). An animal glue in powder or jelly form, used in cheap work as an undercoating for distempers and wall-papers in order to prevent the wall from absorbing moisture from them.

size water (*Paint., Plast.*). A solution of size in hot water. It is added to plaster to make it more slow-setting, or used as an undercoating on walls. See **size**.

size distribution (*Chem.*). The proportion of each group of particles, of about the same size from small to large, which in the aggregate make the whole.

size-grading (*Chem.*). The process of determining the general distribution of particles of different sizes in a material.

sizing (*Textiles*). The term *sizing* comprehends several processes employed at various stages and for different purposes in the manufacture of textile fabrics, e.g. the application of binding materials such as flours, starches, animal sizes; softeners such as lubricants; weighting materials.

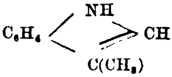
S.J. (*Build.*). Abbrev. for *soldered joint*.

skarn (*Geol.*). A Swedish mining term applied to the silicate-gangue minerals associated with the magnetite ores in Sweden. They occur in Archaean rocks, and have been formed by the replacement of carbonates through the action of hot solutions. The term is now extended to cover analogous deposits elsewhere.

skate (*Elec. Eng.*). The special type of sliding contact piece by which an electric tractor collects current in the surface-contact system of electric traction supply.

skate, sidetracking (*Aero.*). (1) A device to move an aeroplane sideways on the ground, for manœuvring in confined spaces, as when packing into sheds.—(2) A shoe for slipping beneath the wheels for handling an aeroplane on soft snow.

skat′ole (*Chem.*).



$C_6H_4\langle {}^{NH}_{C(CH_3)} \rangle CH$; 3-methylindole, colourless plates, of faecal odour; m p. 95° C.

skein (*Cyt.*). The nuclear reticulum.

skein (*Textiles*). (1) A fixed quantity of yarn or thread; wool, cotton, or silk yarn wound on a frame to a fixed length, and then doubled and secured by a knot for convenience in handling.—(2) The unit of length in the counting of woollen yarns and silk yarns. See **count**.

skeletal muscle (*Zool.*). See **striated muscle.**

skeletog′enous (*Zool.*). Forming or taking part in the formation of the skeleton.

skeleton (*Anat., Zool.*). The rigid or elastic, internal or external, framework, usually of inorganic material, which gives support and protection to the soft tissues of the body and provides a basis of attachment for the muscles.—*adjs.* **skel′etal, skeletog′enous.**

skeleton (*Surv.*). The network of survey lines providing a figure from which the shape and salient features of the survey may be determined.

skeleton crystals (*Geol.*). Imperfect crystals of very minute size occurring in glassy igneous rocks; often merely three-dimensional frameworks, the interstices in which would have been filled in under conditions of slower cooling. See also **dendrite.**

skeleton drums (*Paper*). Drums over which paper is dried after being animal-sized. Fans revolve in a direction opposite to the travel of the paper and expedite the drying process.

skeleton flashing (*Plumb.*). A *stepped flashing* (q.v.).

skeleton key (*Build.*). A special key of skeleton form, capable of operating a number of different locks.

skeleton movement (*Horol.*). A clock or watch movement the plates of which have been pierced or cut away to show the mechanism.

skeleton steps (*Build.*). Steps in a stair, made usually of cast-iron, in which there are no risers but only treads fixed at suitable positions above one another between side supporting pieces.

skeleton-type switchboard (*Elec. Eng.*). A switchboard consisting of a metal framework upon which the switches and other apparatus is mounted. Also called FRAME-TYPE SWITCHBOARD.

Skelgill Group (*Geol.*). The name given to the lower portion of the Llandovery Series of rocks in the Lake District and the North of England. They consist of pale mudstones and black shale yielding a rich graptolitic fauna.

skelp (*Met.*). Mild steel strip from which tubes are made by drawing through a bell at welding temperature, to produce lap-welded or butt-welded tubes.

skene arch (*Civ. Eng*). An arch having the shape of a circular arc subtending less than 180°. Also called SCHEME ARCH.

skep (*Mining*). See **skip.**

skew. Generally, irregular, unsymmetrical, oblique.

skew arch (*Build., Civ. Eng.*). An arch which has its axis or line of direction oblique to its face.

skewback (*Civ. Eng.*). The part of a pier which immediately supports a segmental arch. Its upper bed is inclined towards the centre of the arch, to correspond with those of the voussoirs, while its lower bed is horizontal, to correspond with those of the stones in the pier.

skew bevel gear (*Eng.*). A *hypoid bevel gear* (q.v.).

skew butt (*Build.*). A *skew corbel* (q.v.).

skew coil (*Elec. Eng.*). An unsymmetrical coil inserted in the armature winding of an alternator having an odd number of pole pairs.

skew corbel (*Build.*). The projecting masonry or brickwork supporting the foot of a gable coping.

skew fillet (*Build.*). A *tilting fillet* (q.v.).

skew flashing (*Plumb*). A flashing fixed down a gable wall.

skew nailing (*Carp.*). The operation of driving nails in obliquely.

skew rabbet plane (*Join*). A rabbet plane with its cutting edge arranged obliquely across the sole.

skew-table (*Masonry*). A stone which is bonded in with a gable wall, as a support for the foot of the coping.

skew wall (*Acous.*). In a studio, a wall which does not form a face of a parallelopiped; the walls are so arranged that continuous reflections between opposite walls are obviated.

skewed pole (*Elec. Eng.*). A field pole whose cross-section is a parallelogram instead of the usual rectangle.

skewed slot (*Elec. Eng.*). A slot whose diameter is not parallel to the axis of rotation.

ski'agraphs (*Photog.*). Photographs made by exposure of sensitive emulsions to X-rays. See **radiograph.**

skias'copy (*Med.*). See **retinoscopy.**

skid, skidding. Movement of a road vehicle under a condition of sliding friction, as distinct from rolling friction.

skid (*Aero.*). See **tail skid.**

skids (*Build.*). Small pieces of timber packed under a surface to bring it to the plane.

Skidda'vian (*Geol.*). An alternative name given to the lowest division (Arenig Series) of the Ordovician System in the British Isles, and applied particularly to the graptolitic shale facies of that formation in the Lake District.

Skiddaw Slates (*Geol.*). A thick group of highly cleaved slates, found in the core of the Lake District of England, and of Lower Ordovician (Arenigian to Llanvirnian) age.

skiffling (*Masonry*). The operation of breaking projecting pieces off stones in a quarry when they are being rough dressed.

skim coulter (*Agric. Mach.*). A form of coulter sometimes fitted to a plough, in advance of the coulter; it pares the edge of the furrow slice.

skimming coat (*Plast.*). The *setting coat* (q.v.).

skin. The protective tissue layers of the body-wall of an animal, external to the musculature. See **epidermis.**

skin (*Bot.*). (1) Epidermis.—(2) The plant material which forms the outer part of a periclinal chimaera.

skin (*Eng.*). The hard surface layer found on iron castings due to the rapid cooling effect of the mould.

skin effect (*Elec. Eng.*). The effect, especially prominent at radio frequencies, of the alternating current in a conductor, which tends to concentrate near the surface, thus increasing the effective resistance. The resistance to 50-cycle current of a 0·75-inch conductor is 1·02 times the d.c. resistance, the effect increasing with frequency.

skin gills (*Zool.*). See **papulae.**

skin wool (*Textiles*). Wool removed from the fleeces of slaughtered sheep, whether by a liming, sulphide, or sweating process. In the first two processes the skins are painted on the flesh side with lime, or sodium sulphide; in the last named, the skins are steeped in water and then hung in a closed chamber.

skinner (*Elec. Comm.*). The length of insulated wire between the point of connexion to a solder tag and the cable form from which it emerges.

Skinoff (*Civ. Eng.*). Trade-name of a retarder, which in use is applied to the shuttering in which concrete work is being moulded.

skintled (*Build.*). Said of brickwork in which the bricks are laid irregularly, so as to leave an uneven surface on the wall; also of a similar effect produced by protruding mortar squeezed from the joints.

skiophyte (*Bot.*). See **sciophyte.**

skip (*Civ. Eng.*). A bucket used for the transport of spoil or materials and hung for this purpose from a crane or cableway.

skip (*Mining*). A guided steel or duralumin box for hoisting coal or mineral up a shaft. A kibble hangs freely in the shaft. Also called SKEP.

skip distance (*Radio*). The minimum distance from a transmitter, beyond the zone where no signals are audible, where the reflected ray returns to earth and the signals become audible again.

skip draft (*Textiles*). An order for drawing warp threads through the eyes of the healds, a number of healds being *skipped*, or missed, at intervals.

skip effect (*Radio*). The effect, prominent at short wavelengths, of the signal from a transmitter becoming inaudible at a relatively short distance away, although being readily receivable at greater distances owing to reflection from the Heaviside layer.

skip-shaft draft (*Textiles*). An order for drawing warp threads through the eyes of the healds, alternate healds being *skipped*, or missed. A skip-shaft draft on 4 shafts is in the order 1, 3, 2, 4; on 8 shafts 1, 3, 5, 7, 2, 4, 6, 8.

skip-tooth saw (*Tools*). A saw from which alternate teeth are cut away.

skipping line scanning (*Television*). The same as *interlaced scanning*.

skipping printer (*Cinema.*). A contact printer of cinematograph film which prints selected frames rather than each one in turn.

skirt (*Elec. Comm.*). The lower side portions of a resonance curve.

skirting board (*Build.*). A board covering the plaster wall where it meets the floor. Also called BASEBOARD, MOP-BOARD, WASHBOARD.

skirtings (*Textiles*). Dirty or coarse wool removed from the skirt of a fleece after shearing.

skittle pot (*Glass*). A small pot, in shape resembling a skittle, which can be set in a furnace in some small corner to melt a special glass, e.g. a colour. Some small firms use a furnace holding only 4 or 6 of these, fired by coke.

skiv'er (*Leather*). The grain split from a sheepskin, used in the finished state for bags, purses, etc.

skot'ograph (*Photog.*). A developable image produced in a photographic emulsion by radiation from organic tissue in the dark.

Skraup's synthesis (*Chem.*). The synthesis of quinoline by heating aniline with glycerine and sulphuric acid, in the presence of nitrobenzene or arsenic acid as oxidising agent.

Skrinkle Sandstones (*Geol.*). A group of quartzitic sandstones and breccias of subangular quartz fragments; of Upper Devonian age; found in Pembrokeshire.

skull (*Zool.*). In *Vertebrata*, the brain case and sense-capsules, together with the jaws and the branchial arches.

skunk (*Furs*). The dressed skin of the skunk (*Mephitis*), an American burrowing animal. The fur is long, glossy, and usually black, with markings along the back, and the tail is tipped with white.

skut'terudite (*Min.*). Grey or whitish arsenide of cobalt, which crystallises in the cubic system and sometimes assumes a massive granular habit.

sky (*Meteor.*). See **blue of the sky.**

sky light (*Bot.*). The diffuse light falling on a plant from the sky, in contrast with direct sunlight.

skylight (*Build.*). A glazed opening in a roof.

skyscraper (*Build.*). A very tall, multistoreyed building.

sky wave (*Radio*). See **indirect ray.**

skyteens (*Textiles*). The name for satin weave shirting with a light blue ground and stripes of other colours.

S.L. (*Build.*). Abbrev. for *short lengths*.

S.L.-type cable (*Cables*). Separate-lead-type cable. Each core has its own lead sheath, and a fourth lead sheath encloses the whole.

slab (*Carp.*). An outer piece of a log cut away in the process of slabbing.

slab (*Civ. Eng.*). (1) The upper part of a reinforced concrete floor supported at intervals by beams underneath, which are continuous with it. See **T-beam.**—(2) A thin flat piece of stone, concrete, etc.

slab and girder floor (*Civ. Eng.*). A ferro-concrete floor in which the secondary beams are embodied with a thin slab for the floor surface.

slab coil (*Elec. Eng.*). A coil in the form of a flat spiral; the term is normally applied to inductance coils.

slabbing (*Carp.*). The operation of squaring a log.

slack (*Mining*). Small coal, coal dirt; as in SLACK HEAP, a tip or dump.

slack blocks (*Civ. Eng.*). A pair of wedge-shaped blocks of hard wood packed beneath each end of a centre, and placed in contact with their thin ends pointing in opposite directions, so that by moving them relatively the centre may be gradually lowered on completion of the work.

slack-water navigation (*Civ. Eng.*). River or canal navigation rendered possible by the construction of dams across the stream at intervals, dividing it into separate reaches, communication being maintained by the use of locks. Also called STILL-WATER NAVIGATION.

slade (*Agric. Mach.*). A flat plate attached to the body of a plough to take up the vertical reactions of the ground when the plough is working.

slade (*Build.*). An inclined pathway.

Slade Beds (*Geol.*). A group of green mudstones and thin limestones which form the highest part of the Ashgillian Series of the Ordovician System in South Wales.

slag (*Met.*). The top layer of the two-layer melt formed during smelting and refining operations. In smelting it contains the gangue minerals and the flux; in refining, the oxidised impurities.

slag cement (*Civ. Eng.*). An artificial cement made by granulating slag from blast furnaces by chilling it in water and then grinding it with lime, to which it imparts hydraulic properties.

slag wool (*Met.*). An aggregate of fine filaments of slag produced by blowing a blast of air through a stream of blast-furnace slag. Used for heat insulation in high-temperature furnaces, etc. Also called MINERAL WOOL.

slaked lime (*Build.*, *Chem.*, *etc.*). See under **caustic lime.**

slaking (*Build.*). The process of combining quicklime with water.

slamming stile (*Join.*). The upright member of a door case against which the door shuts and into which the bolt of a rim lock engages.

slap dash (*Plast.*). A rough finish given to a wall by coating it with a plaster containing gravel or small stones.

slashed (*Bot.*). Deeply cut by tapering incisions.

slasher (*Textiles*). (1) The slasher sizing machine; it performs the operations of sizing, drying, and beaming yarn intended for warp.—(2) The operative in charge of the slasher sizing machine.

slat (*Aero.*). An auxiliary aerofoil which constitutes the forward portion of a slotted aerofoil, the space between it and the main portion of the structure forming the slot.

slat (*Carp.*). A thin flat strip of wood.

slat conveyor (*Eng.*). See **apron conveyor.**

slate (*Geol.*). A sedimentary rock of the clay or silt grade which, as a consequence of regional metamorphism, has developed a good slaty cleavage. Cf. *Stonesfield Slate*, *Collyweston Slate.*—(*Build.*) A thin slab of slate used in roof or wall covering.—(*Elec.*) Slate is used for switchboard panels. Care must be taken to avoid the use of pieces with conducting veins of pyrites, magnetite, etc. The electrical strength is 5 to 7 kV per inch for 1 inch thickness.

slate axe (*Tools*). A *sax* (q.v.).

slate boarding (*Build.*). Close boarding laid as an underlining to, and a support for, roofing slates or tiles.

slate cramp (*Build.*). A piece of slate about 7×2¼×1 in. cut to a narrow waist at the middle, and fitted flush into mortises in adjacent stones to bind them together.

slate hanging (*Build.*). Similar to *weather tiling* (q.v.), slates being used instead of tiles.

Slatex (*Build.*). Trade-name of a bituminous waterproofing agent.

slating (*Build.*). A roof-covering formed of slates.

slating and tiling battens (*Build.*). Any pieces of square-sawn converted timber between ⅝ and 1¼ in. in thickness and from 1 to 3½ in. in width; commonly used as a basis for slating and tiling.

slaty cleavage (*Geol.*). The property of splitting easily along regular, closely spaced planes of fissility, produced by pressure in fine-grained rocks, the cleavage planes lying in the directions of maximum elongation of the mass.

slaughterhouse. A place in which cattle or sheep are killed.

slavery (*Zool.*). See **dulosis.**

slay (*Weaving*). See **sley.**

sledge-hammer (*Eng.*). A heavy double-faced or straight-paned hammer, weighing up to 100 lb. or over, swung by both hands.

sleekers (*Foundry*). Moulders' tools having a smoothing face made to various shapes, for smoothing over small irregularities in the sand of the mould. Also called SMOOTHERS. See **corner tool.**

sleep movement (*Bot.*). The folding together of the leaflets of a compound leaf at night, so that surfaces bearing numerous stomata are brought together; the significance of the movement is not yet understood.

sleeper (*Carp.*). A horizontal timber supporting a vertical shore or post, and distributing the load over the ground.—(*Rail.*) A beam passing transversely beneath the rails, which it supports and prevents from spreading apart. Also called CROSS-TIE, CROSS-SILL.

sleeper plate (*Build.*). A wall plate resting upon a sleeper wall.

sleeper wall (*Build.*). A low wall built under the ground storey of buildings having no basement, as a support for the floor joists. When in brick, the wall is built honeycombed to leave spaces for ventilation, and when in stone small piers at intervals provide the support required.

sleeping sickness (*Med.*). See **trypanosomiasis.**

sleeping sickness, avian (*Vet.*). See **spirochaetosis (avian).**

sleepy sickness (*Med.*). See **epidemic encephalitis.**

sleepy sickness of foxes (*Vet.*). Chronic bronchitis due to infection by nematode worms of the genus *Encoleus*.

sleet (*Meteor.*). A mixture of rain and snow, or partially melted snow.

sleeve (*Elec. Eng.*). See **plain coupler.**

sleeve (*Eng.*). A tubular piece, usually one machined externally and internally.

sleeve (*Teleph.*). (1) The thin slug which is placed over the core of the line relay in a subscriber's line circuit. Made of nickel-iron, so that the inductance of the relay, which also acts as a feeding bridge, is enhanced, with a reduction of the number of turns and consequent lower resistance.—(2) The outermost contact on three-conductor flexible cords, terminating in conductor plugs which terminate the cord circuit. It is connected to the S-wire of the circuit. See **S-wire.**

sleeve joint (*Elec. Eng.*). A conductor joint formed by a sleeve fitting over the conductor ends. It is either pinned or soldered to the conductors.

sleeve piece (*Plumb.*). A short length of brass or copper pipe, used in forming a joint between a lead pipe and one of some other material. Also called THIMBLE.

sleeve valve (*I.C. Engs.*). A thin steel sleeve fitted between the cylinder and the piston of a petrol- or oil-engine. It is given a reciprocating and rotary oscillating motion, thus causing ports cut in it to register alternately with corresponding inlet and exhaust ports in the cylinder wall.

slenderness ratio (*Struct.*). See **ratio of slenderness.**

sley or **slay** (*Weaving, etc.*). (1) To pass the warp threads through a reed, for dressing or weaving.—(2) The reed guiding the warp threads in a loom, and carrying the raceboard and shuttle boxes. It has a to-and-fro movement which enables it to beat up the weft to the edge of the cloth.—(3) A guideway in a knitting machine.—(4) The part of a lace machine, between the beams and the thread guides, which functions in keeping the threads properly arranged.

sley sword (*Weaving*). One of the two metal arms, attached to a rocking shaft, which support the sley in a loom.

slicing (*Cinema.*). Rotating a microphone so that its axis is diverted from the source of sound.

slick (*Join.*). A chisel with a wide cutting edge, used for paring the sides of tenons and mortises.

slick'ensides (*Geol.*). Smooth, grooved, polished surfaces produced by friction on fault-planes and joint faces of rocks which have been involved in faulting.

slicker (*Foundry*). A small implement used by a moulder for smoothing the surface of a mould.

slicker (*Leather*). A metal, vulcanite, stone, or glass implement, used for smoothing or stretching leather.

slide (*Mining*). A vertical crack in a vein, along which movement has taken place: the clay filling of such a crack: a fault.

slide (*Photog.*). See **dark slide; also projection lantern.**

slide-back (*Radio*). The depression of the mean potential of the grid of a thermionic valve which occurs when a relatively large alternating voltage is applied to it and the external grid to cathode path offers a high resistance to direct current.

slide bars (*Eng.*). See **guide bars.**

slide-rails (*Elec. Eng.*). Slotted rails, secured to the floor, on which the base-plate of an electric motor is fixed. As the driving belt stretches the motor can be moved along the rails to take up the slack.

slide-resistance (*Elec. Eng.*). A rheostat whose ohmic value is adjusted by sliding a contact over the resistance wire.

slide rest (*Eng.*). A slotted table carrying the tool post of a lathe. It is mounted on the saddle or carriage, and is capable of longitudinal and cross traverse.

slide rule. A device for performing mechanically arithmetical processes, as multiplication, division, etc. It consists of one rule sliding within another, so that their adjacent similar logarithmic scales permit of the addition and subtraction, corresponding to the multiplication and division, of the numbers engraved thereon.

slide valve (*Acous.*). The slide, containing holes, which is drawn across the supply of air to a rank of organ pipes, to stop the pipes speaking when a key is depressed. Operated by draw-stops through trackers and stickers.

slide valve (*Eng.*). A steam-engine inlet and exhaust valve shaped like a rectangular lid. It is reciprocated inside the steam chest, over a face in which steam ports are cut, so as alternately to admit steam to the cylinder and connect the ports to exhaust through the valve cavity. See **D-slide valve, piston valve.**

sliding caisson (*Hyd. Eng.*). A floating body used to open or shut the entrance to a dock or basin, and capable of being drawn for the former purpose into a recess at right-angles to the channel.

sliding contact (*Elec. Eng.*). A contact in which there is relative movement with another surface, e.g. the moving contact of a slide-wire resistance.

sliding growth (*Bot.*). The rearrangements which are presumed to take place in xylem as the tracheids and vessels elongate and fit in among one another.

sliding-mesh gear-box (*Automobiles*). A gear-box in which the ratio is changed by sliding one pair of wheels out of engagement and sliding another pair in.

sliding-panel weir (*Civ. Eng.*). A form of frame weir in which the wooden barrier consists of wooden panels, sliding in grooves between each pair of frames.

sliding sash (*Join.*). A sash that moves horizontally on runners, as distinct from a *balanced sash* sliding vertically.

sliding ways (*Ship Constr.*). The portion of a ship's launching ways which move with the ship on launching.

slimes (*Met.*). Particles of crushed ore which are of such a size that they settle very slowly in water and through a bed which water does not readily percolate. Such particles must be leached by agitation. By convention these particles are regarded as less than one four-hundredth of an inch in diameter (200 mesh).

slime flux (*Bot.*). An exudation of a watery solution of sugars and other substances from trees which have been wounded or are attacked by various parasites.

slime mould (*Bot.*). The popular name for a *Myxomycete*.

slime plug (*Bot.*). A mass of slimy material filling the pores in a sieve tube.

slime string (*Bot.*). A viscous mass of food material passing through a pore in a sieve plate.

sling (*Civ. Eng.*). A rope or chain fastened around an object which is to be raised by crane, etc., providing a point of suspension.

sling fruit (*Bot.*). A fruit from which the seeds are projected by elastic tissue.

slip (*Build.*). A long narrow piece of wood of the full thickness of a mortar joint, built into surface brickwork to provide material to which joinery may be nailed.

slip (*Civ. Eng.*). A sloping masonry or concrete surface for the support of a vessel in process of being built or repaired.

slip (*Elec. Eng.*). The fraction by which the rotor speed of an induction motor is less than the speed of rotation of the stator field, i.e. the ratio of the speed at which the rotor slips back from exact synchronism with the stator field to the latter's speed of rotation.

slip (*Eng., etc.*). (1) See **belt slip.**—(2) In a screw propeller, the amount by which the product of the pitch and r.p.m. exceeds the actual forward velocity, expressed as a percentage of the former.

slip (*Met.*). The process involved in the plastic deformation of metal crystals in which the change in shape is produced by parts of the crystals moving with respect to each other along crystallographic planes.

slip (*Pot.*). Clay reduced to the consistency of cream by the addition of water; used for coating coarser bodies by dipping, or, coloured, for decorative layers, and for glazing. *

slip (*Teleg.*). The continuous narrow strip of paper which is perforated with holes representing telegraphic signals intended for subsequent accurate and speedy transmission in a transmitter such as the *Wheatstone* (Morse code), or *Siemens Multiplex* (Baudot code).

slip bands (*Met.*). Steps or terraces produced on the polished surface of metal crystals as a result of the parts moving with respect to each other during slip.

slip dock (*Civ. Eng.*). A dock from which the water can be discharged, and which is equipped with a *slip* (q.v.).

slip feather (*Join.*). A wooden tongue for a *ploughed and tongued joint* (q.v.), distinguished as a *straight tongue, feather tongue,* or *cross tongue* (qq.v.) according to the direction of the grain.

slip kiln (*Pot.*). A shallow tank traversed by hot-air flues, in which clay, converted into slip with water, is dried for regrinding.

slip meter (*Elec. Eng.*). A device for measuring the slip of an induction motor.

slip mortise (*Join.*). A *slot mortise* or a *chase mortise* (qq.v.).

slip planes (*Met., Min.*). The particular set or sets of crystallographic planes along which slip takes place in metal and other crystals. These are usually the most widely spaced set or sets of planes in the crystals concerned. See **gliding planes.**

slip proof (*Typog.*). A proof taken from a galley of type matter before it is made up into pages.

slip regulator (*Elec. Eng.*). A regulating resistance connected in series with the rotor of a slip-ring type induction motor in order to alter the slip, and thus vary the speed of the machine.

slip-rings (*Elec. Eng.*). The rings mounted on, and insulated from, the rotor shaft of an a.c. machine, which form the means of leading the current into or away from the rotor winding.

slip-ring motor (*Elec. Eng.*). An induction motor having a wound rotor, the connexions to which are brought out to slip-rings.

slip-ring rotor (*Elec. Eng.*). The rotor of a slip-ring induction motor; it has a two- or three-phase winding brought out to slip-rings. Cf. *cage rotor.*

slip sill (*Build.*). A *sill* (q.v.) of length equal to the distance between the jambs of the opening.

slip stone (*Carp., etc.*). A small shaped piece of oilstone used for putting an edge on gouges.

slipstream (*Aero.*). The air current set up by an air screw.

slip tanks (*Aero.*). See under **fuel tanks.**

slipway (*Civ. Eng.*). A *slip* (q.v.).

slip winding (*Textiles*). The process of transferring yarn from a hank to flanged bobbins, for lace manufacture.

slip-winding engine (*Textiles*). A machine comprising drums and swifts, used for winding flanged bobbins in lace manufacture.

slipe wool (*Textiles*). Wool removed from the skins of slaughtered sheep by the process of liming. See **skin wool.**

slipped bank (or **multiple**) (*Auto. Teleph.*). A bank of outgoing trunks so connected that they are tested in the same order by all switches but starting from different points. See **straight bank.**

slipper brake (*Elec. Eng.*). An electromechanical brake acting directly on the rails of a tramway.

slipper jack (*Teleph.*). The original type of jack used in telephone exchanges.

slipper piston (*I.C. Engs.*). A light piston having the lower part or skirt cut away between the thrust faces, to save weight and reduce friction.

slipping zone (*Bot.*). A highly polished surface a little below the rim of a pitcher, on which insects slip and are projected to the bottom of the pitcher.

slit (*Cinema.*). The slit which is illuminated and focused on to the moving film, both in recording and projecting.

slit test (*Cinema.*). The routine test in which a photograph of the focused slit is made, either in sound-camera or projector, to ascertain whether it is of the correct dimensions and located exactly 90° with respect to the edge of the film.

slitless spectroscope (*Astron.*). See **objective prism.**

sliv'er (*Spinning*). A continuous strand of fibres formed after carding.

slope (*Build.*). See **splay brick.**

slope (*Civ. Eng.*). (1) The inclined side of a cutting or embankment.—(2) The angle of inclination of the above side.

slope, slope conductance (*Radio*). See **mutual conductance.**

slope correction (*Surv.*). A correction applied to the observed length of a base line to correct for differences of level between the ends of the measuring tape.

slope level (*Surv.*). A form of clinometer for determining the slope of cuttings and embankments.

slope resistance (*Thermionics*). See **differential anode resistance.**

slope staking (*Surv.*). The locating and pegging of points at which proposed earth slopes in cutting or bank will meet the original ground surface.

slot (*Elec. Eng.*). An axially-cut trench, cut out of the periphery of the stator or rotor of an electrical machine, into which the current-carrying conductors forming the winding are embedded.

slot leakage (*Elec. Eng.*). In an electrical machine, the leakage flux that passes across the slots.

slot link (*Eng.*). See **link motion, radial valve gear.**

slot meter. The common name for the usual coin-in-the-slot type of prepayment meter used for obtaining supplies of gas and electricity.

slot mortise (*Join.*). A mortise made in the end of a member.

slot permeance (*Elec. Eng.*). The total permeance of the several parallel portions of the slot-leakage flux path.

slot pitch (*Elec. Eng.*). The distance between successive slots round the periphery of an armature.

slot ripple (*Elec. Eng.*). The harmonic ripple in the e.m.f. wave of an electrical machine. It arises from the regular variation in the permeability of the magnetic path between stator and rotor, caused by the repeated change in air-gap length as the rotor and stator slots pass one another and the intervening teeth.

slot wedge (*Elec. Eng.*). A wood or metal wedge driven into the opening of an armature slot so as to keep the conductors in place against the action of centrifugal forces.

slotted aerofoil (*Aero.*). Any aerofoil having an air passage (or slot) directing the air from the lower to the upper surface in a rearward direction. Slots may be permanently open, closable, automatic, or manually operated.

slotted core (*Elec. Eng.*). The usual type of armature core, in which slots are provided for the windings. Cf. *smooth core.*

slotting machine (*Eng.*). A machine tool resembling a *shaping machine* (q.v.) but in which the ram has a vertical motion and is balanced by a counterweight, the tool cutting on the down stroke, towards the table.

slotting tools (*Eng.*). Cutting tools used for keyway cutting, etc., in a *slotting machine* (q.v.); they are of narrow edge and deep, stiff section, with top and side clearance but little rake.

slough, sluf (*Med.*). A mass of dead, soft, bodily tissue in a wound or infected area: to form dead tissue (said of the soft parts of the body): to come away as a slough.

slough (*Zool.*). The cast-off outer skin of a Snake.

slow-acting relay (*Elec. Comm.*). A relay designed to operate at an appreciable time after the application of voltage. A copper sleeve or slug is placed over the core, or a short-circuited winding is used.

slow-break switch (*Elec. Eng.*). A knife switch with a single rigid blade forming the moving part of each pole.

slub (*Textiles*). A fault in cotton yarn, which appears as a thicker part, with little twist. Slubs may be deliberately made in yarn at intervals for ornamentation.

slub yarns (*Textiles*). Fancy yarns with thickened parts at frequent intervals.

slubbing (*Spinning*). Sliver which has been fed from the draw frame to the slubbing machine, and there attenuated and wound on a bobbin in the form of coarse thread, with very slight twist.

sludge (*Mining*). Soft mud produced in drilling or boring, or settling out of water in a pump sump.

sludge (*Sewage*). A slimy material produced by the precipitation of solid matters from liquid sewage in sedimentation tanks. See **sewage gas.**

sludger (*Civ. Eng.*). A long cylindrical tube, fitted with a valve at the bottom and open at the top, used for raising the mud which accumulates in the bottom of a boring during the sinking process. Also called SAND PUMP, SHELL PUMP.

sludger (*Mining*). (1) A scraper for clearing mud out of a shothole.—(2) A centrifugal pump for sand and slime.

sludging (*Elec. Eng.*). The formation of a brown deposit in transformer and switch oil, the rate of deposition determining the 'grade' or 'class' of the oil.

sludging (*Hyd. Eng.*). (1) Free-running mud.—(2) The process of filling the crevices left in the dried clay of an embankment formed by the method of *flood-flanking* (q.v.).

slug (*Typog.*). A solid line of type as cast by the Linotype process.

slug (*Teleph.*). A thick copper cylinder placed over the core of a telephone-type relay to retard the rate of change of magnetic flux in the core. If placed at the armature end the relay is slow both in operation and release, but if placed at the heel end the release is slow but the time of operation hardly affected.

sluice (*Civ. Eng.*). A water channel equipped with means of controlling the flow, enabling a sudden rush of water to be used at harbours or canal-locks for the purpose of cleaning out silt, mud, etc. obstructing navigation.

sluice (*Mining*). A long trough for washing gold-bearing sand, clay, or gravel. Also called SLUICE BOX.

sluice gate (*Civ. Eng.*). A barrier plate free to slide vertically across a water or sewage channel or an opening in a lock gate, thereby controlling flow and enabling a sudden rush of water to be used.

sluicing (*Hyd. Eng.*). The process of deepening a navigation channel by discharging into it through an open sluice impounded water from a reservoir.

slump test (*Civ. Eng.*). A test for the consistence of concrete, made with a metal mould in the form of a frustrum of a cone with the following internal dimensions: bottom diameter 8 in., top diameter 4 in., height 12 in. This is filled with the concrete, deposited in layers 3 or 4 in. thick, and then the mould is removed and the height of the specimen measured when it has finished subsiding.

slurgalls (*Hosiery*). Faults in knitted fabrics which occur in a horizontal direction; due to trapping or tightening of the thread while it is being fed to the needles.

slurry (*Build.*). A thin paste produced by mixing some materials, especially Portland cement, with water.

slushed-up (*Build.*). A term applied to brickwork the joints of which are filled with mortar.

Sm (*Chem.*). The symbol for *samarium.*

small (*Paper*). A standard size of cut card 2⅝ × 3⅝ in.

smalls (*Build.*). A slate size, 12 × 8 in.

small arms. All weapons which can be fired with one hand or from the shoulder. The term includes machine-guns.

small bayonet cap (*Elec. Eng.*). A bayonet cap having a diameter of about ⅝ in.; used for small lamps, such as automobile head and side lamps.

small calorie (*Heat*). See **calorie.**

small capital (*Typog.*). A letter having the form of a *capital* (q.v.). but the height of a lower-case letter; e.g. c; indicated in manuscript or proof by two lines under the letter. See **even small caps.**

small circle (*Surv.*). A circle formed on the surface of a sphere by the intersection with it of a plane not passing through the centre of the sphere. Cf. *great circle.*

small Edison screw-cap (*Elec. Eng.*). An Edison screw-cap having a screw-thread of about ½ in. diameter and about 9 threads per in.

small pica (*Typog.*). The old name for a type size now standardised as 11-point.

smallpox (*Med.*). Variola. An acute infectious disease characterised by fever, severe headache, pain in the loins, and a rash which is successively macular, papular, vesicular, and pustular, affecting chiefly the peripheral parts of the body; the causative organism is thought to be a filter-passer.

small-shot effect (*Thermionics*). See **shot noise.**

smallwares (*Textiles*). The term applied to tapes, ribbons, and other narrow goods.

smalt (*Chem.*). A glass made by fusing cobalt oxide and silica.

smaltite, smaltine (*Min.*). Smaltite-chloanthite; essentially the diarsenide of cobalt, crystallising in the cubic system. Chloanthite (diarsenide of nickel) is also invariably present, and the two species graduate into each other; occur in veins; ores of cobalt and nickel.

smar'agdine (*Bot.*). Emerald or dark bluish-green.

smarag'dite (*Min.*). A fibrous green amphibole, replacive after the pyroxene, omphacite, in such rocks as eclogite.

smashing (*Bind.*). The pressing of a book in a machine after sewing, thereby crushing and expelling air. Also called CRUSHING, NIPPING.

smear (*Pot.*). A delicate, waxy or ivory-like glaze.

smegma (*Med.*). A thick greasy secretion of the sebaceous glands of the glans penis.

smell. The sensation produced by stimulation of the mucous membrane of the olfactory organs.

smell test (*San. Eng.*). *Scent test* (q.v.).

smelting (*Met.*). Fusion of an ore or concentrate with suitable fluxes, to produce a melt consisting of two layers—on top a slag of the flux and gangue minerals, and below molten impure metal.

smith'sonite (*Min.*). Carbonate of zinc, crystallising in the trigonal system. It occurs in veins and beds and in calcareous rocks, and is commonly associated with hemimorphite. The honeycombed variety is known as *drybone ore*. The name *calamine* is frequently used in Britain.

smoke (*Chem.*). A suspension, often colloidal, of a solid in a gas.

smoke box (*Eng.*). A cylindrical extension on the front of a locomotive boiler through which the flue gases pass from the tubes to the funnel, and in which draught is created by the exhaust steam blast. A door gives access to the tubes for cleaning.

smoke point (*Chem.*). In the testing of kerosene, the maximum flame height (in millimetres) at which a kerosene will burn without smoking, under prescribed conditions.

smoke shell (*Ammunition*). A shell which on explosion emits a thick cloud of smoke; employed either for blinding the enemy or for concealing the movements of friendly troops.

smoke test (*San. Eng.*). A test sometimes applied to drain-pipes suspected of leakage. The ends are plugged and dense smoke is introduced into the pipe, which is watched for any escape.

smoky quartz (*Min.*). See **cairngorm.**

smooth (*Bot.*). Said of a surface which is neither hairy nor roughened in any way.

smooth ashlar (*Masonry*). A block of stone dressed ready for use, usually for the stone-facing of walls.

smooth core (*Elec. Eng.*). An old form of armature core in which the windings were laid on the smooth cylindrical surface of the core and secured by binding wires or small pegs.

smooth-core rotor (*Elec. Eng.*). A rotor carrying a field winding embedded in tunnels, used in high-speed steam-turbine-driven generators.

smooth mouth (*Vet.*). See **mouth (smooth).**

smoothing circuit (*Radio*). A combination of inductance coils and condensers, arranged as a low-pass filter, for removing the ripple from the d.c. anode voltage supply to a valve derived from a rectifier or d.c. generator.

smoothing equipment (*Elec. Eng.*). A general term covering wave filters, resonant shunts, or other devices installed on d.c. circuits to smooth out any superimposed alternating currents or voltages.

smoothing plane (*Carp.*). A bench plane, about 8 in. long, which is not provided with a handle; used after the trying plane to give a smooth even finish to the work.

S.M.P.E. (*Cinema.*). The Society of Motion-Picture Engineers standard for sound-tracks on substandard cinematograph film in which the sound-track is located on the left-hand side of the picture as normally projected on the screen, as contrasted with the *D.I.N. standard*, at one time in considerable use in Europe, which places the sound-track on the right-hand side. In each type the sound-track replaces one set of sprocket holes on the side of the film.

smudge (*Plumb.*). A lampblack and glue size mixture which is painted over lead surfaces so that solder shall not adhere. Also called SOIL.

smut, smut fungus (*Bot.*). See **Ustilaginales.**

smut (*Mining*). (1) Bad soft coal containing earthy matter.—(2) Coal smuts.—(3) Worthless outcrop material of a coal-seam.

Sn (*Chem.*). The symbol for *tin*.

S/N curve (*Met.*). See **stress-number curve.**

snail (*Horol.*). A cam the contour of which may be a smooth curve or stepped. Used for the gradual lifting or discharge of a lever. The snail in the rack striking work controls the number of teeth picked up on the rack; e.g. at 12 o'clock sufficient motion is allowed to the rack for the gathering pallet to pick up twelve teeth.

snail plant (*Bot.*). A plant which is pollinated by snails.

snailed (*Horol.*). Said of (1) a surface finished with eccentric curves; (2) a barrel arbor so shaped that the inner coil of the mainspring passes over the hook without forming a kink.

snap (*Eng.*). (1) A form of punch with a hemispherically recessed end, used to form rivet heads.—(2) A limit gauge of plate or calliper type.

snap (*Horol.*). To hold parts together by springing one part over or into another. Thus the back of a watch case is snapped on, or a barrel cover snaps into the barrel.

snap (*Textiles*). The unit of length used in the West of England for woollen yarn; viz. 320 yards. See **counts of yarn.**

snap switch (*Elec. Eng.*). A switch which makes and breaks the circuit with a quick snap; it comprises blades whose rate of motion is controlled by a spring. Also QUICK-MAKE-AND-BREAK SWITCH.

snap the line (*Build., Civ. Eng.*). To pluck a well-chalked string, held taut in position, against work in order to mark a straight line.

snapped header (*Build.*). A half-length brick, sometimes used in Flemish bond.

snare (*Surg.*). A wire loop for removing soft tumours such as nasal polypi.

snarls (*Spinning*). Faults due to the yarn having been subjected to an excessive amount of twist. The yarn curls back when tension is released.

sneck (*Join.*). The lifting lever which passes through a slot in a door and actuates the fall bar. See **Norfolk latch.**

sneck (*Masonry*). One of the smaller stones used to fill in between the larger ones in a snecked masonry wall.

snecked (*Masonry*). Said of rubble walls in which the stones are roughly squared but of irregular size and uncoursed.

Snell's law (*Light*). For a ray of light refracted at a surface separating two media, the ratio of the sine of the angle of incidence to the sine of the angle of refraction is constant and is known as the index of refraction for the two media. See **refraction.**

Snett'isham Clay (*Geol.*). A clay rock of marine origin found in the Lower Greensand series of the Cretaceous System in Norfolk.

snore piece (*Mining*). The lower part of the pipe which admits the water to a mine pump: the nose or wind bore.

snow (*Meteor.*). Precipitation in the form of small ice crystals, which may fall singly or in flakes, i.e. tangled masses of snow crystals. The crystals are formed in the cloud from water vapour.

snow boards (*Build.*). Protective boards fixed over roof gutters to carry the weight of snow. The snow, on melting, drops into the gutter through gaps left between the boards. Also called GUTTER BOARDS.

snow guards (*Build.*). Horizontal boards fixed on edge, slightly above an eaves gutter, to prevent snow from sliding off a roof.

snow load (*Struct.*). The unit loading assumed in the design of a roof to allow for the probable maximum amount of snow which will collect upon it.

Snowcrete (*Build.*, *Civ. Eng.*). Trade-name of a white or cream-coloured Portland cement manufactured by the Cement Marketing Co., Ltd.

Snowdonian Lavas (*Geol*). A thick series of rhyolitic lavas and ashes exposed on Snowdon in North Wales; they belong to the Caradocian stage of the Ordovician System.

snuffles (*Med.*). Symptoms resulting from nasal discharge and obstruction of the nose in infants, due usually to congenital syphilis.—(*Vet.*) A nasal catarrh supervening upon rickets or osteomalacia: contagious rhinitis and bronchitis of rabbits.

soakers (*Plumb.*). Small pieces of sheet-lead or zinc bonded in for watertightness with the slates or tiles of a roof at joints with walls or at valleys and hips.

soaking (*Met.*). A phase of a heating operation during which metal is maintained at the requisite temperature until the temperature is uniform throughout the mass.

soaps (*Build.*). Bricks, 9×2¼×2¼ in. in size, which are often pierced for use as air bricks.

soaps (*Chem.*). (1) The alkaline salts of palmitic, stearic, or oleic acid. *Soft soaps* contain the potassium salts, whereas the sodium salts are *hard soaps*.—(2) The alkali salts of resins, so-called *resin soaps*.

soapstone (*Min.*, *etc.*). see **steatite.**

so'bole (*Bot.*). A creeping underground stem which develops leaf buds and roots at intervals.

sobolif'erous (*Bot.*). Having soboles.

social (*Zool.*). Living together; gregarious; living in organised colonies.

social parasitism (*Zool.*). A form of association between a colony of social animals and another species, in which the latter lives in the colony and either preys on the members or makes use of their food, without conferring any benefit in turn.—*n.* **social parasite.**

social plants (*Bot.*). Species which grow many together and occupy wide areas.

social symbiosis (*Zool.*). A form of association between a colony of social animals and another species which is mutually beneficial.

society (*Bot.*). A plant community of minor rank forming part of a consociation.

socket (*Elec. Eng.*). The female portion of a plug-and-socket connexion in an electric circuit.

socket (*Plumb.*). The enlarged end of a pipe, into which the end of another pipe of the same diameter can be fitted to form a joint between the two lengths. Called in America BELL or HUB.

socket chisel (*Join.*). A robust type of chisel used for mortising; it has a hollow tapering end to the steel shank into which the wooden handle can be driven.

socle (*Arch.*). A plain projecting block or plinth at the base of a pedestal, wall, or pier.

sod oil (*Oils*). See **degras** (2).

soda feldspar, soda-lime feldspar (*Min.*). See **feldspar.**

soda lakes (*Geol.*). Salt lakes the water of which contains a high content of sodium salts (chiefly chloride, sulphate, and acid carbonate). These salts also occur as an efflorescence around the lakes.

soda-lime glass (*Glass*). See **crown glass.**

soda nitre (*Min.*). Nitrate of sodium, crystallising in the trigonal system. It is found in great quantities in northern Chile, where beds of it are exposed at the surface and are known as *caliche*. Also called CHILE SALTPETRE.

soda recovery (*Paper*). Liquor resulting from the digestion of raw materials with caustic soda is concentrated, and organic matter burnt off in a furnace. The soda is recovered as soda ash and causticised for further use.

soda-syenite (*Geol.*). A syenitic igneous rock containing an excess of soda-feldspar or feldspathoid. Cf. *potash-syenite*.

so'dalite (*Min.*). A cubic feldspathoid mineral, essentially silicate of sodium and aluminium with sodium chloride, occurring in certain alkali-rich syenitic rocks.

so'damide (*Chem.*). $NaNH_2$; a compound formed when ammonia gas is passed over hot sodium.

So'derberg electrode (*Elec. Eng.*). An amorphous carbon electrode manufactured by a continuous electric-arc furnace process.

sodion, —ī'on (*Chem.*). A sodium ion.

sodium (*Chem.*). Symbol, Na. A metallic element in the first group of the periodic system, one of the alkali metals. At. no. 11, at. wt. 22·997. Sodium does not occur in nature in the free state, owing to its reactivity, but it is widely distributed combined as the chloride, nitrate, etc. Metallic sodium is made by electrolysis of fused caustic soda.

sodium-cooled valves (*I.C. Engs.*). High-duty engine exhaust valves cooled by filling the hollow stem (and head) with sodium to about 60% of the volume.

sodium hydroxide (*Chem.*). See **caustic soda.**

sodium-vapour lamp (*Illum.*). An electric lamp of the gaseous-discharge type whose electrodes operate in an atmosphere of sodium vapour.

so'doku (*Med.*). Rat-bite fever. A disease due to infection with the micro-organism *Spirillum minus*, conveyed by the bite of a rat; it is characterised by inflammation of the skin around the bite, relapsing fever, swelling of the lymphatic glands, and a dark red, patchy, erythematous rash.

sof'fit (*Build.*, *Civ. Eng.*). (1) A term often used for *intrados* (q.v.), but more particularly applied to that part of the intrados in the immediate vicinity of the keystone.—(2) The under surface of a stair or of the head of an opening such as a door or window opening.

soft bast (*Bot.*). The sieve tubes and phloem parenchyma.

soft commissure (*Zool.*). In Mammals, the point at which the thickened sides of the thalamencephalon touch one another across the constricted third ventricle.

soft-focus lens (*Photog.*). A pictorial lens of wide aperture for producing slightly diffused outlines.

soft-iron armature (*Elec. Eng.*). The attracted part of an electromagnet retaining little residual magnetism.

soft-iron instrument (*Elec. Eng.*). See **moving-iron instrument.**

soft knitting yarn (*Textiles*). Four-ply worsted yarns, for knitting stockings.

soft lighting (*Cinema.*). Lighting of objects to be photographed in which there is not strong demarcation between the high-lights and the shadows; the lighting, however, is not flat.

soft palate (*Zool.*). In Mammals, the posterior part of the roof of the buccal cavity which is composed of soft tissues only.

soft-paste (*Pot.*). See **paste.**

soft soaps (*Chem.*). See **soaps.**

soft solder (*Met.*). Alloys of lead and tin used in soldering. Tin content varies from 63%

to 31%. The remainder is mainly lead, but some types contain about 2% antimony and others contain cadmium. The best-known types are *tinman's solder* and *plumber's solder* (qq.v.).

soft valve (*Thermionics*). A valve in which there is an appreciable amount of gas left in the envelope after pumping, as opposed to a *high-vacuum* (or *hard*) *valve*.

softeners (*Chem.*). *Plasticisers* (q.v.).

softening (*Met.*). A process for removing arsenic, antimony, and tin from lead, after drossing. A bath of molten metal is oxidised by furnace gases and the addition of lead oxide. Impurities are oxidised and form a dross. Also called IMPROVING.

softening (*Photog.*). Reducing the hard lines and contrast in the lighting of objects to be photographed by interposing a diffuser of silk. A similar effect is obtainable by slightly defocusing during exposure or optical printing.

softening-point test (*Build.*, *Civ. Eng.*). See **melting-point test.**

softness (*Met.*). Tendency to deform easily. It is indicated in tensile test by low ultimate tensile stress and large reduction in area. Usually the elongation is also high. In notched bar test, specimens bend instead of fracturing, and energy absorbed is relatively small. See **toughness** and **brittleness.**

soil (*Plumb.*). See **smudge.**

soil flora (*Bot.*). Plants, chiefly fungi, living in the soil.

soil pipe (*Build.*, *San. Eng.*). A vertical cast-iron or lead pipe conveying waste matter from W.C.'s, etc., to the drains. Abbrev. **S.P.**

soil solution, soil water (*Bot.*). The dilute aqueous solution of mineral salts present around the particles of the soil and in the spaces between them, on which plants draw for supplies.

sol (*Chem.*). A colloidal solution, i.e. a suspension of solid particles of colloidal dimensions in a liquid.

sol′anine bases (*Chem.*). Alkaloid bases derived from the Solanum genus, e.g. *Atropa belladonna.*

solar (*Zool.*). Having branches or filaments radially arranged.

solar plexus (*Zool.*). In higher Mammals, a ganglionic centre of the autonomic nervous system—situated in the anterior dorsal part of the abdominal cavity—from which nerves radiate in all directions.

solar antapex (*Astron.*). The point on the celestial sphere diametrically opposite to the *solar apex* (q.v.).

solar apex (*Astron.*). The point on the celestial sphere towards which the solar system as a whole is moving at the rate of 20 kilometres a second. It is located in the constellation Hercules in equatorial co-ordinates R.A. 271° and declination +31° approximately.

solar attachment (*Surv.*). A fitting for a theodolite, enabling an observer to determine by solar observation the true meridian and latitude of the place of observation, and the true local time.

solar constant (*Phys.*). The quantity of energy received normally per sq. cm. per second by the earth, corrected for loss by absorption in the earth's atmosphere. The value (which is not constant) is about $1{\cdot}34 \times 10^6$ erg sec.$^{-1}$ cm.$^{-2}$

solar day (*Astron.*). See **apparent— mean—**

solar oil (*Fuels*). *Gas oil* (q.v.).

Solar System (*Astron.*). The term designating the sun and the attendant bodies moving about it under gravitational attraction; comprises nine major planets, many hundreds of asteroids, some comets, and various known meteor swarms.

solar time, apparent (*Astron.*). The hour angle of the true sun at any place; distinguished from *mean solar time*, from which it differs by the value of the *equation of time* (q.v.); the time given by sundials, or any astronomical observation of the true sun.

solarisation (*Bot.*). The temporary stoppage of photosynthesis in a leaf when this is exposed for a long time to bright light.

solarisation (*Photog.*). The reversal of an image because of excessive exposure to light; i.e. a supposed negative appears to be a positive.

solation (*Chem.*). The liquefaction of a gel.

solder (*Met.*). A general term for alloys used for joining metals by soldering. The principal types are *soft solder* (lead-tin alloys) and *brazing solders* (alloys of copper and zinc, sometimes containing silver).

soldered (*Bot.*). United.

soldered dot (*Plumb.*). A device for fixing sheet-lead to woodwork. A hollow formed in vertical boarding which is covered with sheet-lead, secured in the hollow by splayed screws, the hollow being then filled with solder.

soldering iron (*Plumb.*). See **copper bit.**

soldier (*Build.*). A term applied to a course of bricks laid so that they are all standing on end.

soldier (*Zool.*). In some social Insects, a form with especially large head and mandibles adapted for defending the community, for fighting, and for crushing hard food-particles.

sole (*Carp.*, *Join.*). The lower surface of the body of a plane.

sole or **sole plate** (*Eng.*). (1) The bed-plate of a marine engine; secured through bearers to the hull of the ship.—(2) A timber base for supporting the feet of *raking shores* (q.v.).

sole piece (*Build.*). The plate to which the feet of the shores, in a system of raking shores, are secured, and which forms an abutment for them at their lower ends.

soleil, so-li′ĕ (*Textiles*). A worsted dress fabric, with a fine cord of the Ottoman rib type formed from twist-way and weft-way yarns.

So′lenhofen stone (*Geol.*). An exceedingly fine and even-bedded limestone, thinly stratified, of Upper Jurassic age, occurring in S.E. Bavaria; widely used in lithography.

sole′nia (*Zool.*). In some hydroid colonies, diverticula of the enteron formed by hollow strands of endoderm.

Solenic′thyes (*Zool.*). An order of *Neopterygii* in which the mouth is situated at the tip of a long tubular snout; marine forms occurring in all tropical and temperate waters. Shrimp-fishes, Cornet-fishes, Snipe-fishes, Pipe-fishes, Sea-horses.

sole′nocyte (*Zool.*). In *Invertebrata* and lower *Chordata*, an excretory organ consisting of a hollow cell with branched processes, in the lumen of which occurs a bunch of cilia which by their movements maintain a downward current.

so′lenoid (*Elec. Eng.*). A multi-turn coil of wire wound in a uniform layer (or layers) on a cylindrical former. When carrying a direct current it behaves like a bar magnet.

solenoid brake (*Elec. Eng.*). An electro-mechanical brake in which the brake toggle is operated by the plunger of a solenoid.

solenoid-operated switch (or **circuit-breaker**) (*Elec. Eng.*). A switch in which the closing force is provided by a solenoid. Cf. *pneumatically operated switch, motor-operated switch.*

solenoid relay (*Elec. Eng.*). A relay in which the contacts are closed by the action of a solenoid-operated plunger.

solenoidal magnetisation (*Elec. Eng.*). The distribution of the magnetisation on a piece of magnetic material when the poles are at the ends. Cf. *lamellar magnetisation.* Also called CIRCUITAL MAGNETISATION.

sole′nostele (*Bot.*). A form of siphonostele in which there is an endodermis both outside and inside the tube of vascular tissues.

so'leus (*Zool.*). A muscle of the lower part of the hind limb in *Tetrapoda.*

Solex pneumatic micrometer (*I.C. Engs., etc.*). A device for rapidly grading the sizes of cylinder bores, etc. It consists of a plug gauge provided with radial air-holes. The pressure of the air supplied at the jets varies with, and provides a measure of, the clearance between the plug and the bore.

solfatar'a (*Geol.*). The name applied to a volcanic orifice which is in a dormant or decadent stage and from which gases (especially sulphur dioxide) and volatile substances are emitted. See **volcanoes.**

solid (*Chem.*). A state of matter in which the constituent molecules or ions possess no translational motion, but can only vibrate about fixed mean positions. A solid has a definite shape and offers resistance to a deforming force.

solid (*Geom.*). A figure having three dimensions. For *solid angle* see Supplement.

solid agate (*Pot.*). See **agate ware.**

solid bearing (*Build.*). The support underneath a beam when it is supported along its whole length.

solid carbons (*Illum*). A carbon electrode for electric arc lamps, in which a core of softer material is absent.

solid diffusion (*Met*). Movement of atoms through the crystals of a solid metal, as when carbon diffuses into or out of steel during carburising or decarburising respectively.

solid floor (*Build*). A floor made of wood blocks laid on a concrete subfloor.

solid head (*I.C. Engs.*). A cylinder or cylinder block cast in one piece, as distinct from one with a detachable head.

solid injection (*Eng*). See **airless injection.**

solid-laid cable (*Cables*). See **solid system of cable-laying.**

solid matter (*Typog.*). Type-matter set up without leads between the lines; or, in mechanical type-setting, type-matter cast on its own body size rather than on a larger one.

solid newel (*Build*). The centre post of a winding stair, as distinct from a *hollow newel* (q v).

solid panel (*Join.*). A panel whose surface is in line with the faces of the stiles.

solid pole (*Elec. Eng.*). A field pole of an electrical machine which is not built up from laminations.

solid skins (*Furs*). Furs from which unwanted parts have been cut away.

solid solubility (*Met.*). The extent to which one metal is capable of forming solid solutions with another. This varies widely between different pairs of metals, some of which are mutually soluble in all proportions, while others are practically insoluble in each other.

solid solution (*Chem., Phys.*). Usually a *primary solid solution*, but the term may also be applied to the case when an intermediate constituent dissolves one of its components. See **mixed crystal.**

solid system of cable-laying (*Cables*). A system of cable-laying in which the cables are laid in troughing in an open trench. The troughing is of stoneware, cast-iron, asphalt, or treated wood, and when the cable is laid the troughing is filled with a bituminous or asphaltic compound.

solid-type cable (*Cables*). See **straight-type cable.**

solidification range (*Chem., Phys.*). The range of temperature in which solidification occurs in alloys and silicate melts, etc., other than those which freeze at constant temperature. It extends from a point on the liquidus to one on the solidus.

solid'ium (*Masonry*). The body of a pedestal.

sol'idus (*Chem., Phys.*). A line in a constitutional diagram indicating the temperatures at which solidification is completed, or melting begins, in alloys and other melts of different composition. See **liquidus, solidification range.**

solifluction, solifluxion (*Geol.*). Soil-creep on sloping ground, characteristic of, though not restricted to, regions subjected to periods of alternating freezing and thawing.

Solif'ugae (*Zool.*). An order of *Embolobranchiata* having a prosoma with the last three somites free, and a segmented opisthosoma; there is no telson; the pedipalpi are slender and tactile, the tarsus ending in a suctorial sac; the chelicerae are very large and powerful; respiration is by tracheae; the femora of the fourth pair of legs bear five racquet-shaped organs (*malleoli*). Usually very hairy, active, carnivorous, tropical forms, diurnal or nocturnal in habits. Sun Spiders, False Spiders.

Solignum (*Build.*). Trade-name for a preserving agent for timber.

solitary (*Bot., Zool.*). Occurring singly.—(*Zool.*) Living alone; as opposed to animals living in a colony, and social forms.

solitary follicles, solitary glands (*Zool.*). See **Peyer's patches.**

sollar (*Build.*). A *loft* (q.v.) which is open to the sun.

sollar or **soller** (*Mining*). The landing between two ladders in a shaft.

Sollas' centre (*Zool.*). The centre or morphological centre of form in the skull of *Primates.*

solstices (*Astron*). The two moments in the year when the sun in its apparent motion attains its maximum distance from the celestial equator: (1) the *summer solstice* of June 21 is the sun's passage through the first point of Cancer; (2) the *winter solstice* of December 22 is the sun's passage through the first point of Capricorn.

solubility (*Chem*). The weight of a dissolved substance which will saturate 100 grams of a solvent.

solubility curve (*Chem.*). The curve showing the variation of the solubility of a substance with temperature.

solubility product (*Chem.*). The value, at saturation, of the product of the activities (concentrations) of the ions into which a dissolved substance dissociates.

soluble glass (*Chem.*). Solid sodium or potassium silicates.

soluble starch (*Chem.*). A product of the hydrolysis of starch obtained by treating starch with dilute acids, or by boiling with glycerine, or by the action of diastase.

sol'ute (*Chem.*). A substance which is dissolved in another.

solution (*Bot.*). The abnormal separation of parts normally united.

solution (*Chem.*). An extremely intimate mixture, of variable composition, of two or more substances, one of which is usually a liquid, which may be separated by simple physical processes. The term is generally restricted to *molecular solutions* (q.v.).

solution pressure (*Chem.*). The tendency of a substance to pass into solution.

solution treatment (*Met.*). The operation of heating suitable alloys (e.g. duralumin) in order to take the hardening constituent into solution. This is followed by quenching, to retain the solid solution, and the alloy is then age-hardened at atmospheric or elevated temperature.

Solva Series (*Geol.*). A series of grey, purple, and red sandstones, flags, and slates forming the lower group of beds which belong to the Middle Cambrian System in South Wales.

solvation (*Chem.*). The association or combination of molecules of solvent with solute ions or molecules.

Solvay's ammonia soda process (*Chem.*). A process based on the fact that when a concentrated solution of sodium chloride is saturated with ammonia, and carbon dioxide is passed through, sodium hydrogen carbonate is precipitated and ammonium chloride remains in solution. Used for the manufacture of sodium carbonate from chloride.

solvent (*Chem.*). That component of a solution which is present in excess, or whose physical state is the same as that of the solution.

solvent (*Paint*). A substance added to paint to make it work more freely.

solvent naphtha (*Chem.*). Middle and high-boiling benzene hydrocarbons chiefly consisting of toluene and xylene, obtained from the fractionation of light tar oils after the benzene fractions have been distilled off.

solvol'ysis (*Chem.*). See **lyolysis.**

so'ma (*Zool.*). The body of an animal, as distinct from the germ-cells; cf. *germen.*—*pl.* **somata.**—*adj.* **somatic.**

somac'tids (*Zool.*). In Fish, cartilaginous or bony rods placed in the basal part of the median fin-folds and supporting the dermotrichia.

somat'ic. See **soma.**

somatic apogamy (*Bot.*) The development of a sporophyte, having nuclei with the zygotic number of chromosomes, from a cell or cells of the gametophyte, the fusion of gametes being omitted.

somatic cell (*Zool.*). One of the non-reproductive cells of the parent body, as distinct from the reproductive or germ cells which give rise to the next generation.

somatic doubling (*Cyt.*). A doubling of the number of chromosomes in the nuclei of somatic cells.

somatic mitosis (*Cyt.*). Division of the metabolic nucleus.

somatic mutation (*Gen.*). A mutation arising in a somatic cell and not in a reproductive structure.

somatic segregation (*Bot.*, *Gen.*). A change in nuclear or hereditary constitution during vegetative growth.

so'mato- (Greek *soma*, gen. *somatos*, body). A prefix used in the construction of compound terms; e.g. *somato-genic* (q.v.).

so'matoblast (*Zool.*). In development, a cell which will give rise to somatic cells: in developing *Chaetopoda*, a micromere (d_2) which divides rapidly after gastrulation to form the ventral plate.

so'matocyst (*Zool.*). In some *Siphonophora*, a dilatation at the upper end of the central canal of a nectocalyx, sometimes containing an oil-drop.

somatogen'ic (*Zool.*). Arising as the result of external stimuli: developing from somatic cells, as opposed to germ cells.

so'matoids (*Chem.*). Small particles of definite shape and possessing a definite arrangement of matter, but, unlike crystals, not homogeneous.

so'matopleure (*Zool.*). The outer body-wall of coelomate animals: the outer layer of the mesoblast which contributes to the outer body-wall; cf. *splanchnopleure.*—*adj.* **somatopleur'al.**

somatotro'pism (*Bot.*). Directed growth movements in plants so that the members come to be placed in a definite position in relation to the substratum.

so'mite (*Zool.*). One of the divisions or segments of the body in a metameric animal: a mesoblastic segment in a developing embryo.

som'mering lines (*Civ. Eng.*). The radiating lines giving the direction of the bed-joints of the voussoirs of an arch.

somnam'bulism (*Med.*). (1) The fact or habit of walking in the sleep.—(2) A hysterical state of automatism in which the patient performs acts of which he is unaware at the time or when he comes out of the state.

sonims (*Met.*). Solid non-metallic inclusions in metal.

Sonne dysentery (*Med.*). Dysentery caused by bacteria described by Carl Sonne and differing from the usual dysentery bacilli described by Shiga and by Flexner.

scor (*Vet.*). See **oidiomycosis.**

Sopwith staff (*Surv.*). A telescopic form of self-reading staff.

sor'al membrane (*Bot.*) The wall surrounding the sorus in some lower fungi.

sora'lium (*Bot.*). A group of soredia surrounded by a distinct margin formed from the thallus of the lichen.

sorbite (*Met.*). The name applied to fine pearlite, or to the structure produced by tempering steel at temperatures above 550° C. In the latter case the structure consists of small globules of cementite in a matrix of fine interlaced crystals of ferrite.

sor'bitol (*Chem.*). A hexahydric alcohol, isomeric with mannitol.

sorb'ose (*Chem.*). A ketohexose, an isomer of fructose.

sor'des (*Med.*). Foul, dark brown crusts which collect on the lips and the teeth in prolonged fever (e.g. in typhoid fever).

sordid (*Bot.*). Dirt-coloured.

sore-heels (*Vet.*). See **horse pox.**

sore-shins (*Vet.*). An inflammation of the periosteum of the large metacarpus (shin bone), occasionally of the metatarsus, of young horses.

sore-teats (*Vet.*). Abrasions of the teats of milch cows.

sore'dial branch (*Bot.*). A branch of a lichen thallus formed by a soredium beginning to develop while still attached to the parent thallus.

sore'diate (*Bot.*). Having small patches on the surface.

sore'dium (*Bot.*). One or more algal cells enclosed in hyphae, forming a tiny mass which separates from the lichen thallus and gives rise to a fresh thallus if transported to a suitable place for growth.

Sorel's cement (*Chem.*). Calcined magnesite (MgO) mixed with a solution of magnesium chloride of a concentration of about 20° Baumé. It sets within a few hours to a hard mass. The basis of artificial flooring cements.

Sørensen's formol titration, sé'— (*Chem.*). See **formol titration.**

sorif'erous (*Bot.*). Bearing sori.

soro'sis (*Bot.*). A fleshy fruit formed from a number of crowded flowers, such as a pineapple.

so'rosphere (*Bot.*). A hollow ball of spores formed by some lower plants.

sorption (*Chem.*). A general term for the processes of absorption, adsorption, and persorption.

sorrel, salts of (*Chem.*). See **potassium oxalate.**

sorting (*Build.*). The process adopted when a roof is to be covered by slates of different sizes; the largest slates are nailed at the eaves and the smallest at the ridge.

sorting (*Textiles*). The selecting of yarns for weaving so that there may be no appreciable difference in types or tones.

sorts (*Typog.*). Particular type letters as distinct from complete founts. The term is usually applied to types missing from the case, a further supply of which is requisitioned from the caster or founder.

so'rus (*Bot.*). (1) In lichens, a powdery mass of soredia lying on the surface of the thallus.—(2) In fungi, ferns, etc., a group of sporangia usually accompanied by some protective structures.

Sothic cycle (*Astron.*). A period of 1460 years, familiar in ancient Egyptian chronology as the time in which the Egyptian calendar year of 365 days precessed through the seasons; so called because the Egyptian new year began with the heliacal rising of the star Sirius, whose Egyptian name was Sothis.

Soudley Sandstone (*Geol.*). An important sandstone found in the Caradocian Series in the Caradoc district of Shropshire; much used for building purposes.

souffle, soof'l (*Med.*). A murmuring, blowing sound, especially a murmur heard over the heart.

sough, suf (*Civ. Eng.*). A drain at the foot of a slope, e.g. an embankment, to receive and carry away surface waters from it.

sound (*Acous.*). The perception of external stimuli accepted through the ear and sense of hearing: also, the wave-motion or vibration which gives rise to such stimulus when applied to the ear.

sound (*Med.*). A solid rod used for exploring hollow viscera (e.g. the bladder, the uterus) or for dilating stenosed passages.

sound (or **acoustic**) **absorption factor** (or **coefficient**) (*Acous.*). The percentage of energy which is not reflected from a large plane uniform surface on the incidence of a sound-wave at a specified angle. See **sabin.**

sound articulation (*Elec. Comm.*). The percentage of all elementary speech-sounds received correctly, when logatoms are called over a circuit or in an auditorium, in the standard manner.

sound (or **sounding**) **board** (*Acous.*). A board actuated by forced vibration from a vibrating body; used because of its ability to radiate more sound-energy than the vibrating body alone.

sound boarding (*Carp.*). Boards fitted in between the joists of a floor, to carry the *pugging* (q.v.) which is to insulate the room from sound and smell from the room below.

sound box (*Acous.*). An enclosure supporting a diaphragm, terminated by a horn on one side and actuated by an armature on the other. At the end of the armature is clamped a needle, which is operated by the recorded track on a gramophone record.

sound camera (*Cinema.*). The machine in which photographic film is exposed for registration of the sound record in motion-picture production. Except in news-reel cameras, this machine is entirely distinct from the camera taking the scene.

sound energy density (*Acous.*). See **energy density of sound.**

sound-film (*Cinema.*). A combination of synchronised sound and cinematography giving the illusion of sound and scene. The sound is invariably reproduced from a sound-track, which is printed along the side of the cinematograph film.

sound-gate (*Cinema.*). The precise location in a sound-head where the sound-track is scanned by the constant focused beam of light from the exciter lamp, the transmitted light being received into the photo-electric cell.

sound-head (*Cinema.*). That unit in a projector which reproduces the sound-track on the edge of the film.

sound insulation (*Build.*). The property, possessed in varying degrees by different materials, of blocking the transmission of sound.

sound level scale (*Acous.*). The same as *phon scale*. See also **loudness level.**

sound locator (*Acous.*). An arrangement for determining the direction of arrival of sound-waves, particularly the noise from aircraft and submarines. See **predictor.**

sound pick-up (*Acous.*). A loose term for a part of a sound-reproducing system, such as a microphone, the sound-head in a projector, or a reproducer of gramophone recordings.

sound pressure (*Acous.*). The fluctuating pressure in air, or other fluid, which constitutes the presence of a propagating or stationary sound-wave. Measured in alternating dynes per square centimetre, either peak or r.m.s. Also called ACOUSTIC PRESSURE, EXCESS PRESSURE.

sound recording (*Acous.*). The practice of registering sound so that it can be reproduced at some subsequent time and be of further use. See **recording, recorder.**

sound (or **acoustic**) **reflection factor** (or **coefficient**) (*Acous.*). The percentage of energy reflected from a large plane surface of uniform material on the incidence of a sound-wave at a specified angle.

sound stage (*Cinema.*). The main floor of a motion-picture studio on which sets are built and the artists perform during shooting. See **scoring stage.**

sound-track (*Cinema.*). That section of the width of cinematograph film which is allocated to the continuous modulation associated with the photographic recording of the accompanying sound.

sound (or **acoustic**) **transmission factor** (or **coefficient**) (*Acous.*). The ratio of the transmitted sound-power to that incident on a wall or partition.

sounder (*Ocean.*). Any instrument used for determining the depth of the sea; e.g. *Lucas sounder* (by line and weight), *Kelvin sounder* (q.v.), *echo sounder* (q.v.).

sounder (*Teleg.*). An electromagnetic device which is operated by incoming morse-signal currents and makes, on operation and release, audible signals from which the operator interprets the received message.

sounding (*Surv.*). The depth of an under-water point below some chosen reference datum. Cf. *reduced level.*

sounding balloon (*Meteor.*). A small free balloon carrying a meteorograph, used for obtaining records of temperature, pressure, and humidity in the upper atmosphere.

sounding board (*Acous.*). A board placed above the head of a speaker standing on a rostrum, or in a pulpit, to deflect the sound of his voice towards the listeners.

sounding line (*Surv.*). A stout cord, divided into fathoms and feet and weighted at one extremity with a lead weight; used in finding soundings.

soup (*Photog.*). A colloquialism for photographic *developer*; so called from its appearance after developing backed film.

souple (*Textiles*). The term applied to silk yarns and fabrics from which the sericin has not been removed; they are not so lustrous as scoured silks. See **boiling-off.**

souring (*Textiles*). The treatment of yarn or cloth with dilute acid; it is part of the bleaching process.

south pole (*Elec.*). See **pole.**

Southern Cross (*Astron.*). A striking constellation of the southern hemisphere, only visible in latitudes below 30° N. It is a cruciform group of four stars, having the two bright stars α and β Centauri some way to the east, which makes it easy to identify.

Southerndown Beds (*Geol.*). A local series of massive and in part conglomeratic limestones found in South Wales and forming part of the Lower Lias; deposited as coastal deposits near islands of Carboniferous Limestone rising through the Liassic Seas.

Southey's tubes (*Med.*). Small cannulae which, inserted into oedematous tissues, drain off the excess fluid.

southing (*Astron.*). The word used of a star crossing the meridian at upper culmination; only applicable in the northern hemisphere, where, unless the star be north of the zenith, it will be due south of the observer at the moment of transit.

southing (*Surv.*). A south latitude.

Soxh'let apparatus (*Chem.*). A laboratory apparatus for the continuous extraction of a solid substance with a solvent, consisting of a distillation flask, a reflux condenser, and a cylindrical vessel fitted between them, to which a syphon system is attached.

S.P. (*Build.*, *San. Eng.*). Abbrev. for *soil pipe.*

S.P. (*Elec. Eng.*) Abbrev. for *single-pole.*

Sp. (*Chem.*). An abbrev. for *spirit.*

space. Continuous and boundless extension considered as a vacuous entity in which extended things may exist and move: the distance between points or objects, whether regarded as filled or unfilled.—(*Teleg.*) The period of time in transmission during which the key is open, i.e. not in contact.—(*Typog.*) A type less than type-height, and thinner than a quadrat; used to separate words, etc.

space box (*Typog.*). A small box with six or eight divisions for different spaces, used when making corrections to type matter.

space charge (*Thermionics*). The negative charge in the inter-electrode space of a high-vacuum thermionic valve created by the electrons emitted from the cathode; it tends to drive back the electrons into the cathode.

space-charge grid (*Thermionics*). A positively charged electrode placed close to the cathode to neutralise the effects of the space charge, thereby reducing the anode voltage necessary to maintain a given anode current.

space-charge limitation (*Thermionics*). The condition which obtains in a thermionic valve when the current leaving the cathode is limited by the balancing of the attractive force of the other electrodes by the repulsive force of the space charge. Cf. *filament limitation.*

space-charge pentode (*Thermionics*). See **beam pentode.**

space contact (*Teleg.*). The contact which is made and which retains the telegraphist's key when it is not depressed; by extension, the contact which is made by a machine when sending spacing-current to line.

space current (*Thermionics*). See **thermionic current.**

space draft (*Weaving*). Entering the warp threads in the healds or harness in the order necessary to suit the pattern to be produced.

space factor (*Elec. Eng.*). The ratio of the active cross-sectional area of an insulated conductor to the total area occupied by it.

space group (*Crystal.*). A grouping together of identical space lattices either by interpenetration or rotation about a definite axis.

space lattice (*Crystal.*). The network arrangement of the structural units of a crystal so that a straight line through any two points will, when produced, pass through a succession of similar points at equal intervals. The same is true for any parallel line through a similar point. The units are atoms or groups of atoms.

space parallax (*Acous.*). The difference in bearing between a moving object, such as a machine in flight, and the direction of arrival of the noise-waves emitted by it. This arises from the comparable velocity of flight with that of the propagation of sound-waves.

space parallax (*Cinema.*). In colour cinematography, the blurring of colours which arises from the registering of primary colours on side-by-side films with lenses having non-coincident axes.

space parasite (*Bot.*). A plant which inhabits intercellular spaces in another plant, obtaining shelter but possibly taking nothing else.

space velocity (*Astron.*). The rate and direction of a star's motion in space of three dimensions, as deduced from its observable components (1) in the line of sight by the spectroscope and (2) perpendicular to the line of sight by proper motions.

spaced antennae (*Radio*). Antennae used in connexion with diversity reception.

spaced-loop direction-finder (*Radio*). A direction-finding equipment including two loops spaced sufficiently in terms of the wavelength to enhance their normal directivity as exhibited by their polar diagram of response.

spaced slating (*Build.*). Slating laid with gaps between adjacent slates in any course.

spacing current (*Teleg.*). The current in the circuit which corresponds to the non-depression of the telegraphist's key, and which also, when there is no mark on the slip, operates the sending machine.

spacing ratio (*Illum.*). The ratio of the distance between equally spaced electric lights to their vertical distance above the plane to be illuminated.

spacing wave (*Radio*). The wave emitted during the spacing (no-signal) periods from a radiotelegraph transmitter in which the keying is achieved by changing the frequency. Formerly used in connexion with arc transmitters.

spade (*Artillery*). An attachment to the trail of a gun-carriage which digs into the ground and assists in keeping the gun still when in action.

spade tuning (*Radio*). A crude form of tuning in which the inductance of a coil is varied by moving a spade-shaped metal disc across the face of the coil.

spadic'eous (*Bot.*). (1) Having the colour of a date.—(2) Bearing a spadix; spadix-like.—(*Zool.*) Shaped like a palm-branch. Also SPADICIFORM, SPADICOSE.

spa'dix (*Bot.*). A spike with a swollen fleshy axis, enclosed in a spathe.

spadix (*Zool.*). In male *Nautiloidea*, a cone-shaped structure formed by the modification of four of the tentacles and believed to be homologous with the heterocotylised arm of male Squids: in some Coelenterate embryos, the endodermal anlage of the manubrium.

spall (*Masonry*). A stone splinter chipped off in the process of chiselling; also called GALET.*

spalling (*Masonry*). The operation of breaking off splinters of stone from a block by slanting blows with a chisel, when dressing to shape.

span (*Civ. Eng., etc.*). The horizontal distance between the supports of a bridge, arch, etc.

span (*Elec. Eng.*). (1) The distance between two transmission-line towers.—(2) The number of slots separating the two sides of an armature coil. Also called THROW.

span-piece (*Carp.*). The horizontal beam connecting the rafters of a collar-beam roof.

span pole (*Elec. Eng.*). The pole to which the span wires are attached.

span roof (*Build.*). A pitched roof with two sloping sides having the same inclination.

span saw (*Tools*). A *frame saw* (q.v.).

span-wire (*Elec. Eng.*). One of several wires by which the trolley-wire of a tramway or trolley-bus system is suspended from street poles or buildings.

spanae'mia, spane'mia (*Med.*). Poorness of the blood: deficiency of red cells in the blood: anaemia.

spandrel (*Civ. Eng.*). The space between the haunches and the road decking of an arch.

spandrel step (*Build.*). An individual stone step in a stair, which consists of a solid block, triangular in section, arranged so that one face is parallel to the slope of the stair.

spandrel wall (*Civ. Eng.*). A wall constructed upon the extrados of an arch.

Spanish blind (*Build.*). A vertical outside spring roller blind covering the upper two-thirds of the window, the lower part being shaded by a projecting canopy.

Spanish topaz (*Min.*). A trade name for orange-brown quartz, the colour resembling that of the honey-brown Brazilian topaz. It is often amethyst which has been heat-treated. See **citrine.**

spar (*Mining*). Any non-metallic mineral with a good cleavage; e.g. calcite or celestine.

spar, Iceland (*Min.*). See **Iceland spar.**

spar (*Timber*). A round timber more than 6 in. diameter in the middle.

spar-piece (*Carp.*). A *span-piece* (q.v.).

Sparag'mite (*Geol.*). A comprehensive term which includes the late Pre-Cambrian rocks of Scandinavia. These, like the Torridonian Sandstone of Northern Scotland, consist of conglomerates and red feldspathic grits and arkoses.

sparganо'sis (*Med.*). Infestation of bodily tissues with the larvae (spargana) of various tape-worms, the adult stage of which may be unknown.

sparging (*Brew.*). A process in which the grains in the mash tun are treated with water at a temperature of about 180° F., which is sprinkled on them after the sweet wort has been run off.

spark (*Elec. Eng.*). An electric discharge taking place in air.

spark absorber (*Elec. Comm.*). See **absorber.**

spark coil (*Radio*). An induction or Ruhmkorff coil used as the source of high voltage in a spark transmitter.

spark frequency (*Radio*). The frequency of repetition of the spark discharge in a spark transmitter.

spark gap (*Radio*). An arrangement of two or more electrodes between which the spark discharge takes place in a spark transmitter.

See **quenched—** **rotary—**

spark-gap arrester (*Elec. Eng.*). A type of surge arrester in which the overvoltage drives a spark discharge across an air-gap connected between the circuit and earth.

spark-over test (*Elec. Eng.*). See **flash-over test.**

spark plug. See **sparking plug.**

spark resistance (*Radio*). The resistance between the electrodes after the discharge has commenced. It is included in the oscillatory circuit, and if excessive causes a loss of power and a high decrement.

spark spectrum (*Phys.*). On account of the greater stimulus given to the atom by the condensed electric spark compared with the arc, the spectra obtained from spark sources are found to contain lines additional to those in the arc spectrum. These lines belong to the spectra of the ionised atoms, and may be obtained fully developed and without the arc lines in some cases.

spark system (*Radio*). The oldest form of radio-telegraphy, in which the high-frequency currents are generated by charging a condenser from an induction coil, or other source of high voltage, and then discharging it through an inductance coil in series with a spark gap. The inductance coil is coupled to the antenna, which may also form part, or all, of the condenser.

spark transmitter (*Radio*). A transmitter using the spark system.

sparking (*Elec. Eng.*). The occurrence of a spark discharge between the brushes and the surface of a commutator.

sparking contact (*Elec. Eng.*). An auxiliary contact used on circuit-breakers; designed to make circuit before, and to break circuit after, the main contact, so that any sparking takes place on the auxiliary contact. It has removable contact tips, usually of carbon.

sparking limit (*Elec. Eng.*). The limiting output of a d.c. machine as determined by considerations of commutator sparking.

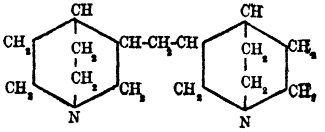
sparking plug or **spark plug** (*I.C. Engs.*). A plug screwed into the cylinder head of a petrol engine for ignition purposes, a spark gap being provided between an insulated central electrode, connected to the H.T. distributor, and one or more earthed points.

sparking potential (*Elec. Eng.*). The e.m.f. required to produce a spark discharge in an insulating medium.

sparkless commutation (*Elec. Eng.*). A term applied to methods of current commutation in which the reactance voltage is neutralised before actual commutation takes place, so that the formation of a commutation spark or arc is avoided.

spar'talite (*Min.*). An old name for *zincite.*

spar'teine, —ē-ēn (*Chem.*). $C_{15}H_{26}N_2$, an alkaloid of the quinuclidine group, obtained from the branches of the common broom, *Cytisus scoparius*; a colourless oil, b.p. 188° C. (18 mm.), sparingly soluble in water, soluble in alcohol, chloroform, or ether. It resembles coniine in its physiological action. It has the following constitution:



spasm (*Zool.*). Involuntary contraction of muscle fibres.—*adj.* **spasmod'ic.**

spasmodic torticollis (*Med.*). A nervous disorder in which the muscles of either side, or both sides, of the neck are in a state of continuous or of intermittent spasm.

spas'moneme (*Zool.*). In *Ciliophora* with contractile stalks, the powerful stalk-muscle formed by the union of the longitudinal myonemes.

spasmophil'ia (*Med.*). A term used to indicate the hypothetical heightened irritability of the nervous system of patients who have a tendency to spasms, convulsions, or tetany.

spasmus nutans (*Med.*). Nodding spasm. Rhythmic nodding of the head seen in babies in the first year of life.

spastic (*Med.*). Of the nature of spasm (sudden contraction) of muscle: characterised or affected by muscular spasm; rigid, or in a state of continuous spasm; e.g. *spastic paralysis.*

Spatangoi'dea (*Zool.*). An order of *Echinoidea* in which Aristotle's lantern is lacking, the anus and often the mouth are eccentric, the body is more or less heart-shaped, and the ambulacral areas are petal-shaped; sand-living forms. Heart Urchins.

spathe, spāth (*Bot.*). A large, usually coloured foliar organ which subtends and more or less encloses a spadix; the white part of the arum lily is a familiar example.—*adjs.* **spathaceous, spathate, spathed.**

spath'ic iron (*Min.*). See **chalybite.**

spath'ulate (*Bot.*). Shaped like a spoon or ladle, having a broad short lamina and a long petiole.

spatial effect (*Acous.*). The same as *auditory perspective.*

spatial harmony (*Photog.*). The aesthetic harmony provided by areas of juxtaposed colours.

spat'ula (*Zool.*). Any spoon-shaped structure.

spat'ulate (*Bot.*). Spathulate.—(*Zool.*) Spoon-shaped.

spav'in (*Vet.*). Chronic arthritis of the hock joint of a horse.

spawn (*Bot.*). The mycelium of a mushroom.

spawn (*Zool.*). To deposit eggs or discharge spermatozoa: a collection of eggs, such as that deposited by many Fish.

spay (*Zool.*). To remove or destroy the ovaries.

S.P.D. (*Astron.*). See **polar distance.**

speak (*Acous.*). An organ pipe is said to *speak* when, actuated by air-pressure, it emits sound.

speak-back (*Cinema.*). The subsidiary microphone-amplifier-reproducer in a motion-picture studio, by which the remote recordist can speak to the director on the sound-stage.

speaker (*Acous.*). Abbrev. for *loudspeaker.*

speaking pair (*Auto. Teleph.*). When wires are grouped for trunking through automatic switching, the pair carrying the speech-currents is termed the *speaking pair,* as contrasted with the guard wire, private wire, or meter wire.

speaking stop (*Acous*). A stop key on an organ console which controls a rank of pipes for potential operation by the keyboard, as contrasted with *non-speaking stops,* which are couplers or other devices not directly controlling pipes.

spear pyrites (*Min.*). The name given to twin crystals of marcasite which show re-entrant angles, in form somewhat like the head of a spear.

special (*Civ. Eng., etc.*). A term applied to a piece (e.g. a bend, tee, elbow, etc.) intended only for a particular use.

special apparatus rack (*Teleph*). In an exchange, the rack for apparatus which is not sufficiently numerous to warrant the provision of a complete rack. Abbrev. **S.A.R.**

special control position (*Teleph.*). The trunk position which deals with delayed calls, the operator dealing with all calls over a route, and allocating the lines to subscribers who require connexion but who must be recalled. See **trunk record position.**

special steel (*Met.*). See **alloy steel.**

specialisation (*Bot.*). The tendency of a parasite to attack only one species or variety of host plant.

species (*Bot., Zool.*). A term used in classification to denote a group of closely allied, mutually fertile individuals, showing constant differences from allied groups.—*adj.* **specific.**—In the system of *binomial nomenclature* (q.v.) of plants and animals, the second name (i.e. the name by which the species is distinguished from other species of the same genus) is termed the *specific epithet* or *specific name.* The latter, however, correctly refers to the full name—e.g. *Lilium candidum* (Madonna Lily), where *candidum* is the *specific epithet.*

specific (*Zool.*). (Of a parasite) restricted to a particular host: (of a stain) colouring certain tissues or structures only.—*n.* **specificity.**

specific characters (*Biol.*). The constant characteristics by which a species is distinguished.

specific conductance (*Elec. Eng.*). An obsolescent term for *conductivity,* the reciprocal of *resistivity.*

specific conductivity of wood (*Bot.*). The rate at which water flows through a piece of wood of standard area and length in a given time.

specific consumption (*Illum.*). The electrical energy, in watts, consumed by an electric lamp per candle-power of light emitted.

specific damping (*Elec. Eng.*). The attenuation constant per kilometre of a cable.

specific depression (*Heat*). See **depression of freezing-point.**

specific dielectric strength (*Elec. Eng.*). The dielectric strength of an insulating material, expressed in volts per millimetre.

specific electric loading (*Elec. Eng.*). The electric loading, in ampere-conductors, of the armature of a machine per centimetre of circumference.

specific energy consumption (*Elec. Eng.*). The energy consumption of an electric tractor, expressed in watt-hours per ton-mile.

specific epithet. See under **species.**

specific fuel consumption (*I.C. Engs.*). The weight of fuel used by an engine per unit horsepower per unit time; generally expressed in pounds per B.H.P.-hour (lb./B.H.P.-hr).

specific gravity (*Phys*). The ratio of the mass of a given volume of a substance to the mass of an equal volume of water at a temperature of 4° C.

specific gravity bottle (*Phys.*). See **density bottle.**

specific heat (*Phys.*). The ratio of the quantity of heat required to raise the temperature of a given mass of a substance through a given range to the heat required to raise the temperature of an equal mass of water through the same range. It may be defined rather less strictly as the quantity of heat necessary to raise the temperature of unit mass one degree.

specific heats of gases (*Phys.*). The *specific heat* of a gas at constant pressure is greater than that at constant volume on account of the energy necessary to expand the gas against the constant pressure. See **ratio of specific heats.**

specific inductive capacity (*Diel.*). *Dielectric constant* (q.v.).

specific magnetic loading (*Elec. Eng.*). The average flux density (i.e. the total magnetic loading divided by the peripheral area) in the armature of a machine.

specific magnetic resistance (*Elec. Eng.*). The obsolescent term for *reluctivity,* the reciprocal of *permeability.*

specific name. See under **species.**

specific output (*Elec. Eng*). The ratio of the electrical output of a machine to its weight, its volume, or some other function of its dimensions. Cf. *specific torque coefficient.*

specific reaction rate (*Chem.*). See **velocity constant.**

specific refraction (*Chem.*). The molecular refraction of a compound, defined by the Lorentz-Lorenz equation, divided by the molecular weight.

specific resistance (*Elec. Eng.*). See **resistivity.**

specific rotation (*Phys., Chem.*). The angle through which the plane of polarisation of a ray of sodium D light would be rotated by a column of liquid one decimetre in length, containing one gram of an optically active substance per cubic centimetre.

specific speed (*Elec. Eng.*). A comparative quantity enabling a direct comparison to be made, as regards angular velocity, between different sizes of hydraulic turbine. It is defined as the speed in r.p.m. that a geometrically similar machine would acquire in order to deliver an output of 1 h.p. under a head of 1 ft.

specific stain (*Zool.*). In zoological technique, a stain which will pick out certain structures or tissues in contrasting colours or shades. Cf. *general stain.*

specific surface (*Chem.*). The surface area per unit volume of a substance in a very finely divided state.

specific temperature rise (*Elec. Eng.*). The temperature rise of an electrical machine per unit of radiating surface.

specific torque coefficient (*Elec. Eng.*). A coefficient used in the design of electrical machines, giving a figure representing the torque per unit of volume enclosed by the air-gap periphery. Also called OUTPUT COEFFICIENT, ESSON COEFFICIENT.

specific volume (*Phys.*). The volume of unit mass; the reciprocal of density.

specific weight (*I.C. Engs.*). (Of an aero engine) the weight per horse-power, expressed in pounds per unit of maximum horse-power.

specimen stones (*Jewel.*). Faultless precious stones.

specpure (*Chem.*). A trade term for *spectroscopically pure.*

spectacle lens (*Photog*). A single uncorrected lens with a soft focus; used for pictorial work.

spectral distribution curve (*Illum.*). The curve showing the relation between the radiant energy and the wavelength of the radiation from a light source.

spectral sensitivity (*Photog.*). The comparative response of an emulsion to exposures of light of different wavelengths but constant intensity.

spectral series (*Light*). A system of lines in a spectrum in which there is an obvious regularity, the lines becoming fainter and closer together towards the short wavelengths. The recognition and measurement of series has been of great importance in atomic and quantum theories. See **Balmer series, Bohr theory, K-series, Rydberg formula.**

spectral transmission (*Photog*). The relative transmission, opacity, or density of a filter in respect of light of different wavelengths.

spectral type (*Astron*). The classification of a star by its physical constitution as revealed by the spectroscope, the sequence proceeding, on the Harvard system, in a graded list beginning with Type O, comprising gaseous, white, and very hot stars, and ending with Type M, comprising the red, cooler stars, with fluted band spectra and many metallic lines.

Spectre of the Brocken (*Meteor.*). See **Brocken.**

spec'trogram (*Photog.*). The photograph of a spectrum, either continuous or line.

spec'trograph (*Light*). An instrument used for photographing the spectrum. It may be a spectroscope, adapted by substituting a camera for the eyepiece, or a specially designed instrument such as the *Littrow spectrograph* (q.v.). See also **concave grating.**

spectrohe'liogram (*Astron*). The recorded result of an exposure on the sun by the spectroheliograph.

spectrohe'liograph (*Astron.*). An instrument for photographing the sun in monochromatic light. It consists essentially of a direct-vision spectroscope, with a second slit instead of an eyepiece, which can be set so that only light of a desired wavelength passes through it on to a photographic plate.

spectrohe'lioscope (*Astron.*). An instrument in principle the same as the spectroheliograph, but adapted for visual use by the employment of a rapidly oscillating slit which, by the persistency of vision, enables an image of the whole solar disc to be viewed in light of one wavelength; it also detects the velocities of moving gases in the solar atmosphere by an adjustment called the 'line-shifter.'

spectrom'eter (*Light*). An instrument similar in construction to the *spectroscope* (q.v.) but used for precise measurement of refractive indices, and therefore provided with divided scales, by means of which the angular positions of the telescope and prism table may be read.

spectrophotom'eter (*Photog.*). A spectroscope, with photometer, which determines quantitatively the relative intensity in different parts of a spectrum.

spec'troscope (*Light*). An instrument for observing spectra. Light from an illuminated slit is rendered parallel by a collimating lens, and falls on a prism or diffraction grating, where it is dispersed. The light is then viewed by means of a telescope in the focal plane of the eyepiece of which the spectrum is visible.

spectroscop'ic analysis (*Chem.*). See **spectrum analysis.**

spectroscopic binary (*Astron.*). See **binary (spectroscopic).**

spectroscopic parallax (*Astron.*). The name given to the indirect method of deducing the distances of stars too far away to have detectable annual parallaxes; it involves the inferring of their absolute magnitudes from spectroscopic evidence which then, combined with the observed apparent magnitudes, gives their distances.

spectros'copy (*Light*). The practical side of the study of spectra, including the excitation of the spectrum, its visual or photographic observation, and the precise determination of wavelengths.

spectrum (*Phys.*). An arrangement of radiated frequencies in order of their frequencies. The term is particularly used to denote an optical spectrum in which a number of images of a narrow slit are disposed in order of wavelength. The chief means of obtaining an optical spectrum are the prism and the diffraction grating. See **continuous—, secondary—*, spectroscope.**

spectrum analysis (*Chem.*). The analysis of a substance by observation of its spectrum. It is a valuable method for the detection of traces of metallic impurities.

spectrum lines (curvature of) (*Light*). See **curvature of spectrum lines.**

spec'ular density (*Photog.*). The photographic density in an image measured with parallel light, as contrasted with diffuse density, when the total light passed is measured, including that dispersed.

specular iron (*Min.*). The name given to a crystalline rhombohedral variety of haematite which possesses a splendent metallic lustre often showing iridescence.

specular reflection (*Illum.*). See **regular reflection.**

spec'ulum (*Med*). A hollow or curved instrument for viewing a passage or cavity of the body.

speech (*Acous.*). The fundamental method of communicating thoughts, which consists in regulating the pitch and intensity of voiced sounds, and the intensity of unvoiced sounds, by the larynx, and in modifying the spectral content of these elementary sounds by posturing the cavities of the mouth (assisted by the nasal cavities), which form double or triple Helmholtz resonators. See **articulation.**

speech-bands (*Teleph.*). The small elementary bands in the frequency-spectrum which contain essential frequencies for the recognition of specified speech-sounds.

speech-power (*Acous.*). See **average speech-power.**

speech-sound (*Acous.*). The least distinctive element in speech, such as vowels and consonants. For telephonic purposes about 30 English speech-sounds are sufficient for recognition in telephonic work, but phoneticians recognise about 60. See **logatom.**

speed. The ratio of the distance covered by a moving body to the time taken, either in a straight line or in a continuous curve. Uniform speed is a theoretical conception approached only in astronomical bodies. A practical uniform speed is a matter of approximate inference, and is always an average speed. Units of speed are *feet per second, miles per hour, knots*, and similar expressions. See **inertia** (*Phys.*).

See **air—** **minimum flying—**
ground— **stalling—**

speed (*Elec. Eng.*). The angular velocity of an electrical machine; generally expressed in revolutions per minute.

speed (*Photog.*). The measure of the rate of exposure required by an emulsion; i.e. *high-speed* means short exposure, in relation to the prevailing conditions of lens, lighting, etc. Specifically measured as an *H & D number* (q.v.), equal to the inertia divided into 34. This defined speed increases with over-development.

speed-adjusting rheostat (*Elec. Eng.*). A rheostat arranged in the field or armature circuit of an electric motor for varying the motor speed.

speed control (*Elec. Eng.*). The method by which the speed of an electric motor may be varied.

speed-distance curve (*Elec. Eng.*). The curve showing the relation between the speed of an electric tractor and the distance it has travelled.

speed-frequency (*Elec. Eng.*). The product of rotor speed and the number of pole-pairs in an induction motor.

speed governing (*Elec. Eng.*). The method of keeping the speed of a prime mover independent of the electrical load on the generator which it is driving.

speed indicator (*Eng.*). See **tachometer, speedometers.**

speed of rotation. In a rotating body, the number of rotations about the axis of rotation divided by the time (see **speed**). Units are *revolutions per second, minute*, or *hour*, or *radians per second, minute*, or *hour*. The axis of rotation may have a translatory speed of its own. See **inertia (moment of).**

speed-time curve (*Elec. Eng.*). A curve of train speed plotted against running time. It forms the starting-point in the determination of traction motor characteristics.

speed-torque characteristic (*Elec. Eng.*). The curve showing the relation between the speed of a motor and the torque developed. Also known as the MECHANICAL CHARACTERISTIC.

speed (*Vet.*). See **blackleg.**

speedom'eters (*Automobiles*). *Tachometers* (q.v.) fitted to the gear box or propeller shaft of a road vehicle, so graduated as to indicate the speed in miles per hour. They may be of centrifugal, magnetic, air-vane, chronometric, or electrical type.

speedy-cut (*Vet.*). Injury of the foreleg of a horse near the knee, made by the shoe of the opposite foot.

Speeton Clay (*Geol.*). A series of clays and marls, with beds of phosphatic nodules, occurring near Speeton on the Yorkshire coast; equivalent in age to the Gault, Lower Greensand, and Wealden of Southern England.

speise, speiss, spi'se, spis (*Met.*). A solution of mixed arsenides and antimonides produced in the smelting of arsenical and antimonical ores.

spelaeol'ogy, speleology (*Zool.*). The study of the fauna and flora of caves.

spelter (*Met.*). Commercial zinc. Formerly applied to all grades, the term is now to some extent applied only to grades of lower purity (under 99·6% zinc). High purity metal produced electrolytically, in vertical retorts, or redistilled, is called *zinc.*

Spence Shale (*Geol.*). A subdivision of the Middle Cambrian at Mt. Stephen in the Canadian Rockies, famous for its remarkable fossils.

Spergen Limestone (*Geol.*). See **Salem Limestone.**

sperm-, sperma-, spermi-, spermo-, spermato- (Greek *sperma*, gen. *spermatos*, seed). Prefixes used in the construction of compound terms; e.g. *spermatoplasm* (q.v.).

sperm (*Zool.*). A male germ-cell.

sperm morula (*Zool.*). A spherical mass consisting of a protoplasmic core with an investment of developing sperms, such as occurs in the vesiculae seminales of the Earthworm.

sperm pronucleus (*Zool.*). A male pronucleus.

spermace'ti (*Chem.*). A glistening white wax from the head of the sperm whale, consisting mainly of cetyl palmitate, $C_{15}H_{31}\cdot CO\cdot O\cdot C_{16}H_{33}$; m.p. 41°-52° C., saponification number 120-135, iodine number nil.

spermaceti candle (*Photog.*). The legalised standard candle, made from sperm-whale wax and giving one candle-power.

sper'maduct (*Zool.*). See **spermiduct.**

spermago'nium (*Bot.*). See **spermogonium.**

spermaphyt'ic (*Bot.*). Seed-bearing.

sper'mary (*Zool.*). See **testis.**

spermateleo'sis (*Zool*). The process by which a mature spermatozoon is developed from a spermatid; used also by some authors in the sense of *spermatogenesis* (q.v).

spermathe'ca (*Zool.*). A sac or cavity used for the reception and storage of spermatozoa in many Invertebrates; receptaculum seminis.

spermat'ic (*Zool.*). Pertaining to spermatozoa: pertaining to the testis.

sper'matid (*Zool.*). A cell formed by division of a secondary spermatocyte, and developing into a spermatozoon without further division.

sperma'tiophore (*Bot.*). A hypha which bears a spermatium.

sperma'tium (*Bot*). (1) The non-motile male gamete in the red algae, which is carried by water to the trichogyne.—(2) A spore-like structure which is formed by some lichens and some fungi, and which may have sexual functions.

sper'matoblast (*Zool.*). A spermatid.

sper'matocele, —sēl (*Med.*). A cyst of the epididymis or of the tubules of the testis as a result of blocking of the ducts of the epididymis; contains a clear fluid and spermatozoa.

sper'matocide (*Med.*). Any agent (especially chemical) which kills spermatozoa.—*adj.* **spermatoci'dal.**

sper'matocyte (*Zool.*). A stage in the development of the male germ-cells, arising by growth from a spermatogonium or by division from another spermatocyte, and giving rise to the spermatids.

spermatogen'esis (*Zool.*). Sperm-formation; the maturation divisions of the male germ-cells by which spermatozoa are produced from spermatogonia.

spermatogo'nium (*Zool.*). A sperm mother cell; a primordial male germ-cell.—*adj.* **spermatogo'nial.**

sper'matogons (*Zool.*). Clear cubical epithelium cells lying on the basement membrane of the seminiferous tubules in higher Vertebrates.

sper'matophore (*Zool.*). A packet of spermatozoa enclosed within a capsule.

Spermatophy'ta (*Bot.*). Seed-bearing plants.

sper'matoplasm (*Zool.*). The protoplasm of sperms.

sper'matoplast (*Bot.*). A male gamete.

spermatorrhoe'a, spermatorrhe'a (*Med.*). Involuntary, frequent discharge of seminal fluid in the absence of sexual excitement or intercourse.

spermatozeug'ma (*Zool.*). Union, by conjugation, of two or more spermatozoa.

spermatozo'id (*Bot.*). The motile male gamete of many lower plants.

spermatozo'on (*Zool.*). The characteristic form of male germ-cell, consisting of a head containing the nucleus and a whip-like tail.—*pl.* **spermatozo'a.**

spermatu'ria (*Med.*). The presence of spermatozoa in the urine.

spermidu'cal glands (*Zool.*). In many Vertebrates, glands opening into or near the spermiducts.

sper'miduct, spermaduct (*Zool.*). A duct by which sperms are carried from the testis to the external genital opening; vas deferens.—*adj.* **spermidu'cal.**

spermiogen'esis (*Bot.*). The conversion of a spermatid into a spermatozoid.

spermogo'nium, sper'mogone (*Bot.*). A flask-shaped structure in which spermatia are formed.

Sperry arc lamp (*Illum.*). An arc lamp used in searchlights, which has a positive carbon with a fast-burning impregnated core, thus giving rise to a deep crater of very high brilliancy.

sper'rylite (*Min*). Diarsenide of platinum, crystallising in the cubic system. It has a brilliant metallic lustre and is tin-white in colour.

spes phthi'sica (*Med.*). Euphoria and hopefulness of recovery in patients with advanced pulmonary tuberculosis.

spes'sartite, spes'sartine (*Min.*). Manganese garnet; silicate of manganese and aluminium, crystallising in the cubic system. Usually contains a certain amount of either ferrous or ferric iron. The colour is dark red, sometimes having a tinge of violet or brown. See **garnet.**

spew (*Acous.*). The superfluous irregular rim of wax which has to be removed from a gramophone record after it has been pressed between two stampers in the hot-pressing machine.

sp. gr. (*Chem.*). An abbrev. for *specific gravity.*

sphacelate, sfas'— (*Bot.*). Dark and shrunken.

sphaerid'ia (*Zool.*). Small rounded bodies containing ganglion cells, situated on the surface of the test in some *Echinodermata*; believed to be sense organs.—*sing.* **sphaeridium.**

sphaerocar'pous (*Bot.*). Having a globular fruit.

sphaeroceph'alous (*Bot.*). Having the flowers crowded in a rounded head.

sphae'rocrys'tal (*Bot.*). A rounded crystalline mass of calcium oxalate found in the cells of some plants.

sphaerra'phide (*Bot.*). A rounded spiky mass of calcium oxalate found, usually singly, in the cells of many plants.

sphagnic'olous (*Zool.*). Living in peat-moss.

sphagnoph'ilous (*Ecol.*). Living in peaty waters.

sphal'erite (*Min.*). See **blende.**

sphen-, spheno- (Greek *sphēn*, a wedge). A prefix used in the construction of compound terms; e.g. *sphenomandibular*, pertaining to the sphenoid and the mandibular.

sphene (*Min.*). See **titanite.**

spheneth'moid (*Zool.*). In *Amphibia*, a bone of the interorbital region which extends forward to the nasal region and replaces the orbitosphenoids.

Sphenisciforʹmes (*Zool.*). An order of *Colymbomorphae* in which flight feathers are lacking; the wings are stiff and used as paddles in swimming; the palate is schizognathous; the feet are webbed, with the hallux free; flightless marine forms, powerful swimmers and divers; confined to the southern hemisphere. Penguins.

sphe'noid, sphenoid'al (*Bot., Zool.*). Wedge-shaped.

sphenoid (*Crystal.*). A wedge-shaped crystal-form consisting of four triangular faces. The tetragonal and orthorhombic analogue of the cubic tetrahedron.

sphenoid (*Zool.*). A bone of the Vertebrate skull, one of the *sphenoidalia* (q.v.).

sphenoida'lia (*Zool.*). A set of cartilage bones forming the walls of the middle part of the brain-case in the Vertebrate skull.

sphenoidi'tis (*Med.*). Inflammation of the air-containing sinus in the sphenoid bone.

sphenolat'eral (*Zool.*). In the developing chondrocranium, a pair of dorsal bars situated in front of the basal plate and parallel to the trabeculae.

sphenot'ic (*Zool.*). A bone of the lateral wall of the auditory capsule of the skull in some Vertebrates.

sphere-crystal (*Bot.*). A sphaerraphide.

sphere gap (*Elec. Eng.*). An excess-voltage protective device comprising two metal spheres separated by an air gap.

spherical aberration (*Light*). A defect in the image formed by a lens or mirror having spherical surfaces, the spherical form being, in most cases, only an approximation to the ideal figure for the surfaces.

spherical astronomy (*Astron.*). See **positional astronomy.**

spherical candle-power (*Illum.*). The illumination on a sphere of unit radius having the source of light at its centre.

spherical excess (*Surv.*). The amount by which the sum of the three angles of a spherical triangle exceeds 180°. It is equal to the area of the triangle divided by the square of the earth's radius.

spherical reduction factor (*Illum.*). The ratio of the mean spherical candle-power of a lamp to the mean horizontal candle-power.

spherical roller-bearing (*Eng.*). A roller-bearing having two rows of barrel-shaped rollers of opposite inclination, working in a spherical outer race, thus providing a measure of self-alignment.

spherocyto'sis (*Med.*). Acholuric jaundice. A congenital and familial disease in which the red cells of the blood are smaller than normal, biconvex instead of biconcave, and abnormally fragile; it is characterised by jaundice and splenomegaly.

spheroidal jointing (*Geol.*). Spheroidal cracks found in both igneous and sedimentary rocks. Some are due to cooling and resultant contraction in the igneous rock body; others are due to a shell-like type of weathering.

spheroidal state (*Phys.*). Water dropped upon a clean, horizontal, red-hot metal plate gathers into spheroidal drops which roll about, rather like mercury drops, without boiling. This is prevented by a cushion of steam on which the drop rides, the rapid evaporation of the drop showing that its temperature is near the boiling-point.

spheroidal structure (*Geol.*). A structure exhibited by certain igneous rocks, which appear to consist of large rounded masses, surrounded by concentric shells of the same material. Presumably a cooling phenomenon, comparable with perlitic structure, but on a much bigger scale, and exhibited by crystalline, not glassy, rocks.

spher'ome (*Bot.*). A cell inclusion which gives rise to globules of fat and oil.

spheroplasts (*Cyt.*). Mitochondria.

spher'ulite (*Geol.*). A crystalline spherical body built of exceedingly thin fibres radiating outwards from a centre and terminating on the surface of the sphere, which may vary in diameter in different cases from a fraction of a millimetre to that of a large apple.

spherulit'ic texture (*Geol.*). A type of rock fabric consisting of spherulites, which may be closely packed or embedded in an originally glassy groundmass. Commonly exhibited by rhyolitic rocks.

sphincter (*Zool.*). A muscle which by its contraction closes or narrows an orifice. Cf. *dilator.*

sphingosine (*Chem.*). See under **phrenosin.**

sphyg'mogram (*Med.*). A tracing of the movements of the pulse made by a sphygmograph.

sphyg'mograph (*Med.*). An instrument for recording the movements of the arterial pulse by means of tracings.

sphyg'momanom'eter (*Med.*). An instrument for measuring the arterial blood-pressure (in millimetres of mercury), an inflatable bag being applied to the arm and attached to a manometer.

sphyg'mus (*Zool.*). The pulse; the beat of the heart and the corresponding beat of the arteries. —*adjs.* **sphygmic, sphygmoid.**

spi'ca (*Med.*). A figure-of-eight bandage with turns that cross one another.

spi'cate (*Bot.*). Spike-like.

spic'ula (*Bot.*). A small spike.

spicular cell (*Bot.*). A hard, thick-walled cell, spindle-shaped or branched, occurring among thin-walled soft tissues.

spic'ulate (*Bot.*). Said of a surface covered by fine points.

spic'ule (*Zool.*). A small pointed process: one of the small calcareous or siliceous bodies which form the skeleton in many *Porifera* and *Coelenterata*.—*adjs.* **spicular, spiculate, spiculif'erous, spic'uliform.**

spic'ulum (*Bot.*). A little spine.—(*Zool.*) Any spicule-like structure: in Snails, the dart.

spider (*Cinema.*). In a motion-picture studio, the local distributing box for lighting cables. It consists of a box with a number of paralleled substantial jacks, into which the ends of the lamp cables are plugged.

spider (*Elec. Eng.*). The centre part of an armature core, upon which the core stampings are built up.

spider (*Eng.*). See **cathead.**

spider webs (*Surv.*). Natural spider webs used to form the cross-hairs across a reticule or diaphragm.

spiegeleisen, spē'gel-i-zen (*Met.*). Pig-iron containing 15-30% manganese and 4-5% carbon. Added to steel as a deoxidising agent and to raise the manganese content of the steel.

Spige'lian lobe (*Zool.*). A division of the right lateral lobe of the Mammalian liver.

spigot (*Civ. Eng., etc.*). The plain end of a pipe which is fitted into the enlarged end of the next pipe to form a joint between the two lengths.

spigot-and-socket joint (*Civ. Eng.*). A common type of joint for cast-iron pipes, the plain or spigot end of one length fitting into the enlarged or socket end of the next length, the joint being made tight by caulking.

spike. A large stout nail more than 4 in. long.

spike (*Bot.*). An indefinite inflorescence with sessile flowers.

spike knot (*Timber*). A knot which has been cut lengthwise. Also called a SPLAY KNOT.

spi'kelet (*Bot.*). One of the units of the inflorescence of a grass. It consists of a central rachis bearing one or more sterile glumes at the base, followed by one or more flowers, each enclosed between a flowering glume and a pale; all the parts are crowded together.

spile (*Civ. Eng.*). A timber pile.

spi'lite (*Geol.*). A fine-grained igneous rock of basaltic composition, generally highly vesicular and containing the soda feldspar, albite. The pyroxenes or amphiboles are usually altered. These rocks are frequently developed as submarine lava-flows and exhibit pillow structure.

spilling (*Mining*). A method of tunnelling through loose ground, by driving *spills* (sharp-edged thick planks) ahead of and around timber frames.

spillway (*Civ. Eng.*). A *bye-channel* (q.v.).

spillway dam (*Civ. Eng.*). A reservoir dam over which flood water is allowed to flow to a downstream escape channel at the foot of the dam.

spi'losites (*Geol.*). Spotted slates formed by contact metamorphism near the junctions of basic igneous rock and shales or slates; frequently associated with adinoles.

Spilsby Sandstone (*Geol.*). A ferruginous sandstone, including some phosphatic nodules, forming the basal member of the Lower Cretaceous Series in Lincolnshire; important as a water-bearing stratum.

spin (*Aero.*). The movement of an aircraft in a continuous spiral dive, with the mean angle of incidence such that the planes are stalled.—FLAT SPIN, a spin such that the longitudinal centre line is nearer to the horizontal than to the vertical.

spi'na (*Zool.*). A small sharp-pointed process; a spine: in Insects, a median apodeme arising from the post-sternellum.

spina bifida (*Med.*). See **rachischisis.**

spina ventosa (*Med.*). A condition, resulting from tuberculous infection of a small bone (e.g. of the hand or foot), in which the centre part of the bone is destroyed and new bone is formed under the periosteum, the bone thus appearing to expand.

spinal (*Zool.*). Pertaining to the vertebral column, or to the spinal cord.

spinal canal (*Zool.*). The tubular cavity of the vertebral column which houses the spinal cord.

spinal caries (*Med.*). See **Pott's disease.**

spinal cord (*Zool.*). In *Craniata*, that part of the dorsal tubular nerve-cord posterior to the brain.

spinal reflex (*Zool.*). A reflex situated in the spinal cord, in which the higher nerve-centres play no part.

spinal shock (*Zool.*). The state of diminished excitability of the spinal cord, due to injury.

spina'les (*Zool.*). Muscles connecting the vertebrae. —*sing.* **spinalis.**

spindle (*Cyt., Zool.*). Any spindle-shaped structure; especially the framework of achromatin fibres which is formed between the centrioles during nuclear division by meiosis or mitosis.

spindle fibre (*Cyt.*). A delicate line seen in a preparation of a dividing nucleus, and with many others, making up the spindle. It is doubtful whether it is a material fibre, or merely a line of strain in the material of the nucleus.

spindle oils (*Lubricants*). See **loom and spindle oils.**

spine (*Bind.*). A name often used for the back of a book, i.e. the edge where the gathered sections are sewn together. The spine faces outwards when the book is placed on a shelf, hence the name often used, SHELF-BACK.

spine (*Bot.*). The end of a branch or leaf which has become rounded in section, hard and sharply pointed.

spine (*Zool.*). A small sharp-pointed process: the backbone or vertebral column: a pointed process of a vertebra, as the neural spine: a fin-ray: the scapular ridge.—*adjs.* **spi'nate, spi'niform, spi'nose, spi'nous.**

spinel (*Min.*). A group of closely related minerals crystallising, usually in octahedrons, in the cubic system. They occur typically as products of contact metamorphism of impure dolomitic limestones, and less commonly as accessory minerals in igneous rocks of basic composition. Chemically, spinels are aluminates, chromates or ferrates of magnesium, iron, zinc, etc., and are distinguished as *iron spinel* (hercynite), *zinc spinel* (gahnite), *chrome spinel* (picotite), and *magnesian spinel.* See also **ruby spinel, Balas ruby, chromite.**

spinel, synthetic (*Min.*). This is produced, in a wide variety of fine colours, by the Verneuil process; in chemical and optical characters identical with natural spinel, it is widely used as a gemstone.

spines'cent (*Bot., Zool.*). Spiny: tapering.—(*Zool.*) Showing a tendency to become spinous, as some animals during the declining period of the racial history.—*n.* **spines'cence.**

spinicar'pous (*Bot.*). Having spiny fruit.

spinif'erous (*Bot.*). Thorn-bearing.

spi'niform (*Bot.*). Like a thorn.

spi'niger, spinigerous (*Bot.*). Producing thorns.

spinner-gate or **whirl-gate** (*Foundry*). An in-gate incorporating a small whirl-chamber into and from which the metal flows tangentially, so releasing any dirt, which rises to the top of the chamber or up a riser. See **in-gate.**

spin'neret (*Zool.*). In Spiders, one of the spinning organs, consisting of a mobile projection bearing at the tip a large number of minute pores by which the silk issues.

spin'nerule (*Zool.*). In Spiders, a duct by which the fluid silk is discharged.

spinning (*Textiles*). The twisting together of short fibres in order to form a continuous length of thread.

spinning glands (*Zool.*). The silk-producing glands of *Arthropoda.*

spinning jenny (*Textiles*). A spinning machine invented by James Hargreaves about 1765.

spinning number (*Textiles*). See **quality number.**

spino-occipital (*Zool.*). Arising in the trunk region, and later becoming incorporated in the occipital region of the skull.

spi'nose (*Bot*). Bearing sharp, spiny teeth.

spi'nous (*Bot., Zool.*). Bearing spines.

spinous process (*Zool.*). A process of the proximal end of the tibia: a process of the sphenoid bone: the neural process or spine of a vertebra.

spin'ule (*Bot., Zool.*). A very small spine or prickle. —*adjs.* **spin'ulate, spinules'cent, spinulif'erous.** —*n.* **spinulation.**

Spinulo'sa (*Zool*). An order of *Asteroidea* in which the aboral or dorsal skeleton is composed either of close-set plates, overlapping plates, or a network of rods, which bear spines arranged singly or in groups; the tube-feet terminate in suckers, and pedicellariae are lacking.

spin'ulose (*Bot., Zool.*). Armed with minute spines or prickles.

Spi'onifor'mia (*Zool.*). An order of *Phanerocephala* comprising burrowing and tubicolous forms with small parapodia, of which the dorsal cirri are large and respiratory; the buccal region may be eversible but the pharynx is unarmed; tentacles and palps are lacking, and the peristomium is large and bears a pair of long tactile cirri; includes the Parchment-tube-worm.

spira (*Arch.*). The base of a column.

spir'acle (*Zool.*). In *Insecta* and some *Arachnida*, one of the external openings of the tracheal system: in Fish, the first visceral cleft, opening from the pharynx to the exterior between the mandibular and the hyoid arches: in amphibian larvae, the external respiratory aperture: in *Cetacea*, the external nasal opening.—*adjs.* **spirac'ular, spirac'ulate, spirac'uliform.**

spiral cell, spiral tracheide, spiral vessel (*Bot.*). A cell, tracheide, or vessel in which the secondary wall is laid down in the form of spirally arranged thickenings.

spiral (or alternating) cleavage (*Zool.*). A type of segmentation of the ovum occurring in many *Turbellaria*, most *Mollusca*, and all *Annelida*; the early micromeres rotate with respect to the macromeres, so that the micromeres lie opposite to the furrows between the macromeres; the direction of rotation (viewed from above) is normally clockwise (*dexiotropic*) but in 'reversed cleavage' it is anti-clockwise (*laeotropic*).

spiral flower (*Bot.*). A flower having its members arranged in spirals.

spiral ganglion (*Zool.*). In Mammals, a continuous ganglionic cord lying at the base of the spiral lamina and connected with the cochlear branch of the auditory nerve.

spiral gear (*Eng.*). A toothed gear for connecting two shafts whose axes are at any angle and do not intersect. The teeth are of spiral form (i.e. parts of a multiple-threaded screw), and engage as in a *worm gear* (q.v.).

spiral instability (*Aero.*). That form of lateral instability which causes an aircraft to develop a combination of side-slipping and banking, the latter being increasingly too great for the turn. This causes the machine to follow a spiral path.

spiral lamina (*Zool.*). In Mammals, the bony shelf which partially subdivides the bony labyrinth of the cochlea.

spiral ligament (*Zool.*). A projection of reticular connective tissue, by which the basilar membrane is attached to the outer wall of the cochlea in the Mammalian ear.

spiral nebulae (*Astron.*). The largest class of nebulae, so called because of their appearance in the telescope; in their distribution they avoid the galactic plane; they are found to have very high velocities of recession in the line of sight; from spectroscopic evidence they appear to be non-gaseous.

spiral reel (*Photog.*). In a light-tight developing tank, a reel on which film has been wound in a spaced spiral so that, on rotation, the developer has free access to the emulsion.

spiral scanning (*Television*). Scanning in which the spot traverses the scan area in a spiral path from the centre to the outside, whence it returns rapidly to the centre, or vice versa.

spiral spring (*Eng.*). A spring formed by coiling a steel ribbon into an elongated spiral or a helix of increasing diameter. When compressed completely it forms a true spiral.

spiral stairs (*Build.*). *Circular stairs* (q.v.) of small diameter and usually open.

spiral time base (*Cathode Ray Tubes*). An arrangement for causing the fluorescent spot to rotate in a spiral path at a constant angular velocity, so as to obtain a much longer base line than is possible with linear deflection. Used for detailed delineation of events relatively widely spaced in time.

spiral tracheide (*Bot.*). See **spiral cell.**

spiral valve (*Zool.*). In Lampreys, Selachii, and some Lung-fish, part of the intestinal canal, which is provided with an internal spiral fold to increase its absorptive surface.

spiral vessel (*Bot.*). See **spiral cell.**

spiral yarn (*Textiles*). A yarn with a spiral effect, generally produced by folding two threads of different counts, one fine and one coarse. The threads doubled are usually under unequal tension.

spire (*Build.*). A slender tower tapering to a point.

spi'reme (*Cyt.*). A stage in *prophase* (q.v.) in which the nuclear chromatin takes the form of a long thread.

spirillo'sis (*Vet.*). *Spirochaetosis (avian)* (q.v.).

spirill'um (*Bot.*). A spirally coiled bacterium.

spirit (*Chem.*). An aqueous solution of ethyl alcohol, especially one obtained by distillation.

spirit level (*Surv.*). A level tube.

spirit photography (*Photog.*). The faking of photographs by partial exposures or printings.

spirit stain (*Build.*). A stain for wood, consisting of colouring matter dissolved in methylated spirits.

spirits of hartshorn (*Chem.*). An old name for *ammonia*; derived from an old method of preparing ammonia by heating hoofs and horns in closed vessels.

spirits of salts (*Chem.*). Another name for *hydrochloric acid.*

spirits of wine (*Chem.*). *Ethyl alcohol* (q.v.).

spirochaeto'sis, spirochetosis (*Med.*). See **relapsing fever.**

spirochaetosis, avian (*Vet.*). A septicaemia of fowls, ducks, and geese due to infection by spirochaetes transmitted by ticks (*Argas* sp. and *Ornithodorus* sp.). Also called AVIAN SLEEPING SICKNESS.

spirochaetosis ic'terohaemorrha'gica (*Med.*). Weil's disease; infectious jaundice. An acute disease characterised by fever, jaundice, haemorrhages from the mucous membranes, enlargement of the liver, and nephritis; due to infection with *Spirochaeta icterohaemorrhagiae*, conveyed to Man by rats, which excrete the organism in their urine.

spirolo'bous (*Bot.*). Said of an embryo having spirally rolled cotyledons.

spirom'eter (*Med.*). An instrument for measuring the air inhaled and exhaled during respiration.

spi'roneme (*Zool.*). In certain *Ciliophora*, the contractile spiral thread of the stalk.

spitz'kasten (*Mining*). An open pointed box or cone classifier, for the water-sizing of crushed ore.

splanchnic (*Zool.*). Visceral.

splanchno- (Greek *splanchnon*, the inward parts) A prefix used in the construction of compound terms; e.g. *splanchnocoele* (q.v.).

splanch'nocoele, —sēl (*Zool.*). In Vertebrates, the larger posterior portion of the coelom which encloses the viscera, as opposed to the pericardium.

splanchnocra'nium (*Zool.*). That part of the skull constituted by the jaws and branchial arches. Cf. *neurocranium.*

splanchnomeg'aly (*Med*). Enlargement of bodily organs.

splanch'nopleure (*Zool.*). The wall of the alimentary canal in coelomate animals; the inner layer of the mesoblast which contributes to the wall of the alimentary canal; cf. *somatopleure.*—*adj.* **splanchnopleu'ral.**

splanchnopto'sis (*Med.*). Glenard's disease. General displacement downwards, or dropping, of the abdominal viscera.

splanchno'tome (*Zool*). In an early Vertebrate embryo, the ventral division of a mesoblastic somite.

splashproof fitting (*Illum.*). See **weatherproof fitting.**

splat (*Build.*). A cover strip for joints between adjacent sheets of building-board.

splat (*Furn.*). A thin, broad piece of wood forming the back of a chair or settee.

splay brick (*Build.*). A purpose-made brick bevelled off on one side. Also called SLOPE.

splay end (*Build.*). That end of a brick opposite to the end which is laid squarely by rule.

splay knot (*Timber*). See **spike knot.**

splayed grounds (*Join.*). Grounds with splayed or rebated edges, providing a key for holding the plaster to the wall in cases where the grounds also serve as screeds.

splayed jambs (*Build.*). Internal jambs or sides of a door or window opening which are not built at right-angles to the wall but slope away from it, to admit more light or to increase the width.

splayed skirting (*Build.*). A skirting board having its top edge chamfered.

splaying arch (*Build., Civ. Eng.*). An arch in which the opening at one end is less than that at the other end, so that the arch is funnel-shaped. Also called a FLUING ARCH.

spleen (*Zool.*). In *Craniata*, a ductless gland-like organ situated in the abdominal cavity close to the stomach, having a very vascular structure, and being responsible for the disintegration of worn-out erythrocytes and the birth of new leucocytes.—*adj.* **splenet'ic, sple'nic.**

splenec'tomy (*Surg.*). Surgical removal of the spleen.

sple'nial (*Zool.*). In some Vertebrates, a membrane bone on the inner side of the lower jaw behind the dentary.

splenial teeth (*Zool.*). A pair of large compound teeth in the lower jaw of some Lung-fish.

splen'ic anaemia (*Med.*). A chronic disease characterised by splenomegaly, anaemia, leucopenia, and a tendency to bleeding; when there is also cirrhosis of the liver the condition is known as *Banti's disease.*

splenic apoplexy (*Vet.*). See **anthrax.**

splenic organs (*Zool.*). In some Insects, certain bilateral groups of phagocytic cells, believed to give rise to fresh leucocytes.

spleni'tis (*Med.*). Inflammation of the substance of the spleen.

sple'nium (*Zool.*). A posterior bend of a commissure; as in the Vertebrate brain, that part of the corpus callosum which passes downwards and forwards to unite with the fornix.

sple'nius (*Zool.*). An anterior dorsal trunk muscle of higher Vertebrates.

splenomeg'aly (*Med.*). Abnormal enlargement of the spleen.

sple'nopexy (*Med*). Fixation, by suture, of the spleen to the abdominal wall.

splenot'omy (*Med.*). Incision of the spleen.

splice (*Carp.*). A *scarf* (q.v.).

splice (*Cinema.*). A joint in a cinematograph film made by removing emulsion and cementing the two bases together, either straight across at the edge of a frame or diagonally across a frame.

splice bump (*Cinema.*). The same as *bloop.*

splice piece (*Rail*). A *fish-plate* (q.v.).

spliced joint (*Elec. Eng.*). A cable joint in which the conductor strands are spliced, in the manner of a rope.

splicing (*Cinema.*). The jointing of strips of cinematograph film in repairing a break, or in editing.

splines (*Eng.*). A number of relatively narrow keys formed integral with a shaft, somewhat resembling long gear-teeth; produced by milling longitudinal grooves in the shaft (*external splines*); similarly, the grooved ways formed in a hole into which the splined shaft is to fit (*internal splines*). Used, instead of keys, for maximum strength.

splint (*Med.*). Any appliance used for the fixation of displaced or movable parts, especially of fractured and dislocated bones.

splints (*Vet.*). Exostoses on the small metacarpal or metatarsal bones of the horse.

splint bones (*Zool.*). In *Equidae*, the reduced second and fourth metacarpals and metatarsals; so-called on account of their position on either side of the third metacarpal or metatarsal.

splint wood (*Bot.*). Wood in which living cells are scattered throughout.

split (*Leather*). A hide that has been split into two or more layers, parallel to the surface.

split (*Mining*). (1) A divider for an air current. —(2) The upper or lower portion of a divided coal-seam.

split (*Weaving*). The name applied to (1) a wire in a reed; (2) the space between two adjacent wires.

splits (*Build.*). Bricks of the same length and breadth as ordinary bricks (i.e. 9 × 4½ in.), but of smaller thickness (e.g. 1, 1½, or 2 in.).

splits (*Textiles*). Two cloths that have been woven at the same time, side by side, and afterwards separated (*split up*).

split bearing (*Eng.*). A shaft bearing in which the housing is split, the bearing bush or brasses being clamped between the two parts.

split-conductor cable (*Cables*). A cable in which each conductor is divided into two sections lightly insulated from each other and connected in parallel at the ends. Used with special schemes of protection.

split-conductor protection (*Elec. Eng.*). A current-balance system of feeder protection avoiding the use of pilot wires by splitting each phase conductor into two parallel sections lightly insulated from each other.

split course (*Build.*). A course of bricks which have been cut lengthwise, so that the depth of the course is less than the normal depth of a brick.

split crankcase (*I.C. Engs.*). An engine crankcase split horizontally at about the centre line of the crankshaft. Cf. *barrel-type crankcase.*

split fitting (*Elec. Eng.*). A bend, elbow, or tee used in electrical installation work, which is split longitudinally so that it can be placed in position after the wires are in the conduit.

split mind (*Psychiatry*). A popular synonym for *schizophrenia* (q.v.).

split order-wire circuit (*Teleph.*). An arrangement for providing a B-operator with more than one order-wire circuit.

split-pastern (*Vet.*). Fracture of the second digit (os coronae) of the horse.

split-phase (*Elec. Eng.*). A term denoting a circuit arrangement for changing a single-phase to a two-phase supply.

split-pin (*Eng.*). See **cotter pin.**

split-pole convertor (*Elec. Eng.*). A synchronous convertor in which the flux distribution under the poles can be varied by means of auxiliary windings on the individual pole limits.

split pulley (*Eng.*). A belt pulley split diametrically, the halves being bolted together on the shaft; used when a solid pulley cannot be fitted.

split-ring clutch (*Eng.*). A small friction clutch commonly used in machine tools. It consists of a split ring which is expanded into a sleeve by a cam or lever mechanism. See **friction clutch.**

split-seconds chronograph (*Horol.*). A chronograph with two independent centre seconds hands, one underneath the other. On pressing the button the two hands travel together, but if a push piece in the band of the case is pressed one hand remains stationary, the other continuing until stopped by a second pressing of the button. A third pressing of the button causes both hands to fly back to zero.

splitter, beam (*Photog.*). See **beam-splitter.**

spo'dogram (*Bot.*). A preparation of the ash of a portion of a plant, especially a woody portion, used in investigating structure.

spod'umene or **triphane** (*Min.*). A silicate of aluminium and lithium which crystallises in the monoclinic system. It usually occurs in granite-pegmatites, often in very large crystals. The rare emerald-green variety *hiddenite* and the clear lilac-coloured variety *kunzite* are used as gems.

Spoerer's law spé'rer (*Astron.*). A formula due to Spoerer, in which he attempted, not very successfully, to express the rate of movement of sun spots in all solar latitudes, given the rate for one latitude.

spoil (*Civ. Eng.*). The excess of cutting over filling on any given construction. Also called **WASTE.**

spoil bank (*Civ. Eng.*). An earthwork bank formed by depositing spoil.

spoke (*Build.*). A *rung* (q.v.).

spokeshave (*Carp.*, *Join.*). A form of double-handled plane used in shaping concave surfaces.

spon'dyl (*Zool.*). A *vertebra* (q.v.).—*adj.* **spon'dylous.**

spondylarthri'tis (*Med.*). Inflammation of a vertebral joint.

spondyli'tis (*Med.*). Inflammation of a vertebra.

spondylitis defor'mans (*Med.*). A condition in which the ligaments of the spinal column become ossified and the vertebrae fused together, so that the spine is bent, rigid, and immobile.

spon'dylolisthe'sis (*Med.*). A forward displacement of the fifth lumbar vertebra (carrying the vertebral column with it) on the sacrum.

sponge beds (*Geol.*). Deposits, either calcareous or siliceous, which contain a large proportion of the remains of sponge organisms belonging to the phylum *Porifera.*

sponge cloth (*Textiles*). (1) A coarse cloth of plain (or irregular) weave, made from cotton yarns of about 4^s count.—(2) A coarse open cloth of gauze structure.

sponge weave (*Textiles*). A weave which produces an irregular or cellular effect by the grouping together of ends and picks.

spongic'olous (*Zool.*). Living in association with a Sponge, usually within the chambers of the water-vascular system.

spon'gin (*Zool.*). A horny skeletal substance, occurring usually in the form of fibres, in various groups of *Porifera.*

spon'ginblast, spon'goblast (*Zool.*). In *Porifera,* a cell which secretes spongin.

spongioblasto'ma (*Med.*). A soft, rapidly growing, malignant tumour occurring in the brain (or in the spinal cord) and derived from cells of the supporting structure of the brain.

spon'gioblasts (*Zool.*). Columnar cells of the neural canal which give rise to neuroglia cells.

spon'gioplasm (*Cyt.*). The more viscid constituents of cytoplasm, forming a meshwork.

spon'giose (*Bot*). Having the texture of a Sponge.

spon'gophare (*Zool.*). In the rhagon-type of Sponge colony, the upper wall containing the flagellated chambers. Cf. *hypophare.*

spongy layer, — mesophyll, — parenchyma, — tissue (*Bot*). A loosely constructed layer of irregularly shaped cells, separated by large intercellular spaces. It lies just above the lower epidermis of a dorsiventral leaf, and contains many chloroplasts.

spongy platinum (*Chem*). The spongy mass resulting from the calcination of ammonium chloroplatinate.

spongy skins (*Furs*). Skins having porous leather.

spontaneous generation (*Biol.*). The production of living matter or organisms from non-living matter.

spontaneous ignition temperature (*Eng.*). The temperature at which a liquid or gaseous fuel will ignite in the presence of air or oxygen, measured, for liquid fuels, by allowing a drop to fall into a heated pot. Abbrev. **S.I.T.**

spontaneous movements (*Bot.*). Movements of a plant which do not depend upon external stimuli.

spool (*Weaving*). A pirn or bobbin (usually a bobbin of weft).

spoon bit (*Carp.*). See **dowel bit.**

sporad'ic (*Bot.*). Scattered over a wide area.—(*Med.*) (Of disease) occurring here and there, not widespread or epidemic.

sporan'gial sac (or **vesicle**) (*Bot.*). A very thin-walled and often evanescent outgrowth from the sporangium of many lower fungi, in which the zoospores complete their development, and from which they are set free.

sporan'giocyst (*Bot.*). A thick-walled sporangium which is able to remain alive but inert under unfavourable conditions.

sporan'giole, sporangio'lum (*Bot.*). A sporangium which contains one spore or very few spores.

sporan'giolif'erous head (*Bot.*). A rounded group of sporangiola.

sporan'giophore (*Bot.*). A hypha or filament on which a sporangium is borne.

sporan'giospore (*Bot.*). A spore—especially a non-motile spore—formed within a sporangium.

sporan'gium (*Bot.*). A walled structure in which spores are formed.—(*Zool.*) In certain *Protozoa*, a capsule containing spores.

spore (*Bot.*). A reproductive body characteristic of plants. It consists of one cell or of a few cells, never contains an embryo, and when set free may, if conditions are favourable, give rise to a new plant.

spore (*Zool.*). In *Protozoa*, a minute body formed by multiple fission: more strictly, a seed-like stage in the life-cycle of *Protozoa* arising as a result of sporulation, and contained in a tough resistant envelope.

spore ball (*Bot.*). A globular mass of spores, either solid or hollow.

spore group (*Bot.*). A multicellular spore, each cell of which is capable of independent germination.

spore membrane (or **wall**) (*Bot.*). The firm membrane surrounding the living contents of a spore.

spore mother cell (*Bot.*). A cell which divides to give four spores, meiosis occurring during the process.—(*Zool*) In *Protozoa*, a stage in the life-history that will give rise to spores.

spore print (*Bot.*). The pattern obtained by placing the cap of an agaric, gills downwards, on paper, and allowing the sticky spores to fall and adhere to the paper.

spore sac (*Bot.*). The layer of cells in immediate contact with the sporogenous cells in the young capsule of a moss.

spore tetrad (*Bot.*). The group of four spores formed from a spore mother cell.

sporeling (*Bot.*). (1) The early stages of a plant developing from a spore.—(2) A young fern plant.

Spörer's law (*Astron*). See **Spoerer's law.**

spore'tia (*Zool.*). See **idiochromidia.**

spori- sporo- (Greek *sporos*, seed). A prefix used in the construction of compound terms; e.g. *sporogenesis*, spore-formation.

spo'ridesm (*Bot.*). See **spore group.**

sporidiif'erous (*Bot.*). Bearing sporidia.

sporid'ium (*Bot.*). (1) A spore formed from a promycelium.—(2) An old name for an *ascospore*.

spo'roblast (*Bot*). One cell or segment of a spore group.—(*Zool*) In *Protozoa*, a spore mother cell from which a spore will arise.

sporobo'la (*Bot.*). The path followed by a spore which is shot off horizontally from a basidium and then falls under the influence of gravity.

spo'rocarp (*Bot.*). (1) A multicellular structure in which spores are formed.—(2) The spore-containing structure of some water ferns.

spo'rocyst (*Zool.*). The tough resistant envelope secreted by, and surrounding, a Protozoan spore.

spo'rocyte (*Zool.*). A spore mother cell.

sporodo'chium (*Bot.*). A cushion-shaped mass consisting of many conidiophores crowded together.

spo'roducts (*Zool.*). In some *Gregarinidea*, ducts in the cyst through which the spores are ejected by the swelling of the residual protoplasm derived from the sporonts.

sporogen'esis (*Bot., Zool.*). Spore formation.

sporogen'ous (*Bot.*). Producing or bearing spores.

sporogenous cell (*Bot.*). A spore mother-cell.

sporogenous layer (*Bot.*). See **hymenium.**

sporogenous tissue (*Bot.*). A layer or group of cells from which spore mother cells are formed.

sporogo'nium (*Bot.*). The spore-bearing plant in the *Bryophyta*. It develops from the fertilised egg and lives as an almost complete parasite on the gametophyte.

sporog'ony (*Zool.*). In *Protozoa*, propagative reproduction, usually involving sexual processes and always ending in the formation of spores.

spo'ront (*Zool.*). A stage in the life-history of some *Protozoa* which, as a gametocyte, gives rise to gametes, which in turn, after a process of syngamy, may give rise to spores.

spo'rophore (*Bot.*). The spore-bearing structure in Fungi.

spo'rophyll (*Bot.*). A leaf, more or less modified, which bears one or more sporangia, or subtends a sporangium.

spo'rophyte (*Bot.*). The spore-bearing plant.

sporophyt'ic (*Bot.*). Pertaining to the sporophyte.

spo'roplasm (*Zool.*). (1) A binucleate amoebula stage in the life-cycle of some *Protozoa*.—(2) In the spores of certain *Sporozoa*, the body of protoplasm.

sporotricho'sis (*Med.*). An infection of the skin (and rarely of muscles and bones) with the fungi of the genus *Sporotrichum*, causing granulomatous lesions.

Sporozo'a (*Zool.*). A class of *Protozoa* comprising forms which are always parasitic, in the principal phase have no external organs of locomotion or are amoeboid, lack a meganucleus, and form large numbers of spores after syngamy.

sporozo'ite (*Zool.*). In *Protozoa*, an infective stage developed within a spore.

sport (*Gen.*). Any individual differing markedly from the normal by reason of genetical factors; it may be due to a *mutation* (q.v.) or to other causes, such as a rare recombination of factors.

sporula'tion (*Bot.*). The production of spores.—(*Zool.*) In *Protozoa*, a form of multiple gemmation in which the parent organism breaks up almost completely into buds, leaving a little mass of residual protoplasm.

spot or **spot-light** (*Cinema.*). An arc or incandescent light in a container with a lens. It emits a narrow beam of rays.

spot, blind (*Optics*). See **blind spot.**

spot board (*Plast.*). The square wooden board on which the plasterer works up the coarse or fine stuff prior to applying it to the walls.

spot cotton (*Cotton Trade*). Cotton available for immediate delivery.

spot level (*Surv.*). The reduced level of a point (usually on the ground surface) chosen at random.

spot recording (*Acous.*). Any recording done on location, particularly when there is one opportunity only, without rehearsal, for making the recording; as in news-reels.

spot welding (*Elec. Eng.*). An electric welding process in which two overlapping sheets of metal are held between a pair of electrodes between which a heavy current of short duration is passed.

spotted fever (*Med.*). Cerebrospinal fever. See also **Rocky Mountain fever.**

spotted slate (*Geol.*). Argillaceous rock which has been altered by low or moderate grade metamorphism so that the homogeneous colouring matter of the rock becomes concentrated at some points and an early stage of crystallisation of other minerals may be found in other points, giving a spotted appearance.

spotting (*Horol., etc.*). A method of finishing plates or other flat surfaces with a regular pattern of circular patches.

spotting (*Eng.*). The operation of turning a short length of a bar or forging to form a journal, by which the work is to be supported by the jaws of a steady rest. See **steady.**

spotting drill (*Eng.*). A flat drill having a point so shaped as to centre and face the end of a bar at one operation. See also **centre drill.**

spotting negatives (*Photog.*). Simple retouching, in which pinholes in negatives are made opaque, and the consequent defect is mitigated.

sprags (*Mining*). Timber props, or short pieces of wood, used to prevent the wheels of a train from revolving.

sprain (*Med.*). A wrenching of a joint with tearing or stretching of its ligaments, damage to the synovial membrane, effusion into the joint, occasionally rupture of muscles or tendons attached to the joint, but without dislocation.

spray arrester (*Elec. Eng.*). (1) A lightning arrester designed for removing accumulation of static charge; it consists of a spray of water from an earthed pipe impinging on a plate connected to the live circuit.—(2) A sheet of glass placed over an open accumulator cell to prevent splashing of acid spray.

spray gate (*Foundry*). An in-gate consisting of a number of small separate gates, fed from the runner; used for shallow castings where there is insufficient depth for a single large gate. See **in-gate.**

spray-gun (*Civ. Eng., Paint., etc.*). An apparatus for forming by pneumatic pressure a fine spray or mist of paint or cement mortar, which can be directed on to the work.

spray-shielded valve (*Thermionics*). See **metallised valve.**

spraying (*Met.*). The process of coating the surface of an article with metal by projecting on to it a spray of molten metal.

spread (*Biol.*). The establishment of a species in a new area.

spread (*Radio*). The angle, in degrees, within which fall a number of bearings, ostensibly of a distant radio-transmitter, when corrected for site and other errors.

spreadboard (*Textiles*). An endless belt on which sorted flax fibre is laid in handfuls for conversion into sliver.

spread factor (*Elec. Eng.*). See **distribution coefficient.**

spreader (*Radio*). A wooden or metal spar for keeping the wires of a multi-wire antenna spaced apart from each other.

spreading (*Bot.*). Diverging gradually outwards.

sprig (*Build.*). A small nail with little or no head.

sprigs (*Foundry*). Small nails pushed into a weak edge of sand in a mould in order to reinforce it during pouring. Also called BRADS.

sprig bit (*Join.*). See **bradawl.**

spring (*Elec. Comm., Eng., etc.*).
See **carriage— fly— relay—**
contact— helical— spiral—
x-contact y-contacts.

spring assembly (*Elec. Comm.*). The collection of contact springs in a relay. The moving springs are pushed by the movement of the armature, on operation of the relay, so that the appropriate circuit changes are made.

spring bows (*Instruments*). Small compasses whose two limbs are not hinged together but are connected by a bow of spring steel, the distance apart of the marking points being adjusted by means of a screw.

spring control (*Elec. Eng.*). A method of controlling the movement of an indicating instrument by means of a spring.

spring-loaded governor (*Eng.*). An engine governor consisting of rotary masses which move outwards under centrifugal force and are controlled by a spring. See **Hartnell governor.**

spring needle (*Hosiery*). A type of needle used to produce close and even texture in knitted fabrics. Also called BEARDED NEEDLE.

spring pawl (*Eng.*). See **pawl.**

spring safety valve (*Eng.*). See **safety valve.**

spring skins (*Furs*). The fur of animals caught in the spring (seconds).

spring wood (*Bot.*). Secondary wood formed during the spring and early summer, often distinguished by the larger and thinner walled elements of which it is composed. Cf. *summer wood.*

spring tides (*Astron.*). Those high tides occurring when the moon is new or full, at which times the sun and moon are acting together to produce a maximum tide.

springer or **springing** (*Civ. Eng.*). The lowest voussoir on each side of an arch. Also called REIN.

springing (*Horol.*). The operation of shaping and fitting the balance spring to its staff.

springings (*Build.*). The lines where the intrados of an arch meets the abutments or piers.

springing line (*Build.*). The line joining the springings on both sides of an arch.

sprinkler (*Build.*). A pipe system installed in a building, having at frequent intervals spray nozzles protected by connexions made of a fusible alloy; these, in the event of a fire, melt and release water for automatic fire-fighting.

sprocket (*Carp.*). A small wedge-shaped piece of wood nailed to the upper surface of the lower end of a common rafter in cases where the latter is carried beyond the pole plate to form a projecting eave. It provides a break in the slope of the roof near the eaves.

sprocket (*Cinema.*). A cylindrical wheel, with protruding pins on one rim or both rims for pulling film by means of perforations.

sprocket or **sprocket wheel** (*Eng., etc.*). A toothed wheel used for chain drives, as on the pedal shaft and rear hub of a bicycle.

sprocket holes (*Cinema.*). The accurately punched perforations on the edges of cinematograph film, for pulling it through cameras and projectors at the correct speed.

sprocket noise (or **hum**) (*Cinema.*). The extraneous noise, of 96 cps. fundamental, arising from a displacement of the film in a sound-gate, so that the light from the exciter lamp passes through the adjacent perforations and is thereby modulated.

sprocket wheel (*Eng., etc.*). See **sprocket.**

sprout cell (*Bot.*). A cell formed as a bud from a mother cell.

sprouting or **sprout germination** (*Bot.*). See **budding** (1).

sprue (*Foundry*). See **gate.**

sprue (*Med.*). Psilosis. A disease affecting the gastro-intestinal tract. Characterised by loss of energy, loss of weight, anaemia, inflammation of the tongue and the mouth, and by the frequent passage of pale, bulky, acid, frothy stools, there being inability to absorb adequately fat, glucose, and calcium.

spun silk (*Textiles*). Yarn made from silk waste which is spun in the same manner as woollen yarns.

spur (*Bot.*). (1) A tubular prolongation of the base of a petal or of a gamopetalous corolla.—(2) An extension of the base of the leaf beyond its point of attachment.—(3) See **short shoot.**—(4) A short branch in many trees on which flowers and fruit are borne.

spur (*Build.*). A strut.

spur (*Geol.*). A hilly projection extending from the flanks of a valley.

spur (*Print.*). See **machine points.**

spur (*Zool.*). See **calcar.**

spurs (*Pot.*). Supports, made of dense non-fusing material, for holding up articles in saggars in the glost kilns.

spur gear (*Eng.*). A system of gear-wheels connecting two parallel shafts. The pitch surfaces are cylinders with straight, helical, or double-helical teeth, generally of involute form.

spur marks (*Pot.*). Dry spots, not covered by glaze, sometimes seen on the base of ware which has been supported in saggars on spurs.

spur pelory (*Bot.*). An abnormal condition in which all the petals of an irregular flower develop spurs, so that the flower becomes regular.

spu'riae (*Zool.*). In Birds, the feathers of the bastard wing.

spurious dissepiment (*Bot.*). A partition in a fruit which is not an ingrowth from the edges of the carpels nor an upgrowth from the receptacle. Also called FALSE SEPTUM.

spurious fruit (*Bot*). A group of fruits having the appearance of a single fruit; a fig is a familiar example.

spurious oscillation (*Radio*). See **parasitic oscillation.**

spurious pregnancy (*Med.*). See **pseudocyesis.**

spurr'ite (*Min.*). A carbonate and silicate of calcium, $2Ca_2SiO_4{\cdot}CaCO_3$, occurring somewhat rarely in limestones containing silica in the metamorphic aureoles round igneous intrusions, as at Scawt Hill, Antrim.

sputtering (*Thermionics*). Disintegration of the material of the cathode in a vacuum or gas-filled discharge tube, and its subsequent deposition on the other electrodes or the walls of the envelope.

spu'tum (*Med.*). Matter composed of secretions from the nose, throat, bronchi, or lungs, which is spat out.

Spy Wood Grit (*Geol.*). A sandstone-grit bed which forms the basal member of the Caradocian stage in the Ordovician System in the Shelve district of Shropshire.

spyndle (*Textiles*). A unit of length (14,400 yards) used in counting jute yarns.

S.Q. (*Build*). Abbrev. for *squint quoin.*

squam'a (*Bot., Zool.*). A scale: a scale-like structure.—(*Zool.*) In some *Crustacea*, a scale-like body arising from the second joint of the antenna and believed to represent the exopodite: in *Diptera*, the *antisquama* (q.v.).

Squama'ta (*Zool.*). An order of *Reptilia* having (usually) procoelous vertebrae, upper temporal arcade only, a perforate palate, a movable quadrate, and no abdominal ribs. Snakes and Lizards.

squamate, squamose, or **squamous** (*Bot., Zool.*). Scaly.

squamation (*Zool*). See **pholidosis.**

squam'iform (*Zool.*). Scale-like.

squamo'sal (*Zool*). A paired membrane bone of the Vertebrate skull which overlies the quadrate.

squamous epithelium (*Zool.*). Epithelium consisting of one or more layers of flattened scale-like cells; pavement epithelium.

squam'ula (*Zool.*). A small scale: in *Insecta*, the tegula: in some *Gymnophiona*, one of the small rounded areas of the pouch scales.—*adj.* **squam'ulate.**

squam'ule (*Bot.*). A small scale.

squam'ulose (*Bot.*). Covered with small scales.

square (*Carp.*). The unit of area used in the trade for flooring, etc., the unit being 100 sq. ft.

square (*Timber*). A piece of square-section timber of size from 1 to 6 in. square.

squares (*Bind.*). The protrusion of the covers of a book beyond the edges.

square folding (*Bind*). The method of folding in which the second fold is at right angles to the first, the third to the second, and so on. Cf. *parallel folding.*

square joint (*Carp., Join.*). A joint formed between the squared ends of two jointing pieces which come together but do not overlap.

square law (*Illum.*). The law of inverse squares expressing the relation between the amount of light falling upon unit area of a surface and the distance of the surface from the light source.

square law condenser (*Radio*). A variable condenser, used for tuning, in which the capacitance is proportional to the square of the scale reading, so that the wavelength of the circuit which it tunes becomes directly proportional thereto. Also called STRAIGHT-LINE WAVELENGTH CONDENSER.

square law rectifier (*Radio*). A rectifier in which the rectified output current is proportional to the square of the applied alternating voltage.

square-mile foot (*Elec. Eng.*). A hydraulic constant often used in hydro-electric calculations; it is defined as the quantity of water that will cover an area of a square mile to a depth of 1 ft. It is equal to 27·88 million cub. ft., or 174 million gallons.

square rabbet plane (*Join.*). A rabbet plane with its cutting edge square across the sole.

square roof (*Build*). A roof in which the principal rafters enclose an angle of 90°.

square staff (*Build.*). An angle staff of square-section material, as distinct from an angle bead.

square step (*Build.*). An individual stone step in a stair which consists of a solid block, rectangular in section, either lapping over the back edge of the step below or rebated to fit over it.

square thread (*Eng.*). A screw-thread having twice the pitch of a similar V thread, with corners slightly rounded; used for transmitting a thrust, as in stop-valve spindles.

squared (*Horol.*). Formed to a square cross-section; e.g. the end of a barrel arbor that takes the winding key.

squared rubble (*Masonry*). Walling in which the stones are roughly squared to rectangular faces but are of irregular size.

squaring (*Furs*). The operation of shaping up furs for use.

squaring bands (*Spinning*). See **steadying bands.**

squaring-up (*Build., Civ. Eng.*). A process following *taking-off* in drawing up a bill of quantities, superficial areas of items being calculated by multiplying the relevant dimensions entered on the dimensions paper.

squar'rose (*Bot.*). Rough, with many scales or hairs standing out at right-angles.

squeaking (*Elec. Comm.*). Using a gliding tone, either from a beat (heterodyne) oscillator or from a record, for testing the frequency-response curve of lines, amplifiers, recorders, etc.

squeegee (*Photog.*). A rubber roller or brush for squeezing out surplus water, to ensure good contact between photographic surfaces or supports.

squeeze track (*Cinema.*). This indicates closing the light-valve ribbons in variable-density recording, or cutting off superfluous light or deflecting the modulating mirror in variable-area recording, so that the negative sound-track is as transparent as possible. It ensures that the positive print, allowing for the desired modulation, is as dense as possible, so that noise arising from scratches and grain is minimised.

squeezer (*Moulding*). A moulding machine, operated by hand, compressed air, hydraulic power, or magnetic means, in which the sand is squeezed or compressed into the box and round the pattern by a ram.

squegging (*Radio*). A mode of oscillation of an oscillator when operated under certain conditions, as with excessive resistance in the grid circuit. The oscillations build up to a certain value and then abruptly stop, the process being repeated at a rate determined by the time-constant of the capacitance and resistance of the grid circuit. Sometimes called SQUAGGING.

squegging oscillator (*Cathode Ray Tubes*). A form of linear time base which includes an oscillator operating in the squegging condition.

squinch (*Build.*). A small arch running diagonally across the corner of a square tower or room, to support a side of an octagonal tower or spire above. Also called a SCOINSON ARCH.

squint (*Build.*). A purpose-made brick of shape suiting it for use as a squint quoin.

squint (*Med.*). See **strabismus.**

squint quoin (*Build.*). A quoin enclosing an angle which is not a right-angle.

squirrel (*Furs*). The dressed skin of the squirrel, of which there are several varieties—red, grey, black. The fur is generally that of the grey squirrel, but frequently it is dyed.

squirrel-cage motor (*Elec. Eng.*). An induction motor whose rotor winding consists of a number of copper bars distributed in slots round the periphery, with the ends solidly connected to two heavy copper end-rings, the whole forming a rigid cage embedded in the rotor. See also **cage rotor, cage winding.**

squirted filament (*Illum.*). An electric-lamp filament prepared by squirting a composition through a die and subsequently applying heat treatment.

Sr (*Chem.*). The symbol for *strontium.*

S.T. (*Build.*). Abbrev. for *surface trench.*

stab (*Typog.*). See under **establishment.**

stabbing (*Bind.*). The operation of (1) piercing a book section prior to stitching or sewing, (2) wire-stitching a closed section or booklet near the back edge.

stabbing (*Build.*). The operation of making a brickwork surface rough in order to provide a key for plasterwork.

stabilisation (*Bot.*). The establishment of an equilibrium between the vegetation of a locality and external conditions, especially climatic conditions.

stabilised feedback amplifier (*Radio*). An amplifier in which the degree of amplification is stabilised against changes in supply voltages, etc., by the application of negative feedback.

stabiliser (*Chem.*). (1) A negative catalyst.—(2) A substance which makes a solution stable.

stabiliser (*Thermionics*). A device for ensuring the constancy of voltage or current, irrespective of variations of conditions of supply and/or load, over a certain range. A typical example is a neon-filled discharge tube, which maintains a constant P.D. across its terminals over wide ranges of current through it.

stabilising choke (*Illum.*). A reactive choke coil inserted in series with an electric discharge lamp in order to compensate its negative resistance characteristic.

Stab'ilit (*Elec. Eng.*). A vulcanised rubber insulating material similar to ebonite and vulcanite.

stability. A general property of mechanical, electrical, or aerodynamical systems, whereby the system returns to a state of equilibrium after disturbance, any consequent oscillation dying away through dissipation of energy.

stability (*Elec. Eng.*). The property of a transmission system whereby there is a general tendency for changes in load demand to be met without any falling out of step on the part of synchronous machines.

stability test (*Cables*). In this test the cable is subjected to working voltage (or a higher voltage) whilst it is alternately heated and allowed to cool. The power factor is measured during each heating and cooling period. If the power factor increases steadily during the test, the cable is said to be unstable.

stable (*Chem., etc.*). Possessing no tendency to change.

stable community (*Bot.*). A plant community which remains unaltered in its general characters for a long time.

stable equilibrium (*Mech.*). See **equilibrium.**

stable oscillation. Any oscillation in a mechanical body, electrical circuit, or aircraft which does not increase, but tends to die away because of natural dissipation of energy unless externally sustained.

stach'yose (*Chem.*). $C_{24}H_{42}O_{21}+4\frac{1}{2}H_2O$, a tetrasaccharose, found in the roots of *Stachys tuberifera* and of several *Labiatiae*; m.p. (anhydrous) 170° C.

stack (*Build.*). See **chimney stack.**

stack mixing (*Textiles*). A method of mixing cotton of different types by piling it in horizontal layers, to produce raw material suitable for spinning yarns of fine count. See **direct mixing.**

Staddon Grits (*Geol.*). A series of sandstones, grits, and quartzites found in Cornwall and South Devon, occurring typically on Staddon Heights, Plymouth, and of Lower Devonian age.

stadia hairs (*Surv.*). The two additional horizontal hairs, one on each side of the central hair, fitted to the diaphragm of a telescope to be used for tacheometric purposes.

stadia rod (*Surv.*). A special form of levelling staff bearing bold graduations suitable for the long sights usual in stadia tacheometry.

stadia system (*Surv.*). A tacheometric method in which distance is determined at one pointing only of the telescope.

stadium (*Zool.*). An interval in the life-history of an animal between two consecutive ecdyses.

staff (*Build.*). (1) A *rung* (q.v.).—(2) An *angle-staff* (q.v.).

staff (*Horol.*). An arbor or axis, especially that of the balance or pallets.

staff (*Surg.*). A grooved rod introduced into the urethra as a guide for cutting a stricture.

staff (*Surv.*). See **levelling staff.**

staff angle (*Build.*). An *angle-staff* (q.v.).

staff bead (*Build.*). An *angle-bead* (q.v.).

staffman (*Surv.*). The surveyor's assistant whose duty it is to hold the levelling staff while the instrument is sighted upon it and readings are being taken.

Staffordian Series (*Geol.*). The so-called Transition Group of the British Coal Measures, between the Middle and Upper Coal Measures in the Carboniferous System. They include the Newcastle-under-Lyme Group and the Etruria Marl, and the Blackband Group in North Staffordshire.

Staffordshire blues (*Build.*). Hard, dense, and almost impervious bricks of the *engineering brick* (q.v.) class, dark-blue in colour owing to an oxide of iron content.

stag-headed (*Bot.*). Said of a tree which, owing to a diseased condition, is devoid of twigs and leaves at the top, some dead main branches standing up like antlers.

stage (*Build., Civ. Eng.*). (1) A *landing* (q.v.).—(2) A *platform* (q.v.).

stage (*Build., Cinema.*). That part of a theatre auditorium which is reserved for the artists who are performing, or which accommodates the cinematograph screen and the associated sound-reproducers, scenery, lighting equipment, etc.

See **sound—** **scoring—**

stage (*Geol.*). A succession of rocks which were deposited during an age of geological time. It is a subdivision of a geological series.

stagger (*Aero.*). The condition in which one or more planes of a multiplane structure are placed ahead of the others. When the higher planes are ahead of the lower, the stagger is *positive,* and when the reverse, *negative.*

staggering (*Elec. Eng.*). A term signifying the displacement of the brushes of a commutator motor from the neutral zone.

staging (*Build.*). See **builders' staging.**

stagnic'olous (*Zool.*). Living in stagnant water.

stain (*Photog.*). Any extraneous marking on a photographic image due to deposition of chemical matter and insufficient washing.

stainer (*Paint.*). A pigment added to paint when a final colour is required which is different from that of the base used. Also called COLOURING PIGMENT.

staining (*Leather*). The operation of brushing the surface of leather with a solution of dyestuff. Also called BRUSH-DYEING.

staining (*Photog.*). The coloration of a black-and-white print with dye in colour cinematography.

staining power (*Chem.*). The degree of intensity of colour which a coloured pigment will impart when mixed with a standard white pigment under standardised conditions.

stainless steel (*Met.*). Corrosion-resistant steel of a wide variety of compositions, but always containing a high percentage of chromium (8-25%). The following are typical compositions: 13% Cr, 0·35% C; 18% Cr, 0·1% C; 18% Cr, 8% Ni, 0·08% C; 25% Cr, 12% Ni. These are highly resistant to corrosive attack by organic acids, weak mineral acids, atmospheric oxidation, etc. Used for cutlery, furnace parts, chemical plant equipment, stills, valves, turbine blades, ball-bearings, etc.

stair (*Build.*). A series of steps constructed to give access to parts of a building at different levels.

staircase (*Build.*). The space containing the stair.

stair clip (or **rod**) (*Build.*). A clip or rod used to hold a stair carpet in position at the re-entrant angle between a tread of one step and the riser of the step immediately higher.

stair-head (*Build.*). The top of a flight of stairs.

stairway (*Build.*). A *staircase* (q.v.).

stake (*Carp.*). A piece of timber pointed at one end for ease of driving into the ground.

staking machine (*Leather*). A machine in which leather undergoes a process of stretching and softening, to prevent cohesion of the fibres while drying.

stalac'tite (*Geol.*). A concretionary deposit of calcium carbonate which is formed by percolating solutions and hangs icicle-like from the roofs of limestone caverns and analogous places.

stalac'tited (*Masonry*). A term applied to a variety of rusticated work distinguished by having ornaments resembling icicles on the faces of the stone.

stalag'mite (*Geol.*). A concretionary deposit of calcium carbonate, precipitated from dripping solutions on the floors and walls of limestone caverns. Stalagmites are often complementary to stalactites, and may grow so that they eventually join with these.

stalagmom'etry (*Chem.*). The analysis of solutions by means of surface tension measurements.

staling (*Bot.*). The accumulation in the substratum of waste metabolic products from bacteria or fungi, rendering the substratum unfit to sustain further growth of the organisms.

stalk (*Civ. Eng.*). The upright part of a reinforced concrete retaining wall, springing from the horizontal base.

stalk (*Horol.*). The thin rod or wire which carries the hammer of a striking or chiming clock.

stall (*Aero.*). To have the planes of an aircraft at or above the angle of incidence corresponding with its maximum lift coefficient.

stall (*Eng.*). (Of an engine) to stop owing to the too sudden application of a load or brake.

stall (*Mining*). The working compartment or room in the bord-and-pillar method of working coal: a coal-miner's working place.

stallboard (*Join.*). A substantial and often wide sill at the foot of the window sash of a shop front.

stall riser (*Build.*). The upright part, of wood, marble, etc., between the pavement and the stallboard of a shop front.

stalling speed (*Aero.*). The airspeed of an aeroplane at which it experiences its maximum lift.

stalling torque (*Elec. Eng.*). The overload torque which is sufficient to slow down to zero the speed of an electric motor operating under load.

Stalloy (*Elec. Eng.*). A special high-grade 'electrical' steel manufactured in thin sheets and used in laminated cores.

sta'men (*Bot.*). One of the members of the flower which produces pollen. It usually consists of a slender filament surmounted by an anther in which the pollen develops.

stam'inal (*Bot.*). Pertaining to a stamen: derived from a stamen.

stam'inate (*Bot.*). Said of a flower possessing stamens but not carpels, and, by extension, of an inflorescence consisting of such flowers.

stam'inode (*Bot.*). An imperfectly developed or vestigial stamen.

stam'inose (*Bot.*). Said of a flower in which the stamens are very obvious.

stamp (*Mining*). (1) To crush.—(2) A freely falling weight, attached to a long rod and lifted by means of a cam; used for crushing ores.

stamp battery (*Met.*). A machine for crushing gold ores. Each battery contains five heavy stamps, which are lifted in turn by cams and dropped. The ore, mixed with water, is crushed on die blocks and splashed against a screen, the mesh of which controls the fineness of the product.

stamper (*Acous.*). The final negative record made by electroplating the mother. The stamper is used to imprint the final positive on the gramophone record which is used for reproduction.

stamping (*Elec. Eng.*). See **lamination.**

stanchion (*Civ. Eng.*). A pillar, usually of steel, for the support of a superstructure.

stand-by losses (*Elec. Eng.*). That part of the power expended in a generating station in order to maintain plant in instant readiness to take a sudden load.

stand-in (*Cinema.*). In motion-picture production, a duplicate, in figure and dress, of a leading artist. The stand-in takes the place of the actual artist during the adjustment of the lighting, etc., before a shot, so that the actual artist is not fatigued by these preliminaries.

stand-insulator (*Elec. Eng.*). An insulator on which stands the structure used for supporting an accumulator or battery.

stand pipe (*Eng.*). An open vertical pipe connected to a pipe line, to ensure that the pressure head at that point cannot exceed the length of the stand pipe.

stand sheet (*Build.*). A window having no frame. Also called FAST SHEET.

standstill (*Elec. Eng.*). A term pertaining to the electrical behaviour of a machine when at rest.

standstill torque (*Elec. Eng.*). The load torque which would bring an electric motor to a standstill.

standard (*Bot.*). The large petal which stands up at the back of the flower of the pea and related plants, and does much to make the flower conspicuous. Also called BANNER, VEXILLUM.

standard (*Build.*). One of the upright poles or members forming a principal part of a scaffold.

standard fitting (*Illum.*). An electric-light fitting designed to stand on a table, or on the floor. More commonly known as a STANDARD LAMP.

standard pile (*Civ. Eng.*). A form of bearing pile driven into the ground to provide support for sheet piling.

standard. Generally, a unit of reference, frequently legally defined; see **metre, pound, line standard.** Also used adjectivally in connexion with numerous specific entities to denote a value commonly accepted for purposes of reference or measurement. See the articles immediately following.

standard (*Timber*). See **board foot, Petersburg standard.**

standard ampere (*Elec. Eng.*). The international unit of current. It is defined as that steady current which, when passed through a solution of silver nitrate, deposits silver at the rate of 1·118 milligrams per second.

standard atmosphere (*Aero.*). A standard of measurement of atmospheric conditions used in comparing the performance of aircraft. Mean sea-level temperature 15° C., and pressure 1013 2 millibars. Lapse rate 6·5° C. per kilometre from sea-level up to 11 kilometres, above which the temperature is assumed constant at −56·3° C.

standard cable (*Elec. Comm.*). See **mile of standard cable.**

standard calomel electrode (*Chem.*). A half-element consisting of mercury, a paste of mercury and calomel (mercurous chloride), and a standard solution of potassium chloride saturated with calomel; used as a standard potential difference in e m.f. measurements.

standard (or **parliamentary**) **candle** (*Illum.*) A source of light of standard intensity once used in photometry but now replaced by more reliable standards such as the pentane lamp, the Hefner lamp, and the Carcel lamp. See **international candle.**

standard cell (*Elec. Eng.*). A voltaic cell selected as a standard because of stability of electromotive force and reproducibility to specification. The standard cell at the present time is the Weston cadmium cell, which has an electromotive force of 1·01823 volt at 20° C.

standard deviation (*Maths.*). The root of the average of the squares of the differences from their mean of a number of observations. The square root of their *variance* (q.v.).

standard electrode potential (*Chem.*). The potential of a chemical element dipping into a solution containing its ions at unit activity, referred to that of hydrogen under a pressure of one atmosphere as zero.

standard film stock (*Cinema.*). The normal size of film used in theatres and film studios, i.e. 35 mm. in width.

standard filter (*Photog.*). A filter which, when placed in front of a specified source, e.g. a tungsten lamp, gives a standard light—white of black-body temperature 4800 K.

standard frequency (*Elec. Eng.*). 50 or 60 cycles per second, the standards of frequency adopted in most countries of the world.

standard gauge (*Rail.*). In Great Britain and the United States of America the standard gauge is 4 ft. 8½ in.

standard knot (*Timber*). A knot which is 1½ in. or less in diameter.

standard measurement (*Build.*). The method recommended by the Chartered Surveyors' Institution for the measurement of building works.

standard mix (*Civ. Eng.*). Concrete mixed in the proportions: 1 of cement to 2 of sand to 4 of coarse material.

standard ohm (*Elec. Eng.*). The resistance of a column of mercury 106·3 cm. long and 1 sq. mm. in area at 15° C. The legal unit of resistance.

standard oxidation - reduction potential (*Chem.*). The potential established at an inert electrode dipping into a solution containing equimolecular amounts of an ion or molecule in two states of oxidation.

standard reflector (*Illum.*). A reflector which conforms with the British Standard Specification for industrial reflectors.

standard sections (*Eng.*). See **girder, H-beam.**

standard signal generator (*Radio*). An oscillator whose output is calibrated as regards frequency and amplitude, and sometimes depth of modulation; used for the testing of radio equipment, receivers, etc.

standard solenoid (*Elec. Eng.*). A laboratory standard of inductance consisting of an air-cored solenoid with a secondary coil located at its centre. The dimensions are such that a change of 1 ampere in primary produces a change of 10^6 flux-linkages in the secondary winding.

standard solution (*Chem.*). A solution whose strength is known. The most important standard solution is the *normal solution.*

standard specification (*Eng., Elec. Eng.*). The specification to which a machine must conform. In Great Britain standard specifications are drawn up by the British Standards Institution; in U.S.A. by the Bureau of Standards.

standard temperature and pressure (*Chem.*). See **S.T.P.** and **N.T.P.**

standard time (*Astron.*). The system of time reckoning with reference to some selected meridian for a large area, instead of using many local times differing according to longitude. For general (e.g. navigational) purposes, Greenwich mean time is the accepted standard. It is also the local standard for Great Britain and France. *Central European Time* (1 hour in advance of Greenwich) is the standard for Germany, Switzerland, and Italy. In the U.S.A. and Canada five zones are recognised, viz. *Atlantic* (Canada, 4 hours behind Greenwich), *Eastern* (5 hours), *Central* (6 hours), *Mountain* (7 hours), *Pacific* (8 hours).

standard wire gauge (*Eng.*). See **British Standard wire gauge, Birmingham wire gauge, Brown & Sharpe wire gauge.**

standing panel (*Join.*). A door panel whose height is greater than its width.

standing pier (*Civ. Eng.*). An isolated bridge-pier. Cf. *abutment pier.*

standing wave (*Elec. Eng.*). See **stationary wave.**

standing waves (*Radio*). A distribution of current and voltage on a conductor system formed by two sets of waves travelling in opposite directions. Characterised by the presence of a number of points of successive maxima and minima in the distribution curves.

standing ways (*Ship Constr.*). The portion of a ship's launching ways which are fixed to the ground. The sliding ways move on these ways and are positioned by an upstanding rib integral with the fixed ways.

stank (*Mining*). An air-tight and water-tight wall.

Stanley Kent's fibres (*Zool.*). The fibres which constitute the auriculoventricular bundle of the heart and maintain connexion between the muscle of the auricles and the muscle of the ventricles.

stannane (*Chem.*). Tin hydride, SnH_4.

stannates (*Chem.*). Analogous to the carbonates. Formed by heating solutions of, say, stannic chloride with alkaline carbonates.

stannic acid (*Chem.*). Acids of two types, formed by the action of alkalies on solutions of stannic chloride and by the action of nitric acid on the metal; called respectively α-stannic acid and metastannic acid or β-stannic acid.

stannic oxide (*Chem.*). SnO_2. Formed (1) by the combustion of tin and (2) when stannic acids are calcined. Forms alkali stannates when fused with alkali carbonates. See also **stannous hydroxide.**

stannite (*Min.*). A sulpho-stannate of copper, iron, and sometimes zinc, which crystallises in the tetragonal system. It usually occurs in tin-bearing veins, having been deposited from hot ascending solutions. Also called TIN PYRITES, BELL-METAL ORE.

stannites (*Chem.*). Salts of stannous acid. Formed when stannous hydroxide is dissolved in alkaline solutions.

Stannius' corpuscles (*Zool.*). In Fish, inter-renal glandular organs scattered in or on the ventral surface of the mesonephros.

stan'notype (*Photog.*). A photo-mechanical process in which an exposed and developed bichromated film is coated with tinfoil and used directly for pressure printing.

stannous hydroxide (*Chem.*). $Sn(OH)_2$. Precipitated when sodium hydroxide is added to a solution of stannous chloride. When heated in carbon dioxide forms black stannous oxide, SnO, which when heated in air forms stannic oxide, SnO_2. Converted into stannous salts when treated with acids.

stapedec'tomy (*Surg.*). Excision of the stapes.

Stapeley Volcanic Series (*Geol.*). A succession of andesitic lavas and volcanic ashes of Llanvirnian age, found in the Shelve district of Shropshire, notably on Stapeley Hill.

sta'pes (*Zool.*). In *Amphibia*, a small nodule of cartilage in connexion with the fenestra ovalis of the ear: in *Mammalia*, the stirrup-shaped innermost auditory ossicle.—*adj.* **stape'dial.**

staphylo'ma (*Med.*). Local bulging of the weakened sclera of the eye (as in glaucoma or myopia); bulging of a corneal scar in which the iris of the eye has become fixed.

staphylor'rhaphy (*Surg.*). The operation of closing a cleft in the soft palate.

staple (*Build.*). A metal loop used with a *hasp* (q.v.) and a *padlock* (q.v.) or peg to form a door or gate fastening.

staple or **staple pit** (*Mining*). An internal shaft connecting two coal-seams. Cf. *winze.*

staple (*Textiles*). The quality of a fibre, estimated by length and strength.

star (*Astron.*). Originally a term for any luminous body seen in the night sky, but now confined to any that is self-luminous and of the same general nature as the *Sun* (q.v.), though differing widely in size, distance, etc. With the aid of telescopes and photography, and the technique of statistical methods, the stars are now extensively studied from many points of view. See **constellation, star streaming, proper motion, magnitudes, spectral type.**

star charts (*Astron.*). The name given to systematic and accurately made maps of the heavens in which the star positions are generally plotted according to equatorial co-ordinates, the most important international publication of this kind, not yet completed, being the Astrographic Catalogue.

star connexion (*Elec. Eng.*). A method of connecting the several phases of a three-phase supply; the terminal voltage is $\sqrt{3}$ times the phase voltage.

star-delta startor (*Elec. Eng.*). A starting switch for an induction motor which, in the one position, connects the stator windings in star for starting and, in the other position, reconnects the windings in delta when the motor has gained speed.

star-like (*Bot.*). Said of a flower with rather narrow, pointed, radiating petals.

star lots (*Textiles*). Wool offered for sale at the London sales in lots not usually exceeding three bales.

star magnitudes (*Astron.*). See **magnitudes.**

star-mesh transformation (*Elec. Comm.*). The equivalence of three impedances radiating from one point to three points with impedances connecting these three points. The simplest case of the equivalence of any number of impedances radiating from one point to the same number of other points with impedances connecting every pair of these points.

Star Peak Group (*Geol.*). A group which comprises three great limestones with three intervening quartzites, totalling more than 10,000 ft., in the Triassic rocks of Nevada; succeeds the Koipato Group.

star point (*Elec. Eng.*). The common junction of the several phases of a star-connected three-phase system.

star-quad cable (*Cables*). See **quad cable.**

star ruby, —sapphire, —topaz, —quartz (*Min.*). The prefix 'star' has reference to the narrow-rayed star of light exhibited by varieties of the minerals named. The star is seen to best advantage when they are cut *en cabochon.* It is caused by reflections from exceedingly fine inclusions lying in certain planes. See also **asterism.**

star shake (*Timber*). The name given to a number of shakes radiating from the heart of a log.

star streaming (*Astron.*) A phenomenon, discovered from analysis of observed stellar motions (after removing the effects of the observer's own motions), by which the stars are found to have two preferential directions of motion, one towards the point R.A. 90°, declination 15° south, and the other towards R.A. 285°, declination 64° south; the first stream contains about 60% of the observed stars.

star wheel (*Horol.*). A wheel with pointed triangular teeth.

starch (*Chem.*). Amylum, $(C_6H_{10}O_5)_x$; a polyose found in all assimilating (green) plants. It is a white hygroscopic powder which can be hydrolysed to dextrin and finally to *d*-glucose. Diastase converts starch into maltose. Starch does not reduce Fehling's reagent and does not react with phenylhydrazine. It forms with iodine a blue compound.

starch crescent (*Bot.*). A strand of cells, crescentic in cross-section, containing starch grains which are presumed to act as statoliths.

starch grain (*Bot.*). A rounded or irregularly shaped inclusion in a cell consisting of a series of layers of starch, giving a stratified appearance, surrounding a central hilum.

starch gum (*Chem.*). Dextrin.

starch plant (*Bot.*). A plant in which the carbohydrate formed in excess of immediate requirements is stored in the cells of the leaf as temporary starch.

starch sheath (*Bot.*). (1) A one-layered cylinder of cells lying on the inner boundary of the cortex of a young stem, with prominent starch grains in the cells. It is homologous with an endodermis.—(2) A layer of starch grains around a pyrenoid in an algal cell.

Stark effect (*Phys.*). An effect similar to the *Zeeman effect* (q.v.) but produced by the action of an electrostatic field on a source of light.

starling (*Civ. Eng.*). Piling driven around a bridge pier to afford it some protection.

starlite (*Min.*). A name suggested (from a fancied resemblance to starlight) for the beautiful blue zircons which are heat-treated and used as gemstones.

starring (*Pot.*). A defect of glazes characterised by star-like figures.

start-stop (*Teleg.*). In machine telegraphy, the principle by which depression of a key on the keyboard of a transmitting machine sends the corresponding code to line, together with start and stop signals, the former to trip the printing machine so that it scans the sent code correctly, the latter to restore the scanning mechanism to the condition required for its operation by the next signal to arrive.

starting current (*Elec. Eng.*). The current drawn by a motor from the mains when starting up.

starting resistance (*Elec. Eng.*). A fixed resistance connected in series with the main circuit of a motor during starting-up

starting sheet (*Met.*). A sheet of pure metal used as the initial cathode on which the metal being refined is deposited during electrolytic refining.

starting torque (*Elec. Eng.*). The torque developed by a motor at starting.

starting winding (*Elec. Eng*). An auxiliary winding on the armature of a single-phase motor (enabling it to start up as a two-phase machine) or of a synchronous convertor.

startor (*Elec. Eng.*). A special type of regulating resistance used in starting-up an electric motor.

sta'simorphy (*Zool.*). Structural modification due to arrested development.

sta'sis (*Bot.*). Stoppage of growth.

stasis (*Med.*). (1) Complete stoppage of the circulation of blood through the capillaries and smallest blood-vessels in a part.—(2) Arrest of the contents of the bowel at any point from obstruction or weakness of the bowel wall.

Stassan'o furnace (*Elec. Eng.*). A type of electric furnace in which the heat is radiated from an arc which is not in contact with the furnace charge.

Stass'furt Deposits (*Geol.*). A series of saline minerals found in the Triassic rocks at Stassfurt, Saxony, which include halite, anhydrite, kieserite, gypsum and boracite.

stass'furtite (*Geol.*). A massive variety of boracite which sometimes has a subcolumnar structure and resembles a fine-grained white marble or granular limestone. See **boracite.**

stat'enchy'ma (*Bot.*). A tissue consisting of cells containing statoliths.

static. See **atmospherics.**

statics. See **mechanics.**

static balancer (*Elec. Eng.*). See **alternating-current balancer.**

static condenser (*Elec. Eng.*). A static piece of electrical apparatus having the characteristic property of drawing a leading current from an a.c. supply, in consequence of which it is widely used for power-factor correction.

static electricity. See **dynamic electricity.**

static frequency changer (*Radio*). A transformer having a magnetically saturated iron core arranged so as to accentuate the harmonic content of the secondary current; formerly used for the production of high-frequency currents for radio transmission.

static friction (*Mech.*). See **friction.**

static impedance (*Elec. Eng., etc.*). The electrical impedance of a machine or transducer when it is stopped from moving. In loudspeakers, it has the same meaning as *blocked impedance.*

static pressure tube (*Aero.*). See **pressure tube (static).**

static stability (*Elec. Eng.*). The stability of a transmission system with reference to gradual changes in load demand.

static tissue (*Zool.*). See **equilibration tissue.**

station (*Bot.*). The place where a plant grows.

station (*Elec. Eng.*). In general, a generating station. Specifically, a key point on an electricity supply system

station (*Surv.*). (1) A point at an apex of a triangle in a skeleton, or otherwise situated in a line of the skeleton.—(2) A point whose reduced level is to be found.

station (*Teleph.*). See **subscriber's main station.**

station pointer (*Surv.*). An instrument for obtaining a mechanical solution of the *three-point problem* (q.v.). It consists of a full-circle protractor with one fixed radial arm and two movable radial arms, which can be set to the correct mutual directions of the three points.

station pole (*Surv.*). A wooden rod used to mark a survey station conspicuously.

station roof (*Struct.*). A roof which is cantilevered out to one side or to both sides of a single line of stanchions; much used for roofing railway platforms.

stationary dredger (*Civ. Eng.*). The type of bucket-ladder dredger which discharges the dredged materials into attendant vessels, and consequently dredges more or less continuously.

stationary period (*Cinema.*). That fraction of the complete time-cycle, expressed in degrees, during which the mechanism holds the frame stationary in the gate. See **period.**

stationary points (*Astron.*). Those two points in a planet's orbit where it appears to have no motion as viewed from the earth, the condition being that the angular motions of the earth and planet are equal and opposite; the direct motion changes to retrograde motion at one such point, and conversely at the other.

stationary wave (*Elec. Eng.*). The multi-harmonic distribution of potential along a conductor when a transient electric wave is propagated along it and reflected from the far end.

stationary waves (*Acous.*). The phenomenon of interference between waves of the same frequency, whereby the combined intensity varies between maxima and minima over the region of interference because of the time-coincidence of in-phase and out-of-phase of the waves. In organ-pipes and strings, the interference is marked, the nodes (zero motion) being nearly perfect at resonance of the higher modes of vibration. In the sound-field in an enclosure, the aim is to avoid these maxima and minima by endeavouring to make the wave diffuse through multiple reflection. See **warble tone.**

stationary waves (*Radio*). See **standing waves.**

stat'oblast (*Zool.*). In some *Polyzoa*, an internal bud arising on the funiculus and becoming surrounded by a chitinous capsule which, unlike the colony, can survive the rigours of winter and germinate to produce a new colony in the spring.

stat'ocone (*Zool.*). One of a number of small calcareous granules occurring in the statocyst in various animals.

stat'ocyst (*Bot.*). A cell containing starch grains or other solid inclusions which act as statoliths. The contents of the cell are rather fluid, so that the statoliths move readily to the lower face of the cell if the position of the latter is altered by a displacement of the plant.

statocyst (*Zool.*). An organ for the perception of the position of the body in space, consisting usually of a sac lined by sensory cells and containing a free hard body or bodies, either introduced or secreted; an otocyst.

stat'olith (*Bot.*). A solid inclusion in a cell, such as a starch grain, which moves readily in the somewhat fluid contents of the cell, comes to rest on the portion of the protoplast lining the lower wall of the cell, and, it is said, plays some part in the perception of gravity by plants.

statolith (*Zool.*). A secreted calcareous body contained in a statocyst.

sta'tor (*Elec. Eng.*). The fixed part of an electrical machine.

stator core (*Elec. Eng.*). The assembly of laminations forming the magnetic circuit of the stator of an a.c. machine.

stator-rotor startor (*Elec. Eng.*). A combined stator-circuit switch and rotor-circuit regulating resistance for use with slip-ring induction motors.

stator winding (*Elec. Eng.*). That part of the electrical winding of a machine accommodated in the stator.

stat'orhab (*Zool.*). In some *Trachomedusae*, a tentacular process bearing the statolith and projecting into the cavity of the statocyst.

stat'oscope (*Aero.*). An instrument which indicates small changes in height, having greater sensibility than an altimeter, but not indicating absolute height.

sta'tus epilep'ticus (*Med.*). A succession of severe epileptic convulsions with no recovery of consciousness between each convulsion.

status lymphat'icus (*Med.*). An ill-defined condition in which there are hyperplasia of lymphatic tissue and enlargement of the thymus; patients in this state are liable to sudden death during anaesthesia.

staur'olite (*Min.*). Silicate of aluminium and iron with chemically combined water, commonly occurring as brown cruciform twins, and crystallising in the orthorhombic system. It is usually found in metamorphic rocks. Occasionally a transparent stone is cut as a gemstone. Also called STAUROTIDE.

Stauromedu'sae (*Zool.*). An order of *Scyphozoa* the members of which are all sedentary marine forms, without tentaculocysts; alternation of generations does not occur.

stave (*Textiles*). See **heald** (2).

stay (*Eng., etc.*). A *brace* (q.v.).

stay pile (*Civ. Eng.*). A pile which is driven into the earth as an anchorage for a *land tie* (q.v.).

stay tap (*Eng.*). A long tap for threading the holes for stays connecting adjacent plates in boilers, thus ensuring that the two holes are threaded in correct pitch relation.

stay tubes (*Eng.*). Boiler fire-tubes acting as stays to the flat surfaces which they join; sometimes threaded and nutted to the plates for extra strength.

stay-wire (*Elec. Eng.*). One of several steel cables by which a transmission-line pole is secured to the ground.

steady (*Eng.*). A support for backing up slender work in the lathe, attached either to the bed or the carriage. It consists of three slotted radial jaws, adjusted to bear on the rough-turned work. Also called BACK REST, BACK STAY.

steady flow (*Hyd.*). See **viscous flow.**

steady pin. A pin which permits mechanical parts to be fitted together accurately with one fixing screw.—(*Horol.*) A pin used where two parts have to be fixed accurately relative to one another; a steady pin is fixed to one part and is a close fit in a hole in the other part. Used for the location of bridges, cocks, etc.

steady state (*Elec. Comm.*). The continued repetition of a cyclicly repeated wave-form during an indefinite period, to ensure that the transient conditions arising at starting and cessation of this wave-form are practically negligible.

steadying bands (*Spinning*). Bands at each end of a mule carriage, used to ensure that the ends make the same movement as the centre of the carriage during its outward and inward run. Also called SQUARING BANDS.

steadying resistance (*Elec. Eng.*). The ballast resistance placed in series with a direct-current arc lamp, to counteract the negative resistance of the arc.

steam (*Phys.*). Water in the vapour state; it is formed when the latent heat of vaporisation is supplied to water at boiling-point. The latent heat varies with the pressure of formation, being approximately 539 C.H.U. per lb. at atmospheric pressure.

See **dry— saturated— superheated—**

steam accumulator (*Eng.*). A large pressure vessel, partly filled with water, into which surplus high-pressure steam is blown and condensed. A supply of saturated steam is thus available by lowering the pressure at the outlet valve, thus causing evaporation of the water stored. See **Ruth's accumulator.**

steam boiler (*Eng.*).

See **dry-back—**
Galloway—
Lancashire—
locomotive—
marine—
water-tube—

steam car (*Eng.*). An automobile propelled by steam. Oil-fired *flash boilers* (q.v.) are generally used, no gear-box is necessary, and control is simple. Water is recovered by condensing the exhaust steam in a radiator.

steam chest (*Eng.*). The chamber in which the slide-valve of a steam-engine works, and to which the steam pipe is connected.

steam distillation (*Chem.*). The distillation of a substance by bubbling steam through the heated liquid. It is a useful method of separation for substances which are practically insoluble in water. The rapidity with which a substance distils in steam depends on its vapour pressure and on its vapour density.

steam dome (*Eng.*). See **dome.**

steam economiser (*Eng.*). See **economiser.**

steam-electric generating set (*Elec. Eng.*). A generating set in which the prime-mover is a steam-engine, e.g. a steam turbine or reciprocating steam-engine.

steam-engine (*Eng.*).

See **compound engine**
high-speed steam-engine
mill do.
simple steam do.
triple-expansion do.
Unaflow do.

steam gauge (*Eng.*). See **pressure gauge.**

steam generating station (*Elec. Eng.*). A generating station in which the prime-movers driving the electric generators are operated by steam, e.g. steam turbines or reciprocating steam-engines.

steam generator (*Eng.*). A steam boiler.

steam injector (*Eng.*). See **injector.**

steam jacket (*Eng.*). A jacket formed round a steam-engine cylinder; supplied with live steam to prevent excessive condensation of the working steam in the cylinder.

steam lap (*Eng.*). See **outside lap.**

steam locomotive (*Eng.*). A steam-engine and boiler integrally mounted on a frame which is fitted with road wheels driven by the engine. The term is usually restricted to locomotives used to haul passenger or goods traffic on a railway. See also **traction engine.**

steam navvy (*Civ. Eng.*). A mechanical excavator having a single large bucket (½ to 8 cu. yds.) at the end of a long beam carried in a revolving jib. Also called STEAM SHOVEL.

steam nozzle (*Eng.*). See **nozzle, convergent-divergent nozzle.**

steam ports (*Eng.*). Passages leading from the valve face to the cylinder of a steam-engine; through them the steam is supplied and exhausted.

steam reversing gear (*Eng.*). A power reversing gear, used in steam locomotives, by which movement of the driver's reversing lever admits steam to an auxiliary cylinder, whose piston operates the reversing links of the valve gear.

steam shovel (*Civ. Eng.*). See **steam navvy.**

steam trap (*Eng.*). A device into which condensed steam from steam pipes, etc. is allowed to drain, and which automatically ejects it without permitting the escape of steam.

steam turbine (*Eng.*). A machine in which steam is made to do work by expanding so as to create kinetic energy, which is then partly absorbed by causing the steam to act on moving blades attached to a disc or drum.

See **back-pressure turbine**
disc-and-drum do.
extraction do.
impulse do.
mixed-pressure do.
reaction do.

steaning (*Civ. Eng.*). See **steining.**

steapsin, stē-ap′sin (*Zool.*). A fat-digesting enzyme occurring in the digestive juices of various animals, as the pancreatic juice of Vertebrates.

stearic acid, stē-ar′ic (*Chem.*). $C_{18}H_{36}O_2$, a monobasic fatty acid; m.p. 69° C., b.p. 287° C.; obtained from mutton suet, or by reducing oleic acid. It occurs free in a few plants, as glycerides in many fats and oils, and as esters with the higher alcohols in certain waxes.

ste′arin (*Chem.*). A term for the glyceryl ester of stearic acid. The name is also applied to a mixture of stearic acid and palmitic acid.

ste′atite or **soapstone** (*Min., etc.*). A coarse, massive, or granular variety of talc, greasy to the touch. On account of its softness it is readily carved into ornamental objects.—(*Diel.*) Fired at 800 to 1000° C., it becomes very hard and strong. Used in the making of sparking-plug insulators and giant high-voltage insulators.

steatite ware (*Pot.*). Ware made from a body containing steatite; used where great accuracy of size and resistance are needed.

ste′atopy′gia (*Med.*). Gross accumulation of fat in the buttocks. A Hottentot deformity.

ste′atorrhoe′a, ste′atorrhe′a (*Med.*). The presence of an excess of fat in the stools, due either to failure of absorption, or to deficiency of the fat-splitting enzymes in the digestive juices, as a result of disease of the pancreas.

steel (*Met.*). Essentially an alloy of iron and carbon. Contains less than 2% carbon, less than 1% manganese, and small amounts of silicon, phosphorus, sulphur, and oxygen. Mechanical properties can be varied over a wide range by changes in composition and heat treatment. See also **alloy steel, stainless steel.**

steel (*Mining*). The borer, consisting of shank, shaft, and bit or cutting edge, used for rock-drilling with drifters or jack hammers.

steel band (*Surv.*). See **band chain.**

steel-cored aluminium (*Elec. Eng.*). An electrical conductor consisting of a layer or layers of aluminium wire surrounding a core of galvanised steel strands.

steel-cored copper conductor (*Elec. Eng.*). A conductor made in the same way as steel-cored aluminium, except that the steel core is covered by a layer of insulating tape, to prevent corrosion of the surrounding copper.

steel-making (*Met.*). The process of making steel from solid or molten pig-iron, with or without admixture with steel scrap. The processes used are *Bessemer*, *open-hearth*, *crucible*, *electric-arc*, *high-frequency induction*, and *duplex*.

steel pipe pressure cable (*Cables*). See **pressure cable.**

steel-tank rectifier (*Elec. Eng.*). A mercury-arc rectifier in which the arc chamber is of steel. Cf. *glass-bulb rectifier*.

steel tower (*Elec. Eng.*). The framed steel structure carrying a high-voltage transmission line. Also called PYLON.

steening (*Civ. Eng.*). See **steining.**

steeping (*Malting*). Soaking barley for a period of about 50 hours in water at a temperature of 50-55° F., to induce germination; a preliminary stage in malting.

steeple (*Build.*). A structure surmounted with a spire.

steeple-head (*Med.*). See **oxycephaly.**

steering (*Radio*). Alteration by mechanical or electrical means of the direction of maximum sensitivity of a directional antenna.

steering-arm (*Automobiles*). An arm rigidly attached to a stub axle, to which it transmits angular movement from the motion of the steering-rod attached to it by a ball joint.

steering-box (*Automobiles*). The housing which encloses the steering-gear and provides an oil-bath for the working surfaces. It is rigidly attached to a side-member of the chassis frame.

steering-gear (*Automobiles*). The two geared members attached to the steering-column and the drop-arm spindle respectively. They transmit motion from the steering-wheel to the stub axles through the drop arm, steering-rod or drag link, steering-arms, and track rod.

See **cam-type—**
rack-and-pinion—
screw-and-nut—
worm-and-wheel—

steering-rod (*Automobiles*). See **drag link.**

steering-wheel (*Automobiles*). The spoked handwheel attached to the top of the inner steering-column, by means of which the *steering-gear* (q.v.) is operated by the driver.

Stefan-Boltzmann law, Stefan's law (*Phys.*). The total radiation from a black body is proportional to the fourth power of the absolute temperature, or: $S=\sigma T^4$, where S is the energy radiated per sq. cm. per second and σ has the value $5{\cdot}735\times10^{-5}$ erg cm.$^{-2}$ deg.$^{-4}$ sec.$^{-1}$. See **Planck's radiation formula, Wien's displacement law.**

stegma (*Bot*). A small elongated cell nearly filled with silica.

ste′gocarp′ous (*Bot.*). Said of the capsule of a moss when it is provided with a lid

stegocrot′aphy (*Zool.*). The condition of having the temporal region of the skull without fossae.—*adj.* **stegocrotaph′ic.**

Steinach's operation, stīn′ahh (*Surg.*). Ligature of the vas deferens (the excretory duct of the testis) for the purpose of increasing sexual vigour in the male.

steining (*Civ. Eng.*). The process of lining a well with bricks, stone, timber, or metal, so as to prevent the sides from caving in.

Steinmetz coefficient, stīn′mets (*Elec. Eng.*). The coefficient by which the 1·6th-power of the flux density must be multiplied in order to give the hysteresis loss in ergs per cycle, when a sample of iron is taken through successive cycles of magnetisation. Also called HYSTERESIS COEFFICIENT.

Steinmetz law (*Elec. Eng.*). The law relating hysteresis loss with flux density, discovered experimentally by Steinmetz.

Steke′lian analysis. The analytical method introduced by Stekel of Vienna which stresses mainly the importance of the active and intuitive approach, as contrasted with the more passive method of Freudian analysis. It uses the *shock factor*, intentionally producing profound emotional reaction, in lessening the duration of analytic treatment.

stele, stēl (*Bot.*). The central region of a stem or root, containing the vascular tissues, often with a central pith and an external parenchymatous sheath, the pericycle, in which some sclerenchyma may be present.

stellar interferometer (*Astron., Phys.*). A device, developed by Michelson, by means of which, when fitted to a telescope, it is possible to measure the angular diameters of certain giant stars (all of which are below the limit of resolution of even the largest telescopes) by observations of interference fringes at the focus of the telescope.

stellar magnitudes (*Astron.*). See **magnitudes.**

stellate (*Bot., Zool.*). Radiating from a centre, like a star.

stellate hair (*Bot.*). A hair which has several radiating branches.

stellite (*Met.*). A series of alloys containing cobalt, chromium, tungsten, and molybdenum in various proportions. The range is chromium 10-40%, cobalt 35-80%, tungsten 0-25%, and molybdenum

0-10%. Very hard. Used for cutting-tools and for protecting surfaces subjected to heavy wear.

stellited valves (*I.C. Engs.*). Poppet valves of high-duty petrol-engines having facings of *stellite* (q.v.) for resisting wear and corrosion by the combustion products of leaded fuels.

stel'lulate (*Bot.*). Resembling a small star.

stem (*Bot.*). The ascending axis of a plant.

stem (*Horol.*). In a keyless watch, the shaft to which the button is attached.

stem (*Zool.*). See **scapus.**

stem post (*Ship Constr.*). The portion of material forming the extreme forward end of a ship. The hull proper is secured thereto.

stem succulent (*Bot.*). A plant with a succulent stem and with very small leaves, often reduced to spines.

stem tendril (*Bot.*). A tendril which is a modified stem.

stem xerophyte (*Bot.*). A plant characteristic of very dry places, with ephemeral or much reduced leaves, and with the photosynthetic tissue located in the peripheral cells of the stem.

stemma (*Zool.*). See **ocellus.**

stemming (*Mining*). The stopping material (e g clay) used to tamp the explosive in a shot-hole. See **tamp.**

stench-trap (*San. Eng.*). See **air-trap.**

steno- (Greek *stenos*, narrow). A prefix used in the construction of compound terms; e.g. *stenostomatous*, narrow mouthed.

stenohal'ine (*Zool.*). Capable of existence within a narrow range of salinity only. Cf. *euryhaline*.

Steno'nian duct (*Zool.*). In Mammals, the duct of the parotid gland opening into the mouth near the molars of the upper jaw.

stenono'tal (*Zool.*). In Insects, having a small or narrow thorax.

stenopa'ic (*Photog.*). The term applied to *pin-hole photography*.

stenopet'alous (*Bot.*). Having narrow petals.

stenophyll'ous (*Bot.*). Having narrow leaves.

stenopo'dium (*Zool.*). The typical biramous limb of *Crustacea*, having slender exopodite and endopodite. Cf. *phyllopodium*.

steno'sis (*Med.*). Narrowing or constriction of any duct, orifice, or tubular passage as a result of disease.—*adj.* **stenosed.**

stenother'my (*Ecol.*). Tolerance of only a very narrow range of temperature.—*adj.* **stenother'mous.**

Stenson's duct (*Zool.*). See **Stenonian duct.**

Stenson's gland (*Zool.*). In *Amniota*, a large gland in the lateral ventral wall of the nasal cavity, opening into the vestibule.

stenter (*Textiles*). A frame or machine on which fabrics are stretched between hooks, or by means of rollers. Also called TENTER.

stentorphone (*Acous.*). Apparatus for the reproduction of sound at high level by the electromagnetic control of the flow of high-pressure air through a grid orifice.

step. (1) The unit part of a stair, bounded by a tread and a riser.—(2) A *rung* (q.v.).

step (*Aero.*). The discontinuity in the form of a hydrofoil, as in the bottom of a flying-boat, to facilitate take-off from the water surface.

step (*Elec. Comm.*). A change from zero-amplitude before a specified time to some other amplitude after that time, the rate of change being infinitely great, first positively and then negatively. This is the *Heaviside unit function*.

step (*Elec. Eng.*). Synchronous machines are said to keep *in step* when they remain in synchronism with each other.

step-by-step method (*Elec. Eng.*). A method of determining the hysteresis curve of a magnetic material, in which the field strength is increased and reversed in steps.

step cut (*Jewel.*). The dressing of precious stones with long, flat facets, slightly inclined, one above the other.

step-down transformer (*Elec. Eng.*). A transformer for changing a high-voltage supply into a low-voltage supply.—(*Elec. Comm.*) An audio-frequency transformer which couples a circuit of high impedance-level to one of low impedance-level; e.g. the output from a power-stage to a line.

step faults (*Geol.*). A series of tensional or normal faults which have a parallel arrangement, throw in the same direction, and hence progressively 'step-down' a particular bed.

step irons (*Build.*). See **foot irons.**

step printer (*Cinema.*). An intermittent printer which prints one frame at a time.

step-rate prepayment meter (*Elec. Eng.*). A prepayment meter in which a high charge per unit is made until a given number of units have been consumed, when the gear ratio is automatically changed to give a lower charge per unit until the mechanism is reset by hand.

step turner (*Plumb.*). A wooden tool for bending sheet-lead through a right-angle, as at the horizontal edges of the steps of a stepped flashing.

step-up instrument (*Elec. Eng.*). See **suppressed-zero instrument.**

step-up transformer (*Elec. Eng.*). A transformer for changing a low-voltage supply into a high-voltage supply.—(*Elec. Comm.*) An audio-frequency transformer which couples a low impedance to a higher impedance, or to an effective open-circuit; e.g. the grid of a thermionic valve when no grid-current flows.

Stepha'nian (*Geol.*). The name given on the Continent to the upper Stage of the Coal Measures which succeeds the Westphalian Stage. Rocks of this type and age are poorly represented in Britain, but the Upper Radstockian and the highest Coal Measures in South Wales may be of this age.

steph'anite (*Min.*). A sulphide of silver and antimony which crystallises in the orthorhombic system. It is usually associated with other silver-bearing minerals and is deposited from ascending solutions. Also called BRITTLE SILVER ORE.

stephanokont'an (*Bot.*). Bearing a crown of cilia.

Stephenson's link motion (*Eng.*). See **link motion.**

stepped flashing (*Plumb.*). A *flashing* (q.v.) much used where a brick chimney projects from a sloping roof, the lead being cut in steps so that the horizontal edges of the 'steps' may be secured into raglets cut in the joints of the brickwork.

stepping (*Block-making*). The cutting away of a block in a zigzag or 'step' fashion to allow the type to extend within the square area of the block.

stepping (*Civ. Eng.*). Laying foundations in horizontal steps on sloping ground. See **benched foundation.**

stepping (*Surv.*). The process of chaining over sloping ground by making the measurement in horizontal lengths with the chain always held horizontally.

stera'dian (*Maths.*). The unit of solid angular measure. It is defined as the solid angle subtended at the centre of a sphere by an area on its surface numerically equal to the square of the radius.

ster'colith, ster'corolith (*Med.*). A hard faecal concretion, impregnated with calcium salts, in the intestine. (Latin *stercus*, gen. *stercoris*, dung.)

stercoma'rium (*Zool.*). In some *Sarcodina*, the system of stercome-containing tubes.

ster'come (*Zool.*). In some *Sarcodina*, faecal matter in the form of masses of brown granules.

stercora'ceous (*Med.*). Consisting of, or pertaining to, faeces.

ster'coral (*Med.*). Of, pertaining to, or caused by, faeces.

ster'eide, —ēd (*Bot.*). Stone cell.

stereo- (Greek *stereos*, stiff, solid). A prefix used in the construction of compound terms; e.g. *stereotype* (q.v.).

stereoblastula (*Zool.*). An abnormal form of echinoderm larva.

stereochemistry (*Chem.*). The study of the spatial arrangement of the atoms in a molecule.

stereogno'sis (*Med.*). The ability to recognise similarities and differences in the size, weight, form, and texture of objects brought into contact with the surface of the body.

ste'reogram, ste'reograph (*Photog.*). General terms for photographs intended to be viewed in an apparatus to give the illusion of stereoscopy. See **parallax stereogram.**

stereoisomerism, —i-som'— (*Chem.*). The existence of different substances whose molecules possess an identical structure but different arrangements of their atoms in space.

ste'reome (*Bot.*). A general term for the mechanical tissue of the plant.

stereome cylinder (*Bot.*). A cylinder of strengthening tissue lying in a stem, usually just outside the phloem.

stereophon'ic (*Acous.*). Said of reproduced sound in which the illusion of auditory perspective is realised.

stereophonic radiotelephony (*Radio*). A system employing two complete communication channels, from microphones to loudspeakers or headphones, so disposed as to give a three-dimensional effect to the listener, in a manner analogous to stereoscopic reproduction of pictures.

ste'reoplasm (*Zool.*). The viscous part of protoplasm: a substance filling the spaces between the septa in some Corals.

stereop'ticon (*Photog.*). A double projection lantern, arranged for fading one projected image into the next.

ste'reoscope (*Photog.*). The original apparatus for realising the reproduction of views in three dimensions; different views are used for the two eyes.

stereoscop'ic camera (*Photog.*). A camera designed to give two displaced images by means of two matched lenses and shutters, so that the images, when viewed with the separate eyes, give a stereoscopic reproduction of the object photographed.

stereoscopic 'television (*Television*). Television in which the reproduced picture has the three-dimensional appearance of the original subject.

stereospon'dyly (*Zool.*). The condition of having the parts of the vertebrae fused to form one solid piece; cf. *temnospondyly*.—*adj.* **stereospon'dylous.**

stereotax'is (*Biol.*). Response or reaction of an organism to the stimulus of contact with a solid body; as the tendency of some animals to insert themselves into holes or crannies, or to attach themselves to solid objects.—*adj.* **stereotac'tic.**

stereotro'pism (*Biol.*). See **stereotaxis.**

ste'reotype (*Typog.*). A printing plate produced from type matter, or from another plate, by making a mould of papier-mâché or flong and from this taking a cast in stereotype metal. Stereotypes are made more durable by nickelling the surface.

ste'reotypy (*Med.*). The repetition of senseless movements, actions, or words by the insane.

steric hindrance (*Chem.*). The retarding influence of neighbouring groups on reactions in organic molecules; e.g. *ortho* substitution in aromatic acids considerably retards esterification.

sterig'ma (*Bot.*). A short, and often somewhat swollen, hypha on which a fungal spore is borne.—*pl.* **sterigmat'a.**

sterile. Unable to breed: freed from bacteria and moulds by treatment with heat or with antiseptics.—(*Bot.*) Unable to produce spores or seeds.

sterile cell (*Bot.*). The terminal cell of a chain of aecidiospores.

sterile flower (*Bot.*). A staminate flower.

sterile glume (*Bot.*). One of the glumes at the base of the spikelet of a grass, which does not subtend a flower.

sterile vein (*Bot.*). A strand or sheet of interwoven hyphae occurring with the spore-bearing hyphae in the fruit bodies of some fungi.

sterilisation (*Bot., Zool.*). (1) Loss of sexual function.—(2) The preparation, usually by heating, of a substratum free from any living organism, on which fungi, bacteria, or protozoa may subsequently be grown in pure culture.

sterlingite (*Min.*). See **zincite.**

stern post (*Ship Constr.*). The portion of material forming the after end of a ship, as distinct from the stern. The hull proper is secured thereto and the rudder post is hinged thereon.

sternal (*Zool.*). Pertaining to the sternum, or to a sternite.

sternal canal (*Zool.*). In some *Crustacea*, a median ventral cavity of the skeleton in which the thoracic part of the nerve-cord lies.

ster'nebrae (*Zool.*). In Mammals, a median ventral series of bones which alternate with the ribs.

sternel'lum (*Zool.*). In Insects, a ventral thoracic sclerite situated behind the eusternum.

sternite (*Zool*). The sternum in Arthropods when it forms a chitinous plate.

sternohy'oid (*Zool.*). In some Vertebrates, a muscle running from the hyoid to the sternum.

sternopleur'on, sternopleur'ite (*Zool.*). In Insects, a compound thoracic sclerite formed by the fusion of the episternum with the sternum.

sternum (*Zool.*). The ventral part of a somite in Arthropods: the breast bone of Vertebrates, forming part of the pectoral girdle, to which, in higher forms, are attached the ventral ends of the ribs.—*adj.* **sternal.**

sternuta'tion (*Med.*). The act of sneezing: a sneeze.

ster'ols (*Chem.*). A group of alcohols of high molecular weight, related to the terpenes. They are found in nature with fatty acids. The best-known sterol derivative is *cholesterol.*

steth'oscope (*Med.*). A tube adapted for listening to the sounds produced in the body.

Stevenson screen (*Meteor.*). A form of housing for meteorological instruments consisting of a wooden cupboard having a double roof and louvred walls, these serving to protect the instruments from the sun and wind while permitting free ventilation. The base of the screen should be 3 ft. 6 in. above the ground.

stew (*Cinema.*). Any undesired sound accompanying sound-film reproduction, particularly one arising from defective or badly adjusted apparatus.

Stewart's organs (*Zool.*). In some *Echinoidea*, internal gills associated with the lantern coelom.

stib'ialism (*Med.*). Antimony poisoning.

stibine (*Chem.*). SbH_3. Antimony hydride. A poisonous gas. Less stable than arsine.

stibnite (*Min.*). Trisulphide of antimony, which crystallises in grey metallic prisms in the orthorhombic system. It is sometimes auriferous and also argentiferous. It is widely distributed but not in large quantity, and is the chief source of antimony. Formerly called ANTIMONY GLANCE. See **antimonite.**

stichid'ium (*Bot.*). A special branch of the thallus in red algae on or within which the tetraspores are formed.

sti'chobasid'ium (*Bot.*). A basidium, usually elongated and cylindrical, in which the spindles of the dividing nuclei lie obliquely or longitudinally.

stick-and-rag work (*Plast.*). Plasterwork formed of canvas stretched across a wooden frame and coated with a thin layer of gypsum plaster.

sticking (*Join.*). The operation of shaping a *stuck moulding* (q.v.).

sticking board (*Join.*). A prepared board used to steady a piece of timber whilst shaping a moulding from it out of the solid.

stiffened expanded metal (*Build.*). See **self-centring lathing.**

stiffened suspension bridge (*Struct.*). A suspension bridge in which the tendency for the suspension cables to change shape under different load systems is counteracted by the provision of stiffening girders supported on the bridge piers and connected to the cables by suspension rods.

stiffener (*Struct.*). A steel angle or bar riveted or welded across the web of a built-up girder to stiffen it.

stiffness control (*Acous.*). In a mechanically vibrating system, the condition in which the motion is mainly determined by the stiffness of the restraining springs and negligibly by the resistance and mass of the system. The resonant frequency of such a system is then much higher than the frequencies of the driving forces.

stifle (*Vet.*). The femorotibial joint of animals.

stigma (*Bot.*). (1) See **eye spot.**—(2) The distal end of the style, more or less enlarged, on which pollen alights and germinates.

stigma (*Zool.*). In *Protozoa*, an eye spot: in *Arthropoda*, one of the external apertures of the tracheal system: in *Urochorda*, a gill-slit: generally, a spot or mark of distinctive colour, as on the wings of many Butterflies.—*pl.* **stig'mata.** —*adjs.* **stigmatif'erous, stigmat'iform.**

stigmat'ic (*Bot., Zool*). Relating to the *stigma*.

stilbene (*Chem.*). $C_6H_5 \cdot CH \cdot CH \cdot C_6H_5$, *s*-diphenylethylene; monoclinic plates or prisms; m.p. 125° C., b.p. 306° C.

stilbite (*Min.*). A zeolite; silicate of sodium, calcium, and aluminium with chemically combined water; crystallises in the monoclinic system, the crystals frequently being grouped in sheaf-like aggregates. Found both in igneous rock cavities and in metamorphic rocks. Also called DESMINE.

stil'boid (*Bot.*). Said of a fungus having a stalked head of spores or other reproductive structures.

stile (*Join.*). An upright member in framing or panelling. Often incorrectly spelt STYLE.

still (*Chem.*). A cylindrical or spherical metal vessel, usually made of mild steel or copper, which can be heated either externally or internally; used for the distillation of liquids.

still (*Cinema.*). A picture of artists in a studio, made with a portrait camera or an ordinary camera for record or publicity purposes, or for subsequent faking.

stillbirth (*Med.*). Birth of a dead child.

still-man (*Cinema.*). The photographer who takes still photographs in a motion-picture studio.

still-picture transmission (*Radio*). The transmission of individual pictures, as distinct from the transmission of moving pictures, which is *television*. See **facsimile telegraphy.**

still-water navigation (*Civ. Eng.*). See **slack-water navigation.**

Still's disease (*Med.*). Acute polyarthritis of children (resembling rheumatoid arthritis), with fever and enlargement of the spleen and of the lymphatic glands.

Stille machine (*Acous.*). The same as *Blattnerphone.*

Stilling's nucleus (*Zool.*). In higher Vertebrates, a group of large nerve cells at the base of the dorsal horn of the spinal cord; isolated grey nuclei lying in the white matter of the middle lobe of the cerebellum over the roof of the fourth ventricle.

stilt (*Pot.*). A support of non-fusible material for ware placed in saggars.

stilt root (*Bot.*). An adventitious root formed by a stem from a point above ground-level, passing downwards into the soil and affording support to the stem.

stilted arch (*Civ. Eng.*). An arch rising from points below its centre, and having the form of a circular arc above its centre.

stimulation (*Bot., Zool*). The application of stimuli.

stim'ulose (*Bot.*). Bearing stinging hairs.

stimulus (*Bot., Zool.*). An agent which will provoke active response or reaction in a living organism.—Especially (*Zool.*) an agent which will cause propagation of a nerve-impulse in a nerve fibre.—*pl.* **stimuli.**

sting (*Zool.*). A sharp-pointed organ by means of which poison can be injected into an enemy or a victim; as the poisonous fin-spines of some Fishes, the ovipositor of a worker Wasp.

stinging hair (*Bot.*). A multicellular hair with a brittle tip, which breaks off on contact with an animal, leaving a sharp edge which penetrates the skin and injects an irritant fluid.

stink damp (*Mining*). Sulphuretted hydrogen.

stink-trap (*San. Eng.*). An *interceptor* (q.v.).

sti'pate (*Bot.*). Crowded.

stipe (*Bot.*). (1) A general term for the stalk of the fruit body of a fungus when it consists of a large number of more or less interwoven hyphae; the stalk of a mushroom is a familiar example.—(2) The petiole of a fern up to the lowermost leaflet.

sti'pel (*Bot.*). One of the two small leaf-like appendages present at the base of a leaflet in some compound leaves.

sti'pellate (*Bot*). Having stipels.

Stiperstones (*Geol.*). A hard quartzite at the base of the Ordovician System which forms a prominent rocky ridge crossing the Shelve in South Shropshire. Also called STIPER QUARTZITE.

stipes, sti'pēz (*Zool.*). A stalk-like structure: an eyestalk: in *Insecta*, the second joint of the maxilla, articulating with the distal border of the cardo.—*pl.* **stip'ites.**—*adj.* **stip'itate, stip'iform.**

stip'itate (*Bot.*). Having a stalk.

stipple (*Block-making*). A fine pattern of dots, lines, or designs of different kinds, added to line blocks to give a certain variation in tone. Stipples are of special value in maps executed in a single colour. In line-colour work, stipples are used, singly or in combination, to give a limited range of intermediate colours.

stippler (*Paint., Plast.*). A special brush used for *stippling* (q.v.).

stippling (*Paint., Plast.*). The operation of breaking up the smoothness of a paint, distemper, plaster, or cement surface by dabbing it repeatedly with the point of a special brush.

stip'ular trace (*Bot.*). The vascular tissue running into a stipule.

stip'ulate (*Bot.*). Having stipules.

stip'ule (*Bot*). One of the two appendages, usually leaf-like, often present at the base of the petiole of a leaf.

stip'ulose (*Bot.*). Bearing conspicuous stipules.

Stirling boiler (*Eng.*). A water-tube boiler in which two upper drums and one lower drum are connected by highly inclined banks of water-tubes curved so as to enter the drums radially, the upper drums being also connected by horizontal steam- and water-tubes.

stirps (*Bot.*). A well-established variety which keeps its characters in cultivation.—*pl.* **stir'pes.**

stirrup (*Civ. Eng.*). A vertical steel rod which loops together the top and bottom reinforcing bars of a reinforced concrete beam and helps to resist the shear.

stirrup (*Horol.*). A support; such as the bottom of the rod of a mercurial pendulum on which rests the container for the mercury.

stitchdown shoes (*Boots and Shoes*). See **veldtschoen.**

stitching (*Bind.*). The process of joining the sections of an inserted book along the back by means of thread or wire.

sto'a (*Arch.*). A covered colonnade or portico.

Stobie furnace (*Elec. Eng.*). An electric furnace of the coreless induction type in which a definite path for the magnetic flux is provided in the form of an external laminated yoke.

stock (*Acous.*). The material from which pressed records are made before it is actually heated and placed between two stampers in the press.

stock (*Bot*). (1) The rooted stem into which the scion is inserted in grafting.—(2) The perennial portion of a herbaceous perennial.—(3) A race.

stock (*Carp., Join.*). The principal part of a tool, e.g. the body of a plane, in which the cutting iron is held: the stouter arm of a bevel, in which the blade is fastened.

stock (*Cinema.*). See **film stock.**

stock (*Eng.*) See **die-stock.**

stock (*Geol.*). Another name for ***boss*** (q.v.).

stock (*Gen., Zool.*). A direct line of descent: an individual originating a line of descent: an asexual zooid giving rise by budding to sexual zooids of one sex only.

stocks (*Build.*). Bricks which are fairly sound and hard-burned but are more uneven in colour than ***shippers*** (q.v.); the bricks most used for ordinary building purposes.

stocks (*Ship Constr.*). The massive timbers supporting a ship in course of construction.

stock board (*Build.*). A bottom made to fit the mould used in the handmoulding of bricks.

stock brush (*Plast.*). A brush used to moisten surfaces with water, prior to plastering, so that the surface shall not absorb moisture from the plaster.

stock lock (*Join.*). A form of rim lock contained in a heavy metal-bound wooden case.

stock lumber (*Timber*). Lumber which is sawn to stock market sizes.

stock rail (*Civ. Eng.*). The outer fixed rail against which the point (see **points**) works at a turn-out.

Stockbridge damper (*Elec. Eng.*). A vibration damper used to prevent the mechanical vibration of overhead lines.

stockless anchor (*Ships*). A form of anchor in which there is no crosspiece on the shank and the arms are pivoted so that both of them can engage at the same time; the shank can be drawn into the hawsepipe of the ship.

stockwork (*Geol.*). An irregular mass of interlacing veins of ore; good examples occur among the tin ores of Cornwall and in the Erzgebirge. (Ger. *Stockwerk.*)

stoep, stoop (*Build.*). See **stoop.**

sto'ichiom'etry (*Chem.*). The study of the numerical proportions in which substances react chemically.

stoke (*Eng.*). To supply fuel to a boiler furnace by mechanical means. See **mechanical stoker.**

stokehold (*Eng.*). A boiler room, more particularly of a ship.

Stokes' rule (*Phys.*). In most cases of fluorescence and phosphorescence, the emitted light is of longer wavelength than the exciting light. See **Raman effect** for an exception to this rule.

sto'lon (*Bot.*). (1) A weak stem, growing more or less horizontally from the main stem of the plant, bearing scale leaves and adventitious roots, and giving rise to one or more buds which develop into new plants, or end in a tuber, as in the potato. The term *stolon* is sometimes confined to underground stems having the characters given above, while similar stems lying on the surface of the soil are called *runners.*—(2) A long hypha produced by some fungi, which lies on the substratum, forming tufts of rhizoids and of sporangiophores at intervals.

stolon (*Zool.*). A cylindrical stem-like structure: a tubular outgrowth in hydroid colonies of *Coelenterata* and *Polyzoa* from which new individuals or colonies may arise: in *Urochorda,* the cadophore.—*adj.* **sto'lonate.**

stolonif'erous (*Bot., Zool.*). Producing stolons or runners.

sto'ma. A small aperture. Specifically (*Bot.*), a minute perforation in the epidermis of a leaf or a young stem, together with two guard cells, one on each side of the pore, and sometimes certain accessory cells. The term is sometimes used to denote the pore only. A stoma allows of the diffusion of gases and vapours from the interior of the leaf to the external atmosphere, and of gases from without into the leaf.—*pl.* **sto'mata.** Also STOMATE.

stomach (*Zool.*). In Vertebrates, the sac-like portion of the alimentary canal intervening between the oesophagus and the intestine. The term is loosely applied in *Invertebrata* to any sac-like expansion of the gut behind the oesophagus.—*adj.* **stomach'ic.**

stom'atal, sto'mate, stomatif'erous, stom'atose, stom'atous. *Adjs.* from *stoma.*

stomatal aperture, —opening, —pore (*Bot.*). The pore of a stoma.

stomatal transpiration (*Bot.*). The loss of water vapour from the interior of the leaf through the stomata.

stomati'tis (*Med.*). Inflammation of the mucous membrane of the mouth.

stomatitis, contagious pustular, equine vesicular (*Vet.*). See **horse pox.**

stom'atogas'tric (*Zool.*). Pertaining to the mouth and stomach; said especially of that portion of the autonomic nervous system which controls the anterior part of the alimentary canal.

Stom'atopo'da (*Zool.*). The only order comprised in the division *Hoplocarida,* having the characteristics of the division; they have a flattened body, a large abdomen, and powerful claws which resemble those of the Praying Mantis Insect, i.e. they work like the blade of a clasp-knife; they burrow in sand or live in crevices of rocks or corals. Mantis Shrimps.

stomid'ia (*Zool.*). In some *Actinaria,* apertures on the disc which represent the terminal pores of tentacles which have disappeared.

stomion (*Zool.*). See **ostium.**

sto'mium (*Bot.*). A part of the wall of a fern sporangium composed of thin-walled cells; splitting begins here when the sporangium dehisces.

stomodae'um (*Zool.*). That part of the alimentary canal which arises in the embryo as an anterior invagination of ectoderm; cf. ***proctodaeum, midgut.***—*adj.* **stomodae'al.**

-stomy (Greek *stoma,* mouth). A suffix used in the construction of compound terms, especially in Surgery; e.g. *caecostomy,* the surgical formation of an artificial opening into the caecum.

stone (*Bot.*). The hard endocarp of a drupe, as a cherry stone.

stone (*Horol.*). A jewel; used especially of the pallet jewels.

stone canal (*Zool.*). In *Echinodermata,* a vertical tubular organ leading upwards or downwards from the madreporite, having calcified walls and forming part of the water-vascular system.

stone cell (*Bot.*). A thick-walled cell, not much longer than broad, with lignified walls.

stone fruit (*Bot.*). A drupe, i.e. a fruit such as a plum or a cherry.

stone head (*Mining*). (1) The solid rock first met with in sinking a shaft.—(2) A heading or tunnel in stone.

stone insulator (*Elec. Eng.*). A low-voltage type of insulator made from stoneware.

stone saw (*Masonry*). A smooth-faced blade which in use is fed with an abrasive such as sand, carborundum, or diamond powder, as it cuts its way through stone.

stone tongs (*Masonry*). An accessory used in hoisting blocks of stone. It resembles a large pair of scissors with the points curved inwards. These clip into the sides of the block, while chains connect the loops of the tongs to the hoisting ring. Also called NIPPERS.

stoneware (*Pot.*). A fine earthenware made hard and partially translucent by firing at a high temperature, even without glazing; able to resist acids.—(*San. Eng.*) A material used for some sanitary fittings; made from plastic clays of the Lias formation, with a small amount of sharp sand, etc., added to reduce shrinkage.

Stonesfield Slate (*Geol.*). A stratigraphical subdivision of the Jurassic System occurring as thinly bedded sandy limestones; formerly exploited for roofing material in the Cotteswolds.

Stoniflex (*Build.*). Trade-name for a waterproof roofing material.

stony meteorites (*Geol.*). Those meteorites which consist essentially of rock-forming silicates. See **achondrite, aerolite, chondrite.**

stoop (*Build.*). A low platform outside the entrance door of a house. Also called STOEP.

stop (*Acous.*). The rank or ranks of pipes in an organ which are grouped together for operation by the manuals and pedals, each group being characterised by specific types of tone. See **draw knob, speaking stop, pitch of organ pipe stops.**

stop (*Carp., Join.*). (1) A projecting piece set in the top of a bench at one end and adjustable for height. It is used to steady work which is being planed.—(2) An ornamental termination to a stuck moulding.—(3) See **door stop.**

stop (*Light*). A screen having a circular aperture; used to limit the effective aperture of a lens, as in the photographic camera, or to limit the field of view in the eyepiece of an optical instrument. See **telecentric stop*.**

stop (*Photog.*). The geometrical factor associated with a camera and lens which contributes to the exposure. See **f-number.**

stop filter (*Elec. Comm.*). See **band-elimination filter.**

stop key (*Acous.*). A finger key for operating the stop mechanism and so bringing into potential action groups of pipes in an organ.

stop moulding (*Join.*). A stuck moulding terminating in a stop.

stop press (*Typog.*). See **fudge.**

stop slide (*Horol.*). See **all-or-nothing piece.**

stop valve (*Eng.*). The main steam valve fitted to a boiler to control the steam supply and to allow of isolating the boiler from the main steam pipe.

stop watch (*Horol.*). A watch, usually having seconds and minutes hands only, which is started and stopped by pressure of the winding knob. The normal type reads to one-fifth second, but special types read to one-fiftieth second.

stop work (*Horol.*). Mechanism to prevent the overwinding of a mainspring or a weight.

stope (*Mining*). (1) To excavate ore from a reef, vein or lode.—(2) The space left after the excavation of ore from a tabular deposit.

stoping (*Geol.*). A mining term applied by R. A. Daly to a process in the emplacement of some igneous rock bodies, by which blocks of the overlying country rock are wedged off and sink into the advancing magma.

stopped end (*Build.*). A square end to a wall.

stopped mortise (*Join.*). A *blind mortise* (q.v.).

stopped pipe (*Acous.*). An organ pipe which is closed at its outer end, so that the wavelength of its fundamental resonance is four times the length of the air-column.

stopper (*Elec. Comm.*). (1) A resistance situated next to the grid of a valve to reduce high-frequency potentials on the grid and consequent build-up of parasitic oscillations.—(2) The resistance-capacity combination for de-coupling anode or grid supply circuits, so as to obviate oscillation in thermionic amplifiers.

stopper (*Horol.*). A watch or clock which continually goes and stops, whatever may be the cause.

stopping (*Paint.*). A plastic material used to fill all holes, dents, and cracks in timber, especially prior to painting.

stopping knife (*Build.*). A special knife used for spreading putty. Also called PUTTY KNIFE.

stopping-out (*Photog.*). The same as *blocking-out.*

stopping motion (*Textiles*). A mechanism used on different kinds of machines, e.g. winding and warping machines, to effect stoppage of the machine when a thread breaks.

Stoprot (*Build.*). See **Pilcher's Stoprot.**

storage battery (*Elec. Eng.*). An assembly of secondary cells connected in series, so as to obtain the desired electromotive force. See also **accumulator.**

storage bin (*Civ. Eng.*). A *silo* (q.v.).

storage cell (*Elec. Eng.*). A secondary cell or accumulator.

storage pith (*Bot.*). Pith in which starch or water is stored by the plant.

storage tracheide (*Bot*). A thick-walled cell resembling a tracheide, without living contents, in which water is stored.

storey (*Bot.*). A layer of vegetation.

storey (*Build.*). The part of a building included between two adjacent floors.

storied cork (*Bot.*). A type of cork composed of short cells arranged in somewhat irregular radial groups.

storm pavement (*Civ. Eng.*). A *breakwater-glacis* (q.v.).

storm-water tanks (*Civ. Eng.*). Tanks into which, in times of storm, when the amount of surface water increases, sewage in excess of three times the mean dry weather flow passes, for the removal of road grit and other solid matters before final discharge into a river.

storm window (*Build.*). (1) A window arranged with double sashes enclosing air, which acts as a sound and heat insulator.—(2) A small upright window set in a sloping roof surface so as not to project beyond it. Cf. *dormer.*

story (*Build.*). See **storey.**

stout (*Brew.*). A dark-brown beer with a strong flavouring of hops; the colour is due to the amount of black malt in the grist. See **beer, malt.**

stovaine (*Chem.*). Amylocaine. A synthetic alkaloid, used as an anaesthetic, especially for spinal purposes.

stoving (*Textiles*). A bleaching process in which wool or woollen fabric, in a moist condition, is brought in contact with sulphur fumes.

S.T.P. (*Chem.*). Standard temperature and pressure, i.e. 0° C. and 760 mm. of mercury.

strabis'mus (*Med.*). Squint. A condition in which the visual axes of the eyes assume a position relative to each other which is abnormal.

straddle milling (*Eng.*). The use of two or more side-cutting milling-cutters on one arbor so as to machine, for example, both side-faces of a piece of work at one operation.

straddle scaffold (*Build.*). A *saddle scaffold* (q.v.).

straight (*Surv.*). A straight or tangent length connecting curves in a highway or railway.

straight arch (*Build.*). See **flat arch.**

straight bank (*Auto. Teleph.*). A bank of outgoing trunks connected in a regular way, so that they are tested in order, starting from the same one each time, by each switch having access to them. Also called STRAIGHT MULTIPLE.

straight eight (*I.C. Engs.*). An eight-cylinder-in-line engine, as distinct from an eight-cylinder-V-type engine.

straight-flute drill (*Eng.*). A conical pointed drill having backed-off cutting edges, formed by cutting straight longitudinal flutes in the shank; more rigid than a twist drill and often used for soft metals.

straight joint (*Build.*). A continuity of vertical joints in brickwork, giving rise to a very unsound construction, since the load which the wall is bearing has to be carried by the joint instead of by the bricks.

straight-line frequency condenser (*Radio*). A variable condenser in which the capacitance is inversely proportional to the square of the scale reading, so that the frequency of the circuit which it tunes is directly proportional thereto.

straight-line lever escapement (*Horol.*). A lever escapement in which the balance staff, pallet staff, and escape wheel are planted in the same straight line. The majority of watches with the club-tooth escapement are of this form.

straight-line rectification (*Radio*). See **linear rectification.**

straight-line wavelength condenser (*Radio*). The same as *square law condenser*.

straight-pane hammer (*Eng.*) A hammer with a pane consisting of a blunt chisel-like edge at right-angles to the shaft.

straight receiver (*Radio*). A receiver in which all the high-frequency amplification, if any, is carried out at the same frequency as that of the original signal. Cf. *supersonic heterodyne receiver*.

straight tie (*Weaving*). See **Norwich tie.**

straight tongue (*Join.*). A wooden tongue for a *ploughed-and-tongued joint* (q.v.) cut so that the grain is parallel to the grooves.

straight (or solid) type cable (*Cables*). A cable which has oil-impregnated paper as the dielectric. Used up to 66 kV in the form of single-core H-type cable.

straight-up-and-down filament (*Illum.*). A filament made in the form of long zigzags between an upper and lower spider support; used in the ordinary vacuum type of filament lamp.

straightening-up (*Furs*). The operation of placing seams in alignment, prior to finishing.

straightforward junction working (*Teleph.*). The system of manual operation in which the attention of a B-operator is obtained by an A-operator connecting to any one of a number of junctions leading to the B-operator.

strain (*Bot., Zool.*). A variety of a species, with distinct morphological and/or physiological characters.

strain (*Eng., Phys., etc.*). See **elasticity, modulus of elasticity, modulus of rigidity.**

strain-ageing (*Met.*). An increase in strength and hardness that proceeds with time, after cold-working. It takes place slowly at air temperature and is accelerated by heating. It is most pronounced in iron and steel, but also occurs in other metals.

strain-hardening (*Met.*). Increase in resistance to deformation (i.e. in hardness) produced by deformation. See **cold-working, work-hardening.**

strain insulator (*Elec. Eng.*). An insulator inserted in the span wire of an overhead trolley-wire system.

strain-slip cleavage (*Geol.*). A variety of cleavage in which the cleavage planes are parallel shear planes; between each pair the rocks are puckered into small sigmoidal folds.

straining (*Leather*). The operation of fastening hides or skins, in a damp state, on wooden frames to maintain their full size while drying.

straining beam (*Build.*). The horizontal beam secured between the heads of the queen-posts in a timber roof having no king-post, in order to prevent them from being forced inwards.

straining sill (*Build.*). A piece of scantling lying on the tie-beam of a timber roof and butting against the feet of the queen-posts, or between the feet of the queens and princesses, in order to keep them apart.

strait work (*Mining*). (1) Narrow headings in coal.—(2) A method of working coal by driving parallel headings and then removing the coal between them.

Straiton Group (*Geol.*). A group of marine conglomerates, grits, flags, and green shales of Wenlockian age found in the Girvan district in Scotland.

strake (*Mining*). A wide inclined launder for catching grains of heavy water-borne mineral. See **blanket strake, tye.**

strake (*Ship Constr.*). A row of plates positioned end to end, as normally found in ship construction.

stramin'eous (*Bot.*) Straw-coloured.

strand (*Elec. Eng.*). One of several wires which together constitute a stranded conductor.

strand space waxing (*Cables*). Waxing which occurs on the conductor side of a conductor paper between two strands. There is no waxing at the crest of the strand because of the good contact between paper and crest.

strand waxing (*Cables*). Waxing which occurs near the conductor because of the latter's stranded shape. It is a maximum at the crest of the strand.

strand plant (*Bot.*). A plant growing in a place where it is not submerged at high tide, but receives salt spray.

stranded cable (*Elec. Eng.*). A cable whose core (or cores) consists of stranded conductor.

stranded conductor (*Elec. Eng.*). Conductors woven from individual wires or strands, as in the case of a rope.

stranded caisson (*Civ. Eng.*). A watertight box, having a solid floor, which is floated over the site where a bridge pier is to be constructed. Construction goes on in the dry on the floor of the box, which sinks finally to a previously levelled bed under water, the sides of the box being kept always above water. Also called an AMERICAN CAISSON.

stranding (*Furs*). The same process as *dropping-out* (q.v.).

stranding effect (*Cables*). An increase (20-30%) of the stress at the surface of the conductor caused by stranding. A usual increase is 25%. Stranding effect is overcome by sector-shaped conductors or by lead sheathing the conductor.

strangler (*I.C. Engs.*). See **choke** (2).

strangles (*Vet.*). A contagious disease of horses, due to infection by *Streptococcus equi*, characterised by rhinitis and suppurative adenitis.

strang'ury (*Med.*). Slow and painful micturition.

strap (*Carp.*). A metal plate or band securing timbers together at a joint.

strap hinge (*Join.*). A hinge having one long leaf for securing to a heavy door or gate.

strapped wall (*Build.*). A wall to which strapping has been fixed.

strapping (*Build.*). A general term for battens fixed to the internal faces of walls as a support for laths and plaster.

strapping motion (*Cotton Spinning*). See **governor motion.**

strapping wires (*Elec. Eng.*). Parallel single-wire connexions between a pair of two-way electric light switches for dual control of a lighting point.

strata. *Pl.* of *stratum.*

strata, table of (*Geol.*). A column which depicts a series of rocks arranged in chronological order, the oldest being at the bottom. It is usual to draw this to scale so that the average thicknesses of the beds are also shown.

Strathmore Sandstones (*Geol.*). A series of unfossiliferous fine sandstones, shales, marls, and flags, usually placed at the top of the Lower Old Red Sandstone, and occurring in Strathmore, in the Central Lowlands of Scotland.

stratification (*Bot.*). (1) The banding seen in thick cell walls, due to the presence of wall layers differing in water content, chemical composition, and physical structure.—(2) The grouping of the vegetation of a wood into two or more well-defined layers differing in height, as trees, shrubs, and ground vegetation.

stratification (*Geol.*). The layering in sedimentary rocks due to changes in the rate of deposition, or in the nature of the sediment, or to contemporaneous recurrent pauses in the process of sedimentation. See also **lamination.**

stratified cambium (*Bot.*). A cambium in which the cells, seen in tangential section, appear arranged in fairly regular horizontal rows.

stratified epithelium (*Zool.*). A type of epithelium consisting of several layers of cells, the outer ones flattened and horny, the inner ones polygonal and protoplasmic.

stratified thallus (*Bot.*). A lichen thallus composed of a layer of algal cells between layers of fungal hyphae.

strat'iform, strat'ose (*Zool.*). Arranged in layers.

stratigraphical level (*Geol.*). See **horizon (geological).**

stratig'raphy (*Geol.*). The historical study of the rocks of the earth's crust, their relations and structure, their arrangement into chronological groups, their lithology and the conditions of their formation, and their fossil contents.

strat'ose (*Bot.*). Made up of well-defined layers; said particularly of the thallus of a heteromerous lichen.

strat'osphere (*Meteor.*). A layer of the earth's atmosphere, about six or seven miles above the earth, in which there is no convection and practically no vertical temperature gradient.

stratum (*Geol.*). A single bed of rock bounded above and below by divisional planes originally almost horizontal—the planes of *stratification* (q.v.). A stratum differs from a lamination only in thickness.—*pl.* **strata.**—*adj.* **stratified.**

stratum (*Zool.*). A layer of cells: a tissue layer.

stratum cine'reum, —lemnis'ci, —op'ticum, —zona'le (*Zool.*). Layers of the anterior *corpora quadrigemina* (q.v.).

stratum compac'tum, —spongio'sum (*Zool.*). Layers of the decidua vera in Mammals.

stratum cor'neum, —granulo'sum, —lu'cidum, —Malpigh'ii (*Zool.*). Layers of the skin in Vertebrates.

stratum society (*Bot.*). A plant society occurring as a well-defined layer in a plant community, as shrubs in a wood.

strawboards (*Bind.*). The cheapest boards, made from crude straw pulp. They are used for binding and mounting. Usual sizes 30×25 in., 32×22 in.

straw-rope (*Moulding*). Rough rope of twisted straw or hay wound on a bar or barrel to serve as a foundation for the loam in making a *struck core* (q.v.).

stray capacitance (*Radio*). Any capacitance occurring within a radio circuit other than that intentionally inserted by capacitors; e.g. the capacitance of connecting wires.

stray field (*Elec. Eng.*). A magnetic field set up in the neighbourhood of electric machines or current-carrying conductors, which serves no useful purpose and which may interfere with the operation of measuring instruments, etc.

stray flux (*Elec. Eng.*). The leakage flux in an a.c. machine or transformer.

stray induction (*Elec. Eng.*). The equivalent induction of the leakage flux effective in producing a reactive voltage drop.

stray losses (*Elec. Eng.*). The stray load losses of an electrical machine, due to stray fields and harmonic flux pulsations in the iron circuit and eddy currents in the windings.

strays (*Radio*). See **atmospherics.**

streak (*Bot.*). (1) A line of tissue differing in colour or structure from the tissues on each side of it.—(2) A furrow.—(3) A kind of virus disease in which necrotic streaks develop in the plant. Also called STRIPE.

streak (*Min.*). The name given to the colour of the powder obtained by scratching a mineral with a knife or file or by rubbing the mineral on paper or an unglazed porcelain surface (*streak plate*).

stream anchor (*Ships*). An anchor of lighter weight than a bower anchor; used as a stern anchor.

stream tin (*Min.*). Cassiterite occurring as derived grains in sands and gravels in the beds of rivers.

streaming potential (*Chem.*). The difference of electrical potential induced between the two ends of a capillary by forcing a liquid through it.

streamline burner (*Eng.*). See **fantail burner.**

streamline flow (*Hyd.*). See **viscous flow.**

streamline wire (*Aero.*). Bracing wire of approximately oval or lenticular cross-section, so formed to reduce head resistance when used externally on an aircraft structure.

street pole (*Elec. Eng.*). The pole at the side of a road or street from which the trolley-wire is suspended by means of the span-wire.

street refuge (*Civ. Eng.*). A small raised area in the middle of a street, surrounded by a kerb and protected by fender-posts, serving as a place of protection for pedestrians crossing the street. Also called SAFETY ISLAND.

strengths of acids (*Chem.*). The relative hydrogen ion *activities* (2), or concentrations, in solutions containing equivalent quantities of acid.

strepsine'ma (*Cyt.*). A stage in reduction division; *strepsitene* (q.v.).

strep'sitene (*Cyt.*). A stage in meiotic prophase during which *crossing-over* (q.v.) takes place.

Streptoneu'ra (*Zool.*). A subclass of *Gastropoda* in which the sexes are separate; the visceral mass and commissure show the maximum degree of torsion and there is generally only a single pair of cephalic tentacles. Limpets, Cowries, Periwinkles, etc.

streptoneu'ral, streptoneu'rous (*Zool.*). Having an asymmetrical nervous system; said especially of certain *Gastropoda* in which the visceral nerve loop is twisted into a figure of eight.

strep'tosty'ly (*Zool.*). In Vertebrates, the condition of having the quadrate movably articulated with the squamosal; cf. *monimostyly.*—*adj.* **streptosty'lic.**

streptotricho'sis or streptothrico'sis (*Med.*). A rare infection (especially of the lungs) with a branching fungus.

stress (*Cables*). In a single-core cable the stress at a point at distance x from the axis is $[E/x \log_e (D/d)]$, where E is the voltage of the conductor, d its diameter, and D the internal diameter of the lead sheath. Hence the stress varies from a maximum of $[E/d \log_e (D/d)]$ at the conductor to a minimum of d/D times this at the sheath. A modern 66 kV cable has a maximum stress of about 60 kV peak/cm.

stress (*Phys.*). See **elasticity.**

stress cone (*Cables*). A cone formed by wrapping paper tapes on the core of a cable from the place where the lead sheath ends. The purpose is to prevent flashover or tracking across the surface of the core. The stress cone is covered on its sloping face by a lead flare.

stress diagram (*Struct.*). See **force diagram.**

stress marks (*Photog.*). Markings on finished prints due to abrasion of the film surface. These can be removed with methylated spirit, possibly assisted by thiocarbamide.

stress minerals (*Geol.*). A term used for minerals occurring in metamorphic rocks whose formation is favoured by shearing-stresses. Such minerals are: kyanite, chlorite, chloritoid, epidote, albite.

stress-number (or **S/N**) **curve** (*Met.*). A curve obtained in fatigue tests by subjecting a series of specimens of a given material to different ranges of stress and plotting the range of stress against the number of cycles required to produce failure. In steel and many other metals there is a limiting range of stress below which failure will not be produced even by an indefinite number of cycles.

stress-strain curve (*Met.*). A curve similar to a *load-extension curve*, except that the load is divided by the original cross-sectional area of the test piece and expressed as tons or pounds per sq. in., while the extension is divided by the length over which it is measured and expressed in inches per inch.

stressed skin construction (*Aero.*). See **monocoque** and **Geodetic.**

stretch (*Cinema.*). (1) The relative increase in length of film during processing or exposure to moist conditions.—(2) The introduction of extra frames in a print by holding the negative in an intermittent printer, to obtain a slower motion of the images on projection, or to permit an increase in speed of projection without increasing motion of images.

stretched diaphragm (*Acous.*). A diaphragm in a microphone or loudspeaker which has its rigidity increased by radial stretching, frequently by screwing on to it a rim near its edge. Resonance then becomes marked, and the tension is adjusted so that the major resonant frequency becomes near the upper limit of the desired transmission frequency-band. The trend of the response curve is then adjusted by altering the damping.

stretcher (*Build.*). A whole brick which has been laid so that its length is in the line of the face of the wall.

stretcher (*Furn.*). A horizontal member joining two or more chair or table legs.

stretcher (*Mining*). A bar fixed across a narrow working place or tunnel to support a rock drill.

stretching bond (*Build.*). The form of bond, used largely for building internal partition walls of 4½ in. thickness, in which every brick is laid as a stretcher, each vertical joint lying between the centres of the stretchers above and below, so that angle closers are not required. See **chimney bond.**

stretching course (*Build.*). An external or visible course of bricks which is made up entirely of stretchers.

Stretton Group (*Geol.*). A group of purple and green flags, slates, and shales of Pre-Cambrian age occurring in the eastern Longmynd of Shropshire. See also **Longmyndian.**

stri'a or **stria'tion** (*Bot.*, *Zool.*). A faint ridge or furrow: a linear mark: a narrow groove or ridge: a streak.—*adjs.* **stri'ate, stri'ated.**

stria medull'aris (*Zool.*). See **habenula.**

stria vascular'is (*Zool.*). A vascular pigmented membrane of the organ of Corti.

striae or **striations** (*Min.*). Surface markings occurring on the faces of some crystals, taking the form of parallel lines; caused by oscillation between two crystal forms. The striated cubes of iron-pyrite are good examples.—(*Geol.*) Parallel lines or narrow grooves occurring on glaciated pavements, roches moutonnées, etc.; produced by hard stones frozen into the base of a moving ice-sheet; also seen on slicken-sided rock surfaces along which movement has taken place during faulting.

striae atroph'icae (*Med.*). Greyish-white bands of atrophied skin in areas where the skin has been unduly stretched, as in pregnancy (*striae gravidarum*).

stri'ate (*Bot.*, *Zool.*). Marked with parallel longitudinal lines, furrows, ridges, or streaks of colour.

stri'ated muscle (*Zool.*). A form of contractile tissue composed of multinucleate unbranched fibres enclosed by a sarcolemma, showing marked transverse striations and having the nuclei at the periphery. Cf. *unstriated muscle, cardiac muscle.*

strickle board (*Foundry*). A board profiled along one edge to the required shape of the surface of a loam mould or core; used to sweep or strike the loam to the correct section. See **loam.**

strict (*Bot.*). Stiff and rigid.

stricture (*Med.*). Any abnormal narrowing of a duct or passage in the body, especially the narrowing of the urethra due to gonorrhoeal inflammation. See also **stenosis.**

striding level (*Surv.*). A sensitive level-tube fitted at each end with a leg at right-angles to the tube, so that the striding level may be placed astride a theodolite by resting the V-shaped ends of the legs on the trunnion axis, enabling the latter to be accurately levelled.

stri'dor (*Med.*). A harsh vibrating noise produced by any obstruction in the respiratory tubes, e.g. in diphtheria of the larynx.

strid'ulating organs (*Zool.*). The parts of the body concerned in sound production by stridulation.

stridulation (*Zool.*). Sound production by friction of one part of the body against another, as in some Insects.

stri'ga (*Zool.*). See **stria.**—*adjs.* **stri'gate, stri'gose.**

strigil, strigilis, strij'— (*Zool.*). In certain *Hemiptera*, a curious asymmetrical organ consisting of rows of black comb-like plates situated on the dorsal surface of the abdomen: in some Bees, a mechanism for cleaning the antennae situated at the junction of the tibia and the tarsus of the first leg.

stri'gose (*Bot.*). Bearing hairs which are usually rough and all pointing in the same general direction.—*dim.* **strig'illose.**

strike (*Geol.*). The horizontal direction which is at right-angles to the dip of a rock.

strike (*Typog.*). To drive a hardened steel punch into a brass or copper bar, so producing a matrix from which types are cast. The term is also used to describe the impression itself.

strike (*Vet.*). See **struck.**

strike fault (*Geol.*). A fault aligned parallel to the strike of the strata which it cuts. Cf. *dip fault.*

strike note (*Acous.*). The note, largely subjective, which is initially prominent when a bell is struck. It rapidly attenuates, leaving the hum note and some overtones, which may not be exactly harmonic.

striking (*Build., Civ. Eng.*). The operation of removing temporary supports from a structure.

striking (*Foundry*). See **striking-up.**

striking clock (*Horol.*). A clock which strikes the hours only.

striking plate (*Carp., Join.*). A metal plate screwed to the jamb of a door case in such a position that when the door is being shut the bolt of the lock strikes against, and rubs along, the plate, finally engaging in a hole in the latter.

striking-up or **striking** (*Foundry*). The process of generating a loam mould surface by means of a *strickle board* (q.v.).

striking wedges (*Civ. Eng.*). A pair of wedge-shaped blocks of hard wood packed beneath each end of a centre and placed in contact, with their thin ends pointing in opposite directions, so that, by moving them relatively, the centre may be gradually lowered on completion of the work. Also called EASING WEDGES, LOWERING WEDGES.

striking work (*Horol.*). The mechanism of a clock which causes the striking.

string (*Carp.*). A sloping wooden joist supporting the steps in wooden stairs.

string (*Cinema.*). The phosphor-bronze flattened wires in a recording vibrator, and the Duralumin strip in a light-valve.

string (*Elec. Eng.*). The series of insulator units combining to form a suspension insulator.

string chart (*Elec. Eng.*). A diagram from which the relation between the sag of an overhead line and the temperature may be rapidly obtained.

string-course (*Masonry*). A projecting course in a wall.

string efficiency (*Elec. Eng.*). The ratio of the flash-over voltage of a suspension-insulator string to the product of the flash-over voltage of each unit and the number of units forming the string.

string galvanometer (*Cinema.*). A vibrator used in variable-area sound-film recording, which deflects the image of the slit across the track or along the track.

string galvanometer (*Elec. Eng.*). See **Einthoven galvanometer.**

string warp machines (*Textiles*). Lace machines which are supplied by spools as well as by beams in making warp laces.

stringer. A long horizontal member in a structural framework.—(*Aero.*) A light auxiliary member parallel to the main structural members of a plane, fuselage, float, or boat body. Its purpose is to assist in preserving the correct external shape.

string'halt (*Vet.*). A disease of horses, characterised by involuntary sudden and excessive flexion of one hind limb or both.

stri'olate (*Bot.*). Finely striate.

strip (*Timber*). A piece of timber of smaller size than 2 × 4 in.

strip-wound armature (*Elec. Eng.*). An armature whose winding consists of conductors in the form of copper strip.

stripe (*Bot.*). See **streak** (3).

striped (*Bot.*). Bearing longitudinal stripes of colour.

striping (*Furs*). The process of dyeing furs in stripes.

stripper and worker (*Textiles*). A pair of wire-covered rollers forming part of the mechanism of a roller carding machine.

stripping (*Acous.*). Removal of the copper electroplate from the original wax-record in gramophone-record manufacture.

stripping (*Furs*). The operation of dividing furs into strips.

stripping (*Paint.*). The operation of removing old paint surfaces or wall-paper prior to redecorating.

stripping (*Photog.*). The process of removing the negative emulsion film from its glass support for transfer to another glass or other support (as in process-block making).

stripping agent (*Acous.*). The substance which is coated on the surface of a copper matrix when a copy of this is made by electroplating. When copper is copperplated a silver iodide film is used, while the bichromate salt is used in nickelplating. For effective plating the stripping agent must be adequately conducting.

strobi'la (*Zool.*). In *Scyphozoa*, a scyphistoma in process of production of medusoids by transverse fission: in *Cestoda*, a chain of proglottides.—*adjs.* **strob'ilate, strobila'ceous, strobilif'erous, strob'iloid.**

strobila'ceous (*Bot.*). Of, or resembling, a cone.

strob'ilate (*Bot.*). Of the nature of a cone.

strobilisation (*Zool.*). Production of strobilae: in *Scyphozoa*, transverse fission of a scyphistoma to form medusoids: in *Cestoda*, production of proglottides by budding from the back of the scolex: in some *Polychaeta*, reproduction by gemmation.

strob'ilus (*Bot.*). A group of sporophylls with their sporangia, more or less tightly packed around a central axis, forming a well-defined group; a cone.

strob'oscope (*Elec. Eng.*). A speed-measuring device consisting of a slotted disc driven at synchronous speed; rapidly rotating objects appear to rotate at a speed equal to the actual speed difference.

stroke (*Eng.*). See **cylinder.**

stroke (*Med.*). An apoplectic seizure: a sudden attack of paralysis. See also **apoplexy.**

stroked (*Masonry*). A term applied to the face of an ashlar which has been so tooled as to present a regular series of small flutings.

stro'ma (*Bot.*). (1) The denser part of a chloroplast; it is colourless.—(2) A dense mass of interwoven hyphae, fleshy to horny in texture, cushion-like, columnar, club-shaped, or branched, in which many fungi develop their fructifications.

stroma (*Zool.*). A supporting framework, as the connective tissue framework of the ovary or testis in Mammals.—*pl.* **stro'mata.**—*adjs.* **stromate, stromat'ic, stromat'iform, stro'matoid, stro'moid, stro'matous.**

stroma starch (*Bot.*). Starch formed in the stroma of a chloroplast at times when photosynthesis is active.

stromatop'oroid limestone (*Geol.*) A calcareous sedimentary rock type, rich in the remains of the reef builder *Stromatopora*, important from Palaeozoic times onwards.

strombulif'erous (*Zool.*). Having the organs coiled in a spiral fashion: bearing spirally coiled structures.

strombu'liform (*Bot.*). Said of a spirally twisted fruit.

strombus (*Bot.*). A spirally coiled pod.

Stromness Flags (*Geol.*). The local representative of part of the Caithness Flagstone Group of the Middle Old Red Sandstone, occurring in the Orkney Islands, Scotland.

strong clay (*Build.*). See **foul clay.**

strong electrolyte (*Chem.*). An *electrolyte* (2) which is completely ionised even in fairly concentrated solutions.

stron'gyloid (*Zool.*). Said of a type of nematode larva: said of a biradiate monaxonic sponge spicule with rounded ends.

Strongyloid'ea (*Zool.*). A class of *Nematoda* in which the oesophagus is more or less club-shaped, and the males have a terminal or subterminal caudal bursa, supported by a series of six paired rays, and a dorsal branched median ray; includes the Hook Worms.

strongyloidi'asis, strongyloido'sis (*Med.*). Infestation of Man with the nematode worm *Strongyloides stercoralis*, the worm living in the intestines and causing diarrhoea; common in the Tropics.

stron'tianite (*Min.*). Carbonate of strontium, crystallising in the orthorhombic system. Its colour varies from pale green or grey to brown, and it is associated with limestones and less frequently with eruptive rocks. It is also a minor source of strontium compounds.

strontium (*Chem.*). A metallic element in the second group of the periodic system, one of the alkaline earth metals. At. no. 38, at. wt. 87·63. The metal is silvery white; sp. gr. 2·5, m.p 800° C. It is found naturally as *celestine* and as *strontianite*; it also occurs in mineral springs.

stro'phiolate (*Bot.*). See **carunculate.**

stro'phiole (*Bot.*). See **caruncle.**

strub rack (*Civ. Eng.*). A form of rack railway in which the rack is centrally located, and is made from a special section, resembling a flat-bottomed rail in its lower portion and thickened greatly at the top, where the teeth are cut.

struck (*Build.*). (1) Taken away, dismantled; said, for example, of scaffolding.—(2) Joints on an exposed face of a wall are said to be *struck* when the mortar is recessed in the upper part of the joint.

struck (*Vet.*). An acute toxaemia of sheep, due to *Clostridium welchii, type C* (*B. paludis*).

struck core (*Foundry*). A loam core formed by revolving the built-up core, loam-covered, against a *strickle board* (q.v.). See also **straw-rope.**

struck-joint pointing (*Build.*). See **weathered pointing.**

structural colours (*Zool.*) Colour effects produced by some structural modification of the surface of the integument, as the iridescent colours of some Beetles. Cf. *pigmentary colours.*

structural deviation (*Bot*). Any departure from the usual structure of a plant.

structural hybrid (*Gen.*). An organism in which the two sets of chromosomes in the diploid complement are different in composition.

structural timber (*Build.*). The Canadian name for *carcassing timber.*

structure (*Chem.*). See **molecular structure.**

structure of the atom (*Chem.*). See **atomic structure.**

stru'ma (*Bot.*). A swelling on one side at the base of the capsule of a moss.

struma (*Med.*). (1) *Scrofula* (q.v.).—(2) *Goitre* (q.v.).

stru'mose (*Bot.*). (1) Bearing a swelling at one side of the base.—(2) Bearing cushion-like swellings.

strut (*Eng.*). Any light structural member or long column which sustains an axial compressive load. Failure occurs by bending before the material reaches its ultimate compressive stress. See **column.**

Struthio'nes (*Zool.*). An order of *Neognathae*, having a typical desmognathous palate, a keelless sternum, and hookless barbules; the wings are reduced; the pygostyle, the syrinx, and the oil-gland are lacking. Ostriches, Emus, Cassowaries, Kiwis, and Rheas; large flightless birds with powerful legs and feet.

strutting (*Build.*). The process of employing props to give temporary support between two surfaces; e.g. the dead shoring of floors and roof prior to underpinning.

strutting (*Carp.*). See **bridging piece.**

Struve's bars (*Surv.*). Apparatus devised by the Russian astronomer F. W. Struve for base-line measurement on the Russian Survey.

strych'nine (*Chem.*). $C_{21}H_{22}N_2O_2$, a monoacidic alkaloid base, rhombic prisms, m.p. 265° C., b.p. 270°/5 mm.; extremely poisonous, causing tetanic spasms. It occurs in the seeds of *Strychnos Ignatii*, in *Strychnos nux vomica*, in *Upas Tieuté*, and in *Lignum colubrinum.* Strychnine is almost insoluble in water, but is readily soluble in chloroform and benzene.

strychnine bases (*Chem.*). A group of alkaloids obtained from *Strychnos nux vomica.* They include *strychnine* (q.v.) and *brucine* (q.v.).

Strypt (*Build.*). Trade-name for a fire-resisting door constructed of wood and metal.

stub (*Build.*). A small projection on the under surface at the top edge of a tile, enabling it to be hung on a batten.

stub axle (*Automobiles*). A short dead axle carrying a steered wheel. It is capable of limited angular movement about a swivel-pin carried by the end of the axle beam.

stub plane (*Aero.*). See **plane.**

stub tenon (*Carp., Join.*). A very short tenon for fitting into a blind mortise. Also called JOGGLE.

stub-tooth gear (*Eng.*). A gear tooth of smaller height and of more robust form than that normally employed; used in the manufacture of automobile gears.

stuc (*Plast.*). Plasterwork finished to resemble stone.

stuc'co (*Plast.*). A smooth-surfaced plaster or cement rendering applied to external walls, especially if it resembles stonework.

stuck moulding (*Join.*). A moulding shaped out of the solid of a member.

stuck-on soles (*Shoes*). Shoe soles in which the upper inner sole and the outer sole are attached together by means of strong cement; used for women's and children's shoes.

stud (*Carp.*). An upright scantling in a timber framework or partition.

stud (*Eng*). A shank, or headless bolt, generally screwed from both ends and plain in the middle. It is permanently screwed into one piece, to which another is then secured by a nut.

stud (*Horol.*). (1) The part to which the outer coil of a balance spring is attached.—(2) A short vertical pin.

stud partition (*Carp.*). A wooden partition based on rough timber framing.

stuff (*Build.*). (1) See **coarse stuff, fine stuff.**—(2) Timber sawn or manufactured from logs.

stuff chest (*Paper*). A large cylindrical vessel in which pulp is stored before passing forward to the strainers, etc. The fibres are kept in suspension by revolving paddles.

stuffed (*Bot*). Said of the stipe of an agaric when the interior is occupied by a cottony or spongy mass different in texture from the peripheral parts.

stuffing (*Leather*). A process, similar to currying, by which leather is impregnated with grease, generally in a stuffing drum.

stuffing-box (*Eng.*). A cylindrical recess provided in, for example, a cylinder cover, at the point at which the piston-rod emerges; it is filled with packing which is compressed by a *gland* (q.v.) to make a pressure-tight joint.

stuffing-drum (*Leather*). A heated drum in which leather is impregnated with grease.

stuke (*Plast.*). *Stucco* (q.v.).

stull (*Mining*). A timber prop between the walls of a stope.

stull covering (*Mining*). A platform in a stope, to carry men or mineral.

stump tenon (*Carp., Join.*). A tenon differing from a *stub tenon* (q.v.) in that it tapers so as to have a greater thickness at the root.

stupe (*Med.*). A piece of cloth, flannel, or the like, soaked in hot water, wrung out dry, and medicated for external application.

stu'por (*Med.*). A state of mental and physical inertia; inhibition of instinctive activity and indifference to social environment.—*adj.* **stu'porous.**

stu'pose (*Bot.*). Tow-like.

sturdy (*Vet.*). See **coenurosis.**

stu'rine (*Chem.*). A protamine isolated from fish testicles.

Stuttgart disease (*Vet.*). Nephritis (Bright's disease) of dogs.

sty or **stye** (*Med.*). Hordeolum. Staphylococcal infection of a sebaceous gland of the eyelid.

sty'lar (*Bot.*). Referring to the style.

stylar canal (*Bot.*). A tube or space occupied by loose tissue, through which the pollen tubes pass as they grow through the style.

style (*Bot.*). The portion of the carpel between the ovary and the stigma; it is often elongated and thread-like.

style (*Join.*). See **stile.**

style or **stylus** (*Zool.*). In *Hydrocorallinae*, a calcareous projection arising from the tabula at the bottom of each cup: in some of the lower orders of Insects, the unmodified outer gonapophysis of the ninth segment in the male: in some *Diptera*, an appendage of the antenna.—*adjs.* **sty'lar, sty'late.**

style of the house (*Typog.*). The customary style of spelling, punctuation, capitalisation, etc., used in a printing establishment. It is followed in the absence of contrary instructions.

sty'let (*Zool.*). A small pointed bristle-like process.

stylid'ium (*Bot.*). The upper portion of an archegonium.

sty'lifer (*Zool.*). A process or sclerite from which a style arises.

sty'liform (*Zool.*). Bristle-shaped.

stylo- (Greek *stylos*, pillar). A prefix used in the construction of compound terms; e g *styloglossal*, pertaining to the styloid process and the tongue.

sty'lobate (*Arch.*). A continuous pedestal supporting a row of columns.

stylocon'ic (*Zool.*). Said of a type of sensilla in Insects which consists of one or more basiconic pegs elevated on a cone.

stylogIos'sus (*Zool.*). In higher Vertebrates, a muscle connecting the styloid process and the tongue.—*adj.* **styloglos'sal.**

stylohy'oid (*Zool.*). Pertaining to, or connecting, the styloid process and the hyoid; as a ligament in higher Vertebrates.

sty'loid (*Zool.*). Pillar-shaped; as a process of the otic capsule in the Mammalian skull.

sty'lopised (*Zool.*). Of Bees, parasitised by *Strepsiptera* (after the principal genus *Stylops*).

stylopo'dium (*Bot.*) A swelling at the base of a style.

stylopodium (*Zool.*). The proximal segment of a typical pentadactyl limb; brachium or femur; upper arm or thigh.

sty'lospore (*Bot.*). See **pycnidiospore, pycnospore.**

sty'lus (*Acous.*). The cutter in a gramophone recording-head; its point is shaped to remove a thread of wax from a blank as it revolves, thus making the record. Generally made of sapphire.

stylus (*Zool.*). In primitive Insects, a small appendage attached to the coxae of the middle and hind pairs of legs: in Mammals, a molar cusp. See also **style.**

styph'nic acid (*Chem.*). $(NO_2)_3 \cdot C_6H \cdot (OH)_2$, the trinitro derivative of resorcinol; formed by the action of nitric acid upon many gum resins.

styp'sis (*Med.*). The application, or use, of styptics.

styp'tic (*Med.*). Astringent; tending to stop bleeding by coagulation: any agent that tends to stop bleeding by astringent action.

sty'rene (*Chem.*). Phenylethylene, $C_6H_5 \cdot CH:CH_2$, a constituent of essential oils and coal-tar. It is a colourless aromatic liquid, b.p. 145° C., soluble in alcohol and ether.

styrene joint (*Cables*). A joint filled with hot liquid styrene, which polymerises on cooling into a very hard solid and prevents displacement of the cores.

styrene resins (*Plastics*). Compounds, polystyrenes, formed by the polymerisation of styrene, $C_6H_5 \cdot CH\ CH_2$. The power factor and dielectric constant are lower than for other plastics, and they do not disintegrate at ultra-short-wave and television frequencies. They have excellent mechanical properties, and are resistant to moisture, concentrated sulphuric acid, strong alkalies, alcohol, and acetone.

styrol resins (*Plastics*). See **styrene resins.**

S.U. (*Acous.*). Abbrev. for *sensation unit*, now termed the *decibel*.

suaveo'lent (*Bot.*). Having a sweet smell.

sub- (Latin *sub*, under). A prefix used in the formation of compound words, in the following senses: (1) deviating slightly from, e.g. *subtypical*, not quite typical; (2) below, e g. *subvertebral*, below the vertebral column; (3) somewhat, e g. *subspatulate*, somewhat spatulate; (4) almost, e.g. *subthoracic*, almost thoracic in position.

sub (*Teleph*). An abbrev. for a telephone subscriber or his apparatus.

subacute (*Med.*). Said of a disease whose symptoms are less pronounced than those of the acute form: between acute and chronic.

subacute combined degeneration (*Med.*). Anaemic spinal disease. A condition in which there is degeneration of motor and sensory nerve tracts in the spinal cord, giving rise to paraplegia and loss of sensibility of the skin, the disease being associated with pernicious anaemia.

subarach'noid (*Zool.*). Beneath the arachnoid.

subarachnoid haemorrhage (*Med.*). Haemorrhage into the space between the arachnoid and the pia mater (inner two membranes covering the brain), especially as a result of rupture of an aneurysm of one of the arteries in this space.

subatom'ics (*Chem.*). The study of processes which involve changes inside an atom.

subcentric oösphere (*Bot.*). A fungal oösphere with the protoplasm surrounded by one layer of fatty globules and with two or three additional layers on one side only.

subche'la (*Zool.*). In *Arthropoda*, any subchelate appendage.

subche'late (*Zool.*). In *Arthropoda*, having the distal joint of an appendage modified so that it will bend back and oppose the penultimate joint, like the blade and handle of a penknife, to form a prehensile weapon. Cf. *chelate*.

sub-chord (*Surv.*). The chord length from a tangent point on a railway or highway curve to the adjacent chainage peg around the curve when this is less than the full chord distance employed in setting out the chainage pegs.

sub-circuit (*Elec. Eng.*). One of several lighting circuits supplied from a common branch distribution fuse-board.

subcla'vian (*Zool.*). Passing beneath, or situated under, the clavicle; as the *subclavian artery*.

subcla'vius (*Zool.*). A wing muscle of Birds.

sub-climax (*Bot.*). A community which has not attained the full development possible under the prevailing climatic conditions because of some limitation imposed by an edaphic or biotic factor

subconscious (*Psycho-an.*). See **pre-conscious.**

subcor'tical (*Zool.*). Below the cortex or cortical layer, as certain cavities in Sponges.

subcos'ta (*Zool.*). In Insects, one of the primary veins of the wing.—*adj.* **subcos'tal.**

subcostal (*Zool.*). Below the costae.

sub-culture (*Bot.*). A culture of bacteria or fungi prepared from a pre-existing culture.

subcuta'neous (*Zool.*). Situated just below the skin.

subdor'sal (*Zool.*). Situated just below the dorsal surface.

subdu'ral (*Med., Zool.*). Situated beneath the dura mater, e.g. *subdural abscess.*

subentire' (*Bot.*). Said of a margin which is very faintly indented.

subepider'mal tissue (*Bot.*). Hypodermis.

suberect' (*Bot.*). Upright below, nodding at the top.

suber'ic acid (*Chem.*). $HOOC\cdot(CH_2)_6\cdot COOH$, a saturated dibasic acid ; m.p. 140° C.

suberifica'tion (*Bot.*). See **suberisation.**

su'berin (*Bot.*). A complex mixture of fatty substances present in the cell walls of corky tissue, rendering them waterproof and resistant to decay.

suberin lamella (*Bot.*). A layer of wall material impregnated with suberin.

suberisa'tion (*Bot.*). The impregnation of cell walls with suberin, with consequent formation of cork.

su'berised (*Bot.*). Transformed into cork.

sub-erose (*Bot*). Appearing as if somewhat gnawed or eroded.

su'berose, su'berous (*Bot.*). Of corky texture.

sub-exchange (*Teleph.*). A small exchange, manually operated, which is dependent on a main exchange for completing its outgoing connexions.

subfloor (*Carp.*). A wooden floor serving as a base for the laying of a finished, e.g. parquet, floor.

subga'lea (*Zool.*). In Insects, an inner sclerite of the stipes ; parastipes.

subgen'ital (*Zool.*). Below the genital organs, as the subgenital pouches of *Aurelia.*

subgenital portico (*Zool.*). In some *Scyphozoa*, a spacious chamber lying below the stomach and formed by the fusion of the subgenital pouches.

subge'nus (*Bot., Zool.*). A subdivision of a genus higher than a species.

subglacial drainage (*Geol.*). The system of streams beneath a glacier or ice-sheet ; formed chiefly of melt-waters. Cf. *englacial streams.*

sub-harmonic (*Acous.*). See **sub-octave.**

subhe'dral (*Geol.*). See **hypidiomorphic.**

subhyme'nial layer (*Bot.*). A layer of hyphae immediately beneath a hymenium.

subic'ulum, su'bicle (*Bot.*). A felted or cottony mass of fungal hyphae underlying the fruit bodies of some fungi.

subima'go (*Zool.*). In *Ephemeroptera* (Mayflies), a stage in the life-history succeeding the nymph and passing into the true imago stage by a final ecdysis.—*adj.* **subimag'inal.**

subincis'ion. The formation of an opening into the urethra by incision of the under side of the penis ; practised by savage tribes.

subinvolu'tion (*Med.*). Partial or complete failure of the uterus to return to the normal state after childbirth.

subjective noise-meter (*Acous.*). A noise-meter for assessing noise-levels on the phon scale ; the loudness of the noise-level being measured is compared by ear with the adjusted reference tone, 1000 cycles per second. See **objective noise-meter.**

sub'limate (*Chem.*). The product of sublimation.

sublimate test (*Chem.*). *Schmidt's test* (q.v.).

sublimation (*Chem.*). The vaporisation of a solid (especially when followed by the reverse change) without the intermediate formation of a liquid.

sublimation (*Psychol.*). An unconscious mechanism whereby the energy attaching to an instinct finds indirect gratification by being diverted into socially and ethically useful channels.

sublimed white lead (*Chem.*). Basic lead sulphate fume.

sublin'gua (*Zool.*). In Marsupials and Lemurs, a fleshy fold beneath the tongue.

sublit'toral plant (*Bot.*). A plant which grows near the sea, but not on the shore.

sublunar point (*Astron.*). See **substellar point.**

subluxa'tion (*Med.*). Partial, incomplete dislocation of a joint.

submarine mine. A container for high explosive, floated at a predetermined depth or on the surface. It is fired electrically, magnetically, or by impact. See **magnetic mine.**

submarine telegraph cable (*Cables*). Deep-sea cable is invariably of gutta-percha with steel-wire armouring. Shallow sea cables have been made with dry paper, lead sheathed, steel-wire armoured.

submax'illary (*Zool.*). Situated beneath the lower jaw.

submen'tum (*Zool.*). The proximal sclerite of the basal part of the labium in Insects.

submerged, submersed (*Bot.*). Growing under water.

submerged dyke (*Hyd. Eng.*). A ground sill.

submi'cron (*Chem*). A particle with a diameter of 50-2000A.(5×10^{-7}—2×10^{-5} cms.), and therefore visible only with the ultra-microscope.

sub-microstructure (*Met.*). Structure of alloys the nature of which cannot be seen under the microscope, but has to be inferred from the results of X-ray analysis, or from the determination of electrical resistance, specific volume, etc.

submod'ulator (*Radio*). The low-frequency amplifier which immediately precedes the modulator in a radio telephony transmitter.

submuco'sa (*Zool.*). A tissue layer underlying a mucous membrane ; usually composed of vascular areolar tissue.

subno'tochord (*Zool.*). In some *Chordata*, a skeletal rod lying beneath the true notochord ; hypochord.

sub-octave (*Acous.*). (1) A frequency which is half a given frequency.—(2) The name of a stop in organs when the note sounded has half the nominal pitch of the key on the manual which controls it. Also called SUB-HARMONIC.

suboc'ular (*Zool.*). In the skull of *Cyclostomata*, an inverted cartilaginous arch lying below, and affording support to, the eyeball: below the eyeball.

subocular shelf (*Zool.*). In some Fish, an ingrowth from the suborbitals supporting the eyeball.

suboper'culum (*Zool.*). In Fish, a membrane bone of the gill-cover.

subor'bital (*Zool.*). One of a series of membrane bones surrounding, or lying below, the eye in some Fish.

sub-outcrop (*Mining*). See **blind apex.**

subpet'iolate (*Bot.*). Said of a bud which grows concealed by the petiole.

subra'dius (*Zool.*). In radially symmetrical forms, a radius of the fourth order, lying between an ad-radius and a per-radius or an ad-radius and an inter-radius.

subram'ose (*Bot.*). (1) Not branching freely.—(2) Having few branches.

subscriber (*Teleph.*). One who rents telephone apparatus for originating or receiving calls through an exchange. Abbrev. **sub.**

subscriber's extension station (*Teleph.*). The subset to which an incoming call can be extended from a main subset on a subscriber's premises.

subscriber's jack (*Teleph.*). The same as *answering jack.*

subscriber's line (*Teleph.*). The line which connects a subscriber through the exchange to his section of the multiple and also to his answering jack; more particularly, his line external to the exchange.

subscriber's main station (*Teleph.*). A subset for originating calls and for extending incoming calls to another subset, called an extension.

subscriber's meter (*Teleph.*). The meter in an exchange which indicates the number of unit-fee calls made by a subscriber. It is operated by the operator in a manual exchange before taking down the connecting cord-circuit; it is automatically operated when the distant subscriber answers over an automatic system, whether this is the desired number or not. In each instance the meter can be operated once only.

subscriber's set (*Teleph.*). See **subset.**

subscriber's station (*Teleph.*). See **sub-station.**

subset or **subscriber's set** (*Teleph.*). The collection of apparatus for originating and receiving calls which is permanently installed on a subscriber's premises.

subsidence (*Build., Civ. Eng.*). (1) The sinking or caving-in of the ground.—(2) The settling down of a structure, etc., to a lower level.

subsidiary cell (*Bot.*). See **accessory cell.**

sub-soil. Residual deposits lying between the soil above and the bed-rock below, the three grading into one another.

sub-soil drain (*Civ. Eng.*). A drain laid just below ground-level to carry off waters from saturated ground. It consists usually of unsocketed earthenware pipes laid end to end at the bottom of a trench, which is covered in with broken stones.

subsolar point (*Astron.*). See **substellar point.**

subspe'cies (*Zool.*). A category of individuals within a species distinguished by certain common characteristics from typical members of the species; a variety. The term is used in different senses by specialists in different groups.

subsponta'neous (*Bot.*). Said of a plant which has been introduced but maintains itself fairly successfully by its ordinary means of reproduction.

subsporan'gial vesicle (*Bot.*). A swelling on a sporangiophore immediately beneath the terminal sporangium.

substance (*Chem.*). A kind of matter, with characteristic properties, and generally with a definite composition independent of its origin.

sub-standard film stock (*Cinema.*). A type of film stock which is narrower than the standard. Sub-standard sizes in use are 17·5, 16, 9·5, and 8 mm., as contrasted with the standard 35 mm.

sub-standard instrument (*Elec. Eng.*). A laboratory instrument whose accuracy is very great and which has been calibrated against an international standard of measurement.

substan'tia (*Zool.*). Substance; matter.

substantive dyes (*Chem.*). Dyestuffs which can dye cotton and other fibres direct without the aid of a mordant. Many are derived from benzidine and its derivatives.

substantive variation (*Bot., Zool.*). Variation in the constitution of an organ or organism, as opposed to variation in the number of parts.

sub-station (*Elec. Eng.*). A switching, transforming, or converting station intermediate between the generating station and the low-tension distribution network.

sub-station (*Surv.*). A station of a subsidiary triangle in a skeleton.

sub-station or **subscriber's station** (*Teleph.*). A subscriber's telephone located on his premises.

substellar point (*Astron.*). The point on the earth's surface, regarded as spherical, where it is cut by a line from the centre of the earth to a given star; hence the point where the star would be vertically overhead, the point whose latitude is equal to the star's declination. Applied also to the sun and moon as *subsolar point* and *sublunar point* respectively.

substitution (*Chem.*). The replacement of hydrogen by other groups, e.g. halogen, alkyl, hydroxyl, etc.

substitutional resistance (*Elec. Eng.*). A resistance, equal to the normal resistance of an arc lamp, which is automatically cut into circuit upon the failure of any one of several arc lamps connected in series.

substomat'ic chamber (*Bot.*). A large intercellular space beneath a stoma.

sub'strate (*Bot.*). The substances used by a plant in respiration.

substra'tum (*Bot.*). Non-living material to which a plant is attached and from which it obtains substances used in its nutrition.—(*Zool.*) The solid underlying material or basis on which an animal moves, or to which it is attached; as the sea-bottom.

subsubmicron (*Chem.*). See **amicron.**

subsul'tus ten'dinum (*Med.*). Involuntary twitching of muscles or groups of muscles in patients whose vitality is lowered by prolonged fever, as in typhoid fever.

sub-synchronous (*Elec. Eng.*). Below synchronism.

subtec'tal (*Zool.*). Lying beneath the roof, as the roof of the skull; in some Fish, a cranial bone.

subtending (*Bot.*). Having a bud, or something developed from a bud, or a sporangium in its axil.

subtense' bar (*Surv.*). A horizontal bar, bearing two targets fixed at a known distance apart, used as the distant base in one system of tacheometry.

subterra'nean (*Bot.*). Growing beneath the surface of the soil.

subthal'amus (*Zool.*). A mass of grey matter lying below the thalamus and representing the prolongation of the tegmentum of the crus cerebri in the Mammalian brain; hypothalamus.—*adj.* **subthal'amic.**

subtraction (*Bot.*). The loss of a hereditary factor.

subtractive-coloured light (*Illum.*). The monochromatic illumination obtained from a polychromatic light source by the aid of an appropriate absorption screen.

subtractive primary colours (*Photog.*). In three-colour photography, the printing colours which are complementary to the colours of the analysing filters. They are magenta (minus green), blue-green (minus red), and yellow (minus blue).

subtractive process (*Photog.*). The printing of images, corresponding to the three primary colours, in their subtractive or complementary colours, so that transmitted light from a white source, or reflected light from a white support, loses in turn the minus colour of the original primary.

subtractor (*Photog.*). A filter which stops the transmission of a specified primary colour in three-colour subtractive printing.

sub'ula (*Bot.*). A delicate sharp-pointed prolongation of an organ.

sub'ulate (*Bot.*). Shaped like an awl.

subumbrel'la (*Zool.*). The concave inner or lower surface of the umbrella of a medusa.—*adj.* **subumbrel'lar.**

subun'gual (*Med.*). Situated, or occurring, beneath a nail.

subun'guis (*Zool.*). In Vertebrates, the ventral scale contributing to a nail or claw.

subway (*Civ. Eng.*). A tunnel driven beneath a road to provide an underground crossing-place for pedestrians wishing to get from one side of the road to the other.

succession (*Cyt.*). The tendency sometimes shown by the sex-chromosomes to pass to the poles of the meiotic spindle after the autosomes.

suc'cinam'ic acid (*Chem.*). $H_2N{\cdot}CO{\cdot}CH_2{\cdot}CH_2{\cdot}COOH$, mono-amidosuccinic acid.

succin'ic acid (*Chem.*). $HOOC{\cdot}CH_2{\cdot}CH_2{\cdot}COOH$, a saturated dibasic acid; monoclinic prisms; m.p. 185° C., b.p. 235° C., with partial decomposition into its anhydride. It occurs in the juice of sugar-cane, in the castor-oil plant, and in muscle, and is one of the oxidation products of fatty acids.

suc'cinite (*Min.*). (1) A variety of *amber* (q.v.), separated mineralogically because it yields succinic acid.—(2) The name given to an amber-coloured garnet of the grossularite species.

suc'cinyl (*Chem.*). The bivalent acid residue $-CO{\cdot}CH_2{\cdot}CH_2{\cdot}CO-$.

succise' (*Bot.*). Ending below abruptly, as if cut off.

suc'cubous (*Bot.*). Having the lower edge of the leaf in front of the stem and overlapping the upper edge of the next leaf below it on the same side of the stem.

suc'culent (*Bot.*). Juicy, soft, and thick. (*Succulent* is often used when *fleshy*—which is not specially juicy—should be employed.)

suc'cus (*Zool.*). A juice secreted by a gland, as the *succus entericus* (q.v.).

succus enter'icus (*Zool.*). The digestive juices secreted by the intestinal glands in *Vertebrata*.

succus'sion (*Med.*). The act of shaking a patient to detect the presence of fluid in a pleural cavity already containing air (pneumothorax).

sucker (*Bot.*). A strongly growing shoot arising from the base of the stem or from a root.

sucker (*Elec. Eng.*). A time-delay device of the dash-pot type employing a disc immersed in glycerine.

sucker (*Zool.*). A suctorial organ adapted for adhesion or imbibition, as one of the muscular sucking discs on the tentacles of Cephalopods: the suctorial mouth of animals like the Leech and the Lamprey: a newly born Whale: one of a large number of Fishes having a suctorial mouth or other suctorial structure, as the Remora (*Echeneis*), members of the genus *Lepadogaster*, etc.

sucking booster (*Elec. Eng.*). A booster whose function is to overcome voltage drop in a feeder.

sucking stomach (*Zool.*). In many Arthropods, a muscular dilatation of the alimentary canal which can produce imbibition of fluid by the mouth.

su'crase (*Chem.*). *Invertase* (q.v.).

su'crose (*Chem.*). See **cane-sugar.**

suction (*Plast.*). The pull or adhesion exerted by certain plasters on the trowel used to work their surfaces.

suction-cutter dredger (*Civ. Eng.*). A dredger in which rotary blades dislodge the material to be excavated, which is then removed by suction as in a *sand-pump dredger* (q.v.).

suction dredger (*Civ. Eng.*). See **sand-pump dredger.**

suction pressure (*Bot.*). The avidity with which the cell takes in water; it is equivalent to the difference between the osmotic pressure of the cell sap, which tends to bring water into the cell, and the pressure exerted by the elastic cell wall, which tends to force water out of the cell.

suction valve (*Eng.*). See **foot valve.**

Sucto'ria (*Zool.*). A subclass of *Ciliophora* in which only the young forms possess cilia, the adults being sedentary organisms devoid of cilia and capturing their food by means of tentacles.

suctor'ial (*Zool.*). Drawing in: imbibing: tending to adhere by producing a vacuum: pertaining to a sucker.

suctorial mouth-parts (*Zool.*). Tubular mouth-parts adapted for the imbibition of fluid nourishment; found in some Insects and many ectoparasites.

sudam'ina (*Med.*). Whitish vesicles on the skin, due to retention of sweat in the sweat glands.—*sing.* **suda'men.**—*adj.* **sudam'inal.**

suda'tion (*Bot.*). The exudation of a dilute watery solution of various substances from the plant.

Sudbury Series or **Sudbu'rian** (*Geol.*). See **Timiskaming Group.**

su'dor (*Med.*). Sweat or perspiration.

sudorif'erous, sudorip'arous (*Zool.*). Sweat-producing: sweat-carrying.

sudorif'ic (*Med.*). Connected with the secretion of sweat: stimulating the secretion of sweat: a drug which does this.

suede, swād (*Skins*). Skins used for gloves and shoe uppers; made from sheep or lamb skins dressed on the flesh side and finished without glaze.

Suffolk coulter (*Agric. Mach.*). A coulter shaped something like the prow of a boat; used on a drill to make a shallow trench for the seed.

Suffolk latch (*Join.*). A variant of the *Norfolk latch* (q.v.).

Suffolk whites (*Build.*). *Gaults* (q.v.).

suffrutes'cent, suffru'ticose (*Bot.*). Said of a plant in which many of the branches die after flowering, leaving a persistent woody base.

suffuse (*Bot.*). Spread out on the substratum.

sugar (*Chem.*). (1) A water-soluble, crystalline mono- or polysaccharose.—(2) The common term for *sucrose*, or cane-sugar, $C_{12}H_{22}O_{11}$.

sugar-dye (*Chem.*). See **caramel.**

sugar plant (*Bot.*). A plant which forms little or no temporary starch, the carbohydrate formed in photosynthesis remaining as sugar.

sugar soap (*Paint.*). A cleansing or stripping preparation for paint surfaces.

su'gent, suges'cent (*Zool.*). See **suctorial.**

suggestion (*Psycho-an.*). The acceptance by an individual of an idea or attitude based not on perception and reasoning but on an unconscious emotional tie with another person. Used as a method of treatment in psychotherapy, either alone or in conjunction with hypnosis.

sul'cate (*Bot.*). Marked by distinct longitudinal parallel furrows.

sul'culus (*Zool.*). The 'dorsal' siphonoglyph of *Anthozoa.*

sulcus (*Zool.*). A groove or furrow, as one of the grooves on the surface of the cerebrum in Mammals: in *Dinoflagellata*, a longitudinal groove in which a flagellum lies: in *Anthozoa*, the 'ventral' siphonoglyph.

sullage (*Civ. Eng.*). The mud and silt deposited by flowing waters.

Sully Beds (*Geol.*). A series of fossiliferous grey and greenish marls which are found exposed in Somerset and Glamorganshire. They belong to the lower division of the Rhaetic Stage in the Jurassic System.

sulphae'moglobinae'mia, sulphe'moglobine'mia (*Med.*). The presence in the blood of sulphaemoglobin, due to the combination of haemoglobin with hydrogen sulphide absorbed from the intestine. See also **enterogenous cyanosis.**

sulphanil'amide (*Chem.*). See **sulphonamides** (*Prontosil Album*) in Supplement.

sulphanil'ic acid (*Chem.*). $H_2N{\cdot}C_6H_4{\cdot}SO_3H$, *p*-aminobenzene-sulphonic acid; rhombic plates; crystallises with $2H_2O$ sparingly soluble in water.

sulphates (*Chem.*). Salts of sulphuric acid. Produced when the acid acts on certain metals, metallic oxides, hydroxides, and carbonates. The acid is dibasic, forming two salts—normal and acid sulphates.

sulphate of ammonia (*Chem.*). $(NH_4)_2SO_4$. Commercially the most important of the ammonium salts, particularly for use as fertiliser. Produced partly as a by-product of gas-works, coke-ovens, etc., but now largely by direct synthesis from hydrogen and atmospheric nitrogen.

sulphate of iron (*Min.*). See **melanterite.**

sulphate of lead (*Min.*). See **anglesite.**

sulphate of lime (*Min.*). See **gypsum.**

sulphate of strontium (*Min.*). See **celestine.**

sulphating roasting (*Met.*). Roasting carried out under conditions designed to retain a certain amount of sulphur as sulphate.

sulpha'tion (*Elec. Eng.*). The formation of the insoluble white sulphate of lead ($PbSO_4$) in the plates of a lead-acid-type secondary cell, a process which diminishes the efficiency and capacity of the cell.

sulphides (*Chem.*). Salts of hydrosulphuric acid. Many sulphides are formed by direct combination of sulphur with the metal.

sulphide dyestuffs (*Chem.*). Dyestuffs of unknown constitution, containing sulphur, e.g. vidal black, obtained by fusing *p*-aminophenol with sulphur, or fast black B by fusing 1,8-dinitronaphthalene with sulphur.

sulphide toning (*Photog.*). A process of toning photographic prints in which the silver is converted to silver sulphide via silver bromide.

sulphin'ic acids (*Chem.*). Acids containing the monovalent sulphinic acid group $-SO \cdot OH$.

sulphites (*Chem.*). Salts of sulphurous acid. The acid forms two series of salts, acid sulphites or bisulphites and normal sulphites.

sulphite wood pulp (*Paper*). Chipped and crushed wood which by boiling with bisulphite liquor has been reduced to its constituent fibres.

sulphocy'anides (*Chem.*). *Thiocyanates* (q.v.).

sul'phonal (*Chem.*). $(CH_3)_2 \cdot C \cdot (SO_2C_2H_5)_2$, diethylsulphonedimethylmethane; colourless prisms; m p. 126° C.; sparingly soluble in water. It is obtained by the condensation of ethyl mercaptan with acetone and subsequent oxidation with potassium permanganate. Used as a hypnotic.

sulphona'tion (*Chem.*). The process of forming sulphonic acids by the action of concentrated sulphuric acid on aliphatic or aromatic compounds.

sul'phones (*Chem.*). Compounds of the formula $RR':SO_2$. The sulphur is hexavalent.

sulphon'ic acids (*Chem.*). Acids containing the monovalent sulphonic acid group $-SO_2 \cdot OH$.

sul'phosol (*Chem.*). A colloidal solution in concentrated sulphuric acid.

sulphox'ides (*Chem.*). Compounds of the formula $RR':SO$. The sulphur is tetravalent.

sulphur (*Chem.*). A non-metallic element in the sixth group of the periodic system. At. no. 16, at. wt. 32·06, valencies 2, 4, 6, symbol S. Rhombic (α-) sulphur is a lemon-yellow powder; m.p. 112·8° C., sp. gr. 2·07. Monoclinic (β-) sulphur has a deeper colour than the rhombic form; m.p. 119·0° C., sp. gr. 1·96, b.p. 444·6° C. Chemically, sulphur resembles oxygen, and can replace the latter in many compounds, organic and inorganic. It is abundantly and widely distributed in nature, in the free state and combined as sulphides and sulphates. It is manufactured by purifying the native material or by heating pyrites. Sulphur is used in the manufacture of sulphuric acid and carbon disulphide; in the preparation of gunpowder, matches, fireworks, and dyes; as a fungicide, and in medicine; and for vulcanising rubber.

sulphur bacteria (*Bot.*). Bacteria which live in situations where oxygen is scarce or absent, and which act upon compounds containing sulphur, liberating the element.

sulphur cement (*Build.*). A cement made of sulphur and pitch mixed in equal parts; used to fix iron work.

sulphur dioxide (*Chem.*). SO_2. A colourless gas formed when sulphur burns in air. Dissolves in water to give sulphurous acid. See also **sulphur oxides.**

sulphur hydrides (*Chem.*). Four well-defined hydrides—H_2S, H_2S_2, H_2S_3, and H_2S_5.

sulphur oxides (*Chem.*). A series of oxides—SO, S_2O_3, SO_2, SO_3, S_2O_7, and SO_4.

sulphur trioxide (*Chem.*). See **sulphuric anhydride.**

sulphu'reous (*Bot.*). Pale clear yellow.

sul'phuretted hydrogen (*Chem.*). See **hydrogen sulphide.**

sulphu'ric acid (*Chem.*). A fairly strong dibasic acid, H_2SO_4. The concentrated acid is a colourless oily liquid; sp. gr. 1·85, b.p. 338° C.; it dissolves in water with the evolution of heat, and is very corrosive, largely owing to its dehydrating action. It is manufactured from sulphur dioxide, obtained by burning either pyrites or brimstone, by the *contact process* (q.v.) or the *chamber process* (q.v.). It is used extensively in the dyestuffs and explosives industries and as a drying agent in chemical processes.

sulphuric anhydride (*Chem.*). SO_3. Dissolves in water to give sulphuric acid.

sulphuric ether (*Chem.*). Diethyl ether.

sul'phuring (*Pot.*). A glaze defect, crystals or scum appearing on the surface.

sulphu'rous acid (*Chem.*). An aqueous solution of sulphur dioxide, which contains the hypothetical compound H_2SO_3. The corresponding salts, sulphites, are well known.

sumat'ra (*Meteor.*). A south-westerly summer squall, with thunder and lightning, blowing in the Straits of Malacca.

summation (*Physiol.*). The production of an effect by repetition of a causal factor which would be insufficient in a single application; as *summation of contractions*, the production of a state of tetanic contraction by a series of stimuli; *summation of stimuli*, the production of response in an excitable tissue by repetition of subminimal stimuli.

summation metering (*Elec. Eng.*). A system of metering electrical energy in which the consumption of several distinct load circuits is summated and indicated by one instrument.

summation of losses (*Elec. Eng.*). The process of adding together the individual losses, after allowing for any corrections, in order to obtain the guaranteed efficiency of an electrical machine.

summation panel (*Elec. Eng.*). A switchboard panel on which are mounted the instruments for measuring and recording the total output of a number of generators.

summation tone (*Acous.*). One of the combination tones produced when two or more pure tones are subjectively perceived by the ear, or partially rectified through amplitude distortion during reproduction.

summer or summer tree (*Carp.*). A large beam or lintel for the support of dead load only.

summer annual (*Bot.*). A plant which lives for a short period in summer, setting seed at the end of its growth and then dying.

summer egg (*Zool.*). In many fresh-water animals, a thin-shelled rapidly developing egg laid during the warm season. Cf. *winter egg.*

summer-load waterline (*Ship Constr.*). The waterline to which a ship may be loaded in summer. It is indicated in the freeboard markings.

summer masti'tis (*Vet.*). Mastitis of non-lactating cows due to infection by *Corynebacterium pyogenes*; probably transmitted by flies.

summer solstice (*Astron.*). See **solstices.**

summer wood (*Bot.*). Secondary wood formed in summer as secondary thickening comes to an end for the season; the elements of summer wood are often thick walled, and smaller than those of *spring wood* (q.v.). Sometimes, but less accurately, called AUTUMN WOOD.

summit canal (*Hyd. Eng.*). A canal crossing a summit; one, therefore, to which water must be supplied.

sump (*Civ. Eng.*). A small hole dug usually at the lowest part of an excavation to provide a place into which water can drain and from which it can be pumped at intervals to keep the working part of the excavation dry.

sump (*I C Engs.*). See **oil sump.**

sump (*Mining*). The prolongation of a shaft or pit, to provide for the collection of water in a mine.

Sumpner test (*Elec. Eng.*). A back-to-back load test, or regenerative test, on two similar transformers.

Sumpner wattmeter (*Elec. Eng.*). An iron-cored type of dynamometer wattmeter for use on a.c. circuits.

Sun (*Astron*). A star of spectral type G and absolute magnitude 5 0, the chief source of light and heat to the Earth and all the planets in the solar system; it consists of a massive sphere of incandescent gas, with a surface temperature of about 6000° C., and a mass of 2×10^{33} grams.

sun arc (*Cinema.*). An arc lamp of sufficient capacity to imitate the sun in studio or outdoor locations in motion-picture production.

sun pillar (*Meteor.*). A vertical column of light passing through the sun, seen at sunset or sunrise. It is caused by reflection of sunlight by horizontal ice crystals.

sun plant (*Bot.*). A plant tolerant of exposure to much bright light, or needing much light for strong growth.

sunshine recorder (*Meteor.*). The Campbell-Stokes recorder consists of a glass sphere arranged to focus the sun's image on to a bent strip of card, on which the hours are marked. The focused heat burns through the card, and the duration of sunshine is read off from the length of the burnt track.

sunspot (*Astron.*). A marking on the solar surface appearing as a relatively dark centre with less dark surrounding matter; spots occur generally in groups, are relatively short-lived, and with few exceptions are found only in regions of the solar disc between the parallels 30° N. and S. latitude; their frequency shows a marked period of 11 or 12 years; they are known to affect magnetic phenomena on the earth.

sun-spot (*Cinema.*). A large incandescent lamp, provided with a glass filter, to imitate the light from the sun in colour cinematography.

sunstone (*Min.*). See **aventurine feldspar.**

sunstroke (*Med.*). Heat hyperpyrexia. A condition produced by exposure to high atmospheric temperature and characterised by a rapid rise of bodily temperature, convulsions, and coma. See also **insolation.**

sun wheel (*Eng.*). A gear-wheel round which one or more planet wheels or planetary pinions rotate in mesh.

Sunbury Shale (*Geol.*). A marine shale of Lower Mississippian (Waverly) age, which acts as impermeable cover to the oil-bearing Berea Sandstone.

Sundance Series (*Geol.*). Marine Jurassic clays and sands exposed in the Front Range district of Colorado. Similar, though thicker, strata with some limestones occur also in the Big Horn Mts., where the series is 300 ft. thick.

sunk-coak (*Carp.*). The mortise-like recess in one of the mating surfaces of a scarfed joint, into which the *coak* (q.v.) fits.

sunk-face (*Masonry*). A term applied to a stone in whose face a panel is sunk by cutting into the solid material.

sunk fence (*Build.*). See **ha-ha.**

sunk key (*Eng.*). A key which is sunk into key ways in both shaft and hub. See **key.**

super- (Latin *super*, over). A prefix used in the construction of compound terms; e.g. *supersphenoidal*, above the sphenoid bone.

superacid'ity (*Chem.*). The excessive acidity which results from the dissolution of certain usually weak acids in certain non-aqueous solvents.

superaxil'lary (*Bot.*). Developing from above the axil.

supercal'endered paper (*Paper*). Paper which has been given an extra smooth surface by means of *calenders* (q.v.).

supercharger (*I.C. Engs.*). A compressor, commonly of the rotary vane or the centrifugal type, used to supply air or combustible mixture to an I.C. engine at a pressure greater than atmospheric; driven either directly by the engine or by an exhaust gas turbine.

supercharging (*Eng.*). (1) In aero engines, the maintenance of ground-level pressure in the inlet pipe up to the rated altitude by means of a centrifugal or other blower. Necessary for flying at heights at which the air-pressure is low and normal aspiration would be insufficient.—(2) In other I.C. engines, the term is used synonymously with boosting (see **boost**).

supercil'iary (*Zool.*). Pertaining to, or situated near, the eyebrows: above the orbit.

supercompression engine (*Eng.*). An unsupercharged engine of above normal compression ratio, to be run at full throttle only at high altitudes, when the normal power decreases owing to the fall in atmospheric pressure. Below these altitudes the throttle opening is limited by the use of a gate.

supercooled (*Chem.*). Cooled below the normal freezing-point without solidification.

supere'go (*Psycho-an.*). The strong unconscious inhibitory mechanism which criticises the ego and causes it pain and distress when it accepts unworthy impulses from the id. The superego is the main constituent of conscience, and the term was originally used by Freud to mean the development of a moral standard in the child as a result of the resolution of the Oedipus complex. Other authorities claim that the superego is formed at an even earlier stage, by the necessity of giving up the earliest love choices of the id, e.g. the breast. It is influenced in its formation by the parents' moral and ethical standards, much of which are taken over into the child's superego.

superelevation (*Surv.*). The amount by which the outer rail of a railway curve is elevated above the inner rail in order to counteract the effect of the centrifugal force of the moving train. Superelevation is also applied in the construction of highway curves. See also **cant.**

supereroga'tion (*Zool.*). A supplementary process, as the developmental processes associated with regeneration of a part, as opposed to the primary developmental processes involved during the first formation of the part.

superficial (*Zool.*). Pertaining to, or situated at, the surface; as *superficial anatomy*, i.e. surface anatomy.

superficial deposits (*Geol.*). See **drift.**

superfoeta'tion, superfeta'tion (*Med.*). Fertilisation of an ovum in a woman already pregnant, some time after fertilisation of the first ovum.

superheat (*Aero.*). The increase (positive) or decrease of the temperature of the gas in a gas-bag as compared with the temperature of the surrounding air. Similarly, *superpressure.*

superheated steam (*Eng.*). Steam heated at constant pressure out of contact with the water from which it was formed, i.e. at a higher temperature than that corresponding to saturation.

superheterodyne receiver (*Radio*). See **supersonic heterodyne receiver**

superimposed drainage (*Geol.*). A river system unrelated to the geological structure of the area, as it was established on a surface since removed. Cf. *consequent drainage.*

superior. Placed above something else; higher, upper (as the *superior* rectus muscle of the eyeball). —(*Bot.*) Posterior, as applied to the petal of a corolla.—Cf. *inferior.*

superior conjunction (*Astron.*). See **conjunction.**

superior figures (or **letters**) (*Typog.*). Small figures or letters printed above the general level of the line. They generally direct the reader to a footnote (cf. *marks of reference*); also used in mathematical work, etc.; thus: x^2.

superior ovary (*Bot.*). An ovary inserted on the receptacle above the other parts of the flower.

superior radicle (*Bot.*). A radicle which points towards the apex of a fruit.

superlin'gual (*Zool.*). In primitive Insects, a pair of small lobes associated with the hypopharynx.

Supermi'ser (*Eng.*). A combination of air preheater and economiser for boilers; the flue gases pass through annular spaces between the water tubes and the flue tubes surrounded by the air stream.

superna'tant liquid (*Chem.*). The clear liquid above a precipitate which has just settled out.

supernu'merary (*Zool.*). Additional; exceeding the usual number; as *supernumerary digit,* a sixth digit in forms which normally possess only five.

superoctave (*Acous.*). A stop on an organ which sounds two octaves higher than the nominal pitch of the key or pedal which actuates it.

super-panchromatic emulsion (*Photog.*). An emulsion similar to panchromatic emulsions but having a higher speed.

superpar'asite (*Bot., Zool.*). A parasite of the second or third degree; a hyperparasite.

superposed (*Bot.*). Said of a member placed vertically above another member.

superposed circuit (*Elec. Comm.*). An additional circuit added to a normal circuit or circuits, e.g. a phantom on telephone circuits, or direct-current telegraphy on a telephone circuit.

superposed ringing current (*Teleph.*). See under **ringing current.**

superposition (*Elec. Comm.*). The principle of *superposition* provides for the addition of independent currents and voltages at any point in an electrical system, provided that the associated electrical elements are linear with currents or voltages.

superposition image (*Zool.*). The type of image formed in a compound eye by overlapping of the separate images formed by the various facets. Cf. *mosaic image.*

superpressure (*Aero.*). See under **superheat.**

super-regeneration, super-reaction (*Radio*). Reaction in a receiver to a degree that would normally cause self-oscillation. This is prevented by the application of a quenching voltage to the reacting valve, which is thereby intermittently paralysed at the frequency of the quenching voltage, which is made high enough to be inaudible.

super-regeneration (*Zool.*). The formation of an organ a second time by regeneration, without removal: the formation of an organ in multiple form by regenerative processes.

super-regenerative receiver (*Radio*). A receiver employing the principle of super-regeneration.

super-royal (*Paper*). A standard size of printing paper, 20½ × 27½ in.

supersaturation (*Chem.*). A metastable state in which the concentration of a solution or a vapour is greater than that corresponding to saturation.

superson'ic amplification (*Radio*). Amplification at a supersonic frequency, such as that following the frequency changer in a supersonic heterodyne receiver.

supersonic frequency (*Radio*). Any frequency which is above the audible limit, but generally the frequency used for the post-frequency-changer amplification in a supersonic heterodyne receiver, viz. from 100 to 450 kilocycles per second.

supersonic heterodyne receiver (*Radio*). A receiver in which the received signal has the frequency of its carrier wave changed, by means of the heterodyne principle, to some predetermined frequency above the audible limit, after which it is amplified and finally rectified. Also called SUPERHETERODYNE RECEIVER, DOUBLE DETECTION RECEIVER.

superstructure (*Civ. Eng.*). The part of a structure carried upon any main supporting level.

supersynchronous (*Elec. Eng.*). Above synchronism.

supervisory control (*Elec. Eng.*). A method of remote control of electrical plant from a distant centre in which back-indication of the several control operations is given to the control centre.

supina'tion (*Zool.*). In some higher Vertebrates, movement of the hand and forearm by which the palm of the hand is turned upwards and the radius and ulna are brought parallel to one another; cf. *pronation.*—*adj.* **su'pinate.**

supina'tor (*Zool.*). A muscle which effects supination.

su'pine (*Med.*). Lying on one's back: the position of lying on the back.

supplemental (*Zool.*). Additional; extra; supernumerary; as (in some *Foraminifera*) *supplemental skeleton,* a deposit of calcium carbonate outside the primary shell.

supplementary (*Zool.*). Additional; extra; supernumerary.

supplementary lens (*Photog.*). A so-called magnifying lens for temporary attachment in front of a normal camera lens, in order to alter the focal-length. Used, particularly with fixed-focus lenses in box-cameras, to take photographs of near-by objects.

supply. A source of energy.

supply frequency (*Elec. Eng.*). The electrical frequency, in cycles per second, of an a.c. supply.

supply meter (*Elec. Eng.*). An instrument for measuring the total quantity of electrical energy supplied to a consumer during a certain period.

supply pipe (*Civ. Eng.*). See **service pipe.**

supply point (*Elec. Eng.*). A point on an electric power system from which electrical energy may be drawn.

supply-station (*Elec. Eng.*). See **generating station.**

supply terminals (*Elec. Eng.*). The terminals at which connexion may be made to a supply point.

supply voltage (*Elec. Eng.*). The voltage across a pair of supply terminals.

suppos'itory (*Med.*). A conical or cylindrical plug of a medicated mass for insertion into the rectum, vagina, or urethra.

suppressed-carrier system (*Radio*). A system of transmission in which the carrier wave is not radiated but is supplied by an oscillator at the receiving end. It is generally used in conjunction with single side-band working because of the phase distortion which arises when a carrier is inserted between two side-bands.

suppressed-zero instrument (*Elec. Eng.*). An indicating or graphic instrument in which the first scale reading is a considerable fraction of the maximum, instead of being zero.

Also called INFERRED-ZERO INSTRUMENT
SET-UP do.
SET-UP-SCALE do.
SET-UP-ZERO do.

suppression (*Bot.*). Failure to develop; said of a member normally present.

suppression (*Med.*, *Zool.*). Stoppage of discharge, as by obstruction of a duct: absence of some organ or structure normally present.—*adj.* **suppressed.**

suppressor, echo (*Acous.*). See **echo suppressor.**

suppressor grid (*Thermionics*). The grid nearest the anode in a pentode valve. It is maintained at a negative potential with respect to the anode, and prevents secondary electrons emitted therefrom from reaching other electrodes.

suppressor modulation (*Radio*). Modulation effected by varying the potential of the suppressor grid.

suppuration (*Med.*). The softening and liquefaction of inflamed tissue, with the production of pus. —*adj.* **sup'purative.**

su'pra-angular'e (*Zool.*). See **surangulare.**

supra-axil'lary (*Bot*). Arising above an axil.

supraclav'icle, supraclavic'ula (*Zool.*). See **supracleithrum.**

supracleith'rum (*Zool.*). A dorsal bone of the pectoral girdle in Fish.

suprador'sal (*Zool.*). On the back: above the dorsal surface: a dorsal intercalary element of the vertebral column.

supra-epimeron (*Zool.*). In Insects, the upper part of the epimeron when that sclerite is subdivided.

supra-episternum (*Zool.*). In Insects, the upper half of the episternum when that sclerite is subdivided.

supra-neuston (*Ecol.*). Aquatic animals associated with the upper side of the surface film, e.g. Water Skaters.

supraoccip'ital (*Zool.*). A median dorsal cartilage bone of the Vertebrate skull forming the roof of the brain-case posteriorly.

supraor'bital (*Zool.*). In some Vertebrates, a paired lateral membrane bone of the orbital region of the skull.

suprapharyn'geal (*Zool.*). A bone lying above the pharynx in some Fish, formed by the fusion of the pharyngobranchials: situated above the pharynx.

suprare'nal (*Zool.*). Situated above the kidneys.

suprarenal body (or **gland**) (*Zool.*). In higher Vertebrates, one of the endocrine glands lying close to the kidney and pouring into the blood secretions having important effects on the metabolism of the body.

suprarenalec'tomy (*Surg*). Surgical removal of the suprarenal gland.

suprascap'ula (*Zool.*). A dorsal element of the pectoral girdle representing the upper part of the scapula.

suprasegmen'tal structures (*Zool.*). The cerebellum, and, in higher forms, the cerebral cortex, as opposed to the *segmental apparatus* (q.v.).

suprasphe'noid (*Zool.*). In some Fish, a membrane bone dorsal to the sphenoid cartilage and within the cranial wall.

supratem'poral (*Zool.*). In the skull of some Vertebrates, a paired membrane bone occurring lateral to each parietal.

supreth'moid (*Zool.*). In the skull of *Pisces*, an unpaired membrane bone lying between the nasals.

su'ral (*Zool.*). Pertaining to the calf of the leg.

sura'nal (*Zool.*). Above the anus, as the *suranal plate* or pygidium of Insects.

surangular'e (*Zool.*). In some lower Vertebrates, a membrane bone on the outer posterior part of the lower jaw.

sur'base (*Join.*). See **dado rail.**

surbased arch (*Build.*). An arch with a rise that is less than one-half its span.

surcharge (*Civ. Eng.*). A term applied to the earth supported by a retaining wall at a level above the top of the wall.

sur'culose (*Bot.*). Bearing suckers.

sur'culus (*Bot.*). A sucker.

surface activity (*Chem.*). The influence of certain substances on the surface tension of liquids.

surface brightness (*Light.*). See **intrinsic brilliancy.**

surface concentration excess (*Chem.*). The excess concentration (which may be negative) of a solute per unit area in the surface layer of a solution.

surface condenser (*Eng.*). A steam condenser for maintaining a vacuum at the exhaust pipe of a steam-engine or turbine. It consists of a chamber in which cooling water is circulated through tubes, and which is evacuated by an air-pump. See **condenser, condenser tubes.**

surface-contact system (*Elec. Eng.*). A system of electric traction supply employing insulated fixed contacts or studs, placed at intervals between the running rails. The studs are normally 'dead,' but become 'alive' as soon as the electric tractor is over them, by connexion to a conductor running in a closed conduit underneath.

surface friction drag (*Aero.*). That part of the drag represented by the components of the pressures at points on the surface of an aerofoil, resolved tangential to the surface.

surface gauge (*Eng.*). See **scribing block.**

surface grinding machine (*Eng.*). A grinding machine for finishing flat surfaces. It consists of a high-speed abrasive wheel, mounted above a reciprocating or rotating work-table on which flat work is held, often by a *magnetic chuck* (q.v.).

surface-measure (*Timber*). A method of measuring timber in quantity, by the area of one face, irrespective of thickness. Cf. *board-measure.*

surface noise (*Acous.*). The characteristic noise accompanying the sound reproduced from records; it is caused by the granular nature of the material and the graphite which is brushed on the original wax, before electroplating, to make the surface conducting.

surface of operation (*Masonry*). A surface which is dressed to a plane as a reference from which the rest of the work can be set out and executed.

surface plate (*Eng.*). A rigid cast-iron plate whose surface is accurately scraped flat; used to test the flatness of other surfaces or to provide a truly plane datum surface in marking off work for machining.

surface tension (*Phys.*). A property possessed by liquid surfaces whereby they appear to be covered by a thin elastic membrane in a state of tension, the surface tension being measured by the force acting normally across unit length in the surface. The phenomenon is due to unbalanced molecular cohesive forces near the surface. See **capillarity, bubbles (pressure in).**

surface wiring (*Elec. Eng.*). A wiring installation in which the insulated conductors are attached to the surfaces of a building, either enclosed in conduit or secured by cleats.

surge (*Elec. Eng.*). A voltage transient manifested along a transmission line as a steep-fronted travelling wave. Caused by switching, insulation failure, or a lightning stroke.

surge absorber (*Elec. Eng.*). A circuit device which diverts, and may partly dissipate, the energy of a surge, thus preventing possible damage to apparatus or machines connected to a transmission line.

surge crest ammeter (*Elec. Eng.*). An instrument for recording a surge on a transmission line by measurement of the residual magnetism in a piece of magnetic material which has been magnetised by the surge current.

surge generator (*Elec. Eng.*). An apparatus for producing impulse voltages. It usually consists of an arrangement of condensers and resistances; the condensers are charged and then discharged through resistors. Also called IMPULSE GENERATOR.

surge impedance (*Elec. Comm.*). The ratio of voltage to current in an advancing wave along a transmission line. Substantially the same as *characteristic impedance* (q.v.).

surge point (*I.C. Engs.*). Of a centrifugal supercharger, the value of the mass air-flow at which, during throttling of the delivery, surging occurs. See **surging** (1).

surging (*I.C. Engs.*). (1) In centrifugal superchargers, an abrupt decrease or severe fluctuation of the delivery pressure as the weight of air delivered is reduced. See **surge point.**—(2) In valve springs, the coincidence of some harmonic of the cam lift curve with the spring's natural frequency of vibration, leading to irregular action and failure.

surmounted (*Build.*). A term applied to a vault springing from points below its centre and having the form of a circular arc above its centre.

surra (*Vet.*). A disease of horses, mules, and camels, due to infection by *Trypanosoma evansi.*

surro'sion (*Chem.*). An increase of weight produced by corrosion.

surround (*Acous.*). The flexible support of the large conical diaphragm in open-diaphragm electrodynamic loudspeakers. It can contribute, by resonance, to the radiation of sound-power of very low frequency.

surveying. The art of making such measurements of the relative positions of points on the surface of the earth as will enable natural and artificial features to be depicted in their true horizontal and vertical relationship by drawing them to scale on paper.

See **plane—** **geodetic—**

susceptance (*Elec. Eng.*). The ratio of the current flowing to the e.m.f. applied in the case of a purely inductive load in an a.c. circuit. The reciprocal of reactance.

susceptibility (*Bot.*). The whole of the properties of a plant which dispose it to suffer from the attacks of a parasite.

susceptibility (*Elec. Eng.*). The ratio of the intensity of magnetisation to the magnetic field strength in a magnetic circuit.

susceptibility curves (*Elec. Eng.*). Curves of susceptibility plotted to a base of magnetic field strength.

susceptor phase advancer (*Elec. Eng.*). A phase advancer which injects into the secondary circuit of an induction motor an e.m.f. which is a function of the open-circuit secondary e.m.f. Cf. *expedor phase advancer.*

suspended (*Bot.*). Said of an ovule which hangs from the top of the ovary.

suspended frame weir (*Civ. Eng.*). A form of frame weir in which the iron frames, in times of flood, are capable of being raised from the river and supported by an overhead bridge.

suspended scaffold (*Build.*). A form of scaffold used in the construction, repair, cleaning, etc., of buildings. It consists of working platforms, on light frameworks, slung from fixed higher points in the building.

suspended span (*Civ. Eng.*). The middle length of a bridge span connecting, and carried upon, the cantilever arms, in cases where these are not built out until they meet. See **cantilever bridge.**

suspension (*Chem.*). A system in which denser particles, which are at least microscopically visible, are distributed throughout a less dense liquid or gas, settling being hindered either by the viscosity of the fluid or the impacts of its molecules on the particles.

suspension bridge (*Civ. Eng.*). A bridge suspended from a flexible connexion between the two sides.

suspension cable anchor (*Civ. Eng.*). The anchorage, which may have various forms, of the cables supporting the bridge platform of a suspension bridge.

suspension insulator (*Elec. Eng.*). A freely hanging insulator made of units connected in series, by which an overhead line is suspended from the arm of a transmission-line tower; it cannot withstand any other force than a tension.

suspension push (*Illum.*). See **pendant push.**

suspension spring (*Horol.*). The thin ribbon of spring steel which supports a pendulum.

suspension switch (*Elec. Eng.*). See **pendant switch.**

suspen'soid (*Chem.*). See **lyophobic colloid.**

suspen'sor (*Bot.*). (1) A hypha which forms the stalk of a gametangium in the *Zygomycetes.*—(2) A small mass of cells which forces the developing embryo of a higher plant down into nutritive tissue.

suspenso'rium (*Zool.*). In Vertebrates, the apparatus by which the jaws are attached to the cranium.

suspensory (*Zool.*). Pertaining to the suspensorium: serving for support or suspension.

Sussex garden-wall bond (*Build.*). The form of *garden-wall bond* (q.v.) in which one header and three stretchers are laid in each course throughout.

sustentac'ular (*Zool.*). Supporting; as the *sustentacular cells* surrounding the gustatory cells in a taste-bud.

sus'tentator (*Zool.*). The cremaster of *Lepidoptera.*

Sutton Stone (*Geol.*). Massive white limestone, conglomeratic at the base, deposited round islands of Carboniferous Limestone which rose above the waters of the Liassic Sea in the South Wales district. See also **Southerndown Beds.**

su'tural bones (*Zool.*). Small supernumerary bones occurring in the sutures between the other bones of the skull in some *Primates.* Also called WORMIAN BONES.

su'ture (*Bot.*). (1) The line of union between two members of a whorl or the united edges of one member.—(2) A line of weakness along which dehiscence may occur.—(*Zool.*) A line of junction of two structures, as the line of junction of adjacent chambers of a Nautiloid shell: a synarthrosis or immovable articulation between bones, as between the bones of the cranium.—*adj.* **su'tural.**

swab (*Foundry*). See **bosh.**

swab (*Med.*). (1) Any small mass of cotton-wool or gauze used for mopping up blood or discharges, or for applying antiseptics to the body, or for cleansing surfaces (e.g. the lips, the mouth).—(2) A specimen of a morbid secretion taken on a swab (attached to a wire) for bacteriological examination.

swallow-tail (*Carp., Join.*). A *dovetail* (q.v.).

Swamm'erdam's glands (*Zool.*). See **calcigerous glands.**

swamp fever (*Vet.*). See **anaemia (infectious).**

swamping resistance (*Elec. Eng.*). A high resistance connected in series with the coil of a voltmeter; made from material having a negligible temperature coefficient, so as effectively to 'swamp' the variation with temperature of the resistance of the copper coil.

swan-neck (*Join.*). The bend formed in a hand-rail when a knee and a ramp are joined together without any intermediate straight length.

swan-neck insulator (*Elec. Eng.*). A pin-type insulator with a bent pin, arranged so as to bring the insulator into approximately the same horizontal plane as that of the support.

swansdown (*Textiles*). A cotton fabric of the fustian type, bleached and with a raised surface, or piece dyed; used for box linings, etc.

swansdown twill (*Weaving*). See **crow twill.**

swarf (*Acous.*). In gramophone-disc manufacture, the thin thread of waste wax which is removed from the surface of the wax blank when the original recording is made.

swarf (*Eng.*). Metal chips and turnings removed by cutting tools during machining operations.

swarm (*Zool.*). A large number of small animals in movement together; especially a number of Bees emigrating from one colony to establish another under the guidance of a queen: (of Bees) to emigrate in this fashion.

swarm cell, swarm spore (*Bot.*). See **zoospore.**

swarm sporangium (*Bot.*). See **zoosporangium.**

swarm spore (*Zool.*). A ciliated planula larva. See **zoospore.**

swash bank (*Hyd. Eng.*). The upper part of the slope of a sea embankment. See **footing, outburst bank.**

swash letters (*Typog.*). Ornamental italic letters with tails and flourishes, such as 𝒜, ℬ, etc. They should be used only at the beginning or end of a word.

swash plate (*Eng.*). A circular plate mounted obliquely on a shaft; sometimes used in conjunction with working cylinders mounted axially concentric with the shaft, as a substitute for an engine or pump crank mechanism.

sway rod (*Struct.*). A member inserted in a structural framework to resist wind forces.

S.W.D. (*Civ. Eng.*). Abbrev. for *stoneware drain.*

sweated joint (*Elec. Eng.*). A joint made by sweating.

sweating (*Build.*). A term applied to a surface showing traces of moisture due either to formation of condensate or to water having got through a porous material of which the surface is part.

sweating (*Eng.*). The operation of soldering pieces together by 'tinning' the surfaces and heating them while pressed into contact.

sweepback (*Aero.*). The angle at which the main planes of an aeroplane are set back relative to the longitudinal axis of the machine; it controls the longitudinal stability in flight.

sweep circuit (*Cathode Ray Tubes*). A circuit which supplies the deflecting voltage to one pair of plates or coils of a cathode ray oscillograph, the other pair being connected to the source of current or voltage under examination. A typical example is a linear time base.

sweep-saw (*Tools*). A thin-bladed saw which is held taut in a special frame and may be used for making curved cuts. Also called TURNING SAW.

sweet wort (*Brew.*). See **wort.**

swell (*Acous.*). One of the main sections of a pipe organ, in addition to the *great*, each having a separate manual. So called because the loudness of the stops on the swell manual can be varied by the foot depression of the *swell pedal* (q.v.), which operates, either directly or remotely, the shutters filling the opening of the chamber containing the swell pipes.

swell (*Weaving*). A spring-controlled device at the back of a shuttle box on a loom; it resists the entry of the shuttle and holds it in position when in the box.

swell pedal (*Acous.*). The foot-operated lever for regulating the loudness of stops drawn on the swell manual. In cinema organs, where the ranks are divided between two chambers and can be drawn on any manual or pedals, the shutters of each chamber are operated by a balanced swell pedal. See **grand swell.**

swelling (*Arch.*). The slight bulge given to the profile of a column near the middle of its length, to correct for the apparent concavity which it would have if it were a straight taper.

S.W.G. (*Eng.*). Abbrev. for *Standard Wire Gauge (British).*

swifts or **cylinders** (*Textiles*). (1) The large rollers in a set of woollen carding engines which, working in conjunction with the workers and strippers, help to scribble the wool.—(2) Light revolving frames of wood or metal which carry the hanks during unwinding.

swim-bladder (*Zool.*). See **air-bladder.**

swimmerets (*Zool.*). In some *Crustacea*, paired biramous abdominal appendages used in part for swimming.

swimming bell (*Zool.*). See **nectocalyx.**

swimming funnel (*Zool.*). In dibranchiate *Cephalopoda*, the funnel-shaped tube through which water is forcibly expelled from the mantle-cavity, producing a jerky backward movement of the animal.

swimming ovaries (*Zool.*). Clumps of ripe ova floating freely in the fluid of the body-cavity, as in *Acanthocephala.*

swimming plate (*Zool.*). See **ctene.**

Swinburne test (*Elec. Eng.*). An indirect test applied to shunt and compound d.c. motors, for determining the load losses.

swine erysipelas (*Vet.*). A septicaemia of swine due to *Erysipelothrix rhusiopathiae.*

swine fever (*Vet.*). A contagious disease of swine due to infection by a filterable virus.

swine paratyphoid (*Vet.*). See **paratyphoid (swine).**

swine plague (*Vet.*). A contagious haemorrhagic septicaemia of swine due to infection by *Pasteurella suiseptica.*

swine pox (*Vet.*). An epidemic eruptive disease of the skin and mucous membranes of swine due to infection by a filterable virus.

swing (*Elec. Comm.*). The extreme excursion from the positive peak to the negative peak in an alternating voltage or current wave-form.

swing (*Radio*). The angle, expressed as plus or minus half the excursion or spread, over which the dial of the goniometer or rotating aerial must be swung in order to estimate the setting for reading a bearing.

swing back (*Photog.*). The back of a camera which can tilt upwards or side-ways, or both, so that distortion of objects (such as the vertical lines of buildings) may be minimised, or objects at different distances may be brought into focus.

swing bridge (*Struct.*). A type of movable bridge which is capable of swinging through a quarter of a circle, about a vertical pivot, to allow of the passage of a vessel.

swing door (*Build.*). A door which swings freely about special hinges, so that it can be pushed (or pulled) open from both sides.

swing front (*Photog.*). The provision for tilting the front of a camera, with the lens, so that distortion of an object due to its receding along the axis can be minimised.

swinger (*Acous.*). A gramophone record which has its centre hole slightly eccentric with respect to the helical track, resulting in pitch variations during reproduction.

swinging post (*Build.*). See **hingeing post.**

Swiss lapiz (*Min.*). A fraudulent imitation of lapiz lazuli, obtained by staining pale-coloured jasper or ironstone with ferrocyanide. Also known as GERMAN LAPIZ.

Swiss (or **schiffle** or **shuttle**) **machine,** shif′le (*Textiles*). A type of embroidery machine in which the shuttles are placed diagonally.

Swiss (or **Thury**) **screw-thread,** tü-rē (*Eng.*). A metric thread having a profile angle of 47½°, the crest of the thread being formed by cutting off ⅕ of the thread height, and rounding.

switch (*Eng.*). A mechanical device for opening and closing an electric circuit: a mechanism for shifting a moving body in another direction: a device for moving a small section of a railway track so that rolling stock may pass from one line of track to another.

switch (*Teleph.*).
See **gravity—** **single switch call**
selector— **double switch call**
sequence— **uniselector.**

switchback (*Rail.*). An arrangement of track layout whereby a train making a steep ascent to the upper part of a valley runs into a siding, from which it passes out along another line at an acute angle to the first. Also called a BACK SHUNT.

switch-base (*Elec. Eng.*). The insulating base on which a switch is mounted.

switch blades (*Civ. Eng.*). *Points* (q.v.).

switchboard (*Elec. Eng., etc.*). An assembly of switch-panels.

switchboard (*Teleph.*). The general name for the whole of the positions in a telephone exchange where the operators make the temporary connexions between subscribers.
See **auto-manual—** **manual—**

switchboard instrument (*Elec. Eng.*). An electric measuring instrument arranged for mounting on a switchboard. See **sector-pattern instrument.**

switchboard panel (*Elec. Eng., etc.*). See **panel.**

switch-box (*Elec. Eng.*). An enclosure housing one or more switches operated by means of an external handle.

switch-desk (*Elec. Eng.*). A control desk on which a number of miniature switches are mounted, each of which serves to initiate some control operation.

switch-fuse (*Elec. Eng.*). A knife-switch carrying a fuse in each blade.

switchgear (*Elec. Eng.*). The generic name for that class of electrical apparatus whose sole function is to open and close electric circuits.

switchgear pillar (*Elec. Eng.*). See **pillar.**

switch hook (*Teleph.*). The device on which the telephone receiver is hung when not in use, and which at the same time opens the subscriber's loop from the exchange. Also called GRAVITY SWITCH.

switch-panel (*Elec. Eng.*). An insulating panel on which a switch is mounted.

switch plant (*Bot.*). A plant with small leaves, often reduced to non-functional scales, and long thin stems and branches with photosynthetic tissue in their cortical regions.

switch-plate (*Elec. Eng.*). A plate for covering one or more flush switches. Also called FLUSH-PLATE.

switch-starter (*Elec. Eng.*). A combination of knife-switch and starting regulator, in which the circuit is closed and the resistance progressively cut out in one continuous movement.

switching (*Elec. Eng., etc.*). The function exercised by a switch.—TELEPHONE SWITCHING, the interconnexion of telephone circuits and exchanges.

switching-off (*Elec. Eng., etc.*). The opening of an electric circuit: the disconnecting of an electrical machine from the supply.

switching-on (*Elec. Eng., etc.*). The closing of an electric circuit: the connecting of an electrical machine to the supply.

swivel-pin (*Automobiles*). See **king-pin.**

swivel weaving (*Weaving*). A method of weaving figures in a fabric by means of small shuttles, which are located above the reed and contain the extra material required.

sy′con grade (*Zool.*). The second type of canal system in *Porifera*; the flagellated chambers open in radial fashion from a central paragaster, which itself opens to the exterior by a single osculum.

syco′nium, syco′nus (*Bot.*). The fruit of the fig, consisting mainly of the much enlarged receptacle of the inflorescence.

syco′sis barbae (*Med.*). Inflammation of the hair follicles of the beard region, due to infection with the staphylococcus.

Sydenham's chorea (*Med.*). See **chorea.**

sy′enite (*Geol.*). A coarse-grained igneous rock of Intermediate composition, composed essentially of alkali-feldspar to the extent of at least two-thirds of the total, with a variable content of mafic minerals, of which common hornblende is characteristic.
See also **nepheline—** **potash—** **soda—**

syenite-porphyry (*Geol.*). An igneous rock of syenitic composition and medium grain-size, commonly occurring in minor intrusions; it consists of phenocrysts of feldspar and/or coloured silicates set in a microcrystalline groundmass. See also **microsyenite.**

sy′enodi′orite (*Geol.*). An alternative name for *monzonite* (q.v.), a rock type sharing the characters of syenite and diorite.

syeno-gabbro (*Geol.*). A term introduced independently by J. W. Evans and A. Johannsen for coarse-grained igneous rocks of Intermediate composition and intermediate between syenite and diorite in regard to feldspar content.

Sykes microphone (*Acous.*). A microphone in which a mass-controlled limp coil is allowed to move axially in the gap of a pot-magnet on the application of a sound-wave, thus generating an electromotive force depending on the excess-pressure wave-form.

syllable articulation (*Acous.*). See **articulation.**

sylphon bellows (*Eng.*). A thin-walled cylindrical metal bellows consisting of a number of elements arranged concertina-fashion, responding to external or internal fluid pressure; used in pressure-governing systems. See also **bellows*.**

Sylvania Sandstone (*Geol.*). An aeolian sandstone, used in the manufacture of glass, occurring in the Monroan of the eastern U.S.A.

syl′vanite (*Min.*). Telluride of gold and silver, which crystallises in the monoclinic system and is usually associated with igneous rocks and, in veins, with native gold. It is used as an ore of gold. See also **graphic tellurium.**

Syl′vedure (*Build.*). Trade-name for a timber-preserving agent.

sylves′tral (*Bot.*). Growing in woods and shady hedges.

sylves′trene (*Chem.*). △-1,8-*m*-Terpadiene, the chief constituent of Swedish and Russian turpentine. It is dextro-rotatory, b.p. 175° C.

Syl′vian aqueduct (*Zool.*). In Vertebrates, the cavity of the mesencephalon.

Sylvian fissure (*Zool.*). In Mammals, a deep lateral fissure of the cerebrum.

syl′vinite (*Min.*). A general name for mixtures of the two salts sylvite and halite, the latter predominating, occurring at Stassfurt and in Alsace.

syl′vite (*Min.*). Chloride of potassium, which crystallises in the cubic system. It occurs as a sublimation product near volcanoes, and is a source of potash compounds used as fertilisers.

sym-. See **syn-.**

symbio′sis (*Biol.*). An internal, mutually beneficial partnership between two organisms (*symbionts*), usually of a physiological nature.—*adj.* **symbiot′ic.**

symbleph'aron (*Med.*). Adhesion of the eyelid to the globe of the eye.

symbol (*Chem.*). See **chemical symbol.**

symbolic method (*Elec. Eng.*). A powerful method of a.c. circuit analysis utilising the vector operator $j=\sqrt{-1}$, a multiplier signifying rotation of a vector through a right-angle in the positive direction.

Symbran'chii (*Zool.*). A small order of eel-like *Neopterygii*, lacking scales and paired fins; found in rivers and swamps of tropical Asia, Australasia, and South America.

symmetrical (*Bot.*). See **actinomorphic.**

symmetrical components (*Elec. Eng.*). A term applied to a method of calculating short-circuit currents in a.c. systems, making use of symmetrical phase-sequence components of the currents and voltage.

symmetrical grading (*Teleph.*). Grading in which all groups of selectors are equally favoured in seeking outlets.

symmetrical short-circuit (*Elec. Eng.*). An a.c. short-circuit in which each phase carries the same current.

symmetrical winding (*Elec. Eng.*). A term applied to an armature winding which fulfils certain conditions of electrical symmetry.

symmetry (*Crystal.*). The quality possessed by crystalline substances by virtue of which they exhibit a repetitive arrangement of similar faces. This is a result of their peculiar internal atomic structure, and the feature is used as a basis of crystal classification.

symmetry (*Zool.*). (1) The method of arrangement of the constituent parts of the animal body; see **radial symmetry, bilateral symmetry, biradial symmetry, asymmetry.**—(2) In higher animals, the disposition of such organs as show bilateral or radial symmetry.

Symons's earth thermometer (*Meteor.*). See **earth thermometer.**

sympathec'tomy, sympatheticec'tomy (*Surg.*). Excision or cutting of a part of a sympathetic nerve.

sympathetic image (*Photog.*). An image formed by rendering insoluble gelatine which has penetrated into a support of unsized paper.

sympathetic nervous system (*Zool.*). In Invertebrates, part of the visceral nervous system supplying the alimentary canal: in Vertebrates, a system of motor nerve-fibres supplying the smooth muscles and glands of the body, and originating from the spinal cord in the cervical, thoracic, and lumbar regions. Cf. *parasympathetic system.*

sympathetic reaction (*Chem.*). See **induced reaction.**

Sympet'alae (*Bot.*). A large subdivision of Dicotyledons in which the corollas consist of united petals.

sympet'alous (*Bot.*). Said of a corolla composed of a number of united petals; gamopetalous.

Sym'phala (*Zool.*). An order of small *Myriapoda* having twenty-five trunk somites and twelve pairs of legs; the head bears a pair of uniflagellate antennae, a pair of two-jointed mandibles, two pairs of maxillae, and a labium; the genital opening is anterior; small active animals feeding on insects.

sym'phile (*Zool.*). In a community of social Insects, especially Ants or Termites, a true guest species which is fed and reared by the members of the community.

symphysiot'omy, symphyseot'omy (*Surg.*). The operation of cutting through the pubic joint to facilitate the birth of a child.

sym'physis (*Zool.*). Union of bones in the middle line of the body, by fusion, ligament, or cartilage, as the mandibular symphysis, the pubic symphysis: growing together or coalescence of parts, as acrodont teeth with the jaw: the point of junction of two structures: chiasma: commissure.—*adj.* **symphys'ial.**

sym'plast (*Cyt.*). A multinucleate cell formed by fragmentation of the nucleus within a single energid.

symplec'tic (*Zool.*). In some Fish, a bone supporting the quadrate, formed by the ossification of the lower part of the hyomandibular cartilage.

sym'podite (*Zool.*). See **protopodite.**

sympo'dium (*Bot.*). A branch system in which the main axis ceases to elongate after a time, and one or more lateral branches grow on; these cease to grow and give laterals which repeat the process.

symptom (*Med.*). Evidence of disease or disorder as experienced by the patient (e.g. pain, weakness, dizziness): any abnormal sensation or emotional expression or thought accompanying disease or disorder of the body or the mind: less accurately, any objective evidence of disease or bodily disorder.

symptomatol'ogy (*Med.*). The study of symptoms: a discourse or treatise on symptoms: the branch of medical science which treats of the symptoms of disease.

syn-, sym- (Greek *syn*, with). A prefix used in the construction of compound terms; e.g. *syndactyl*, having fused digits; *syngamy*, fusion of gametes.

syn-aldoximes (*Chem.*). The stereo-isomeric forms of aldoximes in which the H and OH groups are on the same side of the plane of the double bond.

synan'drium (*Bot.*). A mass of united anthers.

synan'drous (*Bot.*). Having several united stamens.

synan'gium (*Bot.*). A group of sporangia united side by side.

synangium (*Zool.*). An arterial trunk from which several arteries arise, as the terminal portion of the truncus arteriosus in lower Vertebrates.—*adj.* **synan'gial.**

synap'osemat'ic (*Zool.*). Said of a form of protective mimicry in which there is resemblance to a powerful or dangerous species.

synapse' (*Zool.*). The mode of connexion of one nerve-cell with another by the interlacing of the terminal arborisations of their processes, or by the embracing of the cell body by the processes of another cell.

synap'sid (*Zool.*). Said of skulls having a single fossa only. Cf. *diapsid.*

synap'sis (*Cyt.*). Syndesis.

synap'tene (*Cyt.*). See **zygotene.**

synap'tic (*Zool.*). Pertaining to, or situated at, a *synapse* (q.v.).

synaptic mates (*Cyt.*). The pairs of homologous chromosomes which form a close association in synapsis.

synaptic'ula (*Zool.*). Transverse rod-like connecting structures, as skeletal rods connecting gill-bars in *Amphioxus* or septa in Corals.—*sing.* **synapticulum.**

Synap'tida (*Zool.*). An order of *Holothuroidea*, having pinnate buccal tube-feet without ampullae but with retractor muscles; there are no tube-feet on the trunk; respiratory trees are lacking; the madreporite is internal; burrowing forms.

synarthro'sis (*Zool.*). An immovable articulation, especially an immovable junction between bones. Cf. *amphiarthrosis, diarthrosis.*

Syncar'ida (*Zool.*). A division of *Crustacea* in which there are six abdominal somites and the thoracic limbs have a two-jointed protopodite; a carapace is lacking, the first thoracic somite is fused with the head and the protopodite of the antenna is two-jointed.

syn'carp (*Bot.*). A multiple fleshy fruit.

syncar'pous (*Bot.*). Said of a gynaeceum consisting of two or more united carpels.

syncar'yon (*Biol.*). See **synkaryon.**

syncer'ebrum (*Zool.*). In *Arthropoda*, a cerebral ganglionic mass formed by the fusion of one or more of the ventral ganglia with the true primary cerebron consisting of supraoesophageal ganglia only.

synchondro'sis (*Zool.*). Connexion of two bones by cartilage, usually with little possibility of relative movement.

synchromesh gear (*Automobiles*). A gear in which the speeds of the driving and of the driven members which it is desired to couple are first automatically synchronised by small *cone clutches* (q.v.) before engagement of the dogs or splines, thus avoiding shock and noise in gear-changing.

synchronisation (*Cinema.*). Linear adjustment of sound-track and mute in cutting rush-prints; also of the negatives, when the separate prints are required to be reproduced together, the reproduced sound fitting exactly with the accompanying motion pictures.—Colloquially abbreviated to SYNC, SINK.—*v.* **synchronise.**

synchronisation (*Television*). Adjustment of the line and frame frequencies in a receiver so as to coincide with those at the transmitter, and the keeping of them so adjusted.

synchronisation of oscillators (*Radio*). A phenomenon which occurs when two oscillators, having nearly equal frequencies, are coupled together. When the degree of coupling reaches a certain point, the two suddenly pull into step.

synchronising (*Elec. Eng.*). The operation of bringing a machine into synchronism with an a.c. supply.

synchronising gear (*Aero.*). A gear to control the firing mechanism of a gun, synchronising it with the rotation of the airscrew, so that the bullets may pass through the disc of revolution without meeting the blades.

synchronising impulse (*Television*). An impulse transmitted at the beginning and/or end of each frame and scanning line, to assist in synchronisation.

synchronising modulation (*Television*). The range of modulation depth reserved for the synchronising impulses, as distinct from that for the picture signal.

synchronising power (*Elec. Eng.*). The power developed in a synchronous machine that keeps it in synchronism with the a.c. supply system to which it is connected.

synchronising torque (*Elec. Eng.*). The torque which, at the synchronous speed, develops the power that keeps a synchronous machine in synchronism with the a.c. supply system to which it is connected.

synchronising valve (*Television*). A valve used for injecting the synchronising impulses into a time-base circuit.

synchronising wheel (*Television*). A rotating wheel, having a large moment of inertia, used for maintaining synchronism over the individual cycles of the frame and line frequency oscillators.

synchronism (*Elec. Eng.*). Two a.c. machines are said to be *in synchronism* when their respective speeds of rotation are such as to make their electrical frequencies identical.

synchronous (*Elec. Eng.*). Exhibiting the characteristic of synchronism.

synchronous-asynchronous motor (*Elec. Eng.*). A slip-ring type induction-motor whose rotor is fed from a d.c. exciter coupled to it. The machine operates asynchronously during starting-up, and runs on load as a synchronous motor.

synchronous booster (*Elec. Eng.*). An a.c. generator coupled to a synchronous convertor and having its armature connected in series with that of the convertor.

synchronous camera (*Cinema.*). A motion-picture camera which is driven by a synchronous motor. In one sound-film system all such cameras, including sound-cameras, are switched on to the normal a.c. mains. In another sound-film system they are switched to special mains excited by a generator; as this generator is started from rest, it brings all cameras up to their synchronous speed, while keeping them interlocked.

synchronous capacitor (*Elec. Eng.*). A preferable name for *synchronous condenser.*

synchronous capacity (*Elec. Eng.*). The synchronising power of an interconnector linking two a.c. power systems. It is defined as the change of kilowatts transmitted over the interconnector per radian change of angular displacement of the voltages of the two systems.

synchronous carrier system (*Radio*). Simultaneous broadcasting by two or more transmitters having the same carrier frequency, the various drive circuits being interlocked so as to avoid heterodyne beats between them.

synchronous condenser (*Elec. Eng.*). A lightly loaded synchronous motor supplying a leading current for power-factor correction.

synchronous convertor (*Elec. Eng.*). A synchronous machine for converting polyphase alternating current to direct current. It comprises a double-purpose armature, rotating within a salient-pole direct-current field system. More generally known as a ROTARY CONVERTOR.

synchronous generator (*Elec. Eng.*). A type of a.c. generator, driven at a constant speed corresponding to the particular frequency of the electrical supply required from it.

synchronous impedance (*Elec. Eng.*). The ratio of the open-circuit e.m.f. to the short-circuit current of a synchronous machine, both values having reference to the same field excitation.

synchronous induction motor (*Elec. Eng.*). An induction motor in which a direct current is passed into the rotor winding after it has run up to speed, so that, after starting as an induction motor (with a high starting torque), it runs as a synchronous motor.

synchronous machine (*Elec. Eng.*). An a.c. machine whose electrical frequency is independent of the load.

synchronous motor (*Elec. Eng.*). A type of a.c. motor whose speed of rotation remains fixed, irrespective of its mechanical output.

synchronous phase-modifier (*Elec. Eng.*). A large synchronous machine used solely for varying the power factor at the receiving end of a transmission line, in order to maintain the voltage constant under all conditions of loading.

synchronous reactance (*Elec. Eng.*). The vector difference between the synchronous impedance and the effective armature resistance of a synchronous machine.

synchronous spark gap (*Radio*). A *rotary spark gap* (q.v.) driven by a synchronous motor running from the same supply as that for the transformer furnishing the high voltage. Used in some forms of spark systems.

synchronous watt (*Elec. Eng.*). A unit of torque sometimes used in connexion with a.c. machines. It is defined as the torque which, at the synchronous speed of the machine, would develop a power of one watt.

syn'chroscope (*Elec. Eng.*). An instrument indicating the difference in frequency between two a.c. supplies.

synchy'sis (*Med.*). Abnormal softening and fluidity of the vitreous body of the eye.

syn'cline (*Geol.*). A flexure found in sedimentary rocks, the form of which is concave downwards.

sync'litism (*Med.*). The compensatory difference in the rates of descent of the anterior and posterior portions of the presenting foetal part in the pelvis during labour.

syncope, sing'kō-pe (*Med.*). A fainting attack or sudden loss of consciousness due to sudden anaemia of the brain, as a result of an unstable nervous system or of heart failure.

syncot'ylous (*Bot.*). Said of a seedling having united cotyledons.

syncot'yly (*Bot.*). The union of cotyledons.

syncra'niate (*Zool.*). Having vertebral elements fused with the skull.

syncrante'rian (*Zool.*). Having the teeth in a continuous row, with no gap between anterior and posterior sets, as some Snakes. Cf. *diacranteric*.

syncryp'tic (*Zool.*). Showing superficial resemblance through protective mimicry of surrounding objects, without any more fundamental relationship.

syncy'tium (*Zool.*). A multinucleate cell: a tissue complex in which there are many nuclei but no distinguishable cell walls, arising from division or concrescence of cells.—*adj.* **syncy'tial.**

syndac'tyl (*Zool.*). Showing fusion of two or more digits, as some Birds.—*n.* **syndac'tylism.**

syn'desis (*Cyt.*). In meiotic nuclear division, fusion of homologous chromosomes.

syndesmo'sis (*Zool.*). Connexion of two bones by a ligament, usually with little possibility of relative movement.

syn-diazo compounds (*Chem.*). The stereoisomeric forms of diazo compounds in which the groups attached to the nitrogen atoms are on the same side of the plane of the double bond.

syn'drome (*Med.*). A concurrence of several symptoms or signs in a disease which are characteristic of it: a set of concurrent symptoms or signs.

syne'chia (*Med.*). A morbid adhesion of the iris of the eye to the cornea or to the lens.

synech'thran (*Zool.*). In a community of social Insects (especially Ants or Termites), a scavenging or predatory species living within the community and arousing marked hostility.

syn'ecology (*Bot.*). The study of plant communities.

syn'ema (*Bot.*). A group of united filaments when the stamens in a flower are monadelphous.

Synentog'nathi (*Zool.*). An order of *Neopterygii* having a distinct lateral line, median fins far back, lower pharyngeals united into a single bone; some forms have the jaws elongated into a beak; mainly marine forms. Skippers, Gar-fishes, Needle-fishes, Half-beaks, Flying Fishes.

syner'esis (*Chem.*). The spontaneous expulsion of liquid from a gel.

syner'gic, synerget'ic (*Zool.*). Working together; said of muscles which co-operate to produce a particular kind of movement.

synergi'dae, syn'ergids (*Bot.*). Two naked cells which lie in the embryo sac at the end toward the micropyle, and appear to play some part in guiding the tip of the pollen tube towards the egg-nucleus.

syngam'eon (*Zool.*). A category of individuals based on the type of reproduction.

syngami'asis (*Vet.*). Infection of the trachea, bronchi, and lungs of birds by the nematode worm *Syngamus trachea*.

syn'gamy, *or* **—gam'i** (*Bot., Zool.*). Fusion of gametes.

syngene'sious (*Bot.*). Said of anthers which are united laterally so that they form a hollow tube around the style.

syngen'esis (*Zool.*). Sexual reproduction; reproduction distinguished by the fusion of male and female elements.—*adj.* **syngenet'ic.**

syngenet'ic (*Min.*). A category of ore bodies comprising all those which were formed contemporaneously with the enclosing rock. Cf. *epigenetic*, i.e. formed at some subsequent time.

syng'nathous (*Zool.*). (Of certain Fish) having the jaws fused to form a tubular structure.

syngy'nous (*Bot.*). Epigynous.

synize'sis (*Cyt.*). In meiotic prophase, contraction of the chromatin towards one side of the nucleus, obscuring the individual loops.

synkar'yon, syncar'yon (*Bot.*). A pair of nuclei in close association in a hyphal segment, and dividing at the same time to give daughter nuclei which associate in similar manner.—(*Zool.*) A zygote nucleus resulting from the fusion of two pronuclei.

syn'nema (*Bot.*). An erect bunch of hyphae.

synodic month (*Astron.*). The interval (amounting to 29.53059 days) between two successive passages of the moon through conjunction or opposition respectively; therefore, the period of the phases.

synodic period (*Astron.*). An interval of time between two similar positions of the moon or a planet, relative to the line joining the earth and sun; hence the time from one conjunction, opposition, or quadrature to another, and the period of the phases of the moon or a planet.

synoekete, sin-ē'kēt (*Zool.*). In a community of social Insects (especially Ants or Termites), an indifferently tolerated guest species living in the community without attracting notice.

synoi'cous (*Bot.*). Having antheridia and archegonia together in the same group, surrounded by an involucre.

synonym (*Bot., Zool.*). A systematic or proper name which has been superseded, or is, by the rules of nomenclature, not tenable.—*n.* **synon'ymy.**

synoptic chart (*Meteor.*). See **weather map.**

synosteo'sis (*Zool.*). Ankylosis.

synosto'sis (*Zool.*). A union between two bones which is so perfect that no trace of original separableness remains.

synotic tectum (*Zool.*). That part of the chondrocranium which forms a roof over the hind-brain between the otic capsules, and later ossifies in higher forms to form the supra- and exoccipitals.

syno'via (*Zool.*). In Vertebrates, a glairy lubricating fluid, occurring typically within tendon sheaths and the capsular ligaments surrounding movable joints.

synovial membrane (*Zool.*). The delicate connective tissue layer which lines a tendon sheath or a capsular ligament, and is responsible for the secretion of the *synovia* (q.v.).

synovip'arous (*Zool.*). Secreting synovia.

synovi'tis (*Med.*). Inflammation of the synovial membrane of a joint.

synsa'crum (*Zool.*) In Birds, part of the pelvic girdle formed by the fusion of some of the dorsal and caudal vertebrae with the sacral vertebrae.

syntech'nic (*Zool*.). Said of unrelated forms showing resemblance due to environmental factors; convergent.

synteno'sis (*Zool.*). Union of bones by means of tendons, as in the phalanges of the digits.

syn'thesis (*Photog.*). The realisation of the positive coloured image from three negatives registering the three component colours in the object.

synthetic music (*Acous.*). Freely composed music for silent-film accompaniment, recorded on gramophone discs so devised that terminations are not obvious.

synthetic resins (*Chem.*). Resinous compounds obtained by the condensation and polymerisation of certain substances, e.g. phenol and formaldehyde, phenol and furfural, formaldehyde and urea, glycerine and phthalic anhydride, etc. See **plastics.**

synthetic rubber (*Chem.*). A rubber-like compound obtained by the polymerisation of isoprene or its derivatives. See **Buna, Neoprene*.**

synthetic ruby, synthetic sapphire (*Min.*). In chemical composition and in all their physical characters, including optical properties, these stones are true crystalline ruby or sapphire; but they are produced in quantity in the laboratory by fusing pure precipitated alumina with the predetermined amount of pigmentary material. They can be distinguished from natural stones only by the most careful expert examination.

synthetic spinel (*Min.*). See **spinel (synthetic).**

synthetic stop (*Acous.*). In an organ, the production of low-pitched notes by sounding two low notes together with a musical interval of a fifth, the impression of the desired difference-tone being subjective.

synthetic tone (*Acous.*). Musical tone built up from its partials, as contrasted with a tone produced *ad hoc* from a musical instrument.

syntonic jars (*Radio*). Two similar Leyden jars each fitted with a spark-gap and equal lengths of conductor for connecting thereto. When one of the jars is charged and then discharged across the gap, a spark appears at the gap connected to the other jar. Used by Lodge to demonstrate the principle of tuning or syntony.

syn'tonins (*Chem.*). Acid *infraproteins* (q.v.).

syn'tony (*Radio*). An obsolescent term expressing the possession of a common resonance frequency by two or more circuits.

synu'sia (*Bot.*). An ecological unit based on the life-forms of the plants growing in company.

syph'ilide, syph'ilid (*Med.*). Any skin affection caused by syphilis. Also SYPHILODERM, SYPHILODERMA.

syph'ilis (*Med.*). A contagious venereal disease due to infection with the micro-organism *Spirochaeta pallida* (*Treponema pallidum*); contracted in sexual intercourse, by accidental contact, or (by the foetus) from an infected mother.

syphilit'ic (*Med.*). Pertaining to, caused by, or affected with syphilis: a syphilitic person.

syph'iloderm, syphiloder'ma (*Med.*). See **syphilide.**

syphilo'ma (*Med.*). A syphilitic tumour. See **gumma.**

Syracuse Salt Series (*Geol.*). The chief salt-bearing members of the Salinian of southern Michigan and the adjacent areas.

Syrian garnet (*Min.*). A trade name for almandine garnet, of gemstone quality.

syringi'tis (*Med.*). Inflammation of the Eustachian tube.

syrin'gium (*Zool.*). In some Insects, a tubular structure for the ejection of repellent liquid.—*adj.* **syrin'gial.**

syringobul'bia (*Med.*). A disease characterised by increase of neuroglia and the presence of cavities in the medulla oblongata, giving rise to such nervous phenomena as paralysis of the palate, pharynx, and larynx. See also **syringomyelia.**

syringomye'lia (*Med.*). A chronic, progressive disease of the spinal cord in which increase of neuroglia and the formation of irregular cavities cause paralysis and wasting of muscles and loss of skin sensibility to pain and to temperature.—See also **syringobulbia** (i.e. syringomyelia affecting the medulla oblongata).

syringomy'elocele (*Med.*). A form of spina bifida in which the part protruding through the defective spinal column consists of the greatly distended central canal of the spinal cord.

syr'inx (*Med.*). A fistula, or a fistulous opening.—(*Zool.*) (1) The vocal organs in Birds, situated at the posterior end of the trachea.—(2) A portion of the internal skeleton of certain Brachiopods.—*pl.* **syrin'ges.**—*adj.* **syrin'geal.**

systal'tic (*Zool.*). Alternately contracting and dilating; pulsatory; as the movements of the heart; cf. *peristaltic*.—*n.* **systal'sis.**

system (*Biol.*). (1) An assemblage of structures or parts composed of similar tissues, e.g. the *osseous system*.—(2) A collection or set of organs which concur in some particular function, e.g. the *digestive system*.—(3) In *Urochorda*, a colony of individuals possessing a common cloaca, e.g. *Botryllidae*.—(4) A method or scheme of classification, e.g. the *Linnaean system*.—(5) A systematic treatise on the animal or plant kingdom, or any part of either.—*adj.* **systematic.**

system (*Chem.*). Any portion of matter which is either in fact or in imagination isolated from other matter.

system (*Elec. Eng.*). A general term covering the entire complex of apparatus involved in the transmission and distribution of electric power.

system (*Geol.*). (1) The name given to the succession of rocks which were formed during a certain period of geological time, e.g. *Jurassic System*.—(2) A term applied to the sum of the phases which can be formed from one or more components of minerals under different conditions of temperature, pressure, and composition.

systems of crystals (*Crystal.*). The seven large divisions into which all crystallising substances can be placed, viz. cubic, tetragonal, hexagonal, trigonal, orthorhombic, monoclinic, triclinic. This classification is based on the degree of *symmetry* (q.v.) displayed by the crystals

systematic errors. Errors which are always in the same direction, i.e. errors which are always positive or always negative. Sometimes known as CUMULATIVE ERRORS.

systematics (*Biol.*). The branch of Biology which deals with classification and nomenclature.

system'ic (*Zool.*). Pertaining to the body as a whole, not localised; as the *systemic circulation*.

systemic arch (*Zool.*). In Vertebrates, the main vessel or vessels carrying blood from the heart to the body as a whole.

systemic heart (*Zool.*). In Birds and Mammals, the auricle and ventricle of the left side of the heart, which supply blood to the body generally. Cf. *respiratory heart*.

systemic infection (*Bot.*). The condition when a parasitic fungus perennates in the perennial parts of its host, and passes from them into the new shoots developed during each season of growth.

systole, sis'tō-le (*Bot.*, *Zool.*). Rhythmical contraction (as of the heart, or of a contractile vacuole).—(*Cyt.*) Collapse of the nucleus and outflow of nuclear material into the cytoplasm during mitosis, due to dissolution of the nuclear membrane. Cf. *diastole*.

systrophe, sis'trŏf-e (*Bot.*). Clumping of chloroplasts when exposed to very bright light.

sys'tyle (*Build.*). A colonnade in which the space between the columns is equal to twice the lower diameter of the columns.

syzygy, siz'i-jē (*Astron.*). A word (derived from the Greek *syzygia*, close union) applied to the moon when in conjunction or opposition.—(*Zool.*) An association of gregarine individuals adhering in strings: in *Crinoidea*, a close suture of two adjacent brachials.—*adj.* **syzyg'ial.**

Szer'elmey's Stone Liquid (*Build.*). Trade-name for a preserving agent for building-stones.

***t*- (*Chem.*).** An abbrev. for (1) *trans*-, i.e. containing the two radicals on opposite sides of the plane of a double bond or alicyclic ring; (2) *tertiary*, i.e. substituted on a carbon atom which is linked to three other carbon atoms.

τ (*Chem.*). A symbol for a time interval, especially half, or mean, life.

T (*Chem.*). With subscript, a symbol for *transport number*.

***T*- (*Chem.*).** A symbol indicating the presence of a triple bond which begins on the corresponding carbon atom.

T-antenna (*Radio*). An antenna comprising a top conductor with a vertical downlead attached at the centre.

T-beam (*Civ. Eng.*). A beam forming part of the construction of a reinforced concrete floor; regarded as being composed of the beam part projecting below the floor slab, and portions of the floor slab on both sides, which are counted in with the compressional flange area, the whole having the form of a letter T.

T-bolts (*Eng.*). Bolts having a head in the form of a short cross-piece; used to hold work on a machine table in conjunction with corresponding T-slots into which the heads are dropped and secured by turning through 90°. Also TEE-BOLTS.

T-iron (*Civ. Eng.*) A structural member of wrought-iron or rolled steel having a T-shaped cross-section.

T-network (*Elec. Comm.*). See **Y-network.**

T-rest (*Eng.*). A T-shaped rest clamped to the bed of a wood-turning lathe for supporting the tool. Also TEE-REST. See **L-rest.**

T-section (*Elec. Comm.*). An electrical network consisting of a series arm, a shunt arm, and another series arm equal to the first series arm.

T-wire (*Teleph.*). The tip-wire connected to the tips of the plugs which terminate the cords of an operator's cord-circuit, and which eventually connect with the A-wire of the subscriber's line.

Ta (*Chem.*). The symbol for *tantalum*.

tab (*Aero.*). The rear portion of a control surface when it is pivoted on a hinge, its position being either automatically controlled or separately controlled, if necessary with a servo device.

tabs (*Cinema.*). Light-weight curtains on a cinema stage, between the screen and the main curtains; operated with the latter or independently.

tabashir, tabasheer, tab'a-shēr (*Bot.*). A mass of silica found in the stems of bamboos.

tabby weave (*Textiles*). See **plain weave.**

ta'bes dorsa'lis (*Med.*). Locomotor ataxia (**ataxy**). A disease of the nervous system marked by attacks of pain in the legs, anaesthesia of certain areas of the skin, ataxia, loss of the pupil reflex to light, and other nervous affections; due to degenerative changes in the nerves, especially of the sensory roots of the spinal cord, as a late result of syphilis.

tabes mesenter'ica (*Med.*). Tuberculous infection of the lymphatic glands in the abdomen, causing enlargement of the abdomen, diarrhoea, anaemia, wasting of the body, and weakness.

tabes'cent (*Bot.*). Shrivelling.

tabet'ic (*Med.*). Pertaining to, affected by, or caused by tabes dorsalis: a person affected by tabes dorsalis.

table (*Carp.*). See **coak.**

table (*Jewel.*). The flat top of a table-cut stone. The table is surrounded by bevelled edges or step-cut facets.

tablet (*Acous.*). A tilting key for operating stops on the console of an organ, with or without illuminated indication of position.

tablet (*Plastics*). A piece of moulding composition of the correct weight and density, and of suitable diameter and thickness to fit the mould; it is not preformed to the approximate shape of the moulding.

tabling (*Carp.*). The operation of shaping a *coak* (q.v.).

tabopare'sis, taboparal'ysis (*Med.*). General paralysis of the insane and tabes dorsalis affecting the same person.

tab'ula (*Zool.*). In *Hydrocorallinae* and certain Corals, a horizontal calcareous partition completely shutting off the lower part of the polyp cup. Cf. *dissepiment*.

tabular (*Bot., Geol., Min.*). Horizontally flattened.

tabular spar (*Min.*). See **wollastonite.**

tabular'e (*Zool.*). A paired membrane bone of the skull in some Vertebrates, lying above the otic capsule and sometimes erroneously termed the *epiotic*.

tach-, tachy- (Greek *tachys*, swift). A prefix used in the construction of compound terms; e.g. *tachycardia* (q.v.).

tacheom'eter, tachym'eter (*Surv.*). An instrument which measures distance from any given point by telescopic observation of a staff held at the point, the length of the staff seen between two fixed reference hairs in the telescope being multiplied by a factor to give distance. See **additive constant, multiplying constant.**

tacheom'etry (*Surv.*). The process of surveying and levelling by means of angular measurements from a known station, combined with determination of distances from the station by the use of hairs or lines in the instrument, reading on a known base held at the point whose distance is required.

tachom'eter (*Eng.*). An instrument for indicating the revolutions per minute of a revolving shaft; it has a hand moving over a graduated scale, operated either by a spring-controlled ring pendulum or by magnetic means.

tachomet'ric electrometer (*Elec. Eng.*) An electrometer for measuring very small currents; it is kept at a fixed reading by compensating for its loss of charge by supplying it with charges from a condenser, these being controlled by a variable-speed motor, the speed of which is observed.

tachycardia (*Med.*). Frequent action of the heart, beyond the normal rate.

tachygen'esis (*Zool.*). Accelerated development with elimination of certain embryonic stages, as in some Caecilians, in which the free-living tadpole stage is suppressed.—*adj.* **tachygenet'ic.**

tach'ylite, tach'ylyte (*Geol.*). A black glassy igneous rock of basaltic composition, which occurs as a chilled margin of dykes and sills. In Hawaii it forms the bulk of certain lava-flows.

tachymeter (*Surv.*). See **tacheometer.**

tachypnoea, tachypnea, tak-ip-nē'a (*Med.*). Excessive frequency of respiration.

tachyspo'rous (*Bot.*). Said of a plant which liberates its seeds quickly.

tack (*Build.*). A small clout nail.

tacky (*Paint.*). Said of paint or varnish which has not quite dried and is in a sticky condition.

Tacon'ic revolution (*Geol.*). A period of intense folding which affected the eastern parts of N.

America at the end of the Ordovician period. The effects are best seen in the Taconic Mts. on the borders of New York State and Massachusetts.

tactile (*Zool.*). Pertaining to the sense of touch.

tactile bristle (*Bot.*). A stiff hair which transmits a contact stimulus.

tactile perception (*Acous.*). The perception of vibration by the sense of touch; developed particularly in deaf persons, who can be trained to detect and interpret vibrations in another person's larynx, or to interpret vibrations applied selectively to their fingers by vibrators operated through filters by a microphone.

tactile pit (*Bot.*). A sharply defined area of thin cell wall in an epidermal cell of a tendril, which appears to be concerned in the perception of pressure.

tae'nia (*Zool.*). A ribbon-shaped structure; as the *taenia pontis*, a bundle of nerve fibres in the hind-brain of Mammals.

taeni'asis (*Med.*). The state of infestation of the human body with tape-worms (*Taenia*), which as adults may inhabit the intestine and as larvae the muscles and other parts of the body.

taenid'ia (*Zool.*). Thickenings of the *endotrachea* (q.v.) which keep the trachea distended and generally take the form of a spiral thread.—*sing.* **taenidium.**

taenio'les (*Zool.*). The ribbon-shaped longitudinal gastric ridges of a scyphula.

taenite (*Min.*). A solid solution of iron in nickel occurring in iron meteorites; it appears as bright white areas on a polished surface.

taf'feta (*Textiles*). A light-weight fabric of plain weave, usually produced from silk or rayon yarns; also made in cotton and worsted. Usually it has a stripe or check pattern. Used for blouses and shirts.

taffrail log (*Ships*). See **log (nautical).**

taft joint (*Plumb.*). A joint between the ends of two lengths of lead pipe, one of which is rasped to a smaller size so as to fit into the opened-out end of the other, the whole being soldered with a blowlamp.

tag block (*Elec. Comm.*). The terminal block, holding varying numbers of double-ended soldering tags, which is fitted to every panel of apparatus and supported on standard apparatus racks. The external wiring to the unit can then be connected without interference with the internal wiring, which is completed during manufacture. The external connexions to bays of apparatus are also made to tag blocks mounted at the top of the racks.

tag'atose (*Chem.*). A ketohexose.

tagma (*Zool.*). A distinct region of the body of a metameric animal, formed by the [illegible] or fusion of somites; as the thorax of an Insect.—*pl.* **tag'mata.**

tagmo'sis (*Zool.*). In a metameric animal, the grouping or fusion of somites to form definite regions; as the head, thorax, and abdomen of an Insect.

tail (*Aero.*). The hindmost horizontal unit of an aeroplane. Also EMPENNAGE.

tail (*Bind.*). The bottom or foot margin (e.g. of a page or volume).

tail (*Masonry*). That end of a stone step which is built into a wall.

tail, tails (*Mining*). American terms for *tailings* (q.v.).

tail (*Zool.*). See **cauda.**

tail-bay (*Build.*). The space under a floor, between the end binder and the wall.

tail-bay (*Hyd. Eng.*). The part of a canal lock immediately below the tail gates.

tail beam (*Carp.*). A floor joist which at one end is framed into a trimmer.

tail fin (*Aero.*). See **fin.**

tail-gates (*Hyd. Eng.*). The gates at the low-level end of a lock.

tail heaviness (*Aero.*). The state in which the combination of forces acting upon an aircraft in flight is such that it tends to pitch downwards by the tail.

tail joist (*Carp.*). A *tail beam* (q.v.).

tail plane (*Aero.*). See **plane.**

tail race (*Hyd. Eng.*). A channel conveying water away from a hydraulically operated machine.—(*Mining*) The launder or trough for the discharge of water-borne tailings.

tail skid (*Aero.*). That part of the alighting gear taking the weight of the rear end of the aeroplane when on the ground. It carries a wheel, shoe, or claw, depending upon the take-off and landing characteristics of the machine.

tail-stock (*Eng.*). A casting mounted slidably on a lathe bed. It carries a spindle in true alignment with the centre of the head-stock, longitudinally adjustable by a handwheel, and coned internally to receive a hardened dead centre. See **lathe.**

tail trimmer (*Carp.*). A trimmer close to a wall, used in cases where it is not desired to build the joists into the wall.

tailed (*Bot.*). Bearing a long slender point.

tailing, — in, — down (*Build.*). The operation of building in and fixing the end of a member which projects from a wall.

tailing iron (*Build.*). A steel section built into a wall, across the top of the encastered end of a projecting member.

tailings (*Mining*). (1) The rejected portion of an ore; waste.—(2) The portion washed away in water concentration.

take (*Cinema., Television*). The unit of registration technique in shooting sound-film or transmitting television images. A number of *takes* are separate samples of the same shot, the best *take* being selected for the final sequence in sound-film production. Each *take* therefore corresponds to a continuous sequence in the rushes.

take-off sprocket wheel (*Cinema.*). The sprocket which accepts the film after it has come off the constant-speed drive sprocket, or impedance wheel. This is driven synchronously, and protects the constant-speed drive from the pull on the film exerted by the take-up reel.

take-up, take-up reel (*Cinema.*). The drive and the reel which is necessary to accept the cinematograph film after exposure in the gate of a camera or projector. It is driven through a friction drive, so that adequate tension is maintained in pulling the film from the take-off sprocket wheel.

taking-off (*Build., Civ. Eng.*). The first process involved in drawing up a bill of quantities. It consists of measuring the various dimensions of each item on the drawing, and entering them in a systematic manner on sheets specially ruled for the purpose.

Talbot process (*San. Eng.*). An anti-corrosion process applied to cast-iron pipes; they are coated internally with a mixture of bitumen and a hard siliceous material, which is distributed over the surface by centrifugal action.

talc (*Min.*). An acid metasilicate of magnesium, $H_2Mg_3SiO_{12}$, which crystallises in either the orthorhombic or monoclinic system. It is usually massive and foliated and is a common mineral of secondary origin associated with serpentine and schistose rocks. See **steatite.**

tali-, talo- (Latin *talus*, ankle-bone, astragalus). A prefix used in the construction of compound terms; e.g. *talocalcaneal*, pertaining to the astragalus and the calcaneum.

talipes, tal'i-pēz (*Med.*). Club-foot. A general term for a number of deformities of the foot:

TALIPES CALCANEUS, in which the toes are drawn up from the ground and the patient walks on the heel; TALIPES EQUINUS, in which the heel is drawn up and the toes point downwards; TALIPES EQUINOVARUS, in which the foot is inverted and turned inwards, with the toes pointing down; TALIPES VALGUS, in which the foot is abducted and everted, so that the patient walks on the inner side of the foot.

talk-back (*Cinema.*). The same as *speak-back*.

tall-boy (*Build.*). A fitting added to the top of a chimney to prevent down-draught.

tallboy (*Furn.*). A tall, narrow chest-of-drawers, usually in two sections.

tally (*Surv.*) A brass tag attached to a chain at every tenth link, and so marked or shaped as to enable the position of the tally along the chain to be immediately read. Also called a TELLER.

talon (*Arch.*). An ogee moulding.

talon (*Zool.*). A sharp-hooked claw, as that of a bird of prey.

tal'ose (*Chem.*). An aldohexose.

ta'lus (*Civ. Eng.*). An earthwork or batter wall slope.

talus (*Geol.*). See **scree.**

talus (*Zool.*). A synonym for *astragalus.*—*pl* **tali.**

talus wall (*Masonry*). A wall the face of which is built to have a batter.

Tamasopo Limestone (*Geol.*). The chief member of the oil-bearing strata in the Mexican oil-fields; of Lower to Middle Cretaceous (Washita to Cenomanian) age; includes the Escamela Limestone above and the Maltrata Limestone below.

tambour (*Furn.*). A panel of slat-work or pleated textile material.

tambour lace (*Textiles*). An embroidery on net or muslin; a variety of Limerick lace.

tamp (*Civ. Eng., Mining*). (1) To fill a charged shot-hole with clay or other stemming material to confine the force of the explosion. See **stemming.**—(2) To ram or pound down ballast on a railway track, or road-metal. See also **punning.**

tampin (*Plumb.*). A conical plug of boxwood used in opening out the end of a lead pipe.

tampon (*Surg.*). A plug or packing made of gauze, cotton-wool, and the like, for insertion into orifices or cavities (especially the vagina and uterus) for the control of haemorrhage, the removal of secretions, or the dilating of passages.

tamponade' (*Surg.*). The surgical use of the tampon.

tan liquor (*Leather*). A solution of tanning materials, prepared for the tanyard by grinding the materials and macerating them with water. The liquor may be strengthened as desired by the addition of tanning extracts. See **leaching, tannins.**

Tanaida'cea (*Zool.*). An order of *Peracarida* in which the carapace is coalesced dorsally with the first two thoracic somites, the eyes, when present, are on short immovable stalks, and the uropods are slender; small marine forms most of which burrow in mud.

tandem connexion (*Elec. Eng.*). An obsolescent term for *cascade connexion.*

tandem engine (*Eng.*). An engine in which the cylinders are arranged axially, or end to end, with a common piston-rod.

tandem knife switch (*Elec. Eng.*). A switch in which two or more blades are mechanically coupled in order to operate simultaneously as a multiple-pole switch.

tandem selection (*Auto. Teleph.*). Selection of outlets by two uniselectors in series, so that the maximum possible availability of outlets is obtained.

tandem selector (*Auto. Teleph.*). A selector for routing calls over junctions.

tandem working (*Teleph.*). The using of an intermediate exchange during the transition period when a manual system is being converted to automatic working. Working is effected by trains of impulses which are set up on key senders on instructions from A-operators in originating exchanges. See also **automatic tandem working.**

tang (*Carp., Join., etc.*). The end of a tool which is driven into or about its haft. See **socket chisel.**

tangent distance (*Surv.*). The distance between the intersection point and one of the tangent points of a railway or highway curve.

tangent galvanometer (*Elec. Eng.*). A galvanometer in which a small magnetic needle is pivoted at the centre of a large circular coil, and in which the current varies as the tangent of the angle of deflection.

tangent point (*Surv.*). The point of commencement, or of termination, of a railway or highway curve.

tangent scale (*Elec. Eng.*). The scale of an electrical instrument in which the measured quantity varies as the tangent of the angle of deflection.

tangent screw (*Surv.*). A screw by which a fine adjustment may be made to the setting of an instrument about its axis, either in order to bring the line of sight into coincidence with a signal, or to adjust the vernier reading to a given value.

tangential keys (*Eng.*). A pair of keys fitted in such a way that one side is entirely sunk in the shaft and the other in the hub, the two keys facing in opposite directions; used for heavy drives. See **key.**

tangential longitudinal section (*Bot.*). A section taken along the length of a plant member, parallel to a tangent to its surface.

tank (*Cinema.*). Colloquialism for a portable camera booth used in motion-picture production.

tank (*Mil.*). An armoured motor vehicle propelled by tractors and mounted with guns.

tank (*Photog.*). The receptacle for solutions in the development of films, particularly when these are held in a rack or frame.

tank circuit (*Radio*). The oscillatory circuit (inductance and condenser) in a thermionic oscillator or amplifier in a radio transmitter.

tank development (*Photog.*). The process of cinematograph development which uses tanks into which the film, wound on racks, is immersed.

tank furnace (*Glass*). Essentially a large 'box' of refractory material holding from 6 to 200 tons of glass, through the sides of which are cut 'ports' fed with a combustible mixture (producer gas and air, coke-oven gas and air, or oil spray and air), so that flame sweeps over the glass surface. With the furnace is associated a regenerative or recuperative system for the purpose of recovering part of the heat from the waste gases.

tanker (*Ship Constr.*). A term covering all types of ships carrying liquid in bulk, from light acids and oils to molasses and latex.

tannic acid (*Chem.*). See **tannin.**

tannin (*Chem.*). A mixture of derivatives of polyhydroxy-benzoic acids. When pure it forms a colourless amorphous mass, easily soluble in water, of bitter taste and astringent properties. Occurs in many trees. The best source for the production of pure tannic acid is the gall formed on certain oak trees. Tannin is used for tanning leather because it has the property of precipitating gelatin and forming an insoluble compound. For fancy leathers, sumach is extensively used. Also called TANNIC ACID or GALLO-TANNIN.

tannin sac (*Bot.*). A cell containing much tannin.

tanning (*Leather*). Any of the processes by which skins and hides are converted into leather, viz. (1) the use of vegetable tanning materials; (2)

impregnation with various mineral salts; (3) treatment with oils and fats. See **tawing, leather, soaking, liming, leaching, tannin, scudding, shaving, handlers, layers.**

tanning (*Photog.*). Development which causes differential hardening or insolubility in emulsions, according to the extent of the reduction of silver consequent on exposure.

tan'talite (*Min.*). Tantalate of iron and manganese, crystallising in the orthorhombic system. It usually has an admixture of the niobate of iron and manganese and the mineral passes from the pure tantalate (tantalite) to the pure niobate (columbite). In some varieties (manganotantalite) the iron is replaced by manganese. It commonly occurs in pegmatite veins, and is used for the filaments of electric lamps and as a source of tantalum.

tan'talum (*Met.*, *Min.*). A metallic element in the fifth group of the periodic system. Chem. symbol, Ta; at. wt. 181·4, at. no. 73, sp. gr. at 20° C., 16·6, m.p. 2910° C. Specific electrical resistivity, 15·5 microhms per cm. cub., Brinell hardness, 46. Occurs in crystals and grains (usually containing, in addition, small amounts of niobium) in the Ural and Altai Mts., and is used as a substitute for platinum for corrosion-resisting laboratory apparatus, as acid-resisting metal in chemical industry, and in the form of carbide in cemented carbides.

tap (*Eng.*). A screwed plug of accurate thread, form, and size, on which cutting edges are formed by longitudinal grooves; screwed into a hole by hand or power, to cut an internal thread.

See **plug— second— taper—**

tap-field control (*Elec. Eng.*). A method of controlling the speed of a series motor; the field excitation is varied by means of tappings on the field windings.

tap-field motor (*Elec. Eng.*). A series motor whose field windings are arranged for tap-field control.

taproot (*Bot.*). A strongly developed main root which grows vertically downwards and normally bears lateral roots much smaller than itself.

tape (*Build.*, *Surv.*). A long flexible measuring scale of thin strip steel, linen, or linen in which wire is interwoven to increase its strength, coiled up in a circular leather case fitted with a handle for winding purposes.

tapes (*Bind.*). See **bands.**

tape condenser (*Spinning*). A mechanism used to convert the web of fibres from the doffer of a carding engine into a number of slivers. Leather tapes and rubbing rollers perform the action.

tape machine (*Elec. Comm.*). A telegraph printing-machine producing a tape on which news or stock prices are printed by signals sent over a line from a central news agency.

taper key (*Eng.*). A rectangular key having parallel sides, but slightly tapered in thickness along its depth. See **key.**

taper-loaded cable (*Teleg.*). Submarine cable in which the continuous loading is effectively reduced towards the ends of the cable but is uniform for the centre length.

taper pipe (*Plumb.*, *San. Eng.*, *etc.*). A pipe of diminishing diameter, serving to connect pipes of different diameters.

taper roller bearing (*Eng.*). A roller bearing rendered capable of sustaining end thrust by the use of tapered rollers, in conjunction with internally and externally coned races.

taper slots (*Elec. Eng.*). Slots in an armature core in which the intervening teeth have parallel sides.

taper tap (*Eng.*). The first tap used in threading a hole. The first few threads are ground down to the core diameter to provide a guide, gradually increasing to the full thread size. See **tap, plug tap, second tap.**

tapering (*Bot.*). Said of a leaf base which becomes gradually narrowed towards the petiole.

tapering gutter (*Build.*). A parapet gutter having an increasing width in the direction of flow, so as to secure the necessary fall.

tapestry (*Textiles*). Formerly, a hand-woven fabric in which a design was produced by stitches across the warp; now the term is also applied to machine-made imitations of the hand-made fabrics.

tapestry brick (*Build.*). A rustic brick. See **rustics.**

tape'tal (*Bot.*). Relating to the tapetum.

tapetal plasmodium (*Bot.*). A multinucleate mass formed by the breakdown of the cell walls between the cells of a tapetum.

tape'tum (*Bot.*). A layer of cells surrounding a mass of spore mother cells, which finally breaks down and contributes material which is used in the nutrition of the developing spores.

tapetum (*Zool.*). In the eyes of certain night-flying Insects, a reflecting structure: in some Vertebrates, a reflecting layer of the retinal side of the choroid: in the Vertebrate brain, a tract of fibres in the corpus callosum.

tap'iolite (*Min.*). Niobate and tantalate of iron and manganese. This really forms a variable series of minerals that may be considered as dimorphous with the columbite-tantalite series. The various molecules have been named *tapiolite* (tantalate of iron), *mossite* (niobate of iron), and *ixiolite* (tantalate of manganese). The minerals crystallise in the tetragonal system.

tapper (*Radio*). An electro-mechanically operated *decoherer* (q.v.) in the form of a light hammer, which taps the coherer tube after the arrival of a signal.

tappet (*Eng.*). A sliding member working in a guide; interposed between a cam and the push rod or valve system which it operates, to eliminate side thrust on the latter.

tappet (*Weaving*). See **wiper.**

tapping (*Elec. Eng.*). A connexion taken to an intermediate joint on a winding.

tapping (*Eng.*). The operation of forming a screw-thread in a hole by means of taps, the tapping size of the hole corresponding to the core diameter of the thread.

tapping (*Met.*). The operation of running molten metal from a furnace into a ladle.

tapping (*Surg.*). See **paracentesis.**

tar (*Chem.*). See **coal-tar.**

tarmacadam (*Civ. Eng.*). A road surfacing formed of broken stone which has been covered with tar; spread in a layer of uniform thickness and well rolled. Two layers are usually applied, the upper one being of stone of smaller size.

Tarannon Shales (*Geol.*). A succession of shales, found in Wales, and belonging to the Upper Llandovery Series. They constitute part of the lower rocks in the Silurian System.

tar'buttite (*Min.*). The basic phosphate of zinc, which crystallises in the triclinic system. The crystals are often found in sheaf-like aggregates. It occurs at Broken Hill and in North-West Rhodesia.

Tardigra'da (*Zool.*). A class of minute cryptozoic *Arthropoda* with a reduced head and no specialised respiratory system; the mouth-parts are suctorial, and the only appendages are four pairs of uniramous clawed legs; common forms, of wide distribution, found among moss and debris in ditches and gutters and on tree trunks, etc.

target (*Thermionics*). Any electrode or surface upon which electrons impinge at high velocity, e.g. the fluorescent screen of a cathode ray tube, or any of the intermediate electrodes in an electron multiplier.

target diagram (*Elec. Eng.*). A diagram for estimating the uniformity of a batch of electric lamps; obtained by plotting candle-power against watts for each lamp. The more uniform the lamps under test the more closely together will the plotted points lie in the diagram.

target rod (*Surv.*). A type of levelling staff provided with a sliding target, which can be moved by the staffman, under direction from the leveller, to a position in which it is in line with the line of sight of the level, the staff reading being recorded by the staffman.

tarnish (*Chem.*). The discoloration produced on the surface of an exposed metal, generally as the result of the formation of an oxide or a sulphide film.

tars-, tarso- (Greek *tarsos*, the sole of the foot). A prefix used in the construction of compound terms in connexion with the tarsus or tarsals; e.g. *tarsophalangeal*, pertaining to the tarsals and the phalanges.

tarsal (*Zool.*) One of the bones composing the *tarsus* (q.v.) in Vertebrates. Also TARSA'LE (*pl.* TARSA'LIA).

tarsal glands (*Zool.*). See **Meibomian glands.**

tarsal'gia (*Med.*) Pain in the instep of the foot.

tarsia (*Dec.*) Wood inlay, of geometric or architectural patterns, in which comparatively large pieces of naturally coloured or dyed wood are used.

tarsometatar'sus (*Zool.*). In Birds, a bone formed by the fusion of the distal row of tarsals with the metatarsals.

tarsus (*Zool.*). (1) In *Vertebrata*, an elongate plate of dense connective tissue which supports the eyelid.—(2) In *Insecta*, *Myriapoda*, and some *Arachnida* (as Mites), the terminal part of the leg, consisting typically of five joints: in land *Vertebrata*, the basal podial region of the hind limb; the ankle.—*adj.* **tarsal.**

tartar emetic (*Chem.*). Potassium antimonyl tartrate, $2[\text{K SbO C}_4\text{H}_4\text{O}_6]\cdot\text{H}_2\text{O}$. In addition to its use as an emetic, it is an important mordant in dyeing, and is used, intravenously, as a remedy in bilharziasis.

tartar'eous (*Bot.*). Said of the surface of a lichen when it is rough and crumbly.

tartar'ic acid (*Chem*). HOOC·CH(OH) CH(OH) COOH, dihydroxy-succinic acid. It exists in four modifications, viz. *d*-tartaric acid, m.p. 170° C.; *l*-tartaric acid, m.p. 170° C.; *racemic* or *dl*-tartaric acid, m.p. 206° C.; *meso*tartaric acid, m.p. 143° C. The *d*-tartaric acid is found in nature, free and as salts of potassium, calcium, and magnesium. It occurs in a large number of plants and fruits, the acid potassium salt is deposited from wine.

tar'trates (*Chem.*). The salts of tartaric acid. They are extensively used in medicine, the potassium salts and Rochelle salt as saline purges.

tarus (*Build.*). A cylindrical projection along the intersection between the two sloping roof surfaces on one side of the ridge of a mansard roof.

tarviated (*Civ. Eng.*). A term applied to macadam road surfacings in which the stone is bound together with tar.

T.A.S. (*Aero.*). Abbrev. for *true air speed* or *air speed* (q.v.).

tas'manite (*Geol.*). A type of practically pure spore coal; a variety of cannel coal.

tassement polaire, tas-mahn^g pō-lär' (*Bot.*). The formation of a dense mass by the chromosomes at the poles of the spindle, as telophase comes on.

taste-bud (*Zool.*). In Vertebrates, an aggregation of superficial sensory cells subserving the sense of taste; in higher forms, usually on the tongue.

taur'ine (*Chem.*). $\text{H}_2\text{N}\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{SO}_3\text{H}$, aminoethylsulphonic acid; m.p. 240° C., with decomposition. Found in the animal body, in ox-gall, etc.

Taurus (*Astron.*). Bull. Second sign of the *Zodiac* (q v).

tautom'erism (*Chem*). The existence of a substance as an equilibrium mixture of two interconvertible forms, usually because of the mobility of a hydrogen atom. Thus tautomeric compounds can give rise to two series of derivatives.

taut'onym (*Bot., Zool*). A name in which the specific epithet is a repetition of the generic name.

Tawara's node (*Zool.*). A plexiform mass of very small muscle fibres on the septal wall of the right auricle in Mammals.

tawing (*Leather*). The process by which lamb, kid, and deer skins are tanned. After soaking, liming, and bating, the skins are drummed with a paste consisting of alum, flour, salt, and egg yolk (or olive oil). Tawed leathers are white and are used for gloves, etc.; they are brush-dyed on the grain side, if necessary.

tawny (*Bot*). Dark-brownish yellow.

taxeop'odous (*Zool.*). Having the proximal and distal tarsal bones in straight lines parallel with the axis of the limb, as some *Ungulata.*

taxi (*Aero*). (Of an aircraft) to travel under its own power, while in contact with the earth.

tax'ine (*Chem*). $\text{C}_{37}\text{H}_{51}\text{O}_{10}\text{N}$, an alkaloid of unknown constitution, obtained from the yew tree (*Taxus baccata*); fine, glistening particles; m.p. 105°-110° C.

taxis (*Bot., Zool.*). A movement of a whole organism towards or away from a stimulus; it is confined to motile plants of microscopic dimensions, and to motile reproductive bodies.

taxonom'ic series (*Biol.*). The range of extant living organisms, ranging from the simplest to the most complex forms Cf. *phylogenetic series.*

taxon'omy (*Biol.*). The science of classification as applied to living organisms.—*adj.* **taxonom'ic.**

Tay-Sachs' disease (*Med.*). Amaurotic family idiocy. A disease of infants (usually of the Hebrew race), characterised by idiocy, progressive paralysis of the body, blindness, and death before the age of two years, as a result of the progressive degeneration of the nerve cells of the brain and spinal cord.

Tb (*Chem.*). The symbol for *terbium.*

Te (*Chem*). The symbol for *tellurium.*

Tea-green Marl (*Geol.*). The highest portion of the Keuper Series, characterised by a green colour, and lying immediately beneath the Rhaetic System.

Tealby Clay (*Geol.*). A thin bed of clay found in Lincolnshire; believed to be of Neocomian age. It forms part of the Lower Cretaceous rocks.

Tealby Limestone (*Geol.*). A limestone found beneath the Red Chalk of Lincolnshire; believed to be of the same age as the Lower Greensand of Southern England. It forms part of the Cretaceous system of rocks.

teaming (*Civ. Eng*). The removing of excavated material from cutting to bank.

tear fault (*Geol.*). A horizontal displacement of a series of rocks along a more or less vertical plane, as a result of differential stresses acting upon the bed. Cf. *normal fault, thrust plane.*

tear gases (*Chem.*). Volatile compounds which even in low concentration make vision impossible by their irritant action on the eyes. They are halogenated organic compounds, e.g. *xylyl bromide*, $\text{CH}_3\cdot\text{C}_6\text{H}_4\cdot\text{CH}_2\text{Br}$, and *ethyl iodoacetate* $\text{CH}_2\text{I}\cdot\text{COOC}_2\text{H}_5$.

tear gland (*Zool.*). See **lacrimal gland.**

teaser (*Cinema.*). Colloquialism for a *trailer* which is intended to advertise films for future exhibition in a cinema.

teasing (*Paint.*). The operation of working out a surface defect in varnish work.

Technicolor (*Cinema., Photog.*). Trade-name for a perfected colour cinematograph process, using three-colour analysis with beam-splitter cameras and imbibition printing.

technology. The practice, description, and terminology of any or all of the applied sciences which have commercial value.

tecton'ic (*Geol.*). Said of rock structures which are directly attributable to earth movements involved in folding and faulting.

tecto'rial (*Zool.*). Covering; as the *tectorial membrane* (membrana tectoria) of Corti's organ.

tectospon'dylous (*Zool.*). Having cartilaginous vertebrae calcified in several concentric rings; cyclospondylous.

tectrices, tek'tri-sēz (*Zool.*). In Birds, small feathers covering the bases of the remiges and filling up the gaps between them.

tectum (*Zool.*). A covering or roofing structure; as the *tectum synoticum*, part of the roof of the cartilaginous skull which connects the two auditory capsules.

tee (*Plumb.*). A short pipe fitting used to connect two pipe lengths, of which one is to be fixed as a branch off the other.

tee bolts (*Eng.*). See **T-bolts.**

tee hinge (*Join.*). A large strap hinge shaped like the letter T, the long arm, corresponding to the upright part of the T, being secured to the door, while the crosspiece is secured to the hinging post.

tee joint (*Elec. Eng.*). A joint in a cable formed by tapping off a branch circuit, without cutting the main cable.

tee-slots (*Eng.*). See **T-bolts.**

teeming (*Met.*). The operation of filling ingot moulds from a ladle of molten metal.

teeth (*Zool.*). See **tooth.**

teg'men (*Bot.*). The inner leaves of a testa.—(*Zool.*) In some *Crinoidea*, the leathery membrane covering the top of the calyx: in *Icthyopsida*, the roof of the chondrocranium: in *Orthoptera*, the hardened leathery fore-wing.—*pl.* **tegmina.**

tegmen'tum (*Zool.*). (1) The upper layer of a shell plate in *Amphineura*.—(2) A reticular mass of fibres with much grey matter in the mesencephalon of higher Vertebrates; also known as RED NUCLEUS.

teg'mina. See **tegmen.**

teg'ula (*Build.*). A roofing tile.

tegula (*Zool.*). One of the articular sclerites of the wing in Insects, a small tile-shaped structure.—*pl.* **tegulae.**—*adj.* **tegular.**

teg'ulico'lous (*Bot.*). Living on tiles.

tegumentary system (*Bot.*). The layer or layers of cells which cover the surface of a plant.

tegumen'tum (*Zool.*). See **tegmentum, integument.**

teg'umere (*Zool.*). In metameric animals, the portion of the integument contained within one somite.

teichop'sia (*Med.*). Temporary loss of sight in part of the visual field, and the appearance before the eye of a spot of light which enlarges and becomes zigzag in shape and many-coloured; a symptom of *migraine* (q.v.).

teir (*Textiles*). See **tier.**

Tejon formation, tā-hhōn' (*Geol.*). See **Martinez formation.**

tek'tites (*Min.*). A group term suggested by Suess in 1900 to cover moldavites, billitonites, australites, and to replace the term obsidianite of Walcott (1898). They consist of balls and other spheroidal dumb-bell forms of green and black glass, approximating to obsidian in composition and probably of cosmic origin.

tela (*Zool.*). A web-like tissue.

telangiec'tasis (*Med.*). Morbid dilatation of capillaries and arteries.—*adj.* **telangiectat'ic.**

telautog'raphy (*Teleg.*). The transmission of half-tone images by scanning electrically a gum print on metal foil, reception being either by photographic scanning with a modulated light beam, or by electrolysis in prepared paper.

tele- (Greek *tēle*, afar, at a distance). A prefix used in the construction of compound terms; e.g. *telephone*, i.e. a voice from afar.

te'leaform (*Zool.*). Resembling *teleas*; said of a larval type of certain *Hymenoptera* having a hooked anterior end, a long caudal process, and one or more bands of setae encircling the trunk.

telearch'ics. The study of, and the means for effecting, the control of mechanical devices remotely, either by radio (as ships and aircraft; see **queen bee**), by sound-waves, or by beams of light.

tel'eblem (*Bot.*). A membrane of closely interwoven hyphae covering the entire fructifications of some agarics.

telecommunication (*Elec. Comm.*). Any communication of information in verbal, written, coded, or pictorial form by electrical means, whether by wire or by radio.

Telefunk'en system (*Radio*). A system of quenched spark radio-telegraphy which employed a spark gap comprising a series of metal discs slightly separated from each other.

teleg'ony (*Zool.*). The supposed influence of a male with which a female has previously been mated, as evinced in offspring subsequently borne by that female to another male.

telegraph (*Elec. Comm.*). A combination of apparatus for conveying messages over a distance by means of electrical impulses sent along special overhead wires or underground cables. For *telegraph cable, telegraph circuit*, etc., see **cable, circuit,** etc.

telegraph distortion set (*Teleg.*). An instrument which generates selected telegraph signals, in morse or five-unit code, for transmission through circuits or apparatus to be tested, and which also indicates the resulting distortion of the signal, either on a dial or a cathode-ray oscillograph.

telegraphy. The electrical communication system whereby messages are transmitted in coded signals by trained operators, the received messages being recorded either manually or automatically before delivery to the recipient. See **facsimile telegraphy, carrier telegraphy, printing telegraph, code, start-stop.**

Telehor (*Television*). Trade-name for a television system involving mechanical scanning by means of vibrating mirrors.

teleme'ter (*Elec. Eng.*). An instrument for the remote indication of electrical quantities, such as voltage, current, power, etc.

telemeter (*Photog.*). A small range-finder for photographic purposes.

telemeter (*Surv.*). The general name for an instrument which acts as a distance measurer, without the use of a chain or other direct-measuring apparatus.

teleme'tering (*Elec. Eng., etc.*). The process by which remote indication is given of electrical quantities.

telenceph'alon (*Zool.*). The cerebral hemispheres of the brain in Vertebrates.

teleol'ogy (*Biol.*). The interpretation of animal or plant structures in terms of purpose and utility. —*adj.* **teleological.**

tel'eophore (*Zool.*). See **gonotheca.**

teleoptiles, —op'tī-lēz (*Zool.*). The types of feathers characteristic of an adult Bird, as filoplumes, plumulae, and pennae. Cf. *neossoptiles.*

Telepan'toscope (*Television.*). A device similar to an Iconoscope, except that the scanning motion of the cathode ray beam is in one direction only (i.e. the line-scanning direction), the frame-scanning being accomplished by mechanical means.

telephone (*Elec. Comm.*). A combination of apparatus for conveying speech over a distance by means of audio-frequency variations in the current sent along special overhead wires or underground cable. See also **automatic telephone**; and for *telephone cable, telephone circuit,* etc., see **cable, circuit,** etc.

telephone condenser (*Radio*). A fixed condenser, having a capacitance of the order of 0 001 mfd., connected in parallel with the telephones in a crystal receiver in order to by-pass the radio-frequency currents.

telephone interference (or **influence) factor** (*Teleph.*). The weighting-factor required for determining the total interference of induced electromotive forces arising from harmonic induction in telephone-lines from adjacent power-lines. The factor takes into account the average relative sensitivity of the ear for varying frequency, and also the average response curves of telephone receivers. Abbrev. **T.I.F.**

telephone-telegram circuit (*Elec. Comm.*). A circuit for transmitting telegrams verbally between telegraph offices.

teleph'ony. The transmission of speech-currents over wires, by means of which two persons can effectively converse at a distance. The complexity of modern telephone plant arises not so much from the difficulty of providing a duplex channel for speech, but in arranging for the speedy and economical connexion of any pair of telephone subscribers on demand.

tel'ephoto lens (*Photog.*). A lens of long focal-length and narrow angle, for obtaining images of very distant objects

telephotog'raphy (*Photog.*). A branch of photography which involves the use of a camera with a lens analogous to a telescope, so that very distant views can be registered, either on plates or by cinematography.

telephotography (*Teleg.*). Photo-telegraphy. See **facsimile telegraphy.**

tel'eprinter (*Elec. Comm.*). A form of telegraph transmitter, having a typewriter keyboard and a type-printing telegraph receiver; widely used in the larger commercial offices and for public and news services. Similar in function to the *teletype* (q.v.).

teleradiog'raphy (*Med.*). Radiography with the X-ray tube at a distance from the body so as to minimise distortion of the part radiographed.

telescope (*Astron.*). An optical instrument for making distant objects appear nearer; it consists of arrangements of lenses or mirrors by which the light is brought to a focus, the image there formed being magnified.

See **astronomical—** **refracting—**
reflecting— **terrestrial—***

telescopic stars (*Astron.*). Those stars whose apparent magnitudes are less than the 6th and which are too faint to be seen with the naked eye. The largest telescopes can photograph stars as faint as apparent magnitude 21.

teleth'moid (*Zool.*). See **prenasal.**

teletor'ium, telestu'dio (*Radio, Television*). The enclosure, sound-proofed and treated acoustically, which is used for originating television or broadcasting programmes.

tel'etron (*Television*). A cathode ray tube specially designed for synthesising television images, either for direct viewing or for projection.

tel'etype (*Teleg.*). The direct-keyboard sending and type-printing of telegraph messages, using the start-stop system with the 5-unit code.

teleutoso'rus (*Bot.*). A group of teleutospores, together with their supporting hyphae, forming a pustule on the surface of the host.

teleu'tospore, teleu'togonid'ium (*Bot.*). A thick-walled spore, consisting of two or more cells, formed by rust fungi towards the end of the season; capable of remaining quiescent for some time, and then germinating to give one or more promycelia, on which the basidiospores are developed.

teleu'tostage (*Bot.*). The stage in the life-history of a rust fungus when teleutospores are formed.

television. The electrical transmission of visual scenes and images by wire or radio, in such rapid succession as to produce, in the observer at the receiving end, the illusion of being able to witness events as they occur at the transmitting end.

television amplifier (*Television*). A thermionic amplifier operating uniformly in gain and phase-delay, between zero and several million cycles per second.

television cable (*Cables*). Cable capable of transmitting frequencies sufficiently high to accommodate television signals without undue attenuation.

tel'evisor (*Television*). A television receiver.

tel'ewriter (*Teleg.*). An obsolete system of transmitting messages whereby the excursions of a pen were transmitted by direct currents over a line; these operated a similar mechanism, which wrote out the message.

Telex (*Teleg*). A service whereby the public may hire from the Post Office teleprinters using an interrupted audio-frequency for transmission. The service provides subscribers with printed telegraph communication through the ordinary telephone exchanges and the national telegraph system.

Telfener rack (*Civ. Eng.*). A form of rack railway in which the rack is centrally located, is formed of two angles (placed back-to-back, with teeth cut in them), and is sometimes strengthened with flat bars between the angles.

te'lial stage (*Bot.*). An American term for *teleutostage.*

te'liospore (*Bot.*). An American term for *teleutospore.*

te'lium (*Bot.*). An American term for *teleutosorus.*

tell-tale clock (*Horol.*). A portable clock which gives, on a chart, a record of the time a watchman visits certain fixed points in his round of inspection.

teller (*Surv.*). See **tally.**

tellies (*Cinema.*). Colloquialism for cinematograph films with sound; also for television.

tellu'ric bismuth (*Min.*). Bismuth which occurs in the trigonal system and contains a trace of tellurium. See also **tetradymite.**

tellu'rium (*Met.*). A metallic element, tin-white in colour, in the sixth group of the periodic system. Chem. symbol, Te. At. wt. 127·61; at. no. 52; sp. gr. at 20° C. 6·24; m.p. 450° C.; valencies 2, 4, 6; specific electrical resistivity 33×10^3 microhms per cm. cub. Used in the electrolytic refining of zinc to eliminate cobalt; alloyed with lead to increase the strength of pipes and cable sheaths. The chief sources are the slimes from copper and lead refineries, and the fine dusts from telluride gold ores.

telo- (Greek *telos,* end). A prefix used (especially in Zoology) in the construction of compound terms; e.g. *telophase* (q.v.).

tel'oblast (*Zool.*). A large cell from which many smaller cells are produced by budding, as one of the primary mesoderm cells in developing *Polychaeta.*

tel'ocoel, —sēl (*Zool.*). The cavity of the *telencephalon* (q.v.).

teloden'dra (*Zool.*). The terminal twigs into which an efferent axon breaks up at a synapse; cf. *dendrite—sing.* **telodendron.**

telokine'sis (*Cyt.*). See **telophase.**

telolecithal, —les'i-thal (*Zool.*). Said of ova in which the yolk is aggregated in one hemisphere.

telolem'ma (*Zool.*). The connective tissue sheath of a muscle-spindle.

telomit'ic (*Cyt.*). (In cell-division) having the chromosomes attached to the fibres of the spindle by their ends.

tel'ophase (*Cyt.*). The period of reconstruction of nuclei which follows the separation of the daughter chromosomes in mitosis.

Telosporid'ia (*Zool.*). A subclass of *Sporozoa* in which the trophozoite is uninucleate and ceases to exist when spores are formed; the spore cases are simple and usually contain several sporozoites.

telosynap'sis, telosyn'desis (*Cyt.*). End-to-end union of the elements of a pair of chromosomes; cf. *parasynapsis*, and see also **synapsis.**

telotax'is (*Zool.*). The movements of an animal when they are directed to the attainment of a definite end.

Telotre'mata (*Zool.*). An order of *Testicardines* in which the shell is usually biconvex and the animal is attached by its peduncle.

tel'otroch (*Zool.*). The abapical tuft of cilia in a trochophore.

telotro'cha (*Zool.*). See **trochophore.**

telpher line (*Civ. Eng.*). A form of monorail in which an electrically driven truck runs along a single rail, the load being suspended below the truck and rail.

telson (*Zool.*). The post-segmental region of the abdomen in *Crustacea* and *Arachnida.*

te'lum (*Zool.*). In Insects, the last abdominal somite.

Temeside Shales (*Geol.*). A succession of greenish nodular shales found in the Old Red Sandstone facies of the Devonian System in South Wales and the Welsh borderlands. Named from the River Teme in Shropshire.

Temnocephaloi'dea (*Zool.*). A class and order of *Platyhelminthes,* comprising a few small epizoic forms having a tough cuticle and a muscular non-protrusible pharynx; in some cases part of the epidermis is ciliated; anteriorly there are from four to twelve tentacles, posteriorly a large sucker.

temnospon'dyly (*Zool.*). The condition of having the vertebrae in articulated parts, cf. *stereospondyly.—adj.* **temnospondylous.**

témoin, tā-mwan^{g} (*Civ. Eng.*). An undisturbed column of earth left on an excavated site, as an indication of the depth of the excavation.

temper brittleness (*Met.*). A type of brittleness that is shown by the notched bar test, but not by the tensile test, in certain types of steel after tempering; influenced to a marked extent by the composition of the steel, the tempering temperature, and the subsequent rate of cooling.

temper-hardening (*Met.*). A term applied to alloys that increase in hardness when heated after rapid cooling; also to the operation of producing this. Also called ARTIFICIAL AGEING; distinguished from *ageing* (q.v.) or age-hardening, which occurs at atmospheric temperature. Both processes are covered by the term *precipitation hardening* (q.v.).

temper colour (*Eng.*). In tempering hardened steel cutting tools, etc., the colour of the oxide layer which forms on reheating and which indicates approximately the correct quenching temperature for a particular purpose. See **tempering.**

tempera (*Dec.*). Pigments ground up in size, liquid glue, white or yolk of egg, or other unctuous medium.

temperament (*Psychol.*). The quantity and quality of the general affective nature of an individual as formed by his inherited traits and physiological constitution. **Nervous temperament,** according to Hadfield, arises from a high excitability of the nerves, physiological in origin.

temperamental (*Psychol.*). Displaying alternation of moods and intensity of responsive reactions.

temperature (*Phys.*). The degree of hotness or coldness measured with respect to an arbitrary zero (as in the Centigrade and Fahrenheit scales) or the *absolute zero* (q.v.). See **degree, fixed points, fundamental interval,** the articles at **thermometer,**

also **absolute—** **critical—**

temperature (*Med., Vet.*). Human body temperature in health is normally taken to be 98·4 F. (mouth). Normal values for animals: equines, 100·5 F.; sheep, goats, 104 F.; dogs, 101 F.; cats, 100·5 F.

temperature adjustment (*Horol.*). The regulating of a watch or chronometer for different temperatures.

temperature coefficient (*Bot.*). The ratio of the rate of progress of any reaction or process in a plant, at a given temperature, to the rate at a temperature 10° C. lower.

temperature coefficient (*Eng., Phys.*). The fractional change in any particular physical quantity per degree rise of temperature. The *temperature coefficient of resistance* is defined as the change in resistance per degree C. rise of temperature divided by the resistance at 0° C.

temperature, colour (*Photog.*). See **colour temperature.**

temperature correction (*Surv.*). A correction applied to the observed length of a base line to correct for any difference between the temperature of the tape during the measurement and that at which it was calibrated.

temperature rise (*Elec. Eng.*). The difference in temperature between an electrical machine, after it has been on load for some time, and the surrounding air. It is a measure of the machine's capacity for dissipating the heat generated by the electrical power losses in the machine, and thus forms part of the electrical specification.

tempered scale (*Acous.*). Also called EQUI-TEMPERED SCALE, EQUAL-TEMPERED SCALE. The musical scale of keyboard instruments, and, by implication, any other instruments or voices which are concerted with them, in which all semi-tones have frequencies of the same ratio, so that 12 semi-tones amount to one octave. See **natural scale.**

tempering (*Met.*). The reheating of hardened steel at any temperature below the critical range, in order to decrease the hardness. Also called DRAWING. Sometimes applied to reheating after rapid cooling, even when this results in increased hardness; e.g. in the case of steels that exhibit secondary hardening.

tempering (*Pot.*). Thorough mixing of clays with water, etc. to form a plastic paste for moulding.

template (*Build.*). A long flat stone supporting the end of a beam, in order to spread the load over several joints in the brickwork.

template or **templet** (*Eng., etc.*). A thin plate, cut to the shape or profile required on a finished surface, by which the surface is marked off or gauged during machining or other operation.

temple (*Weaving*). A device (spiked or fluted rollers, etc.) on a loom for keeping cloth as it is woven at the same width as the spread of the warp threads in the reed.

tempola'bile (*Chem.*). Tending to change with time.

tempor-, temporo- (Latin *tempora,* temples). A prefix used (especially in Zoology) in the construction of compound terms; e.g. *temporo-maxillary,* pertaining to the temporal and maxillary regions.

temporal (*Zool.*). A cartilage bone of the Mammalian skull formed by the fusion of the petrosal with the squamosal.

tempora'lis (*Zool.*). In Vertebrates, one of the adductor muscles which by their contraction raise the lower jaw.

temporary adjustment (*Surv.*). An adjustment to a surveying instrument which it is necessary to make each time the instrument is used; e.g. setting up, levelling, and focusing.

temporary collenchyma (*Bot.*). Collenchyma present in a young organ and disappearing as secondary thickening progresses.

temporary hardness (*Chem.*) A form of hardness of water caused by the presence of the bicarbonates of calcium and magnesium and therefore removable by boiling.

temporary starch (*Bot.*) Starch which is stored for a time in the chloroplasts, when the plant is forming carbohydrates more rapidly than they are being used or removed from the leaf.

temporary stars (*Astron.*). See **nova.**

temporary support (*Photog.*). The support which is used during the double-transfer carbon process.

temporary way (*Civ. Eng.*). The ballast, sleepers, and rails laid temporarily by a contractor for his use on constructional works in transporting material.

temse, temz (*Build., etc.*). A *sieve* (q.v.).

tenacity (*Met.*). See **ultimate tensile stress.**

tenac'ulum (*Zool.*). In *Neopterygii*, a fibrous band extending from the eyeball to the skull.

tender (*Build., Civ. Eng., etc.*). A quotation from a contractor, offering to supply materials or execute work for a given sum.

tendinous (*Zool.*). See **tendon.**

tendo calca'neus (*Zool.*). See **Achillis tendo.**

tendon (*Zool.*). A cord, band, or sheet of fibrous tissue by which a muscle is attached to a skeletal structure, or to another muscle.—*adj.* **ten'dinous.**

tendril (*Bot.*). A slender, simple, or branched, elongated organ used in climbing, at first soft and flexible, later becoming stiff and hard. It may be a modified stem, leaf, leaflet, or inflorescence.

ten'ent (*Zool.*). Used for clinging or attachment.

tenes'mus (*Med.*). Painful and ineffectual straining at stool.

tenia, teniasis, etc. See **taenia,** etc.

ten'nantite (*Min.*). The sulphide of copper and arsenic, which crystallises in the cubic system. This mineral is isomorphous with *tetrahedrite* (q.v.). The crystals are frequently dodecahedral and contain antimony, and hence grade into tetrahedrite.

ten'on (*Carp.*). A tongue formed on the end of a member by cutting away from both sides one-third of the thickness of the member. The projecting part fits into a mortise in a second member in order to make a joint between them.

tenon-and-slot mortise (*Join.*). A joint, such as that made between the posts and heads of solid door frames, in which a tenon cut on the end of the head fits into a *slot mortise* (q.v.) on the end of the post.

tenon saw (*Join.*). A saw with a very thin parallel blade, having fine teeth (10 to 14 to the inch) and a stiffened back along its upper edge. Also called a MITRE SAW.

ten'orite (*Min.*). Oxide of copper, crystallising in the triclinic system. It occurs in minute black scales as a sublimation product in volcanic regions or associated with copper veins.

tenosynovi'tis, tenovagini'tis (*Med.*). Inflammation of the sheath of a tendon.

tenot'omy (*Surg.*). The cutting of a tendon for the correction of deformity.

tenovaginitis (*Med.*). See **tenosinovitis.**

tensile strength (or **stress**) (*Met.*). See **ultimate tensile stress.**

tensile test (*Met.*). A test in which specimens are subjected to an increasing tensile pull until they fracture. A stress-strain curve may be plotted, and the limit of proportionality, proof stress, yield point, ultimate tensile stress, elongation and reduction in area determined.

tensile testing machine (*Eng.*). A machine for applying a tensile or compressive load to a test piece, by means of hand- or power-driven screws, or by hydraulic ram. The load is usually measured by a poise weight and calibrated lever.

tensim'eter (*Chem.*). An apparatus for the determination of transition points by observation of the temperature at which the vapour pressures of the two modifications become equal.

tension (*Elec. Eng.*). A term sometimes used in place of *voltage* or *electromotive force.*

tension flange (*Bot.*). Mechanical tissue developed on the concave side of a coiled tendril.

tension insulator (*Elec. Eng.*). A suspension insulator for overhead transmission lines, which is designed to withstand the pull of the conductors; it is used, therefore, at terminal, anchor, or angle towers.

tension rod (*Struct.*). A structural member subject to tensile stress only.

tension sleeve (*Struct.*). A *screw shackle* (q.v.).

tensor (*Elec. Eng.*). See **amplitude.**

tensor (*Zool.*). A muscle which stretches or tightens a part of the body without changing the relative position or direction of the axis of the part. Cf. *laxator.*

tent (*Surg.*). A roll or plug of soft absorbent material, or of expansible material, for keeping open a wound or dilating an orifice. See also **laminaria tent.**

tentacle (*Bot.*). One of the hairs on the leaf of sundew, which helps in capturing small insects and produces enzymes which digest the prey.

tentacle, tentac'ulum (*Zool.*). An elongate, slender, flexible organ, usually anterior, fulfilling a variety of functions in different forms, as exploring, feeling, grasping, holding, and sometimes locomotion. In *Protozoa,* a pseudopod: in *Coelenterata,* a prehensile appendage bearing stinging cells; in *Polychaeta,* a tactile process of the prostomium or peristomium: in *Arthropoda* generally, an antenna (popular): in *Cirripedia,* a thoracic appendage or cirrus: in Insect larvae, any slender fleshy process of the body: in *Gastropoda,* a sensory cephalic process or horn: in some *Pelecypoda,* a sensory process of the mantle-edge: in *Cephalopoda,* an arm: in *Crinoidea,* an arm or ray: in some *Hemichorda,* a process of the collar: in *Cephalochorda,* a tactile process of the velum or the buccal hood: in Fish, a barbel.—*adjs.* **tentac'ular, tentac'ulif'erous, tentac'uliform.**

Tentacula'ta (*Zool.*). A subclass of *Ctenophora* distinguished by the possession of tentacles.

tentac'ulocyst (*Zool.*). In some coelenterate medusoids, a sense organ situated at the margin of the umbrella and consisting of a modified vesicular tentacle, frequently containing lithites.

tenter (*Textiles*). See **stenter.**

Tentest (*Build.*). Trade-name of a building-board made of fibre.

tentil'la (*Zool.*). Branches of a tentacle.

tento'rium (*Zool.*). In the Mammalian brain, a strong transverse fold of the dura mater, lying between the cerebrum and the cerebellum.

tep'al (*Bot.*). One of the members of a perianth which is not clearly differentiated into a calyx and a corolla.

tepee buttes (*Geol.*). Conical hills of Cretaceous shale, with steep, smooth slopes of talus and a core of shell-limestone, formed *in situ* by the growth of successive generations of lamellibranchs (*Lucina*). See also **St. Pierre Shales.**

teph'rite (*Geol.*). A fine-grained igneous rock resembling basalt and normally occurring in lava flows; characterised by the presence of a feldspathoid mineral in addition to, or in place of, feldspar. According to the particular feldspathoid mineral present, *leucite-tephrite, nepheline-tephrite,* and *analcite-tephrite* may be distinguished.

teph'roite, —rō-it (*Min.*). An orthosilicate of manganese, which crystallises in the orthorhombic system. It forms a member of the isomorphous olivine group, and occurs with zinc and manganese minerals in New Jersey and Sweden.

teratol'ogy (*Biol.*). The study of monstrosities (Greek *teras,* gen. *teratos,* a wonder).

terato'ma (*Med.*). A tumour-like mass in the body consisting of tissues derived from the three germ layers (ectoderm, mesoderm, and entoderm) as a result of some abnormality in development

ter'bium (*Chem.*). Symbol, Tb. A metallic element, a member of the rare earth group; at. no. 65, at. wt. 159 2. It occurs in the same minerals as dysprosium, europium, and gadolinium.

Terebellifor'mia (*Zool.*). An order of *Phanerocephala,* comprising burrowing and tubicolous forms with small parapodia from which cirri are usually absent, although dorsal respiratory cirri occur in some cases; the buccal region is not eversible and the pharynx is unarmed; palps are always, and tentacles sometimes, lacking; the peristomium may bear cirri or tentacular filaments

ter'ebene, ter'ebine, tereban'thenes (*Paint*) Volatile solvents and thinners derived from heavy petroleum oils, mixtures of petroleum and rosin oils, or petroleum and rosin oils mixed with turpentine.

ter'ebra (*Zool.*). The actual sting or modified ovipositor of female *Hymenoptera*

ter'ebrate (*Bot.*) Having scattered perforations

terebrate (*Zool.*). Possessing a boring organ possessing a sting.

ter'ebrator (*Bot*). The trichogyne of a lichen.

terephthal'ic acid (*Chem.*). $C_6H_4(COOH)_2$, benzene-1, 4-dicarboxylic acid, a powder, hardly soluble in water or alcohol, which sublimes unchanged. It is prepared by the oxidation of *p*-toluic acid.

terete' (*Bot.*). Elongated cylindrical-conical, tapering to a point.

ter'gite (*Zool.*). The tergum in Arthropods when it forms a chitinous plate.

tergum (*Zool.*). The dorsal part of a somite in *Arthropoda*: one of the plates of the carapace in *Cirripedia.*—*adj.* **tergal.**

terminal (*Bot.*). (1) Situated at the tip of anything —(2) Said of secondary wood parenchyma when this develops only at the end of the growing season, and therefore at the limit between one annual ring and the next.

terminal (*Build.*). The pointed upper end of a lightning conductor.

terminal (*Elec. Eng*). A point of connexion in an electric circuit: a point where the supply to an electrical machine is taken.

terminals (*Bot.*). The fine end-branches of the veins of a leaf.

terminal assembly (*Auto. Teleph.*). A terminal frame for connecting to a bank multiple.

terminal-bar (*Elec. Eng.*). A bar to which a group of plates of an accumulator is attached. Also called CONNECTOR-BAR, TERMINAL-YOKE.

terminal curvature (*Geol.*). A sudden local change in the dip of stratified rocks in the near neighbourhood of a fault, caused by the drag of the downward displaced block against the fault plane.

terminal curve (*Horol.*). The curve which connects the inner end of a balance spring to the collet or the outer end to the stud.

terminal equipment (*Teleph.*). The special apparatus required for connecting the normal telephone exchange pairs to special transmission systems (such as radio-telephone links, carrier systems) or to trunk-lines. See **trunk terminal.**

terminal insulator (*Elec. Eng.*). An insulator carrying a terminal to which part of an electric circuit is connected.

terminal-lug (*Elec. Eng.*). A projection on a group of accumulator plates for connexion to an external circuit.

terminal nose dive (*Aero.*). See **dive (terminal nose).**

terminal pillar (*Elec. Eng.*). See **post-head.**

terminal pole (*Elec. Eng*). A pole at the end of a power-transmission or telephone line so designed as to withstand the longitudinal load of the conductors as well as the vertical load.

terminal screw (*Elec. Eng.*). See **clamping screw.**

terminal tower (*Elec. Eng*). The transmission line tower at the end of an overhead transmission line; arrangements must be made for taking the pull of the conductors, and for connecting them to the substation or other apparatus at the end of the line.

terminal velocity. The constant velocity acquired by a particle falling in air or water when the frictional resistance is equal to the gravitational pull.

terminal voltage (*Elec. Eng.*). The voltage at the supply terminals of an electrical machine.

terminal-yoke (*Elec. Eng*). See **terminal-bar.**

termination (terminal or **terminating) impedance** (*Elec. Comm.*). The end or load impedance of a network or line, generally required to match the image impedance of the line or network, i.e. to obviate reflection of power.

terminator (*Astron.*). That projected great circle of the moon's surface which appears as a curve on which the sun is rising or setting; hence the eastern curved edge of the waxing moon and the western edge of the waning moon.

termita'rium (*Zool*). A mound of earth built and inhabited by termites and containing an elaborate system of passages and chambers.

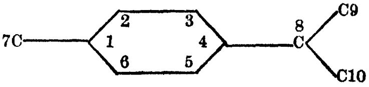
termolec'ular (*Chem.*). Pertaining to three molecules.

ternary (*Chem.*). Consisting of three components, etc.

ternary system, ternary diagram (*Met.*). The alloys formed by three metals constitute a ternary alloy system, which is represented by the ternary constitutional diagram for the system.

ter'nate (*Bot.*) (1) Said of a compound leaf with three leaflets.—(2) Arranged in threes, as branches arising at about the same point from a stem.

terpadi'enes (*Chem.*). $C_{10}H_{16}$, isocyclic compounds, containing two double bonds. Numerous compounds in the terpene series are terpadienes. The carbon atoms are numbered as follows:



ter'penes (*Chem.*). $C_{10}H_{16}$, a group of essential oils found in many plants. They may be regarded as hydro-derivatives of cymene. The simplest members of this series are monocyclic terpenes containing two double bonds; the more complicated polycyclic terpenes contain one double bond only.

terpin'eol (*Chem.*). $C_{10}H_{17}OH$, colourless crystals; m.p. 37° C., b.p. 218° C.; it can be obtained from limonene hydrochloride by the action of caustic potash. Terpineol is used extensively as the basis of certain perfumes and in soap perfumery.

terra-cotta (*Pot.*). A hard body, composed of fine clay, fine sand, crushed pottery waste, etc.; of a yellow to brownish-red colour, generally unglazed; used for statuettes, vases, and as building material in the form of shaped blocks.

terrace (*Build.*). A raised level space having at least one upright or sloping side.

terrace house (*Build.*). A house which forms part of a block of houses built in a row, and which has another house attached to it on each side.

terrain clearance indicator (*Radio*). See **radio altimeter.**

terrazzo, ter-at′sō (*Build.*). A rendering of cement and marble or granite chippings, used as a covering for concrete floors, on which it is floated and finally polished with carborundum blocks and fine grit stones. Also called VENETIAN MOSAIC.

terrestrial. Pertaining to the earth.—(*Bot., Zool.*) Growing or living on land, in contrast to growing submerged in water.

terrestrial equator (*Astron.*). An imaginary circle on the surface of the earth, the latter being regarded as cut by the plane through the centre of the earth perpendicular to the polar axis; it divides the earth into the northern and southern hemispheres, and is the primary circle from which terrestrial altitudes are measured.

terrestrial magnetism (*Elec. Eng., etc.*). The magnetic properties exhibited within, on, and outside the earth's surface. There is a nominal South pole in Canada and a nominal North pole approximately opposite, the positions varying cyclically with time. The direction indicated by a compass needle at any point is that of the intensity of the component of the field at the point. Having the characteristics of flux from a permanent magnet, the earth's magnetic field probably depends on currents within the earth and also on those arising from ionisation in the upper atmosphere, interaction being exhibited by the Aurora Borealis. See **declination, dip, inclination.**

terrestrial poles. The two diametrically opposite points in which the earth's axis cuts the earth's surface.

terrestrial radiation (*Meteor.*). At night the earth loses heat by radiation to the sky, the maximum cooling occurring when the sky is cloudless and the air dry. Dew and hoar-frost are the result of such cooling.

terrico′lous (*Bot.*). Living in the soil.

terrigenous sediments, —ig′en-us (*Geol.*). Those sediments that are deposited on the shallower parts of the sea-floors and consist of detritus derived from the land areas. Cf. *deep-sea deposits.*

terro-metallic clinkers (*Build.*). Bricks similar to *Dutch clinkers* (q.v.) but made from a clay which burns to a nearly black colour.

terry (*Textiles*). See under **pile.**

ter′tial (*Zool.*). In Birds, a flight feather of the third row, attached to the upper arm. Cf. *primary, secondary.*

ter′tian (*Med.*). A type of malaria in which the febrile paroxysm occurs every third day (i.e. at an interval of forty-eight hours between each paroxysm); the benign form is due to infection with *Plasmodium vivax,* and the maligant form to infection with *Plasmodium falciparum.*

Tertiary (*Geol.*). The era of geological time during which the strata ranging from the Eocene to the Pliocene were deposited.

tertiary alcohols (*Chem.*). Alcohols containing the group $\rightarrow C{\cdot}OH$. When oxidised, the carbon chain is broken up, resulting in the formation of two or more oxidation products containing a smaller number of carbon atoms in the molecule than the original compound.

tertiary amines (*Chem.*). Amines containing the nitrogen atom attached to three alkyl groups. Tertiary aliphatic-aromatic amines yield *p*-nitroso compounds with nitrous acid.

tertiary cell wall, tertiary layer, tertiary thickening (*Bot.*). A deposit of wall-thickening on the inner surface of the secondary wall of a cell, tracheide or vessel, usually in the form of rings or of a loose spiral band.

tertiary colours (*Paint.*). Colours produced by mixing two or more secondary colours.

Tertiary igneous rocks (*Geol.*). The various types of igneous rocks which were intruded or extruded during early Tertiary times, especially over a region stretching from Britain to Iceland; e.g. in the Inner Hebrides and north-east Ireland (the Thulean Province).

tertiary layer (*Bot.*). See **tertiary cell wall.**

tertiary nitro compounds (*Chem.*). Nitro compounds containing the group $\rightarrow C\ NO_2$. They contain no hydrogen atom attached to the carbon atom next to the nitro group, and they have no acidic properties.

tertiary thickening (*Bot.*). See **tertiary cell wall.**

tertiary winding (*Elec. Comm.*). (1) An extra winding on an audio-frequency transformer for monitoring purposes.—(2) The third winding on a hybrid coil, the other two being exactly equal and inserted in series with the two legs of the circuit.

terva′lent (*Chem.*). See **trivalent.**

tesch′enite (*Geol.*). A coarse-grained basic (gabbroic) igneous rock consisting essentially of plagioclase, near labradorite in composition, titanaugite, ilmenite, and olivine (or its decomposition products); primary analcite occurs in wedges between the plagioclase crystals, which it also veins.

tessel′la (*Arch.*). See **tessera.**

tes′sellate (*Bot.*). Said of a surface marked out in little squarish areas, like a tiled pavement.

tes′sellated pavement (*Build.*). A pavement formed of small pieces of stone, marble, etc. in the manner of a mosaic. Also called ROMAN MOSAIC.

tes′sera, tessel′la (*Arch.*). One of the small pieces of stone, marble, etc. used in the mosaic of a tessellated pavement.—*pls.* **tesserae, tessellae.**

tesseral system (*Crystal.*). See **cubic system.**

tesseralkies (*Min.*). See **skutterudite.**

test (*Bot., Zool.*). See **testa.**

test. Any routine or special procedure for ascertaining that apparatus is functioning correctly as specified.

test bed (*Elec. Eng.*). A cast-iron framework foundation on which machines are fixed for the purpose of carrying out load tests.

test board (*Elec. Eng.*). A switchboard carrying instruments and switches for connecting up to apparatus to be tested.

test-desk (*Teleph.*). The special position, away from the operators, at which are situated test-clerks who can apply special tests to faulty lines to ascertain the nature of such faults, and who issue instructions for remedying them.

test film (*Cinema.*). A special film, either of speech, music, or a continuously varying frequency of constant amplitude, which is passed through a projector to ascertain that the sound reproduction is up to a specified standard.

test final selector (*Auto. Teleph.*). The selector following the test selector, which enables operators at the test-desk to get on to a subscriber's line.

test jack (*Elec. Comm.*). A jack with contacts in series with a circuit, so that an instrument, or other testing device, can be immediately introduced into a circuit for locating faults.

test paper (*Photog.*). Strip paper which has been impregnated with litmus (or some other indicator) for testing the acidity or alkalinity of solutions.

test piece (*Eng.*). A piece of material accurately turned or shaped, often to specified standard dimensions, for subjecting to a tensile test, shock test, etc., in a testing machine.

test record (*Acous.*). A gramophone record specially made for the testing of reproducing equipment, having on its surface constant-frequency or gliding tones, or selected recordings of speech or music, to emphasise particular faults in the subsequent reproduction.

test selector (*Auto. Teleph.*). A selector operated by a test-clerk in an automatic exchange; by means of it, through a test final selector, he is able to get on to any line in the exchange.

test strip (*Cinema*). The specially exposed unmodulated sound-track which is made to ascertain the current in the exciter lamp of a recording machine which gives the requisite density on the negative, after normal development. See **slit test.**

test terminals (*Elec. Eng.*). Circuit terminals to which a connexion is made for purposes of testing.

testa, test (*Bot.*). The seed coat, several layers of cells in thickness, derived from the integuments of the ovule.—(*Zool.*) A hard external covering, usually calcareous, siliceous, chitinous, fibrous or membranous. an exoskeleton: a shell; a lorica: in *Urochorda*, the gelatinous 'house': in *Echinoidea*, the hard calcareous shell.—*adjs.* **testa'ceous, testa'cean.**

testa'ceous (*Bot.*). Of the colour of old red bricks.

Testicardines, —kar'di-nēz (*Zool.*). A class of *Brachiopoda* in which there is an internal skeleton supporting the lophophore, the shell is hinged, and the intestine ends blindly.

tes'ticle (*Zool*). See **testis.**

testing machine (*Eng.*). A machine for applying accurately measured loads to a test piece, to determine the suitability of the latter for a particular purpose.

See **Haigh fatigue—** **Izod test.**
tensile—

testing position (*Teleph.*). The position in an exchange where the operating staff make simple tests to determine whether a line is faulty, before reporting to the test-desk.

testing set (*Elec Eng.*). A self-contained set of apparatus, including switches, instruments, etc., for carrying out certain special tests.

testing transformer (*Elec. Eng.*). A specially designed transformer providing a high-voltage supply for testing purposes.

testis, testicle (*Zool.*). A male gonad or reproductive gland responsible for the production of male germ-cells or sperms.—*adj.* **testic'ular.**

tetan'ic contraction (*Zool.*). See **tetanus.**

tet'anus (*Med.*). Lockjaw. A disease due to infection with the tetanus bacillus, *Clostridium tetani*, the toxins secreted by which cause the symptoms and signs of the disease, viz. painful tonic spasms of the muscles, which usually begin in the jaw and then spread to other parts.

tetanus (*Zool.*). The state of prolonged contraction which can be induced in a voluntary muscle by a rapid succession of stimuli.

tet'any (*Med.*). A condition characterised by heightened excitability of the motor nerves and intermittent painful muscular cramps, occurring in many abnormal states, especially those associated with hypocalcaemia.

tetany, grass (*Vet.*). See **grass disease.**

tetartohe'dral (*Crystal.*). Containing a quarter of the number of faces required for the full symmetry of the crystal system.

tetra- (Greek *tetra-*, a prefix indicating four). A prefix used in the construction of compound terms; e.g. *tetradactyl*, having four digits.

tetrabo'ric acid (*Chem.*). See **boric acid.**

Tetrabran'chia (*Zool.*). A subclass of *Cephalopoda* in which the whole visceral mass is protected by an external, multilocular, siphunculated shell, the last chamber of which is occupied by the animal; there are two pairs of ctenidia and the eyes lack a crystalline lens.

tetrabran'chiate (*Zool.*). Having four gills or ctenidia.

tetracerous, tet-ras'— (*Zool.*). Having four horns.

Tetractinel'lida (*Zool.*). An order of *Demospongiae* in which the skeleton is composed of tetraxial and monaxial spicules.

tetracy'clic (*Bot.*). Said of a flower which has four whorls or members.

tet'racyte (*Bot*). One of the four cells formed after a meiotic division.

tetrad (*Bot*). A group of four spores remaining together until they are nearly or quite mature.

tetrad (*Cyt*). A bivalent chromosome, formed during the latter part of meiotic prophase, which shows signs of division into four longitudinal threads.

tetrad division (*Bot.*). The nuclear and cell divisions occurring when a spore mother cell divides to give four spores.

tetradac'tyl (*Zool.*). Having four digits.

tetradid'ymous (*Bot.*). Four-fold.

tetrad'ymite (*Min.*). A mineral consisting of bismuth and tellurium. It sometimes contains sulphur and a trace of selenium; crystallises in the trigonal system. Bismuth tellurides are commonly found in gold-quartz veins or in metamorphic rocks.

tetrady'namous (*Bot.*). Said of a flower which has six stamens, four of them longer than the remaining two.

tetrag'onal system (*Crystal.*). The crystallographic system in which all the forms are referred to three axes at right-angles; two are equal and are taken as the horizontal axes, whilst the vertical axis is either longer or shorter than these. It includes such minerals as zircon and cassiterite.

tetragonous (*Bot.*). Having four angles and four convex faces.

tetrahe'dral (*Bot*). Having four triangular faces.

tetrahe'drite (*Min.*). A sulphide of copper and antimony, $4Cu_2S\,Sb_2S_3$, which crystallises in the tetrahedrite class of the cubic system, and frequently contains other metals such as bismuth, mercury, silver (as in the old silver-mines of Devon and Cornwall), zinc, and iron. It is used as an ore of copper and, in some case, of these other metals. Also called FAHLERZ, FAHL-ORE, GREY COPPER ORE.

tetrakon'tan (*Bot.*). Having four flagella.

tetram'erous (*Bot., Zool*). Having four parts: arranged in fours: arranged in multiples of four.

tetramor'phous (*Chem.*). Existing in four different crystalline forms.

tet'raploid (*Bot., Zool*). Possessing twice the normal number of chromosomes. Cf. *haploid, diploid.*

tetrapneumonous, —pnū'mon-us (*Zool.*). Possessing four lung-books.

tet'rapod (*Zool.*). Having four feet.

tetrap'terous (*Zool.*). Having four wings.

tetrarch (*Bot.*). Having four strands of xylem.

tetraso'mic (*Cyt.*). A tetraploid nucleus (or organism) having one chromosome four times over, the others in duplicate.

tetrasporan'gium (*Bot.*). A unilocular sporangium containing tetraspores.

tet'raspore (*Bot.*). One of the asexual spores of the red algae; these spores are formed in groups of four.

tetraspo'rous (*Bot.*). Having or containing four spores.

tetras'ter (*Cyt.*). A complex mitotic figure formed in an ovum after polyspermy.

tetrastich'ous (*Bot.*). Arranged in four rows.

tetrathog'nathous (*Zool.*). Having the jaws borne on the fourth somite of the head.

tetrava'lent (*Chem.*). Capable of combining with four atoms of hydrogen or their equivalent.

tetrax'on (*Zool.*). (Of sponge spicules) having four axes.

tetraz'o dyes (*Chem.*). See **disazo dyes.**

tet'razole (*Chem.*). A five-membered heterocyclic compound containing four nitrogen atoms and one carbon atom in the ring.

tetrazo'oid (*Zool.*). In some *Urochorda*, one of four zooids developed from the stolon.

tet'rode (*Thermionics*). See **screened-grid valve.**

tet'roses (*Chem.*). Monosaccharoses containing four oxygen atoms in the molecule, e.g. $HO\cdot CH_2\cdot(CHOH)_2 CHO$.

Texas fever (*Vet.*) A disease of tropical cattle due to infection of the blood by piroplasms (*Babesia bigemina*), and transmitted by ticks (*Boophilus annulatus*).

text (*Typog.*). The body of matter in a printed page or book, exclusive of notes, comments, and illustrations: words set to music, as distinguished from the accompanying music.

textile. A woven fabric, or a material suitable for weaving.

textile fibres (*Weaving, etc.*). Filaments of vegetable, animal, or mineral origin used for making yarns and fabrics. Cotton, ramie, and linen are vegetable fibres; wool, mohair, and silk are of animal origin; asbestos is a mineral. Rayon is a synthetic material made from cellulose, wood pulp forming the bulk of the raw material for its manufacture.

texture. The mode of union or disposition, in regard to each other, of the elementary constituent parts in the structure of any body or material.—(*Geol.*) That quality of a rock which is determined by the relative sizes, disposition, and arrangement of the component minerals. The nomenclature and classification of rocks are governed by mineral composition and texture. See, for example, **graphic texture, ophitic texture, poikilitic texture.**—(*Photog.*) The quality of the surface of a photograph.

texture brick (*Build.*). A rustic brick. See **rustics.**

Th (*Chem.*). The symbol for *thorium*.

thalamenceph'alon (*Zool.*). See **diencephalon.**

thalamiflo'ral (*Bot.*). Said of a flower which has all its members inserted separately on the receptacle, with the gynaeceum superior.

thala'mium (*Bot.*), The hymenium of an apothecium.

thal'amus (*Bot.*). The receptacle of a flower.

thalamus (*Zool.*). In the Vertebrate brain, the larger, more ventral part of the dorsal zone of the thalamencephalon.

thalass'in (*Zool.*). A poisonous substance produced by some sea-anemones. (Greek *thalassa*, sea.)

thalass'oid (*Ecol.*). See **pseudo-marine.**

thalass'ophyte (*Bot.*) A seaweed.

Thalia'cea (*Zool.*). A class of *Urochorda* in which the adult is pelagic and tailless, with a degenerate nervous system and a posterior atriopore; the gill-clefts are not divided by external longitudinal bars.

thal'liform (*Bot.*). Like a thallus.

thal'line exciple (*Bot.*). An exciple which contains algal cells.

thalline margin (*Bot.*). The margin of an apothecium in a lichen when it is of the same structure as the thallus, and usually coloured like the thallus.

thallium (*Chem.*). Symbol, Tl. A metallic element in the third group of the periodic system. At. no. 81, at. wt. 204·39. The metal is silvery white, but turns to a grey colour in air; m.p. 303°, b.p. 1525° C., sp. gr. at ordinary temperatures 11·9. It can act as a monovalent element and as a trivalent element.

thallo'dic (*Bot.*). Belonging to a thallus.

Thallophy'ta (*Bot.*). A major division of the plant kingdom, including fungi, algae, bacteria, and a number of smaller groups. The plant body is a thallus, but varies a good deal in complexity, and the plants do not produce flowers or seeds.

thallous carbonate (*Chem.*). Tl_2CO_3. Possesses marked fungicidal potency against mildew growth in textile fabrics.

thallus (*Bot.*). A plant body which is not differentiated into root and shoot; it may be a single cell, a filament of cells, or a complicated branching multicellular structure, in which case it has no true root.

Thal'ofide cell (*Photo-electric Cells*). A photoconducting cell employing thallium oxy-sulphide as the light-sensitive agent.

thalweg, tahl'väg (*Geol.*). (German 'valley way.') The name frequently used for the longitudinal profile of a river, i.e. from source to mouth.

than'atoid (*Zool.*). Poisonous, deadly, lethal; as some venomous animals.

Thanet Sands (*Geol.*). A succession of marine glauconitic sands which form the lowest division of the Landenian stage of the Eocene beds in the London district.

thatchboard (*Build.*) A form of building-board made of straw, faced sometimes with cement or plaster.

thatching (*Build.*). A form of roof-covering composed of courses of reeds, straw, or heather laced together.

theatre film (*Cinema*). The fictional type of film which forms the major part of cinema programmes.

theatre main (*Elec. Eng.*). A special service main providing an alternative electric supply to a theatre in the event of failure of the normal supply.

theatre organ. A musical instrument based on organ technique, but employing more novel effects, for entertainment purposes in theatres, mainly cinemas. Characterised by the full use of the extension principle, the predominance of tibia tone, and the possibility of drawing nearly all the stops on any manual; contrasted with the straight organ for concert or ecclesiastical purposes, in which each manual is a complete organ in itself, extension is sparingly used, and the predominant tone is diapason. Also termed UNIT ORCHESTRA.

the'baine (*Chem.*). $C_{19}H_{21}NO_3$; glistening plates; m.p. 193° C.; contained in opium; it is a morphine in which both hydroxyls are methylated.

Thebe'sian valve (*Zool.*). An auricular valve of the Mammalian heart.

the'ca (*Bot.*). (1) An ascus.—(2) The capsule of a moss.—(3) A pollen sac.—(4) An anther.

theca (*Zool.*). A case or sheath covering or enclosing an organ, as the *theca vertebralis* or dura mater enclosing the spinal cord: a tendon sheath: the wall of a coral cup.—*adjs.* **the'cal, the'cate.**

the'caspore (*Bot.*). An ascospore.

thecif'erous (*Bot.*). Containing asci.

the'cium (*Bot.*). The hymenium of the apothecium of a lichen.

the'codont (*Zool.*). Having the teeth implanted in sockets in the bone which bears them.

the'ine (*Chem.*). See **caffeine.**

thelykaryot'ic (*Zool.*). Possessing a female pronucleus only.

thel'ytoky (*Zool.*). Parthenogenesis resulting in the production of females only.

ThEm (*Chem.*). The symbol for *thorium emanation*, or *thoron* (q.v.).

the'nal (*Zool.*). Pertaining to the palm of the hand.

Thénard's blue, tā-nar (*Chem.*). A blue pigment made by calcining a mixture of cobalt oxide and alumina. It can be used in oil or water.

theobro'mine (*Chem.*). 3,7-Dimethyl-2,6-dihydroxypurine. Occurs in cacao beans. A crystalline powder with a bitter taste. It is used as a diuretic and in certain forms of dropsy.

theod'olite (*Surv.*). An instrument for measuring horizontal and vertical angles.

theophyll'ine (*Chem*). 1, 3 - Dimethyl - 2, 6 - dihydroxypurine. Occurs in tea and is a strong diuretic. Colourless crystals; m.p. 264° C.

theorem of the equipartition of energy (*Chem.*). See **principle of the equipartition of energy.**

theory. A *scientific theory* is a co-ordinated set of hypotheses which are found to be consistent with one another and with specially observed phenomena.

theory of indicators (*Chem.*). See **Ostwald's theory of indicators.**

ther'alite (*Geol*). A coarse-grained, holocrystalline igneous rock composed essentially of the minerals labradorite, nepheline, purple titanaugite, and often with soda-amphiboles, biotite, analcite, or olivine.

therapeu'tic (*Med.*). Of, or pertaining to, the medical treatment of disease: remedial: curative. —Hence THERAPEUTICS, that part of medical science which deals with the treatment of disease; the art of healing.

ther'apy (*Med.*). The curative and preventive medical treatment of disease.

therm-, thermo- (Greek *thermē*, heat). A prefix used in the construction of compound terms; e.g. *thermodynamics*, *thermometer* (qq.v).

therm (*Phys*). A unit of heat used as a basis for the sale of town gas; equal to 100,000 B.Th.U.

thermal (*Aero.*). See **air pocket*.**

thermal agitation noise (*Elec. Comm.*). See **Johnson noise.**

thermal ammeter (*Elec. Eng.*). One in which the deflection of the pointer depends on the sag of a fine wire carrying the current to be measured, due to thermal expansion.

thermal analysis (*Met.*). The use of cooling or heating curves in the study of changes in metals and alloys. The freezing-points and the temperatures of any polymorphic changes occurring in pure metals may be determined. The freezing ranges and temperatures of changes in solid alloys may also be studied. The data obtained are used in constructing constitutional diagrams.

thermal capacity (*Heat*). See **water equivalent.**

thermal circuit-breaker (*Elec. Eng.*). A miniature-type circuit-breaker whose overload device operates by virtue of thermal expansion.

thermal conductivity (*Heat*). See **conductivity (thermal).**

thermal cut-out (*Elec. Eng.*). A thermal circuit-breaker designed to screw into a standard barrel-type fuse-holder.

thermal death-point (*Bot.*). The temperature at which an organism is killed or a plant virus inactivated.

thermal detector (*Radio*). Any detector of high-frequency currents which operates by virtue of their heating effect when passed through a resistance.

thermal dissociation (*Chem.*). The dissociation of certain molecules under the influence of heat.

thermal efficiency (*Eng.*). Of a heat engine, the ratio of the work done by the engine to the mechanical equivalent of the heat supplied in the steam or fuel.

See **brake—** **indicated—**

thermal emissivity (*Bot.*). The loss of heat from a leaf by radiation, conduction, and convection.

thermal flasher (*Illum.*). A flasher the operation of which depends upon the heating effect of the current which it is controlling. The movement of a wire or bimetallic strip, when heated by the current, causes it to interrupt the circuit, which is not remade until it has cooled.

thermal instability (*Cables, Diel*). The condition when, the power factor rising so rapidly with temperature that the losses increase more rapidly than the dissipation, the dielectric becomes progressively hotter and burns out.

thermal instrument (*Elec. Eng.*). An instrument the operation of which depends upon the heating effect of a current. See **hot-wire, thermocouple instrument.**

thermal limit (*Elec. Eng.*). The maximum permissible output of an electrical machine as governed by considerations of safe temperature rise.

thermal metamorphism (*Geol.*). The process by which the atoms forming the constituent parts of rocks are regrouped as a result of induced temperature changes, due to contact with, or proximity to, molten magma. Cf. *regional metamorphism.*

thermal microphone (*Acous.*). A microphone which depends for its operation on the variation of resistance of a fine wire or foil on the passage of a sound-wave, the velocity of the particles in the sound-wave cooling the heated wire.

thermal noise (*Elec. Comm.*). See **Johnson noise.**

thermal ohm (*Elec. Eng*). See **thermal resistance.**

thermal receiver (*Acous.*). The same as *thermophone.*

thermal relay (*Elec. Eng*). A relay the operation of which depends upon the heating effect of an electric current.

thermal resistance (*Elec. Eng.*). Resistance to the flow of heat. The unit of resistance is the *thermal ohm*, which requires a temperature difference of 1° C. to drive heat at the rate of 1 watt If the temperature difference is θ° C., the resistance S thermal ohms, and the rate of driving heat W watts, we have $\theta = SW$.

thermal resistivity (*Cables*). The resistance to the flow of heat across a cm. cube of dielectric. The unit is ° C. × cm./watt.

thermal station (*Elec. Eng.*). An electric generating station in which the prime movers are steam-turbines or internal-combustion engines.

thermal trip (*Elec. Eng.*). A tripping relay for a large circuit-breaker, which operates by thermal expansion.

thermal unit (*Heat*). See **British Thermal Unit, calorie.**

therman'aesthe'sia (*Med.*). Loss of skin sensibility to heat and cold.

ther'mion (*Thermionics*). An electron emitted from a heated cathode. (Rare.)

thermion'ics. Strictly, the science dealing with the emission of electrons from hot bodies. Applied, generally, to the broader subject of the subsequent behaviour and control of such electrons, especially in vacuo.

thermionic amplifier. Any device employing thermionic vacuum tubes and used for the amplification of electric currents and/or voltages. Also called THERMIONIC MAGNIFIER.

thermionic current (*Thermionics*). The current represented by the electrons leaving a heated cathode and flowing to other electrodes, as distinguished from the current which flows through the cathode for the purpose of heating it. Also called SPACE CURRENT.

thermionic detector (*Radio*). A thermionic vacuum tube used for the detection of radio-frequency alternating currents.

thermionic emission (*Thermionics*). The emission of electrons from the surface of a conductor through the agency of heat.

thermionic generator (*Radio*). A generator of high-frequency alternating currents which employs thermionic vacuum tubes as a means of conversion from d.c. to a.c.; for example, an oscillator.

thermionic magnifier (*Thermionics*). See **thermionic amplifier.**

thermionic oscillator. An oscillator employing a thermionic vacuum tube (or tubes).

thermionic rectifier (*Radio*). A thermionic vacuum tube used for the rectification or detection of alternating currents.

thermionic relay (*Thermionics*). A three- (or more) electrode thermionic vacuum tube in which the potential applied to one of the electrodes controls the current flowing to another, usually without the expenditure of energy at the control electrode.

thermionic tube, thermionic vacuum tube (*Thermionics*). See **thermionic valve.**

thermionic valve (*Thermionics*). A vacuum tube containing a heated cathode from which electrons are emitted, an anode for collecting some or all of these electrons, and generally additional electrodes for controlling their flow to the anode. Also called THERMIONIC TUBE, THERMIONIC VACUUM TUBE.

thermionic voltmeter (*Thermionics*). A combination of thermionic vacuum tube (or tubes) with d.c. indicating instruments; used for the measurement of alternating or direct voltages, and generally characterised by the absence of current drawn from the source of voltage measured. A number of forms are available, for the measurement of peak, r.m.s., and average voltage over a wide range of values.

ther'mite process (*Chem.*). See **aluminothermic process** and **Thermit*.**

thermo-. Prefix. See **therm-.**

thermochem'istry (*Chem.*) The study of the heat changes accompanying chemical reactions.

thermo-couple (*Elec. Eng.*). A combination of two dissimilar metals having a junction which can be maintained at the temperature which it is desired to measure in terms of the thermo-electric current produced.

thermo-couple instrument (*Elec. Eng.*). An instrument the operation of which depends upon the heating of a thermo-junction by an electric current.

thermodynam'ics (*Phys.*). The mathematical treatment of the relation of heat to mechanical and other forms of energy. Its chief applications are with respect to heat engines (steam-engines and I.C. engines; see **Carnot cycle**) and to chemical reactions (see **thermochemistry**).—LAWS OF THERMODYNAMICS. 1*st law*: During a transformation of heat into any other form of energy there is a constant relation between the amount of heat lost and the amount of energy gained. The same is true of the reverse process.—2*nd law*: Heat can never pass spontaneously from a colder to a hotter body; a temperature difference can never appear spontaneously in a body originally at uniform temperature (Clausius).

thermodynamic concentration (*Chem.*). See **activity** (2).

thermodynamic potential (*Chem.*). The differential coefficient of the energy taken with respect to the variable expressing the quantity of the substance.

thermo-electric element (*Elec. Eng.*). One of the two dissimilar metallic conductors constituting a thermo-couple.

thermo-electric pyrometer (*Elec. Eng.*). The combination of apparatus forming a temperature-indicating instrument whose action derives from a thermo-electric current.

thermo-electricity (*Elec. Eng.*). The current flowing in a circuit due to an e.m.f. generated by the difference in temperature between the junction of two dissimilar metal conductors and another part of the circuit.

thermo-e.m.f. (*Elec. Eng.*). The e.m.f. produced at the junction of two dissimilar metals when heated; if the circuit is electrically completed a current flows, the necessary energy being obtained from the heat supplied to the junction, which is therefore cooled.

thermo-galvanometer (*Elec. Eng.*). A galvanometer in which the current to be measured passes through a fine wire coil, in which it produces a heating effect. Above the coil is suspended a thermo-couple, the e.m.f. from which is observed by means of a moving-coil galvanometer.

thermogen'esis (*Zool.*). Production of heat within the body.

therm'ograph (*Meteor.*). A continuously recording thermometer. In the commonest forms the record is made by the movement of a bimetallic spiral, or by means of the out-of-balance current in a Wheatstone bridge containing a resistance thermometer in one of its arms.

thermola'bile (*Chem.*). Tending to decompose on being heated.

thermol'ysis (*Chem.*). The dissociation or decomposition of a molecule by heat.—(*Zool.*) Loss of body heat.

thermometer (*Heat*). An instrument for measuring temperature. The commonest form consists of a glass bulb communicating with a straight uniform capillary tube, mercury filling the bulb and part of the stem. As temperature rises and falls, the mercury expands and contracts, the position of the end of the mercury thread indicating the temperature on a scale engraved on or attached to the stem. A *clinical thermometer* is one specially adapted for recording bodily temperature. See **fixed points,** also **platinum (resistance) thermometer, Six's thermometer.**

thermometer screen (*Meteor.*). See **Stevenson screen.**

thermomet'ric scales (*Heat*). See **Fahrenheit scale, Centigrade scale, fixed points.**

thermom'etry (*Heat*). The measurement of temperature.

ther'monas'ty (*Bot.*). A nastic movement in a plant in relation to heat.

ther'mophile, thermophi'lous, thermophi'lic (*Bot.*). Said of a plant which requires a high temperature for growth, or which can tolerate exposure to high temperatures.

thermophi'lic bacteria (*Bot.*). Bacteria which need a temperature of from 45° C. to 65° C. for their development.

ther'mophone (*Acous.*). A device which generates alternating acoustic pressures, either within the aural cavity when used as a telephone receiver or for measuring the sensitivity of the ear, or in the cavity of a condenser-transmitter during calibration; the pressure variations arise from heat disposal from a fine wire or foil, which carries the corresponding electric currents.

ther'mophyte (*Bot.*). A plant growing in warm situations.

ther'mopile (*Elec. Eng.*). An apparatus for the direct conversion of heat into electrical energy, consisting of a number of thermo-electric elements connected in series or in parallel or both.

thermoplas'tic (*Chem.*). Becoming plastic on being heated. Specifically (*Plastics*), any resin which can be melted by heat and then cooled, the process being able to be repeated any number of times without appreciable change in properties; e.g. cellulose acetate, vinyl resins, polystyrenes, acrylic resins.

thermoplastic putty (*Build.*). Glazier's putty which is rendered pliable by the addition of tallow and is so able to give and take with the expansion and contraction of large sheets of glass.

thermoreg'ulator (*Chem.*). A device which keeps a bath at a constant temperature by regulating the supply of heat thereto. Thermoregulators generally contain a liquid with a high coefficient of expansion, e.g. toluene or mercury.

Thermosbaena'cea (*Zool.*). An order of small and inconspicuous *Peracarida* closely related to the *Cumacea* and *Tanaidacea*; it comprises only a single species, which occurs in the waters of hot mineral springs.

thermoscop'ic (*Zool.*). Perceptive of change of temperature.

thermosetting compositions (*Plastics*). Compositions in which a chemical reaction takes place while they are being moulded under heat and pressure; the appearance and chemical and physical properties are entirely changed, and the product is resistant to further applications of heat; e.g. phenolics, urea resins.

thermosta'ble (*Bot., etc*). Not decomposed by moderate heating.

thermo-stage (*Bot.*). A stage in the life-history of a flowering plant, when, at the outset of development from the embryo in the seed, low temperatures are needed to ensure further normal development.

ther'mostat (*Chem.*). A bath which is kept at a constant temperature.—(*Heat*) A device for maintaining an enclosure at a constant temperature. This may be achieved by arranging that some expansible element automatically cuts off the heat supply (gas or electric) when the temperature exceeds the required value.

thermostat'ic control (*Elec. Eng.*). The automatic adjustment or maintenance of temperature by means of a thermostat.

thermotax'is (*Biol.*). Response or reaction of an organism to the stimulus of heat —*adj.* **thermotac'tic.**

thermotol'erant (*Bot.*). Able to endure high temperatures, but not growing well under such conditions.

thermotro'pism (*Biol.*). See **thermotaxis.**

therophyll'ous (*Bot.*) Having leaves only in the warmer part of the year; deciduous.

ther'ophyte (*Bot.*). An annual plant, passing the winter or dry season in the form of seeds.

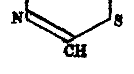
Thévénin's theorem, tā-vā-nan^g (*Elec. Comm.*). The current produced in a load, when connected to a source, is that produced by an electromotive force equal to the open-circuit voltage of the source divided by the load-impedance plus the apparent internal impedance of the source, i.e. the conjugate impedance to that which extracts maximum power from the source. See **Norton's theorem.**

thi-, thio- (*Chem.*). A prefix denoting a compound in which a sulphur atom occupies a position normally filled by an oxygen atom.

thi'amides (*Chem.*). A group of compounds derived from amides by the exchange of oxygen for sulphur, e.g. $CH_3 \cdot CS \cdot NH_2$.

thi'azines (*Chem.*). Six-membered heterocyclic compounds, containing in the ring four carbon, one sulphur, and one nitrogen atoms.

thi'azole (*Chem.*). A colourless, very volatile liquid which closely resembles pyridine; b.p. 117° C. It forms salts, but is hardly affected by concentrated sulphuric acid. Its formula is



thiazole dyestuffs (*Chem.*). Thiazole derivarives, e.g. primulines, which are obtained by heating a mixture of *p*-toluidine with sulphur at about 200° C. Other dyestuffs of this group are the thioflavines.

thick lens (*Light*). Any lens, or system of lenses, in which the distance between the outer faces is not small compared with the focal length.

thickener (*Met.*). Apparatus in which water is removed from ore pulp by allowing solids to settle. To obtain continuous working the solids are worked towards a central hole in the bottom by means of revolving rakes.

thickening fibre (*Bot.*). One of the spiral bands of thickening on the wall of a cell, tracheide, or vessel.

thickness moulding (*Build.*). A moulding serving to fill up the bare space beneath a projecting cornice.

thig'mocyte (*Zool*). See **thrombocyte.**

thigmotax'is (*Biol*). Response or reaction of an organism to the stimulus of touch or contact.—*adj.* **thigmotac'tic.**

thigmotro'pism (*Biol*). Thigmotaxis.

thill (*Mining*). The floor in a coal-mine.

thimble (*Plumb*). See **sleeve piece.**

thimbles (*Pot*). Supports used in seggars for flat-ware

thimble-tube boiler (*Eng*). A heat-recovery boiler, consisting of an annular water-drum from which short thimble-like tubes or pockets project into the central flue, through which the hot exhaust products are passed.

thin (*Photog.*). A general term referring to a developed emulsion which has density lower than normal, either because of lack of exposure or insufficient development.

thin feel (*Textiles*). The term applied to a fabric which is thin or appears so when handled.

thin films, colours of (*Light*). See **colours of thin films.**

thinner (*Paint.*). A substance, such as turpentine or petroleum spirits, which is added to a mixed paint in order to thin it to a consistency at which it will work freely.

thio-acids (*Chem*). Acids in which the hydroxyl of the carboxyl group has been replaced by SH, thus forming the group $-CO \cdot SH$.

thio-alcohols (*Chem.*). *Mercaptans* (q.v.).

thiocar'bamide (*Chem.*). *Thiourea* (q.v.).

thiocy'anates (*Chem.*). Compounds formed when alkaline cyanides are fused with sulphur. Also called SULPHOCYANIDES.

thio-ethers (*Chem.*). Compounds in which the ether oxygen has been replaced by sulphur; general formula R.S.R'. They form additive crystalline compounds with metallic salts; they are capable of combining with halogen or oxygen, which becomes attached to the sulphur atom, thereby converting the latter from the bivalent to the tetravalent state; and they form additive crystalline compounds with alkyl halides, e.g. $(CH_3)_3SI$.

thi'ophen (*Chem.*). A five-membered heterocyclic compound of the formula  ; a colourless liquid, b.p. 84° C., which closely resembles benzene and occurs in coal-tar.

thiosulphu'ric acid (*Chem.*). See **hyposulphurous acid.**

thiourea, thī'ō-ū-rē'a (*Chem.*). Thiocarbamide, $NH_2 \cdot CS \cdot NH_2$, colourless prisms, m.p. 180° C.; it is slightly soluble in water, alcohol, and ether. It is used in organic synthesis and as a reagent for bismuth.

thiourea resins (*Plastics*). Resins made from thiourea and an aldehyde. They are more water-resistant and more stable than the urea resins, but they cure more slowly, and the sulphur in them causes trouble with the steel moulds and the dyestuffs used to colour them.

third pinion (*Horol.*). The pinion on the same axis as the third wheel which engages with the centre wheel.

third-rail insulator (*Elec. Eng.*). See **conductor-rail insulator.**

third-rail system (*Elec. Eng.*). The system of electric traction supply by which current is fed to the electric tractor from an insulated conductor rail running parallel with the track.

third tap (*Eng.*). See **plug tap** (1).

third ventricle (*Zool.*). In Vertebrates, the cavity of the 'twixt brain or thalamencephalon.

third wheel (*Horol.*). The wheel between the centre and the fourth wheel of a watch train.

thirds (*Paper*). A standard size of cut card, 1½ × 3 in.

thirl (*Mining*). To cut through from one working into another. To cut out the lost coal between two workings or headings.

Thistle board (*Build.*). A form of building-board made from gypsum faced with sheets of brown paper on both sides.

thistle funnel (*Chem.*). A glass funnel with a thistle-shaped head to which is attached a long narrow tube.

thix'otrope (*Chem.*). A colloid whose properties are affected by mechanical treatment.

thixot'ropy (*Chem.*). The property, shown by certain gels, of liquefying on being shaken and of re-forming on standing.

tholeiite, tō'lē-it (*Geol.*). A fine-grained basic igneous rock essentially basaltic in composition, intersertal in texture, with wedges of mesostasis or glass occurring between laths of plagioclase. Quartz-dolerite is the medium-grained equivalent of tholeiite.

Thomas's splint (*Surg.*). A skeleton splint consisting of two parallel metal rods and a padded leather ring, used for maintaining the hip and the knee-joint in fixed extension.

Thomsen's disease (*Med.*). See **myotonia congenita.**

Thomson compass (*Elec. Eng.*). See **Kelvin compass.**

Thomson effect (*Elec. Eng.*). The phenomenon of thermo-electricity. Also called KELVIN EFFECT.

Thompson Limestone (*Geol.*). A marine limestone occurring in the Jurassic succession of the Cordilleran geosyncline in California; equivalent, with the overlying Mormon Sandstone, to the Bajocian of the European succession.

thoracente'sis, thoracocente'sis (*Surg.*). The operation of drawing off a morbid collection of fluid in the pleural cavity through a hollow needle stuck through the wall of the chest.

Thorac'ica (*Zool.*). An order of *Cirripedia*, the members of which possess a mantle and six pairs of cirriform trunk appendages; the members of the order, although frequently found attached to other animals, are rarely parasitic.

thorac'icolum'bar outflow (*Zool.*). See **sympathetic nervous system.**

thoracop'agus (*Med.*). A foetal monstrosity in which twins are joined together at the thorax.

tho'racoplasty (*Surg.*). The operation for collapsing a diseased lung by removal of portions of the ribs.

thora'coscope (*Surg.*). An instrument for viewing the pleura covering the lung and the chest wall. It is inserted through the chest wall into a pleural cavity previously filled with air.

thoracot'omy (*Surg.*). Incision of the wall of the chest, for draining pus from the pleural cavity or from the lung.

tho'rax (*Zool.*). In *Crustacea* and *Arachnida*, a region of the body lying between the head and the abdomen and usually fused with the former, distinguished by the nature of its appendages: in *Insecta*, one of the three primary regions of the body, lying between the head and the abdomen, and bearing in the adult three pairs of legs and the wings (if present): in some tubicolous *Polychaeta*, a region of the body behind the head, distinguished by the form of its segments and the nature of its appendages: in land *Vertebrata*, the region of the trunk between the head or neck and the abdomen which contains the heart and lungs and bears the fore limbs, especially in the higher forms, in which it is enclosed by ribs and separated from the abdomen by the diaphragm.—*adj.* **thorac'ic.**

thor'iated filament (*Thermionics*). A tungsten filament containing a small proportion of thorium, to reduce the temperature at which copious electronic emission takes place.

thor'ium (*Chem.*). Symbol, Th. A radio-active dark grey metallic element in the fourth group of the periodic system. At. no. 90, at. wt. 232·12, half-life 1·8 × 10^{10} years, m.p. above 1700° C., sp. gr. 11-12, specific electrical resistivity 18 microhms per cm. cub., chief source monazite. The oxide, ThO_2, is used in gas-mantles.

thorn (*Bot.*). A leaf, part of a leaf, or a shoot which contains vascular tissue and ends in a hard, sharp point.

thor'on (*Chem.*). A radio-active isotope of radon, produced by the disintegration of thorium; its half-life is 54·5 seconds.

thor'oughpin (*Vet.*). A distension of the synovial sheath of the flexor perforans tendons of the horse at the knee-joint.

thorter-ill (*Vet.*). See **louping ill.**

thousand (*Build.*). A trade term for 1200 slates.

thread (*Eng.*) See **screw thread.**

thread grinding (*Eng.*). The accurate finishing of screw threads by a form grinding wheel, profiled to the thread section and automatically traversed along the revolving work.

threading or **threading-up** (*Cinema.*). The operation of inserting the start of the film into the mechanism of camera, or projector, as it leaves the feed-reel, and attaching it to the take-up reel.

three-ammeter method (*Elec. Eng.*). A method of measuring the power carried by a single-phase circuit making use of three ammeters.

three-centred arch (*Build.*). An arch having the form of a false ellipse struck from three centres.

three-coat work (*Plast.*). Plastering in three successive coats. See **pricking-up, roughing-in, floating, setting.**

three-colour process (*Photog.*). Any system of colour photography which analyses the colours by three colour filters each giving a black-and-white record. These records are used in the synthesis of the final positive coloured image, either by the additive process, in which lights approximating to the filters are added together, or by the subtractive process, in which the colours approximating to filters are subtracted from white light, or from a white reflecting surface, by the use of colours complementary to those of the filters.—(*Print.*) The subtractive process applied to printing. The yellow is, as a rule, printed first, followed by red, then blue. A fourth printing, in black or grey, may be added in high-class work.

three-core cable (*Elec. Eng.*). A cable having three conducting cores arranged symmetrically about the axis of the cable and insulated.

three-electrode valve (*Thermionics*). See **triode valve.**

three-high mill (*Met.*). A rolling mill with three rolls, which are rotated in such a way that the metal is passed in one direction through the bottom pair of rolls and in the opposite direction through the top pair.

three-hinged arch (*Civ. Eng.*). An otherwise continuous arch which is hinged at the crown and the abutments.

three-impedance star network (*Elec. Comm.*). See **Y-network.**

three-light window (*Join.*). A window having two mullions dividing the window space into three compartments.

three-phase (*Elec. Eng.*). A term applied to an a.c. system in which the currents flowing in three independent circuits are mutually displaced in phase by 120 electrical degrees.

three-phase four-wire system (*Elec. Eng.*). A system of three-phase a.c. distribution making use of three outgoing conductors (lines) and a common return conductor (neutral), the voltage between lines being $\sqrt{3}$ times the voltage between any line and the neutral.

three-phase induction regulator (*Elec. Eng.*). An induction regulator for use on three-phase circuits, in which the e.m.f. induced in the secondary winding is constant in magnitude but variable in phase, so that the total e.m.f. on the secondary side bears a small phase displacement to the primary voltage.

three-phase six-wire system (*Elec. Eng.*). A system of three-phase a.c. distribution in which each phase has separate outgoing and return conductors.

three-pin plug (*Elec. Eng.*). A plug with three contact pins, two for the main circuit and one for the earth connexion.

three-pinned arch (*Civ. Eng.*). See **three-hinged arch.**

three-point landing (*Aero.*). The landing of an aeroplane on the two wheels and tail skid (or wheel) simultaneously; the normal 'perfect landing.'

three-point problem (*Surv.*). A field problem, arising in plane table and hydrographical surveying, in which it is required to locate on the plan the position of the instrument station, given that only three points represented on the plan are in fact visible from the station.

three-point switch (*Elec. Eng.*). See **three-way switch.**

three-quarter bat (*Build.*). A bat of length equal to three-quarters the full length of a brick.

three-quarter plate watch (*Horol.*). A watch with the upper plate cut away so that the balance may be in the same plane as the plate.

three-start thread (*Eng.*). See **multiple-threaded screw.**

three-voltmeter method (*Elec. Eng.*). A method of measuring the power in a single-phase circuit by means of three voltmeters and a non-reactive resistance. Cf. *three-ammeter method.*

three-wattmeter method (*Elec. Eng.*). A method of measuring the power carried by a three-phase four-wire circuit, making use of three wattmeters whose current coils are connected in the lines and whose voltage coils are connected between the lines and the neutral.

three-way switch (*Elec. Eng.*). A rotary-type single-pole switch having three independent contact positions.

three-wire meter (*Elec. Eng.*). An electricity supply meter performing the simultaneous integration of the energy supplied by the two sides of a three-wire system.

three-wire mooring (*Aero.*). See **mooring (three-wire).**

three-wire system (*Elec. Eng.*). A system of d.c. transmission and distribution making use of two main conductors, the so-called positive and negative 'outers,' and a third conductor, the so-called 'mid-wire' or neutral, whose potential is intermediate between that of the other two. A consumer is fed by a neutral and one outer wire. By suitably alternating the outer wire for neighbouring consumers, the current in the neutral is kept small compared with the currents in the outers. The neutral wire is usually made half the weight of the outers.

threshold (*Build.*). See **sill.**

threshold (*Photog.*). The minimum intensity of stimulus which causes a perceptible sensation in the eye.

threshold effect (*Cathode Ray Tubes*). *Origin distortion* (q.v.)—(*Radio*) The marked increase in background noise which occurs in a valve circuit when on the verge of oscillation.

threshold of hearing (*Acous.*). The curve that gives the relation between frequency and the relative intensity of sound (usually expressed in bels or decibels) which can just be heard in very quiet surroundings. Marked deviations from the average indicates that the ear is deaf. The deviations are useful in diagnosing the cause of deafness and adjusting a suitable correcting deaf-aid. See **audiogram.**

thrill (*Med.*). A tremor or vibration palpable at the surface of the body, especially in valvular disease of the heart.

throat (*Bot.*). The aperture of a gamopetalous corolla or of a gamosepalous calyx.

throat (*Build., Civ. Eng.*). See **drip.**

throat plate (*Eng.*). In a locomotive boiler, the front plate of the firebox casing, flanged to receive the boiler shell and *wrapper plate* (q.v.).

thromb-, thrombo- (Greek *thrombos*, lump, clot). A prefix used in compound terms; e.g. *thrombosis.*

thrombec'tomy (*Surg.*). The operation of removing a venous thrombus.

thrombin (*Chem.*). A protein-like substance formed in shed blood from *prothrombin** (q.v.). It reacts with the soluble protein fibrinogen, converting it to insoluble fibrin, and so causes the blood to clot.

thrombo-angii'tis oblit'erans (*Med.*). A disease occurring in Hebrews, characterised by inflammation and thrombosis of the larger arteries and veins (especially those of the leg); it gives rise to muscular cramps on walking and, later, to ulceration and gangrene of the foot.

throm'bocyte (*Zool.*). A minute greyish circular or oval body found in the blood of higher Vertebrates in numbers varying from 20,000 to 300,000 per cubic millimetre; it plays an important rôle in coagulation; a blood-platelet.

thrombocytope'nia (*Med.*). Abnormal decrease in the number of platelets (thrombocytes) in the blood. See **purpura haemorrhagica.**

thromboki'nase (*Chem.*). A *kinase* (q.v.) which converts prothrombin into active thrombin in the presence of soluble calcium salts.

thrombope'nia (*Med.*). See **thrombocytopenia.**

thrombophil'ia (*Med.*). A tendency to the formation of thrombi in the blood-vessels.

thrombophlebi'tis (*Med.*). Combined inflammation and thrombosis of a vein.

thrombo'sis (*Med.*). The formation of a clot in a blood-vessel during life.—(*Zool.*) Coagulation; clotting.

throm'bus (*Med.*). A clot formed in a blood-vessel during life and composed of thrombocytes (platelets), fibrin, and blood cells.

throttle valve (*Eng.*). (1) In steam engines and turbines, a governor-controlled steam valve, usually of the *double-beat* (q.v.) type.—(2) In gas engines, the *regulator valve* (q.v.).—(3) In petrol engines, the *butterfly valve* (q.v.).—(4) In refrigerators, the regulating valve controlling the pressure and temperature range of the working agent.

throttling (*Eng.*). The process of reducing the pressure of a fluid by causing it to pass through minute or tortuous passages so that no kinetic energy is developed and the total heat remains constant. See **refrigerators, throttling calorimeter.**

throttling calorimeter (*Eng.*). A device for measuring the *dryness fraction* (q.v.) of wet steam by throttling to a measured lower pressure and measuring the resulting degree of superheat.

through bridge (*Civ. Eng.*). A bridge in which the track is carried by the lower stringer. Cf. *deck bridge.*

through road (*Civ. Eng.*). A road which serves as a connexion between other roads.

through-stone (*Masonry*). A bondstone whose length is equal to the full thickness of the wall in which it is laid as a header. Also called PERPEND.

throw (*Cinema.*). The distance between the projector and the screen.

throw (*Elec. Eng.*). See **span** (2).

throw (*Geol.*). The amount of vertical displacement (*upthrow* or *downthrow*) of a particular rock, vein, or stratum, due to faulting; usually expressed in fathoms, yards, or feet. See **fault,** and cf. *lateral shift.*

throw (*Horol.*). A hand-driven, dead-centre lathe, used by clock-makers.

throw (*Mining*). (1) See **throw** (*Geol.*).—(2) The amplitude of shake of a concentrating table.

throwback (*Acous.*). In a public-address system, when the microphone is near the reproducers, the *throwback* is the sound-intensity which is applied to the microphone by the reproducers. If this is excessive, the system becomes paralysed with self-sustained oscillations.

throw-off trip (*Print.*). An attachment on a printing machine which allows the impression to be suspended without stopping the machine.

throw-over switches (*Elec. Eng.*). See **double-throw switches.**

throwing (*Pot.*). The operation of shaping clay on a potter's wheel, on a flat disc supported on a shaft and rotated by a treadle, or by power.

throwing (*Textiles*). In silk manufacture, the processes of reeling, doubling, twisting, scouring, etc., to bring the raw silk filaments into the form of a silk thread.

throwing power (*Chem.*). The property of a solution in virtue of which a relatively uniform layer of metal may be electrodeposited on a relatively irregular surface.

thrum-eyed (*Bot.*). Having the throat of the corolla more or less closed by the anthers; said of the primrose and its relatives.

thrush (*Med.*). Infection of the mouth with the fungus *Oidium albicans*, characterised by the appearance of white patches on the mucous membrane and the tongue.

thrush, avian (*Vet.*). See **oidiomycosis.**

thrush, equine (*Vet.*). Inflammation of the frog of the horse's foot, attended with a fetid discharge.

thrust (*Struct.*). The equal horizontal forces acting upon the abutments of an arch, due to the loading carried by it.

thrust bearing or **thrust block** (*Eng.*). A shaft bearing designed to take an axial load. It consists either of a plain bearing pad, a *Michell bearing* (q.v.), or a ball-bearing provided with lateral races.

thrust plane (*Geol.*). The plane over which a block of rocks is pushed as a result of stresses which develop in the earth's crust. This usually occurs when the elastic limit of the folded beds has been reached.

thu'lite (*Min.*). An obsolete name for *zoisite.*

thu'lium (*Chem.*). Chem. symbol, Tm or Tu. A metallic element, a member of the rare earth group. At. no. 69, at. wt. 169·4. One of the rarest elements, occurring in small quantities in euxenite, gadolinite, xenotime, etc.

thumb latch (*Join.*). A latch operated by the pressure of the thumb. See **Norfolk latch.**

thumbat (*Build.*). A *wall-hook* (q.v.) intended for attaching sheet-lead to a wall surface.

thunder (*Meteor.*). The crackling, booming, or rumbling noise which accompanies a flash of lightning. The noise has its origin in the violent thermal changes accompanying the discharge, which cause non-periodic wave disturbances in the air. Its reverberatory characteristic arises mainly from the continuous arrival of the brief noise from sections of the discharge at increasingly remote locations, since the spark may be several miles long. A *clap* of thunder occurs when the spark is, roughly, normal to the line of observation. The time-interval between lightning and the corresponding thunder (seconds divided by five) gives the distance of the storm centre (in miles).

thunder-cloud (*Meteor.*). See **cumulo-nimbus.**

thunder-storm (*Meteor.*). In the powerful upward air currents, which are a characteristic feature of a thunder-cloud, large raindrops become broken up and acquire positive electric charges, which accumulate until the potential becomes sufficient to cause a lightning discharge to occur, either to earth or to another cloud. See **lightning, cumulo-nimbus.**

Thurso Flagstone Group (*Geol.*). A group of flagstones, some 5000 ft. in thickness, constituting the higher division of the Caithness Flagstone Series of Northern Scotland.

Thury regulator, tu-rē (*Elec. Eng.*). An automatic voltage regulator in which the rheostat arm is moved by a pawl-and-ratchet mechanism actuated by solenoids.

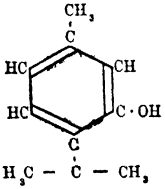
Thury screw-thread (*Eng.*). See **Swiss screw-thread.**

Thury system (*Elec. Eng.*) See **series system.**

thymec'tomy (*Surg.*) Surgical removal of the thymus.

thymi'tis (*Med.*). Inflammation of the thymus.

thy'mol (*Chem.*). $C_{10}H_{14}O$, 1-methyl-4-*iso*propyl-3-hydroxy-benzene, of the formula



Large crystals; m.p. 44° C., b.p. 230° C.; it occurs in thyme oil, and can be synthesised from *iso*propyl alcohol and *m*-cresol. It is used as a disinfectant.

thymo'ma (*Med.*). A tumour arising in the thymus, usually highly malignant.

thy'mus (*Zool.*). A ductless gland of Vertebrates, developed as a series of solid outgrowths from the gill-pouches, the function of which is believed to be associated with growth.

thy'ratron (*Thermionics*). Originally a trade-name for a gas-filled triode operating in an atmosphere of mercury vapour. The name is now generally applied to any gas-filled triode, other common gas fillings being argon, helium, and neon. The operation is similar to that of a high-vacuum triode, except that ionisation takes place when current starts to flow, the anode voltage drops, and the grid loses most of its controlling action.

thy'reohy'al (*Zool.*). In some Fish, a vertical plate connected with the posterior side of the basihyal and serving for the attachment of the muscles of the hyoid apparatus.

thyrid'ium (*Zool.*). In some Insects (as *Trichoptera*), a semi-transparent hairless whitish spot on the wing.

thy'riothe'cium (*Bot.*). An inverted perithecium in which the asci hang down.

thyro- (Greek *thyra*, door). A prefix used in the construction of compound terms relating to the thyroid gland or structures in that region; e.g. *thyro-glossal*, pertaining to the thyroid and the tongue.

thyrohy'oid (*Zool.*). The posterior cornua of the hyoid.

thy'roid (*Zool.*) In Vertebrates, a ductless gland in the pharyngeal region, ventral to the alimentary canal: one of the cartilages of the larynx.

thyroidec'tomise (*Surg.*). To remove the thyroid.

thyroidec'tomy (*Surg.*). The surgical removal of part of the thyroid gland.

thyroidi'tis (*Med.*). Inflammation of the thyroid gland. See also **Riedel's disease.**

thyrot'omy (*Surg.*). See **laryngofissure.**

thy'rotoxico'sis (*Med.*). The condition resulting from overactivity of the thyroid gland (hyperthyroidism), the secretion of which is probably abnormal, as in Graves's disease.

thyrox'ine (*Chem.*). $C_{15}H_{11}O_4NI_4$, a hormone produced by the thyroid gland, which controls the oxidation processes of the organism. Thyroxine has been synthesised, and the following constitution has been ascertained for it:

thyr'soid (*Bot.*). Of the nature of a thyrsus.

thyr'sus (*Bot.*). A densely branched inflorescence, of which the main branching is racemose but the lateral branches are cymose. The term is sometimes applied to any closely branched inflorescence containing many small stalked flowers.

Thysanop'tera (*Zool.*). An order of small *Exopterygota* having two pairs of narrow membranous wings fringed with long hairs and asymmetrical mouth-parts adapted for piercing and sucking; vegetarian forms occurring amongst flowers, foliage, dead leaves, and fungi; some are of economic importance as pests. Thrips, Fringe-wings.

Thysanu'ra (*Zool.*). An order of *Apterygota* having ten or eleven abdominal somites, many-jointed antennae, anal cerci, and abdominal appendages; some forms are blind; of universal distribution. Silver Fish, Bristle Tails.

thysanu'riform (*Zool.*). See **campodeiform.**

Ti (*Chem.*). The symbol for *titanium*.

tib'ia (*Zool.*). In land *Vertebrata*, the pre-axial bone of the crus: in *Insecta*, *Myriapoda*, and some *Arachnida*, the fourth joint of the leg.—*adj.* **tib'ial.**

tibia'le (*Zool.*). A bone of the proximal row of the tarsus in line with the tibia.

tibiofib'ula (*Zool.*). In some *Tetrapoda*, a bone of the leg formed by the fusion of the tibia with the fibula.

tibiotar'sus (*Zool.*). In Birds, a bone of the leg formed by the fusion of the tibia with the astragalus.

tic (*Med.*). See **habit spasm.**

tic douloureux, doo-loo-rê' (*Med.*). Trigeminal neuralgia. An affection of the fifth cranial nerve characterised by paroxysmal attacks of pain in the face and the forehead.

ticks (*Zool.*). See **Acarina.**

tick fever (*Vet.*). See **Texas fever.**

ticker (*Elec. Comm.*). The familiar name for a *tape-machine* (q.v.).

ticker (*Radio*). See **chopper.**

ticketing (*Mining*). A meeting for the sale of concentrates or washed ore. (Cornish.)

tickler coil (*Radio*). An inductance coil included in the anode circuit of a thermionic valve and magnetically coupled to the grid circuit to obtain reaction.

tidal dock (*Civ. Eng.*). A dock within which the level is the same as outside.

tide (*Astron.*). The effect of the gravitational attraction of the moon, and in a lesser degree of the sun, on the waters of the earth, by which they tend to become heaped up at the point below the moon, and at the opposite point to this, so that twice in each lunar day there is an alternate inflow and outflow on the shores, modified by local configurations.

tide gauge (*Surv.*). An apparatus for determining the variation of sea-level with time.

tie (*Eng.*). A frame member sustaining only a tensile load.

tie-beam (*Struct.*). A structural member connecting the lower ends of a pair of principal rafters to prevent them from moving apart.

tie line (*Surv.*). A survey line forming part of a *skeleton* (q.v.) and serving to fix its shape, e.g. a diagonal of a four-sided skeleton.

tie line (*Teleph.*). A line which may pass through exchanges, but which is used solely for connecting private branch exchanges, and over which incoming calls cannot be extended.

tie-rod (*Struct.*). A *tension rod* (q.v.).

tie-rod stator frame (*Elec. Eng.*). A form of stator frame for large electrical machines in which several frame sections are laterally secured by means of tie-rods parallel with the axis of the machine.

tie wall (*Civ. Eng.*). A cross-wall built upon the extrados of an arch at right-angles to the spandrel wall or walls.

tie-wire (*Elec. Eng.*). A wire used to attach a transmission or telephone line conductor to a supporting insulator. Also called a BINDING-WIRE.

Tied'emann's bodies (or **vesicles**) (*Zool.*). In some *Echinodermata*, small gland-like structures of unknown function borne by the water-vascular ring.

Tiemann-Reimer reaction, tē'man rī'mer (*Chem.*). The synthesis of phenolic aldehydes by heating a phenol with chloroform in the presence of concentrated KOH. The intermediate dichloro derivative is hydrolysed to an aldehyde. The ·CHO group takes up the *o-* or *p-*position with respect to the hydroxyl group.

tier or **teir** or **rangs** (*Textiles*). The term applied to the carriages in a lace machine, arranged in working order.

TIF (*Teleph.*). Abbrev. for *telephone interference* (or *influence*) *factor*.

tige, tēzh (*Arch.*). The principal part of a column, between the capital and the base.

tiger's eye (*Min.*). A form of silicified crocidolite stained yellow or brown by iron oxide.

tight coupling (*Elec. Eng.*). Two circuits are said to be *tight-coupled* when the coupling factor is high, i.e. when the rate of transference of energy from one circuit to the other is high. Cf. *weak* (*loose*) *coupling*.

tight coupling (*Radio*). Coupling between two circuits which causes alteration of the current in either to affect materially the current in the other. In the case of mutual reactance coupling, the coupling is said to be *tight* when the ratio of the mutual reactance to the geometric mean of the individual reactances (of the same sign) of the two circuits approaches unity.

tikker (*Radio*). See **chopper.**

tile (*Build.*). A thin slab, often highly ornamental, of baked clay, terra-cotta, glass, cement, or asbestos-cement, used for roofing or for covering walls or floors.

tile-and-a-half tile (*Build.*). A purpose-made tile of extra width, used to form the bond at a *laced valley* (q.v.).

tile creasing (*Build.*). A course formed of two or three thicknesses of plain roofing tiles set in mortar and breaking joint. Laid immediately below a brick-on-edge coping and projecting about 2 in. over each side of the wall, with the top surface sloped in cement, in order to prevent the percolation of water into the wall below the coping.

tile hanging (*Build.*). See **weather tiling.**

tile lintol floor (*Build.*). A type of fire-resisting floor having a steel framework similar to the *filler joist floor* (q v.), but with hollow tile, terra-cotta, or fireclay lintols filling in the panels between filler joists, thus reducing the amount of steel-encasing concrete.

tile ore (*Min.*). The earthy brick-red variety of cuprite; often mixed with red oxide of iron.

Tilgate Stone (*Geol*). Beds of fossiliferous calcareous sandstone found in the Wadhurst Clay in the Weald. These rocks form part of the Hastings Sand Group of the Wealden beds in the Cretaceous System.

tiling batten (*Carp.*). See **slating and tiling battens.**

till or **tillite** (*Geol.*). Boulder clay. The term is sometimes restricted to those boulder clays formed during the glacial periods before the Pleistocene.

tiller (*Bot.*). A branch produced from the base of the stem, especially in corn and grasses.

tilt-and-bend (*Television*). The voltage adjustments which must continually be made to ensure that each part of the mosaic in an electron camera, such as the Emitron, is operating within potential ranges that result in good video modulation.

tilt roof (*Build.*). A roof having the form of a circular arc in which the rise is small compared with the span.

tilting (*Cinema.*). Swinging the motion-picture camera vertically instead of sideways. See **panning.**

tilting fillet (*Build.*). A strip of wood laid beneath a *doubling course* (q.v.) to tilt it up slightly, so that the slates may rest properly on the roof. Also called SKEW FILLET, EAVE-BOARD.

tilting level (*Surv.*). A type of level whose essential characteristic is that the telescope and attached bubble tube may be levelled without the necessity for setting the rotation axis truly vertical.

timber. Felled trees or logs suitable for conversion by sawing or otherwise.

timber brick (*Build.*). See **wood brick.**

timbering (*Build.*, *Civ. Eng.*). Temporary timbers arranged for the support of the earth in excavations, to prevent collapse of the sides.

timbre (*Acous.*). The subjective quality of a complex tone which makes it pleasing and of artistic value.

time (*Astron.*). In its astronomical sense of a measured quantity, essentially a measure of angle. Time is measured by the *hour angle* (q.v.) of some selected point of reference on the celestial sphere with respect to the observer's meridian. The fundamental unit of time measurement is supplied by the earth's rotation on its axis.

See **apparent solar—** **sidereal—**
local— **standard—**
mean solar— **universal—**

time-and-percussion fuse (*Ammunition*). A fuse employed with shrapnel shell to produce a burst at a given time or on percussion.

time ball (*Horol.*). A ball, placed in a conspicuous position at the top of a mast, which is caused to drop at the hour or at any predetermined time.

time base (*Cathode Ray Tubes*). Any device for causing the deflection of the spot in the horizontal or vertical direction (or in some cases in a circular path) to vary in a known manner (usually linearly) with time.

time-constant (*Elec. Eng.*). The time in which a current in an inductance, or a charge in a condenser, changes by the fraction $(1-1/\epsilon)$ of its ultimate change, when the applied voltage is changed; $\epsilon=2{\cdot}71828$ . . . the base of the Napierian, or natural, logarithms. The time-constants are L/R and RC respectively, where R is the total series resistance of the circuit.

time element (*Elec. Eng.*). The time-delay feature in the action of a circuit-breaker.

time exposures (*Photog.*). Exposures in cameras for periods which are long in comparison with so-called instantaneous exposure; generally operated by hand with the assistance of a stop-watch.

timekeeper (*Horol.*). A general term applied to any watch or clock.

time-lag device (*Elec. Eng.*). The apparatus providing the time element in a circuit-breaker. See **time-limit attachment.**

time-limit attachment (*Elec. Eng.*). The mechanical device whereby a circuit-breaker opens only after a predetermined time-delay. Cf. *time-limit relay.*

time-limit relay (*Elec. Eng.*). An electric relay which comes into action some time after it has received the electrical operating impulse.

time-meter (*Elec. Eng*). An instrument for measuring the time during which current flows in a circuit. Also called HOUR-COUNTER, HOUR-METER.

time of reverberation (*Acous.*). See **reverberation time.**

time parallax (*Cinema.*). The blurring of colours when three component colours are registered on successive frames of a film and there are slight displacements due to motion in the object.

timepiece (*Horol.*). A general trade term for any clock that shows the time but does not strike.

time-signal (*Radio, etc.*). A signal to indicate a standardised time, radiated by radio or over telegraph lines. See **chronopher** and **rhythmic time-signals.**

time switch (*Elec. Eng.*). A switch arranged to open or close a circuit at a predetermined time, operating by means of an electrically wound clock.

time valve (*Photog.*). A small valve on the operating bulb of the release of a camera shutter, fitted to enable the actual time of operation of the shutter to be delayed arbitrarily.

timed-spark system (*Radio*). A spark system of radio-telegraphy employing a rotary spark-gap, so that the discharges occur at regular intervals.

timer (*Horol.*). A stop-watch; a watch provided with a large centre seconds hand for timing sporting events, etc.

timing (*Horol.*). The process of (1) setting a clock or watch to time; (2) observing the rate of a clock or watch.

timing (*I.C. Engs.*). The process of setting the valve-operating mechanism of an engine so that the valves open and close in correct angular relation to the crank during the cycle: a similar adjustment of the magneto or distributor drive: the actual valve or magneto setting, referred to as *valve timing, ignition timing.*

timing nuts (*Horol.*). The two nuts on the rim of a chronometer balance, one at each end of the arm, used for timing purposes.

timing screws (*Horol.*). The four diametrically opposite screws in the rim of a compensating balance used for bringing the watch to time.

timing washers (*Horol.*). Thin washers placed under the heads of the screws of a balance to produce slight alteration in the moment of inertia of the balance and so modify the time of vibration.

timing wheels (*Automobiles*). Toothed wheels attached to the crankshaft and camshaft respectively, connected by a driving chain, and giving a reduction ratio of 1 : 2, which constitutes the camshaft drive in most engines.

Timis'kaming Group (*Geol.*). An important member of the Pre-Cambrian succession in the Canadian Shield, of post-Laurentian, pre-Huronian age, and consisting essentially of quartzites and arkoses with a thickness of 29,000 ft. Equivalent to the Sudbury Series (or Sudburian) of Coleman, the Hastings Series of S.W. Ontario, and the Pontiac Series around Lake Quebec.

tin (*Met.*). A white metallic element with a yellowish tinge, in the fourth group of the periodic system. Chem. symbol, Sn (Latin *stannum*, tin). At. wt 118·7, at. no. 50, sp. gr. at 20° C. 7·3, m.p. 232° C. Specific electrical restivity 11·5 microhms per cm. cub. The principal use is as a coating on steel in tin-plate ; also used for collapsible tubes and as a constituent in alloys. See **tin alloys.**

tin. To coat copper or iron articles with a layer of tin by dipping them in a bath of the molten metal.

tin alloys (*Met*). Tin is an essential constituent in soft solders, type metals, fusible alloys, and certain bearing metals. These last contain 50-92% of tin alloyed with copper and antimony, and sometimes lead. Tin is also a constituent of bronze and pewter.

tin-plate (*Met.*). Thin sheet-steel covered with an adherent layer of tin formed by passing the steel through a bath of molten tin. Resists atmospheric oxidation and attack by many organic acids. Used for food-containers, etc.

tin py'rites (*Min.*). See **stannite.**

tin-stone (*Min.*). See **cassiterite.**

tin'type (*Photog.*). *Ferrotype* (q v.).

tin'cal (*Min*). The name given since early times to crude borax obtained from salt lakes, e.g. in Kashmir and Tibet. See **borax.**

tincto'rial power (*Photog.*). The measure of the depth of colour produced by a dye. Precisely, it is the reciprocal of the concentration required to yield a given density in a given thickness of emulsion.

tin'ea (*Med.*). See **ringworm.**

tingle (*Plumb.*). A flat strip of lead or copper, about 2×6 in., used as a clip between jointing sheets of lead.

ting-tang (*Horol.*). A clock that strikes the quarters on two notes only.

tinguaite, ting'gwa-īt (*Geol.*). A fine-grained, usually porphyritic igneous rock which normally occurs in dykes. It has the composition of phonolite, with aegerine-augite and nepheline as essential constituents.

tinman's solder. A tin-lead solder melting below a red heat, used for tinning. The most fusible solder contains 65% tin.

tinni'tus, tinnitus aurium (*Med.*). Persistent sensation of ringing noises in the ear.

tint (*Dec.*). A colour softened by the addition of white. *Tinting* signifies the addition of pigment to white.

tint (*Print.*). A *stipple* (q.v.), especially when used for line-colour purposes.

tinting (*Cinema.*). The addition of colour to the transparent area of motion-picture film, either by dyeing the emulsion or by using a positive stock with a coloured base.

tintom'eter (*Chem., Photog.*). A colorimeter in which colours are compared with those of standard solutions or of specially prepared glass slides.

tintype (*Photog.*). See under **tin.**

tip (*Teleph.*). The outermost contact on the three-way plugs which terminate the flexible cords of an operator's cord circuit in a manual exchange.

tip wire (*Teleph.*). The wire in an operator's cord circuit connected to the tip of the terminating plugs.

tipping-in (*Bind.*). *Plating* (q.v.).

tire. A variant spelling of *tyre* ; chiefly U.S.A.

Tirill regulator (*Elec. Eng.*). An automatic voltage regulator in which a vibrating contact device short-circuits the regulating rheostat to an extent controlled by voltage relays.

tissue (*Biol.*). An aggregate of similar cells forming a definite and continuous fabric, and usually having a comparable function ; as *epithelial tissue, nervous tissue, vascular tissue.*—(*Zool.*) A popular name for the Geometrid moth *Scotosia dubitata.*

tissue (*Photog.*). See **carbon— Japanese—**

tissue culture (*Bot., Zool.*). The growth of detached pieces of tissue in nutritive fluids under conditions which exclude bacteria and fungi.

tissue system (*Bot.*). The whole of the tissues present in a plant which have the same function, whether or not they are in continuity throughout the plant and whatever their position in the plant.

tissue tension (*Bot.*). The mutual compressions and stretchings exerted by the tissues of a living plant.

ti'tanates (*Chem.*). Compounds formed when titanium oxide or dioxide is fused with alkalies.

tita'nia (*Chem.*). See **titanium oxide.**

titanif'erous iron ore (*Min.*). See **ilmenite.**

ti'tanite (*Min.*). Silicate of calcium and titanium, with iron, or manganese, or yttrium in varying amounts. It crystallises in the monoclinic system as wedge-shaped crystals, usually yellow or brown in colour, and occurs as an accessory component in igneous rocks of intermediate composition and also in metamorphic rocks. Also called SPHENE.

tita'nium (*Met.*). A metallic element in the fourth group of the periodic system. Chem. symbol, Ti. At. wt. 47·9, at. no. 22, sp. gr. at 20° C. 4·5, m p. 2000° C., b.p. above 2800° C. Used as a deoxidiser for special types of steel, in stainless steel to diminish susceptibility to intercrystalline corrosion, and as a carbide in *cemented carbides* (q.v.). It occurs only in combination, and is widely distributed on the earth's crust. The chief ore is ilmenite (ferrous titanate).

titanium oxide (*Chem.*). TiO_2. Both acidic and basic. Forms titanates when fused with alkalies. Also called TITANIA.

titra'tion (*Chem.*). The addition of a solution from a graduated vessel (burette) to a known volume of a second solution, until the chemical reaction between the two is just completed. A knowledge of the volume of liquid added and of the strength of one of the solutions enables that of the other to be calculated.

titrim'eter (*Chem.*). A valve apparatus for electrometric titrations, in which potential changes are followed continuously and automatically on a microammeter.

tituba'tion (*Med.*). Staggering and reeling movements of the body, due to disease of the nervous system.

Tl (*Chem.*). The symbol for *thallium.*

Tm (*Chem.*). The symbol for *thulium.*

Tn (*Chem.*). The symbol for *thoron.*

T.N.A. (*Chem.*). An abbrev. for *trinitroaniline,* $C_6H_2(NH_2)(NO_2)_3$.

T.N.B. (*Chem.*). An abbrev. for *trinitrobenzene,* $C_6H_3(NO_2)_3$.

T.N.T. (*Chem.*). An abbrev. for *trinitrotoluene,* $C_6H_2(CH_3)(NO_2)_3$.

T.N.X. (*Chem.*). An abbrev. for *trinitroxylene,* $C_6H(CH_3)_2(NO_2)_3$.

to-and-fro aerial ropeway (*Civ. Eng.*). See **jig-back.**

toadstone (*Geol.*). An old and local name for the basalts found in the Carboniferous Limestone of Derbyshire. The name may be derived from the rock's resemblance in appearance to a toad's skin, or from the fact that it weathers into shapes like a toad, or from the German word *todstein* ('dead stone') in reference to the absence of lead.

toad's-eye tin (*Min.*). A variety of *cassiterite* (q.v.) occurring in botryoidal or reniform shapes which show an internal concentric and fibrous structure. It is brownish in colour.

toat (*Carp., Join.*). The handle of a bench plane.

To'bin bronze (*Met.*). A type of alpha-beta brass or Muntz metal containing tin. It contains 59-62% copper, 0·5-1·5% tin, the remainder being zinc, and is used when resistance to sea water is required. Also called NAVAL BRASS.

toe (*Civ. Eng.*). The part of the base of a reinforced concrete retaining wall projecting in front of the face of the *stalk* (q.v.).

toe (*Photog.*). The lower curvature of the gamma curve of an emulsion, where densities are obtained which are greater than those expected from a given exposure.

toe-in (*Automobiles*). A slight forward convergence given to the planes of the front wheels to promote steering stability and equalise tyre-wear.

toe-picking (*Vet.*). The vice, acquired by individual budgerigars, of biting the feet of birds of other species, particularly finches, within the same aviary.

toe piston (*Acous.*). A large push-button, arranged with others at the side of the balanced pedals in an organ, for operating groups of stops with the foot.

toe puffs (*Boots and Shoes*). Stiffeners that keep the toe part of uppers in position.

toe wall (*Civ. Eng.*). A dwarf retaining-wall built at the foot of an embankment slope as a safeguard against any tendency of the earth to spread.

toed (*Carp.*). Said of an upright or inclined timber which is fastened to a horizontal timber by nails driven in obliquely through its foot.

Toepler machine (*Elec. Eng.*). An early form of electrostatic generator. Also called VOSS MACHINE.

toilet (*Med.*). The cleaning and dressing of a wound or injured part.

tolerance (*Bot.*). (1) The ability of a plant to endure adverse environmental conditions, especially drought and shading.—(2) The ability of the plant to withstand the development within it of a parasite without showing signs of serious disease.

tolerance (*Eng.*). A permissible range of dimension of a finished piece, provided to cover minute and unavoidable inaccuracies in pieces intended to fit together. See **limit gauging.**

toll call (*Teleph.*). A short-distance trunk call covering exchanges in the neighbourhood of London. In America, any long-distance call.

toll exchange (*Teleph.*). That part of the London trunk system which deals mainly with the short-haul trunk circuits classed as *toll*. In America, any exchange which makes long-distance connexions.

toll line (or **circuit**) (*Teleph.*). A short-haul trunk circuit radiating from London. In America, any long-distance circuit.

Tolu balsam (*Chem.*). See **balsam of Tolu.**

tol'uene (*Chem.*). $C_6H_5{\cdot}CH_3$, a colourless liquid, m.p. −94° C., b.p. 110° C. It occurs in coal- and wood-tar; insoluble in water; miscible with alcohol, ether, chloroform. Used as a solvent and as an intermediate for its derivatives. Also called TOLUOL, METHYLBENZENE.

tolu'idines (*Chem.*). $H_3C{\cdot}C_6H_4{\cdot}NH_2$, homologues of aniline. There are three isomers, viz., *o*-toluidine, a liquid, b.p. 197° C.; *p*-toluidine, crystals, m.p. 43° C., b.p. 198° C.; *m*-toluidine, a liquid, b.p. 199° C.

Tombigbee Sand (*Geol.*). See **Eutaw Group.**

tomen'tose (*Bot.*). Covered with a felt of cottony hairs; downy.

tomen'tum (*Bot.*). A covering of felted cottony hairs.

tommy or **tommy bar** (*Eng.*). A rod inserted loosely in a diametral hole in a bolt head or tubular spanner in order to turn it. See **box spanner.**

Tomosvary's organs (*Zool.*). In some Centipedes, transparent chitinous projections, covered with fine hairs, placed on the head near the base of the antennae; they are believed to be auditory in function.

-tomy (Greek *tomē*, a cut, *temnein*, to cut). A suffix used in the construction of compound terms, especially in Medicine; e.g. *phlebotomy*, the cutting of a vein.

ton. A unit of weight for large quantities. The *long ton*, commonly used in Britain, is 2240 lb. The *short ton*, commonly used in America, is 2000 lb. The *metric ton* (1000 kilograms) is 2204·6 lb. In Britain the *short ton* is used in metalliferous mining, the *long ton* in coal-mining; the *smelter's ton* is greater than the long ton. For the nautical sense, see **tonnage.**

to'nalite (*Geol.*). A coarse-grained igneous rock of dioritic composition carrying quartz as an essential constituent, that is, quartz-mica-diorite. Two varieties are distinguished: soda-tonalite, with albite in excess of anorthite, and lime-tonalite, with anorthite in excess of albite.

tonal'ity (*Acous.*). In music, the type of scale and key in which a musical work is written. See **atonality.**—(*Photog.*) See **tone.**

tone (*Acous.*). Strictly, a sound-wave of one frequency, but the term is loosely applied to any steady complex tone or musical combination of complex tones. It is also applied to an electrical current giving rise to an acoustic tone, and (wrongly) to the quality of reproduction of **radio-receivers.** See **alien frequencies.**

See **anti-side—**
busy—
complex—
dialling—
edge—
N.U.—
ringing—
side—
warble—

tone (*Dec.*). The depth or brilliance of a colour.

tone or **tonality** (*Photog.*). The subjective relations between the colours of a photograph.

tone (*Zool.*). The condition of elasticity or tension proper to the living tissues of the animal body, especially muscles.—*adj.* **tonic.**

tone-control transformer (*Elec. Comm.*). A transformer in which the leakage and/or self-capacity can be altered in such a way as to regulate its response over the frequency range it is required to operate.

tone-deaf (*Acous.*). Said of persons who cannot be trained to appreciate musical tones.

tone wheel (*Radio*). See **chopper** (1).

tong-test ammeter (*Elec. Eng.*). An a.c. ammeter and current transformer combination whose iron core can be opened and closed round a cable, thus forming the single-turn primary winding of the transformer.

tongs (*Masonry*). See **stone tongs.**

tongue (*Join.*). A slip feather.

tongue (*Teleg.*). In a telegraph relay, the moving contact which leaves the back or spacing stop and moves towards the marking or front stop on operation of the relay.

tongue (*Zool.*). In Vertebrates, the movable muscular organ lying on, and attached to, the floor of the buccal cavity; it has important functions in connexion with tasting, mastication, swallowing, and (in higher forms) sound production: in Invertebrates, especially Insects, any conformation of the mouth-parts which resembles the tongue in structure, appearance, or function—proboscis; antlia; haustellum; radula; ligula; any structure which resembles the tongue.

tongue-and-groove joint (*Join.*). A joint formed between the butting edges of two boards, one of which has, along the middle of its length, a projecting fin cut to fit into a corresponding plough groove in the other.

tongue bars (*Zool.*). In *Cephalochorda*, the secondary gill-bars.

tongue, blue (*Vet.*). See **malarial catarrhal fever of sheep.**

tonic (*Zool.*). *Adj.* from *tone* and *tonus* (qq v.).

tonic train (*Radio*). See **interrupted continuous waves.**

tonic′ity (*Zool.*). See **tone.**

toning (*Photog.*). The alteration of the colour of a silver print by chemical action.

See **chemical—** **dye—**

tonnage (*Ship Constr.*). A measurement assigned by the Board of Trade, under legal regulations, for assessing dues, etc. It is expressed in tons, one ton being 100 cubic feet. The main item, underdeck tonnage, is measured up to the free-board deck. Above-deck spaces are added to give gross tonnage.

to′noplast (*Bot.*). The cytoplasmic membrane surrounding a vacuole in the protoplast.

tonsillec′tomy (*Med.*). The surgical removal of the tonsils.

tonsilli′tis (*Med.*). Inflammation of the tonsils. See also **quinsy.**

tonsils (*Zool.*). In Vertebrates, lymphoid bodies of disputed function situated at the junction of the buccal cavity and the pharynx.

to′nus (*Zool.*). A state of persistent excitation: in plain or involuntary muscle, a prolonged state of contraction, independent of continued excitation by nervous impulses: in striated or voluntary muscle, a similar state of prolonged contraction dependent on continued impulses from the nerve-centres: in certain nerve-centres, as the respiratory centre, the state in which impulses are constantly given out without any corresponding afferent impulses from the receptors.—*adj.* **tonic.**

tool post (*Eng.*). The clamp by which a lathe or shaping-machine tool is held in the slide rest or ram. In its simplest form it consists of a slotted post, the end of which carries a clamping screw.

tool steel (*Met.*). Steel suitable for use in tools, usually for cutting or shaping wood or metals. The main qualities required are hardness, toughness, ability to retain a cutting edge, etc. Contains 0·6-1·6% carbon. Many tool steels contain high percentages of alloying metals—tungsten, chromium, molybdenum, etc. (see **high-speed steel**). Usually quenched and tempered, to obtain the required properties.

tooled ashlar (*Masonry*). A block of stone finished with parallel vertical flutes.

tooth (*Bot.*). (1) Any small irregularity on the margin of a leaf.—(2) The free tip of one petal of a gamopetalous corolla.

tooth (*Elec. Eng.*). The projection formed in the core-plate of an armature between adjacent slots.

tooth (*Zool.*). A hard projecting body with a masticatory function. In Vertebrates, a hard calcareous or horny body attached to the skeletal framework of the mouth or pharynx, used for trituration or fragmentation of food: in Invertebrates, any similar projection of chitinous or calcareous material used for mastication or trituration.

tooth ratio (*Elec. Eng.*). The ratio of slot width to tooth width as measured at the circumference of the armature.

tooth ripple (*Elec. Eng.*). See **slot ripple.**

toothed wheels (*Eng.*).

See **bevel gear**
helical do.
spiral do.
spur gears
worm do.

toothings (*Build.*). The recesses left in alternate courses of a wall when later extension is allowed for.

top (*Acous.*). A colloquialism for the higher range of audio-frequencies in sound-reproduction.

top (*Spinning*). Combed sliver which has been prepared for spinning into worsted yarn.

top beam (*Carp.*). The horizontal beam connecting the rafters of a collar-beam roof.

top-contact rail (*Elec. Eng.*). A type of contact rail, as used in electric traction, where contact between the collecting-shoe and the rail is made at the upper surface of the rail.

top dead-centre (*Eng.*). See **inner dead-centre.**

top-hung (*Build.*). Said of a window-sash arranged to open outwards about hinges on its upper edge.

top yeast (*Bot.*). The yeast which vegetates at the surface of a fluid in which fermentation is proceeding.

to′paz (*Min.*). Silicate of aluminium and fluorine, usually containing hydroxyl, which crystallises in the orthorhombic system. It usually occurs in granite-like rocks. It is colourless, pale blue, or pale yellow in colour, and is used as a gemstone. Cf. *citrine*, *Scotch topaz*, *Spanish topaz*. ORIENTAL TOPAZ is the name given in the gemstone trade to a yellow variety of sapphire.

topaz′olite (*Min.*). A variety of the calcium-iron garnet *andradite* (q.v.), which has the colour and transparency of topaz. It is sometimes green and the crystals often show a vicinal hexakis octahedron.

topha′ceous (*Med.*). Sandy, gritty, of the nature of tophus; e.g. *tophaceous gout.*

to′phus (*Med.*). A hard nodule composed of crystals of sodium biurate which are deposited in bodily tissues in gout.

topochem′istry (*Chem.*). The study of reactions which occur only at certain definite regions in a system.

topog′raphy (*Geog.*, *Surv.*). The delineation of the natural and artificial features of an area.

topotax′is (*Biol.*). Response or reaction of an organism to a stimulus, in which the organism orientates itself in relation to the stimulus and moves towards or away from it.

to′potype (*Zool.*). A specimen collected in the same locality as the original type specimen of the same genus or species.

topping (*Furs*). The brushing of fur with dyes, to colour tips of hairs only.

topping coat (*Plast.*). The floating coat applied after rendering.

topping-up (*Elec. Eng.*). The process of making good the loss of water by evaporation in a secondary cell by adding distilled water.

topset beds (*Geol.*). Gently inclined strata deposited on the subaerial plain or the just-submerged part of a delta. They are succeeded seawards by the foreset beds and, in deep water, by the bottomset beds.

tor′banite (*Min.*). A variety of oil shale containing 70-80% of carbonaceous matter, including an abundance of spores. It is dark-brown in colour, and is found at Torbane Hill near Bathgate (Scotland).

tor′bernite (*Min.*). A beautiful rich-green hydrous phosphate of uranium and copper which crystallises in the orthorhombic system but is pseudo-tetragonal. It occurs associated with autunite and frequently in parallel growth with it, and also with other uranium minerals. Also called COPPER (or CUPRO-) URANITE.

torching (*Build.*). The operation, sometimes performed on slates which have been laid on battens only and not on boarding, of pointing the horizontal joints from the inside with hair mortar or cement.

torf′schlamm (*Ecol.*). See **dy.**

tor′mae (*Zool.*). Two small chitinous processes of the pharyngeal surface of the labrum in Insecta.

tormentor (*Cinema.*). In motion-picture production, a portable panel for absorbing sound-waves and regulating the reflection of sound-waves in a set.

torna'do (*Meteor.*). An intensely destructive, advancing whirlwind formed from strongly ascending currents. When over the sea, the apparent drawing up of water arises from the condensing of water vapour in the vacuous core; also, in W. Africa, the squall following thunderstorms between the wet and dry seasons.

torna'ria (*Zool.*). The ciliated pelagic larval form of *Balanoglossida.*

to'roid (*Elec. Comm.*). Said of a coil or transformer which corresponds in shape to an anchor ring. Adopted because of the ease of making equal windings, exactly balanced with respect to the circuit in which they are inserted, and because it does not affect other adjacent coils, on account of the entire enclosure of magnetic field.

toroidal winding (*Elec. Eng.*). See **ring winding** (1).

torpedo (*Ammunition*). A projectile provided with a *warhead* containing the explosive charge, an engine and propeller which drive it at high speed, a gyro steering-gear, and a depth-regulating gear. It is usually discharged from a tube by air pressure, or by a small explosive charge; it may be mounted in a ship above water, or launched from an aircraft, or it may be submerged.

torque (*Mech.*). The uniform or fluctuating turning moment exerted by a tangential force acting at a distance from the axis of rotation or twist; expressed in lb.-ft.—(*Aero.*) Airscrew torque is the measure of the total air forces on the airscrew blades, expressed as a moment about its axis.

torque convertor (*Eng.*). A device which acts as an infinitely variable gear, but generally at varying efficiency; e.g. a centrifugal pump in circuit with an inward-flow turbine.

torque meter (*Eng.*). A torsion meter attached to a rotating shaft, the angle of twist of a known length of shaft between the gauge points of the meter being indicated by optical or electrical means, thus enabling the power transmitted to be calculated. A form of transmission dynamometer.

torrent'icoles (*Ecol.*). Animals living in swiftly running waters, such as mountain streams.

Torrid Zone (*Astron.*). The region of the earth bounded by the two tropics and bisected by the equator. So called because, owing to the height of the sun in the sky, the climate is all the year round very hot and has almost no seasonal temperature variations.

Torrido'nian (*Geol.*). A succession of conglomerates and red sandstones and arkoses forming part of the Pre-Cambrian System in the north-west highlands of Scotland. They were deposited in mountain-girt basins under desert-like conditions, and rest on the Lewisian schists and gneisses.

tor'siograph (*Eng.*). An instrument for recording and measuring the frequency and amplitude of torsional vibrations in a shaft.

torsion. The state of strain set up in a part by twisting. The external twisting effort is opposed by the shear stresses induced in the material.

torsion (*Bot.*). Twisting without marked displacement.

torsion (*Zool.*). The preliminary twisting of the visceral hump in gastropod larvae which results in the transfer of the pallial cavity from the posterior to the anterior face, as distinct from the secondary or spiral twisting of the hump exemplified by the spiral form of the shell.

torsion balance (*Phys.*). A delicate device for measuring small forces such as those due to gravitation, magnetism, or electric charges. The force is caused to act at one end of a small horizontal rod, which is suspended at the end of a fine vertical fibre. The rod turns until the turning moment of the force is balanced by the torsional reaction of the twisted fibre, the deflection being measured by a lamp and scale using a small mirror fixed to the suspended rod.

torsion bar suspension (*Automobiles*). A springing system, used in some independent suspension designs, in which straight bars, anchored at one end, are subjected to torsion by the weight of the car, thereby acting as springs.

torsion galvanometer (*Elec. Eng.*). A galvanometer in which the controlling torque is measured by the angle through which the suspension head must be rotated in order to bring the pointer back to zero.

torsional pendulum (*Horol.*). A pendulum in which the bob rotates, in a plane perpendicular to the line of suspension, by the twisting of the suspension ribbon. Used where a long time of vibration is required, as with 400-day clocks.

torticol'lis (*Med.*). Wry neck. Stiff neck. A twisted position of the head on the neck, due to disease of the cervical vertebrae or to affections (especially rheumatic) of the muscles of the neck. See also **spasmodic torticollis.**

tor'ticone (*Zool.*). A spirally twisted shell.

tor'tuose, tortuous (*Bot., etc.*). Pursuing a somewhat zigzag line.

tor'uloid, tor'ulose (*Bot.*). Elongated and cylindrical, with fairly evenly spaced swellings; necklace-like.

torulo'sis (*Med.*). A disease due to infection with the yeast-like micro-organism *Torula histolytica*; affects especially the central nervous system.

tor'ulus (*Zool.*). The socket for the insertion of the antenna in *Insecta.*

tor'us (*Bot.*). (1) The receptacle of a flower.—(2) The tiny thickening on the middle of the closing membrane of a bordered pit.

torus (*Zool.*). A ridge or fold; as in *Polychaeta,* a ridge bearing uncini.

tos'canite (*Geol.*). A quartz-bearing trachy-andesite, i.e. a fine-grained acid igneous rock, commonly occurring as lava-flows and characterised by the presence of orthoclase and plagioclase feldspars.

tossing (*Mining*). The operation of raising the grade or purity of a concentrate by violent stirring, followed by packing, in a kieve or open *dolly tub* (q.v.).

total emission (*Thermionics*). See **saturation current.**

total losses (*Elec. Eng.*). The totality of power loss in an electrical machine, equal to the difference between the input and the output powers.

total modulation (*Radio*). Amplitude modulation to a depth of 100%.

total output panel (*Elec. Eng.*). A panel of a generating station switchboard carrying instruments for measuring and recording the total power output of the station.

total response (*Acous.*). The response of a loudspeaker expressed as the relative ratio of the output sound-power to the applied electrical power for each frequency over the operating frequency-range. Substantially equal to the mean-spherical response of the device.

totally enclosed motor (*Elec. Eng.*). A motor with no provision for ventilation but not necessarily water- or gas-tight.

toti- (Latin *totus*, all). A prefix used in the construction of compound terms; e.g. *totipalmate,* having the foot completely webbed.

totipo'tent (*Zool.*). Capable of development into a complete organ or embryo: capable of self-differentiation.

touch (*Plumb.*). The plumber's term for tallow.

touch, double (*Acous.*). See **double touch.**

touchstone (*Min.*). See **Lydian stone.**

touchwood (*Bot.*). Wood much decayed as a result of fungal attack; it crumbles readily, and when dry is easily ignited by a spark.

tough pitch (*Met.*). A term applied to copper in which the oxygen content has been correctly adjusted at 0·03–0·06% by poling. Distinguished from overpoled and underpoled copper.

toughened glass (*Glass*). See **safety glass.**

toughness (*Met.*). A term denoting a condition intermediate between brittleness and softness. It is indicated in tensile test by a high ultimate tensile stress and low to moderate elongation and reduction in area. It is also associated with high values in notched bar test.

tourbillon watch, toor-bil′yon (*Horol.*). A watch fitted with a revolving carriage which carries the balance and escapement round the fourth wheel, for the purpose of eliminating the positional errors.

tour′maline (*Min.*). A complex silicate of boron and aluminium, with, in addition, magnesium, iron, or the alkali metals, and fluorine in small amounts, which crystallises in the trigonal system. It is usually found in granites or gneisses. The variously coloured and transparent varieties are used as gemstones, under the names *achroite* (colourless), *indicolite* (blue), *rubellite* (pink). The common black variety is *schorl.*

tourmalinisation (*Geol.*). The processes whereby minerals or rocks are replaced wholly or in part by tourmaline. These processes result from the invasion by mineralising fluxes and gases. See **pneumatolysis.**

tourniquet, toor′ni-ket (*Surg.*). Any instrument or appliance which, by means of a constricting band, a pad to lie over the artery, and a device for tightening it, exerts pressure on an artery so as to control bleeding from it.

tow-net (*Ocean.*). A conical net having the mouth kept open by a frame and at the apex a glass or metal vessel in which the catch accumulates; it is towed behind a boat in order to obtain samples of the fauna of the surface waters.

tower (*Elec. Eng.*). The lattice-type steel structure used to carry the several conductors of a transmission line at a considerable height above the ground. Also called PYLON.—(*Struct.*) See **pylon.**

tower bolt (*Build.*). See **barrel bolt.**

tower clock (*Horol.*). A clock for mounting in a tower or similar structure, usually with exposed dials and hands.

tower crane (*Eng.*). A rotatable cantilever pivoted to the top of a steelwork tower, either fixed or carried on rails. The load is balanced by the lifting machinery carried on the opposite side of the pivot. Commonly used in shipbuilding.

tower gantry (*Build.*). See **derrick tower gantry.**

tower line (*Elec. Eng.*). An electric power transmission line carried on steel towers.

town gas (*Fuels, etc.*). Gas made and supplied for domestic or trade use. Usually a mixture of coal gas and carburetted water gas; the calorific value ranges from 450 to 500 B.Th.U. per cubic foot.

Townend ring (*Aero.*). A special form of cowling for a radial engine. It consists of a concentric ring, of aerofoil section, which deflects the air inwards on to the engine cylinders with a minimum drag. Often used in addition as an exhaust collector ring.

toxae′mia, toxe′mia (*Med.*). The condition of a patient caused by the absorption into the tissues and into the blood of toxins formed by micro-organisms at the site of infection.

toxicol′ogy (*Med.*). That branch of medical science which deals with the nature and effects of poisons.

T.P. (*Surv.*). Abbrev. for *turning point* (see **change point**).

trabant′ (*Bot.*). See **satellite.**

trabec′ula (*Bot.*). A rod-like structure, or a rod-like cell, running across a cavity.

trabecula (*Zool.*). A row of cells bridging a cavity: a band or plate of fibrous tissue forming part of the internal supporting framework of an organ: one of a pair of cartilaginous bars lying just anterior to the parachordals in the developing cranium.—*adjs.* **trabec′ular, trabec′ulate.**

trabec′ulate (*Bot.*). (1) Said of peristome teeth marked by transverse bars.—(2) Having trabeculae.

tracer (*Ammunition*). An attachment to the base of a small projectile, which, by emitting smoke or flame, makes the path of the trajectory visible.

trache′a (*Bot.*). See **vessel.**

trachea (*Zool.*). An air-tube of the respiratory system in certain Arthropods, as Insects: in air-breathing Vertebrates, the windpipe leading from the glottis to the lungs.—*adj.* **trache′al.**

tracheal gills (*Zool.*). In some aquatic Insect larvae, filiform or lamellate respiratory outgrowths of the abdomen richly supplied with tracheae and tracheoles.

tracheal system (*Zool.*). In certain Arthropods, as Insects and Myriapods, a system of respiratory tubules containing air and passing to all parts of the body.

trache′idal (*Bot.*). Of the nature of a tracheide.

trach′eide (*Bot.*). An elongated element with pointed ends, occurring in wood. It is derived from a single cell, which lengthens and develops thickened pitted walls, losing its living contents. Tracheides conduct water.

trachel′tis (*Med.*). Inflammation of the mucous membrane of the trachea.

trachel-, trachelo- (Greek *trachēlos,* neck, throat). A prefix used in the construction of compound terms; e.g. *trachelomastoid,* pertaining to the tracheal region and the mastoid process.

trach′elate (*Zool.*). Neck-like.

trachelec′tomy (*Surg.*). Surgical excision of the cervix uteri.

trachelor′rhaphy (*Surg.*). The surgical repair of lacerations of the cervix uteri.

tracheo- (Latin *trachia,* windpipe). A prefix used in the construction of compound terms; e.g. *tracheobronchial* (q.v.).

tracheobron′chial (*Zool.*). Formed from, or pertaining to, the trachea and bronchi; as a particular type of syrinx.

tracheobronchi′tis (*Med.*). Inflammation of the mucous membrane of both the trachea and the bronchi.—(*Vet.*) An inflammation of the trachea and bronchi of dogs due to infection by the nematode worm *Oslerus osleri.*

trach′eocele (*Med.*). An air-containing swelling in the neck due to the bulging of the wall of the trachea between the cartilages of the trachea.

trache′ole (*Zool.*). The ultimate branches of the tracheal system.

tracheos′copy (*Surg.*). Inspection of the interior of the trachea by means of a tubular instrument fitted with a lamp.

tracheot′omy (*Surg.*). The operation of cutting into the trachea, usually for the relief of respiratory obstruction.

tracho′ma (*Med.*). A highly contagious infection of the conjunctiva covering the eyelids, characterised by the presence of small elevations on the inner side of the lid and leading often to blindness.

trachy-andesite (*Geol.*). Fine-grained igneous rock, commonly occurring as lava flows, intermediate in composition between trachyte and andesite, that is, containing both orthoclase and plagioclase in approximately equal amounts. See also **toscanite.**

trachybas′alt (*Geol.*). A fine-grained igneous rock commonly occurring in lava flows and sharing the mineralogical characters of trachyte and basalt. The rock contains sanidine (characteristic of trachyte) and calcic plagioclase (characteristic of basalt).

trachyglos'sate (*Zool.*). Having a rough tongue, adapted for rasping.

Trachyli'na (*Zool.*). An order of *Hydrozoa* in which the hydroid phase is unknown, the medusoid phase developing directly from the egg; tentaculocysts occur; the gonads are situated on the radial canals or on the floor of the gastric cavity. Jelly Fish.

trachysper'mous (*Bot.*). Having seeds with rough surfaces.

trach'yte (*Geol.*). A fine-grained igneous rock-type, of intermediate composition, in most specimens with little or no quartz, consisting largely of alkali-feldspars (sanidine or oligoclase) together with a small amount of coloured silicates such as diopside, hornblende, or mica.

track (*Acous.*). The groove which is cut on a wax blank during disc-recording and is carried through the processing to the finished disc.

track (*Cinema.*). See **tracking shot** and **sound track.**

track (*Rail.*). The rail or rails along which a train travels.

track brake (*Elec Eng.*). A solenoid-operated tram-car track in which a brake-shoe acts directly on the track rail.

track circuit (*Elec. Eng.*). The electric circuit formed by the two running rails of a traction system, as used for track-circuit signalling.

track-circuit signalling (*Elec. Eng.*). An electric signalling system making use of the change in resistance of a track circuit when an electric train passes over a section of the railway track.

track rail-bond (*Elec. Eng.*). A rail-bond for preserving the electrical continuity of the track rails when these are used for carrying traction or other currents.

track relay (*Elec. Eng.*). A relay used in track-circuit signalling for controlling the electrically operated signals.

track rod (*Automobiles*). A transverse link which, through ball-joints, connects arms carried by the stub axles, in order to convey angular motion from the axle directly steered to the other.

track-sectioning cabin (*Elec. Eng.*). A cabin housing switchgear by means of which the supply to different sections of an electrified railway line may be disconnected.

track, showing the (*Cinema.*). The temporary removal of the mask in the film-gate of a sound-film projector to allow an image of the sound-track to be projected for inspection on the left side of the picture on the screen.

track switch (*Elec. Eng.*). A switch controlling the supply of current to a section of an electrified railway line.

tracker (*Acous.*). The feed-motion arrangement for traversing the cutting-head across the wax blank during the making of a record.

tracker wires (*Elec. Eng.*). Wires forming a mechanical connexion between a switch and its operating mechanism situated some distance away.

tracking (*Acous.*). The ability of a reproducing needle to follow the recorded groove on a gramophone record; also, the guidance given by the mechanism to the cutting head, so that the stylus cuts along an accurately spaced spiral.

tracking (*Cables*). Tracks along the surface of oil-impregnated paper caused by a surface stress. Tracking causes waxing and carbon formation.

tracking shot (*Cinema.*). A shot in motion-picture production which involves the longitudinal or sideways motion of the camera, which, with its operators, is mounted on a dolly. This latter may be mounted on rails (*track*), which are nailed to the floor, or laid on the earth.

trackless trolley (*Elec. Eng.*). An obsolescent name for *trolley omnibus.*

tract (*Zool.*). The extent of an organ or system, as the *alimentary tract*: an area or expanse, as the *ciliated tracts* of some *Ctenophora*: a band of nerve-fibres, as the *optic tract*: a *pteryla* (q.v.).

tractel'lum (*Zool.*). An anterior flagellum of *Mastigophora*, which draws the organism after it. Cf. *pulsellum.*

tractile fibre (*Cyt.*). A spindle fibre which begins to develop from an attachment to a chromosome and extends to the pole of the spindle.

traction. The propulsion of vehicles, the motive force being indicated adjectivally, e.g. *electric traction, steam traction,* etc.: specifically, electric traction.

traction battery (*Elec. Eng.*). See **vehicle battery.**

traction engine (*Eng.*). A road locomotive in which large road wheels are gear-driven from a simple or compound engine mounted on top of the boiler, a rope drum being provided for haulage purposes.

traction generator (*Elec Eng.*). A d.c. generator used solely for supplying power to an electric traction system.

traction lamp (*Illum.*). An electric lamp having a specially robust filament to withstand vibration; used on trains or road vehicles.

traction load (*Elec. Eng.*). That part of the load carried by a d.c. generating station which is formed by the traction system which it supplies.

traction motor (*Elec. Eng.*). An electric motor specially designed for traction service.

traction permeameter (*Elec. Eng.*). An apparatus for measuring the permeability of a sample of iron by weighing the mechanical force between the end of the sample and a surface forming part of the yoke of the apparatus.

traction rope (*Civ. Eng.*). The endless rope employed in an aerial ropeway system to effect movement of the carriers transporting the loads. Also called a HAULING ROPE.

tractive force (or **effort**) (*Eng.*). Of a locomotive, the pull, in lbs., which the engine is capable of exerting at the draw-bar, the limiting value of which is given by the product of the weight on the coupled wheels and the coefficient of friction between wheels and rails.—(*Elec. Eng.*) The pull, in lbs., necessary to detach the armature from an excited electromagnet.

tractor. A vehicle capable of propelling itself along a roadway or track, or for drawing other vehicles.

tractor (*Aero.*). A propeller or air-screw which is in front of the engine and the structure of the aircraft, as contrasted with a *pusher*, which is behind the engine and pushes the aircraft forward.

tractor mower (*Agric. Mach.*). A machine similar in design to the *horse mower* (q.v.) but with longer cutter-bars, which are operated directly from a shaft on the tractor.

tractor plough (*Agric. Mach.*). A plough consisting of a frame to which is attached the requisite number of coulters, shares, and breasts, usually not exceeding five of each. Mechanism enables all the working parts to be lifted by the pull of a cord, when the plough is being turned. See **mouldboard plough.**

tractrix horn (*Acous.*). A horn which is so shaped that the area at a distance from the throat is dependent on the tractrix curve, as contrasted with the exponential horn.

trade-winds (*Meteor.*). Persistent winds blowing from the N.E. in the northern hemisphere and from the S.E. in the southern hemisphere between the *horse latitudes* (calm belts at 30° N. and S. of the equator) towards the *doldrums* (equatorial regions of very irregular calms and storms).

traffic (*Teleph.*). The measure, in traffic units, of the telephonic use of a number of circuits or an exchange.

traffic diagram (*Auto. Teleph.*). The diagram which indicates the telephone traffic over the various routes inside an automatic switching exchange.

traffic flow (*Auto. Teleph.*). The number of calls which an exchange, or a set of switches, is carrying at any instant.

traffic lane (*Civ. Eng.*). A longitudinal strip of a road surface regarded as a unit width (usually taken as 10 ft.) for the passage of a single line of traffic.

traffic lights (*Elec. Eng.*). Red, amber, and green signal-lights installed at street intersections, etc., for controlling the flow of traffic; operated by hand, by fixed time sequence, or automatically, depending on the flow of traffic.

traffic meter (*Auto. Teleph.*). A meter which, inserted at any part of an automatic telephone exchange, totals the number of calls passing through a group or switch.

traffic unit (*Teleph.*). The measure of the occupancy of telephonic apparatus during conversation. One traffic unit, T U., equals the use of one circuit for one minute or for one hour. See **congestion traffic-unit meter.**

trail (*Artillery*). The part of a gun-carriage which rests on the ground when the gun is fired and which takes the horizontal component of the force of recoil.

trail (*Automobiles*). The distance by which the point of contact of a steered wheel with the ground lies behind the intersection of the swivel-pin axis and the ground. See **caster action.**

trails (*Astron.*). (1) Long flashes of brightness seen in the wake of some large meteors in the sky.—(2) The lines left on a photographic plate when a star image, instead of being kept stationary by moving the plate, is allowed to 'trail' across it during the exposure.

trail eye (*Artillery*). The means by which a gun is attached to the gun limber for travelling.

Trail formation (*Geol.*). A group of shales with sandstones and conglomerates of non-marine origin, occurring in the Lower Jurassic of the Cordilleran geosyncline, e.g. in California; equivalent to the lower parts of the Lias of Europe.

trailer. A vehicle drawn by a tractor.

trailer (*Cinema.*). (1) The blank piece of film, generally black, which is attached or printed at the end of every reel, so that when the projected picture finishes there is time to close the picture shutter before the threaded film runs out.—(2) A strip of film projected in a cinema to advertise a forthcoming film.

trailing action (*Automobiles*). See **caster action.**

trailing axle,—springs,—wheels, etc. (*Eng.*). In a locomotive, the parts belonging to the rear-most axle.

trailing cable (*Elec. Eng.*). A flexible cable carrying the current to a transportable piece of electric apparatus.

trailing edge (*Elec. Eng.*). See **leaving edge.**

trailing pole tip (or **horn**) (*Elec. Eng.*). The edge of a field pole which is passed last by an armature conductor, irrespective of the direction of rotation of the armature.

train (*Horol.*). The interconnected wheels and pinions of a watch, clock, or similar mechanism. A watch is said to have an 18,000 train when the train is suitable for a balance making 18,000 vibrations per hour; a 21,600 train is used for small wrist-watches, and a 14,400 train for chronometers.

train brake (*Eng.*). See **vacuum brake, air brake.**

train control (*Elec. Eng.*). The method by which the mechanical control operations carried out by the driver of an electric train are translated into the appropriate changes in the electric circuit conditions pertaining to the supply of the traction motors.

train describer (*Elec. Eng.*). An automatic or semi-automatic device for giving information regarding the destination of trains. Also called DESTINATION INDICATOR.

train lighting system (*Elec. Eng.*). The system of electric illumination adopted in electric railway vehicles.

train-line (*Elec. Eng.*). An electric cable extending over the length of a railway coach, and terminating in sockets at each end so that couplers may maintain continuity over the whole length of the train. See **bus-line, control-line, pump-line.**

train of waves (*Radio*). A group of waves of limited duration, such as that resulting from a single spark discharge in an oscillatory circuit.

training works (*Hyd. Eng.*). Works undertaken to remedy instability and eccentricity of flow in channels. See **dyke, levee, groynes, ground sills.**

tram. Abbrev. for *tramcar.*—(*Mining*) A small wagon, tub, cocoa-pan, corve, corf, or hutch, for carrying mineral.

tramcar (*Elec. Eng.*). An electric tractor forming a passenger vehicle, as used on a tramway; a streetcar.

tramway (*Elec. Eng.*). An electric traction system in which one or more passenger vehicles are propelled along a track laid in city streets and along inter-urban roads

tramway motor (*Elec. Eng.*). A d.c. motor specially designed for the propulsion of tramcars.

tramway poles (*Elec. Eng.*). The steel poles fixed at the sides or centre of a street or road for supporting the overhead conductors of a tramway system.

tram (*Spinning*). The term for silk yarn intended for weft; it is formed from two or more single threads, slightly twisted.

tram'a (*Bot.*). The somewhat loosely packed hyphae which occupy the middle of the gill of an agaric.

trammel-net (*Ocean.*). A form of *gill-net* (q.v.) consisting of two taut outer nets of large mesh and a larger slack middle net of finer mesh, all three being attached to each other at the head, foot, and ends.

trammels (*Instruments*). See **beam compasses.**

tramontan'a (*Meteor.*). A northerly mountain wind blowing over Italy.

trans- (*Chem.*). That geometrical isomer in which the two radicals are situated on opposite sides of the plane of a double bond or alicyclic ring.

transconductance (*Elec. Comm.*). The reciprocal of *transfer impedance*. The ratio of the current in one part of an electrical system to the electromotive force or potential difference applied at some other point; this co-exists with the current and varies proportionally with it, but not necessarily with the same frequency, e.g. in a demodulator. See **mutual conductance.**

transcription (*Elec. Comm.*). The recording of a broadcast performance for subsequent re-broadcast or other use.

transcrystalline failure (*Met.*). The normal type of failure observed in metals. The line of fracture passes through the crystals, and not round the boundaries as in intercrystalline failure.

transducer (*Elec. Comm.*). A power-transforming device for insertion between electrical, mechanical, or acoustic parts of systems of communication.

See **active— ideal— passive—**

tran'sect (*Bot.*). A line or belt of vegetation marked off for study.

transep'tate (*Bot.*). Having all the septa placed transversely.

transfer (*Photog.*). A photographic image which has been transferred from one support to another.

transfer admittance (*Elec. Comm.*). The ratio of the current in any part of a mesh to the electromotive force producing it. The latter, however, is applied in another part of the mesh, all other electromotive forces being reduced to zero.

transfer circuit (*Teleph.*). A circuit between operators' positions in an exchange, allowing the functions of one operator to be taken over by another during slack periods.

transfer constant (*Elec. Comm.*). The ratio of the volt-amperes leaving to those entering a network when it is terminated with its image impedances.

transfer (or **mutual**) **impedance** (*Elec. Comm.*). The ratio of the applied voltage at one part of a network or transmission line to the current at another part of the same system.

transfer moulding (*Plastics*). Injection moulding with thermosetting compositions.

transfer printing (*Pot.*). Decoration by means of thin paper prints taken from engraved and inked copper-plates, or from lithographic stones, impressed on the ware and then washed off.

transfer process (*Photog.*). Any means whereby an image, dyed or pigmented, is transferred to a new emulsion.

See **single—** **double—**

transference (*Psycho-an.*). The displacement of affect, positive or negative, from the person to whom it was originally directed, on to another. Used specifically in relation to the psychoanalytical situation where all the earlier emotional attitudes and reactions of the patient to his parents are displaced on to the analyst, and relived in relation to him. See **counter—*, negative—*, positive—*.**

transference number. *Transport number* (q.v.).

transfer'otype (*Photog.*). Bromide printing paper in which the supporting paper is coated with a soluble gelatine layer before the addition of the sensitive emulsion, to facilitate the transfer of the film to other supports.

transformation (*Met.*). A constitutional change in a solid metal, e.g. the change from gamma to alpha iron, or the formation of pearlite from austenite.

transformation (transformer) ratio (*Elec. Eng.*). The ratio between the primary and secondary terminal voltages of a transformer. *

transformer (*Elec. Comm.*). An electromagnetic device, consisting of windings on a core of magnetic material, for separating electrical circuits while permitting the flow of electrical power from one to the other; also for matching impedances in communication circuits, so that the maximum power is extractable from a given source.

See **audio-frequency—** **output—**
bridge— **step-down—**
input— **step-up—**
inter-valve— **tone-control—**
matching—

transformer (*Elec. Eng.*). A static apparatus for converting electrical energy received at one voltage to electrical energy sent out at a different voltage.

transformer booster (*Elec. Eng.*). A transformer connected with its secondary in series with the line, so that its voltage is added to that of the circuit; used to compensate the voltage drop in a feeder or distributor.

transformer core (*Elec. Eng.*). The laminated iron structure forming the magnetic circuit of a transformer.

transformer (or **mutual**) **coupling** (*Elec. Comm.*). The transference, in both directions, of electrical energy from one circuit to another by a transformer, of any degree of coupling, the primary being in one circuit, the secondary in the other. See **inter-valve transformer coupling.**

transformer oil (*Elec. Eng.*). A special type of oil of high dielectric strength, forming the cooling medium of electric power transformers.

transformer plate (*Elec. Eng.*). Sheet-iron of low magnetic loss, for transformer core laminations

transformer ratio. See **transformation ratio.**

transformer stampings (*Elec. Eng.*). The laminations, stamped out of transformer plate, which are assembled to form the transformer core.

transformer switch (*Elec. Eng.*). A switch or circuit-breaker for disconnecting a transformer from the supply at times of uneconomic loading.

transformer tank (*Elec. Eng.*). The steel tank encasing the core and windings of a transformer and holding the transformer oil.

transformer tube (*Elec. Eng.*). One of a number of steel tubes on the outside of a transformer tank to provide a vertical path of circulation for the transformer oil.

transformer winding (*Elec. Eng.*). The electrically active part of a transformer, which surrounds the magnetically active transformer core.

transforming station (*Elec. Eng.*). A point on an electricity supply system where a change of supply voltage occurs.

transfusion (*Med.*). Blood transfusion. The operation of transferring the blood of one person into the veins of another.

transfusion cell (*Bot.*). See **passage cell.**

transfusion tissue (*Bot.*). A group of short tracheides lying by the side of the xylem in a leaf of a pine (and related plants), by means of which material passes to or from the vascular strand and the rest of the leaf.

transient (*Acous.*). A sound of short period and irregular non-repeating wave-form, which implies a continuous spectrum of sound-energy contributions, the frequency distribution of which determines whether the sound is correctly recognisable or not.

transient (*Elec Comm.*). Any non-cyclic change in any part of a communication system. The most general transient is the step, while the steady-state is represented by any number of sinusoidal variations.

transient (*Elec. Eng.*). A term applied to the current resulting from a voltage surge.

transient (*Zool.*). A distinct individual mode in a developmental series, such as a line of descent, corresponding in the time-character concept to a species in the taxonomic concept.

transient reactance (*Elec. Eng.*). The reactance of the armature winding of a synchronous machine which is caused by the leakage flux. Cf. *synchronous reactance.*

transient stability (*Elec. Eng.*). The stability of a power system under transient current conditions.

transient state (*Elec. Comm.*). The transition period between steady-states in the repetition of a wave-form. See **step.**

transient wave (*Elec. Comm.*). A wave set up in transmission circuits or filters on account of changes in the transmission current amplitude and/or frequency.

transillumina'tion (*Med.*). The passing of a strong light through the walls of a cavity so that its outlines may become visible to the observer and any abnormalities in density detected.

transit (*Astron.*). (1) The apparent passage of a heavenly body across the meridian of a place, due to the earth's diurnal revolution. See **culmination.**—(2) The passage of a smaller body across the disc of a larger body as seen by an observer on the earth, e.g. of Venus or Mercury across the sun's disc, or of a satellite across the disc of its parent planet.

transit (*Surv.*). To rotate the telescope of a theodolite about its trunnion axis, so that the positions of the ends of the telescope are reversed. See **change face.**

transit call (*Teleph.*). In international telephony, a call which is established over more than one international telephone circuit, the transit country not being concerned with the switching, except in emergency. See **single switch call, double switch call.**

transit circle (*Astron.*). See **meridian circle.**

transitman (*Surv.*). An American term for a man operating a transit theodolite. See **American transit.**

transit theodolite (*Surv.*). A theodolite whose telescope is capable of being completely rotated about its horizontal axis. See **American transit, wye theodolite, Everest theodolite.**

transit time (*Thermionics*). The time taken by an electron to go from the cathode to the anode of a thermionic valve ; an important factor in the operation of valves at very high frequencies.

transition cell (*Bot.*) A thin-walled cell at the end of a vein in a leaf, representing the last of the phloem.

transition curve (*Surv.*). A curve of special form connecting a straight and a circular arc. Designed to eliminate sudden change of curvature between the two, and to allow of superelevation being applied gradually to the outer rail or outer part of the curve. Also called an EASEMENT CURVE.

transition elements (*Chem.*). The elements in the middle of the long periods (especially the first) of the periodic system. They differ from one another mainly in the completeness of an inner electron shell, which accounts for the similarity of many of their physical and chemical properties.

transition point (*Chem*). The temperature at which one crystalline form of a substance is converted into another solid modification, i.e the temperature at which they can both exist in equilibrium.

transition region (*Bot.*). The portion of the axis of a young plant in which the change from root structure to shoot structure occurs.

transition stops (*Elec. Eng.*) In a traction-motor controller, intermediate electrical positives inserted between the main circuit positions in order to avoid breaking the circuit.

transitional (*Bot.*). Said of an inflorescence which has some racemose and some cymose characters.

transitional epithelium (*Zool.*). A stratified epithelium consisting of only three or four layers of cells; especially that found lining the ureters, the bladder, and the pelvis of the kidney in Vertebrates.

transitory starch (*Bot.*). Starch formed temporarily in a leaf in which photosynthesis is proceeding faster than the removal or consumption of carbohydrates.

transitron (*Radio, Thermionics*). A pentode in which the suppressor grid acts as the control grid. It is characterised by a negative mutual conductance between the suppressor and screen grids.

translation (*Auto. Teleph.*). Alteration of the number and composition of the last two coded trains of impulses which are dialled by a subscriber and represent a desired exchange. The translation is effected in the director, and is for the purpose of routing the call over a multiplicity of junctions.

translation, translocation (*Zool.*). Change of position of an organ.

translation field (*Auto. Teleph.*). The frame of terminal tags by means of which the coded impulses dialled by a subscriber are translated.

translation of heterosis (*Zool.*). An apparent change in the position of a merome from one somite to another, due to the expansion or contraction of tagmata, as the lateral fins of Fish.

translator (*Teleg.*). A telegraph printing machine which prints, on a slip or page, messages which have been received on a punched slip, which is fed into the translator.

transloca'tion (*Bot*). The movement of material in solution inside the body of the plant —(*Cyt.*) The transfer of a portion of a chromosome, either to another part of the same chromosome or to a different chromosome.—(*Zool.*) See **translation.**

translucent, translucid (*Bot., Min., etc.*). More or less transparent.

transmission (*Elec. Comm., Elec. Eng*) The conveying of electrical energy over a distance.

transmission (*Photog*). The ratio of the transmitted light intensity to the incident light intensity in a developed image on film or glass. Reciprocal of *opacity*. See **density.**

transmission band (*Elec. Comm.*). The band in the frequency spectrum over which minimum attenuation of currents is desired, depending on the type of transmission and the speed of desired signals.

transmission dynamometer (*Eng.*). A device for measuring the torque in a shaft, and hence the power transmitted, either (*a*) by inference from the measured twist over a given length of shaft, obtained by a torsion meter, or (*b*) by direct measurement of the torque acting on the cage carrying the planetary pinions of an interposed differential gear.

transmission level (*Elec. Comm.*). The power in a transmission circuit, stated as the number of decibels (or népers) by which it exceeds a reference level. This is 1 milli-watt in Europe and was 5·8 milli-watts in America. Also called POWER LEVEL. See also **zero power-level.**

transmission line (*Elec. Eng.*). The overhead conductor system by which electric power is transmitted at high voltage from one place to another.—(*Radio*) A system of conductors, usually two, for the transmission of power from a transmitter to the antenna, or from the antenna to the receiver, where the separation between them is considerable. The term is usually applied to such a system when special precautions are taken to prevent the formation of standing waves.

transmission line control (*Radio*). The control of the frequency of an oscillator by means of a resonant line.

transmission loss (*Elec. Comm.*). The difference between the output power-level and the input power-level of the whole, or part of, a transmission system. See **V.U.**

transmission pressure (*Elec. Eng.*). The nominal voltage at which electric power is transmitted from one place to another.

transmission ratio (*Illum.*). The ratio of the transmitted luminous flux to that incident upon a transparent medium.

transmission reference system (*Teleph.*). See **master telephone transmission reference system.**

transmission tower (*Elec. Eng.*). The steel structure that carries a high-voltage transmission line.

transmission unit (*Elec. Comm.*). The old name for *decibel* (q.v.) ; abbrev. **T.U.**

transmitter (*Elec. Comm.*). A generic term for the device which transmits electrical power under the control of some signal, conveyed mechanically. Acoustically, the term is substantially synonymous with *microphone*, except that it may be applied to the essential component (e.g. a condenser transmitter) in a complete microphone equipment.

See **carbon—**
condenser—
curb—
telephone—
Wheatstone
automatic—

transmitter (*Radio*). Strictly, the complete assemblage of apparatus necessary for the production and modulation of radio-frequency current together with the associated antenna system, but the term is frequently restricted to that part of the apparatus concerned with the conversion of d c. or low-frequency a.c. into modulated radio-frequency current.

transmitter (*Teleg.*). The mechanical device which sends accurate signals, at a uniform speed, over a telegraph circuit; operated by punched holes on a slip.—(*Teleph.*) The device which converts an acoustic wave-form into an electrical wave-form for telephonic transmission. It generally consists of a metal or carbon diaphragm and a capsule of carbon granules.

transmitting valve (*Thermionics*). A thermionic valve capable of dealing with the amount of power used in a radio transmitter.

transmutation (*Chem.*). The conversion of one element into another, either spontaneously or artificially.

transom, transome (*Join.*). An intermediate horizontal member of a window frame, separating adjacent panes

transpal'atine (*Zool*). In *Crocodilia*, a cranial bone connecting the jugal and maxilla with the pterygoid.

transparency, colour (*Photog.*). See **colour transparency.**

transparent parchment (*Paper*). See **glassine.**

transpiration (*Aero*). The flow of gas along relatively long passages, the flow being determined by the pressure difference and the viscosity of the gas, surface friction being negligible.

transpiration (*Bot*). The loss of water vapour from a plant, mainly through the stomata.

transpiration current (or **stream**) (*Bot.*). The stream of water which passes through the plant from the roots to the leaves, whence it escapes chiefly as water vapour.

transplant (*Zool.*). In experimental zoology, a part or organ which is removed from its normal position and grafted into another position in the same individual or any position in another individual.

transplantation (*Surg., Zool.*). In experimental zoology or surgery, transference of a part or organ to a different position in the same individual or to any position in another individual; grafting. Also, the union of two organisms by artificial means.

transport number (*Chem.*). The fraction of the total current carried by a given ionic species during electrolysis.

transporter bridge (*Civ. Eng.*). A bridge consisting of two tall towers, one on each side of the river, connected at the top by a supporting girder along which a carriage runs. A small platform at the ordinary road-level is suspended from the carriage, and this system can be made to travel along the girder across the river.

transporter mast (*Aero.*). See **mooring mast.**

transposition (*Elec. Comm.*). The ordered interchange of position of the lines on a pole route, and also of the phases in an open power line, so that the effects of mutual capacity and inductance, with consequent interference, are minimised. See **twisting.**

transposition insulator (*Elec. Eng.*). A special type of insulator used at transposition points on a transmission line.

transposition tower (*Elec. Eng.*). A transmission tower specially designed to allow of the transposing of the conductors at that point on the transmission line.

tran'sudate (*Med.*). A passive effusion of fluid from blood-vessels due to obstruction of the circulation, the fluid containing little protein and few cells, and not clotting outside the body.

Transvaal jade (*Min.*). A term applied in the gemstone trade to massive green garnet (grossularite).

transverse, transversal (*Bot., Zool., etc.*). Broader than long: lying across the long axis of the body or of an organ: lying crosswise between two structures: connecting two structures in crosswise fashion.

transverse architrave (*Carp.*). The moulding across the top of a door or window opening.

transverse current microphone (*Elec. Comm.*). A type of Reisz microphone; sometimes modified by having two cells of carbon granules in series, so that, by varying the size of the granules, a combination of characteristics is possible.

transverse frame (*Aero.*). The outer-ring members of a rigid airship frame. It may be of a stiff-jointed type, or braced with taut radial members to a central fitting. It connects the main longitudinal girders together.—(*Ship Constr.*) A stiffening member of a ship's hull, disposed transversely to the longitudinal axis. In double bottom construction, it is that portion above the tank margin.

transverse joint (*Build.*). Any joint in a brick wall which cuts across the bed from the front to the back surface, such joint in the best practice being always a continuous one in order to avoid the setting up of *straight joint* (q.v.).

transverse springs (*Automobiles*). Laminated springs arranged transversely across the car, parallel to the axles, instead of longitudinally; usually *semi-elliptic* (q.v.) and anchored centrally to the chassis.

transversely (*Bot.*). Applied to a member which is longer one way than the other, when it is attached by one of its longer sides; thus, *transversely oval.*

transver'sum (*Zool.*). In *Crocodilia*, a cranial bone joining the palatine and the pterygoid to the maxilla.

transverter (*Elec. Eng.*). Apparatus for converting alternating to direct current, and vice versa. It makes use of a multiphase transformer, in conjunction with a stationary commutator and synchronously rotating brushgear. Cf. *commutator rectifier.*

transvest'itism (*Psycho-path*). A psychological disorder in which a person dresses in the clothes of the opposite sex.

trap (*Geol.*). See **trappean rocks.**

trap (*San. Eng.*). A bend in a pipe so arranged as to be always full of water, in order to imprison air within the pipe.

trap amplifier (*Elec. Comm.*). A parallel amplifier, generally with the grid of the amplifying valve connected to the grid of an amplifying valve in the main amplifier; frequently used to ensure that a short-circuit on any part of the monitoring equipment, such as head-telephones, shall not affect the transmission in the main current.

trap, beam (*Thermionics*). See **beam trap.**

trap cut (*Jewel.*). Long flat facets, slightly inclined, placed one above the other.

trapez'ioid, trap'ezoid. Shaped like a triangle with one corner cut off; irregularly four-sided.

trapezium (*Zool.*). In the Mammalian brain, a part of the medulla oblongata consisting of transverse fibres running behind the pyramid bundles of the pons varolii.

trapezium diagram (*Cathode Ray Tubes, Radio*). The characteristic pattern formed on the screen of a cathode ray oscillograph when a linearly modulated radio-frequency voltage is applied to one pair of plates and the modulating voltage is applied to the other pair.

trapezium distortion (*Cathode Ray Tubes*). Distortion due to *trapezium effect* (q.v.).

trapezium effect (*Cathode Ray Tubes*). An effect which occurs when the deflecting voltage applied to the deflector plates of a cathode ray tube is unbalanced with respect to the anode, i.e. their variations of potential, in opposite directions, with respect to the anode are unequal. If equal alternating voltages, of different frequencies, are applied to the two sets of plates, the resulting pattern on the screen is trapezoidal instead of square.

trapezius (*Zool.*). In land Vertebrates, one of the levators of the fore limb.

trapezohe'dron (*Crystal.*). A form in the quartz class of the trigonal system. See also **icositetrahedron.**

trapezoi'dal rule (*Surv.*). A rule for the estimation of the area of an irregular figure. For this purpose it is divided into a number of parallel strips of equal width. The lengths of the boundary ordinates of the strips are measured, and the area is calculated from the rule stating that the area is equal to the common width of the strips multiplied by the sum of half the first and half the last ordinates plus all the others.

trapezoidal speed-time curve (*Elec. Eng.*). A simplified form of speed-time curve used in making preliminary calculations regarding the energy consumption and average speed of electric trains. The acceleration and braking portions of the curve are sloping straight lines, while the coasting portion is a horizontal straight line, so that the complete curve becomes a trapezium. Cf. *quadrilateral speed-time curve.*

trap'pean rocks (*Geol.*). An obsolete term (from Swedish *trappa*, a stair) applied originally to dolerites and basalts whose outcrops gave rise to a terraced type of scenery; later widened to include a large variety of igneous rocks excluding granite, e.g. mica-trap.

trap'poid breccias (*Geol.*). A succession of breccias found near Nuneaton, Charnwood, and Malvern, consisting of angular blocks of rhyolite and feldspathic tuffs; of Permian age. They probably represent fossil scree material.

trass (*Build.*, *Geol.*). A material similar to pozzuolana, found in the Eifel district of Germany; used to give additional strength to lime mortars and plasters.

trass mortar (*Build.*, *Civ. Eng.*). A mortar composed of lime, sand, and trass or brick-dust, or of lime and trass without sand, the trass making the mortar more suited for use in structures exposed to water.

Traube's rule, trow'be (*Chem.*). The adsorption by carbon of an organic substance from aqueous solution increases with increasing number of carbon atoms in a molecule of the compound.

trau'ma (*Med.*). (1) A wound or bodily injury.—(2) Emotional shock (*psychic trauma*).

traumat'ic (*Bot.*). Relating to wounds.

traumatic response (*Bot.*). A reaction of the plant to wounding.

trau'matonas'ty (*Bot.*). A nastic movement following wounding.

traumotax'is (*Bot.*). Movements of protoplasts and nuclei after wounding.

trau'motro'pism (*Bot.*). The development of curvatures following wounding.

traveller (*Spinning*). A small C-shaped spring clipped upon the ring of a ring spinning frame; it acts as a thread guide and assists in the insertion of the yarn twist.

traveller gantry (*Build.*). A gantry of the platform gantry type, but having a movable carriage on rails in place of the platform; the carriage, on which is fixed a crab or winch, is capable of movement along or across the gantry.

trav'erse (*Surv.*). A survey consisting of a set of connected lines whose lengths and directions are measured.

traverse tables (*Surv.*). Tables from which the differences of latitude and departure of a line of any length and bearing may be read off.

trav'ersing (*Surv.*). A method of plane-table surveying in which the lines of a traverse are drawn to scale on the paper, the instrument being set up over each station in turn, and the alidade being used to mark the directions of the two traverse lines meeting at the station. Also called PROGRESSION.

traversing bridge (*Struct.*). A type of movable bridge which is capable of rolling backwards and forwards across an opening, such as a dock entrance, to allow of the passage of a vessel.

trav'ertine (*Geol.*). A variety of calcareous tufa of light colour, often concretionary and compact, but varying considerably in structure; some varieties are porous.

trawl (*Ocean.*). A sack-like net the mouth of which is kept open by some kind of framework; used on smooth ground for obtaining samples of the fauna of the sea-bottom. There are many different types, e g. the Agassiz trawl, beam trawl, otter trawl.

tread (*Build.*). The horizontal part of a step.

tread (*Eng.*). In the wheels of a vehicle, that part of the tyre in contact with the road or rail.

tread (*Vet.*). An injury of the coronet of a horse's hoof due to striking with the shoe of the opposite foot.

treatment (*Cinema*). Amplification of the theme or plot of a motion-picture story, indicating the filmic aspects of the production and the way in which it is proposed to achieve them.

tree (*Bot.*). A tall, woody perennial plant having a well-marked trunk and few or no branches persisting from the basal parts.

treeing (*Acous.*). Irregular build-up of the metal which is electro-deposited on the surface of a wax record, because of excessive potential drop across the plating solution, resulting in a coarse metal surface.

treeing department (*Boots and Shoes*). The department in which the uppers are ironed, cleaned, and glossed, and the socks inserted; trade-marks, etc., are also impressed on the soles.

Treetex (*Build.*). A proprietary building-board.

treg'a- (*Elec. Eng*). A prefix signifying 10^{12} times. Cf. *mega* and *bega*.

treg'ohm (*Elec. Eng.*). A million megohms. Cf. *megohm* and *begohm*.

Tremad'oc Slates (*Geol.*). A succession of slates about 1000 ft. thick at the type-locality, Tremadoc in North Wales; they are grey in colour, locally provide good roofing slates, and are referred in Great Britain to the top of the Cambrian System. By some continental geologists they are referred to the overlying system, the Ordovician.

tremat'ic (*Zool.*). Pertaining to the gill-clefts.

Tremato'da (*Zool.*). A class of *Platyhelminthes* all the members of which are either ectoparasites or endoparasites, and have a tough cuticle, a muscular non-protrusible pharynx, and a forked intestine; eye-spots never occur; a ventral sucker for attachment is always present, and sometimes also a sucker surrounding the mouth. Flukes.

trembler bell (*Elec.*). A bell with a self-interrupting armature; actuated by d.c. or a.c.

trem'elloid, trem'ellose (*Bot.*). Of jelly-like consistency.

trem'ie (*Civ. Eng.*). A large metal funnel used for the distribution of freshly mixed concrete over a site which is below water.

trem'olite (*Min.*). A silicate of calcium and magnesium which crystallises in the monoclinic system. It is usually grey or white, and occurs in bladed crystals or fibrous aggregates associated with metamorphic rocks. See **amphiboles, asbestos.**

tremor (*Med.*). Involuntary agitation of the muscles of the body or of the limbs, due to emotional disturbance, old age, or disease of the nervous system.

tremulant (*Acous.*). The stop-key in an organ console which actuates a vibrating piston in the wind-chest supporting and operating ranks of pipes, so that the sound emitted has a pulsating or tremolo effect.

tre'nail (*Carp.*). A hardwood pin driven transversely through a mortise and tenon to secure the joint. Also called TRUNNEL. See **draw-bore.**

trench (*Civ. Eng.*). A long narrow excavation for drains, pipes, and the like.

trench drain (*Civ. Eng.*). A *French drain* (q.v.).

trench fever (*Med.*). A disease common among troops in the war of 1914-18; symptoms were relapsing fever, headache, pains in the back and in the limbs, and often by a rose-red eruption; due to infection with a virus conveyed by lice.

Trenton Limestone (*Geol.*). An important member of the Ordovician succession in the region of the Adirondacks, lying between the Black River Limestone below and the Utica Shales above. Usually regarded as the highest member of the Champlainian Series, it is typically exposed at Trenton Falls, Utica, and is an important oil-bearing formation in the central States.

trepan' (*Surg.*). (1) To trephine.—(2) A form of trephine no longer in use.

trepana'tion (*Surg.*). An operation with the trepan; trephining.

trephina'tion (*Surg.*). The operation of trephine.

trephine (*Surg.*). (1) To operate with the trephine: to remove by surgical means a part of the skull: to remove by surgical means a disc from any part, e.g. from the globe of the eye in the treatment of glaucoma.—(2) A crown saw for removing a circular area of bone from the skull.

trev'ette or **triv'et** (*Textiles*). A knife used to release the wire in a row of loop pile, by drawing it along a groove on the top; this produces cut pile.

tri- (Latin *tres*, Greek *tria*, three). A prefix used in the construction of compound terms; e.g. *triflagellate*, having three flagella.

triacid (*Chem.*). Containing three hydroxyl groups replaceable by acid radicals on neutralisation.

tri'aene (*Zool.*). In *Porifera*, a spicule in the form of a trident.

trial pit (*Civ. Eng.*). A pit sunk into the ground to obtain information as to nature, thickness, and position of strata.

trian'drous (*Bot.*). Having three stamens.

triangle, colour (*Photog.*). See **colour triangle.**

triangle of error (*Surv.*). The triangle formed in the trial-and-error solution of the three-point problem when, on drawing back rays through the three known points on plan, they form a small triangle instead of intersecting at a single point, as a result of the orientation of the plane table being not quite correct.

triangular. Having three angles.—(*Bot.*) Having three angles and three flat faces.

triangular notch (*Civ. Eng.*). See **vee notch.**

triangulation (*Surv.*). (1) The process of dividing up a large area for survey purposes into a number of connected triangles, measuring one side of one of the triangles (the 'base line') and all the angles, and thence computing all the other sides.—(2) See **intersection.**

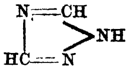
tri'arch (*Bot.*). Having three strands of xylem in the stele.

Tri'as (*Geol.*). The geological system of rocks which succeeds the Permian and precedes the Jurassic System. It was named by von Alberti from the three-fold division in Germany. The rocks in Britain consist of red sandstones and marls, and were deposited under desert condition. The Trias in N. America is largely continental (see **Dolores Beds, Painted Desert Beds, Leroux formation**); but marine sands, shales and sandstones occur in parts of Idaho, Wyoming, and northern Utah.—*adj.* **Triassic.** See also **Bunter Series, Keuper Series, Newark Series.**

triast'er (*Cyt.*). A complex mitotic figure resulting from triple mitosis, as in the ovum after polyspermy.

triax'on (*Zool.*) Having three axes; said of Sponge spicules.

tri'azole (*Chem.*). A heterocyclic compound consisting of a five-membered ring containing three nitrogen atoms, i.e.



triba'sic (*Chem.*). Containing three replaceable hydrogen atoms in a molecule.

tribe (*Bot.*). A section of a family consisting of a number of related genera.

tribute (*Mining*). A method of payment for the working of a portion of a mine, or for the reworking of an old mine, the payment or *tribute* being a percentage of the ore recovered, or its equivalent price.

tricarballyl'ic acid (*Chem.*). $HOOC \cdot CH_2CH(COOH) \cdot CH_2 COOH$, a saturated tribasic acid which crystallises in rhombic prisms; m.p. 166° C.

tricarpel'lary (*Bot.*). Consisting of three carpels.

tri'ceps (*Zool.*). A muscle with three insertions.—*adj.* **tricip'ital.**

trich-, tricho-, trick(o)- (Greek *thrix*, gen. *trichos*, hair). A prefix used in the construction of compound terms; e.g. *trichiasis* (q.v.).

trichi'asis (*Med.*). Distortion of the eyelashes so that they rub against the eye.

Trichinelloi'dea (*Zool.*). A class of *Nematoda* in which the body is divided into an oesophageal portion and a posterior portion; the oesophagus is a cuticular tube embedded in a single chain of cells; in the female the ovary is single; in the male there is one single copulatory spicule or none.

trichini'asis, trichino'sis (*Med.*). Infestation of the human intestine, as a result of eating raw or underdone pork, with the nematode worm *Trichinella* (or *Trichina*) *spiralis*, the larvae of which migrate to, and become encysted in, the muscles of the body.

tri'chite (*Bot.*). A hypothetical crystal, very thin and elongated, presumed to be present in very large numbers in a starch grain.

trichite (*Geol.*). Thin filament- or hair-like crystallite which occurs in volcanic rocks in irregular or radiating groups.

trichite (*Zool.*). A type of Sponge spicule: a rod-like element of the shell in some *Ciliophora.*

tricho-. Prefix. See **trich-.**

trichocephali'asis (*Med.*). See **trichuriasis.**

trich'ocyst (*Zool.*). In some *Ciliophora*, a minute hair-like body lying in the subcuticular layer of protoplasm; it is capable of being shot out, and is believed to serve as an organ of attachment.

trichogyne (*Bot.*). A thread-like extension of the female organ in some fungi, red algae, and lichens, which appears to function, at least sometimes, in receiving the male organ.

tri'choid (*Zool.*). Hair-like.

tri'chome (*Bot.*). (1) A plant hair, i.e. a superficial outgrowth consisting of one or more cells.—(2) The thread of cells which, together with the sheath, makes up the filament in *Myxophyceae.*

trichome hydathode (*Bot.*). A multicellular hair which secretes water.

trichomoni'esis (*Vet.*). A disease of the intestines and liver of gallinaceous birds, due to infection by *Trichomonas meliagris.*

trich'ophore (*Zool.*). A chaeta sac.

trichophyl'lous (*Bot.*). Said of a plant of dry places which has the young stems and leaves protected from desiccation by a thick coating of hairs.

Trichop'tera (*Zool.*). An order of *Endopterygota* having hairy wings, the hinder pair being larger; mandibles are absent and the mouth-parts are imperfectly modified for sucking in the adult; the larva is aquatic and possesses biting mouthparts, while the abdomen bears filamentous tracheal gills; it inhabits a silken case to which it attaches various foreign bodies. Caddis Flies.

tricho'sis (*Zool.*). Arrangement or distribution of hair.

trichothal'lic growth (*Bot.*). A type of growth of an algal filament in which cell division occurs only in a few cells located towards, or at the base of, the filament.

trichotilloma'nia (*Med.*). An obsessional impulse to pull one's own hairs.

trichoto'mous (*Bot.*). Having three equal or nearly equal branches arising from the same part of the stem.

tri'chroism (*Jewel.*). The property, seen in some precious stones, of exhibiting three colours when viewed from different points.

trichromat'ic filter (*Photog.*). In colour photography, a set of three filters arranged to suit a specified emulsion.

trichromatic process (*Photog.*). The *three-colour process* (q.v.).

trichuri'asis (*Med.*). Infestation of the human intestine with the nematode whip-worm *Trichuris trichiura* (also known as *Trichocephalus dispar*).

tricip'ital (*Zool.*). *Adj.* from *triceps*.

trick photography (*Photog.*). The use of non-regular arrangements for attaining novel effects in photographic work, e g. reversing or inverting the camera, double exposure or printing, use of mirrors, screens, or masks, etc.

trick valve (*Eng.*). A slide-valve housing an internal steam passage in addition to the exhaust cavity, in order to supplement the area for steam admission to the port and so reduce wire-drawing. Also known as the ALLAN VALVE.

Triclad'ida (*Zool.*). An order of *Turbellaria*, including marine, fresh-water, and terrestrial forms; the gut has three branches, one forward and two backward.

triclin'ic system (*Crystal.*). The crystallographic system which includes all the forms referred to three unequal axes which are not at right-angles.

tri'colour filter (*Photog.*). One of a set of filters for three-colour photography or a composite filter having the colours on adjacent areas.

tricolour ratio (*Photog.*). The relative inertias of an emulsion for specified primary colours, i.e. deep-blue, green-yellow, and red.

tric'otine (*Textiles*). A dress fabric made from fine Botany worsted yarns, with a whipcord effect.

tricot'ylous (*Bot.*). Having three cotyledons.

tricus'pid (*Zool.*). Having three points, as the right auriculo-ventricular valve of the Mammalian heart.

tridac'tyle (*Zool.*). Said of large pedicellariae having a partially flexible stalk and three toothed jaws, broad at the base and narrow distally, usually without poison-glands; found in *Echinoidea.*

trid'ymite (*Min.*). A high-temperature form of silica, SiO_2, crystallising in the orthorhombic system, but possessing pseudohexagonal symmetry. The stable form of silica above 870° C. An α and a β form are recognised.

trien'nial (*Bot.*). Lasting for three years.

trifa'cial (*Zool.*). The fifth cranial or trigeminal nerve of Vertebrates.

trifar'ious (*Bot.*). Arranged in three rows.

tri'fid (*Bot.*). Divided about half-way down into three parts.

trifol'iate (*Zool.*). Said of very small pedicellariae found in *Echinoidea*, having a very flexible stalk and three broad leaf-like blades without teeth or poison-glands.

trifol'iolate (*Bot.*). Said of a compound leaf having three leaflets.

trifov'eolate (*Bot.*). Marked by three hollows.

trifur'cate (*Bot*). Bearing three prongs.—(*Zool.*) Having three branches.

trifur'cating box (*Elec. Eng.*). A cable dividing box for enclosing the joints between a three-aro or triple concentric cable and three single-core cables or conductor terminals.

trigam'ma (*Zool.*). In *Lepidoptera*, a characteristic feature of wing venation, consisting of a three-pronged fork formed by the veins, M_3, Cu_{1a}, Cu_{1b}.

trigem'inal (*Zool.*). Having three branches: the fifth cranial nerve of Vertebrates, dividing into the ophthalmic, maxillary, and mandibular nerves.

trigger (*Chem.*). The agent which causes the initial decomposition of a chain reaction.

trigger hair (*Zool*). See **cnidocil.**

trigger relay (*Elec. Comm.*). A relay which, when operated, remains in its operated condition when the operating current or other control is removed. See **locking relay.**

trigger relay (*Thermionics*). A device, such as a gas-filled triode or certain combinations of high-vacuum thermionic valves, in which a disturbance of sufficient magnitude can initiate or terminate a discharge but has no subsequent control thereof.

trigger valve (*Thermionics*). A thermionic or gas discharge valve used as a trigger relay. A typical example is the discharging valve in a linear time base circuit.

tri'glyph (*Arch.*). A group of three glyphs, or of two glyphs and two half-glyphs, used as a decoration for a flat surface.

trig'onal (*Bot.*). Triangular in section.

trigonal system (*Crystal.*). A style of crystal architecture characterised essentially by a principal axis of threefold symmetry; otherwise resembling the hexagonal system. Such important minerals as calcite, quartz, and tourmaline crystallise in this system.

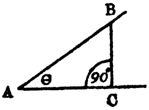
tri'gone (*Bot.*). A thickened angle of a cell.

trigone, trigo'num (*Zool.*). A triangular space or area.—(*Anat.*) The triangular area of the interior of the urinary bladder between the openings of the ureters and of the urethra.—*adjs.* **trig'onal, trig'onate.**

Trigo'nia Grit (*Geol.*). A rubbly, granular limestone (not a true grit) which occurs in Gloucestershire and is characterised by *Trigonia*. It is part of the Middle Jurassic rocks.

trigoni'tis (*Med.*). Inflammation of the trigone.

trigonometrical ratios (*Maths.*). If θ is any angle,



and ABC is the right-angled triangle formed by dropping a perpendicular BC from a point B in one of the lines enclosing the angle to the other, the trigonometrical ratios are as follows:

$$\text{sine } \theta = \frac{BC}{AB}; \quad \text{cosecant } \theta = \frac{1}{\text{sine } \theta}$$

$$\text{cosine } \theta = \frac{AC}{AB}; \quad \text{secant } \theta = \frac{1}{\text{cosine } \theta}$$

$$\text{tangent } \theta = \frac{BC}{AC}; \quad \text{cotangent } \theta = \frac{1}{\text{tangent } \theta}$$

In use these are abbreviated to *sin, cosec, cos, sec, tan, cot.*

trigonometrical station (*Surv.*). A survey station used in a triangulation.

trigonometrical survey (*Surv.*). A survey based on a triangulation.

trigo'nous (*Bot.*). Having three obtuse angles.

trihy'dric alcohols (*Chem.*). Alcohols containing three hydroxyl groups attached to three different carbon atoms, e.g. *glycerine* (q.v.).

trihy'drol (*Chem.*). The polymerised compound, H_6O_3, supposed to be present in liquid water.

Trilobi'ta (*Zool.*). A class of extinct aquatic *Arthropoda* which possessed a flattened body; the head was covered by a broad crescentic shield bearing a pair of compound eyes on its upper surface; there was a single pair of antennae, and the remaining limbs were all similar and biramous and bore gnathobases. Trilobites occur abundantly in certain Palaeozoic strata, reaching their maximum development in the Cambrian and Ordovician Systems.

trim (*Aero.*). The general condition of an aircraft in flight. Particularly the adjustment of the angle of *pitch* (q.v.).

trim (*Build.*). Architraves and other finishings around a door or window opening.

trimer'ic (*Chem.*). Having the same empirical formula but a molecular weight three times as great.

trimer'ous (*Bot.*). Arranged in threes or in multiples of three.

trimeth'yl-gly'cocoll (*Chem.*) *Betaine* (q.v.).

trimet'ric system (*Crystal.*). See **orthorhombic system.**

trimmer (*Carp.*). The cross-member which is framed in between the full-length members to afford intermediate support to the shortened joists in a trimming.

trimmer (*Radio*). See **trimming condenser.**

trimmer arch (*Build.*). A somewhat flat arch turned from the wall to the trimmer to support a hearthstone at a fireplace. Also called a BRICK-TRIMMER.

trimmer joint (*Carp.*). A joint formed with a *tusk tenon* (q.v.).

trimming (*Carp.*). The operation by which bridging joists or rafters are shortened and given intermediate support around a fireplace or chimney.

trimming (*Foundry*). See **dressing-off.**

trimming condenser (*Radio*). A variable condenser of small capacitance used in conjunction with ganging for taking up the discrepancies between the self and stray capacitances of the individual ganged circuits, so that they remain in step for all settings of the main tuning control. Also called TRIMMER.

trimming joist (*Carp.*). One of the two full-length members between which the trimmer is framed. As these members have to carry more load than the other bridging joists, they are made wider.

trimming machine (*Join.*). A lever- or treadle-operated machine for cutting, trimming, or mitring purposes.

trimonoe'cious (*Bot.*). Having hermaphrodite, male, and female flowers on the same plant.

trimor'phic (*Bot.*). Said of a species which has three kinds of flowers, differing in the relative lengths and positions of the filaments, anthers, and stigmata.—*n.* **trimor'phism.**

trimor'phous (*Chem.*). Existing in three crystalline forms.

Tri'mya'ria (*Zool.*). A class of *Nemertinea* in which there are three muscle layers in the body-wall—an outer longitudinal layer, a circular layer, and an inner longitudinal layer.

trimya'rian (*Zool.*). Having three muscular layers, as certain *Nemertinea.*

trinac'riform (*Bot.*). Having three prongs.

trini'trides (*Chem.*). Salts of hydrazoic acid. Also called AZIDES and HYDRAZOATES.

trini'troaniline (*Chem.*). See **T.N.A.**

trinitrobenzene (*Chem.*). See **T.N.B.**

trinitroglycerine (*Chem.*). See **nitroglycerine.**

trinitrophenol (*Chem.*). *Picric acid* (q.v.).

trinitrotoluene (*Chem.*). The symmetrical isomer, 2,4,6-trinitrotoluene, $C_6H_2(CH_3)(NO_2)_3$, is a solid, melting at 82° C. It is manufactured by slowly adding toluene to a mixture of nitric and sulphuric acids containing oleum. It is used as a high explosive, and is known as T.N.T.

trinitroxylene (*Chem.*). See **T.N.X.**

trini'trogen monohydride (*Chem.*). See **hydrazoic acid.**

Trinity Series (*Geol.*). The lowest of the three divisions into which the Comanchean is divided. These beds are marls, limestones, and marine argillaceous strata in Zacatecas; they cover half Texas and part of Arizona, where a limestone member (the Glen Rose Limestone) rests upon continental Comanchean beds.

tri'ode hexode (*Thermionics*). A combination of triode and hexode in the same envelope, used as a frequency convertor in a supersonic heterodyne receiver. The triode section is used as the oscillator and the hexode as modulator.

triode valve or **triode** (*Thermionics*). A thermionic vacuum tube containing an emitting cathode, an anode, and a control electrode or grid, whose potential controls the flow of electrons from the cathode to the anode. Also called THREE-ELECTRODE VALVE.

trioe'cious (*Bot.*). Having hermaphrodite, female, and male flowers on distinct plants of the same species.

tri'oses (*Chem.*). The simplest monosaccharoses. They contain three oxygen atoms in the molecule, e.g. $HO{\cdot}CH_2\,CO\,CH_2\,OH$.

trip (*Horol.*). See **tripping.**

trip circuit (*Elec. Eng.*). The electric circuit operating the tripping mechanism of a circuit-breaker. Cf. *shunt-trip.*

trip coil (*Elec. Comm.*). Any magnet coil which operates some other circuit or mechanism by motion of an armature; more particularly, a coil which operates a circuit-breaker, or the release mechanism of a telegraph machine.

trip gear (*Eng.*). A valve-actuating gear, used for drop valves and rocking (Corliss) valves of large steam-engines, in which the valve is opened by a trigger mechanism, which is then tripped out of engagement to allow the valve to close under a heavy spring. See **Corliss valve, drop valve.**

trip relay (*Elec. Eng.*). A relay controlling the electromagnetic tripping mechanism of a circuit-breaker.

trip switch (*Elec. Eng.*). A control switch for closing the tripping circuit of a circuit-breaker.

tri'pack (*Photog.*). A process involving the use of three emulsions on separate bases, so that exposure is effected by light passing through them when they are all in contact. For cinematography, separate magazines are used, the separate films being brought together at the gate.

tripar'tite (*Bot., etc.*). Divided nearly to the base into three parts.

tri'phane (*Min.*). See **spodumene.**

triphenylmethane dyes (*Chem.*). A group of dyestuffs derived from triphenylmethane. They comprise the malachite green group derived from diaminotriphenylmethane, the rosaniline group derived from triaminotriphenylmethane, the aurine group derived from trihydroxytriphenylmethane, the phthalein group derived from triphenylmethane-carboxylic acid.

tripin'nate (*Bot.*). Said of a pinnate compound leaf with pinnately divided leaflets, themselves pinnately divided.

triple bond (*Chem.*). An indication of a state of unsaturation between two polyvalent atoms, showing that two hydrogen atoms or their equivalent can be attached to each atom connected by a triple bond before saturation is reached.

triple-concentric cable (*Elec. Eng.*). A three-core cable in which the conducting cores are arranged concentrically about the axis of the cable.

triple-expansion engine (*Eng.*). An engine in which the steam expands, successively, in a high pressure, intermediate pressure, and low pressure cylinder, working on the same crankshaft. See **multiple-expansion engine.**

triple fusion (*Bot.*) The nuclear union in the embryo sac between the two polar nuclei and a male nucleus; it provides the starting-point for the development of the endosperm.

triple point (*Chem.*). The temperature and pressure at which three phases of a substance can co-exist.

triple-pole switch (*Elec. Eng*). A switch for simultaneously making or breaking a three-wire electric circuit.

triplet (*Chem.*). A chemical bond which consists of three electrons shared between two atoms.

triplets (*Bot.*). Individuals resulting from the division of the ovum into three parts, each then developing.

trip'lex (*Bot.*). A tetraploid zygote which has three doses of any given dominant.

triplex boards (*Paper*). See **cardboards.**

Triplex glass (*Glass*). A patented form of laminated glass. See **safety glass.**

triplex winding (*Elec. Eng.*). A d.c. armature winding having three parallel paths per pole between positive and negative terminals.

tripli-, triplo- (Latin *triplex*, triple). A prefix used in the construction of compound terms; e.g. *triploblastic* (q.v.).

trip'linerved (*Bot.*). Having three main veins in the leaf.

triploblas'tic (*Zool.*). Having three primary germinal layers, namely, ectoderm, endoderm, and mesoderm.

triplocaules'cent (*Bot.*). Having a main stem bearing branches which are themselves branched.

trip'loid (*Cyt.*). Having three times the haploid number of chromosomes for the species.

tri'pod (*Surv.*). The device by which some surveying instruments are supported firmly off the ground. It consists of three legs hinged to a common head on which the instrument is secured.—(*Photog.*) A similar device used for cameras when time-exposures are required.

Trip'oli powder (*Min.*). See **tripolite.**

trip'olite (*Min.*). A variety of opaline silica which is formed from the siliceous frustules of diatoms. It looks like earthy chalk or clay, but is harsh to the feel and scratches glass. When finely divided it is sometimes called EARTHY TRIPOLITE. Also called DIATOMITE, INFUSORIAL EARTH.

tripping (*Horol.*). An escapement is said to *trip* when a tooth of the escape wheel runs past the locking face.

tripping battery (*Elec. Eng.*). The secondary battery which provides the supply for the trip-coil circuits of a number of circuit-breakers.

triprosthom'erous (*Zool.*). Having three somites in front of the mouth.

tri'pus (*Zool.*). In *Ostariophysi*, one of the Weberian ossicles.

triquetrous, —kwet'rus (*Bot.*). Having three angles and three concave faces.

trisac'charoses (*Chem.*). Carbohydrates consisting of molecules composed of three monosaccharose anhydrides; they result from the elimination of two molecules of water from three molecules of a monosaccharose.

tris'mus (*Med.*). Lock-jaw; tonic spasm of the muscles of the jaw, causing the jaws to be clenched, as in tetanus.

trisom'ic (*Cyt.*). Said of a nucleus (or organism) which is triploid and has one chromosome present in triplicate, the others in duplicate.

tristich'ous (*Bot.*). Having leaves or branches arranged one above another in three rows.—(*Zool.*) Arranged in three rows.

trit'ium (*Chem.*). In addition to deuterium, the hydrogen isotope of mass 2, there is another isotope of mass 3, to which the name *tritium* has been given. This ion has been detected in the mass spectrograph and also arises from the bombardment of deuterons by deuterons.

tritocer'ebron, tritocer'ebrum (*Zool.*). In higher *Arthropoda*, as *Insecta* and *Crustacea*, the fused ganglia of the third somite of the head, forming part of the 'brain.'

tritog'nathous (*Zool.*). Having the jaws borne on the third somite of the head.

tri'tor (*Zool.*). The masticatory surface of a tooth.

trituber'cular (*Zool.*). (Of teeth) possessing three cusps.

trit'urate (*Chem.*). To grind to a fine powder, especially beneath the surface of a liquid.

triun'gulin (*Zool.*). In *Meloidae* (Oil-Beetles), the small active hard-skinned campodeiform larva: the similar larva of *Strepsiptera*.

triva'lent (*Cyt.*). Said of a chromosome which is threefold.

trivalent (*Chem.*). Capable of combining with three atoms of hydrogen, or their equivalent.

triv'et (*Textiles*). See **trevette.**

triv'ium (*Zool.*). In *Echinodermata* generally, the three radii farthest from the madreporite: in *Holothuroidea*, the three rays which form the 'ventral' surface of the body.

tro'car (*Surg.*). A sharp-pointed perforator which, inserted into a cannula, enables this to be introduced into the body.

tro'chal (*Zool.*) Wheel-shaped.

trochal disc (*Zool.*). In *Rotifera*, the flattened anterior end

trochan'ter (*Zool.*). The second joint of the leg in Insects: a prominence for muscle attachment near the head of the femur in Vertebrates.

trochan'tin (*Zool.*). In primitive Insects, an articular sclerite situated at the base of the coxa.

Trochelmin'thes (*Zool.*). A phylum of minute non-metameric animals of aquatic habit in which part of the epidermis is always ciliated; in some forms there is an epidermal syncytium underlying a chitinous cuticle; there is a forked tail containing cement glands, a sac-like mesenteric stomach, and a central nervous mass without cords or commissures; excretion is by flame-cells.

troch'ilus (*Arch.*). A hollow moulding whose profile is formed of two circular arcs of different radii.

troch'lea (*Zool.*). Any structure shaped like a pulley, especially any foramen through which a tendon passes.—*adj.* **troch'lear.**

troch'lear nerve (*Zool.*). The fourth cranial nerve of Vertebrates, running to the superior oblique muscle.

troch'oblasts (*Zool.*). Those cells of a segmenting ovum destined to become a trochophore which will give rise to the prototroch.

troch'ophore, troch'osphere (*Zool.*). A free-swimming pelagic larval form of *Annelida*, *Mollusca*, and *Polyzoa*, possessing a prominent preoral ring of cilia, an apical tuft of cilia, a ventrally curved gut, and a blastocoelic body cavity containing the primitive mesoblasts.

Trochosphaer'ida (*Zool.*). An order of *Rotifera* in which the tail is absent and the body globular in form; the trochal disc is represented by an equatorial circlet of cilia.

tro'chus (*Zool.*). In *Rotifera*, the inner pre-oral circlet of cilia; *cf. cingulum*.—*adj.* **tro'chal.**

troc'tolite (*Geol.*). A coarse-grained basic igneous rock, consisting essentially of olivine and plagioclase only. The former mineral occurs as dark spots on a light ground of feldspar, giving the rock a characteristic spotted appearance, whence the name *troutstone.*

trolley-bus (*Elec. Eng.*). A trackless electric passenger vehicle of the omnibus type, running on a highway.

trolley bush (*Elec. Eng.*). The graphite bushing between the steel axle-pin and the trolley wheel.

trolley-car (*Elec. Eng.*). The American equivalent of *tramcar.*

trolley cord (*Elec. Eng.*). The rope by which the trolley head may be drawn down so that the trolley wheel disengages from the overhead contact wire.

trolley-frog (*Elec. Eng.*). A device used at a junction of two overhead contact wires on a traction system to permit the passage of the current-collector along either wire as desired.

trolley head (*Elec. Eng.*). The complete fitting housing the trolley wheel.

trolley pole (*Elec. Eng.*). The steel tube or pole carrying the trolley head, which is insulated from it, and down which runs the cable connecting the trolley wheel to the traction-motor circuit.

trolley standard (*Elec. Eng*) The short vertical iron pillar supporting the trolley pole in the open type of double-deck tramcar.

trolley system (*Elec. Eng*). The overhead current-collecting system used on tramcars and trolley-buses, in which a small grooved wheel runs under the contact wire.

trolley wheel (*Elec. Eng*). The small grooved wheel by means of which current is collected from the overhead contact wire in the trolley system.

trolley wire (*Elec Eng*) The overhead contact wire in the trolley system of current collection.

trommel (*Mining*). A cylindrical revolving sieve for sizing crushed ore or rock.

trondh'jemite (*Geol.*). A coarse-grained igneous rock consisting essentially of plagioclase (ranging from oligoclase to andesine), quartz, and small quantities of biotite, in some instances accompanied, or replaced by, amphibole and pyroxene.

troos'tite (*Met.*). The name applied to structures in steel which consist of very fine aggregates of ferrite and cementite, which cannot be resolved under the microscope, which etch rapidly, and appear very dark. Such structures may be very fine pearlite, or the product of tempering martensite at temperatures lower than those which give sorbite.

tropae'olines (*Chem.*). A group of dyes derived from *p*-hydroxy-azobenzene.

trope'ic (*Zool.*). See **carinate.**

troph-, tro'pho- (Greek *trophē*, nourishment). A prefix used in the construction of compound terms; e.g. *trophochromidia* (q.v.).

trophallax'is (*Zool.*). Mutual exchange of food between imagines and their larvae, as in some social Insects.

trophamn'ion (*Zool.*). In the eggs of certain parasitic *Hymenoptera,* a protoplasmic sheath surrounding a central embryonic mass during early development.

tro'phi (*Zool.*). In *Insecta,* the mouth-parts: in *Trochelminthes,* the masticatory mechanism of the mastax.

tro'phic (*Bot., Zool.*). Pertaining to nutrition.

trophic race (*Zool.*). A collection of individuals within the limits of a species, but differing from the typical members of the species in their choice of food.

tro'phifer, tro'phiger (*Zool.*). That part of the head of an Insect with which the mouth-parts articulate.

tro'phoblast (*Zool.*). The differentiated outer layer of epiblast in a segmenting Mammalian ovum.

trophochondrio'ma (*Cyt.*). Mitochondria as concerned in nutrition.

trophochro'matin (*Cyt.*). A substance within the nucleus which controls the metabolism of the cell.

trophochromid'ia (*Cyt.*). Vegetative chromidia; chromidia concerned with nutritive processes.

tro'phocyte (*Zool.*). In Insects, a cell of the larval fat-body which accumulates albuminoid reserve material and plays a part in tissue-building during histogenesis.

trophone'mata (*Zool*) Finger-shaped projections of the wall of the uterus in some viviparous lower Vertebrates.

trophoneuro'sis (*Med.*) Any functional disorder of the body due to derangement of the trophic action of the nerves.

trophonu'cleus (*Zool*). In some *Mastigophora,* the large vegetative nucleus which regulates metabolism and growth Cf. *kinetonucleus.*

tro'phophore (*Zool*). In *Porifera,* an aggregation of cells destined to become a gemmule.

tro'phophyll (*Bot*). A vegetative leaf.

tro'phoplasm (*Cyt.*). Protoplasm which is mainly concerned with nutrition.

tro'phoplast (*Bot.*). A plastid.

tro'phosome (*Zool.*). All the zooids of a hydroid colony which are concerned with nutrition.

trophospon'gium (*Zool*). Holmgren canaliculi of nerve cells occupied by branching processes of neuroglia cells.

trophotax'is (*Zool*). The movements of an animal when it directs itself symmetrically.

trophothy'lax (*Zool*). In certain Ant larvae (*Pseudomyrminae*), a food-pouch on the first abdominal somite.

tro'photro'pism (*Bot.*) A reaction in a growing organ induced by the chemical nature of the environment.

trophozo'ite (*Zool*). In *Protozoa,* the trophic phase of the adult, which generally reproduces by schizogony.

trophozo'oid (*Zool.*). In some *Urochorda* colonies, a nutritive zooid.

tropiba'sic (*Zool.*). Said of a skull in which the trabeculae are near together and fuse in the middle line.

trop'ic acid (*Chem.*). $C_6H_5{\cdot}CH(CH_2OH)COOH$, *α*-phenyl-*β*-hydroxypropionic acid; crystallises in fine prisms; m p. 117° C.

tropic curvature (*Bot.*). A curvature of a plant organ caused by one-sided growth under the influence of a stimulus falling on the plant from one side.

tropical month (*Astron.*). The period of lunar revolution with respect to a point on the ecliptic (27 days, 7 hours, 43 minutes, 4·7 seconds).

tropical revolving storm (*Meteor.*). A small intense cyclonic depression originating over tropical oceans. See **cyclone, hurricane, typhoon, willy-willy.**

tropical switch (*Elec. Eng.*). A switch mounted on feet or bosses; it thus guards against the effect of excessively damp climates by having an air space between its base and mounting surface. Also called FEET-SWITCH.

tropical year (*Astron.*). The interval between two successive passages of the sun in its apparent motion through the First Point of Aries; hence the interval between two similar equinoxes or solstices and the period of the seasons; its length is 365·242196 mean solar days.

Tropics (*Astron.*). The two parallels of celestial latitude which touch the ecliptic at its most northerly and southerly points, the First Point of Cancer and the First Point of Capricorn respectively, and which therefore mark the limits of the sun's extreme north and south declinations. Hence the terms *Tropic of Cancer* and *Tropic of Capricorn.* The terrestrial counterparts are the two parallels of terrestrial latitude on either side of the equator and each distant from it by about 23° 27′, the value of the *obliquity of the ecliptic* (q.v.). In popular language, the term is sometimes used of the zone of the earth, bounded by these parallels, in which the sun can be vertically overhead.

tro′pism (*Physiol.*). A reflex response to an external stimulus, differing from an ordinary compound reflex in that it involves movements of the whole body rather than a part.

tropitrab′ic (*Zool.*). See **tropibasic.**

tro′popause (*Meteor.*). The boundary between the *troposphere* and the *stratosphere* (qq.v.).

tro′posphere (*Meteor.*). The hollow sphere of atmosphere on the surface of the earth in which there are relatively large temperature gradients and in which the weather functions.

Trotter photometer (*Illum.*). A portable photometer in which the brightness of the comparison screen is varied by tilting.

trough fault (*Geol.*). Actually a pair of parallel, normal faults hading towards one another and throwing in opposite directions.

trough gutter (*Build.*). A parallel gutter used along roof valleys or parapets.

Trousseau's phenomenon, troo-sō (*Med.*). Spasm of the muscles of a limb whose blood-vessels or nerves are compressed, occurring in tetany.

Trouton's rule, trow′ton (*Chem.*). For most non-associated liquids, the ratio of the latent heat of vaporisation per gram-molecule, measured in calories, to the boiling-point, on the absolute scale of temperature, is approximately equal to 21 at atmospheric pressure.

trout′stone (*Geol.*). See **troctolite.**

trowel (*Build., Plast.*). A flat steel tool used for spreading and smoothing mortar or plaster.

truck-type switchgear (*Elec. Eng.*). Switchgear in which each circuit-breaker, with its associated equipment, is mounted on a truck capable of withdrawal, so that it may be completely removed from the rest of the gear for maintenance and repair. Also called CARRIAGE-TYPE SWITCHGEAR.

true altitude (*Surv.*). The *altitude* (q.v.) of a heavenly body as deduced from the *apparent altitude* (q.v.) by applying corrections for atmospheric refraction, for instrumental errors, and where necessary for geocentric parallax, sun's semi-diameter, and dip of horizon.

true angle of incidence (*Aero.*). See **angle of incidence.**

true bearing (*Surv.*). The horizontal angle between any survey line and the direction of true north.

true horizon (*Surv.*). A great circle of the celestial sphere parallel to the horizon and passing through the earth's centre. Also called the RATIONAL HORIZON.

true ohm (*Elec. Eng.*). The actual realisation of the practical unit of resistance, exactly equal to 10^9 electromagnetic units of resistance. Cf. *international ohm, B.A. ohm, legal ohm.*

true resistance (*Elec. Eng.*). See **d.c. resistance.**

true section (*Surv.*). A section which has been drawn, with the same scales, horizontally and vertically.

true watts (*Elec. Eng.*). A synonym for the active power flowing in an a.c. circuit.

trumpet arch (*Build.*). A *splaying arch* (q.v.).

trumpet hypha (*Bot.*). A filament inside the thallus of a brown alga which is markedly enlarged at each transverse septum.

trun′cate (*Bot.*). Blunt-ended, as if cut off abruptly.

truncus (*Zool.*). A main blood-vessel; as, in *Icthyopsida,* the *truncus transversus* or ductus Cuvierii, and the *truncus arteriosus* or great vessel, through which blood passes from the ventricle.

trunk (*Anat., Zool.*). The body, apart from the limbs: the proboscis of an elephant.

trunk (*Arch.*). The shaft of a column.

trunk (*Bot.*). The upright, massive main stem of a tree.

trunk piston (*Eng.*). A piston, long in relation to its diameter, used where there is no piston-rod or crosshead, the piston having to take the connecting-rod thrust; most I.C. engine pistons are of this type.

trunk (*Teleph.*). In America, the name for a junction circuit between exchanges.—(*Auto. Teleph.*) The same as *link.* See **common trunk, individual trunk.**—(*Cables*) A *trunk feeder* (q.v.).

trunk call (*Teleph.*). In Britain, a telephone call from one telephone area to another, involving a connexion between two trunk centres each dealing with all calls passing in or out of its area. See **long-distance call, toll call.**

trunk circuit (*Teleph.*). In Britain, a 2- or 4-wire connexion between trunk centres, for establishing trunk calls between telephone areas. In America, a circuit between exchanges in the same telephone area.

trunk distribution frame (*Auto Teleph.*). A frame carrying the terminals for connecting the trunks between ranks of selectors.

trunk exchange (*Teleph.*). An exchange in a telephone area which is connected, by trunk or long-distance lines, to other trunk exchanges, and to subscribers through their local exchanges.

trunk feeder (*Cables*). A feeder connecting two generating stations, or a generating station and a large sub-station.

trunk frame terminal assembly (*Auto. Teleph.*). A cross-connexion terminal frame for connecting trunks between ranks of selectors.

trunk junction circuit (*Teleph.*). The junction between an exchange and the trunk exchange, for routing subscribers to the trunk exchange system.

trunk line (*Teleph.*). The same as *trunk circuit.*

trunk main (*Cables*). A *trunk feeder* (q.v.).

trunk-offering final selector (*Auto. Teleph.*). The final selector which enables a trunk operator to offer a trunk call to a subscriber although he may be engaged on another call.

trunk-offering selector (*Auto. Teleph.*). The first selector operated by impulse trains coming from a trunk operator who wishes to break into a conversation to offer a trunk connexion.

trunk position (*Teleph.*). A position in a trunk exchange at which delayed trunk calls are handled.

trunk-record circuit (*Teleph.*). The circuit to a trunk operator who records the long-distance connexion requirements of a subscriber, so that the latter may be called when the trunk line is available, and may be properly charged, when delay-working is in operation.

trunk-record position (*Teleph.*). A position in a trunk exchange at which particulars of a trunk call are recorded on a card which is routed to a trunk operator, who rings back the calling subscriber when a line is free. The record is made by any trunk operator when no-delay is in operation.

trunk road (*Civ. Eng.*). A road for which the responsibility for control and maintenance has been transferred from the existing highway authorities to the Ministry of Transport. (Great Britain.)

trunk terminal (*Teleph.*). The location of the special apparatus required at trunk centres for connecting the normal telephone exchange pairs to trunk lines.

trunking (*Auto. Teleph.*). The cables which contain the links between one rank of selectors and others in the sequence of operation, the cables taking a common route through the exchange building.

trunking diagram (*Auto. Teleph.*). A diagram which indicates the cable routes between the various groups of telephone switching apparatus in an automatic telephone exchange.

trun'nel (*Carp.*). A *trenail* (q.v.).

trunnion axis (*Surv.*). The horizontal axis about which the telescope of a theodolite or tacheometer may be rotated on its trunnion bearings.

trunnion bearing (*Eng.*). A pair of short journals, supported in bearings, projecting co-axially from opposite sides of a vessel or cylinder required to pivot about their axis.

Truscon floor (*Build.*) A type of fire-resisting floor formed in monolithic reinforced concrete, in imitation of the ordinary wood joist and boarding floor.

truss (*Struct.*). A framed structure built up entirely from tension and compression members, arranged in panels so as to be stable under load; used for supporting loads over long spans.

See **English roof— sickle-shaped—**
French— Whipple-Murphy—

truss (*Surg.*). A surgical appliance consisting of a pad incorporated in a spring or belt for retaining a reduced hernia in place.

truss-beam (*Build.*). A steel framework acting as a beam, or a timber beam or framework stiffened against deflection by a steel tie-rod.

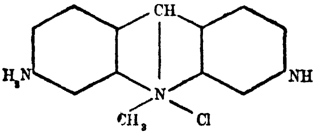
trussed partition (*Carp.*). A partition which is framed so as to be self-supporting between its ends; used in cases where the floor is not strong enough to carry it.

Trussit (*Build.*). Trade-name of a form of metal lathing used for thin plaster or concrete walls.

try square (*Carp., etc.*). A tool similar to the bevel but having the blade fixed at 90° to the stock.

trying plane (*Carp.*). A tool similar to the jack plane but about 22 in. long; used after the jack plane to obtain a straight and true surface.

tryp'afla'vine (*Chem.*). 3, 6-Diamino-methylacridinium chloride, a dye used for the treatment of wounds, on account of its antiseptic and non-toxic properties. The formula is



trypano- (Greek *trypanon*, borer) A prefix used in the construction of compound terms; e.g. *trypanorhynchus* (q v).

trypanomo'nad (*Zool.*). See **crithidial.**

trypanorhyn'chus (*Zool.*). In *Cestoda*, a protractile proboscis armed with hooks.

trypanosomi'asis (*Med.*). Sleeping-sickness. A general term for diseases caused by infection with flagellate protozoan of the genus *Trypanosoma.* Sleeping-sickness is caused by infection by *Trypanosoma gambiense* or by *Trypanosoma rhodesiense*, transmitted by the bite of tsetse flies, and characterised by irregular fever, erythematous rash, enlargement of the glands and the spleen, and, finally, by headache, apathy, abnormal sleepiness, wasting, weakness, and coma.

tryp'sin (*Zool.*). A protein-digesting ferment of the alimentary canal of Vertebrates, secreted by the pancreas.—*adj.* **tryp'tic.**

trypsin'ogen (*Zool.*). In Vertebrates, an inactive substance produced by the pancreas from which *trypsin* (q.v.) is formed by the action of the enterokinase of the succus entericus.

***l*-tryp'tophan** (*Chem.*). $C_{11}H_{12}N_2O_2$, β-indole-α-aminopropionic acid, obtained by the cleavage of certain proteins, e.g. of casein by pancreatic enzymes.

T.S. (*Chem.*). Abbrev. for *test solution.*

tsutsu'gamushi fever (*Med.*). See **shimamushi fever.**

T.U. (*Teleph.*). Abbrev. for *traffic unit* and for *transmission unit.*

Tu (*Chem*). An alternative symbol for *thulium.*

tub (*Mining*). A tram, wagon, corf, or corve.

tubbing (*Mining*) The lining of a circular shaft, formed by timber or by steel segments.

tubby (*Acous.*). An acoustically defective set in motion-picture or other recording; characterised by reverberant booming for frequencies which are familiar when barrels are struck.

tube (*Ammunition*). The tube used for the ignition of B L. cartridges. It is usually filled with gunpowder and fired by means of a cap. See **cap.**

tube (*Bot.*). The lower, cylindrical portion of a gamopetalous corolla.

tube (*Elec. Eng.*). Abbrev. for *tube railway.*

tube (*Thermionics*). An alternative name, used chiefly in America, for an electric *valve* (q.v.).

tube-drawing (*Eng.*). The production of seamless tubes by drawing a large, roughly formed tubular piece of material through dies of progressively decreasing size.

tube feet (*Zool.*). See **podium** (2).

tube fuse (*Elec. Eng.*). A fuse in which the fuse wire is enclosed in an insulating tube. Cf. *cartridge fuse.*

tube germination (*Bot.*). Germination of a spore by the formation of a hypha (germ tube).

tube nucleus (*Bot.*). A non-gametic nucleus in a pollen tube which probably plays a part in regulating the development and behaviour of that organ.

tube plates (*Eng.*). The end walls of a surface condenser, between which the water tubes are carried; they are bolted between the casing and the water-chamber covers. See **condenser tubes.**

tube railway (*Civ. Eng.*). An underground electric railway running in tunnels of circular cross-section, and lined with cast-iron facing segments, each tunnel accommodating one track.

tube ring (*Elec. Comm.*). Undesired ringing noise, sustained in an amplifying system because of continual mechanical impulsing of a microphonic thermionic valve from some external source.

tuber (*Bot.*). A swollen, underground stem, or less often a root, consisting mainly of parenchymatous cells containing much stored food material.

tuber cine'reum (*Zool.*). A nerve-centre of the diencephalon.

tu'bercle (*Bot.*) (1) A general name for a small swelling.—(2) A small swelling on the roots of beans and other plants, inhabited by symbiotic bacteria.—(*Med.*) (1) Any small rounded projection on a bone or other part of the body.—(2) A solid elevation of the skin larger than a papule.—(3) A small mass or nodule of cells resulting from infection with the bacillus of tuberculosis.—(4) Loosely, tuberculosis; the tubercle bacillus.—(*Zool*) A small rounded projection: the dorsal articulator process of a rib: a cusp of a tooth. Also called TUBERCULUM.—*adjs.* **tu'bercled, tuber'cular, tuber'culate, tuber'culose.**

tuber'cular (*Med*). Of, pertaining to, resembling, or affected with, nodules (tubercles): less correctly, affected with tuberculosis (i.e. *tuberculous*).

tuber'cularoid (*Bot.*). Having a warted surface.

tuber'culate (*Bot.*). Provided with tubercles.

tuber'culide, tuber'culid (*Med.*). Any skin lesion due to infection with the bacillus of tuberculosis.

tuber'culiform (*Bot.*). Wart-like.

tuber'culin (*Bacteriol.*). Any one of a number of preparations from a culture of *Mycobacterium tuberculosis*, for use in the diagnosis and treatment of tuberculosis.

tuberculo'ma (*Med.*). A slow-growing, circumscribed tuberculous lesion, sometimes present in the brain.

tuberculo'sis (*Med.*). Infection of the body by *Mycobacterium tuberculosis*, especially of the lungs, lymphatic glands, and joints; characterised by the development of tubercles in the bodily tissues and by fever, anorexia, and loss of weight.

tuber'culous (*Med.*). Pertaining to, affected with, or caused by, tuberculosis.

tu'beriform, tu'berous (*Bot.*). Having the form of a tuber.

tuberose (or **tuberous**) **sclerosis** (*Med.*). A condition in which hyperplasia of the neuroglia gives rise to hard, tumour-like masses in the brain, associated with epilepsy and mental deficiency; the disease is part of the developmental defect known as *epiloia* (q.v.).

tuberos'ity (*Zool.*). A prominence on a bone, generally for muscle attachment, especially prominences near the head of the humerus.

tu'berous (*Bot.*). Thickened and forming tubers.

tubic'olous (*Zool.*). Living in a tube.

tubifa'cient (*Zool.*). Tube-building, as certain *Polychaetes*.

tubip'arous (*Zool.*). Tube-producing; said of certain glands in some tubicolous animals which secrete the material with which the tube is built.

tubular lamp (*Illum.*). An electric lamp in the form of a tube, the connexion to which is generally made at either end.

tubular scaffold (*Build.*). A form of scaffold constructed of weldless steel tubes which can be clamped together in any desired manner by special steel collar-pieces with screw fixings.

tu'bule, tu'bulus (*Bot.*). (1) The neck of a perithecium.—(2) A pore lined by a hymenium-bearing basidia.—(*Zool.*) Any small tubular structure.—*adjs.* **tu'bulate, tubulif'erous, tu'buliform, tu'bulose.**

tu'buliform (*Bot.*). Composed of cylindrical, pipe-like filaments.

tuck pointing (*Build.*). Pointing finished by cutting a groove in the surface at the joints and tucking into the groove a narrow projecting artificial joint of putty.

Tudsbury machine (*Elec. Eng.*). A form of electrostatic generator which operates inside a vessel containing compressed air, and is therefore able to employ smaller clearances for a given voltage.

tufa (*Geol.*). A porous, concretionary, or compact form of calcium carbonate which is deposited from solution around springs.

tuff (*Geol.*). A rock formed of compacted volcanic fragments, some of which can be distinguished by the naked eye. If the fragments are larger, then the rock grades into an agglomerate.

Tufnol (*Plastics*). A proprietary laminated plastic; light-weight, tensile strength 3½-7¼ tons per sq. in.; strong insulation qualities.

tufted (*Bot.*). Having many short crowded branches all arising at about the same level.

tularae'mia, tulare'mia (*Med., Vet.*). A disease of rodents due to infection with *Bacterium tularense*, transmitted to Man by blood-sucking flies, fleas, or bugs, or directly from the infected rodent. In Man it is characterised by prolonged fever, enlargement of the lymphatic glands, or by a condition resembling that of typhoid fever.

tumble-home (*Ship Constr.*). A term defining the narrowing of a ship's breadth. It is the measure of the inward fall when the deck breadth is less than the maximum breadth.

tumbler switch (*Elec. Eng.*). A small single-pole switch having a quick-break action, universally used in electric-lighting installations for controlling individual lamp circuits.

tumbling bay (*Civ. Eng.*). A form of weir used to measure the rate of flow of water passing over it, or to act as an overflow dam diverting water in excess of a given discharge.

tumbling-in (*Build.*). A term applied to the brickwork forming the top surface of a pier and sloping in towards the general face of the wall.

tumbu disease (*Med.*). A disease, common in Central and West Africa, due to invasion of the surface of the body by the larvae of the tumbu fly *Cordylobia anthropophaga*; it is characterised by the formation of a boil or a warble in the skin.

tumefaction (*Med.*). The process or act of swelling: the state of being swollen.

tu'mid (*Bot.*). Swollen; inflated.

tumour, tumor (*Med.*) Any swelling or morbid enlargement. The term now usually denotes neoplasm, a non-inflammatory mass formed by the growth of new cells in the body and having no physiological function. An *innocent tumour* is encapsulated and usually solitary, pressing upon, but not invading, adjacent tissues; a *malignant tumour* (*carcinoma, sarcoma*) invades tissues, tends to recur, and spreads to other parts of the body.

Tunbridge Wells Sand (*Geol.*). A succession of ferruginous sandstones which are almost unfossiliferous. It occurs in Southern England, and forms the upper division of the Hastings Sand Group of the Wealden beds, which are usually grouped in the Cretaceous System.

tune (*Acous.*, *Radio*). To carry out the operation of *tuning* (q.v.).

tune in (*Radio*). To carry out the operation of *tuning-in* (q.v.).

tuned amplifier (*Radio*). An amplifier containing tuned circuits, and therefore sharply responsive to particular frequencies.

tuned-anode circuit (*Radio*). An inductance coil shunted by a condenser (either or both of which may be variable) connected in series with the lead to the anode of a thermionic valve.

tuned-anode coupling (*Radio*). A form of coupling between stages of a high-frequency thermionic valve amplifier, in which the coupling impedance is provided by a tuned anode circuit.

tuned circuit (*Radio*). A circuit comprising an inductance coil and a condenser connected in series or in parallel, and offering a low or high impedance respectively to the passage of alternating current at the resonant frequency.

tuned grid circuit (*Radio*). A parallel tuned circuit included between the grid and the cathode of a thermionic valve.

tuned spark system (*Radio*). See **musical spark system.**

tuner (*Radio*). An assemblage of one or more resonant circuits, used for accepting a wanted signal and rejecting others.

tung oil or **China wood oil** (*Chem.*). A yellow drying oil, obtained from the seeds of *Aleurites cordata*. M.p. 31°-44° C., sp. gr. 0·936-0·943, saponification value 193, iodine value 150-165. Used in paints and varnishes, especially enamels.

Tungar rectifier (*Elec. Eng.*). A rectifier of the gas-discharge type, employing a thermionic cathode and operating in an atmosphere of inert gas, e.g. argon.

tung'sten or **wolfram** (*Met.*). A metallic element in the sixth group of the periodic system. Chem. symbol, W. At. wt. 184, at. no. 74, sp. gr. at 20° C. 19·3, m.p. 3400° C., specific electrical resistivity 5·48 microhms per cm. cub. Used as the filament in electric lamps, as a constituent in magnet and high-speed steels, and as carbide in cemented carbides.

tungsten arc (*Elec. Eng.*). A high-intensity arc of small dimensions, obtained between tungsten electrodes enclosed in a glass bulb.

tungsten lamp (*Elec. Eng.*). An electric lamp employing an incandescent tungsten filament.

tung'stic acid (*Chem.*). WO_3. The starting-point for the preparation of tungsten metal. Also called TUNGSTIC OXIDE and TUNGSTEN TRIOXIDE.

tungstic ochre or **tungstite** (*Min.*). Trioxide of tungsten, which probably crystallises in the orthorhombic system. It is usually earthy and yellow or greenish in colour, and is a mineral of secondary origin, usually associated with wolframite.

tunic (*Zool.*). An investing layer.—*adj.* **tu'nicate.**

tu'nica albugin'ea (*Zool.*). In Mammals, the fibrous capsule of the testis.

tunica vagina'lis (*Zool.*). The serous layer covering the tunica albuginea of the testis.

Tunica'ta (*Zool.*). See **Urochorda.**

tu'nicate, tu'nicated (*Bot.*). Having a coat or covering.—(*Zool.*) Enclosed by a non-living test or mantle.

tunicate bulb (*Bot.*). A bulb composed of a number of swollen leaf bases, each of which completely encloses all parts of the bulb inside it; an onion is a familiar example.

tu'nicin (*Zool.*). A gelatinous substance, allied to cellulose, found in the test of *Urochorda.*

tuning (*Acous.*) (1) The pitch adjustment of one note to another, or to a specified frequency of oscillation.—(2) The adjustment of tension in the strings of a piano, harp, or violin, so that the specified notes emitted coincide in frequency with a standard scale, e.g concert pitch.—(3) The adjustment of the length of pipes in organs to obtain the correct emitted pitch. See **aliquot tuning.**—(*Radio*) The operation of adjusting the resonant frequency of a circuit or circuits to a particular value, generally to coincide with the frequency of an impressed e m.f. Tuning is normally effected by variation of the capacitance and/or inductance of the circuit.

tuning coil (*Radio*). See **tuning inductance.**

tuning condenser (*Radio*). A variable condenser used for tuning purposes

tuning control (*Radio*). The mechanical means for tuning a resonant circuit.

tuning curve (*Radio*). A curve relating the resonant frequency of a tuned circuit to the setting of the variable element, e.g. the condenser.

tuning error (*Radio*). See **loop tuning error.**

tuning-fork (*Acous.*). A fork with two tines and heavy cross-section, generally made of steel. Expressly designed to retain a constant frequency of oscillation when struck. See **maintained tuning-fork.**

tuning-fork control (*Radio*). Control of the frequency of the waves emitted from a radio transmitter by means of a tuning-fork oscillator.

tuning-fork oscillator (*Radio*). See **maintained tuning-fork.**

tuning-in (*Radio*). The operation of adjusting the circuit settings of a radio receiver so as to produce the maximum response to a particular signal.

tuning inductance (*Radio*). A fixed or variable inductance coil used for tuning purposes.

tuning note (*Radio*). A steady musical note radiated from a broadcasting transmitter at the commencement of, or during the intervals in, a programme, to facilitate the tuning of receivers thereto.

tuning-out (*Radio*). The opposite of *tuning-in* (q.v.), i.e. adjustment for minimum response to a signal, consistent with acceptance of another.

tunnel (*Civ. Eng.*). An underground passage which is nearly or quite horizontal, and through which passes a railway, road, aqueduct, or canal.

tunnel slots (*Elec. Eng.*). See **closed slots.**

tunnel vault (*Build.*). See **barrel vault.**

tunnel windings (*Elec. Eng.*). A term sometimes applied to armature windings in which the conductors are inserted, end-on, into closed slots.

Tunnelite (*Civ. Eng.*). A form of rapid-hardening cement.

tup (*Civ. Eng.*). A *monkey* (q.v.).

tu'ranose (*Chem.*). A disaccharose, formed from one molecule of fructose and one molecule of glucose, obtained by the hydrolysis of the trisaccharose melezitose.

Turbella'ria (*Zool.*). A class of *Platyhelminthes* comprising forms of free-living habit, marine, fresh-water, or terrestrial; with a ciliated ectoderm containing rhabdites; usually with a muscular protrusible pharynx and a pair of eye-spots. Planarians.

turbidim'eter (*Civ. Eng.*). An instrument for measuring the size of the particles in a *filler* (q.v.).

turbidimet'ric analysis (*Chem.*). See **nephelometric analysis.**

tur'binal (*Zool.*). Coiled in a spiral: one of certain bones of the nose in Vertebrates which support the folds of the olfactory mucous membrane.

tur'binate (*Bot.*). Shaped like a top and attached by the point.—(*Zool.*) In the form of a whorl or an inverted cone; as certain Gastropod shells.

turbinate bone. See **turbinal.**

turbine (*Eng*). See **steam— water—**

turbinec'tomy (*Surg.*). Surgical removal of a turbinal.

turbo-convertor (*Elec. Eng*) A combination of turbine-driven induction generator and rotary convertor, in which the rotor of the generator revolves at turbine speed; the stator, being in this case free to revolve also, is coupled to the armature of a rotary convertor.

turbo-dynamo (*Elec. Eng.*). A specially designed d.c. generator for direct coupling to a high-speed steam turbine.

turbo-electric propulsion (*Elec. Eng.*). A form of electric drive, used in marine and locomotive work, in which turbine-driven generators supply electric power to motors coupled to the propeller or axle shafts.

turbo-generator (*Elec. Eng.*). A combination of steam turbine and electric generator, directly coupled together.

turbulent burner (*Eng*). A pulverised-coal burner in which the coal-bearing primary air and secondary air pass through the burner, resulting in a short flaring flame.

turbulent flow (*Hyd*). See **eddy flow.**

turges'cence (*Bot*). The condition of cells or tissues which are distended with water.—*adj.* **turges'cent.**

turgescence (*Med.*). The act or condition of swelling up: the state of being swollen.

tur'gid (*Bot.*). (1) Said of a cell which is distended and tense, well supplied with water.—(2) Said of a young or soft plant member which is stiff and rigid owing to internal pressure arising from a plentiful supply of water.

turgid'ity (*Bot.*). The condition of rigidity when the cells of a plant member are distended and press against one another, owing to turgor pressure.

turgite (*Min.*). See **hydrohaematite.**

tur'gor (*Bot.*). The balance between the osmotic pressure of the cell sap and the elasticity of the cell wall.

turgor pressure (*Bot.*). The hydrostatic pressure set up within the cell by the water present acting against the elasticity of the wall.

tu'rion (*Bot.*). A swollen perennating bud, containing much stored food, formed by a number of water plants; it comes away from the parent, remains inert during winter, and gives rise to a fresh plant in the following spring.

Turkey-red oil (*Chem.*). Sulphonated castor oil, sp. gr. 0·95, acid value 174, iodine value 82, saponification value 189. Used in dyeing.

Turkish mortar (*Build.*). See **Khorassar mortar.**

turn bridge (*Struct.*). A *swing bridge* (q.v.) or *pivot bridge* (q.v.).

turn'buckle (*Struct.*). A *screw shackle* (q.v.).

turn indicator (*Aero.*). Any instrument that indicates the departure of an aircraft from its set course in a horizontal plane. Necessary for flying in clouds or at night when the horizon is not visible.

turnout (*Rail., etc*). The movable tapered rails or points by which a train or tram is directed from one set of rails to another.

turnover (*Elec. Comm.*). The reversing of the legs of a balanced transmission circuit. The turnover test is very important in all transmission measurements with balanced circuits, because if the same results are not obtained when any legs of the balanced system are interchanged, the presence of longitudinal currents is indicated, and no measurement can be accurate unless such currents are eliminated.

turnover board (*Moulding*). A smooth square board on which an inverted bottom-half box is placed and rammed up round a pattern having a flat joint, thus saving the labour of making the facing joint. After turning over, removing the board, and adding facing sand, the top half may be rammed up at once.

turnshoe (*Shoes*). See **sewround.**

turnsick (*Vet.*). See **coenurosis.**

turn-table (*Acous*). The rotating table which supports the wax-blank during cutting and the processed record while being reproduced. It is of relatively high inertia, to keep down fluctuations of speed.

turn-table (*Rail.*). A circular platform capable of rotation about its centre; used to reverse locomotives, which are driven on, turned through a half-circle, and driven off pointing the opposite way.

turn tread (*Build.*). A tread, generally triangular in plan, to form a step at a change of direction of the stair.

turned sorts (*Typog.*). Characters purposely turned face-downwards so that the feet print prominent black marks in a proof, thus ensuring that letters temporarily missing shall be inserted later

turning (*Build.*). A term applied to the process of building an arch.

turning-bar (*Build.*). An iron bar supporting the arch over a fireplace opening.

turning-on (*Silk*). See **beaming.**

turning-piece (*Build.*). A simple form of centring, consisting of a single solid wooden piece shaped to the form of the intrados of the arch, and supported in its temporary position by wooden struts at its ends.

turning-pin (*Plumb.*). See **tampin.**

turning-point (*Surv.*). The point at which consecutive straight lines of a traverse meet at an angle.

turning-saw (*Tools*). See **sweep-saw**

turning tools (*Eng.*) See **lathe tools.**

turns (*Horol.*). A small dead-centre lathe used by watchmakers. Usually held in a vice, and driven by a hand wheel or a bow. Used for pivoting, polishing, and turning small parts.

tur'pentine (*Chem.*). An essential oil, $C_{10}H_{16}$, obtained by the steam distillation of rosin. It is a colourless liquid, of aromatic pine-like odour; b.p. 155°-165° C., sp. gr. 0·85-0·91; the chief constituent is pinene. American turpentine is dextro-rotatory, others are usually laevo-rotatory. An important solvent for lacquers, polishes, etc.

tur'quoise (*Min.*). A hydrous phosphate of aluminium and copper which crystallises in the triclinic system. It is a mineral of secondary origin, found in thin veins or small masses in rocks of various types, and used as a gem. The typical sky-blue colour often disappears when the mineral is dried. Much of the gem turquoise of old was fossil bone of organic origin and not true turquoise.

turret (*Build.*). A small tower built on a building as a special feature.

turret clock (*Horol.*). A tower clock; a large clock in which the movement is quite separate from the dials.

turret lathe (*Eng.*). A large *capstan lathe* (q.v.) in which the turret (capstan) head and the carriage are generally automatically operated by power in the correct sequence for a particular job.

turric'ulated (*Arch.*). Pertaining to a building which is ornamented with small turrets.

tur'war bark (*Tanning*). The bark of a species of acacia (*Acacia auriculata*), used extensively for tanning in India. The leaves are used for tea.

Tuscaloo'sa Beds (*Geol.*). Glauconitic sands and lignitic clays containing fossil plants, deposited under shore and deltaic conditions; occur locally as the basal member of the Cretaceous System in the southern U.S.A., but are overlapped northwards by the Eutaw Group.

tusk tenon (*Carp.*). A form of tenon used for framing one horizontal piece into another, e.g. a trimmer into a trimming joist. The tenon is strengthened by a short projection underneath, and by a bevelled shoulder above, both fitting into a suitably cut mortise in the other piece.

tusks (*Masonry*). See **tusses.**

tus'sah or **tus'sur silk** (*Silk*). Yarn or fabric produced from the silk of the wild silkworm, of which the tussah moth of India (*Antheraea mylitta*) is an example. The fabric is light brown in colour and of rather irregular texture.

tusses (*Masonry*) Stones left projecting from the face of a wall, when later extension is allowed for. Also called TUSKS.

tus'sive (*Med*). Pertaining to, or caused by, a cough.

tus'sores (*Textiles*). Plain cotton cloths, dyed, or dyed and mercerised; made for Eastern and African markets

tussur silk (*Textiles*). See **tussah.**

tut-work (*Mining*). Work paid for according to the amount excavated, e.g. per fathom.

tuyère or **twyere**, twē-ār′ (*Met.*). A nozzle through which air is blown into a blast furnace. Usually made of copper and kept cool by circulating water.

Twaddell or **Twaddle** (*Chem.*). A scale for measuring the specific gravity of acids, etc., used in the trade. It is abbreviated °Tw., and the calculation in relation to specific gravity is $x°$ Tw. $=(\text{sp. gr.}-1)\times 200$.

tweeter loudspeaker (*Acous.*). A loudspeaker designed to operate efficiently over a restricted high audio-frequency range, so that, in combination with a larger unit for operating over most of the lower audio-frequency range, the entire range of audio-frequencies is reproduced with uniformity. May be piezo or electro-dynamically driven.

twelve-mo (*Print.*). See **duodecimo.**

twilight sleep (*Med.*). A state of semi-consciousness produced by the administration of morphine and scopolamine, used for diminishing pain in labour and for producing forgetfulness of the event after it is over.

twilled mats (*Woollen*). See **Celtic twills.**

twills (*Textiles*). Fabrics with diagonal lines on the face. Regular twills have continuous lines; zigzag twills have the lines reversed at intervals See **broken— combined— figured—**

twin. One of a pair of two and related entities similar in structure or function; often synonymous with *double*.

twins (*Biol.*). (1) Individuals arising from the division into two of the fertilised egg, each part proceeding to develop.—(2) In Mammals, two individuals produced at the same birth.

twins (*Cinema.*). A double lighting unit in a motion-picture studio, containing arc lamps.

twin cable (*Elec. Eng., etc.*). A lead-sheathed cable comprising two individually insulated conductors twisted together. A twin cable for telecommunication may have a large number of such pairs, e.g. up to 2400 pairs for telephone connexions between large exchanges.

twin-carbon arc lamp (*Illum.*). An arc lamp having two pairs of carbons, so arranged that the second pair comes into operation automatically as soon as the first pair has burnt away. Also called DOUBLE-CARBON ARC LAMP.

twin-columns (*Build.*). Two columns coupled on one base.

twin-concentric cable (*Elec. Eng.*). A two-core cable in which the conducting cores are concentrically arranged about the axis of the cable.

twin contacts (*Teleph.*). The double contacts which are used on the springs of the standard Post Office telephone-type relay, to ensure uniform wear and enhanced reliability.

Twin Creek Series (*Geol.*). Dark calcareous shales and shaly limestones representing a marine intercalation in the continental Jurassic strata of Wyoming. Underlain by aeolian sandstones and succeeded by the Beckwith formation.

twin crystal (*Crystal.*). A crystal which results from the growing together of two crystals in a symmetrical manner.

twin feeder (*Radio*). A two-wire transmission line.

twin flexible cord (*Elec. Eng.*). Two flexible cords plaited together to form *go* and *return* leads for pendant or portable electric fittings.

twin lens camera (*Photog.*). A camera with matched lenses, one for exposing, the other for focusing, generally with a reflex mirror.

twiner (*Bot.*). A plant which climbs by winding around a support.

twinned grooves (*Acous.*). A defect in cutting a wax record, in which the grooves are not uniformly spaced, generally because of the flexing of some part of the traversing mechanism.

twinning (*Crystal.*). The formation of twin crystals.

twist (*Textiles*). A cotton trade term for *warp yarn.*

twist (*Timber*). A form of warp in which the distortion is of a spiral character; as when the ends of a board are twisted or rotated permanently in opposite directions.

twist cop (*Textiles*). A large size cop of warp yarn.

twist drill (*Eng.*). A hardened steel drill in which cutting edges, of specific rake, are formed by the intersection of helical flutes with the conical point, which is backed off to give clearance; of universal application.

twist gimlet (*Carp.*). A gimlet having a tapered shank for easy withdrawal.

twist lace (*Textiles*). A lace which has been formed simply by the twisting together of bobbin and warp threads.

twisted aestivation (*Bot.*). See **contorted aestivation.**

twisting (*Teleph.*). The regular rotation of the unit of four telephone or telegraph wires on a pole route, to equalise capacities to earth and minimise induction to and from other circuits. See **transposition.**

twisting frame (*Spinning*). See **doubling frame.**

twitch (*Vet.*). A noose for compressing the lip of a horse as a means of restraint.

twitty (*Textiles*). A term applied in the woollen trade to slubbings or yarns that are uneven in form.

twixt brain (*Zool.*). See **diencephalon.**

two-and-two (2-and-2) twill (*Textiles*). A weave in which all ends work 2-up and 2-down, the ends being lifted in consecutive order, thus producing a diagonal line in the cloth. In the cotton trade it is often referred to as the *Harvard twill* or *sheeting twill.* In the woollen and worsted trades it is known as the *Cassimere twill.*

two bells (*Cinema.*). The signal (O.K.) to indicate that the take is over and silence may be broken.

two-circuit prepayment meter (*Elec. Eng.*). A prepayment meter for use when the load is connected to two separate circuits, energy being charged at a different rate in each.

two-circuit tuner (*Radio*). A tuner, formerly much used for receivers, in which the antenna circuit is tuned by an inductance and variable condenser, and inductively coupled to a closed resonant circuit to which the detector is connected.

two-circuit winding (*Elec. Eng.*). An alternative name for *wave winding* (q.v.).

two-coat work (*Plast.*). Plastering in two coats—a first coat of coarse stuff, and a second coat of fine stuff.

two-colour process (*Photog.*). Any additive or subtractive colour photographic process for obtaining colour positives with two records only, corresponding to two arbitrarily selected colour-bands.—(*Print.*) The application of the subtractive process to printing for the reproduction of a two-colour original.

two-core cable (*Elec. Eng.*). A cable containing two individually insulated conducting cores.

two-dimensional gas (*Chem.*). A unimolecular film whose behaviour in two dimensions is analogous, qualitatively and quantitatively, to that of an ordinary gas in three dimensions.

two-edged (*Bot.*). Flattened and having two sharp edges.

two-electrode valve (*Thermionics*). See **diode.**

two-fluid theory (*Elec. Eng.*). The obsolete theory of electrostatics which regarded positive and negative electricity as two separate fluids which neutralised each other when present in equal quantities. Also called DOUBLE-FLUID THEORY.

two-hinged arch (*Civ. Eng.*). An otherwise continuous rigid arch which is hinged at the abutments.

two-light frame (*Join.*). A window frame having one mullion dividing the window space into two compartments.

two-line letters (*Typog.*). Letters having a body depth double that of the specified size, such as 2-line pica. They are often used as initial letters to chapters in bookwork.

two-lipped (*Bot.*). See **bilabiate.**

two-part prepayment meter (*Elec. Eng.*). A prepayment meter in which the supply is cut off by the combined action of a time element (to collect the fixed charge) and an energy element (to collect the running charge).

two-part step-rate prepayment meter (*Elec. Eng.*). A prepayment meter combining the functions of a two-part prepayment meter and a step-rate prepayment meter.

two-part tariff (*Elec. Eng.*). An electricity tariff divided into a fixed charge, calculated per annum, and a variable charge for the actual amount of electrical energy consumed in a given period.

two-phase (*Elec. Eng.*). A term applied to a.c. systems employing two phases, whose voltages are displaced from one another by 90 electrical degrees.

two-phase four-wire system (*Elec. Eng.*). A system of two-phase a.c. distribution employing two conductors per phase.

two-phase three-wire system (*Elec. Eng.*). A system of two-phase a.c. distribution in which two conductors (lines) belong one to each phase, and the third (neutral) is common to both phases.

two-pin plug (*Elec. Eng.*). A plug for connecting a twin-flex lead to a socket forming the terminal of a two-wire electric circuit.

two-point problem (*Surv.*). A field problem arising in plane-table surveying, in which it is required to locate on the plan the position of the instrument station if only two points represented on the plan are in fact visible from the station.

two-rate meter (*Elec. Eng.*). A meter for use with a two-part tariff.

two-rate two-part prepayment meter (*Elec. Eng.*). A two-part prepayment meter in which the running charge collected by the energy element is automatically changed to a lower rate per unit during certain hours of the day.

two-reaction theory (*Elec. Eng.*). A theory used in calculations on salient-pole synchronous machines; the m.m f.'s in the machine are assumed to be divided into two components, one acting along the axis of the main poles, the other at 90° to this.

two-start thread (*Eng.*). See **double-threaded screw.**

two-step relay (*Teleph.*). A telephone relay which is partially operated by a weak current, and so makes an *x*-contact or fly-contact, thereby closing a winding in a local circuit, which passes sufficient current for the full operation of the remaining contacts of the relay.

two-stroke cycle (*I.C. Engs.*). An engine cycle completed in two piston strokes, i e. in one crankshaft revolution, the charge being introduced by a blower or other means, compressed, expanded, and exhausted through ports in the cylinder wall, before and during the entry of the fresh charge. See **Otto cycle, Diesel cycle.**

two-tone (*Textiles*). The term applied to a lace fabric in which the materials have a different affinity for dyes.

two-way switches (*Elec. Eng.*). See **double-throw switches.**

two-wire circuit (*Elec. Comm.*). A circuit in which go and return wires take equal currents, with potentials balanced with respect to earth.

two-wire repeater (*Elec. Comm.*). A repeater for insertion into a two-wire telephone circuit, in which the two amplifiers, one for amplifying the telephonic current in each direction, are connected into the two-wire line by hybrid coils.

two-wire system (*Elec. Eng.*). A system of d.c. transmission and distribution making use of two conductors.

twyere (*Met.*). See **tuyère.**

ty'chopot'amous (*Ecol.*). Occurring in a river fauna, but derived from a pond fauna.

tye (*Mining*). A form of strake, in which a considerable thickness of low-grade concentrate is collected

tylo'sis, ty'lose (*Bot.*). A bladder-like growth of a parenchymatous cell through a pit into the lumen of a neighbouring vessel or tracheide; the vessel or tracheide becomes blocked by the tyloses, and ceases to function as a conducting element.

tylosis (*Zool.*). The development of irregular cells in a cavity.

tym'pan (*Print.*). In a hand-press, the frame on which the paper is placed when printing.

tympan hooks (*Print*). In a hand-press, thumb-hooks used for locking the outer and inner tympans together.

tympan'ic bulla (*Zool.*). In some Mammals, a bony vesicle surrounding the outer part of the tympanic cavity and external auditory meatus formed by the expansion of the tympanic bone.

tympan'iform (*Bot.*). Drum-like.

tympani'tes (*Med.*). Distension of the abdomen by accumulation of gas in the intestines or in the peritoneal cavity.—(*Vet.*) Rapid distension of the rumen and reticulum of cattle, due to the formation of gases.

tym'panum (*Arch.*). The triangular or segmental space forming the central panel of a pediment.

tympanum (*Zool.*). A drum-like structure: in some Insects, the external vibratory membrane of a chordotonal organ: in some members of the Grouse family (*Tetraonidae*), an inflatable air-sac of the neck-region: in Vertebrates, the middle ear, or the resonating membrane of the middle ear: in Birds, the resonating sac of the syrinx.—*adjs.* **tympan'ic, tym'panal.**

tyndallim'etry (*Chem.*). The determination of the concentration of suspended material in a liquid by measurement of the amount of light scattered from a Tyndall cone.

type (*Biol.*). The individual specimen on which the description of a new species or genus is based: the sum-total of the characteristics of a group.—*adj.* **typ'ical.**

type locality (*Geol.*). The locality from which a rock, formation, etc., has been named and described, usually because of its characteristic occurrence there.

type specimen (*Biol.*). The actual specimen from which a given species was first described.

type (*Typog*). A rectangular piece of metal on the top of which is cast any of the characters used in letterpress printing. Styles of type are divided broadly into four groups: Roman Old Style, Roman Modern, *Italics*, Sans Serif. There are innumerable variations and modifications of the original letter forms (see **type face**).

type face (*Typog.*). A particular family or fount of type in which the characters have distinctive features. The following specimens name and illustrate the type faces most commonly used in modern book-work:

Aldine Bembo: Chambers's Tech. Dict.
Baskerville: Chambers's Technical Dict.
Caslon: Chambers's Technical Dict.
Fournier: Chambers's Technical Dictionary.
Garamond: Chambers's Technical Dict.
Imprint: Chambers's Technical Dict.
Plantin: Chambers's Technical Dict.

type-high (*Typog.*). When a printing plate or block is mounted on wood or metal and brought to the proper height for printing it is said to be *type-high.*—*n.* **type-height.**

type holder (*Bind*). A hand tool for holding the letters to be impressed on the cover of a book by the finisher.

type metal (*Met.*). A series of alloys of lead, antimony, and tin, used for type. The composition is antimony 10-20%, tin 2-12%, and the remainder lead.

type-setting machines (*Typog.*). See **composing machines.**

typhli'tis (*Med.*). Inflammation of the caecum.

typh'losole (*Zool.*). In some *Invertebrata*, a longitudinal dorsal inwardly projecting fold of the wall of the intestine, by which the absorptive surface is increased.

ty'phoid, typhoid fever (*Med.*). Enteric, enteric fever. An infectious disease due to infection with the *Bacillus typhosus* (*Bacterium typhosum*), characterised by prolonged fever, enlargement of the spleen, a rose-red rash, and ulceration of the intestines, with diarrhoea and possibly haemorrhage from, or perforation of, the intestines.

typhoid, avian (*Vet.*). A contagious disease of birds due to infection by *Bacterium gallinarum.*

typhoon (*Meteor.*). A tropical revolving storm in the seas bordering on China; a cyclone.

ty'phus, typhus fever (*Med.*). Jail fever. A contagious disease characterised by high fever, severe prostration, and an eruption of macules, papules, and petechiae, the infection being conveyed by lice harbouring *Rickettsia prowazeki.*

typhus, canine (*Vet.*). See **Stuttgart disease.**

typhus, equine (*Vet.*). See **purpura haemorrhagica.**

tyre (*Eng.*). A renewable, forged steel, flanged ring, shrunk on the rim of a locomotive wheel to give additional strength and durability.

tyre-measurer. See **circumferentor.**

***l*-ty'rosine** (*Chem.*). $C_9H_{11}NO_3$, *β-p*-hydroxyphenyl-*α*-aminopropionic acid. It has the constitution $HO{\cdot}C_6H_4{\cdot}CH_2{\cdot}CH(NH_2){\cdot}COOH$, is obtained by the cleavage of certain proteins, and is found in cheese, in the pancreas, etc.

u **(*Chem.*).** (With subscript) a symbol for velocity of ions.

U (*Chem.*). The symbol for *uranium*.

U (*Chem.*). A symbol for *intrinsic energy*.

U-bolts (*Automobiles*). Bars bent into U-shape and threaded at each end; used for anchoring a semi-elliptic spring to an axle beam, a plate being threaded over the ends and secured by nuts.

U-leather, U-packing (*Eng.*). A leather ring of U-section, used to pack the glands of hydraulic rams. The open side is the pressure side, and the water in expanding the inner face against the ram effectively seals it against leakage.

U-links (*Elec. Comm.*). The spring links used to join isolated parts of telegraph or other communication channels, the ends of which are brought to a special link-board. Removal of a link opens the circuit, so that testing apparatus can be rapidly inserted to detect and locate faults.

udder (*Vet.*). The organ containing the mammary glands of certain animals, particularly the cow and mare.

U.F. (*Plastics*). Abbrev. for *urea-formaldehyde* plastics.

uferflucht, oo′fer-floohht (*Ecol.*). A concentration of limnetic plankton towards the centre of a lake

Uin′ta formation (*Geol.*). Strata of Eocene age and continental origin occurring typically in the Uinta Basin in Utah and Colorado.

Uinta Quartzite Series (*Geol.*). See **Belt Series.**

uintaite, oo-in′ta-īt (*Min.*). A variety of natural asphalt occurring in the Uinta Valley, Utah, as rounded masses of brilliant black solid hydrocarbon. Also called GILSONITE.

Ulbricht globe photometer (*Illum.*). A photometer for giving a direct measurement of the mean-spherical candle-power of a lamp. It consists of a hollow sphere, whitened on the inside, with the lamp under test at the centre. Owing to the internal reflection, the illumination on any part of the internal surface of the sphere is proportional to the total light output from the lamp; this is measured through a small window.

ulcer (*Med.*). A localised destruction of an epithelial surface (e.g. of the skin or of the gastric mucous membrane), forming an open sore; it is usually a result of infection.

ulceration (*Med.*). The process of forming an ulcer: the state of being ulcerated.

ul′cerative (*Med.*). Of the nature of, or pertaining to, ulcers: causing ulceration: associated with ulceration (e.g. *ulcerative colitis*).

u′lexite (*Min.*). A hydrous borate of sodium and calcium occurring in saline crusts on alkali flats in arid regions, as in Chile and Nevada, where it forms rounded masses of extremely fine acicular white crystals.

uliginose, uliginous, ū-lij′— (*Bot.*). Growing in wet places.

ull′manite (*Min.*). See **nickel antimony glance.**

Ullswater Basalt Group (*Geol.*). A subdivision of the Borrowdale Volcanic Series of the Ordovician System in the English Lake District.

ulna (*Zool.*). The post-axial bone of the antebrachium in land Vertebrates.—*adj.* **ulnar.**

ulna′re (*Zool.*). A bone of the proximal row of the carpus in line with the ulna.—*pl.* **ulna′ria.**

ulno- (Latin *ulna*, elbow). A prefix used in the construction of compound terms with reference to the ulna; e.g. *ulnocarpal*, pertaining to the ulna and the carpus.

ulot′richous (*Zool.*). Having wool or curly hair.

Ulsterian (*Geol.*). The lower of the two divisions of the Middle Devonian rocks in N. America; it is succeeded by the Erian stage.

ultimate limit switch (*Elec. Eng.*). See **final limit switch.**

ultimate lines (*Chem.*). See **raies ultimes.**

ultimate tensile stress (*Met.*). The highest load applied to a metal in the course of a tensile test, divided by the original cross-sectional area. In brittle or very tough metals it coincides with the point of fracture, but usually extension continues under a decreasing stress, after the ultimate stress has been passed. Also called TENACITY.

ultimobran′chial bodies (*Zool.*). In Vertebrates, a pair of glandular bodies, of unknown function, arising from the last pair of gill-pouches.

ultra-basic rocks (*Geol.*). Igneous rocks containing less silica than the basic rocks (i.e. less than 45%), and characterised by a high content of mafic constituents, particularly olivine (in the peridotites) and amphiboles and pyroxenes (in the perknites and picrites).

ultra-centrifuge (*Chem.*). A high-speed centrifuge for the separation of submicroscopic particles.

ultra-dextral (*Zool.*). Said of sinistral Gastropod shells when the organisation of the animal is dextral.

ultra-filtration (*Chem.*). The separation of colloidal particles by filtration, under suction or pressure, through a colloidal filter or semi-permeable membrane.

ultrama′fites (*Geol.*). Those igneous rocks in which there is an abnormally high content of ferromagnesian silicates, but which contain no feldspar; subdivided into picrites (with accessory plagioclase), pyroxenites and peridotites.

ultramicrobe (*Biol.*). An agent of obscure nature, able to cause disease in organisms, but too small to be visible with the microscope.

ultra-short waves (*Radio*). Electromagnetic waves of wavelength less than 10 metres.

ultrasonics (*Acous.*). The science of mechanical vibrations and radiations in solids, gases, and fluids, which have frequencies in excess of those which, in a sound-wave, are normally perceivable by the ear.

ultrasonic frequency (*Radio*). The same as *supersonic frequency*.

ultraud′ion (*Radio*). The name given by Lee de Forrest to one of the earliest forms of detector circuit employing reaction in conjunction with a three-electrode valve.

ultra-violet radiation (*Phys.*). Invisible radiations of wave-length less than 3900 A.U.—the limit of visibility at the violet end of the spectrum. From 3900 to 2000 A.U., the spectrum may be photographed with ordinary plates in air. Below 2000 A.U., Schumann plates and vacuum spectrographs are necessary. Ultra-violet radiation may also be detected by *fluorescence* (q.v.).

ultra-violet cell (*Photo-electric Cells*). A cell having a maximum response to light in the ultra-violet end of the spectrum.

umbel (*Bot.*). An inflorescence consisting of numerous small flowers in flat-topped groups, borne on stalks all arising from about the same point on the main stem; in most umbels this sort of branching is repeated, the stalks which bear the groups of flowers themselves arising at about the same point on a main axis.

um′bellate (*Bot.*). Having the characters of an umbel: producing umbels.

umbel'lifer (*Bot.*). A plant which has its flowers in umbels.

um'bellule (*Bot.*). A partial umbel.

umbilec'tomy (*Surg.*). Surgical removal of the umbilicus.

umbil'ical cord (*Anat., Zool.*). In eutherian Mammals, the vascular cord connecting the foetus with the placenta.

umbilical cord (*Bot.*). See **funicle.**

umbil'icate, umbil'icated (*Bot*). Having a small central depression.—(*Med*) Having a depression which resembles the umbilicus.

umbil'icus, *or* —ī'kus (*Anat., Zool.*). In Gastropod shells, the cavity of a hollow columella: in Birds, a groove or slit in the quill of a feather: in Mammals, an abdominal depression marking the position of former attachment of the umbilical cord.—*pl.* **umbilici.**

umbo (*Bot.*). (1) A small central hump in the middle of the top of the pileus of an agaric.—(2) A small projection on the apophysis of the scale of a pine cone.—(*Zool.*) A boss or protuberance: the beak-like prominence which represents the oldest part of a Bivalve shell.—*pl.* **umbo'nes.**

um'bonate (*Bot., Zool*). Bearing, resembling, or pertaining to an umbo.

umbra (*Astron.*). The cone of shadow bounded by the external tangents of one celestial body to another, whose interposition causes the eclipse of a third; thus used of the earth's shadow in a lunar eclipse, and of the moon's shadow in a solar eclipse. The shadow cone bounded by the internal tangents is called the *penumbra.*

umbracu'liform (*Bot.*). Shaped like an umbrella.

umbrella (*Zool.*). A flat cone-shaped structure, especially the contractile disc of a medusa.

umbrella antenna (*Radio*). An antenna comprising a vertical uplead from the top of which a number of wires extend radially towards the ground.

umbrella roof (*Struct.*). A *station roof* (q.v.).

umbrella-type alternator (*Elec. Eng.*). A vertical-shaft alternator, driven by a water turbine, in which the field system is overhung and revolves around the stationary armature.

um'brine (*Bot.*). Dull darkish-brown.

umlaut, oom'lowt (*Typog.*). The *diaeresis* mark used in German words (e.g. *Männer*). Strictly, a philological term signifying the modification of a vowel by a succeeding vowel.

U'naflow (or **U'niflow**) **engine** (*Eng.*). A steam-engine in which the steam enters through drop valves at the ends of the cylinder and exhausts through a piston-controlled belt of ports at the centre.

unarmed (*Bot.*). Without thorns or prickles.

unarmoured cable (*Cables*). A cable in which the outer covering of steel wire (armouring) is absent.

u'nary (*Chem.*). Consisting of one component, etc.

unbalanced circuit (*Elec. Comm.*). A circuit in which the impedance of one leg, the return, is substantially zero, and the potential substantially earth potential, the conductor being connected to earth at least at one point.

unbalanced load (*Elec. Eng.*). A load which is unequal on the two sides of a three-wire d.c. system, or on the three phases of a symmetrical three-phase a.c. system.

unbalanced network (*Elec. Comm.*). A network arranged for insertion into an unbalanced circuit, the earthy terminal of the input end being directly connected to the earthy terminal of the output end.

unbalanced system (*Elec. Eng.*). A three-phase a.c. system carrying an unbalanced load.

unbreakable record (*Acous.*). A gramophone record made from a non-brittle material, such as celluloid.

unbuttoning (*Struct.*). A term applied to the process of dismantling steel frameworks.

un'cate, un'ciform, un'cinate (*Bot., Zool.*). Hooked at the tip: hook-like.

un'cinate fit (*Med.*). A hallucination of smell or of taste, due either to a cerebral tumour or to epilepsy.

unci'nus (*Zool*). A hook, or hook-like structure; as a hook-like chaeta of *Annelida*: in *Gastropoda*, one of the marginal radula-teeth.

unconformity (*Geol.*). A geological structure involving two sets of rocks of different ages, usually dipping in different directions and at different angles.

unconscious (*Psychol.*). A general term used to include all processes which cannot be made conscious by direct effort of will. These processes are present in a dynamic state, and require a powerful force to maintain them in the unconscious. This force is supplied by the *superego* (q.v.), and by the *censor* (q.v.) present in dreams, causing distortion, displacement, and condensation, which are forms of *resistance* (q.v.). The unconscious contains the reservoir of instinct, real desires, and all experiences in the past history of the individual which have never been made completely conscious and resolved. Jung also includes the racial history of the individual, forming a racial or collective unconscious. See **psyche.**

uncoursed (*Masonry*). *Random* (q.v.).

uncus (*Zool.*). In *Rotifera*, the head of the malleus: in some male *Lepidoptera*, a hook-like dorsal process of the ninth abdominal somite: any hook-shaped structure.

uncut (*Bind.*). Said of a book whose edges have been left untrimmed, the bolts therefore remaining *uncut.*

undamped oscillations (*Radio*). *Continuous oscillations.*

undamped waves (*Radio*). *Continuous waves.*

underbridge (*Civ. Eng.*). A bridge carrying one road along the top of an embankment, and providing space for another road to pass under it.

undercarriage (*Aero.*). The main part of the alighting structure of an aircraft, approximately under the centre of gravity of the machine; usually carries the main wheels, skids, or floats; often retractable into the body or wings to reduce head resistance.

undercast (*Mining*). A duct to carry ventilating air under a roadway at a crossing.

underclay (*Geol.*). A bed of clay, in some cases highly siliceous, in many others highly aluminous, occurring immediately beneath a coal-seam, and representing the soil in which the trees of the Carboniferous swamp-forests were rooted. Stigmarian roots commonly occur as fossils in underclays, many of which are used as fire-clays. Also called SEAT EARTH.

undercloak (*Plumb.*). The first or lower sheet of lead in a *roll* (q.v.). Cf. *overcloak.*

undercoat (*Paint.*). A coat of *flatting* (q.v.).

under-compensated meter (*Elec. Eng.*). An induction-type meter provided with insufficient phase compensation, as the result of which it reads high with leading currents and low with lagging currents.

under-contact rail (*Elec. Eng.*). A conductor-rail supported and protected from above, in order that the collecting-shoe of the electric tractor may make contact with the bottom surface.

under-exposure (*Photog.*). Insufficient exposure of the sensitive surface of a plate, paper, or film to the incident image, resulting in lack of detail and reduced contrast.

underfeed stoker (*Eng.*). A *mechanical stoker* (q.v.) in which the fuel is fed automatically and progressively from below the fire, and gradually forced up into the active zone, air being injected into the fuel bed just below the combustion-level. See **single-retort— multiple-retort—**

under-gettings (*Mining*). See **shorts.**

underglaze (*Pot.*). Coloured decoration applied before the final process of glazing.

underground cable (*Cables*). An armoured cable suitable for laying underground either direct or in conduit.

underground collector (*Elec. Eng.*). See **plough.**

underground conduit (*Cables*). A cement or stoneware underground channel in which cables are laid.

underground railway (*Civ. Eng.*). A railway laid either wholly or in the main below the surface-level of a town or city, so as to be in tunnel, with perhaps occasional open cuttings.

underlay (*Mining*). The departure of a vein or thin tabular deposit from the vertical; it may be measured in horizontal feet per fathom of inclined depth. Also UNDERLIE.

underlay (*Print.*). To paste paper or card under the mount of a printing plate in order to bring it to type-height.

underlay shaft (*Mining*). A shaft sunk in the rock below an inclined reef or lode, and at the same dip or inclination as the lode.

underleaf (*Bot.*). One of a row of leaves on the under side of the stem of a liverwort.

underlie (*Mining*). See **underlay.**

underlining felt (*Build.*) *Sarking felt* (q.v.).

undermodulation (*Cinema*). Modulation which is unnecessarily low in relation to the possible level of modulation that can be accommodated on the sound-track.—(*Radio*) That state of adjustment of a radio telephone transmitter at which the peaks of speech or music do not produce 100% modulation, so that the carrier power is not used to full advantage.

underpick (*Weaving*). The condition when the picking arm of a loom is below the shuttle box.

underpinning (*Build., Civ. Eng.*). The operation of rebuilding the lower part of a building without damaging or weakening the superstructure.

underpitch groin (*Build.*). See **Welsh groin.**

underpoled copper (*Met.*). See **poling.**

underproof (*Spirits*). See **proof*.**

underrunning trolley (*Elec. Eng.*). The normal form of trolley system, in which contact is made from under the trolley wire.

undersaturated exciter (*Elec. Eng.*). An auxiliary exciter operating on the straight part of its magnetisation curve; used to compensate a rotary convertor for field weakening due to lagging currents.

undershot wheel (*Eng.*). A water-wheel used for low heads, in which the power is obtained almost entirely from the impulse of the water on the vanes. See **Poncelet wheel.**

undershrub (*Bot.*). A small woody perennial in which the flowering branches die back after flowering, leaving a persistent basal system of woody branches from which new growth arises in the next season.

under-voltage no-close release (*Elec. Eng.*). A device which acts upon the trip coil of a circuit-breaker in such a way as to prevent the circuit-breaker being closed if the voltage is below a certain predetermined value.

under-voltage release (*Elec. Eng.*). A device to trip an electrical circuit should the voltage fall below a certain predetermined value. Also called a LOW-VOLT RELEASE.

undine, un'dēn (*Med.*). A small flask for applying lotions to the eye.

un'dulant fever (*Med.*). (1) Malta fever, Mediterranean fever, Gibraltar fever, Rock fever. A disease characterised by alternating febrile and afebrile periods, splenomegaly, transient painful swelling of joints, neuralgia, and anaemia; due to infection with *Brucella melitensis*, conveyed to Man in goat's milk.—(2) A disease having the same characteristics as above, due to infection of Man by *Brucella abortus*, a micro-organism which causes abortion in cows and is conveyed to Man in cow's milk.

un'dulate (*Bot.*). Having a wavy margin.

undulated (*Bot.*). With gentle elevations and depressions; repand.

undulating membrane (*Zool.*) See **vibratile membrane.**

unequal (*Bot.*). (1) Having the two sides not symmetrical.—(2) Not all of the same length.

unequally pinnate (*Bot.*). See **imparipinnate.**

unessential element (*Bot.*). A chemical element which may be found in plants, but which appears to play no part in nutrition and seems not to be necessary to the welfare of the plant.

un'gual (*Med.*). Pertaining to or affecting the nails.

unguarded interval (*Auto. Teleph.*). A brief interval of time during which false operation of automatic switching apparatus is possible.

unguiculate, un-gwik'— (*Bot., Zool.*). Provided with claws.—Specifically (*Bot.*) applied to a petal with an expanded limb supported on a long narrow stalk-like base.

un'guis (*Zool.*). In Insects, one of the tarsal claws: in Vertebrates, the dorsal scale contributing to a nail or claw (cf. *subunguis*): more generally, a nail or claw.—*pl.* **ungues.**—*adj.* **un'guinal.**

un'gula (*Zool.*). A hoof.—*adj.* **ungulate.**

Ungula'ta (*Zool.*). An order of herbivorous terrestrial Mammals in which there are never more than four digits in the hind limb; hoofed digitigrade forms with inguinal or abdominal mammae and the testes in a scrotal sac; a collar-bone is lacking. Oxen, Sheep, Goats, Deer, Horses, Asses, Zebras, Antelopes, Giraffes, Camels, Swine, Hippopotami, Tapirs, and Rhinoceroses.

un'guligrade (*Zool.*). Walking on hoofs, i.e. on the tips of the enlarged nails; as Horses.

unhairing (*Leather*). The operation of removing from hides and skins the hair that has been loosened by the process of liming; carried out by hand on a sloping beam, or by machine.

uni- (Latin *unus*, one). A prefix used in the construction of compound terms; e.g. *uniflagellate*, having a single flagellum.

uniax'ial (*Bot., Zool.*). Having an unbranched main axis; haplocaulescent.

uniaxial (*Min.*). A term embracing all those crystalline minerals in which there is only one direction of single refraction (parallel to the principal crystal axis and known as the optic axis). All minerals which crystallise in the tetragonal, trigonal, and hexagonal systems are *uniaxial*. Cf. *biaxial*.

uniaxial construction (*Bot.*). The structure of an algal thallus, consisting of a main filament with its branches packed closely round it.

unicel'lular (*Biol.*). Consisting of a single cell.

unidac'tyl (*Zool.*). Having one digit.

unidirectional antenna (*Radio*). An antenna in which the radiating or receiving properties are largely concentrated in one direction.

unidirectional current (*Elec. Eng.*). A current whose direction is unchanging. More commonly known as a *direct current*.

Uniflow engine (*Eng.*). See **Unaflow engine.**

unifol'iolate (*Bot.*). Said of a compound leaf which has one leaflet only.

uniform extension (*Met.*). The extension produced in a tensile test before the ultimate tensile stress is reached, and uniform over the gauge length. See **local extension.**

uniform system (*Photog.*). A method of marking the stop adjustment of lenses so that equal unit-steps correspond to doubling or halving the exposure, unity on the scale corresponding to *f*/4. Abbrev. **U.S.**—See ***f*-system.**

uniju'gate (*Bot.*). Said of a compound leaf having one pair of leaflets.

unilat'eral (*Bot.*). Said (1) of members which are all inserted on one side of the axis, or are all turned to one side of the axis; (2) of a raceme with all the flowers turned to one side; (3) of a stimulus falling on the plant from one side; as when a plant is placed so that light reaches it through a small aperture.

unilateral conductivity (*Elec. Eng.*). The property of unipolarity by which current can flow in one direction only; exhibited by a perfect rectifier.

unilateral impedance (*Elec. Comm.*). Any electrical or electromechanical device in which power can be transmitted in one direction only; e g. a thermionic valve or carbon microphone.

uniloc'ular (*Bot.*). Consisting of a single compartment.

unimolec'ular layer, — reaction (*Chem.*). See **monomolecular layer, — reaction.**

uninsulated conductor (*Elec. Eng.*). A conductor at earth potential, such that no care need be taken to insulate it from earth.

uninu'cleate (*Biol.*). Containing one nucleus.

union (*Med.*). In the process of healing, the growing together of parts separated by injury (e.g. the two ends of a broken bone, the edges of a wound).

union (*Plumb.*). A connexion for pipes.

union (*Textiles*). A mixture of two or more materials in a yarn or cloth; generally the presence of the less expensive material is not apparent.

union blanket (*Textiles*). A blanket made from cotton warp and woollen or shoddy weft; or one made from Angola yarns.

unionised, un-ī'on-izd (*Chem.*). Not ionised.

unip'arous (*Zool.*). Giving birth to one offspring at a time.

Unipiv'ot instrument (*Elec. Eng.*). An instrument whose moving-coil system is balanced on a single pivot passing through its centre of gravity.

unipo'lar (*Zool.*). Said of nerve cells having only one process.

unira'mous (*Zool.*). Having only one branch; as some Crustacean appendages.

uniselector (*Auto. Telcph.*). A selector switch which only rotates its wipers about an axis, in contrast with the normal selector, in which the wipers are raised to a specified level in the rows of contacts by the impulse trains, and then enter the bank of contacts, either by hunting or by a further train of impulses. See **selector.**

uniselector distribution frame (*Auto. Teleph.*). A frame carrying terminals, so that the extent of the multiple outlets from uniselectors can be varied to suit the demand on outlets in the multiple.

unise'rial (*Zool.*). Said of a type of fish fin in which the radial elements occur on one side only of the basalia.

unise'riate (*Bot.*). (1) Arranged in a single row, series, or layer.—(2) Said of a vascular ray which is one cell wide in cross-section.

uniseriate sorus (*Bot.*). A sorus having a single series of sporangia, forming a rosette around a central cushion.

unisex'ual (*Bot., Zool.*). Showing the characters of one sex or the other; distinctly male or female. Cf. *hermaphrodite.*

unison (*Acous.*). In an organ, the production of notes which have the same pitch as the keys which actuate them: in singing or orchestral music, the use of octaves only in the harmony.

unistrat'ose (*Bot.*). Forming a single layer.

unit cell (*Crystal.*). The smallest group of atoms, ions, or molecules, whose repetition at regular intervals, in three dimensions, produces the lattice of a given crystal.

unit characters (*Gen.*). Independent characteristics, which act as units, are traceable in each generation, and are assorted and distributed by the laws of chance.

unit-fee call (*Teleph.*). A call in the local area of a telephone exchange for which the unit-fee charge is not exceeded.

unit of attenuation (*Elec. Comm.*). See **néper.**

unit of bond (*Build.*). That part of a brickwork course which, by being constantly repeated throughout the length of the wall, forms a particular bond.

unit of illumination (*Light, etc.*). See **foot-candle, lux, phot.**

unit of mass. See **gram.**

unit of reluctance (*Elec. Eng.*). See **oersted.**

unit of vegetation (*Bot.*). See **community.**

unit orchestra. See **theatre organ.**

unit organ (*Acous.*). A theatre organ in which the stops, including extension stops, are arranged in units, the number of units measuring the size of the instrument.

unit pole (*Elec. Eng.*). A magnetic pole which, when placed at a distance of one centimetre from a like pole, experiences a force of repulsion equal to one dyne.

unit weight (*Eng.*). In a steam boiler, the weight of the complete boiler, in tons, per ton of the hourly maximum steam production.

unitary ratio (*Elec. Eng.*). The ratio between the electromagnetic and electrostatic absolute units; equal to the velocity of propagation of radiated energy, viz., 3×10^{10} cms. per sec.

univa'lent (*Cyt.*). One of the single chromosomes which separate in the first meiotic division.

univalent (*Chem.*). Monovalent.

u'nivalve (*Zool.*). In one piece; said of Molluscan shells.

univariant (*Chem.*). Having one *degree of freedom* (1, q.v.).

universal chuck (*Eng.*). See **self-centring chuck.**

universal controller (*Elec. Eng.*). A crane controller, similar in action to the 'joystick' of an airplane, in which a vertical motion of the control handle operates the hoist motor, whilst a lateral motion controls the travel motor.

universal indicator (*Chem.*). A mixture of *indicators* (1, q.v.) which gives a definite colour change for each integral change of *p*H-value over a wide range.

universal joint (*Automobiles, etc.*). A joint placed at the ends of the propeller shaft to allow for movement of the rear axle relative to the gear box; generally of modified Hooke's type, enclosed in a grease-cover.

universal machine (*Print.*). A printing machine of the platen type.

universal shunt (*Elec. Eng.*). A resistance box containing several shunts, for use with galvanometers of different resistances.

universal time (*Astron.*). A system of time reckoning adopted by international agreement; the same as Greenwich Civil Time (that is, Greenwich Mean Solar Time) but counted from 0 hours, beginning at Greenwich Mean Midnight. Abbrev. U.T.

universal veil (*Bot.*). A coating of hyphae which completely surrounds the young fruit body of a fungus.

univo'ltine (*Zool.*). Producing only one set of offspring during the breeding season or year.

unloaded antenna (*Radio*). An antenna containing no inductance coils to increase its natural wavelength.

unloaded wavelength (*Radio*). The natural wavelength of an unloaded antenna.

unlocking (*Horol.*). The action of removing the locking corners of the pallet from the tooth of the escape wheel.

unmasked hearing (*Acous.*). In deaf-aids, the principle of applying to one ear the higher-frequency components of wanted sounds, in order that their presence may be appreciated; such frequencies are swamped by amplitude-distortion, and consequent alien tones, when all the desired component frequencies are applied at high level to the other ear.

unmodulated track (*Cinema*). Those parts of the finished sound-track on which the modulation is zero, the transparent part of the track being responsible for the residual noise-level.

unmodulated waves (*Radio*). Waves which do not vary in amplitude with time, such as those radiated from a radio-telephone transmitter when no sound enters the microphone.

unorganised ferments (*Chem.*). *Enzymes* (q.v.).

unpitched sound (*Acous*). Any sound or noise which does not exhibit a definite pitch, but consists of components spread more or less continuously over the frequency spectrum.

unreduced apogamy (*Bot.*). Euapogamy.

unsaturated (*Chem.*). (1) Less concentrated than a saturated solution or vapour.—(2) Containing a double or a triple bond, especially between two carbon atoms; unsaturated molecules can thus add on other atoms or radicals before saturation is reached.

unseptate (*Bot.*). Aseptate.

unsoundness (*Met.*). The condition of a solid metal which contains blowholes or pinholes due to gases, or cavities resulting from the liquid-to-solid contraction (i e. *contraction cavities*, q.v.).

unstability (*Cables*). See under **stability test.**

unstable (*Chem.*). Subject to spontaneous change.

unstable or **deficient** (*Struct.*). A term applied to a structural framework having fewer members than it would require to be perfect.

unstable community (*Bot.*). A plant community which does not remain constant over a period of years.

unstable equilibrium (*Phys., etc.*). See **equilibrium (unstable).**

unstable oscillation. Any oscillation, in a mechanical body, aircraft, or electrical circuit, which increases with time.

unstri'ated muscle (*Zool.*). A form of contractile tissue composed of spindle-shaped fibrillar uninucleate cells, occurring principally in the walls of the hollow viscera. Cf. *striated muscle.*

unsymmetrical (*Bot.*). Said of a flower in which all the parts are not regular.

unsymmetrical grading (*Auto. Teleph.*). *Grading* (q.v.) in which subscribers originating higher-than-average traffic are given access to a greater proportion of individual trunks.

unsymmetrical oscillations (*Radio*). Oscillations in which the positive and negative halves of the wave-form are unequal and of different shape.

untrimmed floor (*Carp.*). A floor consisting of bridging joists only.

untuned antenna (*Radio*). An antenna not separately tuned to the operating frequency, although it may be effectively tuned by coupling to a resonant circuit.

untuned circuit (*Radio*). A circuit not sharply resonant to any particular frequency.

unvoiced sound (*Acous.*). In speech, any elemental sound which has not discrete harmonic frequencies but consists of noise-frequencies generated by air rushing through the mouth and nasal cavities; these are modified in spectral energy distribution by the posture of the cavities of the mouth and the resultant broad resonances.

up (*Mining*). A working place which has reached the boundary.

up-and-down indicator (*Horol.*). A mechanism which indicates when a chronometer or watch requires to be wound, *up* indicating fully wound.

upcast (*Geol.*). In faulted rocks, *upcast* refers to the strata in which the *relative* displacement has been upwards, i.e. away from the earth's centre, along the fault plane. Cf. *downthrow.* See **fault.**

upcast or **uptake** (*Mining*). (1) The shaft or pit up which the ventilating current returns to the surface.—(2) The lifting of a seam or bed by a dyke.

upcast shaft (*Civ. Eng*). A ventilating shaft through which the vitiated air passes in an upward direction.

upper (*Boots and Shoes*). The part of a boot or shoe that is above the sole and welt.

upper (*Bot.*). Posterior.

Upper Avonian (*Geol.*). See **Dinantian Stage.**

upper case (*Typog.*). The *type case* (q.v.) which contains the capital letters; it is placed above the case containing the small letters. Cf. *lower case.*

upper culmination (*Astron.*). See under **transit.**

upper deck (*Ship Constr.*). The term correctly denotes the main strength deck of a ship. From this deck all scantlings are determined, freeboard assigned, and subdivision arranged, according to types.

Upper Greensand (*Geol.*). So named to distinguish it from the Lower Greensand, is the arenaceous facies of the Albian stage of the English Cretaceous rocks. Best developed in the more westerly outcrops, it passes eastwards laterally into the Gault Clay at Maidstone, Kent, to the east of which town no Upper Greensand occurs.

upper leathers (*Leather*). The name for leathers prepared from the hides of a class of small animals found in India, Nigeria, and Abyssinia; they are more lightly tanned than heavy hides, and are used extensively for the uppers of boots and shoes, harness, straps, etc.

upper mean-hemispherical candle-power (*Illum*). See **mean-hemispherical candle-power.**

Upper Pottsville Series (*Geol.*). See **Kanawha Series.**

upper transit (*Astron.*). Another name for *upper culmination* (see **culmination**).

upright (*Struct*). A vertical member in a structure.

uprighting (*Horol*). The process of correcting the pivot holes in a plate so that the hole in one plate is exactly in line with the corresponding hole in the other plate, and a line through the two holes is at right-angles to the plates.

upset (*Timber*). A timber defect, the fibres being torn across the grain.

upsetting (*Eng.*). The operation of increasing the diameter of a bar during forging, uniformly or locally, by heating and hammering axially.

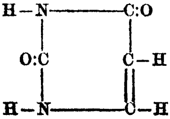
uptake (*Eng.*). The flue or duct which leads the flue gases of a marine boiler to the base of the funnel.

uptake (*Mining*). See **upcast.**

upturn (*Plumb.*). The part of a lead flashing which is dressed up against a wall face.

u'rachus (*Zool.*). The median ligament of the umbilical cord.

u'racil (*Chem.*). 2,6-Dioxypyrimidine having the following constitution:



urae'mia, ure'mia (*Med.*). The state resulting from failure of a diseased kidney to perform its normal functions; associated with retention of urea in the blood, and characterised by varied symptoms, among which are headache, foul breath, diarrhoea and vomiting, visual disturbances, lethargy, convulsions, and coma.

Ura′lian emerald (*Min.*). A green variety of andradite garnet, occurring as nodules in ultrabasic rocks in the Nizhni-Tagilsk district of the Urals; used as a semi-precious gemstone, though rather soft for this purpose. Known also as BOBROVSKA GARNET.

Uralite (*Chem.*). Trade-name for moulded articles or sheets made with asbestos cement.

uralitisation (*Geol.*). A type of alteration of pyroxene-bearing rocks, involving the replacement of the original pyroxenes by fibrous amphiboles, as in some epidiorites.

uran′inite (*Min.*). Uranate of uranyl, lead, thorium and the metals of the lanthanum and yttrium groups, occurring as opaque cubic crystals, varying in colour from white to black; it appears as an accessory mineral in granitic rocks and in metallic veins. When massive, and probably amorphous, known as PITCHBLENDE (q.v.).

u′ranite (*Min.*). For *copper uranite* see **torbernite.** —LIME URANITE, a tetragonal mineral occurring as thin tabular crystals or in mica-like aggregates of a bright-yellow colour resembling torbernite in composition; a hydrated phosphate of uranium and calcium. See **autunite.**

ura′nium (*Chem.*). Symbol, U. A metallic element in group VI of the periodic system and in the subgroup Cr : Mo : W : U. It is radioactive, with a half-life period of $4{\cdot}5 \times 10^9$ years. At. wt. 238·2, at. no. 92, sp. gr. 18 9, m.p. about 1690° C.

u′rano-argen′tophile apparatus (*Zool.*). See **Golgi apparatus.**

u′ranoplas′ty (*Surg.*). Plastic operation for closing a cleft in the hard palate.

U′ranus (*Astron.*). The seventh planet in the solar system in order of distance from the sun; the first to be discovered by the telescope (by Herschel in 1781); it has four satellites; its mass is about 14½ times that of the earth; its sidereal period is 84·01 years.

u′ranyl (*Chem.*). The group UO_2.

Urastone (*Build.*). Trade-name for an asbestos-cement building material.

urce′olus (*Bot., Zool.*). An urn-shaped or pitcher-shaped structure, as the tube in which some *Rotifera* live.—*adj.* **ur′ceolate.**

ure′a (*Chem.*). Carbamide, $H_2N{\cdot}CO{\cdot}NH_2$; long rhombic prisms or needles; m.p. 132° C., very soluble in water, insoluble in ether. It is found in the urine of Mammals. Woehler synthesised urea from ammonium *iso*cyanate, which undergoes an intramolecular transfiguration when its aqueous solution is heated, forming urea.

urea resins (*Plastics*). Thermosetting resins manufactured by heating together urea and an aldehyde, generally formaldehyde. They are pale-coloured or water-white and translucent, and can therefore take delicate dyes and tints. They are non-inflammable, and are resistant to weathering, weak acids and alkalies (*p*H between 6 and 8·4), alcohol, acetone, greases, and oils.

urease, ū′rē-āz (*Chem.*). An enzyme which occurs in several plants, e.g. in the soya bean and in *Micrococcus ureae*, hydrolysing urea quantitatively with the formation of ammonium carbonate.

ured-, uredo- (Latin *uredo*, a blight). A prefix used in the construction of compound words, especially in Botany; e.g. *uredospore* (q.v.).

ure′dicole (*Bot.*). Growing as a parasite upon a rust fungus.

Uredina′les (*Bot.*). A group of parasitic *Basidiomycetes*, including about 2000 species. The mycelium lives inside the host plant, spores being formed in pustules on the surface of the host. Some species pass part of their life on one host and part on another. Some have a complicated life-history, forming *uredospores, teleutospores, basidiospores, spermatia,* and *aecidiospores*; others omit one or more of these kinds of spores. *Wheat rust* is a destructive parasite on wheat, and other members of the family are of some economic importance. The *Uredinales* are popularly known as *rust fungi.*

uredin′ial stage (*Bot.*). An American term for *uredo-stage.*

uredin′iospore (*Bot.*). An American term for *uredospore.*

uredin′ium (*Bot.*). An American term for *uredosorus.*

ure′diospore (*Bot.*). An American term for *uredospore.*

uredogonid′ium (*Bot*). See **uredospore.**

uredoso′rus (*Bot.*). A pustule consisting of uredospores, with their supporting hypha, and some sterile hyphae.

ure′dospore (*Bot.*). An orange or brownish spore formed by rust fungi when growth is vigorous, and serving as a means of rapid propagation; it gives rise to a mycelium which may produce more uredospores, or, later in the year, uredospores and teleutospores.

ure′do-stage (*Bot.*). The phase in the life-history of a rust-fungus when uredospores are formed.

ureides, ū′rē-idz (*Chem.*). The acid derivatives of urea. They correspond to amides or anilides.

ure′ido acids (*Chem.*). The mono-substituted products of urea and a dibasic acid, in which only one hydroxyl of the carboxyl group has been substituted by the urea group with elimination of water.

ure′mia (*Med.*). See **uraemia.**

ure′ter (*Zool.*). The duct by which the urine is conveyed from the kidney to the bladder or cloaca.

ureteral′gia (*Med.*). Pain in the ureter.

ureteri′tis (*Med.*). Inflammation of the ureter.

ure′terocele, —sēl (*Med.*). Cystic dilatation of that part of the ureter which lies within the wall of the urinary bladder, due to congenital narrowing at its point of entry into the bladder.

ureterocolos′tomy (*Surg*). The operation of implanting the ureter into the colon so that it may drain into it.

ureterog′raphy (*Med.*). Radiography of a ureter filled with a medium opaque to X-rays.

ureterolithot′omy (*Surg.*). The operation of cutting into the ureter to remove a stone from it.

ureteropyeli′tis (*Med.*). Inflammation both of a ureter and of the pelvis of the kidney on the same side.

ureterot′omy (*Surg.*). Surgical incision of a ureter.

u′rethan (*Chem.*). $H_2N\,CO{\cdot}OC_2H_5$, ethyl carbamate; crystallises in large plates; m.p. 50° C., b p. 184° C., soluble in water.

ure′thra (*Zool.*). The duct by which the urine is conveyed from the bladder to the exterior, and which in male Vertebrates serves also for the passage of the semen.—*adj.* **ure′thral.**

urethri′tis (*Med.*). Inflammation of the urethra.

ure′throcele, —sēl (*Med.*). Prolapse of the floor of the female urethra; usually associated with cystocele.

urethrocysti′tis (*Med.*). Inflammation of both the urethra and the urinary bladder.

ure′throscope (*Surg.*). A tubular instrument for viewing the interior of the urethra.

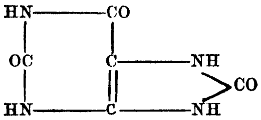
ure′throspasm (*Med.*). Spasmodic contraction of the muscular tissue of the urethra.

urethrot′omy (*Surg.*). The operation of cutting a stricture of the urethra.

uret′idine (*Chem.*). A four-membered heterocyclic compound containing two nitrogen atoms in the ring, and having the following constitution;

$$H_2C\begin{matrix}\diagup NH \diagdown \\ \diagdown NH \diagup\end{matrix}CH_2$$

uric acid (*Chem*.). An acid of the purine group, $C_5H_4N_4O_3$, 2,6,8-trihydroxypurine. It has the constitution:



It is a white crystalline powder, insoluble in cold, hardly soluble in hot, water. Uric acid deposits in the organism are the cause of gout and rheumatism. It forms soluble lithium and piperazine salts. It can be recognised by the *murexide test* (q.v.).

Urico′nian Rocks (*Geol.*). Lavas (largely rhyolites), tuffs, and intrusive rocks of presumed Pre-Cambrian age occurring in Shropshire in the hills east of the Longmynd, and in the Wrekin. Possibly the rocks of similar type occurring on Pontesford Hill, west of the Longmynd, are of the same age; some refer to these as the *Pontesfordian Group.*

urine (*Zool*.). In Vertebrates, the excretory product elaborated by the kidneys, usually of a more or less fluid nature.—*adj.* **urinary.**

urinif′erous, urinip′arous (*Zool.*). Urine-secreting, urine-producing; as the glandular tubules of the kidney.

urinogen′ital (*Zool*.). Pertaining to the urinary and genital systems.

urinogenital system (*Zool.*). The organs of the urinary and genital systems when there is a direct functional connexion between them, as in male Vertebrates.

urinom′eter (*Med*.). An instrument for measuring the specific gravity of urine.

u′rite, u′romere (*Zool.*). In *Arthropoda*, one of the somites of the abdomen.

urn (*Bot.*). The capsule of a moss.

urn-shaped (*Bot.*). Having the form of a rounded vase swollen in the middle.

uro- (1. Greek *ouron*, urine; 2. Greek *oura*, tail). A prefix used in the construction of compound terms; e.g. (1) *urorectal*, pertaining to the urinary or urinogenital ducts and to the rectum; (2) *urosacral*, pertaining to the caudal and sacral regions of the vertebral column.

urobilinae′mia, urobiline′mia (*Med.*). The presence of urobilin in the blood.

urobilinu′ria (*Med.*). The presence of (an excess of) urobilin in the urine.

urocar′diac (*Zool.*). In higher *Crustacea*, said of one of the ossicles of the gastric mill.

u′rochord (*Zool.*). Having the notochord confined to the tail region.

Urochor′da (*Zool.*). A subphylum of *Chordata* having the typical characters of the phylum in the larva only; the adults are degenerate forms lacking a notochord, coelom, or metameric segmentation; the nervous system is much reduced, and the pharynx surrounded by a dorsal atrium; there is usually a test composed of gelatinous material (tunicin).

urodae′um (*Zool.*). The division of the cloaca which receives the urinary ducts.

Urode′la (*Zool.*). See **Caudata.**

urode′lous (*Zool.*). Having a persistent tail; as Salamanders.

urohy′al (*Zool.*). A posterior element of the hyoid copula.

urol′ogy (*Med.*). That part of medical science which deals with diseases and abnormalities of the urinary tract and their treatment.—Hence **urologist.**

u′romere (*Zool.*). See **urite.**

uropata′gium (*Zool.*). In *Insecta*, the podical plate: in *Cheiroptera*, the membrane of the hind limbs.

u′ropod (*Zool.*). In *Malacostraca*, an appendage of the abdominal somite preceding the telson.

uropygial, —pij′i-al (*Zool.*). Pertaining to or situated on the uropygium; as the oil gland.

uropygial gland (*Zool.*). See **oil gland.**

uropygium (*Zool.*). In Birds, the short caudal stump into which the body is prolonged posteriorly.

uros′copy (*Med.*). The inspection and scientific examination of urine for diagnostic purposes.

u′rosome (*Zool*.). In aquatic *Vertebrata*, the tail region: in *Crustacea*, the hinder part of the abdomen.

u′rostege, uros′tegite (*Zool.*). In *Ophidia*, a ventral tail-plate.

uroster′nite (*Zool*.). In *Arthropoda*, the sternite of an abdominal somite.

urosthen′ic (*Zool.*). Having the tail adapted for propulsion.

u′rostyle (*Zool.*). In Fish, the hypural bone: in *Anura*, a rod-like bone formed by the fusion of the caudal vertebrae.

urotro′pine (*Chem.*). *Hexamethylene-tetramine* (q.v.).

ur′ticant, ur′ticating (*Zool*.). Irritating; stinging.

urtica′ria (*Med.*). A condition in which smooth, elevated, whitish patches (wheals) appear on the skin and itch intensely, as a result of taking drugs or certain foods (e.g. shell-fish), or as a reaction to the injection of serum, insect bites, or the stings of plants (nettle-rash).

U.S. (*Photog.*). Abbrev. for *uniform system.*

useful life (*Elec. Eng.*). The period for which an incandescent electric lamp can be used. Beyond this its falling candle-power renders it inefficient.

useful load (*Aero.*). The gross weight of an aircraft, less the tare weight. Usually includes fuel, oil, crew, equipment not necessary for flight (such as parachutes), and paying load.

U.S.S. thread (*Eng.*). See **Sellers screw-thread.**

Ustilaginales, —laj-in-āl′ēz (*Bot.*). A group of parasitic *Basidiomycetes*, including about 400 species. The mycelium lives inside the host, and frequently the flowers of the host are destroyed, and their ovaries replaced by a mass of dark-coloured spores looking like small masses of soot. Several species cause a good deal of damage to cereals. The *Ustilaginales* are popularly known as *smuts* or *smut fungi.*

U.T. (*Astron.*). Abbrev. for *universal time.*

utero- (Latin *uterus*, womb). A prefix used in the construction of compound terms; e.g. *utero-vaginal*, pertaining to the uterus and the vagina.

u′terus (*Bot.*). The peridium in some fungi, especially in the *Gasteromycetes.*

uterus (*Zool.*). In female Mammals, the muscular posterior part of the oviduct in which the foetus is lodged during the prenatal period: in lower *Vertebrata* and *Invertebrata*, a term loosely used to indicate the lower part of the female genital duct, or in certain cases (as in *Platyhelminthes*) a special duct in which eggs are stored or young developed.—*adj.* **uterine.**

uterus masculi′nus (*Zool.*). In male Mammals, a small blind tube embedded in the prostate gland, opening dorsally into the urethra; believed to represent the vestige of the Müllerian ducts.

U′tica Shale (*Geol.*). An important member of the Upper Ordovician succession in the eastern parts of N. America, succeeding the Trenton Limestone, and placed at the base of the Cincinnatian Series.

utilisation factor (*Illum.*). The ratio of the luminous flux reaching a specified plane to the total flux emanating from an electric lamp.

utility factor (*Elec. Eng.*). The ratio of the equivalent d.c. power output of a rectifier transformer to its mean volt-ampere rating.

u′tricle (*Bot.*). A more or less inflated, membranous, bladder-like envelope surrounding the fruits of various plants.

utricle, utric'ulus (*Zool.*). A small sac: in Vertebrates, the upper chamber of the inner ear from which arise the semicircular canals: the *uterus masculinus* (q.v.).

utric'ular, utricu'liform (*Bot., Zool.*). Like a bladder: pertaining to a utricle.

utric'uloplas'ty (*Surg.*). The operation of excising a portion of the body of the uterus; done for the treatment of uterine haemorrhage.

u'va (*Bot.*). A berry formed from a superior ovary.

uvar'ovite (*Min.*). A variety of garnet, of an attractive green colour, essentially silicate of calcium and chromium. Named after Uvarov, a Russian statesman.

u'vea (*Zool.*). In Vertebrates, the posterior pigment-bearing layer of the iris of the eye.—(*Med.*) The iris, the ciliary body, and the choroid considered as one structure; also called the UVEAL TRACT.

uveitis, ū-ve-it'is (*Med.*). Inflammation affecting the iris, the ciliary body, and the choroid.

u'veoparot'id fever (*Med.*). A condition characterised by inflammation of the parotid glands and bilateral iridocyclitis, often with paralysis of the seventh cranial nerve.

V

v- (*Chem.*). *Vicinal* (q.v.).

v (*Elec. Eng.*). The symbol for (1) *voltage gradient*; (2) *electric field strength*.

v (*Phys.*). (1) The symbol for *velocity*.—(2) In heat and thermodynamics, the symbol for the specific volume of a gas.

V (*Chem.*). The symbol for *vanadium*.

V (*Elec. Eng.*). The symbol for *potential* or *voltage*.

V (*Phys.*). In heat and thermodynamics, the symbol for the volume of a gas.

V-connexion (*Elec. Eng.*). An alternative name for the open delta connexion of two phases of a three-phase a.c. system.

V-curve (*Cables*). The power-factor/temperature curve of a cable with moisture shows a pronounced minimum at about 40° C., and is called the *V-curve*.

V-end connexions (*Elec. Eng.*). V-shaped conductors connecting the ends of corresponding pairs of bars in a bar-wound armature.

V-antenna, V-gutter, V-joint, etc. See **vee antenna*, vee gutter, vee joint,** etc.

V-rings (*Elec. Eng.*). V-shaped mica rings insulating the segments of a commutator from the end rings.

V-type commutator (*Elec. Eng.*). A commutator whose segments are provided with projecting spigots, which dovetail into the end rings.

vac'cinal (*Med.*). Of, pertaining to, or caused by, vaccine or vaccination.

vaccination (*Med.*). (1) Inoculation into the skin of the virus of vaccinia in order to immunise the person so treated against smallpox.—(2) The therapeutic application of a vaccine made from any micro-organism.

vac'cine (*Med.*). (1) The lymph (containing virus) taken from the cow-pox vesicle.—(2) Of, or pertaining to, vaccinia.—(3) Of, pertaining to, or connected with, the cow.—(4) A preparation of any micro-organism or virus, either killed or so treated as to lose its virulence, for introduction into the body in order to stimulate the production of antibodies to the micro-organism(s) introduced, in order to confer immunity against any subsequent infection by the same type of micro-organism(s.)

vaccin'ia (*Med., Vet.*). Cow-pox. A disease of cows characterised by the eruption of vesicles on the udders and teats, due to infection with a virus which is probably a modified form of that causing smallpox.

vaccinial (*Med.*). Of, pertaining to, or caused by, vaccinia.

vac'uolar (*Biol.*). Resembling, or pertaining to, a vacuole.

vacuolar membrane (*Biol.*). The protoplasmic membrane which bounds a vacuole, separating it from the surrounding cytoplasm.

vac'uolate (*Biol.*). Vesicular; provided with vacuoles.

vac'uole (*Biol.*). A small space or cavity in cytoplasm, generally containing fluid.

vacuolisation (*Biol.*). The formation of vacuoles.

vac'uome (*Zool.*). A system of vacuoles in close relation with the Golgi apparatus.

vacuum (*Phys.*). A region in which the gas pressure is considerably lower than atmospheric pressure. A 'perfect' vacuum, i.e. one which contains no gas, is unobtainable, but, by the use of mercury-vapour pumps and liquid air traps, pressures down to 10^{-6} millimetre of mercury may be obtained.

vacuum augmenter (*Eng.*). An *air-ejector* (q.v.) placed in a steam condenser to produce a higher degree of vacuum than is obtainable by the use of an air-pump alone.

vacuum brake (*Eng.*). A brake system used on passenger trains, in which a vacuum, maintained in reservoirs by exhausters, is simultaneously applied to brake cylinders throughout the train. See **continuous brake.**

vacuum cell (*Photo-electric Cells*). A cell in which the photo cathode and anode are situated in a high vacuum. It is less sensitive than the corresponding gas-filled cell, but time-lag effects are absent.

vacuum distillation (*Chem.*). Distillation under reduced pressure. As a reduction of pressure effects a lowering of the boiling-point, many substances can be distilled which otherwise would not stand high temperatures without decomposition.

vacuum filament lamp (*Illum.*). An incandescent electric lamp in which the filament is enclosed in a highly evacuated bulb.

vacuum filtration (*Chem.*). A process of filtration where a partial vacuum is applied to increase the rate of filtration by causing the liquid to be sucked through the filter.

vacuum impregnation (*Elec. Eng.*). The process of treating armature and transformer windings by applying moisture-resisting varnish to the insulation, under vacuum, thereby ensuring that the varnish penetrates the pores of the insulating material when normal atmospheric conditions are restored.

vacuum oven (*Elec. Eng.*). An oven for heating armature and transformer windings under vacuum, so as to drive off all moisture from the insulation prior to impregnation.

vacuum pump. See **air-pump.**

vacuum rectifier (*Elec. Eng.*). A rectifier operating by virtue of the unipolarity of the electric discharge *in vacuo* between an incandescent cathode and an anode at normal temperature.

vacuum tube, vacuum valve (*Thermionics*). See **thermionic tube.**

vagi'na (*Bot.*) A sheathing leaf-base.

vagina (*Zool.*). Any sheath-like structure; the terminal portion of the female genital duct leading from the uterus to the external genital opening.—*adjs.* **vag'inal, vag'inant, vag'inate, vaginif'erous.**

vaginal plug (*Zool.*). In female Rodents and Insectivores, the coagulated secretion of Cowper's glands which blocks the vagina and prevents premature escape of the seminal fluid.

vaginic'olous (*Zool.*). Living in a sheath, as some *Protozoa*.

vaginis'mus (*Med.*). Painful spasmodic contraction of the muscles of the vagina and/or of the muscles forming the pelvic floor.

vagini'tis (*Med.*). Inflammation of the vagina.

vagin'ula (*Bot.*). A minute sheath surrounding the base of the seta in *Bryophyta*.

vagi'tus uteri'nus (*Med.*). The crying of a child while still *in utero*, just before birth.

vagoto'nia, vagot'ony (*Med.*). The condition of heightened activity of the vagus nerve.—*adj.* **vagoton'ic.**

va'gus (*Zool.*). (1) The tenth cranial nerve of Vertebrates, supplying the viscera and heart (see also **pneumogastric**), and, in lower forms, the gills and lateral line system.—(2) In Mammals, the larynx.

valence (*Chem.*). See **chemical bond.**

valency (*Chem.*). The combining power of an atom or group in terms of hydrogen atoms or their equivalent. The valency of an ion is equal to its charge.

valency (*Zool.*). The numerical arrangement of the chromosomes in a nucleus, i.e. whether single, paired, etc. See **univalent, bivalent.**

valency bond (*Chem.*). See **chemical bond.**

valency electrons (*Chem.*). The electrons in the outermost shell, or those having the highest principal quantum number, of an atom; they are largely responsible for the chemical and physical properties of the atom.

Valentian Series (*Geol.*). The lowest series of rocks in the Silurian System, lying between the Bala Series of the Ordovician and the Wenlock Series of the Silurian. Equivalent to the Llandovery Series or Llandoverian.

val'entinite (*Min.*). Trioxide of antimony, Sb_2O_3, occurring as orthorhombic crystals or radiating aggregates; snow-white when pure; formed by the decomposition of other ores of antimony.

valerian'ic acid (*Chem.*). Valeric acid.

valer'ic acids (*Chem.*). $C_4H_9 \cdot COOH$, monobasic fatty acids, of which isomers are known, viz. *normal* valeric acid, $CH_3 \cdot (CH_2)_3 \cdot COOH$, b.p. 185° C.; *iso*valeric acid, $(CH_3)_2{:}CH \cdot CH_2COOH$, b.p. 175° C.; methylethylacetic acid, $(CH_3)(C_2H_5)CH \cdot COOH$, b.p. 177° C.; trimethylacetic acid, $(CH_3)_3C \cdot COOH$, b.p. 164° C.

***d*-valine** (*Chem.*). $(CH_3)_2{:}CH \cdot CH(NH_2) \cdot COOH$, α-amino-*iso*valerianic acid, an amino acid obtained by the hydrolysis of certain proteins.

vallec'ula (*Zool.*). A groove.—*adj.* **vallec'ulate.**

valley (*Build.*). The outer angle (less than 180°) between two intersecting roof slopes. Cf. *hip*.

valley (*Geol.*). Any hollow or low-lying tract of ground between hills or mountains, usually traversed by streams or rivers, which receive the natural drainage from the surrounding high ground. Deep, narrow valleys are more appropriately termed *glens*, *ravines*, *gorges*, *canyons*, according to their size and the steepness of the valley walls. Usually valleys are developed by stream erosion; but in special cases faulting may also have contributed, as in rift valleys.

valley (*Plumb.*). A V-shaped gutter between two roof-slopes.

valley board (*Build.*). A board nailed along the top of the valley rafter as a support for a *laced valley* (q.v.).

valonia (*Tanning, etc.*). The large unripe acorn-cup of the Valonia oak (*Quercus aegilops*) of Asiatic Turkey; used extensively in tanning, dyeing, and ink-making.

val'soid (*Bot.*). Having the perithecia in a circle in the stroma.

values (*Photog.*). Those qualities which determine the correspondence between the brightnesses of the elements of a pictorial image when the original coloured subject is reproduced in black and white.

Valva'ta (*Zool.*). An order of *Asteroidea* in which the dorsal surface is protected by plates covered with minute granules; the tube-feet terminate in suckers and the pedicellariae are valvate or alveolate.

valvate aestivation (*Bot.*). The condition when the perianth segments touch but do not overlap at the edges.

valvate dehiscence (*Bot.*). Liberation of pollen from anthers, or of seeds from dry fruits, by means of little flaps of upraised wall material.

valve (*Bot.*). (1) A part of the wall of the fruit-wall which separates at dehiscence.—(2) One of the two silicified halves of the cell wall of a diatom.

valve (*Cinema.*). See **light-valve,** and for *magazine valve* see **fire-trap.**

valve (*Radio, Thermionics*). A term strictly applicable to a device which allows the passage of current in one direction only, i.e. a rectifier; but generally applied to all forms of thermionic or gas-discharge tubes used as rectifiers, amplifiers, modulators, oscillators, etc. Also called TUBE. See **valve nomenclature.**

See **diode—**
electrolytic—
electron—
ionic—
Lodge—
pentode—
rectifying—
screened-grid—
thermionic—
triode—

valve, valva (*Zool.*). Any structure which controls the passage of material through a tube, duct, or aperture, usually in the form of membranous folds, as the auriculo-ventricular valves of the heart: any membranous fold resembling a valve, as the valve of Vieussens: in *Mollusca*, *Cirripedia*, *Brachiopoda*, one of several separate pieces composing the shell: in *Insecta*, a covering plate or sheath, especially one of a pair which can be opposed to form a tubular structure, as the valves of the ovipositor.—*adjs.* **valval, valvar, valvate, valvif'erous val'viform, valvular.**

valve adaptor (*Radio, Thermionics*). A device which enables a valve to be fitted to a socket for which it was not originally designed.

valve amplifier (*Radio*). See **thermionic amplifier.**

valve base (*Radio, Thermionics*). An insulating cap cemented to the envelope of a valve and fitted with contacts connected to the electrodes. It enables the valve to be plugged readily into the circuit.

valve box (or **chest**) (*Eng.*). In a force-pump or steam-engine, the chamber which contains the valves or valve: the *steam chest* (q.v.) of a steam-engine.

valve coupling (*Elec. Comm*). Coupling by means of a thermionic valve which permits power to pass in one direction only in a communication channel.

valve detector (*Radio*). See **thermionic detector.**

valve diagram (*Eng.*). For a steam-engine slide-valve, a graphical method of correlating the throw and angle of advance of the eccentric, the lead and laps of the valve, and the points of admission, cut-off, compression, and release. The 'Bilgram,' the 'Reuleaux,' and the 'Zeuner' valve diagrams are examples of the method.

valve effect (*Chem.*). The unilateral conductivity of certain electrodes (notably aluminium) in suitable solutions. As anodes they may withstand several hundred volts, although current will pass freely in the opposite direction.

valve face (*Eng.*). The sealing surface of a valve which slides over, or beds on to, the seating.

valve hiss (*Thermionics*). The same as *valve noise* (q.v.).

valve holder (*Radio, Thermionics*). See **valve socket.**

valve inserts (*I.C. Engs.*). Valve seatings of special heat- and lead-resisting steel which are pressed into the alloy heads of high-duty petrol-engines.

valve noise (*Thermionics*). A noise present in telephones connected in the anode circuit of a thermionic valve, even in the absence of signals applied to the grid, due to shot effect, microphonic action of the electrodes, thermal agitation voltage, etc.

valve nomenclature (*Thermionics*). The description of thermionic valves in terms of the number of electrodes therein, e.g. *diode*, *triode*, *tetrode*, *pentode*, *hexode*, *heptode*, *octode*, etc.; suggested by Eccles.

valve-opening diagram (*I.C. Engs.*). A diagram showing the lift or the opening area of a valve to a base of engine crank angle or piston displacement.

valve oscillator (*Radio*). See **thermionic oscillator.**

valve rectifier (*Elec. Eng.*). A rectifier of the vacuum or the gas-discharge type.

valve relay (*Elec. Eng.*). A thermionic valve arranged to operate as a synchronous voltage relay in high-frequency a.c. circuits.

valve rocker (*I C. Engs*). A small lever, generally pivoted at about its mid-point, used to transmit motion from a cam or a push-rod to a valve stem.

valve rustle (*Cinema.*). A rustling noise accompanying sound-film reproduction; caused by the clashing of the ribbons in the light-valve in the recorder.

valve socket (*Radio, Thermionics*). An arrangement of contact springs or pins into which a valve can be plugged for connexion to the rest of the circuit.

valve spring (*Eng.*). The helical spring (or springs) used to close a poppet valve after it has been lifted by the cam: generally, any spring which closes a valve after it has been lifted mechanically or by fluid pressure.

valve, time (*Photog*). See **time valve.**

valve tower (*Civ. Eng.*). A hollow cast-iron or masonry tower built within a reservoir; equipped with draw-off pipes at different levels for taking off water for supply purposes.

valve voltmeter (*Elec. Comm*). A thermionic valve used for measuring voltages, the rectified output current being dependent on the voltage applied to the grid. It uses practically no power for operation, and can be calibrated at low frequencies for use at very high frequencies, when other means are impossible.

val'vula (*Zool.*). In bony Fish, a process of the cerebellum projecting downwards and forwards beneath the roof of the mid-brain.

val'vular (*Bot*). Opening by means of valves.

valvulate, valvate (*Zool.*). Said of pedicellariae in which the jaws are broader than they are long; such pedicellariae are always sessile.

valvuli'tis (*Med.*). Inflammation of a valve of the heart.

vamp (*Boots and Shoes*). The front upper part of a boot or shoe.

vanad'inite (*Min.*). Vanadate and chloride of lead, typically forming brilliant blood-red hexagonal crystals or globular masses encrusting other minerals in lead-mines.

vana'dium (*Met.*). A metallic element. Chem. symbol, V. At. wt. 50 95, at. no. 23, sp. gr. at 20° C. 5·68, m.p. 1720° C., specific electrical resistivity 26 microhms per cm. cub. Its principal use is as constituent of alloy steel, e.g. in chromium-vanadium, manganese-vanadium, and high-speed steels.

van der Hoeven's organ (*Zool.*). In male *Nautiloidea*, a median body lying between the groups of tentacles and having its surface divided into folds.

van der Waals' equation (*Phys.*). An equation of state which takes into account the effect of intermolecular attraction at high densities and the reduction in effective volume due to the actual volume of the molecules:

$$\left(P+\frac{a}{v^2}\right)\left(v-b\right)=RT,$$

a and *b* being constant for a particular gas. See **gas laws.**

van der Waals' forces (*Chem.*). Weak attractive forces between molecules or crystals.

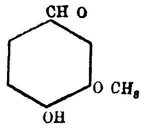
Vandyke pieces (*Plumb.*). The lead scraps remaining after the cutting out of a stepped flashing.

vane (*Build.*). A *weathercock* (q.v.).

vane (*Surv.*). A disc attachment to a levelling-staff; it provides a sliding target which the staffman can move into the line of sight of the level. See **target rod.**

vane (*Zool*). The web of a feather, composed of the barbs and barbules.

van'illin (*Chem*). 3-Methoxy-4-hydroxy-benzaldehyde, found in vanilla pods. It crystallises in white needles, m.p. 80° C., and has the formula:



vanner (*Mining*). A wide, travelling, shaking rubber belt, for the concentration (dressing) of ores.

vanning (*Mining*). The estimating of the content of an ore by washing on a flat shovel.

van 't Hoff factor (*Chem.*). The ratio of the number of dissolved particles (ions and undissociated molecules) actually present in a solution to the number there would be if no dissociation occurred.

van 't Hoff's law (*Chem.*). The osmotic pressure of a dilute solution is equal to the pressure which the dissolved substance would exert if it were in the gaseous state and occupied the same volume as the solution at the same temperature.

van 't Hoff's reaction isochore (*Chem.*). For a reversible reaction taking place at constant volume,

$$\frac{d\log_e K}{dT}=\frac{\Delta U}{RT^2},$$

where K is the equilibrium constant, T is the absolute temperature, R is the gas constant, ΔU is the heat absorbed in the complete reaction.

van 't Hoff's reaction isotherm (*Chem.*). For a reversible reaction taking place at constant temperature,

$$-\Delta A=RT\log K-RT\Sigma n\log_e c,$$

where $-\Delta A$ is the decrease in free energy, R the gas constant, T the absolute temperature, K the equilibrium constant, and $\Sigma n\log_e c$ is of the same form as $\log_e K$, but with the equilibrium concentrations replaced by the initial values.

vapog'raphy (*Photog.*). An effect obtained by the action of vapours on sensitive photographic materials.

vaporim'eter (*Chem.*). An apparatus in which the volatility of oils is estimated by heating them in a current of air.

vaporisation (*Chem.*). The conversion of a liquid or a solid into a vapour.

vaporising oil (*Fuels*). See **kerosene.**

vapour (*Phys.*). A gas which is at a temperature below its critical temperature and can therefore be liquefied by a suitable reduction in pressure.

vapour lock (*Eng.*). (Of a volatile fluid in a pipe) the formation of vapour in a petrol feed-pipe to a carburettor due to undue heating of the pipe, resulting in an interruption of flow.

vapour pressure (*Phys.*). The pressure exerted by a vapour, either by itself or in a mixture of gases. The term is often taken to mean saturated vapour pressure, which is the vapour pressure of a vapour in contact with its liquid form. The saturated vapour pressure increases with rise of temperature. See **saturation of the air.**

Vaqueros formation, va-kā'rōs (*Geol.*). Strata of shallow-water origin and of Lower Miocene age. The formation includes the chief oil-bearing sands of the Coalinga district, California.

var (*Elec. Eng.*). See **reactive volt-amperes.**

varec (*Chem.*). The French name for *kelp* (q.v.).

variability (*Chem.*). The number of *degrees of freedom* (1, q.v.) of a system.

variable-area recording (*Cinema.*). Photographic sound-track recording for sound-films in which, in the print, the modulation appears as a blocked-out wave-form, so that a scanning light-slit, of sufficiently small dimension in the direction of the film and covering the whole of the track, is modulated, the transmitted light passing into a photo-electric cell for subsequent amplification and radiation. The variable-area sound-track is improved by using two or four cutting edges (blocked wave-forms), and squeezing the track (see **squeeze track**) to minimise ground-noise.

variable attenuator (*Elec. Comm.*). See **attenuator.**

variable condenser (*Elec. Eng*). A condenser whose capacity is continuously variable between wide limits.

variable coupling (*Elec. Eng.*). An electromagnetic coupling between two a.c. circuits in which the mutual inductance is continuously variable between wide limits.

variable-density recording (*Cinema.*). The form of photographic record on film in which the area of sound-track under the area of the image of the scanning slit is of constant density, which varies along the length of the sound-track. This represents the modulation that is imposed on the transmitted beam of light which is received into the photo-electric cell, and, after amplification, is converted into radiated sound-waves.

variable inductance (*Elec. Eng*). An inductive coil whose self-inductance is continuously variable between wide limits.

variable mu valve (*Thermionics*). A valve in which the form of the grid is such as to permit change of the mutual conductance by variation of the grid bias. Also called MULTIMU VALVE.

variable-ratio transformer (*Elec. Eng.*). A transformer whose voltage ratio can be varied by altering the number of active turns in either the primary or the secondary winding.

variable resistance (*Elec. Eng.*). An alternative name for *rheostat.*

variable-speed drive (*Elec. Eng.*). An electric drive whose speed is continuously variable between wide limits.

variable-speed motor (*Elec. Eng.*). An electric motor whose speed is continuously variable between wide limits.

variable-speed scanning (*Television*). The system of scanning employed in a velocity modulation system.

variable stars (*Astron*). Those stars whose apparent magnitudes are not constant but vary over a range. There are three main classes: (1) Long-period variables, with periods from 50 to 600 days or more; (2) short-period variables, with periods from a few hours to 50 days, which include the Cepheids; (3) irregular variables, so called because no definite period seems assignable.

variable-voltage control (*Elec. Eng.*). A system of controlling speed by varying the voltage applied at the motor terminals.

variable-voltage generator (*Elec. Eng.*). A generator whose voltage is continuously variable between wide limits.

variance (*Chem.*). See **variability.**

variance (*Maths.*). The square of the *standard deviation* (q.v.), i.e. the average of the squares of the deviations of a number of observations of a quantity from their mean value, the quantity being termed a *variate.*

variant (*Biol.*). A specimen differing slightly in its characteristics from the type.

variation (*Astron.*). The name given to the fourth principal periodic term in the mathematical expression of the moon's motion, caused by the variation of the residual attraction of the sun on the earth-moon system during a synodic month; it has a maximum value of 39′ and a period of 14·77 days.

variation (*Biol.*). The differences between the offspring of a single mating: the differences between the individuals of a race, subspecies, or species: the differences between analogous groups of higher rank.

variation, magnetic variation (*Surv., etc*). See **declination.**

variations (*Build., Civ. Eng.*). See **extras.**

variation factor (*Illum.*). The ratio between the maximum and the minimum illumination along a street or roadway illuminated at intervals by overhead lamps.

variation order (*Civ. Eng.*). A document giving authority for some alteration in work being done under contract.

varicel′la (*Med*). See **chickenpox.**

var′icocele (*Med.*). A varicose condition of the plexus of veins which leave the testis to form the spermatic vein, forming at the upper part of the testis a swelling which feels like a mass of spaghetti.

var′icose (*Bot.*). Dilated.

varicose (*Med.*). Of the nature of, pertaining to, or affected by, a varix or varices: (of veins) abnormally dilated, lengthened, and tortuous.

variegated (*Bot., etc*). Marked irregularly with patches of diverse colour.

variegated copper ore (*Min.*). A popular name for *bornite* (q.v). So named from the characteristic tarnish that soon appears on the freshly fractured surface.

variety (*Biol*). A race: a stock or strain: a sport or mutant: a breed: a subspecies: a category of individuals within a species which differ in constant transmissible characteristics from the type but which can be traced back to the type by a complete series of gradations: a geographical or biological race. This term has been used in different senses by specialists in different groups.

vario coupler (*Radio*). A device comprising two inductance coils whose mutual inductance can be varied. It is used for variable inductive coupling between two circuits.

vari′ola (*Med.*). See **smallpox.**

variola minor (*Med.*). See **alastrim.**

variola (*Vet.*). See **pox.** For *swine variola* see **swine pox.**

var′iolar′ioid, var′iolose (*Bot.*). Covered with a powdery coating or with very small tubercles.

var′iolite (*Geol.*). A fine-grained igneous rock of basic composition containing small more or less spherical bodies (*varioles*) consisting of minute radiating fibres of feldspar, comparable with the more perfect spherulites in acid igneous rocks. The term would be better used as an adjective, i.e. *variolitic* basalt, etc.

var′ioloid (*Med.*). A mild type of smallpox occurring in one who has been vaccinated.

variom′eter (*Radio*). A form of variable inductance comprising two coils connected in series and arranged one inside the other, the inner coil being capable of rotation so as to vary the mutual inductance between them.

var′iscite (*Min.*). A soft-green hydrated phosphate of aluminium ($AlPO_4{\cdot}2H_2O$) occurring as nodular masses in Utah, U.S.A.

Varistor (*Elec. Comm.*). A resistance, consisting of compressed silicon carbide (thyrite, atmite), which has a markedly reduced resistance when the applied voltage is increased. Used to protect communication circuits against damage consequent on high-voltage surges arising from lightning or from induction from high-tension lines under fault conditions.

varix (*Med.*). Varicose vein; a vein that is abnormally dilated, lengthened, and tortuous.—*pl.* **varices.**

Varley loop test (*Elec. Eng.*). A method of determining the position of a cable fault, in which resistance measurements are made with a resistance bridge, first, so that the fault forms one junction of the bridge, and, secondly, so that the conductor resistance of the cable is measured directly.

varnish (*Paint.*). A solution of a resin or resinous gum in spirits or oil applied as an extra glossy coat on a painted surface, which it serves to protect.—(*Diel.*) See **oil varnishes, bitumen varnishes, enamel.**—(*Photog.*) See **crystal varnish.**

varnished (*Bot.*). Said of a surface which appears to be covered by a thin shining film.

varnished insulation (*Diel.*). Varnished cotton, silk, and cambric which are much used for insulating wires and flexes.

varve clays (*Geol.*). Distinctly and finely stratified clays of glacial origin, deposited in lakes during the retreat stage of glaciation. The stratification is a seasonal banding, and its study has enabled Baron de Geer to work out the chronology of the Pleistocene Ice Age.

vas (*Zool.*). A vessel, duct, or tube carrying fluid.—*pl.* **vasa.**—*adj.* **va'sal.**

vas de'ferens (*Zool.*). A duct leading from the testis to the ejaculatory organ, the urinogenital canal, the cloaca, or the exterior.

vasa efferen'tia (*Zool.*). A series of small ducts by which the semen is conveyed from the testis to the vas deferens.

vasa recta (*Zool.*). In the Mammalian kidney, groups of small arteries and veins alternating with groups of uriniferous tubules in the part of the medulla nearest to the cortex.

vasa vasorum (*Zool.*). In Vertebrates, small blood-vessels ramifying in the external coats of the larger arteries and veins.

vascular (*Bot., Zool.*). Pertaining to vessels which convey fluids or provide for the circulation of fluids: provided with vessels for the circulation of fluids.

vascular anastomosis (*Bot.*). A small transversely directed vascular bundle, acting as a link between the main vascular bundles of a stem or root.

vascular area (*Zool.*). See **area vasculosa.**

vascular bundle, vascular strand (*Bot.*). A strand of conducting tissue, consisting of xylem and phloem, sometimes separated by cambium; sclerenchymatous supporting tissue may also be present.

vascular cryptogam (*Bot.*). A non-flowering plant which has vascular tissue. Ferns are the most familiar of these.

vascular ray (*Bot.*). A sheet of cells, usually mostly parenchymatous, lying radially in a stem or root, appearing in cross-section as a narrow radial streak, in radial longitudinal section as a plate of cells; the ray lies partly in the xylem and partly in the phloem, and serves to conduct solutions horizontally in the stem or root. Often called a MEDULLARY RAY.

vascular-ray initial (*Bot.*). A cell of the cambium which divides to give daughter cells which are converted into the cells forming a vascular ray.

vascular system (*Zool.*). The organs responsible for the circulation of blood and lymph, collectively.

vascular tissue (*Bot.*). Xylem and phloem.

vascu'liform (*Bot.*). Shaped like a little pot.

vasec'tomy (*Surg.*). Excision of the vas deferens, or of part of it.

Vaseline (*Chem.*). Trade-name for high-boiling residues obtained from the distillation of petroleum.

vasicen'tric (*Bot.*). See **paratracheal.**

vasifac'tive (*Zool.*). See **vasoformative.**

vas'iform tracheide (*Bot.*). A wide tracheide capable of conducting water.

vasoconstric'tor (*Zool.*). (Of certain autonomic nerves) causing constriction of the arteries.

vasodila'tor (*Zool.*). (Of certain autonomic nerves) causing expansion of the arteries.

vaso-ep'ididymos'tomy (*Surg.*). The operation of anastomosing the vas deferens to the upper part of the epididymis, forming a communication between the two; performed for the treatment of sterility in the male.

vasofor'mative (*Zool.*). Pertaining to the formation of blood or blood-vessels.

vasoformative cells (*Zool.*). See **angioblast.**

vasogan'glion (*Zool.*). See **red gland.**

vasohyperton'ic (*Zool.*). See **vasoconstrictor.**

vasohypoton'ic (*Zool.*). See **vasodilator.**

vasoinhibitory, vā-zō-in-hib'— (*Zool.*). See **vasodilator.**

vasoligation (*Surg.*). See **vasoligature.**

vasolig'ature (*Surg.*). Ligature of the vas deferens, as in *Steinach's operation* (q.v.).

vasomo'tor (*Zool.*). Causing constriction or expansion of the arteries; as certain nerves of the autonomic nervous system.

vat dyestuffs (*Chem.*). A series of insoluble dyestuffs that can be reduced to their water-soluble leuco-compounds, which are oxidised by exposure to the air, thus producing the dyestuff direct on the fibre.

Vater's corpuscles, fah'ter (*Zool.*). See **Pacinian corpuscles.**

vault (*Build.*). (1) An arched roof or ceiling.—(2) A room or passage covered by an arched ceiling.—(3) An underground room.

vault light (*Build.*). A form of *pavement light* (q.v.).

vector. A straight line of a definite length drawn from a given point in a given direction. A vector may represent a quantity, such as a velocity, which has both magnitude and direction. Such a quantity is called a *vector quantity.* Vectors may be added according to the rules given under *polygon of forces.*

vector (*Bot.*). Any agent which transmits a virus disease from one host plant to another; insects are the usual agents.

vector potential (*Radio*). A vector quantity occurring in electromagnetic field theory, whose component along any axis at any point is equal to $\Sigma\frac{i.dl}{r}$, where $i.dl$ is a current element parallel to the axis at a distance r from a point, the summation extending throughout all space.

vector product (*Elec. Eng.*). A vector normal to the plane of two vectors, of magnitude equal to the product of the magnitudes of the two vectors. Not used in electrical engineering. See **scalar product.**

vector quantity (*Elec. Eng.*). A quantity, such as the intensity of an electric or magnetic field, which has direction as well as magnitude. Represented graphically and mathematically as a line the direction of which represents the direction of the quantity and the length of which represents the magnitude in terms of a unit vector. Graphical vectors (and in the form $a+jb$ for algebraical manipulation) are greatly used in calculating alternating currents. See **scalar product.**

vector ratio (*Elec. Comm., Elec. Eng., Radio*). The ratio between two alternating quantities, e.g. currents, in which both relative amplitudes and phases are expressed in the form of vectors.

vee gutter (*Build.*). A gutter of V-shape, as required, for example, along the valley of an M-roof.

vee joint (*Join.*). A joint between *matched boards* (q.v.) which have been chamfered along their edges on the same side to present a vee depression at their junction.

vee notch (*Civ. Eng.*). A notch plate having a triangular notch cut in it, used for the measurement of small discharges.

vee roof (*Build.*). A roof formed by two lean-to roofs meeting to enclose a valley.

vee thread (*Eng., etc.*). A screw-thread in which the thread profile is V-shaped (as for the common Whitworth thread), as distinct from other forms, e.g. square thread.

veering (*Meteor.*). A change in the direction of the arrival of the wind in a clockwise direction. Cf. *backing*.

vees (*Mining*). Soft earth occurring on the sides of a fault or dyke.

Veevie (*Paint.*). Trade-name for a paint solvent.

vegetable oils (*Chem.*). Oils obtained from plants, seeds, etc. Cf. *mineral oils*.

vegetable pole (*Zool.*). The lower portion or pole of an ovum in which cleavage is slow owing to the presence of yolk. Cf. *animal pole*.

vegetation (*Bot.*). The whole of the plants in a given area.

vegetative cone (*Bot.*). The apical meristem of a stem.

vegetative functions (*Zool.*). The autonomic or involuntary functions; as digestion, circulation.

vegetative multiplication (*Bot.*). Increase in the number of plants by the production of portions of the plant body which root and become detached from the parent.

vegetative nervous system (*Med.*). Sympathetic nervous system.

vegetative reproduction (*Zool.*). Propagation by budding.

vehicle (*Paint.*). The liquid substance which when mixed with a pigment forms a paint.

vehicle battery (*Elec. Eng.*). A battery of heavy-duty-type secondary cells, which forms the source of electrical energy in self-contained electric road vehicles.

veil, velum (*Bot.*). (1) An evanescent membrane over an apothecium.—(2) A sheath of hypha forming a complete membrane over a young fruit body of an agaric.—(3) The calyptra of a moss.

veil (*Zool.*). See **velum.**

vein (*Bot.*). One of the smaller strands of conducting tissue in a leaf.

vein (*Geol.*). An irregular minor intrusion, differing from sills, dykes, cone-sheets, etc. in its relation to the rocks which it penetrates. The term is also applied to bodies of quartz similarly related to the country rock (vein-quartz) which is mineralised in mineral veins.

vein (*Zool.*). A vessel conveying blood back to the heart from the various organs of the body: a wing nervure.—*adj.* **venous.**

vein islet (*Bot.*). A very small patch of photosynthetic cells in a leaf, more or less surrounded by a small vein.

vein stuff (*Mining*). The minerals occurring in veins of fissures.

vela'men (*Bot.*). A multilayered sheath of dead empty cells occurring on the surfaces of some aerial roots; the air-filled cells give it a silvery appearance.—*pl.* **velam'ina.**

vela'rium (*Zool.*). In scyphozoan medusae, the thin flexible marginal region of the umbrella with its fringe of tentacles; it is distinguished from a true *velum* (q.v.) of *Hydrozoa* by its containing endoderm canals.

Vela'ta (*Zool.*). An order of *Asteroidea* in which the dorsal surface of the animal is concealed by a membrane composed of webs of skin stretched between diverging groups of spines united at the base with one another; the tube-feet terminate in suckers, and pedicellariae are lacking; mainly deep-water forms.

veldt sore (*Med.*). Barcoo rot. A chronic ulcerated sore of the exposed hairy parts of the body occurring in those living in hot, dry, sandy, or desert country; thought to be due to a deficiency in diet.

veldtschoen, felt'skoon (*Boots and Shoes*). A sandal-like form of shoe in which the upper is attached directly to the sole by a row of stitches near the edge. Also called STITCHDOWN SHOES.

ve'liger (*Zool.*). The secondary larval stage of most *Mollusca*, developing from the trochophore and characterised by the possession of a velum.

velocity (*Mech.*). Rate of change of position or rate of displacement, expressed in feet (or centimetres) per second. Velocity is a vector quantity, i.e. for its complete specification, its direction as well as its magnitude must be stated.

velocity amplitude (*Acous.*). On a gramophone record, the r.m.s. or peak lateral velocity of the sinuous track when the disc is rotating at its correct speed. This equals the product of the frequency, in radians per second, of the note recorded on the track and the amplitude of the excursion of the track as measured in cm. along a radius of the disc.

velocity constant (*Chem.*). The speed of a chemical reaction, in gram-molecules of change per litre per second, when the active masses of all the reactants are unity.

velocity function (*Astron.*). One of the three functions sought in the statistical investigation of the stars. It seeks to express the distributions of their velocities in space. The other two are the luminosity function and density function.

velocity head (*Hyd.*). The energy possessed per unit weight of a fluid, due to its velocity. If at a given point the velocity is v feet per second, the velocity head at this point is $\frac{v^2}{2g}$, g being the acceleration due to gravity in feet per second per second. Also called KINETIC HEAD.

velocity microphone (*Acous.*). See **pressure-gradient microphone.**

velocity-modulated electron stream (*Thermionics*). An electron space-current which is bunched by periodically accelerating and retarding its electrons while passing them through a buncher, such as the rhumbatron in the klystron oscillator, and thereby imparts to them modulated energy. See **klystron.**

velocity modulation (*Television*). A system of television in which the gradation of light and shade in the reproduced picture is effected by variation of the velocity of the scanning spot across the surface of the screen, the intensity of illumination of the spot being constant. Cf. *intensity modulation*.

velocity of approach (*Hyd.*). The velocity of the liquid at the point from which the head above the sill is measured, in the case of flow over a weir or notch-plate. It may be appreciable if the cross-sectional area of the liquid in the approach channel is small.

velocity of light (*Phys.*). A universal constant denoted by c, equal to $(2{\cdot}99796 \pm 0{\cdot}00004) \times 10^{10}$ cm. per sec. *in vacuo*. This is the result obtained finally by Michelson, as the mean of several very accurate determinations, by a rotating mirror method, over distances up to 260 km.

velocity of propagation (*Elec. Eng.*). The velocity with which a surge travels along a line or cable; it is numerically equal to the *velocity of light* (q.v.).

velocity, particle (*Acous.*). See **particle velocity.**

velocity ratio (*Mech.*). The ratio of the distance moved through by the point of application of the effort to the corresponding distance for the load in a machine. The ratio of the *mechanical advantage* (q.v.) to the velocity ratio is termed the efficiency of the machine. See **machine.**

velour, vel-oor′ (*Textiles*). A woollen cloth with a fine dense pile, cropped level. The name is often applied to woollen cloths finished with a soft thick pile

Velox boiler (*Eng.*). A forced-circulation boiler in which very high rates of heat release and heat transfer are obtained by the use of a supercharged furnace and high gas velocities, resulting in exceptionally low *unit weight* (q.v.) and high efficiency.

ve′lum (*Bot.*). See **veil.**

velum (*Zool.*). A veil-like structure, as the *velum pendulum* or posterior part of the soft palate in higher Mammals: in some *Ciliophora*, a delicate membrane bordering the oral cavity: in *Porifera*, a membrane constricting the lumen of an incurrent or excurrent canal: in hydrozoan medusae, an annular shelf projecting inwards from the margin of the umbrella: in *Rotifera*, the trochal disc: in some Bees, a membrane attached to the inner side of the cubital spur: in *Mollusca*, the ciliated locomotor organ of the veliger larva: in *Cephalochorda*, the perforated membrane separating the buccal cavity from the pharynx.—*adjs.* **ve′lar, ve′late.**

velum partiale, par-shi-ā′le (*Bot.*). See **partial veil.**

velum universa′le (*Bot.*). See **universal veil.**

velu′tinous (*Bot*). Having a velvety surface.

velvet (*Textiles*) A fabric with a dense short pile of silk; the pile is first formed in loops, which are cut with a trevette. The cheaper velvets are made in a power loom.

velvet (*Zool.*). The tissue layers covering a growing antler, consisting of periosteum, skin, and hair.

velvet pile (*Textiles*). A surface covering of projecting threads upon a foundation structure, formed by an extra warp lifted over wires so that loops are formed. The loops are cut when the wires are withdrawn.

velveteen′ (*Textiles*). A cotton cloth with a weft face, the floats of weft being afterwards cut to produce a pile: an imitation of velvet.

ve′na. The Latin equivalent of *vein.*

vena contracta (*Hyd.*). (Of a jet of fluid discharged by an orifice) the point of minimum cross-sectional area at which the converging streamlines become parallel.

venae cavae (*Zool*). The caval veins; in higher Vertebrates, three large main veins conveying blood from the body to the right auricle of the heart.

venation (*Bot., Zool.*). The arrangement of the veins or nervures: by extension, the veins themselves considered as a whole.

vendavales, —vah′läs (*Meteor.*). South-west winds blowing in the Straits of Gibraltar.

veneer′ (*Timber*). Timber in the form of a thin layer of uniform thickness; it is generally cut from timber of fine appearance, the veneer being glued to a less expensive material and appearing on the surface.

veneered construction (*Build.*). A mode of construction in which a thin external layer of marble slabs, or other facing material, is applied to the steel or reinforced concrete framework.

venesec′tion (*Med.*). Letting of blood from a vein as a remedial measure, e.g. in heart failure: cutting or opening of a vein.

Venestra (*Build.*). Trade-name for a form of plywood.

Venetian arch (*Arch.*). (1) A *Queen Anne arch* (q.v.).—(2) A pointed arch in which the extrados and the intrados are not parallel.

Venetian blind (*Build.*). An inside blind composed of horizontal wooden slats strung on cords and capable of adjustment to admit or exclude light.

Venetian glass (*Glass*). A style of glass having an excessive amount of decoration, usually on a very light and delicate foundation. It was developed by the Venetian glassworkers in Murano.

Venetian mosaic (*Build*). See **terrazzo.**

Venetian shutters (*Build.*). See **jalousies.**

Venetian window (*Join*). A window having two mullions dividing the window space into three compartments, usually a large centre light and two narrow side lights.

venomous (*Zool.*). Provided with poison-secreting glands.

venosclero′sis (*Med.*). Hardening of a vein due to thickening of its walls.

ve′nose (*Bot.*). Having raised anastomosing ridges on the surface, looking like veins.

venous system (*Zool.*). That part of the circulatory system responsible for the conveyance of blood from the organs of the body to the heart.

vent (*Zool.*). The aperture of the anus or cloaca in Vertebrates.

vent gleet (*Vet.*). An infectious disease of fowls, characterised by inflammation of the cloaca and transmitted by coitus.

vent pipe (*San. Eng*). A small escape pipe which carries off foul gases from a sanitary fixture and leads into the vent stack.

vent stack (*San. Eng*). A vertical pipe carried up from the highest point in a system of house drains to a level clear of all windows and opening skylights; it provides an escape for foul gases from drains and sanitary fixtures.

vent, volcanic (*Geol.*). The pipe which connects the crater with the source of magma below; it ultimately becomes choked with agglomerate or volcanic ash, or with consolidated lava.

vent wires (*Moulding*). Wires ranging from $\frac{1}{16}$ to $\frac{1}{4}$ in. diameter, used for making vent holes in the rammed sand of a mould or core.

venter (*Bot.*). The dilated basal part of an archegonium, containing one egg.

venter (*Zool*). A protuberance: a median swelling: the abdomen in Vertebrates: the ventral surface of the abdomen.

ven′tifacts (*Geol.*). A general name for pebbles shaped by wind under (usually) desert conditions. As they may have more than three sides, the original term *dreikanter* (q.v.) is a misnomer.

ventil (*Acous.*). A key for disabling a section of an organ which has become faulty during playing, so that the included stops cannot be drawn. The most usual fault is a *cipher*, which is the persistent emission of a note because of the non-release of some part of the actuating mechanism.

ventilated commutator (*Elec. Eng.*). A commutator whose segments are provided with ventilating ducts for the passage of cooling air.

ventilated motor (*Elec. Eng.*). An electric motor provided with ventilating channels for the circulation of cooling air.

ventilating bead (*Join.*). A *deep bead* (q.v.).

ventilating duct (*Elec. Eng.*). A channel in the iron core of an electrical machine or transformer for the circulation of cooling air or oil.

ventilating fan (*Elec. Eng.*). An electrically driven fan whose function is to force cooling air through the ventilating ducts of an electrical machine.

ventilating plant (*Elec. Eng.*). Electrically driven fans and their attendant apparatus, designed for specific ventilating purposes.

ventilating tissue (*Bot.*). The sum total of the intercellular spaces in a plant, by means of which air circulates in the plant body.

ventilation (*Build.*, *etc.*). The process of replacement of vitiated air by fresh air.

ventilator (*Build.*). A device employed in order to promote and maintain ventilation.

venting (*Moulding*). The process of making holes through the rammed sand of a mould or core in order to allow gases to escape during pouring and so avoid blown castings. See **vent wires, wax vent.**

ventral (*Bot*.). (1) Anterior or in front.—(2) Uppermost (of the upper face of a leaf).—(3) Nearest to the axis.

ventral (*Zool.*). Pertaining to that aspect of a bilaterally symmetrical animal which is normally turned towards the ground.

ventral canal cell (*Bot.*). An unwalled cell, non-functional, which lies in the venter of the archegonium above the egg, of which it is the sister cell.

ventral suture (*Bot.*). The presumed line of junction of the edges of the infolded carpel.

ventral trace (*Bot.*). One of the two laterally placed vascular strands often present in the wall of a carpel.

ventri-. Prefix. See **ventro-.**

ven'tricle, ventric'ulus (*Zool.*). A chamber or cavity, especially the cavities of the Vertebrate brain and the main contractile chamber or chambers of the heart (in Vertebrates or Invertebrates).—*adj.* **ventric'ular.**

ven'tricose (*Bot*, *Zool.*). (1) Swollen in the middle.—(2) Having an inflated bulge to one side.

ventric'ulog'raphy (*Med.*). Radiography of the brain after the cerebrospinal fluid in the lateral ventricles has been replaced by air.

ven'trifixa'tion (*Surg.*). The operation of stitching the uterus to the anterior wall of the abdomen, for the treatment of retroversion of the uterus.

ven'trisuspen'sion (*Surg*). An operation for replacing the retroverted uterus by transplanting the round ligaments of the uterus into the anterior abdominal wall in such a way that they exert a strong pull on the uterus.

ventro-, ventri- (Latin *venter*, belly). A prefix used in the construction of compound terms; e g. *ventrolateral*, situated at the side of the ventral region.

ventrofixation (*Surg.*). See **ventrifixation.**

ventrosuspension (*Surg.*). See **ventrisuspension.**

Ventu'ri flume (*Civ. Eng*). A flume which is constricted at one section with convergent upstream and divergent downstream walls, the difference in water-level at the constriction and at a point in the full channel upstream affording a means of measuring the rate of flow. See **flume.**

Venturi meter (or **tube**) (*Hyd.*). An apparatus for recording rates of flow through closed pipes; it consists of a constriction inserted in the line of piping, together with means for measuring the loss of head over the convergent part of the constriction.

Venus (*Astron.*). The second planet in the solar system in order of distance from the sun, and the brightest of all the planets; its mass is about 0·82 that of the earth, it has no satellite, and its sidereal period is 225 days.

veranda (*Build.*). A covered external *balcony* (q.v.) along the outside of a building.

veranil'lo (*Meteor.*). The short period of fine weather which ends the rainy reason in the tropical countries of America.

veran'o (*Meteor.*). The dry season in the tropical countries of America.

ver'atrine (*Chem.*). (1) Crystalline veratrine is the same as *cevadine* (q.v.).—(2) A commercial term for a mixture of alkaloid bases obtained from the *Veratrum* genus.

verbigera'tion, ver-bij— (*Med.*). The persistent repetition of meaningless words and phrases.

ver'de antico, an-tē'ko (*Dec.*). A green patina formed on old bronze by oxidation; it is imitated artificially by pickling.

Verdet's constant, vār-dā (*Light*). The rotation of the plane of polarisation per cm. per unit magnetic field in the *Faraday effect* (q.v.). The value of the constant varies with temperature and is approximately proportional to the square of the wavelength of the light.

ver'digris (*Chem.*). The green basic copper carbonate formed on copper exposed to moist air.

verdite (*Min*). A green rock, consisting chiefly of green mica (fuchsite) and clayey matter, occurring as large boulders in the North Kaap River, South Africa; used as an ornamental stone.

verge (*Build.*). The edge of the roof covering projecting beyond the gable of a roof.

verge (*Horol*). The axis of a clock pallet, especially that of the verge escapement.

verge board (*Build.*). A *barge board* (q.v.).

verge escapement (*Horol.*). One of the earliest known escapements, now obsolete. The pallets are set at right-angles to the escape wheel (crown wheel) axis, and its action has a recoil.

verge tile (*Build.*). A tile which is purpose-made to a wider size than the normal, to assist in forming the bond at the end of a roof.

verge watch (*Horol.*). A watch with the verge escapement.

Veribest (*Build.*). Trade-name for a water-, acid- and fume-proof bituminous roofing-felt.

vermic'ular (*Bot*). Shaped like a worm.

vermiculation (*Masonry*). A variety of rustication, distinguished by worm-shaped sinkings in the face of the stone.

ver'micule (*Zool.*). A small worm-like structure or organism, as the motile phase of certain *Sporozoa.*

vermic'ulites (*Min.*). A group of hydrous silicates, closely related chemically to the chlorites, and occurring as decomposition products of the micas. When slowly heated they exfoliate and open into long worm-like threads. (Latin *vermiculari*, to breed worms.)

ver'miform (*Zool.*). Worm-like, as the *vermiform appendix*.

ver'mifuge (*Med.*) Having the power to expel worms from the intestines: any drug which has this power.

vermilion (*Chem.*). The red form of mercuric sulphide.

vermilionette (*Paint.*). A crimson paint made from red lead stained with eosine.

vermis (*Zool.*) In lower Vertebrates, the main portion of the cerebellum: in Mammals, the central lobe of the cerebellum.

vernal (*Bot.*). Of, or belonging to, spring.

vernal aspect (*Bot.*). The condition of a plant community in spring, characterised by some species being specially active at that time.

vernal equinox (*Astron.*). See **equinoxes.**

vernalisation (*Bot.*). The treatment of seeds, before they are sown, by wetting at a low temperature. This may hasten the subsequent flowering of the plant by enabling certain developmental stages to be completed before the seeds are sown.

vernation (*Bot.*). The manner in which the leaves are packed in a bud.

Verneuil process, ver-nê'ē (*Min.*). The technique invented by the French chemist Verneuil for the manufacture of synthetic corundum and spinel by fusing pure precipitated alumina, to which has been added a predetermined amount of the appropriate oxide for colouring, in an oxygen-coal-gas furnace.

vernier (*Instruments*). A small movable auxiliary scale, attached to and sliding in contact with a scale of graduation. It enables readings on the latter to be made to a fraction (usually a tenth) of a division.

vernier arm (*Surv.*). The part of an instrument carrying the vernier or verniers.

vernier condenser (*Elec. Eng.*). A variable condenser of small capacitance, connected in parallel with one of larger capacitance, and used for fine adjustment of condenser capacity or tuning.

vernier time-signals. See **rhythmic time-signals.**

Vernon-Harcourt pentane lamp (*Illum.*). A lamp burning pentane vapour in an Argand burner; designed to give 10 candle-power under certain specified conditions; used as a standard in photometric work.

Vernon Shale (*Geol.*). A division of the Middle Silurian of the eastern U.S A.; it consists of red shales laid down under continental conditions as loess-like deposits, underlying the Syracuse Salt Series.

veroby'erite (*Min.*). See **morganite.**

ver'onal (*Chem.*). Diethylbarbituric acid,

$$(C_2H_5)_2C{<}\begin{matrix}CO\,NH\\ CO\,NH\end{matrix}{>}CO,$$

prepared by condensing diethylmalonic ester with urea in the presence of sodium ethoxide. It has soporific properties.

Veronese green (*Paint.*). See **viridian green.**

verru'ca (*Bot.*). A granular or wart-like outgrowth on a thallus.—(*Zool.*) A wart-like process; especially one of a number of wart-like processes situated around the base of certain kinds of alcyonarian polyp

verru'ciform (*Bot*, *Zool.*). Resembling a wart.

ver'rucose (*Bot*, *Zool.*). Said of a surface covered with wart-like upgrowths.—*dim.* **verru'culose.**

ver'rucous (*Bot., Zool.*). Studded with wart-like tubercles.

versatile (*Bot.*). (Of an anther) attached to the tip of the filament by a small area on its dorsal side, so that it turns freely in the wind, facilitating the dispersal of the pollen.—(*Zool.*) Capable of free movement, as the toes of birds when they may be turned forwards or backwards.

versed sine (*Civ. Eng.*). See **rise.**

versicol'orous (*Bot., Zool.*). Not all of the same colour: changing in colour with age.

ver'siform (*Bot.*). Said of organs of the same kind which are not all alike in shape, or which change in shape as they age.

version (*Med.*). The act of turning manually the foetus *in utero* in order to facilitate delivery.

verso (*Print., Typog.*). The left-hand page of an open book, bearing an even number.

Verson's cells (*Zool.*). Large cells of disputed function found in the testicular follicles of some male Insects (e.g. *Lepidoptera*).

vertebra (*Zool.*). One of the bony or cartilaginous skeletal elements of mesodermal origin which arise around the notochord and compose the backbone: in *Ophiuroidea*, one of the brachial ossicles.—*pl.* **vertebrae.**—*adjs.* **vertebral, vertebrate.**

vertebra prom'inens (*Zool*). The seventh cervical vertebra in some Mammals in which the neural spine is very large.

vertebrarte'rial canal (*Zool.*). The canal for the vertebral artery between the two heads of the rib and the vertebra in higher Vertebrates.

Vertebra'ta (*Zool.*). See **Craniata.**

vertex (*Build., Civ. Eng.*). See **crown.**

vertex (*Zool.*). In higher Vertebrates, the top of the head, the highest point of the skull: in Insects, the dorsal area of the head behind the epicranial suture.

vertical or **vertical effect** (*Radio*). The obsolete name for the cause of error in radio direction-finding which arises from the loops or spaced aerials acting as a simple vertical aerial. If the parts of the antenna are not exactly balanced to ground (earth), the consequent unbalanced current interacts with the desired current from the aerial, and may vitiate a clean zero signal; in any event, it gives rise to an erroneous bearing. See **antenna effect.**

vertical aerial photograph (*Surv.*). A photograph taken from the air, for purposes of aerial survey work, with the camera pointing directly at the ground so that the optical axis is vertical or nearly so.

vertical boiler (*Eng.*). A steam boiler having a vertical cylindrical shell and domed firebox, from which (generally) a bank of vertical flue tubes leads to the smoke box and chimney.

vertical circle (*Astron.*). A great circle which passes through the observer's zenith and cuts the horizon at right-angles; hence the term is applied to the great circles on which altitudes of heavenly bodies are measured.

vertical circle (*Surv.*). The graduated circular plate used for the measurement of vertical angles by theodolite.

vertical component (*Elec. Eng.*). The vertical component of the force experienced by unit magnetic pole as the result of the action of the earth's magnetic field. Cf. *horizontal component.*

vertical curve (*Surv.*). The curve, generally parabolic, which is introduced between two railway or highway gradients in order to provide a gradual change from one to the other.

vertical-draw-out metal-clad switchgear (*Elec. Eng.*). A form of metal-clad switchgear in which the circuit-breaker can be withdrawn for inspection or repair by being lowered away from the bus-bar chambers.

vertical engine (*Eng.*). Any engine in which the cylinders are arranged vertically above the crankshaft.

vertical escapement (*Horol.*). An escapement in which the axis of the balance is at right-angles to that of the escape wheel. In a verge watch the balance staff is vertical when the watch is in the laying position.

vertical frequency (*Television*). The frequency of the frame scanning voltage in a conventional television system in which the line scanning is horizontal.

vertical panning (*Cinema.*). In motion-picture production the operation of swinging the camera in a vertical plane during shooting.

vertical polarisation (*Radio*). The state of polarisation of an electromagnetic wave when the electric component lies in the vertical plane and the magnetic component in the horizontal plane, as in the wave emitted from a vertical antenna.

vertical recording (*Acous.*). The same as *contour recording.*

vertical scanning (*Television*). Scanning in which the individual lines are vertical, not horizontal (as is usual).

vertical shaft alternator (*Elec. Eng.*). A water-turbine driven alternator designed to operate with its shaft vertically above, and directly coupled to, the turbine shaft.

vertical spindle motor (*Elec. Eng.*). An electric motor specially designed to operate with its spindle in a vertical position.

vertical tiling (*Build.*). *Weather tiling* (q.v.).

ver'ticil (*Bot.*). See **whorl.**

verticillas'ter (*Bot.*). A kind of inflorescence found in dead nettles and related plants. It looks like a dense whorl of flowers, but is really a combination of two crowded dichasial cymes, one on each side of the stem.

ver'ticillate (*Bot.*). Arranged in whorls.

vertiginous, ver-tij'— (*Med.*). Giddy, dizzy: affected with, or pertaining to, vertigo.

ver'tigo, or —ti'go (*Med.*). Dizziness: a condition in which the person has the sensation of turning or falling, or of surrounding objects turning about himself. See also **Ménière's disease.**

Very light. A small flare fired from a pistol; used in a wide range of colours for purposes of illumination or signalling, especially in warfare.

vesi'ca (*Zool.*). The urinary bladder.

ves'icant (*Med.*). Causing blisters: any agent which does this.

ves'icle (*Bot.*). A thin-walled globular swelling, usually at the end of a hypha.—(*Med.*, *Zool.*) A small cavity containing fluid: a small sac-like space containing gas: one of the three primary cavities of the Vertebrate brain: a small bladder-like sac.

vesicle (*Geol.*). See under **vesicular structure.**

vesic'ula (*Zool.*). A vesicle.

vesicula semina'lis (*Zool.*). In many animals, a sac in which spermatozoa are stored during the completion of their development.

vesic'ular (*Bot.*, *Zool.*). Like, or pertaining to, a vesicle: like a bladder.

vesicular structure (*Geol.*). A character exhibited by many extrusive igneous rocks, in which the expansion of gases has given rise to more or less spherical cavities (vesicles). The latter may become filled with such minerals as silica (chalcedony, agate, quartz), zeolites, chlorite, calcite, etc. Dyke rocks also are occasionally vesicular.

vesiculi'tis (*Med.*). Inflammation of the vesiculae seminales.

vesic'ulose (*Bot.*). (1) Swollen like a bladder.—(2) Appearing as if made up of small bladders.

vespoid (*Zool.*). Wasp-like.

vessel (*Bot.*). A long water-conducting tube in the xylem, formed from a vertical row of cells by the more or less complete breakdown of the horizontal walls between the individual cells. When mature, the vessel has no living contents, and has thick lignified walls which are pitted in various ways. Also TRACHEA.

vessel (*Zool.*). A channel or duct with definitive walls, as one of the principal vessels through which the blood flows.

vessel element, —segment, —unit (*Bot.*). One of the cells which, with many others above and below it, forms a vessel.

vestibule (*Build.*). A small antechamber just inside the entrance to a building, or serving as an entrance room to a larger room.

vestibule (*Zool.*). A passage leading from one cavity to another or leading into a cavity from the exterior: in *Protozoa*, a depression in the ectoplasm at the base of which is the mouth: in *Entoprocta*, the space within the ring of tentacles: in a female Mammal, the space between the vulva and the junction of the vagina and the urethra (urinogenital sinus): in Birds, the posterior chamber of the cloaca: in Vertebrates generally, the cavity of the internal ear.—*adjs.* **vestib'ular, vestib'ulate.**

vestibuli'tis, acute (*Med.*). A condition characterised by slight fever, vertigo, vomiting, and ataxia, resulting in complete deafness; due to an inflammation of the labyrinth and cochlea of the inner ear.

vestigial, ves-tij'— (*Zool.*). A small or reduced structure: a functionless structure representing a useful organ of a lower form.—*n.* **vestige.**

ves'titure (*Bot.*, *Zool.*). A covering, e.g. of hairs, feathers, fur, or scales.

vesu'vianite (*Min.*). See **idocrase.**

vet'erinary. Relating to the science which treats of the diseases of domestic animals.

vexil'lar (*Bot.*). Relating to the vexillum.

vexil'lum (*Bot.*). See **standard.**—(*Zool.*) See **vane.**

V.F. (or **v-f**) **telegraphy.** Abbrev. for *voice-frequency telegraphy.*

V.I. (*Elec. Comm.*). Abbrev. for *volume indicator.*

Via Lactea (*Astron.*). The Milky Way (see **Galaxy**).

viable (*Bot.*, *Zool.*). Capable of living and developing normally.

viaduct (*Civ. Eng.*). A structure which carries a road or railway across a wide and deep valley; it consists of a series of small-span bridges in line, supported on intermediate piers.

viam'eter (*Surv.*). A *perambulator* (q.v.).

vibrac'ula, vibracula'ria (*Zool.*). Long, bristle-like structures, found in certain polyzoan colonies, which represent modified zooids.

vi'bratile membrane (*Zool.*) In *Protozoa*, a sheet-like extension of the ectoplasm which performs rippling movements, as in some *Mastigophora* and *Ciliophora.*

vibrating-reed instrument (*Elec. Eng.*). An instrument for measuring frequency, consisting of a row of steel reeds each having a different natural frequency; these are in the field of an electromagnet excited by the current whose frequency it is desired to measure. The reed which is in resonance with the field vibrates strongly and is easily distinguished from the rest.

vibrating-reed rectifier (*Elec. Eng.*). A rectifier in which a vibrating steel reed acts as a commutator, the reed being made to vibrate synchronously with the a.c. supply by means of an electromagnet.

vibration dampers (*Eng.*). Devices fitted to an engine crankshaft in order to suppress or minimise stresses resulting from torsional vibration at critical speeds. See **dynamic damper, frictional damper.**

vibration galvanometer (*Elec. Eng.*). A galvanometer whose movement is undamped, so that, when operating with alternating current, the vibrations of the moving system can be translated on to a screen by a mirror fixed to the movement.

vibrator (*Cinema*). The electromechanical device, consisting of two stretched wires in a magnetic field and carrying a mirror, which deflects a beam of light from the exciter lamp in making the photographic sound-record on the location of the sound-track. Essentially the same as the *Duddell oscillograph unit.*

vibrator (*Elec. Eng.*). A type of phase advancer employing an a.c. armature free to oscillate in a unidirectional magnetic field. Cf. *Kapp vibrator.*

vibrator (*Horol.*). An instrument for checking the time of vibration of a balance and its spring. It consists of a vertical arm to which the free end of the spring is clipped and a master balance and spring in a container with a glass cover in the base. The master balance is vibrated, and the vibrations of the balance to be tested are compared with it.

vibrator roller (*Print.*). A roller which supplies the necessary quantity of ink from the ductor to the ink-table.

vibris'sa (*Zool.*). (1) In Mammals, one of the stiff tactile hairs borne on the sides of the snout and about the eyes.—(2) In *Diptera*, one of the stout cephalic bristles placed close to the sides of the epistoma.—(3) One of the vaneless rictal feathers of certain Birds, e.g. Flycatchers.—*pl.* **vibris'sae.**

vibrotro'pism (*Zool.*). Reaction or response of an animal to the stimulus of vibratory disturbance of its surroundings.

Vicat needle (*Civ. Eng.*). An apparatus which tests the setting-time of a cement specimen by measuring the effect produced by a specially shaped loaded needle which is pressed against the surface of the specimen.

vice, vise (*Carp.*). A *solid newel* (q.v.) **stair.**

vicinal, vis'— (*Chem.*). Substituted on adjacent carbon atoms, e.g. on the 1,2,3,4 atoms in a naphthalene nucleus.

vicinal faces (*Min.*). Facets modifying normal crystal faces, but themselves abnormal, as their indices cannot be expressed in small whole numbers; they usually lie nearly in the plane of the face they modify.

Vickers diamond pyramid hardness test (*Met.*). A method of determining the hardness of metals by indenting them with a diamond pyramid under a specified load and measuring the size of the impression produced.

Vickers-Maxim gun (*Small Arms*). A machine-gun used in the British army.

vidal black (*Chem.*). See **sulphide dyestuffs.**

video frequency (*Television*). A term corresponding to audio frequency in the case of telephonic transmission; namely, any one of the range of modulating frequencies present in a television picture signal. In the case of 400 line 25 frame transmission, the range of frequencies extends from zero to approximately two million cycles per second.

video signal (*Television*). See **picture signal,** also **negative—** **positive—**

vidian nerve (*Zool.*). In Vertebrates, a nerve of the head formed by the union of the deep petrosal nerve and the palatine nerve which runs to the spheno-palatine ganglion.

Vienna white (*Paint*). A paint base composed of pure white lead, imported from Austria in small cubes. Also called CREMNITZ WHITE, KREMNITZ WHITE, KREMS WHITE.

Vierendeel girder, fĕ'ren-dāl (*Struct.*). A girder formed of upper and lower booms connected rigidly by upright members but not braced by diagonal members, the rigidity of the girder being secured by rigidity at the joints.

Vieussens' valve, vū'senz (*Zool.*). In the Vertebrate brain, a transverse fold formed by the isthmus together with the anterior wall of the cerebellum which dips into the fourth ventricle: the anterior medullary velum.

view, angle (*Cinema.*). See **angle shot.**

view, angle of (*Photog.*). The same as *angle of lens.*

view-finder (*Photog.*). An attachment to a camera for ascertaining the field of view about to be registered on the emulsion.

See **brilliant—** **direct-vision—**

viewing room (*Cinema.*). A small projection theatre in a studio, for viewing rushes and completed films during the process of editing.

vignetting, vēn-yet'—(*Photog.*). In making a negative of an object, the fading-off of the background round the principal part of the object, such as a head. Vignetting is usually effected by interposing, either between the object and the lens or between the lens and the sensitive surface, a serrated diaphragm of suitable dimensions.

Vignoles rail, vin-yōlz' (*Rail.*). The flat-bottomed type of rail in general use in America and some other countries.

villi'tis (*Vet.*). Inflammation of the coronet of the horse.

villose, villous (*Bot.*). Covered with loose, long, weak hairs.

villus (*Bot.*). A thin branching outgrowth from the stem of a moss.—(*Zool.*) A hair-like or finger-shaped process, such as the absorptive processes of the Vertebrate intestine: the vascular processes of the Mammalian placenta which fit into the crypts of the uterine wall.—*adjs.* **villous, villiform.**

Vincent's angina (*Med.*). See **fusospirillosis.**

vinc'ulum (*Zool.*). A narrow tendinous band.

vinegar (*Chem.*). The product of the alcoholic and acetic fermentation of fruit juices, e.g. grape juice, cider, etc., or of malt extracts. Vinegar consists of an aqueous solution of acetic acid (3-6%), mineral salts, and traces of esters.

vi'nous (*Bot.*). Of the colour of red wine.

vi'nyl group (*Chem.*). The unsaturated monovalent radical $CH_2{\cdot}CH-$.

vinyl resins (*Plastics*). Thermoplastic resins formed by the co-polymerisation of vinyl chloride, $CH_2\,CHCl$, and vinyl acetate, $CH_3{\cdot}COOCH.CH_2$. They are odourless and tasteless, and resist moisture, dilute acids, and dilute alkalies. The liquid forms are valuable for protective coatings for foods and chemicals.*

vi'olane (*Min.*). A massive deep-blue form of the pyroxene *diopside*, exploited as an ornamental stone at San Marcel, Piedmont, Italy.

vires'cence (*Bot.*). An abnormal green condition, sometimes accompanied by the development of small, crowded leaf-like structures, due to attack by a parasite or other disease.

virgate (*Bot.*). Long, slender, and stiff, and not much branched.

Virgo (*Astron.*). Virgin. Sixth sign of the *Zodiac* (q.v.).

viridian green (*Paint.*). A transparent pigment, hydrated chromium sesquioxide. Also called VERONESE GREEN.

vir'ilism (*Med.*). The development of masculine characteristics, physical and mental, in the female, often due to hyperplasia of, or the presence of a tumour in, the cortex of the adrenal gland.

viro'sis (*Bot.*). A virus disease, as distinct from the virus causing it.

virtual slope (*Hyd.*). The slope showing the rate of loss of head due to resistance at any point in a system of fluid flow.

virtual image (*Phys.*). See **image.**

virtual value (*Elec. Eng.*). An alternative name for *root-mean-square value.*

vir'ulence (*Bot.*). The capacity of a parasite to cause disease.

vi'rus (*Med., etc.*). (1) A poison, such as snake venom.—(2) Any living micro-organism which causes disease.—(3) A term now generally used to denote filterable virus (cf. *filter-passer*), a living organism which passes through filters which retain bacteria, is invisible by ordinary microscopical methods, multiplies locally in the cells of the body, and forms inclusion bodies in the cells.

virus disease (*Bot., etc.*). A disease caused by a virus.

viscach'a (*Furs*). The dressed skin of the viscacha, a burrowing chinchilloid animal of the South American pampas; the fur is a mottled grey.

vis'ceral (*Med.*). Of, pertaining to, situated in, or affecting, a viscus.

visceral arch (*Zool.*). See **gill arch.**

visceral clefts (*Zool.*). The gill-clefts, especially the abortive gill-clefts of higher Vertebrates.

visceral lobe (*Zool.*). The nerve centre in the medulla oblongata of the Vertebrate brain, which is the seat of the sense of taste.

vis'cero- (Latin *viscera*, bowels). A prefix used in the construction of compound terms; e.g. *visceromotor*, bearing motor impulses to the viscera (of nerve fibres).

viscerocra'nium (*Zool.*). The jaws and visceral arches of a Vertebrate skull. Cf. *neurocranium.*

visceropto'sis (*Med.*). See **enteroptosis.**

viscid, vis'id (*Bot.*). Said of a surface which is glutinous, clammy, covered by a sticky secretion.

viscid disseminule (*Bot.*). A spore or seed which has a sticky surface, or bears sticky hairs, and is dispersed by adhering to the coat of an animal.

vis'cin (*Bot.*). The sticky substance present in the fruits of the mistletoe.

viscom'eter (*Phys.*). An instrument for measuring viscosity. Many types of viscometer employ *Poiseuille's formula* (q.v.) for the rate of flow of a viscous fluid through a capillary tube.

vis'cose (*Chem.*). The sodium salt of *cellulose xanthate* (q.v.), used in the manufacture of rayon.

viscose rayon (*Textiles*). *Rayon* (q.v.) in which the cellulose constituent is derived from purified wood pulp, sometimes mixed with cotton linters, the agents being caustic soda and carbon bisulphide.

See **acetate—** **cuprammonium—**

viscosity (*Phys*.). Internal friction due to molecular cohesion in fluids. The *coefficient of viscosity* (η) is the value of the tangential force per unit area which is necessary to maintain unit relative velocity between two parallel planes unit distance apart. Values of η in c g s. units are: water 0·01, glycerine 11, air 0·00018. Viscosity varies inversely with temperature.

viscountess (*Build*.). A slate size, 18 × 10 in.

viscous flow (*Hyd*.). A type of fluid flow in which there is a continuous steady motion of the particles, the motion at a fixed point always remaining constant. Also called STREAMLINE FLOW, LAMINAR FLOW, STEADY FLOW.

viscous hysteresis (*Elec. Eng*.). The phenomenon of time-lag between the intensity of magnetisation and the magnetising force producing it.

viscus (*Med., Zool*.). Any one of the organs situated within the chest and the abdomen: heart, lungs, liver, spleen, intestines, etc.—*pl.* **viscera.**

vise (*Eng., etc*.). A clamping device, usually consisting of two jaws which can be brought together by means of a screw, toggle, or lever, used for holding work that is to be operated on. Generally named after the trade in which it is used. See also **vice.**

visibility (*Meteor*.). Ability to observe distant objects through suspended water-droplets in the atmosphere. By international agreement the official scale of visibility varies from zero (dense fog, objects not distinguishable at 50 metres), through 4 (mist or haze, objects distinguishable between 1 and 2 km.), to 9 (excellent visibility, objects distinguishable at distances greater than 50 km.).

visibility (*Photog*.). The ratio of the luminous flux, in lumens, to the corresponding energy flux, in watts.

visibility curve (*Photog*.). The relation between visibility and wavelength. Owing to varying sensitivity of the eye, this curve indicates a maximum at 5550 A., which is a bright green.

visibility meter (*Meteor*.). A meter which attenuates visibility to a standardised value, and measures such visibility on a scale.

visible horizon (*Surv*.). The circle of contact with the earth of the cone of visual rays passing through the point of observation. Also called SENSIBLE HORIZON or APPARENT HORIZON.

visible radiation (*Illum*.). Radiation limited to the visible spectrum, i.e. to frequencies within the range of light.

visiogen′ic (*Television*). Suitable, artistically, for television transmission.

vision (*Photog*.). See **molecular—** **recurrent—**

vision modulation (*Television*). The modulation of the carrier effected by the picture signal, as distinct from that reserved for the synchronising impulses.

vision, persistence of (*Cinema*.). See **persistence of vision.**

visual fatigue (*Photog*.). Loss in visual sensitivity due to prolonged perception of distorted images, particularly of cinematographic images on a screen.

visual purple (*Zool*.). See **rhodopsin.**

Vita glass (*Build*.). Trade-name for a glass which transmits ultra-violet light and is much used for window-panes.

vital stain (*Bot., Zool*.). A stain which can be used on living cells without killing them.

vi′tamins (*Chem., Med*.). Organic substances required, in relatively small amounts, for the proper functioning of the animal organism. They (or in some cases their immediate precursors) must be present in the food. Lack causes certain deficiency diseases, curable by administration of the appropriate vitamin; partial lack may cause minor disturbances or less well-defined ill-health. The total number is not yet known. Some are known only from the effects of deprivation, but several have been isolated, and most of these have been synthesised. Some vitamins have a valuable therapeutic action when given in relatively large doses. As they were discovered, vitamins were distinguished by letters (A, B, C, etc.), but these temporary designations are being replaced by names as their chemical nature is determined. There are two main groups:—*fat-soluble* (i.e. associated with fats, soluble in fats and the usual fat solvents) which contain only carbon, hydrogen, and oxygen; and *water-soluble* most of which contain nitrogen. Several of the latter group are associated with enzymes concerned in oxidation-reduction processes.

vitamin A. A fat-soluble vitamin. It is an almost colourless viscous oil, volatile in superheated steam or in a very high vacuum, but destroyed by oxidation when heated at ordinary pressure.*

vitamin B_1 (*aneurin, thiamin*). A somewhat heat-labile water-soluble vitamin, complete deprivation of which causes beri-beri, while partial lack results in peripheral neuritis and cardiac abnormalities.*

vitamin B_2 complex. A group of water-soluble vitamins originally distinguished from B_1 by their greater heat-stability. Yeast, liver, milk, eggs, and certain vegetables are good sources.*

vitamin C (*ascorbic acid*). A white crystalline substance, stable when dry but very easily oxidised in solution, especially in neutral or alkaline solution; the oxidation is greatly accelerated by traces of copper.*

vitamin D. The fat-soluble, antirachitic vitamin which probably acts by regulating the absorption of calcium and phosphate from the intestine.*

vitamin E (*tocopherol*). A fat-soluble, antisterility vitamin.*

Vitaphone (*Cinema*.). The Warner system of sound-film, which used slow-speed gramophone discs operating synchronously with the projection of the motion-picture.

vitella′rium (*Zool*.). A yolk-forming gland.

vitellig′enous (*Zool*.). Yolk-secreting or producing.

vitel′lin (*Chem*.). A phosphoprotein present in the yolk of the egg.

vitelline (*Bot., Zool*.). Egg-yellow: pertaining to yolk.

vitelline membrane (*Zool*.). A protective membrane formed around a fertilised ovum to prevent the entry of further sperms.

vitel′lophags (*Zool*.). In some *Arthropoda*, isolated yolk-consuming cells which play a part in the formation of the hypoblast.

vitili′go (*Med*.). See **leucodermia.**

vit′rain (*Coals*). A separable constituent of bright coal, of vitreous appearance; said to impart coking properties to the coal.

vitrel′lae (*Zool*.). The cells which secrete the crystalline cone in an ommatidium.

Vitreosil (*Chem*.). Trade-name for vitreous silica, used for apparatus which is subject to large temperature variations, because of its extremely low coefficient of expansion.

vitreous electricity (*Elec. Eng*.). An obsolete name for positive electricity, since vitreous bodies, such as glass, become positively charged by the action on them of friction. Cf. *resinous electricity*.

vitreous humour (*Zool*.). The jelly-like substance filling the posterior chamber of the Vertebrate eye, between the lens and the retina.

vitriol, blue (*Min.*). See **blue vitriol.**

vitriol, green (*Min.*). See **green vitriol.**

vitriol, oil of (*Chem.*). Sulphuric acid.

vitriol, white (*Min.*). See **white vitriol.**

vitroclas'tic structure (*Geol.*). The characteristic structure of volcanic ashes which have been produced by the disruption of highly vesicular glassy rocks, most of the component fragments thus having concave outlines.

vitta (*Bot.*). (1) A stripe.—(2) A thin, elongated cavity containing oil, present in the pericarps of some fruits.

vittate (*Bot.*). Bearing longitudinal ridges or stripes.

vivip'arous *or* —păr'us (*Bot.*). (1) Producing bulbils or young plants in place of flowers.—(2) Said of a seed which begins to germinate before it is detached from the parent plant.

viviparous (*Zool.*). Giving birth to living young which have already reached an advanced stage of development; cf. *oviparous.*—*n.* **vivipar'ity.**

vivipary (*Bot.*). (1) The production of buds and young plants instead of, and in place of, flowers.—(2) The production of seeds which begin to germinate before they are set free from the parent.

vocal cords (*Zool.*). In air-breathing Vertebrates, folds of the lining membrane of the larynx by the vibration of the edges of which, under the influence of the breath, the voice is produced.

Vodas (*Elec. Comm.*). The contraction for the *voice-operated device for anti-singing* which is incorporated in all radio telephone circuits to ensure stability and absence of oscillation (singing) because of feed-back between the transmitters and receivers or inexactitude of terminating balances. In each direction the voice-currents operate relays, which block the return circuit and open the forward circuit, suitable delay-networks being incorporated so that the speech is not clipped by the operation of the relays.

Voder (*Acous.*). The contraction for *voice operation demonstration equipment*, whereby, by means of valve oscillators and filter circuits, electronically generated sounds can be reproduced through a loudspeaker in imitation of natural sounds (especially speech-sounds). Operated by keyboard.

Vogad (*Elec. Comm.*). The contraction for *voice-operated gain adjustor*, an arrangement of thermionic valves for adjusting automatically the gain of an amplifier under the control of the speech or music currents being amplified. See **A.V.C.**

vo'gesite (*Geol.*). A hornblende-lamprophyre, the other essential constituent being orthoclase. Cf. *spessartite.*

Vogt loudspeaker (*Acous.*). An electrostatically driven loudspeaker operating on the push-pull system, the stretched diaphragm being located between two damping grilles which connect the displaced air with the outer air.

voice-frequency (*Elec. Comm.*). The description of a frequency which lies within the range of frequencies normally considered sufficient for telephonic purposes. Cf. *audio-frequency.*

voice-frequency relay (*Teleg.*). A relay, incorporating a tuned reed, which is selectively operated by voice-frequency current, as in ringing on a long-distance telephone line. In *voice-frequency telegraphy*, the incoming currents are filtered, rectified by a valve, and then operate a normal polarised d.c. relay.

voice-frequency telegraphy (*Teleg.*). A system using interrupted carrier frequencies in the audio-frequency range for the conveyance of *telegraphic* signals over normal *telephone* circuits.

voiced sound (*Acous.*). In speech, an elemental sound in which the component frequencies are exact multiples of a fundamental frequency which is determined by the tension of the oscillating muscles in the larynx.

voicing (*Acous.*). The art of adjusting the volume, pitch, and timbre of organ pipes so that they operate together in an organ.

void waxing (*Cables*). Occurs at random anywhere in the dielectric, irregular in size and shape, and is free from carbon and treeing.

voids (*Civ. Eng.*). The spaces between the separate particles in a mass of granular material, such as an aggregate for concrete.

Voigt loudspeaker (*Acous.*). A moving-coil loudspeaker in which a large open diaphragm terminates the throat of a tractrix horn.

volant (*Zool.*). Flying: pertaining to flight.

volatile alkali (*Chem.*). An old name for *ammonia.*

volatilisation (*Chem.*). See **vaporisation.**

volatility product (*Chem.*). The product of the equilibrium pressures of the gases formed by the dissociation of a solid or a liquid.

volcanic ash (*Geol.*). The typical product of explosive volcanic eruptions, consisting of comminuted rock and lava, the fragments varying widely in size and in composition, and including deposits of the finest dust, lapilli, and bombs. See also **agglomerate, pyroclastic rocks, tuff.**

volcanic muds and sands (*Geol.*). The products of explosive volcanic eruptions (volcanic ash) which have been deposited under water and have consequently been sorted and stratified, thus showing some of the characters of normal sediments, into which they grade.

volcanic neck (*Geol.*). See **neck (volcanic).**

volcanic vent (*Geol.*). See **vent (volcanic).**

volca'no (*Geol.*). A centre of volcanic eruption, having the form typically of a conical hill or mountain, built of ashes and/or lava-flows, penetrated irregularly by dykes and veins of igneous rocks, with a central crater from which a pipe leads downwards to the source of magma beneath. Volcanoes may be active (periodically), dormant, or extinct; the eruptions may involve violent explosions (e.g. Krakatoa) or the relatively quiet outpouring of lava, particularly in those cases where the lava is basaltic (e.g. Hawaii).

Volkmann's canals, folk'man (*Zool.*). Canals carrying blood-vessels which traverse the periosteal lamellae of a bone to join the Haversian canals.

Volkmann's contracture (*Med.*). A contracture of the flexor muscles of the forearm due to the pressure of splints or tight bandages used in the treatment of fracture. It causes obstruction to the veins, so that the muscles swell, become hard, and then undergo fibrosis.

volsel'la forceps (*Surg.*). Forceps whose blades have pronged ends.

volt (*Elec.*). The practical unit of electromotive force, equal to 10^8 absolute units.

volt-ampere (*Elec. Eng.*). The unit of apparent power; equal to the product of voltage and current.

volt-ampere-hour meter (*Elec. Eng.*). An integrating meter for recording the volt-ampere-hours which pass in a circuit. Usually calibrated in kilo-volt-ampere-hours (kVAh).

volt-box (*Elec. Eng.*). An alternative name for a *voltage divider.*

volt-line (*Elec. Eng.*). A unit of magnetic flux equal to 10^8 maxwells.

voltage (*Elec.*). The value of an electromotive force or potential difference, expressed in volts.

voltage amplification factor (*Thermionics*). See **amplification factor.**

voltage amplifier (*Radio*). An amplifier whose function is to increase the voltage of the applied signal, without necessarily increasing its power. The output impedance must therefore be high.

voltage between lines (*Elec. Eng.*). The voltage between any two of the line wires in a single- or three-phase system; between the two lines of the same phase in a two-phase system; between any two lines which are consecutive as regards phase sequence in a symmetrical six-phase system. Also called LINE VOLTAGE, VOLTAGE BETWEEN PHASES, VOLTAGE OF THE SYSTEM.

voltage circuit (*Elec. Eng.*). The circuit of an instrument or relay which is connected across the lines of the circuit under test, and which therefore carries a current proportional to the voltage of this circuit. Also called PRESSURE CIRCUIT, SHUNT CIRCUIT.

voltage coefficient (*Elec. Eng.*). The constant by which the product of the armature speed in revolutions per minute, the flux in volt-lines, and the number of armature conductors in series must be multiplied in order to obtain the e.m.f. of a d.c. generator.

voltage divider (*Elec. Eng*). A high resistance provided with a tapping, which may be either fixed or adjustable, so as to obtain a voltage that is a fraction of the total voltage applied across the resistance. Also called POTENTIAL DIVIDER, VOLT-BOX.

voltage doubling (*Elec. Comm.*). The rise in voltage to double its value when any wave, travelling along a line, arrives at a high impedance or an open circuit and is thereby completely reflected.

voltage drop (*Elec. Eng.*). An alternative name for *potential difference*.

voltage-fed antenna (*Radio*). An antenna which is fed with power from a transmission line at a point of high impedance, where, through resonance, there is a voltage loop in the stationary-wave system.

voltage gradient (*Elec. Eng.*). The difference in potential per unit length of a conductor, or per unit thickness of an insulating medium.

voltage multiplier (*Elec. Eng*). A resistance in series with a voltmeter, enabling it to be used on a range higher than normal.

voltage ratio (*Elec. Eng.*). An alternative name for *transformation ratio*.

voltage regulator (*Elec. Eng.*). An apparatus for varying the output voltage of a generator.

voltage resonance (*Elec. Comm.*). The condition arising when the reactances of a condenser in shunt with an inductance become conjugate, so that when the frequency of an inducing current is varied the shunt voltage passes through a maximum.

voltage to neutral (*Elec. Eng.*). The voltage between any line and neutral of a three- or six-phase system. Also called PHASE VOLTAGE, STAR VOLTAGE, Y-VOLTAGE.

voltage transformer (*Elec. Eng.*). A small transformer of high insulation for connecting a voltmeter to a high-tension a.c. supply.

voltaic cell (*Elec. Eng.*). See **cell.**

voltaic electricity (*Elec. Eng.*). Current electricity, as opposed to static electricity.

voltaic pile (*Elec. Eng.*). A source of d.c. supply. It comprises a battery of primary cells in series, arranged in the form of a pile of discs, successive discs being of dissimilar metals separated by a pad soaked in the chemical agent.

voltam'eter (*Elec. Eng., etc.*). An instrument for measuring a current by means of the amount of metal deposited, or gas liberated, from an electrolyte in a given time due to the passage of the current.

vol'tinism (*Zool.*). Breeding rhythm: brood frequency. See **univoltine, bivoltine.**

voltmeter (*Elec. Eng.*). An instrument for measuring electromotive force directly, calibrated in volts.

voluble (*Bot.*). Twining.

volume (*Acous.*). A general term comprehending the general loudness of sounds, or the magnitudes of currents which give rise to them. Volume is measured by the occasional peak values of the amplitude, when integrated over a short period, corresponding to the time-constant of the ear. See **volume-indicator, VU.**

volume compression and expansion (*Elec. Comm.*). The automatic compression of the volume range in any transmission, but particularly in speech for radio-telephone transmission, so that the envelope of the wave-form is transmitted at a higher average level with respect to interfering noise-levels. After expansion at the receiving end, the resulting transmission is freer from noise. See **compandor.**

volume control (*Elec. Comm.*). The manually operated potentiometer which is used to regulate the transmission-levels in a communication system.

volume governor (*Gas Fittings*). A gas governor which operates so as to supply gas at a constant volumetric rate of flow.

volume indicator (*Elec. Comm*). A voltage-measuring device which, when placed across a communication channel carrying current for later conversion into sounds, gives a relative estimation of the apparent loudness of these reproduced sounds. The standard type of volume indicator used a bridging transformer and an anode-bend rectifying thermionic valve, but indicators having a metal-oxide rectifier are now in use, the indicating meter and associated circuit having in each case a time-constant which results in the indication being an integration over a short period, 0 2 second, of the varying voltage wave-form applied to it. In these volume indicators frequency-weighting networks are not usually used. Abbrev. **V.I.** See **VU.**

volume range (*Acous*). The difference between the maximum amplitude and the minimum useful amplitude of a wave-form in an original sound, e g. of an orchestra, expressed in decibels. In speech, it is generally taken to be 15-20 decibels, and for full orchestra 60-70 decibels.

volume resistivity (*Elec. Eng.*). An alternative name for *specific resistance*.

volumetric analysis (*Chem.*). A form of chemical analysis using standard solutions for the estimation of the particular constituent present in solution.

volumetric efficiency (*Eng*). In an I.C. engine or air compressor, the ratio of the weight of air actually induced per unit time to the weight which would fill the swept volume at N.T.P.

volumetric heat (*Phys., etc.*). See **molal specific heat.**

voluntary (*Zool.*). Under the control of the will.

voluntary contraction (*Zool.*). Reflex contraction of skeletal muscle.

voluntary muscle (*Zool.*). See **striated muscle.**

voluntary waste (*Build.*). Dilapidations resulting from the action of a tenant.

vol'utine granules (*Cyt.*). Granular cytoplasmic inclusions which stain intensely with basic dyes; believed to contribute to the formation of chromatin.

volva (*Bot.*). A sheath of hypha enclosing the whole of the fruit body of some agarics, becoming ruptured as the fruit body enlarges, and sometimes remaining as a cup or pouch round the base of the pileus.

volvate (*Bot.*). Possessing a volva.

Volvoci'na (*Zool.*). An order of *Phytomastigina*, comprising forms with, generally, two flagella; green or colourless; usually with a cellulose cuticle; having no gullet or transverse groove; forming food-reserves of starch; many species form colonies.

vol'vulus (*Med.*). Torsion of an abdominal viscus, especially of a loop of bowel, causing internal obstruction.

vomer (*Zool.*). A paired membrane bone forming part of the cranial floor in the nasal region of the Vertebrate skull; believed not to be homologous in all groups.—*adj.* **vo'merine.**

vom'ero- (Latin *vomer*, ploughshare). A prefix used in the construction of compound terms; e.g. *vomeronasal*, pertaining to the vomers and the nasal cavity.

Von Ebner's glands (*Zool.*). The serous glands of the tongue in Mammals.

Von Economo's disease (*Med.*). The disease called by Von Economo *lethargic encephalitis*, popularly known as *sleepy sickness*. See **epidemic encephalitis.**

Von Gudden's atrophy (*Zool.*). Secondary atrophy caused by disuse of nerve cells in the same physiological path as a damaged cell which has failed to regenerate.

Von Gudden's commissure (*Zool.*). A tract of fibres in the Mammalian brain connecting the posterior corpora quadrigemina.

Von Gudden's tract (or **bundle**) (*Zool.*). A tract of fibres in the Mammalian brain, passing from the corpora mammillaria to the tegmentum of the mid-brain.

Von Reck'linghausen's disease (*Med.*). See **molluscum fibrosum**; also **fibrocystic disease** (2).

vortex street (*Aero.*). A regular arrangement of vortices in parallel rows; e.g. those springing from the wing-tips of an aeroplane and extending down-stream behind it.

vortex, trailing (*Aero.*). The vortex passing from the main surfaces of an aeroplane and extending over the tail and behind it.

Voss machine (*Elec. Eng.*). See **Toepler machine.**

voussoir, voo-swar' (*Civ. Eng.*). See **arch-stone.**

vowel articulation (*Acous.*). See **articulation.**

V.P. (*San. Eng.*). Abbrev. for *vent pipe.*

V.S. (*Chem.*). Abbrev. for *volumetric solution.*

V.T.B. curve (*Cables*). Voltage/time–to–breakdown curve, i.e. a curve connecting the time and voltage for breakdown in this time. See **short-time breakdown voltage** and **asymptotic breakdown voltage.**

VU (*Elec. Comm.*). The number of *volume units* above or below zero power-level (decibels above or below one milliwatt) indicated by the standardised volume-indicator when measuring a fluctuation modulation in a communication circuit, e.g. in telephony or broadcasting.

vug (*Mining*). A cavity in rock or a lode, usually lined with crystals.

Vulcan (*Astron.*). See **intramercurial planet.**

Vulcan coupling (*Eng.*). A hydraulic shaft coupling, of the Föttinger type, used for connecting marine Diesel engines to the propeller shaft in order to avoid torsional vibration troubles. See **Föttinger coupling.**

vulcanisation of rubber (*Chem.*). The treatment of rubber with sulphur or sulphur compounds, resulting in a change in the physical properties of the rubber. Sulphur is absorbed by the rubber, and the process can be carried out either by heating raw rubber with sulphur at a temperature between 135° and 160° C., or by treating rubber sheets in the cold with a solution of S_2Cl_2. To increase the velocity of vulcanisation so-called *accelerators* (q.v.) may be used.

vulcanised fibre. A fibre obtained by treating paper pulp with zinc chloride solution. It consists of amyloid 90%, the remainder being water with some slight trace of insoluble salts. Used for low-voltage insulation. Leatheroid is an example.

vulcanites (*Geol.*). A general name for igneous rocks of fine grain-size, normally occurring as lava flows, and thus in direct contrast with *plutonites* (q.v.).

vul'pinite (*Min.*). A granular, scaly form of the mineral anhydrite, occurring at Vulpino, Lombardy, where it is cut and polished for ornamental purposes.

vul'sinite (*Geol.*). A variety of trachyandesite containing phenocrysts of andesine bordered with sanidine, together with mica, hornblende, and, rarely, olivine, embedded in a groundmass consisting essentially of sanidine microliths.

vultex (*Rubber*). See under **latex.**

vulva (*Zool.*). The external genital opening of a female Mammal.—*adj.* **vulviform.**

vulvi'tis (*Med.*). Inflammation of the vulva.

vulvo- (Latin *vulva*, vulva). A prefix used in the construction of compound terms; e.g. *vulvovaginal*, pertaining to the vulva and the vagina.

vulvovagini'tis (*Med.*). Inflammation of both the vulva and the vagina.

w (*Civ. Eng.*). Symbol for *load per foot run* or for *weight per cubic foot.*

W (*Chem.*). The symbol for *tungsten.*

W (*Civ. Eng.*). Symbol for *total load.*

W (*Elec. Eng.*). Symbol for *electrical energy.*

Wackenroder's solution, vack'— (*Chem.*). A concentrated solution of sulphurous acid into which hydrogen sulphide is passed at 0° C.

wad (*Min.*). Bog manganese, hydrated oxide of manganese. See **asbolane.**

Wadhurst Clay (*Geol.*). A subdivision of the Hastings Beds in the Wealden Series, comprising clays, often shaly, with stone bands, such as the Tilgate Stone, at intervals; deposited under deltaic conditions, and occurring in the Weald, notably near Wadhurst.

Wagner earth, vahg'ner (*Elec. Comm.*). A bridge using an additional pair of ratio-arms. The earth connexion to the bridge is removed to a point on these ratio-arms, with the possibility of effecting a perfect balance, free from error.

wagon retarder (*Eng.*). See **retarder.**

wagon vault (*Build.*). See **barrel vault.**

wagtail (*Join.*). A *parting slip* (q.v.).

wainscot, wainscoting (*Join.*). A wooden lining, usually panelled, applied to interior walls.

wainscot oak (*Join.*). Selected oak, cut radially to display the silver grain; much used for panelling.

wainscoting cap (*Join.*). A moulding surmounting a given piece of wainscoting.

waist. A narrowed-down, constricted part of an object; e.g. the middle of the length of a *slate cramp* (q.v.).

Waldegg valve-gear, val'— (*Eng.*). More commonly known as *Walschaert's valve-gear* (q.v.).

Walden inversion, val'— (*Chem.*). The transformation of certain optically active substances into their stereo-isomeric derivatives by chemical reactions; sometimes a complete cycle is involved, e.g.

$$\begin{tikzcd}
l\text{-chlorosuccinic acid} \arrow[r, "\text{(moist Ag}_2\text{O)}"'] & l\text{-malic acid} \arrow[d, "(\text{PCl}_5)"] \\
d\text{-malic acid} \arrow[u, "(\text{PCl}_5)"'] & d\text{-chlorosuccinic acid} \arrow[l, "\text{(moist Ag}_2\text{O)}"]
\end{tikzcd}$$

wale (*Civ. Eng.*). A horizontal timber used to bind together piles driven in a row.

wale (*Hosiery*). A ridge which is formed vertically in knitted fabrics.

walings (*Civ. Eng.*). Rough planks which run horizontally in front of the poling boards used in timbering trenches. The struts wedging the timbers apart on both sides are placed between the walings.

Walker phase-advancer (*Elec. Eng.*). A type of rotary phase-advancer, comprising a generator with three-phase star-connected armature, commutator, and three field poles, the latter being in series with the armature circuit and the slip rings of the induction motor to be compensated.

walking beam (*Mining*). The rocking beam used for actuating the cable in cable-drilling for oil.

walking line (*Build.*). An imaginary line, always 18 in. from the centre line of the handrail, used in setting out winders for a stair, the width of the winder measured on this line being made approximately the same as the going of the fliers.

wall (*Build.*). A construction, usually of brick or stone, put up to enclose space such as a room, and often supporting loading from floors and a roof above.

wall-board (*Build.*). See **building-board.**

wall box (*Build.*). A cast-iron support built into a wall to carry the end of a timber and allow for its ventilation.

wall hanger (*Build.*). A cast-iron or pressed-steel support partly built into a wall to carry the end of a structural timber, which itself is not to be built into the wall.

wall hook (*Build.*). An L-shaped nail used as a means of attachment to a wall.

wall insulator (*Elec. Eng.*). An insulator specifically designed to enable a conductor at high potential to earth to pass through a brick or concrete wall.

wall-paper (*Build.*). Decorative paper applied as a covering to the plastered wall surfaces of a room.

wall plate (*Build.*). (1) The vertical member in a system of raking shores, held against the wall by hooks driven into the mortar joints, and providing support for the heads of the shores.—(2) The timber or rolled-steel member built into or upon a wall as support for the ends of floor joists or other bearers.

wall plates (*Mining*). (1) The side-pieces of a timber frame in a rectangular shaft.—(2) End-pieces, end-plates.

wall plug (*Elec. Eng.*). A plug-in device for connecting a flexible conductor to a circuit terminal in the form of a wall socket. See **two-pin plug, three-pin plug.**

wall-sided (*Ship Constr.*). A term signifying absence of tumble-home, and indicating that the maximum breadth is maintained to deck-level.

wall socket (*Elec. Eng.*). A circuit terminal in the form of a receptacle into which a plug is inserted in order to make a connexion to the circuit. The device is insulated and mounted on the wall of a room or building.

wall string (*Carp.*). A string, generally a housed string, positioned against a wall and supporting the inner ends of the steps.

wall tie (*Build.*). A galvanised iron piece splayed in two limbs at each end; built into the two parts of a cavity wall, thus serving to bond them together.

Wallace's line (*Zool.*). An imaginary line passing through the Malay Archipelago and dividing the Oriental faunal region from the Australasian region.

Walle'rian degeneration (*Zool.*). Disintegration of the myelin sheath of the distal part of a crushed or severed nerve fibre.

Wallfortis (*Build.*). Trade-name of a waterproofing agent, in liquid form, for application to walls.

walling (*Civ. Eng.*). A general term for masonry walls.

Wal'schaert's valve-gear (*Eng.*). A valve-gear of the radial type used in some steam locomotives. The valve is driven through a 'combination lever' whose oscillation is the resultant of sine and cosine components of the piston motion, derived from connexions with the engine crosshead and with an eccentric or return crank at 90° to the main crank. Sometimes called the WALDEGG VALVE-GEAR.

wander plug (*Elec. Eng.*). A plug contact device for connecting a flexible conductor to one of several alternative sockets forming terminals of different circuits (e.g. tappings on a battery or small transformer).

wandering cells (*Zool.*). Migratory amoeboid cells; leucocytes.

wane (*Timber*). A defect in converted timber; some of the original rounded surface of the tree is left along an edge.

war neurosis (*Psychol.*). A preferable synonym for *shell-shock*. The term was originally used (war of 1914-18) for all types of nervous conditions resulting from war experiences, especially those caused by a bursting shell, which might result in (*a*) a condition of physical shock or concussion to the nervous system, (*b*) the precipitation of a psychoneurosis in a pre-disposed individual, (*c*) a combination of these conditions. In its original sense, shell-shock was given only a physical or neurological meaning.

warble (*Leather*). A small skin tumour of horses and cattle caused by bot-fly (*Hypoderma bovis*) which deposits its eggs in the fetlocks of cattle. The larvae reach the back of the animal and form chrysalises immediately beneath the skin, through which they emerge. Skins so damaged are of less value as leather.

warble tone (*Acous.*). A single-frequency electric current for testing microphones and loudspeakers. The frequency is varied between deliberate limits several times per second, so that the stationary-wave pattern in the testing enclosure is constantly moving and does not give rise to errors in sound measurements.

warbler (*Radio*). A rotating condenser or other device for rapidly varying the carrier frequency of a transmitter using the warbling carrier system.

warbling carrier system (*Radio*). A method of increasing the degree of secrecy obtainable with a radiotelephone system using inversion. It consists of rapid variation of the carrier frequency of the transmitter over a range of a few hundred cycles, so that the inverted speech transmitted through space cannot be readily re-inverted by heterodyning, as is otherwise the case.

Ward-Leonard control (*Elec. Eng.*). A method of speed control for large d.c. motors, employing a variable-voltage generator to supply the motor armature, and driven by a shunt motor.

Ward-Leonard-Ilgner system (*Elec. Eng.*). A modification of the Ward-Leonard system of speed-control, in which a flywheel is included on the motor generator shaft to smooth out peak loads, which would otherwise be taken from the supply.

warm-blooded (*Zool.*). Said of animals which have the bodily temperature constantly maintained at a point usually above the environmental temperature, of which it is independent; idiothermous. Cf. *cold-blooded*.

warm front (*Meteor.*). The leading edge of a mass of advancing warm air as it rises over colder air. There is usually heavy rain in advance of the warm front.

Warminster Beds (*Geol.*). Usually referred to the Upper Greensand, these consist of about 18 ft. of fossiliferous glauconitic sands with chert and cherty sandstone composed largely of sponge spicules, and occur typically just below the Chalk in the Vale of Warminster, Wilts, England.

warning (*Horol.*). In a striking clock, the partial unlocking of the striking train, just before the hour.

warning coloration (*Zool.*). See **aposematic coloration.**

warning piece (*Horol.*). In the striking work, a projection on the lifting piece which projects through a slot in the dial plate, and against which a pin on the warning wheel butts, to hold up the train. Exactly at the hour the warning piece drops clear of the pin and frees the train.

warning pipe (*Plumb.*). An overflow pipe fitted to cisterns, etc. to give warning of a defective valve.

warning wheel (*Horol.*). The last wheel in a striking train, which is held up by the warning piece during warning.

warp (*Timber*). Permanent distortion of a timber from its true form, due to causes such as exposure to heat or moisture.

warp (*Weaving*). The collection of threads spread out on a loom beam, which, when unwound and passed through the reed, run lengthwise in the woven fabric. In lace manufacture the warp comes from the warp beam, and from independent beams. See **balled warp, bobbin, chain warp, shed, shedding.**

warp loom fabric (*Hosiery*). A knitted fabric formed entirely from warp threads, which are made to interloop.

warp machine (*Textiles*). A straight-bar lace frame with bearded needles, in which individual threads pass to individual needles to form the fabric.

warp satin (*Textiles*). A term applied to a satin texture merely to emphasise the fact that it is a true satin (i.e. with a warp face).

warp stop motion (*Weaving*). A device which automatically stops a loom when a warp thread is broken.

warper's brasses (*Textiles*). A series of brass plates in a lace machine, with holes arranged in rows through which the warp threads pass.

warping (*Acous.*). Departure from flatness in a gramophone record, usually caused by excessive temperature during storage; obviated by storing vertically under moderate pressure in rigid racks.

warping (*Timber*). See **warp.**

warping mill (*Textiles*). (1) A cylindrical cage in which threads from jack bobbins are wound to fixed lengths, for use in the lace machine.—(2) A wooden reel of large diameter, vertical or horizontal, upon which threads are wound during the making of a warp.

warping woof (*Textiles*). See **bartrees.**

Warren girder (*Struct.*). A form of girder consisting of horizontal upper and lower members, connected by members inclined alternately in opposite directions.

Warren Hill Series (*Geol.*). A group of volcanic rocks of Pre-Cambrian age occurring in the Malvern Hills, England, and probably to be correlated with the Uriconian of Shropshire, which they closely resemble.

wart (*Bot.*). A small blunt-topped rounded upgrowth.

wart (*Med.*). A tumour of the skin formed by overgrowth of the prickle-cell layer, with or without hyperkeratosis; due to infection with a filter-passer. See also **verruca.**

warted (*Bot.*). Said of a surface bearing small blunt outgrowths: tuberculate.

wash (*Civ. Eng.*). A thin coat of water-colour paint applied to part of a drawing as an indication of the nature of the material to be used for the part represented, particular colours conventionally indicating particular materials.

wash board (*Build.*). A *skirting board* (q.v.).

wash dirt (*Mining*). The material rejected or discarded in the process of washing an alluvial deposit for gold.

wash-in, wash-out (*Aero.*). Increase (*wash-in*) or decrease (*wash-out*) in the angle of incidence, i.e. the angle between the chord of a wing (or aerofoil) and the wind relative to the aeroplane, in approaching the wing-tip along the camber.

wash leather (*Leather*). See **chamois leather.**

wash-out (*Acous.*). The elimination of a record on a magnetic tape or wire by saturating it magnetically with a relatively high direct current in one of the recording coils, thus permitting further records to be made.

wash-out valve (*Civ. Eng.*). A valve inserted in a pipe-line at the bottom of a valley, in order to enable a particular length of the pipe to be emptied as required.

washable leather (*Gloves*). A leather produced by tanning the skins with a mixture of formaldehyde and alkaline salts. The product is white leather, which can be dyed to any shade.

washed clay (*Build.*). See **malm.**

washer (*Build., Eng.*). An annular piece, usually flat, used under a nut to distribute pressure, or between jointing surfaces to make a tight joint.

washing (*Photog.*). The essential process of removing soluble salts from emulsions, particularly hypo after fixing silver images, residual hypo corroding the image after a time.

Wash'ita Series (*Geol.*). The highest of the three subdivisions of the Comanchean of the southern U.S.A. and Mexico. See also **Fredericksburg Series, Kiowa Shales.**

Wassermann's reaction, vahs'er-man (*Med.*). A test of the blood-serum (or of the cerebrospinal fluid) to determine whether the person from whom it is drawn is infected with syphilis. This condition is indicated by the presence of syphilitic antibodies in the serum.

waste (*Civ. Eng.*). See **spoil.**

waste light factor (*Illum.*). A factor used in the design of floodlighting installations to allow for the light which, although emitted along the beam from the projector, does not fall on the area to be illuminated.

waste pipe (*San. Eng.*). A pipe carrying the discharge from a sanitary fitting to a drain.

waste preventer (*San. Eng.*). A type of cistern used for flushing a water-closet; a fixed quantity of water is released for the purpose by pulling a chain or depressing a lever.

waste weir (*Civ. Eng.*). The weir provided in reservoir construction to discharge all surplus water flowing into the reservoir in flood-time, so as to prevent the water-level from rising above the limit allowed for in designing the dam.

waster (*Build.*). A facing-brick having some defect which renders it unsuitable for facing work, although it may be quite suitable for other building purposes.

wasting (*Masonry*). The operation of removing stone from a block by blows with a pick, prior to squaring and dressing.

watch (*Horol.*). A portable timekeeper for wear in the pocket, on the wrist, or on a fob.—POCKET WATCH, a watch for wear in the pocket.—WATERPROOF WATCH, a watch provided with a special case which prevents the entry of moisture.

watch movement (*Horol.*). The *movement* (q.v.) of a watch.

Watchet Beds (*Geol.*). A series of oyster-bearing marls of restricted distribution, named from the type-locality in Somerset, England, where they occur as the highest division of the Rhaetic Series.

water (*Chem., Phys.*). A colourless, odourless, tasteless liquid, m.p. 0° C., b.p. 100° C. It is formed when hydrogen burns in oxygen, and is therefore hydrogen oxide, H_2O, the liquid probably containing associated molecules, H_4O_2, H_6O_3, etc.; on electrolysis it yields two volumes of hydrogen and one of oxygen. It forms a large proportion of the earth's surface, occurs in all living organisms, and combines with many salts as water of crystallisation. At 0° C. the density is 0·9999 gm. per c.c.; and at 100° C., 0·9584 gm. per c.c. Water has its maximum density of 1·0000 gm. per c.c. at a temperature of 4° C. This fact has an important bearing on the freezing of ponds and lakes in winter, since the water at 4° C. sinks to the bottom and ice at 0° C. forms on the surface.

water (*Jewel.*). The transparency or lustre of a precious stone or a pearl.

water balance (*Bot.*). The ratio between the water taken in by a plant and the water lost by it.

water ballast (*Ships*). Water carried by a ship to balance or redress change of draught due to consumption of fuel, provisions, or to discharge of cargo: also, water carried for purposes of stability.

water bar (*Build.*). A galvanised iron bar set in the joint between the wood and stone sills of a window, to prevent penetration of water. Also called WEATHER BAR.

water blast (*Mining*). (1) A sudden escape of confined air due to water pressure, e.g. in rise workings.—(2) A water-actuated ventilating device.

water bloom, water flowers (*Bot.*). Large masses of algae, chiefly *Myxophyceae*, which sometimes develop very suddenly in bodies of fresh water.

waterbound macadam (*Civ. Eng.*). A road surfacing formed of broken stone, well rolled and covered with a thin layer of hoggin, which is watered in and binds the stones together.

waterbrash (*Med.*). A sudden gush into the mouth of a tasteless watery secretion from the salivary glands; often a symptom of duodenal ulcer.

water calyx (*Bot.*). A calyx, in the form of a closed sac, into which hydathodes secrete much water, so that the other parts of the flower continue their development without risk of damage from dryness.

water-carriage system (*San. Eng.*). The system of disposing of waste matter from buildings by water-closets, etc., involving the use of water to carry away the waste matter. Cf. *conservancy system.*

water-cement ratio (*Civ. Eng.*). The relative proportions of water and cement used in a given concrete mix.

water-checked (*Build.*). Said of a casement the stiles and mullions of which have grooves cut in the meeting edges in order to prevent rain from getting through.

water-chrysolite (*Min.*). See **bottle-stone.**

water closet (*San. Eng.*). A closet which is connected to a water-supply system so that the excreta may be carried away by flushing.

water colours (*Paint.*). Pigments soluble in water but often ground up in a gummy medium.

water-cooled engine (*I.C. Engs.*). An engine cooled by the circulation of water through jackets, which are usually cast integral with the cylinder block; all large engines are of this type.

water-cooled motor (*Elec. Eng.*). A motor employing water as a cooling medium, the water circulating through appropriate cooling channels or jackets.

water-cooled resistance (*Elec. Eng.*). A resistance kept cool by immersion in water, which circulates in channels provided for the purpose.

water-cooled transformer (*Elec. Eng.*). A transformer in which the oil is kept cool by means of water circulating in pipes immersed in the oil.

water-cooled valve. A thermionic vacuum tube in which the heat generated by the electronic bombardment of the anode is carried away by water circulating around or through it. In the former case the anode is made an integral part of the envelope.

water culture (*Bot.*). An experimental means of determining the mineral requirements of a plant; the plant is grown with its roots dipping into solutions of known composition.

water development (*Photog.*). The transference of an emulsion from a normal developing bath to a water bath after partial development, so as to reduce final contrast without increasing the maximum density; the development continues in those parts where the density is low, the high densities having used up all the locally absorbed developer.

water equivalent (*Heat*). The product of the specific heat of a body and its mass. It is the mass of water requiring the same quantity of heat to raise its temperature by the same amount as the body. Also known as the THERMAL CAPACITY of the body.

water flowers (*Bot.*). See **water bloom.**

water gas. See **blue water gas, carburetted water gas, semi-water gas.**

water-gauge (*Eng.*). A vertical or inclined protected glass tube connected, at its upper and lower ends respectively, to the steam and water spaces of a boiler, for showing the height of the water-level.

water-gauge (*Mining*). An instrument for measuring the difference in pressure produced by a ventilating fan or air current.

water-glass (*Chem.*). A concentrated and viscous solution of sodium or potassium silicate in water. It is used as an adhesive, as a binder, as a protective coating in waterproofing cement, as a preservative for eggs, and in the bleaching and cleaning of fabrics.

water-inch. A *miner's inch* (q.v.).

water-jet driving (*Civ. Eng.*). A process of pile driving often adopted when the piles have to be sunk into alluvial deposits; a pressure water-jet is used to displace the earth around the point of the pile.

water-level (*Surv.*). A rudimentary instrument for establishing a horizontal line of sight. It consists of a U-shaped tube containing water, the free surfaces of which in each limb lie in the same horizontal line.

water lime (*Build., Civ. Eng.*). *Hydraulic cement* (q.v.).

water lines (*Ship Constr.*). The intersection of the various waterplanes with the ship's form.

water lodge (*Mining*). An underground reservoir.

waterlogged (*Civ. Eng.*). A term applied to ground which is saturated with water.

watermark (*Paper*). Lettering or a design impressed into the paper during manufacture by means of the dandy roll or a projecting wire on the mould. Added as a trade-mark, or to give distinction to a paper.

water of capillarity (*Build.*). The moisture drawn up by capillary action from the soil into the walls of a building.

water of crystallisation (or **hydration**) (*Chem.*). The water present in hydrated compounds. These compounds when crystallised from solution in water retain a definite amount of water; e.g. copper sulphate, $CuSO_4{\cdot}5H_2O$.

water paint (*Paint.*). A trade term for a washable distemper.

water plane (*Ship Constr.*). A horizontal section through a ship's hull. Usually named by measurement from the base line, but sometimes from the load water plane.

water pore (*Bot.*). See **hydathode.**—(*Zool.*) A madreporite.

water-power station (*Elec. Eng.*). An alternative name for *hydro-electric power station.*

waterproof paper (*Paper*). Paper which has been impregnated with pitch or bitumen to make it waterproof; often lined with hessian or other coarse material.

waterproofing. The process of rendering surfaces or materials impervious to water.—(*Textiles*) Waterproofing can be effected (1) by the deposition of metallic salts or insoluble soaps, which process renders fabrics rainproof but does not interfere with the ventilating properties; (2) by impregnation with oils; (3) by coating with rubber or varnish. The latter processes prevent the transmission of air.

water recovery (*Aero.*). The recovery, principally by condensation, of the water in the exhaust gases of an aero engine. Used in airships for ballast purposes, as a partial set-off against the loss of weight due to the consumption of fuel during flight.

water resistance (*Elec. Eng.*). A resistance formed by two electrodes immersed in a weak saline solution.

water rheostat (*Elec. Eng.*). A water resistance in which one of the electrodes is movable into and out of the conducting solution, thus varying the ohmic value of the resistance.

water-rib tile (*Build.*). A purpose-made tile having a projecting rib that serves to prevent entry of rain or snow.

water sapphire (*Min.*). See **saphir d'eau.**

water seal (*San. Eng.*). See **seal.**

watershed (*Civ. Eng.*). The line of separation between adjacent catchment areas.

waterspout (*Meteor.*). A *tornado* (q.v.).

water stain (*Build.*). A stain for wood, consisting of colouring matter dissolved in water.

water stoma (*Bot.*). The opening through which water is discharged from a hydathode.

Waterstones (*Geol.*). The term applied by Prof. Hull to the higher part of the Keuper Sandstone of the English Midlands, consisting of irregularly bedded red and grey sandstones with curious markings on the bedding planes, resembling 'watered' silk. The name does not refer to the water-bearing qualities of the rocks, which are not exceptional.

water-storage tissue (*Bot.*). A group of large and often thin-walled cells inside a plant, in which water is stored and from which it is withdrawn in times of drought.

water-table (*Build.*). See **canting strip.**

water-table (*Geol.*). The surface below which fissures and pores in the strata are saturated with water. It roughly conforms to the configuration of the ground, but is smoother. Where the water-table rises above ground-level a body of standing water exists.

watertight fitting (*Elec. Eng.*). An electric-light fitting designed to exclude water under certain prescribed conditions. Cf. *weatherproof fitting.*

water tower (*Civ. Eng.*). A tower containing tanks in which water is stored, built at or near the summit of an area of high ground in cases where the ordinary water pressure would be inadequate for distribution to consumers in the area.

water-tube boiler (*Eng.*). A boiler consisting of a large number of closely spaced water-tubes connected to one or more drums, which act as water pockets and steam separators, giving rapid water circulation and quick steaming. See **Babcock and Wilcox boiler, forced-circulation boilers, Stirling boiler, Yarrow boiler.**

water turbine (*Eng.*). A prime-mover in which a wheel or runner carrying curved vanes is supplied with water directed by a number of stationary guide vanes; usually direct-coupled to large alternators.

See **Francis—**
Kaplan—
mixed-flow (or American)—
propeller-type—
Pelton wheel.

water twist (*Spinning*). Rather more than the usual amount of twist; a ring yarn has usually $4\sqrt{\text{counts}}$ as the turns per inch, but for water twist $4{\cdot}25\sqrt{\text{counts}}$ are usual.

water-vascular system (*Zool.*). In *Echino-*

dermata, a system of coelomic canals, associated with the tube-feet, in which water circulates: in *Platyhelminthes*, the excretory system.

water vesicle (*Bot.*). A much enlarged epidermal cell which serves for the storage of water.

water wave (*Acous.*). An optical effect on the surface of a gramophone record, caused by periodic alteration of the recording stylus with reference to the surface of the record, which varies the depth of cut.

water wheels (*Eng.*). Large wheels carrying, round the periphery, buckets or shrouded vanes, on which water is caused to act, either by falling under gravity or by virtue of its kinetic energy
See **breast wheel** **Pelton wheel**
overshot do. **undershot** do.

Waterex (*Build.*). Trade-name for a waterproofing agent in liquid form.

Watling Shales (*Geol.*). The basal member of the Eastern Longmyndian Series, of Pre-Cambrian age, occurring in the eastern part of the Longmynd in South Shropshire; they consist of green shales (with occasional purple mudstones), with rare calcareous bands.

watt (*Elec. Eng.*). The unit of electric power; equal to a rate of working of 10^7 ergs, or 1 joule, per second. 1 H P.=746 watts.

watt-hour (*Elec. Eng.*). The unit of electrical energy, being the work done by 1 watt acting for 1 hour, and thus equal to 3600 joules or $3{\cdot}6 \times 10^{10}$ ergs. See **work.**

watt-hour efficiency (*Elec. Eng.*). The ratio of the amount of energy available during the discharge of an accumulator to the amount of energy put in during charge. Cf. *ampere-hour efficiency.*

watt-hour meter (*Elec. Eng.*). See **energy meter.**

wattmeter (*Elec. Eng.*). An instrument containing a series (*current*) and a shunt (*voltage*) coil whose combined torque produces a deflection of the needle that is a direct measure of the circuit power in watts.

wattmeter method (*Elec. Eng.*). A method of testing the electrical quality of iron specimens by measuring the power loss with a.c. magnetisation.

Watt governor (*Eng.*). A simple *pendulum governor* (q.v.) in which a pair of links are pivoted to the vertical spindle and terminate in heavy balls. Shorter links are pivoted to the mid-points of the first, and to the sleeve operating the engine throttle.

wattful current (*Elec. Eng.*). An alternative name for the active component of an alternating current.

wattle and dab (*Build.*). A type of wall construction in which wicker work is interlaced about a rough timber framework and the whole covered with plaster.

wattless component (*Elec. Eng.*). See **reactive component.**

wattless current (*Elec. Eng.*). An alternative name for the reactive component of an alternating current.

Wauco'bian (*Geol.*). A thick series of strata referred to the Lower Cambrian of western N. America (Waucoba Springs, California). Also known as the GEORGIAN SERIES (Georgia, Vermont) in an eastern area extending from Boston to Newfoundland.

Waulsor'tian, vŏl—(*Geol.*). A reef-knoll facies of the Lower Carboniferous of Belgium, resembling that of the Mid-Pennine region of England.

wave (*Elec. Eng.*). The spatial form of an electrical oscillation or disturbance, whether transient or maintained, propagated along a conductor with a maximum velocity equal to that of light.—(*Radio*) A disturbance propagated through a dielectric or free space, having the nature of a travelling magnetic field accompanied by an electric field at right-angles to it. The velocity of propagation in free space is 186,000 miles or 300 million metres per second.

wave (*Phys.*). A row of particles, each executing similar vibrations, and each being slightly out of phase with the preceding one, constitutes a *progressive wave.* A *transverse wave* (e.g. a wave on the surface of water) is one in which the particle vibrations are at right-angles to the row; a *longitudinal wave* (e g. sound-wave) is formed when the vibrations are parallel to the row. See **sine wave, wavelength, stationary waves.**

wave antenna (*Radio*). A form of directional receiving antenna comprising a long wire running horizontally in the direction of arrival of the incoming waves, at a small distance above the ground. The receiver is connected to one end, and the other end is connected to earth through a terminating resistance. Also called BEVERAGE ANTENNA.

waveband (*Radio*). A range of wavelengths which is occupied by transmissions of a particular type; e.g. the *medium waveband* (from 200 to 550 metres) used for broadcasting.

wave detector (*Radio*). A name formerly applied to a detector of the high-frequency currents which a wave produces in an antenna.

wave filter (*Elec. Eng.*). A combination of inductance and capacitance connected in an a.c. circuit in such a manner as to suppress the harmonics in a distorted current wave, thus leaving a sinusoidal current of fundamental frequency. Cf. *resonant shunt, smoothing equipment.*

wave-form, wave-shape (*Elec. Eng.*). The trace of an alternating current or voltage, or of a transient disturbance.—(*Elec. Comm.*) The time variation of a signal in a communication circuit, either for current or voltage. If cyclic and repeated indefinitely, the wave-form is referred to as a *steady-state.* If varying without cyclic repetition, the wave-form is *transient.*

wave-formed mouth (*Vet.*). See **mouth (wave-formed).**

wave-front (*Acous.*). The surface which is the locus of all molecules having motion in identical phases in a propagating sound-wave, the direction of propagation being perpendicular to this.

wave-front (*Elec. Eng.*). The leading portion of an advancing wave; e.g. a voltage surge propagated along a transmission line.

wavelength (*Elec. Eng.*). The distance between two similar and successive points on an alternating wave, e.g. between successive maxima or minima; equal to the velocity of propagation divided by the frequency of the alternations.—(*Radio*) The distance, measured radially from the source, between two successive points in free space at which an electromagnetic wave has the same phase. It is numerically equal, in metres, to 300,000 divided by the frequency in kilocycles. See **wave.**

wavelength constant (*Elec. Comm.*). That part of the propagation constant referring to the retardation in phase of an alternating current in passing along unit length, one mile, of a transmission line. Also called PHASE CONSTANT.

wavelength of light (*Light*). Light consists of electromagnetic waves in a medium known as the ether, which is supposed to fill all space whether 'empty' (a vacuum) or occupied by matter. The wavelength of visible light varies from 3900 to 7600 Ångström units (Å.U.). See **spectrum, Ångström unit.**

wavemeter (*Radio*). An instrument for measuring wavelengths either directly or (as is more usual) indirectly, by means of their frequency.

See **absorption—** **heterodyne—**

wave-shape (*Elec. Eng.*). See **wave-form.**

wave train (*Radio*). See **train of waves.**

wavetrap (*Radio*). A parallel resonant circuit tuned to the frequency of an interfering transmitter, and inserted in series with the antenna circuit of a receiver, to reject such interference.

wave velocity (*Radio*). See **phase velocity.**

wave-winding (*Elec. Eng.*). A type of armature winding in which there are only two parallel circuits through the armature, irrespective of the number of poles.

waved, wavy (*Bot.*). See **undulate.**

wa'vellite (*Min.*). Orthorhombic hydrated phosphate of aluminium, occurring rarely in prismatic crystals, but commonly in flattened globular aggregates, showing a strongly developed internal radiating structure. Named after Dr. Wavell, who discovered the mineral in the Culm cherty shales near Barnstaple.

Waverly Group (*Geol.*). The general name for the Lower Mississippian of Ohio; equivalent to the Osage-Kinderhook Group of the Mississippi valley.

waving groin (*Build.*). A groin which is not straight in plan

wax (*Chem.*). Waxes are amorphous masses, usually consisting of esters of monohydric alcohols of the higher homologues; e.g. *beeswax* is the melissyl ester of palmitic acid, $C_{30}H_{61}O{\cdot}CO{\cdot}C_{15}H_{31}$. See also **cable wax.**

wax pocket (*Zool.*). In Bees, a ventral abdominal pouch which secretes wax.

wax recorder (*Acous.*). The machine on which wax blanks are rotated during the cutting of a sinuous track, which is the registration of the component frequencies in the currents applied to the recording head. See **disc recording.**

wax shaving (*Acous.*). See **shaving.**

wax stew (*Acous.*). Undesired reproduced sounds arising from the original wax blank, from which records have been pressed.

wax test, magenta (*Cables*). See **magenta wax test.**

wax vent (*Moulding*). A pliable wax taper with a cotton core, placed in intricate cores during moulding. This wax melts when the core is dried, leaving a clear hole for the escape of gases.

wax wall (*Mining*). A wall of clay built round the gob or goaf, to prevent the entry of air or egress of gas.

waxed leather (*Leather*). Leather finished with a high wax polish on the flesh side.

waxing (*Cinema.*). The thin layer of wax which is placed on the edges of positive release prints, on the emulsion side, to form lubrication when the film is being projected.

waxing (*Cables*).

See **bush—** **strand space—**
gap— **void—**
strand—

waxy flexibility (*Med.*). See **flexibilitas cerea.**

ways (*Eng., etc.*). (1) The machined surfaces of the top of a lathe bed on which the carriage and tailstock slide; sometimes called SHEARS.—(2) The framework of timbers on which a ship slides when being launched.

weak coupling (*Elec. Eng.*). An inductive coupling in which the mutual inductance between two circuits is small; more generally known as LOOSE COUPLING. Cf. *tight coupling*.

weak electrolyte (*Chem.*). An *electrolyte* (2, q.v.) which is only slightly ionised in moderately concentrated solutions.

weak negative (*Photog.*). A negative which has a density lower than normal.

Wealden Series (*Geol.*). A series some 2300 ft. thick, comprising the Hastings Beds below and the Weald Clay above, deposited under deltaic conditions in S.E. England; approximately equivalent to the marine Neocomian stage of the Cretaceous System.

wear, needle (*Acous.*). See **needle wear.**

wearing depth (*Elec. Eng.*). The permissible amount of radial wear on a commutator, prior to renewing the segments.

weather bar (*Build.*). See **water bar.**

weather-board (*Join.*). A board used with others for covering sheds and similar structures; fixed horizontally.

weather check (*Build.*). A *drip* (q.v.): a groove cut in a surface which is in close contact with another, in order to prevent rain from getting through.

weathercock (*Build.*). A pivoted and often ornamental finial which is turned by the force of the wind and indicates the quarter from which it is blowing.

weathercock instability (*Aero.*). That form of lateral instability which causes an aircraft to develop a combination of side-slipping and yawing, even when kept on an even keel by the pilot. It causes the machine to follow a path successively pointing in directions alternately on either side of its intended direction.

weather fillet (*Build.*). See **cement fillet.**

weather map (*Meteor.*). A map on which are marked synchronous observations of atmospheric pressure, temperature, strength, and direction of the wind, the state of the weather, cloud, and visibility. Weather maps (also known as SYNOPTIC CHARTS) are used as a basis for forecasting.

weather moulding (*Build.*). A *dripstone* (q.v.).

weatherproof fitting (*Illum.*). An electric-light fitting having an enclosure which excludes rain, snow, and external splashings. Also called SPLASHPROOF FITTING.

weather slating (*Build.*). *Slate hanging* (q.v.).

weather strip (*Join.*). See **door strip.**

weather-struck (*Build.*). A term applied to mortar joints finished by the method of *weathered pointing* (q.v.).

weather tiling (*Build.*). Tiles hung vertically to the face of walls, in order to protect them against wet and to help maintain an even temperature within the building. Also called TILE HANGING.

weathered pointing (*Build.*). The method of pointing in which, in order to throw the rain off the horizontal joints, the mortar is sloped inwards, either from the lower edge of the upper brick, or the upper edge of the lower brick, the latter method being preferred by bricklayers. Also called STRUCK-JOINT POINTING.

weathering (*Build.*). The deliberate slope at which an approximately horizontal surface is built or laid so that it may be able to throw off the rain. See **coping.**

weathering (*Geol.*). The processes of disintegration and decomposition effected in minerals and rocks as a consequence of exposure to the atmosphere and to the action of frost, rain, and insolation. These effects are partly mechanical, partly chemical, and for their continuation depend upon the removal, by transportation, of the products of weathering. *Denudation* (q.v.) involves both weathering and transportation.

weathering (*Mining*). The submitting of ore to continued exposure to the atmosphere; most beneficial with some ores, harmful with others and with coal.

weatherom'eter (*Paint.*). An instrument used to determine the weather-resisting properties of paints; cycles of artificial conditions are provided to approximate as closely as possible to natural weathering conditions.

weaver's warp (or **web**) (*Textiles*). See **warp.**

weaving (*Textiles*). The interlacing of two sets of threads to form a fabric. See **loom, reed, shuttle, warp, weft.**

web (*Build.*). One of the panels of a rib-and-panel vault.

web (*Struct.*). The relatively slender vertical part or parts of an I-beam or built-up girder such as a box girder separating the two flanges.

web (*Zool.*). The mesh of silk threads produced by Spiders, some Insects, and other forms; the vexillum of a feather; the membrane connecting the toes in aquatic Vertebrates, such as the Otter.

web machine (*Print.*). A printing machine in which the paper is fed from a continuous roll.

webbed (*Zool.*). Having the toes connected by membrane, as in Frogs, Penguins, Otters.

weber, vā'ber *or* wē'ber (*Elec. Eng.*). The proposed unit of magnetic reluctance, equal to the ratio of gilberts to maxwells.

Weber dynamometer, vā'ber (*Elec. Eng.*). An early form of dynamometer, having a fixed coil within which a small moving-coil is suspended by a bifilar suspension.

Weber-Fechner law of hearing (*Acous.*). This states that a just perceptible increase in the stimulus (intensity of sound) bears a constant ratio to the total stimulus. This law would indicate a logarithmic law for a scale of loudness, but the permissibility of the integration leading to this scale is now discredited. See **phon.**

Weber photometer (*Elec. Eng.*). A transportable photometer in which a direct comparison is made between the brightness of two screens, one illuminated by the unknown light-source and the other by a standard lamp.

Webe'rian apparatus (*Zool.*). In *Ostariophysi*, a complex apparatus of disputed function, but believed to be receptive of vibrations; it consists of a set of ossicles connecting an anterior division of the air-bladder with the perilymph cavities of the internal ear.

Weberian ossicles (*Zool.*). In *Ostariophysi*, a chain of small bones united by a ligament which put the internal ear in direct communication with the air-bladder.

websterite (*Geol.*). A coarse-grained ultramafic igneous rock, consisting essentially of both ortho- and clino-pyroxenes: a diallage-hypersthene-pyroxenite.

wedge bones (*Zool.*). In some Lizards, as Sphenodon and Gecko, small wedge-shaped intercentra formed by the ossification of the ventral portions of the intervertebral discs.

wedge contact (*Elec. Eng.*). A contact consisting of two fingers between which a wedge-shaped contact on the moving element is forced; used for circuit-breakers, etc.

wedge filter or **wedge** (*Photog.*). An adjustable light-attenuating device, made of material of a uniform grey translucence, the varying loss in light being obtained by the varying thickness of path. See **neutral wedge filter.**

wedge photometer (*Elec. Eng.*). A type of photometer in which the illumination of the two sides of a wedge is directly compared.

wedge spectrogram (*Photog.*). A spectrogram taken with a neutral wedge with its varying thickness parallel to the slit of the spectrometer. The resultant photographic image indicates, by the height of the density contours, the differential colour sensitivity of the emulsion.

wedging crib, —curb, —ring (*Mining*). A segmented steel ring on which shaft tubbing is built up and wedged in place.

weed (*Bot.*). A plant growing where it is not wanted by man; a potato growing in a bed of geraniums would be a weed.

weed (*Vet.*). See **lymphangitis (epizootic).**

weephole (*Civ. Eng.*). A pipe laid through an earth retaining wall, with a slope from back to front to allow of the escape of collected water.

weft, woof, pick, shot, shoot (*Textiles*). The threads across the width of a fabric are called the *weft* (formerly *woof*); a single one of these is called a *pick*, or, less frequently, a *shot* (or *shoot*) of weft.

weft fork (*Textiles*). A portion of the loom stop motion which acts when the weft breaks or runs out. It consists of a short lever, forked at one end, hooked at the other, the fulcrum being in the centre.

Wegener's hypothesis, vā'gen-er (*Geol.*). The theory of *continental drift* (q.v.).

wehrlite, vār'līt (*Geol.*). A name, now little used, for ultramafic igneous rocks of coarse grain, consisting essentially of diallage and olivine, i.e. diallage-peridotite.

weight. The gravitational force acting on a body. It may be expressed in absolute units of force (*dynes* or *poundals*) or in gravitational units (*pounds-weight* or *grams-weight*), the latter being numerically equal to the mass of the body in lbs. or gms.

weight (*Aero.*). GROSS WEIGHT, the total or maximum weight of an aircraft as used by the designer for strength and performance calculations. In British practice the maximum authorised weight shown on the Certificate of Airworthiness. Colloquially, ALL-UP WEIGHT.—TARE WEIGHT, the weight of an aircraft complete in flying condition, including water in engine radiators if necessary. Not including fuel, oil, crew, equipment not necessary for flight (such as parachutes), or paying load.

weights. Standardised masses used for comparison with unknown masses, balances of various grades of sensitivity and sensibility being employed. For high-grade analysis, weights are often plated with noble metal to ensure that diminution of mass with time, through corrosion, is minimised. Such weights should not be touched by hand.

weight coefficient (*Elec. Eng.*). The ratio of the weight of an electrical machine to its rated output.

weighting (*Textiles*). The operation of adding sizing material, such as china clay, or weighting material, such as metallic salts, to yarn or cloth in order to increase the weight.

weighting observations (*Surv.*). The operation of assigning factors or 'weights' to each of a number of observations to represent their relative liability to error under their individual conditions of measurement.

Weil's disease, vīl (*Med.*). See **spirochaetosis icterohaemorrhagica.**

Weil loudspeaker (*Acous.*). A loudspeaking receiver with an open diaphragm, tuned to operate over a restricted frequency range, so that a number, tuned to different ranges, are essential for normal use, e.g. in a cinema.

weir (*Civ. Eng.*). A dam placed across a river to raise its level in dry weather.

Weisbach triangle, vīz'bahh (*Surv.*). A method used in setting out works underground, in which the theodolite is deliberately set up off the line of the two hanging wires used to transfer direction from above-ground to below-ground, so that the triangle between the instrument and the wires may be solved to enable the setting-out to proceed.

welded joint (*Elec. Eng.*). A joint between two metals, e.g. tramway rails, made by electric welding.

welding (*Eng.*). (1) The joining of two iron or steel pieces by raising the temperature at the joint so that the metal becomes plastic and may be united by hammering or pressure. The welding temperature may be attained by external heating or by passing a heavy electric current through the butted joint (*resistance welding*).—(2) The joining of two pieces by striking an electric arc between a rod of similar metal and the butted pieces, metal being melted from the electrode into the joint (*arc welding*). See also **oxy-hydrogen welding.**

welding regulator (*Elec. Eng.*). A reactance by means of which the welding current may be varied in an a.c. welding set; it is variable by tappings controlled by a handwheel.

welding-rod (*Elec. Eng.*). Filler metal in the form of a wire or rod; used in electric welding when the electrode itself does not furnish the filler metal. Also called FILLER-ROD.

welding set (*Elec. Eng.*). The apparatus for electric arc welding, either a.c. or d.c., comprising a supply unit and a regulator, which may be combined or separate.

welding tests (*Eng.*). Rough tests to determine the suitability of iron and steel bar for welding, (*a*) by making a *bending test* (q.v.) on a welded joint, (*b*) by welding the bar into a link, which should stand being closed up without failure.

welding transformer (*Elec. Eng*). A transformer specially designed to supply one or more welding regulators.

Weldon's process (*Chem.*). A process for the manufacture of chlorine, using manganese dioxide and hydrochloric acid.

well (*Civ. Eng.*). A shaft sunk in the ground for the purpose of procuring a supply from underground waters, or for allowing surface waters to pass away into sub-surface strata.

See **deep—** **shallow—**

well foundation (*Civ. Eng.*). A type of foundation formed by sinking *monoliths* (q v.) to a firm stratum and filling in the open wells with concrete.

well-hole (*Build.*). The vertical opening enclosed between the outer ends of the flights in a winding stair.

well-conditioned (*Surv*). A term used to describe triangles of such a shape that the distortion resulting from errors made in measurement and in plotting is, or is nearly, a minimum; achieved in practice by making the triangles equilateral or approximately so.

Welsh groin (*Build.*). A groin formed by two intersecting cylindrical vaults of different rises. Also called an UNDERPITCH GROIN.

welt (*Boots and Shoes*). A strip of leather which is attached to the upper, and to the inner sole, by a horizontal stitch; it projects beyond the upper and forms the attachment for the sole.

welt (*Cotton Weaving*). (1) A cord or rib.—(2) A piqué fabric which has a transverse cord as its chief characteristic.

welt (*Plumb.*). A joint made between the edges of two lead sheets on the flat. Made by turning up each edge at right-angles to the flat surface, bringing the two turned-up parts together, doubling them over, and dressing them down flat. Also called a SEAM.

welted shoes (*Boots and Shoes*). Footwear in which the outer sole is stitched to a welt, which has been previously stitched to the upper and the inner sole.

Wendriner apparatus (*Gutta-percha, etc.*). An apparatus for testing the melting-point (softening point) of a sample of gutta-percha by heating it beneath 10 gm. of mercury; when mercury falls through, the temperature is noted.

Wenlock Beds (*Geol.*). One of the major series into which the Silurian System is divided, comprising a considerable thickness of shales, limestones, or grits, lying between the Llandovery Series below and the Ludlow Series above. Named from the Shropshire town of Wenlock, which is situated on the main outcrop.

Wenlock Limestone (*Geol.*). A massive bedded limestone, about 100 ft. thick, occurring in the Welsh Borderlands, and referred to the Silurian System. It is rich in brachiopods and trilobites and (in the so-called 'ball-stones') in corals forming reefs. The Wenlock Limestone extends eastwards to Dudley and westwards to the Church Stretton Valley.

Wenlock Shales (*Geol.*). A thick (1000-2000 ft.) series of marine shales, rich in small brachiopods, occurring in the Welsh Borderlands, in the Silurian System, between the Llandovery Series below and the Wenlock Limestone above; usually forming a belt of low ground, as at the foot of Wenlock Edge.

Werlhof's disease, verl'hōf (*Med.*). See **purpura haemorrhagica.**

wernerite (*Min.*). A *scapolite* (q.v.), of composition intermediate between meionite and marialite.

Werner's theory (*Chem.*). A method of formulation of complex inorganic compounds based on the assumption that saturated groups are held to the central atom by residual valencies. The total number of such groups and ordinary unsaturated radicals which surround the central atom to form an unionisable co-ordination complex is characteristic of the central atom.

Wertheim's operation, vert'him (*Surg.*). The operation of removing the uterus, the glandular tissue in the pelvis, and the upper part of the vagina, in the treatment of cancer of the cervix uteri.

Westbury Beds (*Geol.*). A series of thinly bedded pyritous black shales, containing a fauna of thin-shelled lamellibranchs (including *Pteria contorta*) belonging to the lower part of the Rhaetic Series. Named from Westbury-on-Severn, the type-locality. See also **Contorta Shales.**

westing (*Surv*). A west departure.

Westleton Beds (*Geol.*). A group of sandy shingles lying between the highest proved Pliocene deposits and the lowest proved Pleistocene beds, in Norfolk and Suffolk, with a known extension into North Essex, and inferentially correlated with certain high-level 'pebble gravels' in the London Basin. Named by Prestwich, who regarded them as the basal conglomerate of the Quaternary System.

Weston cell (*Chem.*). A standard cell with an e.m.f. of 1·0183 volt at 20° C. for an almost indefinite period. It consists of an amalgamated cadmium anode covered with crystals of cadmium sulphate, dipping into a saturated solution of the salt, and a mercury cathode covered with solid mercurous sulphate.

Weston film-speed (*Photog.*). A practical film-speed scale derived so that optimum development of the emulsion results in a suitable average density. The degrees of the scale are such that 16 Weston is twice as fast as 8 Weston (half-exposure) and half as fast as 32 Weston (double-exposure). See **f-number, speed, Weston-Scheiner film-speed.**

Weston-Scheiner film-speed, shī'ner (*Photog.*). A film-speed scale derived so that an increase of 3 in the scale means doubling the actual speed (halving exposure), the values for particular emulsions being selected to give, under optimum conditions of development, a suitable average density. See **Weston film-speed.**

Weston Flags (*Geol.*). A subdivision of the Llanvirn Series of Shropshire, some 500 ft. thick, lying above the Stapeley Volcanic Group and below the Betton Shales, with *Didymograptus murchisoni.*

wet and dry bulb hygrometer (*Meteor.*). A pair of similar thermometers mounted side by side, one having its bulb wrapped in a damp wick dipping into water. The rate of evaporation of water from the wick and the consequent cooling of the 'wet bulb' is dependent on the relative humidity of the air; the latter can be obtained by means of a table from readings of the two thermometers.

wet assay (*Met., etc.*). The use of the processes of solution, flotation, or other liquid means for the determination of a given constituent in ores, metallurgical residues and alloys. The general term 'assay' is usually applied only to materials containing precious metals, and certain base metals. See also **dry assay, scorification,** and **cupellation.**

wet collodion process (*Photog.*). A process employing a glass plate coated with iodised collodion, sensitised in silver nitrate solution, physically developed with a solution of ferrous sulphate and acetic acid in water. The whole procedure is carried out while the film is wet. Obsolete in ordinary photography, but largely used in photomechanical processes owing to its adaptability and the greater density obtainable. Ferrotype or tintype formerly used this process for positives on varnished metal.

wet dock (*Civ. Eng.*). A dock in which water is impounded at a suitable level by means of dock gates; entrance is generally effected by means of locks.

wet electrolytic condenser (*Elec. Comm.*). An electrolytic condenser in which the negative electrode is a solution of a salt, e.g. aluminium borate, which is suitable for maintaining the aluminium oxide film without spurious corrosion.

wet end (*Paper*). The part of a paper-making machine where water is extracted (wire, suction boxes, etc.), as distinct from the drying end, where moisture is evaporated by heated cylinders.

wet flashover voltage (*Elec. Eng.*). The voltage at which the air surrounding a clean wet insulator completely breaks down. Also called WET SPARKOVER VOLTAGE.

wet mix (*Build., Civ. Eng.*). A concrete *mix* (q.v.) having an excess of water in it.

wet-plate process (*Photog.*). Another name for the *wet collodion process* (q.v.).

wet raising (*Textiles*). A process of raising which produces a dress-face pile, as on beaver and box-cloth fabrics, the fabrics being kept in a wet state during the operations.

wet rot (*Build.*). A decay of timber which is due to chemical decomposition in the growing tree; it is sometimes set up in wood saturated with water and exposed to alternations of moisture and dryness.

wet sparkover voltage (*Elec. Eng.*). See **wet flashover voltage.**

wet spinning (*Linen*). The method of spinning used for fine counts, the roving being passed through a trough of hot water above the frame. This assists drafting by softening the gum, and aids in the production of a level smooth yarn.

wet steam (*Eng.*). A steam-water mixture, such as results from partial condensation on the cooling of dry saturated steam.

wettability (*Chem.*). The extent to which a solid is wetted by a liquid, measured by the force of adhesion between the solid and the liquid phases.

wetted perimeter (*Hyd.*). In a channel or pipe through which flow is taking place, the part of the perimeter with which the liquid is actually in contact is called the *wetted perimeter.*

wetting agent (*Acous.*). A substance, such as an acid, oil, or hydrocarbon, which is added to a heterogeneous mixture, such as binder and filler in gramophone-record manufacture, to facilitate the absorption or adhesion between the constituents.

wetting-down (*Print.*). The practice of damping paper for printing purposes. Now obsolete.

w.f. (*Typog.*). An abbrev. for *wrong fount.* It is written in the proof margin and the letter is underlined or struck through.

whalebone (*Zool.*). See **baleen.**

whaling glass (*Textiles*). A *counting glass* (q.v.).

wharf (*Civ. Eng.*). A *quay* (q.v.).

Wharfedale machine (*Typog.*). A printing machine of the cylindrical type.

Wharton's duct (*Zool.*). In Mammals, the duct of the submaxillary salivary gland.

Wharton's jelly (*Zool.*). In Mammals, jelly-like embryonic connective tissue occurring in the umbilical cord.

wheal (*Mining*). A Cornish name for a mine.

Wheatstone automatic (*Teleg.*). A telegraph system in which high-speed signals are transmitted from a slip, and received automatically on a slip, by mechanical means.

Wheatstone bridge (*Elec. Eng.*). An apparatus for measuring electrical resistance by the zero method, comprising two parallel resistance branches, each branch consisting of two resistances in series.

Wheatstone transmitter (*Teleg.*). A high-speed morse transmitter which is operated by a slip on which are perforated holes which represent the dots and dashes of the coding of the desired message. These holes are scanned by peckers, which, if permitted to pass through the slip, operate contacts to form the transmitted signal.

wheel base (*Eng.*). The distance between the leading and trailing axles of a vehicle.

wheel-cutting engine (*Horol.*). A machine for cutting the teeth of wheels.

wheel ore (*Min.*). An orthorhombic sulphide of lead, copper, and antimony, occurring commonly in wheel-shaped twins; the name *bournonite* is now more commonly used.

wheel organ (*Zool.*). In *Rotifera*, the ciliated disc: in *Cephalochorda*, a wheel-shaped ciliated organ, on the under surface of the oral hood, which creates a current of water flowing towards the mouth.

wheel-quartering machine (*Eng.*). A horizontal drilling machine having two opposed spindles at opposite ends of the bed; used to drill the crank-pin holes in both wheels on a locomotive coupled-axle simultaneously, and in precise angular relationship.

wheel stretcher (*Horol.*). A tool used for slightly increasing the diameter of a wheel. The wheel rim is passed between rollers under pressure, which slightly reduce the thickness but increase the width of the rim.

wheel window (*Build.*). A *rose window* (q.v.).

wheel wobble (*Automobiles*). A periodic angular oscillation of the front wheels, resulting generally from insufficient caster action or from backlash in the steering-gear.

wheeling step (*Build.*). A *winder* (q.v.).

whim (*Mining*). A vertical rope drum revolved by a horse; used for hoisting from shallow shafts.

whin or **whinstone** (*Geol.*). A popular term applied to doleritic intrusive igneous rock resembling that of the well-known Whin Sill.

Whin Sill (*Geol.*). A sheet of intrusive quartz-dolerite or quartz-basalt, unique in the British Isles, as it is exposed almost continuously for nearly 200 miles from the Farne Islands to Middleton-in-Teesdale.

whine (*Acous.*). The fluctuation in apparent loudness and pitch of a reproduced sound when the speed of the recording or reproducing machine is varying at a slow rate. See **wow.**

whip (*Mining*). A simple hoisting device consisting of a rope, to which an animal is directly attached, passing over a fixed pulley.

whipcords (*Textiles*). Fabrics with a bold steep warp twill, used chiefly for dresses, suitings, and coatings, particularly the last.

whipstitching or **whipping** (*Bind.*). See **overcasting.**

Whipple-Murphy truss (*Eng.*). A bridge truss having horizontal upper and lower chords connected by vertical and diagonal members, so that the panels resemble the letter N. Also called LINVILLE TRUSS, N-TRUSS, PRATT TRUSS.

whirling arm (*Aero.*). An apparatus for making certain experiments in aerodynamics, the model or instrument being carried round the circumference of a circle, at the end of an arm rotating in a horizontal plane.

whirlwind (*Meteor.*). A small rotating wind-storm which may extend upwards to a height of many hundred feet; a miniature cyclone.

whiskers (*Acous.*). A wow of high frequency; e.g. above about 200 fluctuations per second.

whistle box (*Cinema.*). A portable inductance, with or without a shunting condenser, for filtering the supply ripple in the electrical supply to arc lamps, which would otherwise emit noise.

white arsenic (*Chem.*). Commercially called ARSENIC. As_2O_3. Arsenic trioxide; the most important compound of arsenic. Obtained from the roasting of arsenical ores.

white bricks (*Build.*). *Gaults* (q.v.).

white cell (*Zool.*). See **leucocyte.**

White Cliff Sandstone (*Geol.*). A 2000-ft.-thick sandstone named from its outcrop in the Grand Cañon; a dune sand originally, of desert origin and of Jurassic age. Equivalent to the La Plata Sandstone of S.W. Colorado.

white coat (*Plast.*). The last or finishing coat of plaster.

white comb (*Vet.*). See **favus (avian).**

white copperas (*Min.*). Goslarite.

white damp (*Mining*). Carbon monoxide. Produced by the incomplete combustion of coal in a mine fire or by gas or dust explosions. Invisible; very poisonous.

white deal (*Timber*). A whitish soft wood obtained from the spruce fir, and commonly used for inferior constructional work. Also called WHITE WOOD.

White Dwarf (*Astron.*). The name given to any of a small class of stars outside the normal spectral sequence, because their luminosities are extremely low for their spectral type; their densities are so high that they are thought to be composed of highly ionised atoms.

white fibres (*Zool.*). Unbranched, inelastic fibres of connective tissue occurring in wavy bundles. Cf. *yellow fibres.*

white fibrocartilage (*Zool.*). A form of fibrocartilage in which white fibres predominate.

white glass (*Glass*). See **opal glass.**

white gold (*Met.*). *Gold* (q.v.) alloyed with nickel or palladium to give it a white colour.

white-heart malleable cast-iron (*Met.*). See **malleable cast-iron.**

white iron (*Met.*). Pig-iron or cast-iron in which all the carbon is present in the form of cementite (Fe_3C). White iron has a white crystalline fracture, and is hard and brittle.

white iron pyrite (*Min.*). See **marcasite.**

white lead (*Chem.*). Basic lead carbonate or lead hydroxycarbonate. Made by several processes of which the oldest and best known is the 'Dutch' or 'Stack' process. Used extensively as a paint pigment and for pottery glazes.

white lead ore (*Min.*). A decomposition product of *sphalerite* (q.v.). See **white vitriol.**

White-leaved Oak Shales (*Geol.*). Black shales, rich in trilobite remains, occurring in the district immediately west of the Malvern Hills; equivalent to the Dolgelley Beds of Cambrian age in North Wales.

white-leg (*Med.*). See **phlegmasia alba dolens.**

White Lias (*Geol.*). So named to distinguish it from the (true) Blue Lias above, this is a subdivision of the Rhaetic Series, consisting essentially of massive bedded light-coloured limestones, separated by partings of marl. The White Lias includes the 'Sun Bed.'

white light (*Phys.*). Light containing all wavelengths in the visible range at the same intensity. The term is used, however, to cover a wide range of intensity distribution in the spectrum. See **Wien's displacement law.**

white line (*Typog.*). A line of space.

white matter (*Zool.*). An area of the central nervous system, mainly composed of cell processes, and therefore light in colour.

white metal (*Met.*). (1) Intermediate product in converting copper matte to blister copper. Reached after the iron and some of the sulphur have been oxidised out, leaving copper-sulphide.—(2) Usually denotes tin-base alloy (over 50% tin) containing varying amounts of lead, copper, and antimony; used for bearings, domestic articles, and small castings; sometimes also applied to alloys in which lead is the principal metal; also called ANTI-FRICTION METAL.

white muscles (*Zool.*). In Vertebrates, muscles which do not perform long-continued actions and which are therefore poor in sarcoplasm and haemoglobin and of a light colour.

white nickel (*Min.*). A popular name for the cubic diarsenide of nickel, $NiAs_2$, the scientific name for which is *chloanthite* (q.v.).

white object (*Photog.*). An object which reflects all wavelengths of light impartially, and therefore, when illuminated with white light, appears to the eye to be hueless.

white-out (*Typog.*). To open out composed type-matter with spaces, in order to fill the allotted area or improve the appearance.

white rami (*Zool.*). In Vertebrates, the rami communicantes connecting the spinal cord with the sympathetic system.

white sapphire (*Min.*). More reasonably called WHITE CORUNDUM, is the colourless, pure variety of crystallised corundum, Al_2O_3, free from those small amounts of impurities which give colour to the varieties 'ruby' and 'sapphire'; when cut and polished, it makes an attractive gemstone. Also called LEUCOSAPPHIRE.

white scour (*Vet.*). Diarrhoea of suckling animals. See also **pyosepticaemia of sucklings.**

white spirit (*Paint.*). A petroleum distillate used as a substitute for turpentine in mixing paints, and in paint and varnish manufacture.

white vitriol (*Min.*). A popular name for *goslarite.* $ZnSO_4{\cdot}7H_2O$.

whitewash, whitening (*Paint.*). *Limewash* (q.v.).

white wood (*Timber*). See **white deal.**

whites (*Vet.*). Leucorrhoea of cows.

whiting. A pulverised chalk used in the manufacture of putty, whitewash, and distemper.

whitlow (*Med.*). See **paronychia.**

whitlow of the claw (*Vet.*). See **panaris.**

Whittery Shales (*Geol.*). A subdivision of the Caradocian Series of the Shelve area of Shropshire, comprising some 1000 ft. of marine shales, immediately succeeding the Whittery Ash.

Whitworth screw-thread (*Eng.*). See **British Standard Whitworth thread.**

whizzer (*Eng.*). A machine consisting of a perforated cylinder inside which loose material to be dried is flung outwards by revolving paddles, thus removing the water by centrifugal force. Also called HYDRO-EXTRACTOR.

whole bound (*Bind.*). See **full bound.**

whole-brick wall (*Build.*). A wall which is 9 in. thick, i.e. the length of a whole brick.

whole-circle bearing (*Surv.*). The horizontal angle measured from 0° to 360° clockwise, from true north to a given survey line.

whole-coiled winding (*Elec. Eng.*). An armature winding for an alternator having one armature coil per pole, the two sides of the coil being separated by a distance equal to the pole pitch.

whole timber (*Carp.*). A roughly squared timber of size greater than 6 × 6 in.

whooping cough (*Med.*). See **pertussis.**

whorl, whėrl (*Bot.*). A group of similar members arising from the same level on a stem, and forming a circular group around it.

whorl (*Zool.*). A single turn of a spirally coiled shell or other spiral structure.

whorled (*Bot.*). Arranged in a whorl.

W.I. (*Build., etc.*). Abbrev. for *wrought-iron.*

Wick Flagstone Group (*Geol.*). A subdivision of the Middle Old Red Sandstone (Caithness Flagstone Series) of northern Scotland, comprising some 5000 ft. of rapidly alternating black flags, dark limestones, pale sandstones, and greenish mudstones, containing fish remains. This Group lies between the Barren Group below and the Passage Beds into the Thurso Flag Group above.

wicket (*Build.*). A small door framed in a larger door.

Widal's test, vē′dal (*Med.*). A test for the presence of typhoid fever, blood-serum from a patient with this infection agglutinating (clumping) a suspension of typhoid bacilli (in a tube) towards the end of the first week of the disease.

wide-angle lens (*Photog.*). A lens, of necessarily short focal-length, with a wide angle of view (up to 100°); used for photographing buildings, etc.

wide-band amplifier (*Elec. Comm.*). A thermionic amplifier for wide ranges of frequencies, particularly when several channels occupying different fractions of the band are amplified together.

wide film (*Cinema.*). Film which is greater in width than the standard 35 mm. film; proposed for projecting a wider motion-picture without increase of granularity.

wide gauge (*Rail.*). See **broad gauge.**

Widmanstätten structure, vēd-man-stet′en (*Met.*). A general term for structures resulting from changes in solid alloys when one constituent forming from another crystallises along the crystallographic planes of the parent constituent.

Wien bridge, vēn (*Elec. Eng.*). An a.c. bridge for measuring dielectric losses. The capacitance to be tested and a standard condenser form two of the arms, and variable resistances form the other two.

Wien effect (*Chem.*). The increase in the conductivity of an electrolyte observed with very high voltage gradients.

Wien's displacement law (*Phys.*). The wavelength of the maximum radiation from a hot source is inversely proportional to the absolute temperature, being at about 4800 A.U. for 6000° A. If a curve is drawn to show the energy distribution in the spectrum of the radiation emitted by a black body at a given temperature, the same curve will give the distribution at any other temperature if the wavelength scale is changed in the inverse ratio of the temperatures. See **Stefan-Boltzmann law.**

wigans (*Cotton Weaving*). Plain grey cloths of medium or heavy type, used for boot linings, casement cloths, etc.

wig-wag (*Horol.*). A machine which gives an oscillatory motion to a polisher; used for polishing pivots, etc.

Wild-Barfield furnace (*Elec. Eng.*). A resistance furnace comprising wire-wound resistance elements; widely used for heat treatment processes.

wild track (*Cinema.*). A sound-track which is recorded independently of any photographic track or mute, but is destined to be used in editing a sound-film.

wild wall (*Cinema.*). A detachable or floating wall, suitable for inclusion in the camera angle; it is covered with sound-absorbing material.

Wilfley table (*Mining*). A reciprocating, transversely inclined, riffled table, for washing or concentrating crushed ore or sand.

wil′lemite (*Min.*). Orthosilicate of zinc, Zn_2SiO_4, occurring massive, granular, or in trigonal prismatic crystals, white when pure but commonly red, brown, or green through manganese or iron in small quantities. In New Jersey (Franklin Furnace) and elsewhere it occurs in sufficient quantity to be mined as an ore of lead. Noteworthy as exhibiting an intense bright-yellow fluorescence in ultra-violet light.

Willesden paper (*Build.*). A specially treated paper used as an underlining beneath slates on a roof; it serves to keep out the wet, and acts as a sound and heat insulator.

willey or **willow** (*Woollen*). A machine for shaking and opening wool. It has a large cylinder with outstanding pegs, similar pegs being also placed on the inside of the casing which encloses the cylinder.

Williot diagram (*Struct.*). A graphical construction for finding the deflection of a given point in a structural framework under load.

Willis's circle (*Zool.*). In Vertebrates, an arterial ring surrounding the hypophysis.

Willis's law (*Zool.*). See **age and area theory.**

willow (*Paper*). See **willowing machine.**—(*Textiles*) See **willey.**

willow leaves (*Astron.*). A term used by Nasmyth to denote certain markings on the sun's surface thought to resemble leaves of the willow tree; they are also known as GRANULES.

willowing machine (*Paper*). A revolving cylinder with fixed and free spikes which separates loose dirt from rags or other material.

willy-willy (*Meteor.*). A tropical revolving storm in Australia; a cyclone.

Wilson's disease (*Med.*). See **hepatolenticular degeneration.**

wilting (*Bot.*). The loss of rigidity in leaves and young stems following on marked loss of water from the plant; growth stops in wilted material.

wilting coefficient (*Bot.*). The percentage of moisture present in a soil when plants growing on that soil begin to wilt.

Wimshurst machine (*Elec. Eng.*). An electrical friction machine by which static electricity can be stored at relatively high potentials. It comprises two co-axial insulating discs revolving in opposite directions. Each disc carries metallic sectors which make contact with fixed collecting brushes.

winceyette (*Textiles*). A plain cotton cloth of light weight, raised slightly on both sides; used for pyjamas, nightgowns, or underwear.

winch (*Eng.*). A hand-power hoisting machine attached to a crane. It consists of a rope drum driven through reduction gearing by a crank handle: a similar mechanism driven by power.

wind (*Timber*). *Twist* (q.v.).

wind (*Meteor.*). Air in motion naturally; a current of air from a particular direction is generally named after that direction, e.g. *south* wind. Winds are due to the tendency of air to pass from a place of high pressure to one of lower pressure. *Trade winds* are constant and blow towards the thermal equator, being diverted westward by the eastward rotation of the earth. See **cyclone, monsoon, typhoon, whirlwind**; also **Beaufort scale.**

wind (*Elec. Eng.*). A stream of air arising at any sharply pointed electrical conductor charged to a high potential.

wind chest (*Acous.*). The box, containing air under pressure, upon which the ranks of pipes in an organ are mounted.

wind cone (*Aero.*). A sleeve floating from the top of a mast; its weight and drag are so proportioned that its angle with the ground gives a rough conception of the velocity of the wind, while its angle in a horizontal plane gives the wind direction.

wind dispersal (*Bot.*). The dispersal of spores, seeds, and fruits by the wind

wind-driven generator (*Elec. Eng.*). A generator driven by a prime-mover of the windmill type, or directly (in the case of aircraft) by an airscrew carried on the generator shaft.

windfilling (*Build.*). Another name for *beam-filling*, as it prevents wind from getting into the roof space.

wind gag (*Acous.*). A bag of thin cloth or silk placed over a microphone when the latter is used out of doors, to eliminate hissing noises due to wind.

windgall (*Vet.*). Distension of the cavity of the fetlock joint of the horse.

wind load (*Struct.*). The force acting on a structure due to the pressure of the wind upon it.

windmill. A familiar device for obtaining power from wind pressure. It consists usually of a number of oblique arms or vanes radiating from a central axis. Seldom used now, and then almost solely for water-pumping purposes.—(*Aero.*) Any device which is caused to rotate by reason of its being carried through the air, and so develops power. Often used to drive auxiliary machinery such as fuel pumps, wireless generators, etc. An engine propeller is said to *windmill* when it rotates by reason of the forward movement of an aeroplane after the engine power is stopped.

wind pollination (*Bot.*). The conveyance of pollen from anthers to stigmas by means of the wind; anemophily.

wind portal (*Civ. Eng.*). A portal which has special bracings to resist wind pressure.

wind pump (*Civ. Eng.*). A pump which is operated by the force of the wind rotating a multi-bladed propeller.

wind road (or **way**) (*Mining*). An underground passage used for ventilation.

wind rose (*Aero.*). A diagram indicating the frequency and strengths of winds in a definite locality for given periods of the year; used by pilots.

windsucking (*Vet.*). A vice acquired by certain horses of swallowing air when 'cribbing' or gripping an object with the incisor teeth.

wind T (*Aero.*). A T-shaped device displayed at aerodromes to indicate the direction of the surface wind. The leg of the T corresponds to the wind direction.

wind trunk (*Acous.*). The metal or wooden piping which distributes the air under pressure to the various wind chests in an organ.

wind tunnel (*Aero.*). An experimental apparatus for producing a uniform steady air-stream past a model for aerodynamic investigation work. Atmospheric pressure and compressed-air models. Types:—*Original N.P.L. type*, closed jet return flow; *Standard N.P.L. type*, closed jet non-return flow; *Göttingen type*, open jet return flow; *Eiffel type*, open jet non-return flow.

winder (*Build.*). A step, generally triangular in plan, used at a change in direction of the stair. See **kite winder.**

winder (*Mining*). An electrically driven winding engine for hoisting a cage or cages up a vertical mine-shaft.

winder (*Horol.*). A clock key: a key used for winding a key-wound watch.

winding (*Bot.*). A movement of a stem due to unequal rates of growth in successive longitudinal strips of the stem, causing the tip to describe a circle in space; if pronounced, the stem will twine around a support.

winding (*Elec. Eng.*). The system of insulated conductors forming the current-carrying element of a dynamo-electric machine or static transformer.

winding (*Textiles*). The coiling of a thread on a spindle or bobbin, in order to form a yarn package convenient to handle.

winding coefficient (*Elec. Eng.*). An alternative name for *winding factor.*

winding diagram (*Elec. Eng.*). A diagram showing in schematic form the arrangement and sequence of an armature winding and its circuit connexions.

winding drum (*Eng.*). An engine or motor-driven drum on to which a haulage rope is wound, as the wire rope of a mine cage. The drum may be cylindrical or conical, with a plain or a helically grooved surface for the rope.

winding engine (*Mining*). The engine which hoists a load up a shaft.

winding factor or **coefficient** (*Elec. Eng.*). A factor which takes account of the difference between the vector and arithmetic sums of the e.m.f.'s induced in a series of armature coils occupying successive positions round the periphery of the armature.

winding gear (*Elec. Eng.*). The mechanical gear associated with an electric winder.

winding pitch (*Elec. Eng.*). The distance, measured as the number of slots, separating an armature coil from its successor in the winding sequence.

winding plant (*Elec. Eng.*). The complex of apparatus constituting an electrically driven winder.

winding space (*Elec. Eng.*). The cross-sectional space available in an armature slot for the insertion of the insulated conductors.

winding square (*Horol.*). The square end of a barrel or fusee arbor on which the key fits for winding.

winding stair (*Build.*). A stair constructed around a solid or hollow newel.

winding strips (*Furn.*). Two pieces of wood with parallel edges, used for testing the parallelism of timber.

window (*Build.*). An opening in a wall to provide access for light or ventilation; sometimes used for purely ornamental purposes.

window (*Elec. Eng.*). The winding space of a transformer, i.e. the cross-sectional spaces between the limbs and yokes of a multi-core transformer.

window (*Geol.*). A closed outcrop of strata lying beneath a thrust plane and exposed by denudation. The strata above the thrust plane surround the 'window' on all sides.

window efficiency ratio (*Illum.*). See **daylight factor.**

window glass (*Glass*). *Sheet glass* (q.v.), usually of a definite quality, the poorer qualities of sheet being used for greenhouse glazing.

window lock (*Join.*). A *sash-fastener* (q.v.).

wing (*Bot.*). (1) One of the lateral petals of a flower of a pea and related plants.—(2) A flattened outgrowth from a fruit or a seed, increasing the area without greatly increasing the weight, and serving in wind dispersal.—(3) The downwardly continued base of a decurrent leaf.

wing (*Build.*). A section of a building projecting from the principal part of it.

wing (*Zool.*). Any broad flat expansion: an organ used for flight, as the fore limb in Birds and Bats, the membranous expansions of the mesothorax and metathorax in Insects.

wings (*Cinema., Theatres*). The sides of the stage remote from, and unseen by, the audience.

wing car (*Aero.*). See **car.**

wing compasses (*Carp.*). A form of *quadrant dividers* (q.v.).

wing coverts (*Zool.*). See **tectrices.**

wing loading (*Aero.*). The maximum flying weight of an aeroplane divided by the total area of the main planes, including the ailerons.

wing nut (*Eng.*). A nut with wings like those of a butterfly to enable it to be turned by thumb and fingers. Also called a FLY NUT or BUTTERFLY NUT.

wing radiator (*Aero.*). A liquid cooler for an aero engine in which the wing profile acts as the radiating surface, thus avoiding the head resistance of the more usual types of radiator.

wing rail (*Rail.*). A *check-rail* (q.v.).

wing shafts (*Ships*). The port and starboard propeller shafts of a triple- or quadruple-screw steamship.

wing-tip float (*Aero.*). A water-tight float which gives stability and buoyancy on the water; placed at the extremities of the wings of a seaplane, flying-boat, or amphibian.

wing valve (*Eng.*). A mitre-faced or conical-seated valve guided by three or four radial vanes or wings fitting inside the circular port.

wing wall (*Civ. Eng.*). A lateral wall built on an abutment and serving to retain earth in embankment.

winged (*Bot.*). (Of a stem) bearing the thin flattened bases of decurrent leaves: (of a fruit or seed) having a flattened appendage.

Winkler burette (*Chem.*). A form of burette employed for the analysis of gaseous mixtures containing a constituent soluble in water.

winning (*Mining*). The operation of (1) mining an ore, (2) opening up a new portion of a coal-seam.

winsey (*Textiles*). A cotton flannelette of good quality; or it may have a union or woollen weft. Plain weave.

Winslow's foramen (*Zool.*). A small opening by which the cavity of the bursa omentalis communicates with the rest of the abdominal cavity in Mammals.

winter annual (*Bot.*). A plant which lives for a short time, grows and sets seeds during the colder part of the year, dies, and is represented during summer only by the resting seeds.

winter egg (*Zool.*). In some fresh-water animals, a thick-shelled egg laid at the onset of the cold season which does not develop until the following warm season. Cf. *summer egg.*

winter green plants (*Bot.*). Small plants, especially woodland plants, which retain green leaves throughout the winter.

winter skins (*Furs*). The skins of animals caught in winter (*firsts*).

winter solstice (*Astron.*). See **solstices.**

Winter-Eichberg-Latour motor (*Elec. Eng.*). A single-phase a.c. motor of the compensated repulsion type; mainly used in electric traction.

winze (*Mining*). A shaft sunk from one level to another in a mine.

wipe (*Print.*). An excess of ink on the edge of a forme deposited by the rollers of a printing machine.

wipe-out (*Acous.*). The same as *wash-out.*

wipe-out (*Radio*). Interference of such intensity as to render impossible the reception of other signals.

wipe-out area (*Radio*). The area surrounding a radio transmitter where wipe-out occurs.

wiped joint (*Plumb.*). A joint formed between two lengths of lead pipe, one of which is opened out with a tampin while the other is tapered to fit into the first. Molten solder in a plastic condition is then wiped around the joint by hand with a moleskin or cloth pad.

wiper (*Auto. Teleph.*). In a uniselector or selector, the conducting arm which is rotated over a row of contacts and comes to rest on an outlet.

wiper (*Weaving*). A mechanism used to convert a rotating to a reciprocating motion. Also called CAM, TAPPET.

wiping gland (*Cables*). A projecting sleeve on a junction box, which is connected by a wiped joint to the lead sheath of a cable that enters the box.

wire (*Teleph.*). A continuous connexion through a system, particularly a telephone exchange, whether automatic or manual.

wire-bar (*Elec. Eng.*). See **electrolytic wire-bar.**

wire cloth (*Paper*). A continuous band of wire gauze with a mesh about 66 to the inch. The moulding unit of a paper-making machine.

wire comb (*Plast.*). A form of *scratcher* (q.v.).

wire-cut bricks (*Build.*). Bricks made by forcing the clay through a rectangular orifice, and cutting suitable lengths off the resulting bar of clay by pressing wires through the plastic mass, before burning.

wire-drawing (*Eng.*). (1) The process of reducing the diameter of rod or wire by pulling it through successively smaller holes in a hard steel die-block.—(2) The fall in pressure when a fluid is throttled by passing it through a small orifice or restricted valve-opening.

wire gauge (*Eng.*). Any system of designating the size of wires by means of numbers, which originally stood for the number of successive passes through the die-blocks necessary to produce a given diameter.

See **Birmingham— Brown and Sharp—**
British Standard—

wirephoto (*Elec. Comm.*). A photograph transmitted over a wire circuit by electrical means.

2-wire repeater (*Teleph.*). A repeater, or telephonic amplifier, for insertion into a two-wire circuit, for amplification of the line current in both directions.

4-wire repeater (*Teleph.*). A repeater, or telephonic amplifier, in which the two amplifiers, one for each direction of transmission, are entirely separate but mounted together for convenience.

wire rope (*Eng.*). Steel rope made by 'twisting' or 'laying' a number of strands over a central core, the strands themselves being formed by twisting together steel wires. See **Lang lay.**

wire scratcher (*Plast.*). See **scratcher.**

wire-stitching (*Bind.*). The securing of a section or inserted book by means of wire staples. See **saddle-stitching, stabbing.**

wire-wound armature (*Elec. Eng.*). An armature wound with insulated copper wire instead of with bar or strip.

wired glass (*Glass*). A form of sheet-glass produced by rolling wire mesh into the ribbon of glass so that it acts as a reinforcement and holds the fragments together in the event of the sheet being fractured.

wired wireless (*Radio*). The transmission of signals by means of electromagnetic waves guided by conductors, the frequencies being of the same order as those used for radio communication. Also called CARRIER TELEGRAPHY (or TELEPHONY).

wireless (*Radio*). An alternative name for *radio*, under which heading are to be sought compound terms, viz. *radio beacon*, *radio beam*, etc.

wiring point (*Elec. Eng*). A point in an interior wiring installation where an external connexion can be made to the electric circuit.

Wirsung's duct (*Zool.*). The ventral or main pancreatic duct of Mammals. Cf. *Santorini's duct*.

wishful-thinking (*Psychol.*). A type of thinking in which the individual substitutes the phantasy of the fulfilment of the wish for the actual achievement.

witches' broom (*Bot.*). A dense tuft of poorly developed branches formed on a woody plant attacked by a parasite (chiefly fungi and mites).

with′amite (*Min.*). A mineral belonging to the epidote group, named after Dr. Witham of Glencoe, where the mineral was discovered. Contains manganese and is allied to piedmontite.

withe (*Build.*). The partition wall between adjacent flues in a chimney stack. Also called MID-FEATHER.

withering (*Brew.*). A stage in the process of malting when the malt remains unturned for a period of about 24 hours, so that accumulation of heat dries the grain and arrests growth. See **steeping.**

withering persistent (*Bot*). Said of a leaf which dies and withers, but remains attached to the stem; a condition found in many herbaceous perennials.

with′erite (*Min.*). Barium carbonate, $BaCO_3$, crystallising in the orthorhombic system as yellowish or greyish-white complicated crystals of hexagonal appearance; also massive. Occurs with galena in the lead mines on Alston Moor and in large quantities near Hexham, Northumberland. Exploited as an important source of barium.

withers (*Vet.*). The region of the horse's back above the shoulders.

wobble crank (*Eng.*). A short-throw crank in which the pin, machined from and at an angle to the axis of the crankshaft, has been used to give an elliptical motion to a sleeve valve by a short connecting-rod and ball joint.

wobble plate (*Eng.*). See **swash plate.**

wobble-plate engine (*Eng.*). A multi-cylinder engine in which a wobble-plate or swash-plate mechanism replaces cranks and connecting-rods. The cylinders are arranged axially round the shaft, their pistons operating on the wobble-plate through sliding blocks. The arrangement is very compact but the mechanical efficiency is usually low.

wobble saw (*Carp.*). A *drunken saw* (q.v.).

Woburn Sands (*Geol.*). A group of brown to white sands, generally coarse in grain, of Lower Cretaceous age, extending from Leighton Buzzard north-eastward to Cambridge, and including the well-known Leighton Buzzard silver sand. Formerly worked for fuller's earth and for the phosphatic nodules used in the manufacture of fertilisers.

Wöhler test, vé′ler (*Met.*). A fatigue test in which one end of a specimen is held in a chuck and rotated in a ball-bearing placed on the other end. The ball-bearing carries a weight and, as the specimen rotates, the stress at each point on its surface passes through a cycle from a maximum in tension to a maximum in compression.

wolf (*Furs*). The dressed skin of one of the varieties of wolf. European wolves have fur of reddish hue, the N. American timber wolf is grey, the Florida wolf black, and the Arctic wolf white, with black-tipped tail.

wolf tooth (*Zool.*). In *Equidae*, a vestigial first upper premolar.

Wolf-Rayet star (*Astron.*). The name sometimes given to a class of star within the limits of spectral type O, showing bright bands superposed on a faint continuous background.

Wolffian body (*Zool.*). The *mesonephros* (q.v.).

Wolffian duct (*Zool.*). That part of the archinephric duct which drains the mesonephros.

Wolffian ridges (*Zool.*). Short longitudinally running ridges representing the limb-rudiments in many *Vertebrata.*

wolfram, woolf′ram (*Met.*). See **tungsten.**

wolf′ramite (*Min.*). Tungstate of iron and manganese $(FeMn)WO_4$, occurring as brownish-black monoclinic crystals, columnar aggregates, or granular masses in association with tin ores, as in Cornwall. An important ore of tungsten.

wolfs′bergite (*Min.*). See **chalcostibite.**

wollas′tonite (*Min.*). One of the pyroxenes of relatively simple composition, being silicate of calcium, $CaSiO_3$, crystallising in the monoclinic system and occurring in metamorphosed siliceous limestones. It is also represented in the more complicated pyroxenes, such as diopside and augite. Also called TABULAR SPAR.

wolverene or **glutton** (*Furs*). The dressed skin of the wolverene, a musteline carnivore of the northern forests of America.

Wommelsdorf machine (*Elec. Eng.*). A form of electrostatic generator, having alternate fixed and moving plates, and collectors in the form of steel wires dipping into grooves in the rims of the moving plates.

wood (*Bot.*). See **xylem.**

wood alcohol (*Chem.*). See **methyl alcohol.**

wood brick (*Build.*). A piece of wood the shape of a brick but larger by the amount of the mortar joints. It is bonded to surface brickwork in the course of building and is held in position by friction alone, its function being to provide a substance to which joinery such as skirtings may be nailed.

woodcut (*Print.*). An engraving cut on wood: an impression from it.

wood-evil (*Vet.*). Diarrhoea of herbivorous animals.

wood fibre (*Bot.*). A thick-walled, elongated, dead element found in wood; it is developed by the elongation and lignification of the wall of a single cell, but differs from a tracheide in its thicker wall and general inability to conduct water.

wood flour. A fine powder made from sawdust and wood waste; used as a filler in many industries, and in the manufacture of guncotton.

wood furniture (*Typog.*). Spacing material, or furniture, made of wood, as distinct from metal furniture.

wood laths (*Build.*). See **lathing.**

wood letters (*Typog.*). Large type-letters cut in wood; used in some poster work.

wood nog (*Build.*). See **nog.**

wood opal (*Min.*). A form of common opal which has replaced pieces of wood entombed as fossils in sediments, in some cases retaining the original structure.

wood parenchyma (*Bot.*). See **xylem parenchyma.**

wood paving blocks (*Civ. Eng.*). Blocks 3 in. wide by 5 in. deep by 8-9 in. long, made of creosoted soft woods; used for paving carriageways in cases where absence of noise is of the first importance.

wood pulp (*Paper*). Wood reduced to a pulp, either mechanically or by a chemical process. It is used in the manufacture of paper.

See **chemical—** **mechanical—**

wood ray (*Bot.*). See **xylem ray.**

wood ray parenchyma (*Bot.*). Parenchymatous cells in a xylem ray.

wood spirit (*Chem.*). Methanol or *methyl alcohol* (q.v.).

wood sugar (*Chem.*). *Xylose* (q.v.).

wood tar (*Chem.*). A product of the destructive distillation of wood, containing paraffins, naphthalene, phenols.

wood tin (*Min.*). A botryoidal or reniform variety of cassiterite which, when broken across, shows a concentric structure of radiating fibres, brown in colour and resembling wood.

wood vessel (*Bot.*). See **vessel.**

woodburytype (*Photog.*). A photo-mechanical process in which an exposed and developed bichromated film is forced into a metal plate by great pressure, and so forms a matrix for subsequent printing. Obsolete.

wooden-tongue (*Vet.*). Actinomycosis or actinobacillosis of the tongue of cattle.

Woodhouse Ashes (*Geol.*). A minor subdivision of the Maplewell Group of the Charnian Series of Pre-Cambrian rocks, occurring in the Charnwood Forest district of Leicestershire.

Woodruff key (*Eng.*). A key consisting of a segment of a disc, fitted in a shaft key-way milled by a cutter of the same radius, and a normal key-way in the hub.

woody tissues (*Bot.*). Tissues which are hard because of the presence of lignin in the cell walls.

woof (*Weaving*). See **weft.**

woofer (*Cinema.*). The moving-coil, open-diaphragm baffle loudspeaker which is designed to radiate low frequencies only, the remainder of the gamut being radiated from horn types of loudspeaker.

wool (*Bot.*). A tangled mass of long, soft whitish hairs on a plant.

wool (*Zool.*). A modification of hair in which the fibres are shorter, curled, and possess an imbricated surface. Specifically, the covering of a sheep. The fibres are composed of carbon, nitrogen, hydrogen, sulphur, and oxygen; they are covered with small scales. The length and diameter of the fibres varies according to breed; commercial wools vary in length from 1 to about 14 in., the majority being about 6 to 10 in. Diameter about 1/600 to 1/1600 in.

wool and silk dyeing (*Textiles*). The colouring of fibres, yarns, or fabrics of wool or silk both of which are of animal origin.

woolsorter's disease (*Med.*). An acute disease due to infection with the *Bacillus anthracis*, conveyed to Man by infected wool or hair of animals; characterised by fever, the appearance on the skin of vesicles which become covered with a black scab, and sometimes by infection of the lungs or of the intestines. See also **anthrax.**

Woolhope Limestone (*Geol.*). An impersistent limestone varying in thickness from 0 to 150 ft. occurring in the Silurian System of the inliers west of the main outcrop in the Welsh Borderlands; it lies between the Llandovery Series below and the Wenlock Shales above.

woolly (*Bot.*). See **lanate.**

Woolwich Beds (*Geol.*). A division of the so-called Lower London Tertiaries, of Eocene age, occurring in E. Kent, where they are marine, and westwards to beyond Woolwich, where they consist of clays, sands, and pebble beds deposited on the seaward side of a great delta in early Tertiary times. They are noteworthy for the occurrence of large numbers of brackish-water fossils and leaf beds.

work (*Elec. Eng.*). The energy of an electric current flowing under the influence of a potential difference expressed as the integral $\int v\,i\,dt$. If v is in volts, i is in amperes, and t is in seconds, the work done by the current is measured in joules. The practical unit is the *watt-hour*, which equals 3600 joules.

work (*Mech.*). Work is done when the point of application of a force moves along the line of action of the force. Units of work are defined under *erg* and *foot-pound.* See also **energy.**

work-and-turn (*Print.*). A term used to describe the process of printing a complete *section* (2, q.v.) of a book without changing the formes on the bed of the machine. Formes comprising the total number of pages in the section are laid down on the machine, and half the required copies are printed on one side of the paper, which is twice the size of the section. The sheets are then turned and the operation repeated, giving, when cut through the middle, two copies to each sheet of paper.

work bar (*Textiles*). See **facing bar.**

work-hardening (*Met.*). The increase in strength and hardness (i.e. resistance to deformation) produced by working metals. It is most pronounced in cold-working, and in the case of metals such as iron, copper, aluminium, and nickel. Lead, tin, and zinc are not appreciably hardened by cold-working, because they can recrystallise at room temperature.

work lead (*Met.*). See **base bullion.**

worker (*Textiles*). See **stripper and worker.**

worker (*Zool.*). In social Insects, one of a caste of sterile apterous individuals which do all the work of the colony.

working (*Teleph.*). The technique of routing calls over a telephonic system.

See **automatic tandem—**
call-indicator—
coded call-indicator—
non-coded call-indicator—
semi-automatic tandem—
straightforward junction—
tandem—

working aperture (*Photog.*). See **focal aperture.**

working chamber (*Civ. Eng.*). The compressed-air chamber at the base of a hollow caisson, being the part in which the work of excavation proceeds. See **air-lock.**

working depth (*Bot.*). The average distance reached by the general root system of a plant in the soil.

working edge (*Carp., Join.*). An edge of a piece of wood trued square with the working face to assist in truing the other surfaces square.

working face (*Carp., Join.*). That face of a piece of wood which is first trued and then used as a basis for truing the other surfaces. See **face mark.**

working flux (*Elec. Eng.*). That part of the total flux produced by the magnetic system of an electrical machine which links the armature winding; numerically equal to the difference between the total flux and the leakage flux.

working standard (*Elec. Eng.*). A standard for everyday use, calibrated against a *secondary standard.*

worm (*Zool.*). A term loosely used to indicate any elongate Invertebrate lacking appendages: as Flat-worms (*Platyhelminthes*), Round-worms (*Nematoda*), and Bristle-worms (*Chaetopoda*).

worm, worm gear, worm wheel (*Eng.*). A gear of high reduction ratio connecting shafts whose axes are at right-angles but do not intersect. It consists of a core carrying a single- or multi-start helical thread of special form (the *worm*), meshing in sliding contact with a concave face gear-wheel (the *worm wheel*).

worm-and-wheel steering gear (*Automobiles*). Steering gear in which the steering column carries a worm, in mesh with a worm wheel or sector, attached to the spindle of the drop arm.

worm (or screw) conveyor (*Eng.*). A conveyor in which loose material such as grain, meal, etc. is continuously propelled along a narrow trough by a revolving worm or helix mounted within it.

Wormian bones (*Zool.*). See **sutural bones.**

Wo'ronin's hypha (*Bot.*). A simplified form of archicarp formed by some *Ascomycetes*, consisting of a coiled somewhat thickened hypha.

wort, wėrt (*Bot.*). Malt extract much used as a medium for the culture of micro-organisms.—(*Brew.*) The liquor which is run off from the mash tun; the first running is termed ***sweet wort.*** When hops have been added to the wort, and both boiled, the liquor is termed ***hopped wort.*** See **beer, malt, hops, mash tun, sparging.**

Woulfe's bottles (*Chem.*). Tubulated glass bottles used for washing gases.

wound cork (*Bot.*). A layer of cork cambium and cork formed below and around wounds, which, if the wound is not too large, heals the damage and prevents the entry of parasites into the plant.

wound hormone (*Bot.*). A substance produced in wounded tissues which is able to influence the subsequent development of parts of the plant.

wound parasite (*Bot.*). A parasite which gains entry to the body of the plant by means of a wound.

wound tissue (*Bot.*). A pad of parenchymatous cells formed by the cambium after wounding; it may give rise to groups of meristematic cells from which roots and buds form.

wound rotor (*Elec. Eng.*). An alternative term for *slip-ring rotor.*

wovenboard (*Build.*). See **interwoven fencing.**

woven steel fabric (*Civ. Eng.*). A mechanically woven fabric of steel wires interlaced and welded at the intersections, used as a reinforcement in ferro-concrete construction.

wow (*Acous.*). Rhythmic or arrhythmic change in reproduced sound, fundamentally arising from fluctuation in speed of either reproducer or recorder. It is made more noticeable by the phenomenon of stationary waves in an enclosure, when the original sound, such as a musical chord, is steady for an appreciable time. Wow refers to slow changes, up to six per second. See **flutter, gargle, whiskers.**

wraithe (*Weaving*). See **raddle.**

wrapper plate (*Eng.*). (1) In a locomotive boiler, the plate bent round and riveted to the tube plate and back plate, forming the sides and crown of the fire box.—(2) The outer casing of the fire box.

Wratten filters (*Photog.*). Trade-name for a comprehensive series of colour filters made to specification.

wreath (*Join.*). The part of a continuous hand-rail curving in plan around the well-hole of a geometrical stair.

wreath filament (*Illum.*). The usual type of filament in large gas-filled electric lamps; the filament wire is festooned from a horizontal supporting spider.

wreathed string (*Carp.*). The continuous curved string around the well-hole of a wooden stair.

Wrekin Quartzite (*Geol.*). A quartzite consisting of wind-rounded quartz grains cemented by silica, forming the local base of the Cambrian System in Shropshire, where it occurs on the flanks of the Wrekin, the Caradoc, and Cardington Hills.

Wrisberg's nerve (*Zool.*). In higher Vertebrates, certain sensory fibres of the seventh cranial nerve.

wrist-drop (*Med.*). Paralysis of the extensor muscles of the hand and of the fingers.

wrist pins (*Eng.*). Pins carried by the big end of the master connecting-rod of a radial aero engine, forming the crank pins of the articulated or *link rods* (q.v.).

wristlet (*Horol.*). A watch for wearing on the wrist.

writer's cramp (*Med.*). A condition in which writing becomes irregular and difficult or even impossible owing to spasm of the muscles of the hand and forearm; an occupational neurosis, not the result of organic disease.

wrong fount (*Typog.*). See **w.f.**

wrought (*Carp.*). Said of timber the surfaces of which have been planed.

wrought grounds (*Join.*). Planed strips of wood used as *grounds* (q.v.) when the attached joinery will leave them partly exposed to view.

wrought-iron (*Met.*). Iron containing only a very small amount of other elements, but containing 1-3% by weight of slag in the form of particles elongated in one direction, giving the iron a characteristic grain. Is more rust-resistant than steel and welds more easily. Used for chains, hooks, bars, etc.

wryneck (*Med.*). See **torticollis.**

wul'fenite (*Min.*). Molybdate of lead, $PbMoO_4$, occurring commonly as yellow orthorhombic crystals in veins with other lead ores. Named after an Austrian mineralogist, Von Wulfen.

wurtzite (*Min.*). Sulphide of zinc, ZnS, of the same composition as sphalerite, but crystallising in the hexagonal system, in black hemimorphic, pyramidal crystals.

wye (*Plumb.*). A *branch pipe* (q.v.) having only one branch, which is not at right-angles to the main run.

wye level (*Surv.*). A type of level whose essential characteristic is the support of the telescope, which is similar to that of the wye theodolite.

wye theodolite (*Surv.*). A form of theodolite differing from the transit in that the telescope is not directly mounted on the trunnion axis but is supported on two Y-shaped forks, in which it may be reversed end-for-end in order to reverse the line of sight.

wythe (*Build.*). See **withe.**

X

x (*Chem.*). A symbol for *mol fraction*.

x-contact, x-spring (*Teleph.*). See **fly-spring.**

x-operation (*Teleph*). The partial operation of a relay by means of an x-spring or *fly-spring* (q.v.).

X (*Chem.*). (1) A general symbol for an electronegative atom or group, especially a halogen.—(2) An alternative symbol for *xenon*.

X (*Elec. Eng.*). A symbol for *reactance*.

Xs (*Radio*). Atmospherics.

XX (*Paper*). See **retree.**

X-back (*Photog.*). A conducting surface on the back of negative cinematograph film, to eliminate scratches arising from the discharge of electric charges, which are separated by friction on the celluloid. See **squeeze-track.**

X-body (*Bot.*). An inclusion in a plant cell suffering from a virus disease.

X-chromosome (*Cyt.*). A heterochromosome associated with sex-determination and sometimes occurring alone (unpaired).

X-generation (*Bot.*). The gametes.

X-plates (*Cathode Ray Tubes*). The pair of electrodes to which the horizontal deflecting voltage is applied. So called in accordance with the conventional Cartesian co-ordinate system.

X-tgd (*Build.*). Abbrev. for *cross-tongued*.

X-rays (*Phys.*). Electromagnetic waves of short wavelength (0·01 *to* 50 A.U.) which are produced when cathode rays impinge on matter. They may be detected photographically by fluorescence and by the ionisation they produce in gases. They are able to penetrate matter which is opaque to light; this makes them valuable for examining inaccessible regions of the body. See **K-series, Compton effect.** When X-rays fall on matter, secondary X-rays (*characteristic X-rays*) are emitted which contain monochromatic radiations that vary in wavelength according to the atoms from which they are scattered. See **Moseley's law, K-series, L-series.**

X-ray analysis of crystal structure. Max von Laue in 1921 showed that the planes of atoms in crystals act as a diffraction grating to X-rays, which are scattered by them and provide an accurate means of determining the details of the internal atomic structure. See **rotating crystal method** and **powder method.**

X-ray spectrum. A wavelength or frequency diagram in which a series of lines indicate by their positions the particular X-rays emitted by a body, as the result of cathode ray bombardment.

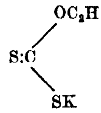
X-ray transformer. A special type of high-voltage transformer for use with X-ray tubes.

X-ray tube. An evacuated tube in which X-rays are emitted from a metal target, placed obliquely opposite to an incandescent cathode, whose rays impinge on the target.

xalostock′ite (*Min.*). A pale rose-pink grossularite which occurs embedded in white marble at Xalostock in Mexico.

xanth-, xantho- (Greek *xanthos*, yellow). A prefix used in the construction of compound terms; e.g. *xanthochroism* (q.v.).

xan′thates (*Chem.*). The salts of xanthic acid, $CS(OC_2H_5)SH$. Potassium xanthate,



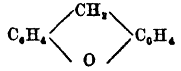
is obtained by the action of potassium ethoxide on carbon disulphide.

xanthation (*Rayon*). A process in the manufacture of viscose rayon; alkali cellulose is converted into cellulose xanthate by mixing it with carbon bisulphide.

xan′thein (*Bot.*). A yellow colouring matter sometimes present in cell sap; it is allied to xanthophyll.

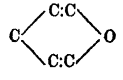
xanthelas′ma (*Med.*). A small yellow nodule occurring on the eyelid of an elderly person as a result of degeneration of muscle.

xanthene (*Chem.*). Diphenylene-methane oxide,



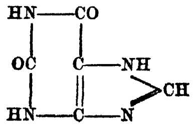
colourless plates, m.p. 98·5° C.

xanthene dyestuffs (*Chem.*). Dyestuffs which may be regarded as derivatives of xanthene containing the pyrone ring



They comprise the pyronines, derivatives of diphenylmethane, and the pthaleins, derivatives of triphenylmethane.

xanthine (*Chem.*). 2,6-Dihydroxy-purine, a white amorphous mass which is both basic and acidic, and can be obtained by the action of nitrous acid upon guanine. It has the formula:



xanthoch′roism (*Zool.*). A condition in which all skin pigments other than golden and yellow ones disappear; as in the Goldfish.

xanthochro′mia (*Med.*). Any yellowish discoloration, especially of the cerebrospinal fluid.

xanth′odont (*Zool.*). Having yellow teeth, as certain Rodents the incisors of which are stained a yellowish colour.

xantho′ma (*Med.*). A yellow tumour composed of fibrous tissue and of cells containing cholesterol ester, occurring on the skin (e.g. in diabetes) or on the sheaths of tendons, or in any tissue of the body (*xanthoma multiplex*).

xanth′ophore (*Zool.*). A cell occurring in the integument and containing a yellow pigment; as in Goldfish.

xanth'ophyll (*Bot., Zool.*). $C_{40}H_{56}O_2$. One of the two yellow pigments present in the normal chlorophyll mixture of green plants: a yellow pigment occurring in some *Phytomastigina.*

xanthopic'rite (*Chem.*). See **berberine.**

xanth'oplasts (*Zool.*). Yellow chromatophores found in some *Phytomastigina.*

xantho-protein reaction (*Chem.*). The reaction between albuminous matter and concentrated nitric acid, resulting in a yellow coloration on heating, often already in the cold. If NaOH is added to the reaction mixture, the solution turns reddish-brown; with ammonia an orange colour is obtained.

xanthop'sia (*Med.*). Yellow vision. The condition in which objects appear yellow to the observer, as in jaundice or after taking santonin.

xanthop'sin (*Zool.*). A pigment which occurs in the retinula elements of the eyes of certain night-flying Insects.

xanthosid'erite (*Min.*). A hydrated oxide of iron, $Fe_2O_3\,2H_2O$, occurring as fine yellow or brown needle-like crystals or as an ochre, in association with other oxidic iron ores; of limited distribution.

Xe (*Chem.*). The symbol for *xenon.*

xenar'thral (*Zool.*). Having additional facets for articulation on the dorsolumbar vertebrae.

xe'nia (*Bot.*). The effect of the pollen upon the characters of the young plant resulting from pollination.

xe'nocryst (*Geol.*). A single crystal or mineral grain which has been incorporated by magma during its uprise and which therefore occurs as an inclusion in igneous rocks, usually surrounded by reaction rims and more or less corroded by the magma. Cf. *xenolith.*

xe'nogamy (*Bot.*). Pollination of a flower from a flower of the same species but on another plant.

xe'nolith (*Geol.*). A fragment of rock of extraneous origin which has been incorporated in magma, either intrusive or extrusive, and occurs as an inclusion, often showing definite signs of modification by the magma. Xenoliths in granite used for ornamental purposes detract from the value of the stone.

xenome'nia (*Med.*). Vicarious menstruation. A condition in which, in the absence of normal menstruation, bleeding occurs at regular monthly intervals from other parts of the body (e.g. from the nose).

xenomor'phic (*Min.*). A textural term implying that the minerals in a rock do not show their own characteristic shapes, but are without regular form by reason of mutual interference.

xenomorphic granular texture (*Geol.*). See **granitoid texture.**

xe'non (*Chem.*). Symbol, Xe. A zero-valent element, one of the rare gases, present in the atmosphere in the proportion of 1:170,000,000 by volume. At. no. 54, at. wt. 131·3, m.p. $-140°$ C., b.p. $-106{\cdot}9°$ C., crit. temp. $+16{\cdot}6°$ C., density at N.T.P. 5·85 gms. per litre.

xenophy'a (*Zool.*). Elements of the shell or skeleton not secreted by the organism itself; foreign particles; as the shell of *Difflugia.* Cf *autophya.*

xenoplas'tic (*Zool.*). In experimental zoology, said of transplantation in which transplant and host belong to the young germs of different species or genera. Cf. *autoplastic, heteroplastic, homoioplastic.*

Xenopterygii, zen'op-ter-ij'i-i (*Zool.*). A small order of *Neopterygii* having a broad sucking disc between the pelvic fins and a smooth scaleless skin; marine forms found clinging to loose stones between tide-marks and feeding on worms and small Crustaceans. Cling-fishes.

xen'otime (*Min.*). Yttrium phosphate, YPO_4, often containing small quantities of cerium, erbium, and thorium, closely resembling zircon in crystal form and general appearance, and occurring in the same types of igneous rock, i.e. in granites and pegmatites as an accessory mineral. An important source of the rare elements named.

xer'arch succession (*Bot.*). A succession starting on land where conditions are very dry.

xe'ric (*Bot.*). See **xerophytic.**

xeric environment (*Bot.*). An environment in which the soil contains very little water, and where atmospheric conditions favour rapid loss of water from the plants.

xeroder'mia, xeroder'ma (*Med.*). See **ichthyosis.**

xerodermia (xeroderma) pigmento'sum (*Med.*). A disease of young children in which prolonged exposure to sunlight produces on the skin erythematous patches which later become pigmented, scaly, wart-like, and finally cancerous.

xeromor'phic (*Bot.*). Said of parts of a plant protected against excessive loss of water by thick cuticles, coatings of hairs, and similar structural characters.

xerophi'lous (*Bot.*). Tolerant of a droughty habitat.

xerophthal'mia (*Med.*). A dry lustreless condition of the conjunctiva with or without keratomalacia, due to deficiency of vitamin A in the diet.

xer'ophyte (*Bot.*). A plant able to inhabit places where the water supply is scanty, or where there is physiological drought.

xerophyt'ic (*Bot.*). Able to withstand drought.

xer'osere (*Bot.*). A succession beginning on dry land.

xero'sis (*Med.*). See **xerophthalmia.**

xerosto'mia (*Med.*). Excessive dryness of the mouth.

xiph'ihumera'lis (*Zool.*). In Vertebrates, a muscle leading from the humerus to the xiphoid cartilage.

xiphiplas'tron (*Zool.*). In *Chelonia,* one of the plates composing the plastron, lying posterior to the hypoplastron.

xiphister'num (*Zool.*). A posterior element of the sternum, usually cartilaginous.

xiphoid (*Zool.*). Sword-shaped. (Greek *xiphos,* sword.)

xiphoid cartilage (*Zool.*). The xiphisternum when it is cartilaginous.

xiphoid process (*Zool.*). The posterior portion of the sternum, the xiphisternum; so called after its shape in Man.

Xiphosu'ra (*Zool.*). The only order of *Delobranchiata,* having the prosoma covered by a characteristic semicircular carapace, the segments of the opisthosoma fused, the telson in the form of a long spine; burrowing forms occurring in coastal waters down to ten fathoms in the tropics and subtropics, feeding on shell-less molluscs and marine worms. King Crabs.

xy'lem (*Bot.*). Wood; usually consisting of vessels, fibres, and/or tracheides, all with lignified walls, together with some parenchyma having more or less lignified walls. Xylem is concerned with the conduction of aqueous solutions about the body of the plant, and with mechanical support.

xylem core (*Bot.*). A solid strand of xylem occupying the middle of the stele.

xylem mother cell (*Bot.*). A daughter cell cut off from a cell of the cambium which is later converted into a component of the xylem.

xylem parenchyma (*Bot.*). Parenchymatous cells occurring in xylem, apart from those present in the vascular rays.

xylem ray (*Bot.*). The portion of a vascular ray traversing the xylem.

xy'lenes (*Chem.*). $C_6H_4(CH_3)_2$, dimethyl-benzenes. There are three isomers which all occur in coal-tar but cannot be separated by fractional distillation:

o-xylene, m.p. −28° C., b.p. 142° C.; *m*-xylene, m.p. −53° C., b.p. 139° C.; *p*-xylene, m.p. +13° C., b.p. 138° C.

xy'lenols (*Chem.*). $(CH_3)_2 \cdot C_6H_3 \cdot OH$, monohydric phenols derived from xylenes: 1,2,3-xylenol (*adj. ortho*), m.p. 73° C., b.p. 213° C.; 1,3,4-xylenol (*asym. ortho*), m.p. 65° C., b.p. 222° C.; 1,2,5-xylenol (*para*), m.p. 75° C., b.p. 209° C.

xy'lic gap (*Bot.*). A gap in the xylem opposite a leaf base.

xy'lochrome (*Bot.*). A mixture of substances to which the colour of heart wood is due. It includes tannins, gums, and resins.

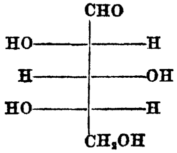
xylogenous, xylophilous (*Bot., Zool.*). Growing on wood: living on or in wood.

xylo'ma (*Bot.*). A sclerotium-like body which forms spores internally, and does not put out branches which develop into sporophores.

Xylonite (*Plastics*). A thermoplastic of the nitrocellulose type. See **celluloid.**

xylophagous (*Zool.*). Wood-eating.

xylose (*Chem.*). *l*-Xylose, known as WOOD SUGAR, is a pentose found in many plants. It has the following constitution:



It is a stereo-isomer of arabinose.

xylotomous (*Zool.*). Wood-boring; wood-cutting.

y-contacts, y-springs (*Teleph.*). The springs and contacts in a relay spring-set, in addition to an *x-contact* (q.v.).

Y (*Chem.*). The symbol for *yttrium.*

Y (*Elec. Eng.*). The symbol for ***admittance.***

Y-alloy (*Met.*). An aluminium base alloy of Duralumin type, containing copper 4%, magnesium 1·5%, silicon 0·7%, nickel 2%, iron 0·6%, and titanium 0·2%. It has properties similar to those of Duralumin.

Y-chromosome (*Zool.*). One of a pair of heterochromosomes associated with sex-determination. See also **X-chromosome.**

Y-connexion (*Elec. Eng.*). An alternative name for ***star connexion*** (q.v.).

Y-level (*Surv.*). See **wye level.**

Y-network (*Elec. Comm.*). An electrical network consisting of three impedances connected together at one end. Also called T-NETWORK or THREE-IMPEDANCE STAR NETWORK.

Y-plates (*Cathode Ray Tubes*). The pair of electrodes to which the voltage producing vertical deflection of the spot is applied. So called in accordance with the conventional Cartesian co-ordinate system.

Y-theodolite (*Surv.*). See **wye theodolite.**

Y-voltage (*Elec. Eng.*). See **voltage to neutral.**

Yankee machine (*Paper*). See **single cylinder machine.**

yapp (*Bind.*). A style of limp binding similar to divinity circuit binding, but having the flaps uncut at the back and corners.

yard. The British unit of length, legally fixed by a *line standard* (q.v.) of 'Baily's metal' (copper 16, tin 2½, zinc 1) at 62° F. deposited at the Standards Office, London. 1 yard = 0·9144 metre.

yard trap (*San. Eng.*). See **gulley trap.**

yardage (*Civ. Eng.*). The volume of excavation in cubic yards.

yarn counts (*Textiles*). See **counts of yarn.**

Yarrow boiler (*Eng.*). A marine water-tube boiler employing an upper steam drum connected by banks of inclined tubes to three lower water drums, between two of which superheating elements are arranged.

Yarside (Yarlside) Rhyolite (*Geol.*). This occurs between the Stile End Beds and the Applethwaite Beds in the Caradocian Series of the English Lake District.

yaryan (*Paper*). The name applied to an evaporation method employed in the recovery of soda from the liquor used in digesting raw materials.

yaw (*Aero.*). The angular motion of an aircraft in a horizontal plane about the normally vertical axis.

yaws (*Med.*). Framboesia; pian. A contagious tropical disease affecting dark-skinned races, due to infection with *Treponema pertenue*, and characterised by raspberry-like papules on the skin; as in syphilis, the bones and joints may later become infected.

yawing moment (*Aero.*). The component of the couple about the normally vertical axis acting on an aircraft in flight.

Yb (*Chem.*). The symbol for *ytterbium.*

year (*Astron.*). The civil or calendar year as used in ordinary life, consisting of a whole number of days, 365 in ordinary years, and 366 in leap years, and beginning with January 1.

See also

anomalistic year
eclipse do.
leap do.
sidereal year
tropical do.

yearling's wool (*Textiles*). See under **fleece wool.**

yeast (*Bot.*). Micro-organisms producing zymase, which induces the alcoholic fermentation of carbohydrates.

yellow cells (*Zool.*). In *Chaetopoda*, yellowish cells forming a layer investing the intestine and playing a rôle in connexion with nitrogenous excretion; chloragogen cells: minute symbiotic algae occurring in the extracapsular protoplasm of some *Radiolaria*: *xanthoplasts* (q.v.).

yellow copper ore (*Min.*). A little-used, popular name for the sulphide of copper and iron, *chalcopyrite.*

yellow fever (*Med.*). Yellow jack. An acute disease caused by infection with a filter-passer, conveyed to Man by the bite of the mosquito *Aëdes aegypti* (*Stegomyia fasciata*); characterised by high fever, acute nephritis, jaundice, and haemorrhages in the skin and from the stomach and bowels; it occurs in tropical America and West Africa.

yellow fibres (*Zool.*). Straight, branched elastic fibres occurring singly in areolar connective tissue. Cf. *white fibres.*

yellow fibrocartilage (*Zool.*). A form of fibrocartilage in which yellow fibres predominate.

Yellow Ground (*Geol.*). The upper, oxidised zone of the Blue Ground, a decomposed volcanic ash occurring in the diamond-bearing vents of South Africa.

yellow ochre (*Paint.*). See **ochre.**

yellow pine (*Timber*). A very soft, even-grained wood imported from Canada. Useful for joinery.

yellow quartz (*Min.*). See **citrine.**

yellow snow (*Bot.*). Snow coloured yellow by the growth on it of certain algae; sometimes observed in the Alps and in the Antarctic regions.

yellow spot (*Zool.*). Macula lutea; the small area at the centre of the retina in Vertebrates at which day vision is most distinct.

yellow tellurium (*Min.*). A synonym for *sylvanite.*

yellow vision (*Med.*). See **xanthopsia.**

yenite, yă′nit (*Min.*). A name rejected by continental mineralogists, because it commemorated the battle of Jena, 1806. The mineral is now known as *ilvaite* (q.v.).

Yeovil Sands (*Geol.*). A subdivision of the Upper Lias of Somersetshire, a diachronous formation which cuts down on to lower horizons when traced from the Dorset coast northwards to the Cotteswold Hills. See **Cotteswold Sands.**

Yewdale Breccia Group (*Geol.*). A division of the Borrowdale Volcanic Series occurring in the English Lake District, placed by Harker and Marr near the top of the series.

yield point (*Met.*). The stress at which a substantial amount of plastic deformation takes place under constant or reduced load. This sudden yielding is a characteristic of iron and annealed steels. In other metals plastic deformation begins gradually and its incidence is indicated by measuring the proof stress, which, however, is frequently called the yield point.

yielding attachment (*Horol.*). A method of attaching the outer end of a mainspring to its barrel. It permits of a more concentric uncoiling of the spring.

-yl (*Chem.*). A suffix denoting (1) a monovalent organic radical, (2) an electropositive inorganic radical which contains oxygen.

Yngel trawl (*Ocean.*). See **young-fish net.**

yohim'bine (*Chem.*). $C_{22}H_{28}O_3N_2+H_2O$, an alkaloid of unknown constitution, obtained from the bark of *Corynanthe johimbe*; colourless needles; m.p. 234° C.; soluble in alcohol and chloroform; slightly soluble in ether. It is poisonous, acts as an aphrodisiac, and also exerts a local anaesthetic action.

yoke (*Civ. Eng.*). Stout timbers bolted round the shuttering for a column to secure the parts together during the process of pouring and setting.

yoke (*Elec. Eng.*). That part of a magnetic circuit joining connecting-parts carrying magnetising windings, e.g. the field poles of an electrical machine, or the limbs of a transformer.

yoke suspension (*Elec. Eng.*). See **bar-suspension.**

yolk (*Zool.*). The nutritive non-living material contained by an ovum.

yolk gland (*Zool.*). See **vitellarium.**

yolk plug (*Zool.*). A mass of yolk-containing cells which partially occludes the blastopore in some *Amphibia*.

yolk sac (*Zool.*). The yolk-containing sac which is attached to the embryo by the yolk stalk in certain forms.

yolk stalk (*Zool.*). A short stalk by which the yolk sac is attached to the embryo and by which yolk substance may pass into the alimentary canal of the embryo.

Yoredale Series (*Geol.*). A rhythmic series, comprising limestones, shales, sandstones, and occasionally thin coals in the order named to a total thickness of 2000 ft. approximately, occurring in the North Pennines and northern England; in the main, of Lower Carboniferous age.

Yorkshire bond (*Build.*). *Monk bond* (q.v.).

young-fish net (*Ocean.*). A large tow-net the mouth of which is kept open by *otter boards* (q.v.), used for capturing small fishes at the surface or in mid-water.

Young-Helmholtz theory of colour vision (*Photog.*). The supposition that the eye contains three systems of colour perception, with maximum response to three primary colours. It is the theory adopted for the realisation of colour photography. There is little medical support for the theory, but the practice is justified by the physical possibility of matching practically every natural colour by the addition of contributions from three primary colours.

Young's modulus (*Phys*). The coefficient of elasticity of stretching. For a stretched wire, Young's modulus is the ratio of the stretching force per unit cross-sectional area to the elongation per unit length. The values of Young's modulus for metals are of the order 10^{12} dynes per sq. cm. See also **elasticity.**

youth form (*Bot.*). See **juvenile form.**

yperite, ĕ'per-it (*Chem.*). *Mustard gas* (q.v.).

yp'siloid cartilage (*Zool.*). In Salamanders with functional lungs, a cartilage attached to, but formed independently of, the pubis, furnishing attachment for muscles connected with respiration.

Yt (*Chem.*). An alternative symbol for *yttrium.*

ytter'bium (*Chem.*). Symbol, Yb. A metallic element, a member of the rare earth group. Oxide, Yb_2O_3, white, giving colourless salts. At. no. 70, at. wt. 173·5, m.p. of metal about 1800° C.

ytt'rium (*Chem.*). Alternative symbols, Y, Yt. A metallic element in the third group of the periodic system, usually classed with the rare earths. Oxide, Y_2O_3, white, giving colourless salts. At. no. 39, at. wt. 88-92, m.p. of metal 1250° C.

yttrocer'ite (*Min.*). A massive, granular or earthy mineral, essentially flouride of calcium, with the metals of the yttrium and cerium groups, commonly violet-blue in colour, and of rare occurrence.

yttrotan'talite (*Min.*). An orthorhombic mineral the name of which conveys the essential chemical composition, though niobium, cerium, yttrium, and calcium are present in varying amounts. At the type-locality, Ytterby (Sweden), it occurs in red feldspar.

yu-stone (*Min.*). Yu or yu-shih, the Chinese name for the highly prized jade of gemstone quality.

Z, ζ

z (*Chem.*). A symbol for the valency of an ion.

ζ (*Chem.*). A symbol for *electrokinetic potential.*

Z (*Chem.*). A symbol for (1) gram-equivalent weight; (2) number of molecular collisions per second; (3) atomic number.

Z (*Elec. Eng.*). The symbol for *impedance.*

zalamb′dodont (*Zool.*). Having molar teeth with V-shaped ridges, as some *Insectivora.*

zar′atite or **emerald nickel** (*Min.*). A hydrated basic nickel carbonate, occurring as emerald green stalactitic or mammillary masses encrusting crystals of chromite and magnetite at Unst (Shetland Islands) and elsewhere.

zawn (*Mining*). A cavern.

zax (*Tools*). A *sax* (q.v.).

Zechstein (*Geol.*). The higher of the two series into which the Permian System of Germany is divided. The whole of the English Permian of Durham and Yorkshire is probably of Zechstein age.

Zeeman effect (*Phys.*). The splitting of a spectrum line into several symmetrically disposed components, which occurs when the source of light is placed in a strong magnetic field. The components are polarised, the directions of polarisation and the appearance of the effect depending on the direction from which the source is viewed relative to the lines of force.

ze′in (*Chem.*). A prolamin obtained from maize.

Zeisel's method, zī′sel (*Chem.*). A method for the determination of methoxyl and ethoxyl groups in organic compounds, in which the substance is heated with hydriodic acid; the alkyl iodide thus formed is passed into an alcoholic solution of silver nitrate, and the resulting silver iodide weighed.

zenith (*Astron.*). The point on the celestial sphere vertically above the observer's head; one of the two poles of the horizon, the other being the nadir.

zenith distance (*Astron.*). The angular distance from the zenith of a heavenly body, measured as the arc of a vertical great circle: hence the complement of the altitude of the body.

zenith sector (*Astron.*). The name given to one of various kinds of similar instruments used, before the invention of the telescope, for measuring altitudes of stars; it consisted essentially of a graduated quadrant, fitted with a movable pointer for sighting the star.

zenith telescope (*Astron.*). An instrument similar to the meridian circle, but fitted with an extremely sensitive level and a declination micrometer; used to determine latitude, by observing the difference in zenith distance of two stars whose meridian transit is at a small and equal distance from the zenith, one north and one south; a special form, avoiding the necessity for a very accurate level, is the *Cookson zenith telescope,* which floats in mercury.

Zenker's degeneration (*Med.*). Hyaline degeneration of striped muscle, occurring, for example, in the abdominal muscles in typhoid fever.

ze′olites (*Min.*). A group of alumino-silicates of sodium, potassium, calcium, and barium, containing very loosely held water, which can be removed by heating and regained by exposure to a moist atmosphere, without destroying the crystal structure. They occur in geodes in igneous rocks, and in red clay, and include chabazite, natrolite, mesolite, stilbite, heulandite, harmotome, phillipsite, etc.

Zeomor′phi (*Zool.*). An order of marine *Neopterygii* having a laterally compressed body, spiny fin-rays, large protractile mouth, and truncate or rounded tail-fin; carnivorous. Boar-fishes, John Dories.

zeph′yr (*Meteor.*). Properly, a warm westerly wind blowing in the Mediterranean.

zepp antenna (*Radio*). A horizontal half-wavelength antenna fed from a resonant transmission line. The antenna is connected at one end to one wire of the transmission line and the transmitter or receiver is connected between the two wires, the length of the line being critical.

zero beat reception (*Radio*). A system of reception of radiotelephony in which a locally generated oscillation, having the same frequency as the incoming signal, is impressed simultaneously therewith on the detector. See **homodyne reception.**

zero clearing (*Radio*). The operation of any arrangement for balancing *antenna effect* (q.v.) so as to obtain the sharpest minimum signal in determining a radio-bearing with a rotating antenna or a radio goniometer.

zero-cut crystal (*Radio*). A quartz crystal cut at such an angle to the axes as to have a zero frequency/temperature coefficient. Used for accurate frequency standards.

zero frequency (*Elec. Comm.*). An alternative name for the direct-current component in a complicated transmission signal, such as a video signal. Abbrev. **z.f.**

zero method (*Elec. Eng.*). A method of measuring an electric circuit quantity in which the correct value is given when the current flowing through the indicating instrument is zero, e.g. there is no deflection in a galvanometer when a Wheatstone bridge is correctly adjusted.

zero phase-sequence (*Elec. Eng.*). A three-phase vector system in which all three vectors are equal in magnitude and are in phase with one another.

zero phase-sequence component (*Elec. Eng.*). One of three vectors forming a zero phase-sequence system, and one of three components into which any vector forming part of an unbalanced three-phase system can be resolved. Cf. *positive phase-sequence component, negative phase-sequence component.*

zero potential (*Elec. Eng.*). Earth potential in electric circuits; or the potentials of the cathode in multi-electrode valves.

zero power-level (*Elec. Comm.*). An arbitrary power-level for referring other power-levels to, either in decibels or nepers. Zero power-level was formerly 5·8 milli-watts in America, but is now one milli-watt as in Europe (C.C.I.F.), both at 600 ohms impedance level.

zero-type dynamometer (*Elec. Eng.*). A dynamometer in which the electrical forces are balanced by mechanical forces, in such a manner as to bring the indicating pointer back to zero, before a reading can be taken.

zero-valent (*Chem.*). Incapable of combining with other atoms.

zeu′gite (*Bot.*). A cell in which nuclear fusion occurs.

zeugopo′dium (*Zool.*). The second segment of a typical pentadactyl limb, lying between the stylopodium and the autopodium; antebrachium or crus; forearm or shank.

Zeuner valve diagram, zoi′ner (*Eng.*). See **valve diagram.**

z.f. (*Elec. Comm.*). Abbrev. for *zero frequency.*

ziberline (*Textiles*). A cloth with a merino warp and a weft of wool and camel hair; raised during finishing to obtain a lustrous pile. Cheaper varieties are made with a worsted or a cotton warp and a cashmere weft.

zigzag connexion (*Elec. Eng.*). A symmetrical three-phase star connexion of six windings, situated in pairs on three cores. Each leg of the star consists of two of the windings in series; these windings, being on different cores, have e.m.f.'s in them differing in phase by 120°. Used in transformers for eliminating **harmonics**, and in reactors for obtaining an artificial neutral.

zigzag leakage (*Elec. Eng.*). Magnetic leakage occurring along the zigzag path between stator and rotor teeth when a stator tooth is opposite to a rotor slot.

zinc (*Met.*). A white metallic element with a bluish tinge. Symbol, Zn. At. wt. 65·38, at. no. 30, sp. gr. at 20° C. 7·14, m.p. 419·4° C., specific electrical resistivity 6·0 microhms per cm. cub. Because of its resistance to atmospheric corrosion, zinc is used for protecting steel (see **galvanised iron, sherardising, spelter, spraying**). It is also used in the form of sheet and as a constituent in alloys (see **zinc alloys**).

zinc alloys (*Met.*). Zinc base alloys, containing aluminium 3-4%, copper 0-3·5%, and magnesium 0·02-0 1%, are used extensively for die-casting. This metal is also used extensively in brass, of which it is one of the essential constituents. Light aluminium zinc alloys are also used.

zinc blende (*Min.*). A much-used name for sphalerite, the common sulphide of zinc. See **blende.**

zinc bloom (*Min*). A popular name for the massive basic zinc carbonate, *hydrozincite* (q.v.).

zinc boxes (*Met.*). Troughs in which gold is precipitated from cyanide solutions by means of zinc shavings.

zinc chrome (*Paint.*). See **zinc yellow.**

zinc spinel (*Min.*). See **spinel.**

zinc white (*Paint.*). A fine white powder (zinc oxide) used as a non-poisonous, permanent pigment to form a base in paint manufacture.

zinc yellow (*Paint.*). A chromate of zinc pigment. Also called ZINC CHROME and CITRON YELLOW.

zincite (*Min.*). Oxide of zinc, crystallising in the hexagonal system and exhibiting polar symmetry; occurring rarely as crystals, usually as deep-red masses; an important ore of zinc, known also as RED OXIDE OF ZINC, SPARTALITE, and STERLINGITE.

zinco (*Print.*). A line block executed in zinc, i.e. the normal line block.

zincog'raphy. An engraving process in which zinc is covered with wax and etched. The name is sometimes applied to the lithographic process in which a zinc plate is used instead of stone.

zink'enite (*Min.*). A steel-grey mineral, essentially sulphide of lead and antimony, $PbSb_2S_4$, occurring in antimony-mines at Wolfsberg in the Harz Mountains, in Colorado, and in Arkansas as columnar orthorhombic crystals, sometimes exceptionally thin, forming fibrous masses.

zink'osite (*Min.*). Anhydrous zinc sulphate, occurring at a mine in the Sierra Almagrera (Spain).

zinn'waldite (*Min.*). A mica related in composition to lepidolite (i.e. containing lithium and potassium) but including iron as an essential constituent; occurring in association with tinstone ores at Zinnwald in the Erzgebirge, in Cornwall, and elsewhere.

zircon (*Min.*). A tetragonal mineral widely distributed in igneous and sedimentary rocks, and occurring in three forms differing in density and optical characters. It varies in colour from brown to green, blue, red, golden-yellow, while colourless zircons make particularly brilliant stones when cut and polished. In composition it is essentially silicate of zirconium, though green specimens contain amorphous silica and zirconia. A small amount of the rare element hafnium is present. See also **jacinth, jargon, hyacinth, Matura diamond, starlite, Ceylonese zircon.**

zirco'nia (*Chem.*). Zirconium oxide, ZrO_2, used as an opacifier in vitreous enamels, as a pigment, and as a refractory.

zirco'nium (*Chem.*). Symbol, Zr. A metallic element occurring in group IV of the periodic system, and in the sub-group Ti:Zr:Hf:Th. Has not been obtained quite pure. At. wt. 91·22, at. no. 40, m.p. about 1700° C.

Zn (*Chem.*). The symbol for *zinc*.

zoaea, zō-ē'a (*Zool.*). A larval stage of some *Malacostraca* in which the appendages of the head and the first two thoracic somites are well developed and the abdomen distinctly segmented, while the posterior thoracic region is only partially segmented and bears no appendages.

Zoantha'ria (*Zool.*). An order of *Anthozoa* the members of which may be solitary or colonial and possess either six or more than eight simple tentacles; a calcareous skeleton, if it occurs, is never formed of spicules and does not lie in the mesogloea (see **Alcyonaria**); there are two siphonoglyphs. Black Corals, Reef Corals, and Sea Anemones.

zoa'rium (*Zool.*). The zooids of a polyzoan colony, collectively.

Zo'bel filter (*Elec. Comm.*). An electric wave-filter designed according to procedures derived by Zobel.

zocle (*Arch.*). See **socle.**

Zo'diac (*Astron.*). A name, of Greek origin, given to the belt of stars, about 18° wide, through which the ecliptic passes centrally. The Zodiac forms the background of the motions of the sun, moon, and planets; it is divided into twelve equal parts of 30° called *Signs of the Zodiac*, named from the constellations that once corresponded to them but do so no longer; these, in their Latin form, are: Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio, Sagittarius, Capricornus, Aquarius, Pisces.

zodi'acal light (*Astron.*). A faint illumination of the sky, lenticular in form and elongated in the direction of the ecliptic on either side of the sun, fading away at about 90° from it; best seen after sunset or before sunrise in the tropics, where the ecliptic is steeply inclined to the horizon; it is possibly caused by minute particles reflecting sunlight.

zo'etrope, zo'echrome (*Photog.*). Early processes for colour cinematography, using rapidly repeated images of the selected colours in sequence on a screen, the synthesis arising from persistence of vision in the eye.

zoetrope. The ancient 'wheel of life,' by means of which images on the inside of a rotating cylinder are made visible through slots and provide an illusion of animated motion.

zo'id (*Bot.*). A zoospore.

zoid'iophi'lous (*Bot.*). Pollinated by animals.

zoid'ophore (*Zool.*). In *Haemosporidia*, a sporoblast derived from the oöcyte.

zo'isite (*Min.*). Hydrated alumino-silicate of calcium, crystallising in the orthorhombic system and occurring chiefly in metamorphic schists; also a constituent of so-called saussurite. Clinozoisite is of the same composition, but crystallises in the monoclinic system.

zona (*Med.*). See **herpes zoster.**

zona (*Zool.*). An area, patch, strip, or band; a zone.—*adjs.* **zonal, zonary, zonate.**

zona pellu'cida (*Zool.*). A thick transparent membrane surrounding the fully formed ovum in a Graafian follicle.

zona radia'ta (*Zool.*). The envelope of the Mammalian egg outside the vitelline membrane.

zonal index (*Geol.*). See **zone.**

zonary placentation (*Zool.*). The condition in which the villi are on a partial or complete girdle round the embryo, as in *Carnivora* and *Proboscidea.*

zo'nate (*Bot.*). Said of tetraspores formed in a row of four, and not in a tetrahedral group.

zonation (*Bot.*). (1) The formation of bands of different colour on the surface of a plant.—(2) The formation, by fungi in culture, of concentric bands different in colour, texture, abundance of sporulation, and so on.—(3) The occurrence of vegetation in well-marked bands, each band having its characteristic dominant species.—(4) A stage in the development of an oögonium, when the contents are arranged in two or more well-marked zones.

zone (*Bot.*). A band of colour, or of hairs, warts, or other surface feature.

zone (*Chem.*). A region of oriented molecules.

zone (*Geol.*). A subdivision of a stratigraphical series, comprising a group of strata characterised by a distinctive fauna or flora, and bearing the name of one fossil, called the **zonal index**; e.g. the *Dibunophyllum Zone*, a group of strata of variable lithology occurring high in the Lower Carboniferous Series and characterised by the rugose coral, *Dibunophyllum*.

zone of cementation (*Geol.*). That 'shell' of the earth's crust lying immediately below the zone of weathering, within which loose sediments are cemented by the addition of such minerals as calcite, introduced by percolating meteoric waters. See also **metasomatism.**

zone of faces (*Crystal.*). A number of faces, belonging to one or several forms, the normals to which lie in one plane (the *zone plane*) and whose edges of intersection are parallel to a line passing through the centre of the crystal (the *zone axis*).

zone of flow (*Geol.*). That 'earth shell' in which great directed pressure causes sediments and even rocks, particularly limestones and argillaceous rocks, to flow like pitch, with the consequent development of cleavage, foliation, and schistosity.

zone of vegetation (*Bot.*). A belt of plants having well-marked characters, occurring with other zones of different characters; the condition may often be observed in seaweeds and in the vegetation occupying the side of a mountain.

zone of weathering (*Geol.*). An 'earth shell' comprising the exposed surface and that part which, through porosity, fracturing, and jointing, is subject to the destructive action of the atmosphere, rain, and frost.

zone television (*Television*). A system of television in which different parts or zones of the image are scanned by separate devices and separately transmitted to the receiver, where they are re-combined.

zoning (*Aero.*). The specification of areas surrounding an aerodrome in which there is a known clearance above obstruction for the safe landing and taking-off of aeroplanes.—(*Town Planning*) The specification of the usage of areas, e.g. for residence, civic purposes, shopping, recreation, etc.

zoning (*Min.*). Concentric layering parallel to the periphery of a crystalline mineral, shown by colour banding in such minerals as tourmaline, and by differences of the optical reactions to polarised light in colourless minerals like feldspars; it is due to the successive deposition of layers of material differing slightly in composition.

zo'nula cilia'ris (*Zool.*). In the Vertebrate eye, a double fenestrated membrane connecting the ciliary process of the choroid with the capsule surrounding the lens.

zonule (*Zool.*). A small belt or zone, such as the zonula ciliaris of the Vertebrate eye.

zo'o- (Greek *zoon*, animal). A prefix used in the construction of compound terms; e.g. *zoogenesis*, the origin of animals.

zo'obiot'ic (*Biol.*). Parasitic on, or living in association with, an animal.

zo'ocaulon (*Zool.*). See **zoodendrium.**

zo'ochor'ous (*Bot.*). Said of spores or seeds dispersed by animals.

zo'ocyst (*Zool.*). See **sporocyst.**

zo'oden'drium (*Zool.*). The branched stalk connecting the members of the colony in certain colonial *Ciliophora.*

zooecium, zō-ē'shum (*Zool.*). The body-wall or enclosing chamber of a polyzoan individual.

zo'ogam'ete (*Zool.*). A motile gamete.

zoogamy, zo-og'— (*Zool.*). Sexual reproduction of animals.

zo'ogeog'raphy (*Zool.*). The study of animal distribution.

zo'ogloe'a (*Bot.*). A mucilaginous mass of bacteria embedded in slimy material derived from the swollen cell walls.

zo'ogo'nid (*Bot.*). See **zoospore.**

zoogonous, zō-og'—(*Zool.*). See **viviparous.**

zo'oid (*Zool.*). An individual forming part of a colony in *Protozoa* (*Volvocina*), *Coelenterata*, *Rhabdopleura*, *Urochorda*, and *Polyzoa*: in *Polychaeta*, a posterior sexual region formed by asexual reproduction; polyp; a polypide.

Zo'omastigi'na (*Zool.*). A subclass of *Mastigophora* comprising forms which lack chromatophores, generally practise holozoic nutrition, often have more than two flagella, and never have starch reserves.

zoom lens (*Photog.*). A lens in which the components can be adjusted continuously to provide a varying angle of view, while maintaining focus. See **magnascope.**

zooming (*Aero.*). The act of utilising the stored energy of the forward motion of an aircraft in order to gain height when flying. Hence ZOOM-BOMBING, the release of a bomb during a zooming manœuvre.

zoop (*Acous.*). A peculiar type of extraneous noise modulation, arising during sound-recording on wax blanks, and reproduced with the desired sounds.

zo'ophytes (*Zool.*). See **Hydrozoa.**

zo'oplank'ton (*Zool.*). Floating and drifting animal life.

zo'osporan'gium (*Bot.*). A sporangium in which zoospores are formed.

zo'ospore (*Bot.*). An asexual reproductive cell which can swim by means of flagella.

zoospore (*Zool.*). In *Protozoa*, an active germ produced by sporulation.

zootomy, zō-ot'—(*Zool.*). See **anatomy.**

Zorap'tera (*Zool.*). An order of small and usually wingless *Exopterygota* having short anal cerci comprising a single joint; they are agile, predaceous forms of social habit, living in small communities in rotting wood and in the nests of Termites; found in the tropics and subtropics.

zoster (*Med.*). See **herpes zoster.**

Zr (*Chem.*). The symbol for *zirconium.*

zu'nyite (*Min.*). A rare basic orthosilicate of aluminium, containing fluorine and chlorine; it occurs in minute cubic crystals at the Zuñi mine, Silverton, Colorado.

zurron (*Mining*). A rawhide sack used by men carrying ore. It holds about 150 lb.

zwitterion, tsvit'er-i-on (*Chem.*). An ion carrying both a positive and a negative charge.

zyg-, zy'go- (Greek *zygon*, yoke). A prefix used in the construction of compound terms; e.g. *zygobranchiate* (q.v.).

zygan'trum (*Zool.*). In Snakes and some Lizards, an additional vertebral articulation, consisting of a fossa on the posterior surface of the neural arch, into which fits the zygosphene.

zygapoph'yses (*Zool.*). Articular processes of the vertebrae of higher Vertebrates arising from the anterior and posterior sides of the neurapophyses.

zygobran'chiate (*Zool.*). Having paired, symmetrically placed gills.

zygocar'diac (*Zool.*). A term used to describe certain paired lateral ossicles in the gastric mill of *Crustacea*.

zygodac'tylous (*Zool.*). Said of Birds which have the first and fourth toes directed backwards, as Parrots.

zy'godont (*Zool.*). Having the cusps of the molar teeth united in pairs.

zygo'ma (*Zool.*). The bony arch of the side of the head in Mammals which bounds the lower side of the orbit.

zygomat'ic (*Zool.*). Pertaining to the zygoma. See also **jugal.**

zygomatic arch (*Zool.*). See **zygoma.**

zygomatic bone (*Zool.*). See **jugal.**

zygomat'ico- (Greek *zygoma*, yoke). A prefix used in the construction of compound terms in relation to the zygoma; e.g. *zygomaticotemporal*, pertaining to the temporal surface of the zygoma.

zygomor'phic, zygomor'phous (*Bot.*, *Zool.*). Divisible into half by one longitudinal plane only: bilaterally symmetrical.—*n.* **zy'gomorphy.**

Zygomyce'tes (*Bot.*). A subdivision of the *Phycomycetes*, including about 300 species, mostly saprophytes, but some parasitic in insects or on other fungi. There are no motile stages in the life-history, and sexual reproduction occurs by the union of multinucleate gametangia which seldom differ much in size and shape.

zygone'ma (*Cyt.*). The zygotene phase of meiosis.

zy'goneur'y (*Zool.*). In some *Gastropoda*, the condition of having the pallial nerves from the pleural ganglion passing direct to the ganglion of the visceral commissure of the same side, from which the mantle nerves of that side appear to originate. Cf. *dialyneury*.

zy'gophase (*Biol.*). The diploid portion of the life-history.

zy'gophore (*Bot.*). A mycelial branch bearing a gametangium in the *Zygomycetes*.

zy'gopleur'y (*Zool.*). Bilateral symmetry.

zygopo'dium (*Zool.*). That part of the fore limb in *Tetrapoda* between the brachium and the basipodium; forearm.

zygo'sis (*Zool.*). See **conjugation.**

zy'gosome (*Zool.*). See **mixochromosome.**

zy'gosphene (*Zool.*). In Snakes and some Lizards, an additional vertebral articulation, consisting of a process on the anterior surface of the neural arch, which fits into the zygantrum.

zy'gospore (*Bot.*). A thick-walled resting spore formed after the union of isogametes or of isogametangia.—(*Zool.*) See **zygote.**

zygospor'ophore (*Bot.*). The suspensor in the *Zygomycetes*.

zy'gote (*Bot.*, *Zool.*). The product of the union of two gametes: in Botany (by extension), the diploid plant developing from that product.

zy'gotene (*Cyt.*). The second stage of meiotic prophase, intervening between leptotene and pachytene, in which the chromatin threads approximate in pairs and become loops.

zygot'ic (*Bot.*, *Zool.*). Relating to, or belonging to, a zygote.

zygotic meiosis (*Cyt.*). Meiosis occurring at the first two divisions of the nucleus resulting from gametic union.

zygotic number (*Cyt.*). The diploid chromosome number.

zygot'onucleus (*Zool.*). A nucleus resulting from the union of two gametonuclei.

zy'mase (*Chem.*). An enzyme inducing the alcoholic fermentation of carbohydrates.

zy'mogen (*Bot.*, *Zool.*). A non-catalytic substance formed by plants and animals as a stage in the development of an enzyme; it is convertible into the active enzyme and a protein by the action of a kinase or zymoexcitor.

zymo'sis (*Med.*). Fermentation. The morbid process, thought to be analogous to fermentation, constituting a zymotic (infectious) disease.

zymot'ic (*Med.*). Of, pertaining to, or causing, an infectious disease: an infectious disease.

THE GREEK ALPHABET

The letters of the Greek alphabet, frequently used in technical terms, are given here for purposes of convenient reference.

Α	α	alpha	=	a	Ν	ν	nu	=	n
Β	β	bēta	=	b	Ξ	ξ	xi	=	x
Γ	γ	gamma	=	g	Ο	ο	omīcron	=	o
Δ	δ	delta	=	d	Π	π	pi	=	p
Ε	ϵ	epsīlon	=	e	Ρ	ρ	rho	=	rh, r
Ζ	ζ	zēta	=	z	Σ	σ ς	sigma	=	s
Η	η	ēta	=	ē	Τ	τ	tau	=	t
Θ	θ ϑ	thēta	=	th	Υ	υ	upsīlon	=	ü
Ι	ι	iōta	=	i	Φ	φ	phi	=	ph
Κ	κ	kappa	=	k	Χ	χ	chi	=	kh
Λ	λ	lambda	=	l	Ψ	ψ	psi	=	ps
Μ	μ	mu	=	m	Ω	ω	ōmega	=	ō

TABLE OF CHEMICAL ELEMENTS

Symbol	Name	Derived from	Valence No.	Atomic No.	Atomic Wt.	Specific Gr.	Melting or Fusing Pt. °C	Discovered by	Date
A	**Argon**	Greek, *argos*=inactive	0	18	39 944	Gas	−188	Rayleigh and Ramsay	1894
Ac	**Actinium**	Greek, *aktis*=ray	3	89	[227]	..	..	Debierne	1899
Ag	**Silver (argentum)**	Anglo-Saxon, *seolfor*	1	47	107·880	10·5	960	Prehistoric	..
Al	**Aluminium**	Latin, *alumen*=alum	3	13	26·97	2·58	658	Wöhler	1828
As	**Arsenic**	Latin, *arsenicum*	3 or 5	33	74·91	5·73	Volatile, 450	Schröder	1649
Au	**Gold (aurum)**	Anglo-Saxon, *gold*	1 or 3	79	197·2	19·3	1062	Prehistoric	..
B	**Boron**	Persian, *bûrah*	3	5	10·82	2·5	2300	Davy	1808
Ba	**Barium**	Greek, *barys*=heavy	2	56	137 36	3·75	850	Davy	1808
Be	**Beryllium**	Greek, *beryllion*=beryl	2	4	9·02	1·93	1281	Wöhler	1828
Bi	**Bismuth**	German (origin unknown)	3 or 5	83	209·00	9·80	268	Valentine	1450
Br	**Bromine**	Greek, *bromos*=stench	1 or 7	35	79 916	3·19	−7·3	Balard	1826
C	**Carbon**	Latin, *carbo*=charcoal	4	6	12 010	3·52	Infusible	Prehistoric	..
Ca	**Calcium**	Latin, *calx*=lime	2	20	40·08	1·58	851	Davy	1808
Cb	**Columbium (niobium)**	Columbia	5	41	92·91	8·4	1950	Hatchett	1801
Cd	**Cadmium**	Greek, *kadmeia*=calamine	1 or 2	48	112·41	8·64	320	Stromeyer	1817
Ce	**Cerium**	Planet Ceres	3 or 4	58	140·13	6·68	623	Berzelius	1803
Cl	**Chlorine**	Greek, *chloros*=green	1, 3, 5, 7	17	35·457	Gas	−102	Scheele	1774
Co	**Cobalt**	German, *Kobold*=goblin	2 or 3	27	58·94	8·6	1490	Brandt	1739
Cr	**Chromium**	Greek, *chroma*=colour	2, 3 or 6	24	52 01	6·5	1510	Vauquelin	1797
Cs	**Caesium**	Latin, *cæsium*=bluish-grey	1	55	132·91	1·88	26	Bunsen	1860
Cu	**Copper (cuprum)**	Cyprus	1 or 2	29	63·57	8·9	1083	Prehistoric	..
Dy	**Dysprosium**	Greek, *dysprositos*	3	66	162·46	..	..	Boisbaudran	1886
Er	**Erbium**	Ytterby, a Swedish town	3	68	167·2	4·8	..	Mosander	1843
Eu	**Europium**	Europe+*ium*	3	63	152 0	..	..	Demarcay	1896
F	**Fluorine**	Latin, *fluo*=flow	1	9	19·00	Gas	−223	Scheele	1771
Fe	**Iron (ferrum)**	Anglo-Saxon, *iren*	2 or 3	26	55·84	7·86	1525	Prehistoric	..
Ga	**Gallium**	Latin, *Gallia*=France	3	31	69·72	5·95	30	Boisbaudran	1875
Gd	**Gadolinium**	Gadolin, a Finnish chemist	3	64	156·9	..	..	Marignac	1880
Ge	**Germanium**	Latin, *Germania*=Germany	4	32	72·60	5·47	958	Winkler	1886
Gl	**Glucinum (beryllium)**	Greek, *glykys*=sweet	2	4	9·02	1·93	1281	Wöhler	1828
H	**Hydrogen**	Greek, *hydor*=water+*gen*	1	1	1·0081	Gas	−258	Cavendish	1766
He	**Helium**	Greek, *helios*=sun	0	2	4·003	Gas	−272	Ramsay	1895
Hf	**Hafnium**	*Hafnia*=Copenhagen	4	72	178·6	12·1	2500	Coster and Hevesey	1923
Hg	**Mercury (hydrargyrum)**	Mercury (myth)	1 or 2	80	200·61	13·596	−38·9	Prehistoric	..
Ho	**Holmium**	*Holmia*=Stockholm	3	67	163·5	..	..	Cleve	1879
I	**Iodine**	Greek, *iodes*=violet	1, 3, 5, 7	53	126·915	4·95	114	Courtois	1811
Il	**Illinium**	Illinois, U.S.A.	..	61	..	..	..	Harris, Yntema and Hopkins (?).	1926
In	**Indium**	Its indigo spectrum	3	49	114·76	7·4	155	Reich and Richter	1863

Ir	Iridium	Latin, *iris*=a rainbow	2 or 4	77	193·1	22·4	2375	Tennant	1803
K	Potassium (kalium)	English, *potash*	1	19	39·096	0·87	63	Davy	1807
Kr	Krypton	Greek, *kryptos*=hidden	0	36	83·7	Gas	−169	Ramsay and Travers	1898
La	Lanthanum	Greek, *lanthanō*=conceal	3	57	138·92	6·1	810	Mosander	1839
Li	Lithium	Greek, *lithos*=stone	1	3	6·940	0·585	186	Arfvedson	1817
Lu	Lutecium	Lutetia, ancient name of Paris	3	71	175·0	..	..	Urbain and Welsbach	1907
Ma	Masurium	Masuria, East Prussia	..	43	..	..	..	Noddack, Tacke and Berg.	1925
Mg	Magnesium	Magnesia, district in Thessaly	2	12	24·32	1·74	651	Bussy	1829
Mn	Manganese	Latin, *magnes*=magnet	2, 3, 4, 6, 7	25	54·93	7·39	1220	Gahn	1774
Mo	Molybdenum	Greek, *molybdos*=lead	2 or 6	42	95·95	8·6	2500	Hjelm	1782
N	Nitrogen	Greek, *nitron*=saltpetre	3 or 5	7	14·008	Gas	−211	D. Rutherford	1772
Na	Sodium (natrium)	English, *soda*	1	11	22·997	0·978	97	Davy	1807
Nb	Niobium (columbium)	Latin, *Niobe*	See Columbium (Cb)						
Nd	Neodymium	Greek, *neos*=new and *didymos* =twin.	3 or 4	60	144·27	6·96	840	Welsbach	1885
Ne	Neon	Greek, *neos*=new	0	10	20·183	Gas	−248·6	Ramsay and Travers	1898
Ni	Nickel	Swedish, abbreviation of kupparnickel.	2 or 3	28	58·69	8·9	1452	Cronstedt	1751
O	Oxygen	Greek, *oxys*=acid+*gen*	2 or 4	8	16·00	Gas	−227	Priestley	1774
Os	Osmium	Greek, *osme*=odour	2 or 8	76	190·2	22·48	2700	Tennant	1803
P	Phosphorus	Latin, from Greek 'light-bearing.'	3 or 5	15	30·98	1·8–2·3	44	Brandt	1669
Pa	Protactinium	Greek, *protos*=first+*actinium*	5	91	231	..	..	Hahn and Meitner	1917
Pb	Lead (plumbum)	Anglo-Saxon, *lead*	2 or 4	82	207·21	11·37	327	Prehistoric	..
Pd	Palladium	Planet Pallas	2 or 4	46	106·7	11·4	1549	Wollaston	1804
Po	Polonium	Poland	2, 3 or 4	84	[210]	..	..	Mme. Curie	1898
Pr	Praseodymium	Greek, *prasios* = green and *didymos*=twin.	3 or 4	59	140·92	6·48	940	Welsbach	1885
Pt	Platinum	Spanish, *platina*=silver	2 or 4	78	195·23	21·5	1755	Wood	1741
Ra	Radium	Latin, *radius*=ray	2	88	226·05	6·0	700	Mme. and M. Curie and Bémont.	1898
Rb	Rubidium	Latin, *rubidus*=red	1	37	85·48	1·52	39	Bunsen	1860
Re	Rhenium	German, *Rhein*	2, 3, 4, 6, 7	75	186·31	21	3000	Noddack and Tacke	1925
Rh	Rhodium	Greek, *rhodon*=rose	2 or 3	45	102·91	12·1	1950	Wollaston	1804
Rn	Radon (niton)	Radium emanation	0	86	222	Gas	−150	Dorn	1901
Ru	Ruthenium	Ruthenia	3, 4 or 8	44	101·7	12·26	2400	Claus	1845
S	Sulphur	Latin, *sulfur*	2, 4 or 6	16	32·06	2·07	115–119	Prehistoric	..
Sb	Antimony (stibium)	L. Latin, *antimonium*	3 or 5	51	121·76	6·62	629	Valentine	1450
Sc	Scandium	Scandinavia	3	21	45·10	..	..	Nilson	1879
Se	Selenium	Greek, *selene*=moon	2, 4 or 6	34	78·96	4·5	170–220	Berzelius	1817
Si	Silicon	Latin, *silex*=flint	4	14	28·06	2·0–2·4	1370	Berzelius	1823
Sm	Samarium	Samarski, a Russian savant	3	62	150·43	7·7	1350	Boisbaudran	1879
Sn	Tin (stannum)	Anglo-Saxon, *tin*	2 or 4	50	118·70	7·3	232	Prehistoric	..
Sr	Strontium	Strontian, a Scottish village	2	38	87·63	2·54	800	Davy	1808
Ta	Tantalum	Tantalus (Greek myth)	5	73	180·88	16·6	2900	Ekeberg	1802
Tb	Terbium	Ytterby, a Swedish quarry	3	65	159·2	..	..	Mosander	1843
Te	Tellurium	Latin, *tellus*=earth	2, 4 or 6	52	127·61	6·0	446	Reichenstein	1782
Th	Thorium	God Thor	4	90	·232·12	11·00	1750	Berzelius	1828
Ti	Titanium	Latin, *Titanes*=sons of the earth.	3 or 4	22	47·90	4·54	1850	Gregor	1789

Based on the Table in 'A Text-book of Inorganic Chemistry' (Griffin and Co. Ltd).

The chemical elements are arranged in ascending order of atomic number (printed in heavy type), which is equal to the total number of planetary electrons in an atom of the element, or to the net positive charge on the nucleus. With four exceptions (A-K, Co-Ni, Te-I, and Th-Pa), this is also the order of increasing atomic weight (the values for 1939 are given). If elements of Group O, which are chemically inert, are excluded, metallic (electropositive) properties become more pronounced towards the bottom left-hand corner of the table, while non-metallic (electronegative) properties are most marked in the top right-hand corner (fluorine). Elements in the same vertical group, especially those in the same subgroup, have a similar character, and show a gradation of properties with increasing atomic weight. There is also a steady change in physical and chemical properties in passing from one end to the other of a horizontal period. The *rare earth elements* (57-71) are enclosed in a thick black line, as they are regarded as occupying a single position in the periodic system. See **periodic system, rare earth elements, transition metals.**

IGNEOUS ROCKS—A. GENERAL TABLE

	COARSE-GRAINED commonly occurring in deep-seated, major intrusions PLUTONITES	MEDIUM-GRAINED commonly occurring in minor intrusions	FINE-GRAINED commonly occurring as lava flows VULCANITES
ACID Silica percentage exceeding 66. Quartz > 10%	GRANITE CLAN (see also Expanded Table, p. 930)		
	ALKALI GRANITE Graphic granite ADAMELLITE GRANODIORITE	Graphic microgranite (=granophyre) MICROGRANITE GRANITE-PORPHYRY Quartz-porphyry Granite-aplite	RHYOLITE Spherulitic rhyolite Obsidian Pumice Pitchstone 'Perlite'
INTERMEDIATE Silica percentage 55 to 66. Normally, quartz < 10%	SYENITE CLAN (see also Expanded Table, p. 931)		
	Quartz-syenite SYENITE (alkali feldspar, e.g. orthoclase, albite, or feldspathoid in excess)	MICROSYENITE SYENITE-PORPHYRY	TRACHYTE LEUCITOPHYRE PHONOLITE
	MONZONITE CLAN		
	Quartz-monzonite (=Banatite) MONZONITE (=SYENODIORITE)	MICROMONZONITE MONZONITE-PORPHYRY Syenite-aplite, e.g. Bostonite	TRACHYANDESITE Vulsinite Banakite

INTERMEDIATE (*contd.*)	DIORITE CLAN		
	DIORITE (soda-lime feldspar in excess) Quartz-mica-diorite (=**TONALITE**)	**MICRODIORITE** **DIORITE-PORPHYRY** (=' Porphyrite ' of some Authors) Diorite-aplite	**ANDESITE**
BASIC Silica percentage <55.	GABBRO CLAN		
	ALKALI GABBRO (See Expanded Table, p. 931)	**ALKALI MICROGABBRO** e.g. **NEPHELINE-DOLERITE** **ESSEXITE-DOLERITE**, etc. **TESCHENITE** } in part **CRINANITE** } (See also Expanded Table, p. 932)	**FELDSPATHOIDAL BASALTS** **TEPHRITES** **BASANITES**, etc. (See also Expanded Table, p. 931)
	KENTALLENITE	**MICROKENTALLENITE**	**TRACHYBASALT**
	CALC-ALKALI (NORMAL) GABBRO including **NORITE** Gabbro-pegmatite } ultra-coarse Norite-pegmatite } (See also Expanded Table, p. 932)	**MICROGABBRO = DOLERITE** (=' **DIABASE** ' of some Authors) (See also Expanded Table, p. 932) Gabbro-aplite	**CALC-ALKALI (NORMAL) BASALT** including Tachylite =basalt-glass (See also Expanded Table, p. 932)
	ULTRAMAFIC TYPES (see also Expanded Table, p. 933)		
	PICRITE **PERKNITE** **PERIDOTITE** (See also Expanded Table, p. 933)		**ULTRAMAFIC BASALT** (=' **MAGMA-BASALT** ') **AUGITITE** **LIMBURGITE** Lamprophyres of some types: e.g. { **MONCHIQUITE** { **ALNOITE**

IGNEOUS ROCKS—B. EXPANDED TABLE

Note.—The Diorite Clan is omitted from the table, it being set out as fully as is necessary in Table A., p. 929.

COARSE-GRAINED	MEDIUM-GRAINED	FINE-GRAINED
GRANITE CLAN		
ALKALI GRANITES (alkali feldspar $> \frac{2}{3}$ of total) **POTASH-GRANITES** $\left(\begin{matrix}\text{orthoclase}\\ \text{microcline}\end{matrix} > \text{albite}\right)$ e.g. Charnockite Potash-leucogranite = aplogranite **SODA-GRANITES** (albite > orthoclase) e.g. Rockallite (mafic var.) Soda-leucogranite = aplogranite with $<5\%$ dark minerals Textural variants :— graphic granite = Runite orbicular granite granite-aplite, fine-grained granite-pegmatite, coarse-grained	0·5 mm. grain diameter POTASH-MICROGRANITES POTASH-GRANITE-PORPHYRIES (= 'Quartz-porphyries' of some Authors) SODA-MICROGRANITES SODA-GRANITE-PORPHYRIES some 'Quartz-porphyries.' ULTRAMAFIC TYPES		
PICRITES (olivine essential, feldspar accessory) Hornblende-picrite Enstatite-picrite Augite-picrite PERKNITES (neither feldspar nor olivine)— Pyroxenites: essentially orthopyroxene — Enstatitite, Hypersthenite, Bronzitite Pyroxenites: essentially clinopyroxene — Diallagite Pyroxenites: with ortho- and clinopyroxenes — Websterite Pyroxenites: with mica — Biotite-pyroxenite Hornblendites Eclogites sometimes grouped here PERIDOTITES (olivine essential) with orthopyroxene — Saxonite, Harzburgite with diallage — Lherzolite with pyroxene and hornblende — Cortlandtite with hornblende and mica — Scyelite with mica — Kimberlite		Ultramafic lavas See TABLE A., p. 929.

Based on the classification by Hatch and Wells in *Petrology of the Igneous Rocks* (1937).

SEDIMENTARY ROCKS

FRAGMENTAL (CLASTIC) DEPOSITS			Indurated Equivalents
RUDACEOUS	blocks ← 250 mm. cobbles	SCREES (angular debris) BOULDER BEDS	BRECCIAS (in part) BOULDER CONGLOMERATES
	← 50 mm. pebbles ← 2 mm.	GRAVELS (pebbles and/or cobbles plus sand) PEBBLE BEDS { monogenetic polygenetic	CONGLOMERATES
ARENACEOUS	sand grain (rounded) grit grain (angular) very coarse ← 1·0 mm. coarse ← 0·5 mm. medium ← 0·25 mm. fine ← 0·10 mm.	SAND very coarse coarse medium fine	SANDSTONES GRITSTONES Quartzites Chalcedonic sandstones Calcareous ,, Ferruginous ,, Sideritic ,, Glauconitic ,, and gritstones ARKOSE (with > 10% feldspar)
	silt particle coarse ← 0·05 mm. fine ← 0·005 mm.	SILT coarse fine	SILTSTONES
ARGILLACEOUS	clay particle	CLAY = rock flour + clay minerals, e.g. kaolinite, dickite, montmorillonite, halloysite, nontronite, etc.	MUDSTONES, massive ARGILLITES, hard, with conchoidal fracture SHALES, fissile FLAGS, often sandy or calcareous
		MARINE CLAYS :— Blue mud Green mud Red mud Black mud	
		LACUSTRINE CLAY, e.g. Pipe clay of Bovey Tracey	
		AEOLIAN CLAYS Loess Adobe	
		GLACIAL CLAY Boulder clay (some)	Tillite
		Varve clay	Varve shale

CLAYS ultimately of volcanic origin:—
- Bentonite
- Fullers' Earth
- Palagonite muds

MARL = calcareous clay

Hydraulic limestone (= 'cement-stone')

CALCAREOUS DEPOSITS > 50% carbonate

1. ORGANIC
   - Shell-fragment limestone
   - Coral limestone—reef limestone (in part)
   - Foraminiferal limestone, e.g. nummulitic limestone
   - Crinoidal limestone
   - Algal limestone:—marine—modern and ancient reef limestones
     - fresh-water—Chara limestone
   - Pellet limestone

2. DETRITAL
   - product of disintegration and redeposition of pre-existing limestones
     - Limestone sand
     - Coral sand
     - Coral mud

3. CHEMICALLY PRECIPITATED
   - Aragonite mud (unconsolidated) ⟶ calcite mudstone (indurated)
   - =drewite (in marine environment)
     - Oolitic limestone
     - Pisolitic ,,
   - Hot spring and lacustrine deposits
     - Calcareous sinter
     - Travertine
     - Tufa
       - lithoid
       - thinolithic
       - dendritic
   - Cave deposits
     - Stalactite
     - Stalagmite

4. DOLOMITE- AND MAGNESITE-LIMESTONES
   - Dolomitic limestone, Dolomite rock
     - primary
       - detrital
       - precipitated
     - secondary
       - penecontemporaneous, e.g. laminosa dolomite
       - subsequent (vein-) dolomite
   - Pseudobreccia (partially dolomitised)
   - Magnesian limestone
   - Magnesite rock

SILICEOUS DEPOSITS

		INDURATED EQUIVALENTS
ORGANIC	Radiolarian ooze Radiolarian earth (Barbados earth)	Radiolarian chert 'phtanite' jasper (some) Radiolarite
	Diatomaceous ooze Diatomaceous earth Tripoli powder 'Infusorial earth' Kieselguhr	Diatomite Diatomaceous chert
	Spicular chert	

CARBONACEOUS DEPOSITS

RECENT		TERTIARY AND EARLIER
Peat	Tundra peat Moorland peat Fen peat	Lignite and jet Brown coal Humic coal Semianthracite Anthracite
Sapropel		Cannel (spore coal) Boghead coal (algal) torbanite tasmanite Oil shale

SEDIMENTARY ROCKS—*Continued*

SILICEOUS DEPOSITS—*Continued*

INORGANIC
- Siliceous sinter (=geyserite)
- Rhynie chert=silicified peat
- Silicified limestones } metasomatic in part
- Oölitic chert } metasomatic in part
- Spherulitic chert } metasomatic in part

CARBONACEOUS DEPOSITS—*Continued*

BITUMENS
- Asphalt, e.g. from Pitch Lake, Trinidad
- Maltha (semi-fluid asphalt)
- Albertite=gilsonite
- Elaterite
- Ozokerite

FERRIFEROUS DEPOSITS

I. PRIMARY, CONTEMPORANEOUS

(A) MARINE

classified as (1) ferrous (without) and (2) ferric, with free iron oxide

- Sideritic limestones, e.g. parts of the Marlstone
- Siderite mudstones
- Chamosite-siderite-rocks
  - Cleveland ironstone
  - Northampton ironstone
- Chamosite ironstones (=chamosite mudstone)
  - Marlstone (in part)
  - Pisolitic chamosites of N. Wales
  - Wabana iron ores, in Lower Ordovician of Newfoundland
- Primary haematitic limestones
  - Rhiwbina ore of S. Wales
  - Bryozoa Bed of S.W. Province of the Carboniferous
- Limonitic ironstones
  - Oöliths of limonite in chamosite (Frodingham)
  - ,, ,, ,, ,, sideritic clay (Claxby)
  - ,, ,, ,, ,, sandstone (Kellaway's Rock)
- Glauconitic sands, sandstones, and muds=greensands
- Greenalite ironstones

(B) FRESH-WATER

- Bog limonites (Recent) (=bog iron ores)
- Clay ironstones of Coal Measures (siderite-rich nodules)
- Blackband ironstone—free from clay, but with 10-20% coaly material

(C) RESIDUAL

- Pisolitic and oolitic limonites
- Sphaerosiderites in Coal Measures and Wealden
- Laterite

II. SECONDARY REPLACEMENT ORES (included here, though metasomatic)

- Haematite ores in Carboniferous of Lancashire, etc.

CHEMICAL DEPOSITS	PHOSPHATIC DEPOSITS
SALT DEPOSITS of marine origin ; or from salt lakes, e.g. Stassfurt. Below clay cover :— 4. carnallite zone 3. kieserite zone 2. polyhalite zone 1. rock-salt zone rock-salt in large excess, associated with anhydrite DEPOSITS OF BORATES, ultimately of volcanic origin Borax, e.g. at Searles Marsh, Cal. Colemanite (calcium borate) at Calico, Cal. Tincal (sodium borate) in Thibet DEPOSITS OF NITRATES Chile saltpetre (sodium nitrate) impure material = CALICHE DEPOSITS OF ALKALI CARBONATES occur in NATRON (SODA) LAKES :— Trona $Na_2CO_3 \cdot NaHCO_3 \cdot 2H_2O$ Gaylussite $CaCO_3 \cdot Na_2CO_3 \cdot 5H_2O$ See also under SILICEOUS and CALCAREOUS DEPOSITS	Minerals of phosphate deposits :— Collophane (=collophanite) $Ca_3(PO_4)_2 \cdot H_2O$ Apatite $Ca_3(PO_4)_2 \cdot CaF_2$ (or $CaCl_2$) Dahllite $4Ca_3(PO_4)_2 \cdot 2CaCO_3 \cdot H_2O$ Variscite $AlPO_4 \cdot 2H_2O$ Vivianite $Fe_3(PO_4)_2 \cdot 8H_2O$ PRIMARY PHOSPHATES Bone beds, e.g. Rhaetic bone bed Guano Marine coprolite deposits Bedded phosphorite Phosphatic nodules DERIVED PHOSPHATE DEPOSITS Nodule beds, e.g. Cambridge Greensand 'dark phosphate' (derived) 'light phosphate' (indigenous)
	Based on the classification by Black, Hatch, and Rastall in *Petrology of the Sedimentary Rocks* (1938).

SUPPLEMENT

NOTE—A dagger † after the heading of an article indicates that the information given supplements that given in the main text of the Dictionary.

An asterisk ★ placed after a cross-reference means that the article to which reference is made occurs in the Supplement. Cross-references without an asterisk refer to the main text.

Abelian integral (*Maths.*). An integral of the form $\int R(x, y)dx$, where x and y are connected by a fundamental relation $f(x, y)=0$.

absolute block system (*Sig.*). See **block system***.

absolute convergence (*Maths.*). A series is ***absolutely convergent*** if the corresponding series of the moduli of the terms converges.

A.C.H. index (*Nut.*) The arm-girth, depth-of-chest, and width-of-pelvis index used for comparative measurements in studies of nutrition. See **Franzen's index***.

accommodation road (*Highways*) A limited-purpose road giving access to public or private properties

acnode (*Maths.*). A node at which the tangents are imaginary and distinct. A conjugate point. See **crunode***.

act'inodermati'tis (*Med.*). Inflammation of the skin due to the action of X-rays.

actinotherapy (*Med.*) Treatment of disease by means of ultra-violet, infra-red and luminous radiations. See also **ultra-violet therapy***, **infra-red therapy***.

ad'amsite (*Chem. War.*). $NH(C_6H_4)_2AsCl$. Toxic smoke. Mortality product 30,000 for ten minutes exposure, 19,500 for thirty minutes exposure. Abbrev. **D.M.**

adermin (*Chem.*). See **vitamin B_2 complex*** (*pyridoxin*).

adjugate determinant (*Maths.*) A determinant formed from another by replacing each constituent by its co-factor.

adjustable-port proportioning valve (*Ind Heat.*). A valve for use with gas or oil burners, usually combined with an air valve, both valves mounted on a common spindle and operated in unison by a single lever linked to a motor actuated by automatic temperature-control apparatus. The ports of the valve are adjustable so that the fuel and air flows may be accurately proportioned.

advance (*Sig.*). The length of line beyond a signal which is covered, as far as a train is concerned, by that signal.

aeration test burner (*Ind. Heat.*). Apparatus by which the combustion characteristics of practically all commercial gases can be correlated and calibrated. Abbrev. **A.T.B.**

aerial resistance (*Radio*). See **antenna resistance***.

aerothermother'apy, ār'ō-ther-mō- (*Med.*). Treatment by means of hot-air currents.

ae'tiopor'phyrin (*Chem.*). 1·3·5·8-tetramethyl-2·4·6·7-tetraethyl-porphin, obtained by reduction and decarboxylation of haematoporphyrin. It can be obtained also as a breakdown product of chlorophyll.

ainhum, ī-yūm', in-yūm (*Med.*). A chronic disease of negro races, terminating in spontaneous amputation of the fingers and toes by the formation of a constricting ring. The fifth toe is the most commonly affected

air-gas mixture. A mixture of air and gas in any ratio, which may or may not require additional air for complete combustion. See **total air-gas mixture***.

air-gas mixture system (*Ind. Heat.*) A method for mixing air and gas, in the desired proportions for combustion, in a mechanically operated apparatus by which air and gas volumes and pressures are automatically controlled at all rates of mixture flow.

air-gas ratio (*Ind. Heat.*). Practical: the known proportions of air to gas in an air-gas mixture Theoretical: the air volume needed to obtain conditions of perfect combustion, calculated according to the analysis of the gas.

air-heater (*Ind. Heat.*). As used for industrial heating and drying operations air-heaters fall within two main categories: (1) direct-fired heaters, in which the products of combustion are combined with the air; (2) indirect-fired heaters, in which the combustion products are excluded from the air flow. Both types of heaters can be operated on the re-circulation system, by which a proportion of the heated air is returned to and passed through the heating chamber.

air pocket (*Aero.*). A localised region of low density in the atmosphere, due, for example, to an ascent of differentially heated air, called a *thermal*. A sudden fall is experienced by lightly loaded aircraft

algebraic function (*Maths.*). One which can be derived by a finite number of algebraic operations, including root extraction.

algebraic number (*Maths.*). A number derived from a *real number** (q.v.) by algebraic processes, including root extraction.

alignment antenna array (*Radio*). See **end-fire antenna array***.

aluminothermic process † (*Chem.*). This process, also known as the *thermite process*, is used especially for the oxides of metals which are reduced with difficulty (e.g. titanium, molybdenum). On ignition, the mass may reach a temperature of 3000° C. Magnesium incendiary bombs have thermite as the igniting agent. See **Thermit***.

amino group (*Chem.*). The grouping $-\mathrm{N}{<}^{\mathrm{R}}_{\mathrm{R'}}$, where R and R′ may be hydrogen or organic radicles. If R and R′ are both H, it is a primary amine; if R is H, a secondary amine; if R and R′ are both organic radicles, a tertiary amine.

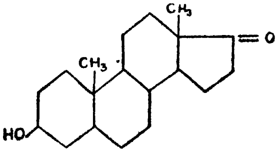
am'plosome (*Nut.*). The short, or stocky, type of human figure. Better term than *pyknosome*.

analysand (*Psycho-an.*). A person who is undergoing a psychological analysis.

anastigmat lens (*Optics*). A photographic objective designed to be free from astigmatism in at least one extra-axial zone of the image plane.

androgen'ic (*Chem*). Having the effects of the male sex hormone.

androsterone (*Chem.*). A steroid, obtained from the testis and from urine. It has male hormone activity, controlling the secondary male characteristics—development of accessory reproductive organs, growth and distribution of hair, etc.



aneu'rin (*Chem.*). Vitamin B$_1$.

angiotonin (*Physiol.*). See **hypertensin***.

angledozer (*Civ. Eng.*). See **bulldozer***.

angle of directivity (*Radio*). See **directivity angle***.

angle of nip (*Chem. Eng.*). The angle between the planes of the crushing surfaces of a crusher and the particle to be crushed.

angular height (*Radio*). Of an aerial: the actual height, in wave-lengths, multiplied by 2π radians, or 360 degrees.

annunciator† (*Sig.*). Any device for indicating audibly the passage of a train past a point.

answer signal (*Elec. Comm.*). A signal sent backwards along a transmission circuit, indicating that the subscriber has answered the call. The answer signal may or may not operate the calling subscriber's meter, or it may be for operator's use only.

antenna† (*Radio*).
See also **box—***
broadside—*
fishbone—*
multiple-unit steerable—*
periodic—*
T.W.—*
vee—*
end-fire antenna array*.

antenna resistance (*Radio*). The total power supplied to an antenna system, divided by the square of a specified current, e.g. in the feeder, or at the earth connection of an open-wire antenna.

anti-parallax mirror (*Elec. Eng.*). A mirror placed on an arc parallel to the scale of an indicating instrument, so that the parallax error in reading the indication of the pointer is avoided by aligning the eye with the pointer and its image in the mirror.

antip'odes, -dēz. On a sphere, such as the earth: points on the surface at either extremity of a diameter through the sphere.

aplanatic refraction (*Optics*). Refraction at a surface under conditions in which there is no spherical aberration and in which the sine condition is satisfied.

apochromatic lens (*Optics*). A lens so designed that light of three wavelengths from an object is brought to the same focus, thus reducing the secondary spectrum.

approach (*Sig.*). The length of track, before a signal, within which the train is under the control of the signal.

aq'uaculture (*Hort.*). The cultivation of plants without soil, the roots being supported in gravel flooded with water containing the salts necessary for growth. See **hydroponics***.

Argand diagram† (*Maths.*). A diagram with rectangular axes, on which complex numbers can be represented by a point, the real part of the complex number being the abscissa, and the imaginary part the ordinate. See ***j***.

armourplate (*Glass*). Plate glass toughened by heating and sudden cooling (see **safety glass**), and so made more resistant to impact and temperature changes.

arsenical smoke (*Chem. War.*). See **toxic smoke***.

Ascheim-Zondek test (*Med.*). A test for pregnancy, based on the urinary excretion, during pregnancy, of an anterior pituitary-like hormone which acts on the ovaries and causes development of the Graafian follicles. The urine under test is injected into immature female mice which are later killed for examination of the ovaries. A positive result, which consists in the finding of large haemorrhagic follicles and corpora lutea, indicates the presence of living placental tissue and is therefore obtained in certain conditions other than pregnancy—e.g. hydatid mole, carcinoma of the ovaries. Males suffering from malignant teratoma of the testis also give a positive result. The accuracy, on repeated tests, is about 98%. In the similar *Friedman's test*, non-pregnant mature rabbits are used

ascorbic acid (*Chem.*). Vitamin C.

ash (*Chem.*). The non-volatile inorganic residue remaining after the ignition of an organic compound, by means of which the percentage of the former is estimated; e g. ash of white flour 0·3-0 5 per cent. after prolonged heating at about 550° C.

aspect (*Sig.*). The indication given by a coloured-light signal, as contrasted with that of a semaphore-arm signal.

asphal'tenes, -tēnz (*Chem.*). Such constituents of asphaltic bitumens as are soluble in carbon disulphide but not in petroleum spirit. See **malthenes***, **carbenes***.

aspherical surface (*Optics.*). A lens surface which departs to a greater or less degree from a sphere, e.g. one having a parabolic or elliptical section.

asymptote, as'im-tōt (*Maths.*). A line which is tangent to a plane curve at infinity. Hence, a line whose distance from a curve approaches zero as the distance from the origin tends to infinity.

asymptot'ic curve (*Maths.*). A curve which gives a guide to the direction of flexion of an infinite branch of a curve, but is not necessarily a curvilinear *asymptote** (q.v.) to that branch.

A.T.B. (*Ind. Heat.*) Abbrev. for *aeration test burner*.

atmospheric gas-burner system (*Ind. Heat.*). A system normally entailing the use of natural-draught burner injectors, in which the momentum of a gas stream projected from an orifice into the injector throat inspirates from the atmosphere a part of the air required for combustion.

available heat (*Ind. Heat.*). The portion of the total heat of any fuel, expressed in British thermal units, that can be utilised to raise the temperature of the work in a furnace or other heating appliance and to overcome loss by radiation and other causes, the remainder of the heat passing out as a flue loss.

avitamino'sis† (*Med.*). Av. A is xerophthalmia, keratomalacia, nyctalopia or night-blindness; Av. B$_1$ is beriberi; Av. B$_2$ complex is pellagra and any of certain types of dermatitis and anaemia; Av. C is scurvy; Av. D is rickets. Lack of B$_2$, A, and C also result in growth disturbances; lack of A and C in certain forms of anaemia; lack of A, D, and C in dental defects. In some animals Av. E is characterised by the retardation of growth of sexual organs. See articles on the several vitamins.

axle counter (*Sig.*). A device used in signalling systems for counting the number of axles or wheels entering or leaving a block section, with means for comparing these totals.

back filling (*Civ. Eng.*). Excavated material which is to be replaced.

back focal length (*Optics*). The distance from the last lens surface in an optical system to the focus.

backlocking (*Sig.*). The holding of a signal lever partially restored until completion of a predetermined sequence of operations, after which it can be fully restored.

back-water† (*Hyd. Eng.*). The reverse flow in a tributary when the level of the main stream rises sufficiently high above normal because of obstruction or floods.

back wave (*Radio*). *Spacing wave* (q.v.).

balance weights† (*Elec. Eng.*). Small weights threaded on radial arms on the movement of an indicating instrument, so adjusted that the pointer gives the same indication whatever the orientation of the instrument.

band (*Radio*). See **frequency—, service—*.**

banner signal (*Sig.*) A small pivoted-arm signal enclosed in a box, illuminated at night.

bar (*Sig.*). A bar, mounted parallel to a running rail, which, being depressed by the wheels of a train, is capable of holding points or giving information respecting the position of a train.

barysphere. The solid heavy interior core of the earth inside the lithosphere, probably consisting largely of iron, with other metals.

basic slag (*Agric*). Phosphate fertiliser, frequently used for grassland improvement.

batch box (*Civ Eng*). See **gauge box*.**

B.B.C. (*Chem. War.*). See **bromobenzyl cyanide*.**

bell-type furnace (*Ind. Heat.*). A portable inverted furnace or heated cover operated in conjunction with a series of bases upon which the work to be heated can be loaded and then left to cool after heat treatment. Gas and electricity are the most commonly used sources of heat. Employed chiefly for bright-annealing of non-ferrous metals and bright-hardening of steels.

bellows or **sylphon bellows** (*Phys.*). A flexible corrugated tube which can be used for transmitting motion from outside into an evacuated vessel.

belly (*Acous.*). The sound-radiating surface of a musical instrument of the viol family, set in forced vibration by the oscillation of the strings.

bending (*Optics*). Of a lens : the process of varying the shape of a lens without altering its power. If r_1 and r_2 are the radii of the lens surfaces, the shape is varied keeping $(1/r_1-1/r_2)$ constant.

berth section (*Sig.*). A section within the approach to a stop signal.

B.H.N. Abbrev. for Brinell Hardness Number, the figure obtained in the *Brinell hardness test* (q.v.).

binoculars (*Optics*). Properly BINOCULAR GLASS or BINOCLE. A field glass having two tubes, one for each eye. See **Galilean—*, prismatic—*.**

binomial coefficients (*Maths.*). The coefficients of the powers of x which occur in the binomial expansion.

binomial equation (*Maths.*). An equation of the form $x^n=1$.

binomial series (*Maths.*). The expansion of $(1+x)^n$ in the form of an infinite series, when n is negative and/or fractional, valid for $|x|$ less than 1, and conditionally $|x|=1$.

binomial theorem (*Maths.*). That, for all positive integral values of n, the expansion of

$$(1+x)^n=1+nx+\frac{n(n-1)}{2!}x^2+\ldots+x^n.$$

bios† (*Chem.*). Bios I (inositol, possibly a vitamin for mice, protecting against a nutritional alopecia) ; bios IIA (see **vitamin B_2 complex***) ; bios IIB (biotin, vitamin H, probably identical with 'co-enzyme R,' which stimulates the growth of micro-organisms in the root nodules of certain leguminous plants).

biotin (*Chem.*). **See vitamin H*.**

black spot (*Television*). See **tilt-and-bend.**

blast†. Generally, a hammer-like blow progressing through the air, caused by the build-up of the wave-front from an explosion, due to the increased wave-velocity at high amplitude in the neighbourhood of the explosion.

blind-alley. A *cul-de-sac* (q.v.).

blind drain (*San. Eng*). See **rubble drain*.**

blind flying, blind landing (*Aero.*). The flying and landing of an aircraft by a pilot who, because of darkness or fog, or for other reasons, cannot see his course clearly, and must rely on the indications of instruments, some of which are operated by specially transmitted radio beams (see **blind-landing system**).

blister gas (*Chem. War*). See **vesicant*.**

block (*Rail*) See **Scotch block*.**

block section (*Sig.*). The length of track in a railway system that is limited by stop signals.

block system (*Sig*). The system of controlling the movements of trains by signals and by independent communication between block posts, where are situated the instruments indicating the position of trains, condition of the block sections, and controlling levers for signals, points, etc It is *absolute* if one train alone is permitted within a block section, and *permissive* if trains are allowed to follow into a block section already occupied by a train

blood groups. A classification of human bloods based on their mutual agglutination reactions. The classification used for transfusion purposes involves four groups, AB (I), A (II), B (III) and O (IV), and depends on the presence or absence of two agglutinins (α and β) in the plasma and two agglutinogens (A and B) in the red cells. The simultaneous presence of α and A or β and B causes agglutination. Hence there are four groups as follows :

Group.	*Agglutinogens.*	*Agglutinins.*
AB	A and B	o
A	A	β
B	B	α
O	O	$\alpha+\beta$.

Other classifications depend on similar agglutination systems (e.g. M and N factors, Rh. factor). Blood groups are inherited according to Mendelian laws.

Bloom gelometer (*Phys.*). A standard apparatus for determining the force required to depress a plunger a definite distance into a jelly, thus indicating the strength of the jelly.

B.N.A. (*Anat.*). *Basle Nomina Anatomica*, an international anatomical terminology accepted at Basle in 1895 by the Anatomical Society to standardise terms used in describing parts of anatomy.

bogie-type furnace (*Ind. Heat*). A furnace provided with a completely portable hearth supported on a bogie or by other means, enabling the work to be loaded and unloaded externally. A *live bogie* is one arranged to receive the hot gases directly from burners positioned in the side walls of the furnace, when the hearth of the bogie is raised to the working temperature, thus resembling an under-fired furnace. The alternative is a direct-fired furnace with the bogie placed in circuit with the waste-gas flues.

bone china (*Pot.*). See **china.**

bootleg (*Sig.*). The protecting tube-like projection for bringing electrical circuit wires from buried conduit or the ground.

Bouchard's index, boo-shar' (*Nut.*). A French index—weight in kilograms divided by height in decimetres ; the anthropometric segment used in measurements of the human frame in nutrition experiments.

box antenna (*Radio*). See **T.W. antenna*.**

bran (*Foods*). The outer protective layers of grain, usually wheat, after removal of the endosperm.

breakdown signal (*Teleph.*). A signal which releases a connection to a subscriber if he elects to take an offered call. See **trunk offering***, **offering signal***.

breakdown, breaking (*Phys.*). Of an emulsion: the re-union of the finely dispersed particles and their separation from the medium with which they form an emulsion.

break rolls (*Flour-Milling*). Grooved chilled-steel rollers, set in pairs, by means of which wheat is sheared open before separation of various parts of the grain.

breathing (*Cinema.*). A noise arising in noise-reduction systems when timed to operate too fast. See **hush-hush***.

bridle-path (-road, -way) (*Highways*). A road for animal or pedestrian traffic. Also called DRIFTWAY, DROVE, DROVEWAY, PACKWAY.

brig (*Maths.*). A proposed unit of ratio, equal to a ratio of 10 : 1; so called after Briggs, the inventor of logarithms to the base 10.

broadside antenna (*Radio*). An antenna array in which the main direction of the reception or radiation of electromagnetic energy is normal to the line of radiating elements.

bromobenzyl cyanide (*Chem. War.*). Formula Ph·CHBr·CN. Very persistent tear gas; oily brown liquid with bitter sweet smell. Mortality product 7500. Abbrevs. **B.B.C.** (Britain), **C.A.** (America); French name, CAMITE.

bulldozer (*Civ. Eng.*). A power-operated machine, provided with a blade for spreading and levelling material. Also called ANGLEDOZER.

burner (*Ind. Heat*).

See **drip-proof—***
gas and pressure air—*
impact—*
industrial gas—*
oil (or fuel oil)—*
piloted-head gas—*
ribbon-flame—*
sealing-in—*
tunnel—*
two-stage pressure gas—*
universal combustion—*

burner firing block (*Ind. Heat.*). A unit shape, made from refractory material, that fits into a furnace wall at the burner position, having a nozzle-protecting recess at back and a tunnel on the firing side. The tunnel serves to stabilise combustion conditions and to ensure positive flame retention after reaching a state of incandescence at or above the ignition temperature of the air-gas or oil-air mixture. Also called QUARL in oil-firing practice.

burner loading (*Ind. Heat.*). The quantity of potential heat that can be liberated efficiently from a burner. Usually expressed in B.Th.U. per hour.

burner turndown factor (*Ind. Heat.*). The minimum gas-rate at which a burner is capable of stable flame propagation without the flame flashing back to the air-gas mixing point or blowing off from the burner nozzle or head. The factor usually is expressed as a percentage of turndown in relation to the maximum gas-rate of the burner.

busy-flash signal (*Teleph.*). The return signal to indicate *outlet busy* by means of a supervisory lamp.

butter-rock (*Min.*). Halotrichite.

C.A. (*Chem. War.*). See **bromobenzyl cyanide***.

calcif'erol (*Chem.*). Vitamin D_2.

calorific value† (*Heat.*). Since most fuels contain hydrogen, which burns to form water vapour, it is possible to have two heating values, namely, *gross* and *net*. The *gross heating value* of a fuel is the total heat developed after the products are cooled back to the starting point, and all the water vapour produced condensed. The *net value* is the heat produced on combustion of the fuel at any given temperature (with gas at 60° F.), with the flue products cooled to the initial temperature, the water vapour remaining uncondensed.

camber (*Highways*). The curvature given to a road surface to prevent the accumulation of water.

camite (*Chem. War.*). See **bromobenzyl cyanide***

camouflet, kam'oo-flā (*Mil.*). A concealed cavity caused by the explosion of a bomb or shell under the surface of the ground. Frequently contains toxic gases.

candolumines'cence (*Phys.*). Luminescence, beyond normal light radiation depending on temperature alone, evinced by certain slightly impure substances when placed in contact with the flame from the burning of hydrogen.

C.A.P. (*Chem. War.*). Tear gas. See **chloracetophenone***.

carbenes (*Chem.*). Such constituents of asphaltic material as are soluble in carbon disulphide but not in carbon tetrachloride. See **malthenes***, **asphaltenes***.

carotenoids (*Chem.*). A group of yellow, orange, or red plant pigments whose structure resembles that of the carotenes but does not necessarily include an unsubstituted β-ionine ring (or even a ring at all). Those with an unsubstituted ring can act as vitamin A precursors (e.g. cryptoxanthin) but those with only a substituted ring (e.g. xanthophyll) or no ring (e.g. lycopene) can not. Carotenoids are also found in animal structures, e.g. feathers.

carot'id arteries (*Zool.*). In Vertebrates, the principal arteries carrying blood forward to the head region.

carotid gland (*Zool.*). A small ductless gland situated at the bifurcation of the carotid artery in Vertebrates.

carrier suppression (*Radio*). (1) The transmission of a modulated carrier wave with the carrier suppressed, with re-insertion of the carrier at the receiving end.—(2) Suppression of the carrier from the radiating system when not required for modulation, especially on board ship to protect the receivers from noise arising from variability of eddy-current paths in the rigging, etc. Cf. *floating carrier system*.

Carte'sian co-ordinates (*Maths.*). (1) Of a point in a plane: the distances x and y of the point from two axes OY and OX, measured parallel to OX and OY respectively.—(2) Of a point in space: the distances x, y, and z of the point from the planes YOZ, ZOX, and XOY, measured parallel to OX, OY, and OZ, respectively.

catch points (*Rail.*). Trailing points placed on an up-gradient for the purpose of derailing rolling stock accidentally descending the gradient. See **spring points***.

cate'nary (*Maths.*). The plane curve assumed by a perfectly flexible string or chain supported at both ends, viz. (1) *common* (or *simple*) *catenary*, that formed by a uniform chain hanging under its own weight; (2) *parabolic catenary*, that formed by a light and uniform chain supporting continuously a uniform horizontal load; (3) *catenary of uniform strength*, that formed by a graded chain equally likely to break at any point.

centre line (*Eng.*, *Surv.*, etc.). A datum line on a drawing, map, or survey from which all dimensions are measured. In engineering drawings, axes of rotation or symmetry are taken as principal or subsidiary centre lines.

ceratoid cusp (*Maths.*). See **cusp***.

characteristic curves (*Maths.*). The family of curves representing the complete primitive of a differential equation.

chemical engineering. Design, construction, and operation of plant and works in which matter undergoes change of state and composition.

chemical warfare. The use in war of any solid, liquid, or gaseous chemical, other than explosive and incendiary material, for harassing and disabling enemy personnel.

chem'urgy (*Chem.*). (1) The application of chemistry to agriculture.—(2) Agriculture prosecuted for chemical purposes, e.g. potato-growing for the purpose of making industrial alcohol by fermentation. Chiefly U.S.A.

chloracetophenone (*Chem. War.*). $C_6H_5 \cdot CO \cdot CH_2Cl$. White crystalline solid, subliming at moderate heat to give a non-persistent particulate cloud. Lachrymatory. Abbrevs. **C.A.P., C.N.** (U.S.A.).

chlorocruorin†. Chlorocruorin is a conjugated protein containing a prosthetic group similar to, but not identical with, reduced haematin.

chloropicrin (*Chem. War.*). $CCl_3 \cdot NO_2$. A lung-irritant non-persistent war gas. Yellow oily liquid. Musty sweetish smell, with lachrymatory properties. Mortality product 2000.

chromidro'sis (*Med.*). The excretion of sweat containing pigment.

chromo-therapy (*Med.*). Electro-therapeutic treatment with luminous rays of specific colours.

chrysother'apy (*Med.*). Treatment by means of gold injections.

circular points (*Maths.*). Two conjugate imaginary points on the line at infinity in a plane, common to all circles in the plane; usually denoted by I and J.

class (*Maths.*). Of a curve or surface: the number of tangents, real, coincident, or imaginary, which can be drawn from a point to the curve; or the number of tangent planes, real, coincident, or imaginary, which can be drawn through a line to the surface.

class A, AB, B, C amplifiers† (*Elec. Comm.*). The suffix 1, e.g. A-1, denotes that grid current does not flow during any part of the cycle. The suffix 2, e.g. AB-2, denotes that grid current does flow through part of the cycle.

clay† (*Geol.*). In the mechanical analysis of soil, clay, according to international classification, has a grain-size less than 0·002 mm.

clear signal (*Teleph.*). Any signal sent by the operator in taking down a connection, or by a subscriber replacing his receiver, thus releasing apparatus and circuits.

click (*Acous.*). A transient noise, characterised by having a wide distribution of energy in its spectrum, without sufficient localisation of such energy to give it a definite character.

clicks, key (*Radio*). See **key clicks*.**

close (*Highways*). A *cul-de-sac* (q.v.).

C.N. (*Chem. War.*). See **chloracetophenone*.**

co-acting signal (*Sig.*). A signal adjacent to a main signal, and repeating its indications for greater convenience of observation.

coasting of temperature (*Ind. Heat.*). The rise above correct predetermined operating temperatures in furnaces when the fuel supply has been checked or shut-off; due to excessive thermal storage in the furnace brickwork through prior overheating. In gas-fired and oil-fired furnaces the fault usually lies with oversize burners. See also **optimum gas rate*.**

coaxial line (*Radio*). See **concentric tube feeder.**

Coddington lens (*Optics*). A magnifying lens cut from a solid piece of glass. It has concentric spherical surfaces of equal radius at the ends, and a V-cut round the centre of its length to act as a stop at the centre of the sphere.

co-factor (*Maths.*). If the expansion of the *determinant** (q.v.) is written as $a_1(b_2c_3-b_3c_2)$, etc., a_1 and the minor $(b_2c_3-b_3c_2)$ are *co-factors.*

cold junction. The junction of thermocouple wires with conductors leading to a thermo-electric pyrometer or other temperature indicator or recorder.

cold-set jelly. In flour confectionery, the jelly produced when a sweetened pectin syrup is blended with a suitable acid such as tartaric.

collineation (*Maths.*). An analytical transformation having a (*1, 1*) correspondence between points, collinear points being projected into collinear points.

colloidal graphite (*Eng.*). An extremely fine dispersion of ground graphite in oil. The graphite lowers the surface tension of the oil without lowering the viscosity; thus the oil spreads more easily, taking the graphite to rough surfaces where it can build up a smoothness. See **Aquadag, Oildag.**

colophonic acid (*Chem.*). *Abietic acid* (q.v.). It is the chief constituent of colophony resin.

colorimator (*Light*). See **trichromatic colorimator*.**

colour code (*Chem. War.*). Used to designate war gases:—*yellow cross*, vesicants; *blue cross*, sternutators; *green cross*, lung irritants; *white cross*, lachrymatory gases.—(*Elec. Comm.*, etc.) A convention for the visual identification of resistances, condensers, wires, etc., by combination of colours.

combine (*Agric. Mach.*). A harvesting machine which cuts, threshes, and ejects the straw on to the land for subsequent collection or burning in.

combustion. The chemical union of oxygen with gas, accompanied by the evolution of light and rapid production of heat.

See **perfect—* submerged—* surface—***

combustion tube furnace (*Ind. Heat.*). Laboratory appliance having one or more horizontal refractory tubes heated by gas or electricity; used chiefly for the estimation of carbon content of steels. Working temperatures are between 1100° and 1300° C.

commercial gases (*Ind. Heat.*). Typically these comprise town gas, coke-oven gas, hydrogen, producer gas, blast-furnace gas, blue water gas, carburetted water gas, natural gas, reformed natural gas, oil gas, butane, propane, and various mixtures of any of these gases.

compaction (*Civ. Eng.*). The operation of inducing a closer packing in loose material, e.g. shaking or pressing sand.

complete combustion (*Ind. Heat.*). A process whereby the whole of the fuel is burned without trace of unburned gases in the products of combustion, a condition usually accompanied by excess air in the flue products. Cf. *perfect combustion.*

complete primitive (*Maths.*). The solution of a differential equation containing the full number of arbitrary constants.

complex number (*Maths.*). A number comprising a real number added algebraically to an imaginary number. See ***j*, algebraic number*, conjugate complex numbers*, Argand diagram*.**

component (*Teleph.*). Any part of a signal (including a space) which is uniform in frequency and amplitude during its allotted duration.

compost (*Hort.*). Any known mixture of soils for potting plants, for use in frames or green-houses, or for ordinary garden purposes. The main constituent is obtained from leaves and other vegetable matter, which has been left to rot in the open air, assisted by chemicals.

compound signal (*Teleph.*). A signal comprising more than one frequency, contrasted with a simple signal of one frequency only.

compressed air inspirator (*Ind. Heat.*). A device of the injector type, used in conjunction with gas burners of the pressure-air class, by which a stream of compressed air is directed through a venturi throat to inspirate the additional combustion air from surrounding atmosphere, thus breaking down the initial pressure to a final pressure of a few inches water-gauge.

conche (*Confectionery*). A machine in which melted chocolate is agitated for prolonged periods to give a smooth product.

conjugate complex numbers (*Maths.*). Two complex numbers are conjugate if their real parts are equal, and their imaginary parts equal but of opposite sign.

conjugate, harmonic (*Maths.*). See **harmonic conjugate***.

conjugate point (*Maths.*). An isolated point on a curve, the co-ordinates of which satisfy the equation of the curve, but through which no branch passes.

connected domain (*Maths.*). A domain in which the value of the variable can pass from one point to another within the domain.

constant-amplitude recording (*Acous.*). In gramophone recording, the technique whereby the response of recording, i.e. amplitude of the track divided by the root of the applied power, is independent of frequency. Cf. *constant-velocity recording*.

constituent (*Maths.*). Of a determinant: one of the numbers in the square array which forms the determinant. Also called ELEMENT.

constringence (*Optics*). The inverse of the dispersive power of a medium. The ratio of the mean refractive index diminished by unity to the difference of the refractive indices for red and violet light.

contex (*Chem. War.*). An additional filter, consisting of closely packed feathers, etc., fitted on a respirator to give protection against toxic smokes.

continued fraction (*Maths.*). A terminated or infinite fraction of the form

$$a+\cfrac{1}{b+\cfrac{1}{c+\cfrac{1}{d+\dots}}} \quad \text{or } a+\frac{1}{b+}\,\frac{1}{c+}\,\frac{1}{d+}\,\dots$$

continuous diffusion. A counterflow system of extracting sugar from beet whereby fresh beet slices (cosettes) are extracted by hot dilute sugar solution, and partially extracted slices are finally extracted with fresh hot water.

convergence (*Maths.*). See **absolute convergence***.

conurbanisation (*Town Planning*). The building up of an area into a town.

convergent (*Maths.*). A *convergent* to a continued fraction is the fractional result obtained by stopping at a given stage in the *continued fraction** (q.v.).

convergent sequence (*Maths.*). A sequence in which members approach a finite limit as the number of terms tends to infinity.

co-ordinates (*Maths.*). Numbers which determine the position of points or lines relatively to an arbitrary frame of reference.

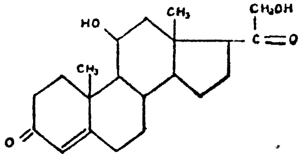
See **Cartesian—*** **polar—***

co-ordinate axes (*Maths.*). A frame of reference consisting of (1) two intersecting lines in a plane, or (2) three non-co-planar lines meeting in a point.

core (*Civ. Eng.*). A cylindrical sample of material obtained by driving a hollow-core drill into strata to ascertain the variation of composition.

correlation (*Maths.*). An analytical transformation giving a (*1, 1*) correspondence between points in one plane, or space, and lines or planes in another plane, or space, which may coincide.

corticosterone (*Chem.*). One of the hormones of the adrenal cortex. It is a steroid with the structure:



Other active substances from the cortex include *dehydrocorticosterone* in which the OH attached to the rings is replaced by oxygen, *desoxycorticosterone* in which this OH is replaced by hydrogen (and which can be obtained by partial synthesis and is used therapeutically in Addison's disease, etc.), *hydroxycorticosterone* with an extra hydroxyl group, etc. These substances all prolong the life of adrenalectomised animals, controlling the sodium and water metabolism and being concerned in glycogen formation, etc.

counter-transference (*Psycho-an.*). A state of emotional reaction, partly unconscious, in which there are positive (love) or negative (hate) feelings in the analyst towards the analysand.

county road (*Highways*). A main road maintained by county authorities, as contrasted with a *trunk road* (q.v.).

crazing† (*Highways*). The cracking of a road surface.

crepe rubber (*Chem.*). Raw, unvulcanised sheet rubber, not chemically treated in any way.

cross fall (*Highways*). The difference in vertical height between the highest and lowest points on the cross-section of a road surface. Also, the average rate of fall from one side to the other, or from the crown to a side of a road.

cross-over (*Thermionics*). In an electron lens system, the location where the streams of electrons from the object pass through a very small area, substantially a point, before forming an image.

cross ratio (*Maths*). The cross ratio of four co-linear points (*ABCD*) is equal to *AB.CD*/*AD.CB*. The cross ratio of a plane pencil of four lines, or of a pencil of planes, is that of the points of intersection of any transversal.

crunode (*Maths.*). A node at which the tangents to the two branches are real and distinct. See **acnode***.

culvert† (*Civ. Eng.*). A similar construction for the total enclosure of a drain or watercourse along its length.

curvilinear asymptote (*Maths.*). A curve which has double contact with a given curve at infinity. Hence, a curve whose distance from a given curve approaches zero as the distance from the origin tends to infinity.

cusp (*Maths.*). A multiple point on a curve where two branches touch but through which the branches do not pass. A *ceratoid cusp* is one where both branches lie on the same side of the common tangent, a *ramploid cusp* is one where the two branches lie on opposite sides of the common tangent.

cyclic curve (*Maths.*). The plane locus of a fixed point on a circle which rolls without slipping, viz. (1) *cycloid*, when the point is on the circumference and the circle rolls on a straight line; (2) *trochoid*, when the point is on a radius and the circle rolls on a straight line; (3) *epicycloid*, when the point is on the circumference of a circle which rolls on the outside of another circle; (4) *hypocycloid*, when the point is on a circle which rolls on the inside of another circle; (5) *Steiner's tricusp*, the *hypocycloid of three cusps*, the rolling circle having a radius one-third of the radius of the fixed circle; (6) *pericycloid*, when the point is on the circumference of a circle which rolls on another circle within it.

cycloid (*Maths.*). See **cyclic curve***.

D method or operator (*Maths.*). Used in determining the particular integral. D represents d/dx, and, under certain conditions, can be treated as an ordinary algebraic function.

D.A. (*Chem. War.*). Ph_2AsCl. One of the toxic smokes. Mortality product 4000 to 15,000 for ten minutes.

Dag. See **Aquadag, Oildag.**

D.C. (*Chem. War.*). Ph_2AsCN. One of the toxic smokes. Mortality product 4000 to 10,000 for ten minutes.

dead-hand (*Med.*). A disease of pneumatic-drill operators. There is cyanosis, anaesthesia of finger-tips, and sometimes bone absorption.

deep therapy (*Radiology*). Treatment of disease by deep X-rays.

defecation (*Sugar-refining*). Removal of impurities from a sugar solution—usually by coagulating the albuminoids and neutralisation with milk of lime.

deficiency (*Maths.*). The number by which the number of singular points of a curve is less than the maximum possible for a curve of that order.

definite integral (*Maths.*). If $F(x)$ equals $\int f(x)dx$, then $\int_a^b f(x)dx = F(b) - F(a)$ is the *definite integral* over the range a to b.

derailer (*Sig.*). An arrangement of rails for deliberately turning off runaway trucks from running rails.

derivative (*Maths.*). See **differential coefficient***.

derris (*Chem.*). An extract of the root of the *Derris* species of tree, found in the tropics, of which rotenone is the chief toxic constituent; highly effective insecticide, also used by natives as a fish poison.

describer (*Sig.*). The apparatus, either in signal cabins or for public use, which indicates movements, destinations, etc., of trains.

determinant (*Maths.*). A square array of numbers representing the algebraic sum of the products of the numbers, one from each row and column, the sign of each product being determined by the number of interchanges required to restore the product to its proper order, e.g.

$$\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix} = \begin{array}{l} a_1b_2c_3 - a_1b_3c_2 \\ +a_3b_1c_2 - a_2b_1c_3 \\ +a_2b_3c_1 - a_3b_2c_1 \end{array}$$

See **matrix*** and **adjugate determinant***.

detour (*Highways*). See **loop road***.

Dettol (*Chem.*). A proprietary non-toxic and non-irritant germicide of which the active principle is chloroxylenol dissolved in a saponified mixture of aromatic oils, e.g. terpineol.

devil (*Civ. Eng.*). A travelling fire-box with a horizontal grate for heating or burning road surfaces, and for heating tools used in finishing asphalting.

Diakon (*Plastics*). A proprietary acrylic resin in the form of moulding powder. Similar to *Perspex*.

dielectric guide (*Radio*). A possible transmission path of very-high-frequency electromagnetic energy functionally realised in a dielectric the dielectric constant of which differs from its surroundings.

diet (*Nut.*). The human intake of food and liquid. According to age, size and activity, etc., the diet should consist of minimum quantities of proteins, carbohydrates, fats, mineral salts, vitamins and water, to ensure adequate available energy, repair and growth of the body tissues, protection from general and specific diseases, potency for reproduction, and sufficient moisture to regulate the body temperature.

differential coefficient (*Maths.*). If $y = f(x)$, the differential coefficient, or derivative, of y with respect to x is given by

$$\underset{h \to 0}{Lt} \frac{f(x+h) - f(x)}{h},$$

if this limit exists, and is written as dy/dx, $f'(x)$, or D_xy.

differential equation (*Maths.*). An equation involving total or partial differential coefficients. *Ordinary differential equation*, a differential equation involving only one independent variable. *Exact differential equation*, an equation of the form

$$R + N\frac{dy}{dx} = 0,$$

which can be solved by direct integration, where R and N are functions of x and y.

differentiation (*Maths.*). The operation of finding a differential coefficient.

diffusion flame (*Ind. Heat.*). A long luminous gas flame holding practically a constant rate of radiation for its designed length of travel, together with uniform precipitation of free carbon, diffusion occurring between adjacent strata of air and gas.

diplex transmission† (*Radio*). The modulation of a carrier with two independent signals.

direct-fired (*Ind. Heat.*). Said of a furnace in which the fuel is delivered directly into the heating chambers.

directivity angle (*Radio*). The angle of elevation of the direction of maximum radiation or reception of an electromagnetic wave by an antenna.

director (*Radio*). A free element in front of an antenna array which assists the directivity of the array in the same direction.

directrix (*Maths.*). Of a conic: the intersection of the plane of the conic with the plane of the circular contact of the cone and the focal sphere. See **ellipse, hyperbola***, and **parabola.**

disbudding (*Hort.*). The removal of some of the buds on a plant in order to assist the development of the remaining buds.

discriminant (*Maths.*). The discriminant of an equation is a special function of the roots of the equation, expressible in terms of the coefficients. If it equals zero, at least two of the roots are equal.

dispersion (*Maths.*). The mode of distribution of observed values, as exhibited by a frequency-distribution curve. The dispersion may be symmetrical or asymmetrical, according to the symmetry or otherwise of the frequency-distribution curve about the modal, or most frequent, value.

dispersion index (*Maths.*). See **standard deviation.**

dissociation of gases (*Ind. Heat.*). A chemical combustion reaction occurring at the highest temperature of the flame where carbon dioxide and water vapour tend to dissociate into carbon monoxide and hydrogen and oxygen respectively. In high-temperature furnaces the dissociation of gases in this way forms a scaling element which cannot be directly traced in analyses of furnace atmospheres or flue gases.

district road (*Civ. Eng.*). A road maintained by the authorities of a district. See **county road***, **trunk road.**

divergent sequence (*Maths.*). A sequence in which members approach an infinite limit.

divider (*Bread-making*). A machine used for automatically cutting dough into pieces of predetermined size.

D.M. (*Chem. War.*). *Adamsite** (q.v.).

doll (*Sig.*). A small arm or post for carrying signalling apparatus, mounted on a gantry or bridge.

domain (*Maths.*). Of the coefficients of an equation:

any number which may be found by rational operation on the coefficients.

See **connected—***
multiply-connected—*
simply-connected—*

donner effect (*Cinema.*). Non-linear photographic distortion occurring in variable-area recording for sound-films.

double series (*Maths.*). A series of numbers which may tend to infinity in two independent ways.

double trenching (*Agric.*). A digging technique whereby the effective depth for root penetration is increased and the upward passage of water facilitated.

dough (*Bread-making*). The product obtained by kneading together flour or meal, yeast, salt and water into a plastic mass.

drag roller (*Cinema.*). A sprocket roller for guiding film through a cinematograph or sound-on-film mechanism, which, by means of an internal friction arrangement, puts tension in the film.

draughtsman, draftsman (*Eng.*). One who makes engineering drawings (of models, articles to be made, electrical circuits, plans, etc.), from which prints, usually blue-prints, are made for actual use. See **tracing***. The draughtsman who makes such drawings frequently designs the details, the main design being laid down by an engineer or architect.

drip-proof burner (*Ind. Heat.*). A type of industrial gas burner designed to prevent the choking of flame ports or nozzles by foreign matter that may drip or fall on to the burner.

drove, droveway (*Highways*). See **bridle path***.

drug. Any substance, natural or synthetic, which has a physiological action on a living body, especially when used for the treatment of disease or the alleviation of pain.

Dühring's rule (*Chem. Eng.*). If the temperatures at which two chemically similar liquids have the same vapour pressure be plotted against each other, a straight line results, i.e. $t'=\alpha+\beta t$, where t' and t are the boiling points of the two liquids on the same scale of temperature, and at the same pressure, and α and β are constants.

dyke† (*Hyd. Eng.*). A similar bank remote from a river, built to control flooding. In Scotland, a stone wall, esp. one constructed without mortar (*dry-stane dyke*).

dysadaptation (*Med.*). Marked reduction in rapidity of adaptation of the eye to suddenly reduced illumination, as in vitamin A deficiency.

dysla'lia (*Med.*). Articulation difficulty due to defects in speech organs.

earth system (*Radio*). See **ground system***.

eccentricity (*Maths.*). Of a conic: the ratio of the distances of a point on a conic from a focus and the corresponding directrix. See **ellipse, hyperbola***, and **parabola.**

electric eye (*Thermionics*). A miniature cathode-ray tube in a radio receiver which exhibits a pattern determined by the rectifier output voltage depending on the received carrier, thus assisting in tuning the receiver.

electro-desiccation (*Med.*). Treatment whereby diseased tissue is destroyed by the application of sparks from a high-frequency current generator Also called FULGURATION.

electromagnetic horn (*Radio*). A metal horn designed to radiate a beam of ultra-short-wave energy originated by a dipole within the horn.

electron volt (*Thermionics*). The unit of energy associated with an electron which has freely dropped its potential by one volt.

element (*Maths.*). See **constituent***.

elliptic integrals (*Maths.*). Integrals which can be connected with the length of the arc of an ellipse, but which can be evaluated only by approximate methods.

emergency gas producer (*Ind. Heat.*). A small unit for generating clean cool producer gas from anthracite or coke, for emergency (e.g. war-time) use on road transport vehicles and for industrial heating operations in the event of failure of the normal town gas services.

end-fire antenna array (*Radio*). An antenna array in which the main direction of the reception or radiation of electromagnetic energy is in line with the elements of the array. Also ALIGNMENT ANTENNA ARRAY, END-ON ANTENNA ARRAY.

end gauge (*Eng.*). A gauge consisting of a metal block or cylinder the ends of which are made parallel within very small limits, the distance between such ends defining a specified dimension. See **limit gauge.**

enema† (*Med.*). See **opaque enema***.

entrance pupil (*Optics*). The diaphragm, or image of the diaphragm in the object space, which limits the diameter of the cone of rays entering an optical system.

envelope (*Geom.*). Of a family of plane curves: the locus of the points of intersection of consecutive members of the family.

epicycloid (*Maths.*). See **cyclic curve***.

epuré, ā-pu-rā' (*Civ. Eng.*). Refined natural asphalt from which volatile matter and water have been sufficiently removed.

equitonic scale (*Acous.*). The musical scale in which the main notes progress by whole-tones, as contrasted with the Pythagorean diatonic, which uses both whole-tones and half-tones.

equivalent focal length (*Optics*). The focal length of a thin lens which is equivalent to a thick lens in respect of the size of image it produces.

ethyl iodoacetate (*Chem. War.*). $CH_2I\cdot COOEt$. Oily dark-brownish violet liquid (colourless when pure). Persistent lachrymator; odour of 'pear-drops.' Mortality product 1500. Abbrev. **K.S.K.**

Euler's constant (*Maths.*). The limit of

$$\sum_{1}^{n}\frac{1}{n}-\log_e n, \quad \text{as } n\to\infty.$$

excess air (*Ind. Heat.*). An excess of the volume of air required for theoretically correct combustion, passing through the combustion space or chamber of a furnace or other heating appliance and leaving with the flue gases.

exciter† (*Radio*). Also, the section of an array, other than the reflector, which is driven by the power from the transmitter.

exhalted carrier (*Radio*). In a frequency-demodulating or homodyne radio receiver, the resulting carrier of the modulation when a locally generated carrier, of exactly the same frequency as that in the received signal, is added to this signal.

explicit function (*Maths.*). A variable x is an explicit function of y when x is directly expressed in terms of y. See **implicit function***.

extraordinary ray (*Light*). Of the two plane-polarised components into which a ray is split in passing through a doubly refracting crystal, the extraordinary ray is the one for which the ratio of the sine of the angle of incidence to the sine of the angle of refraction is not constant, and for which the incident ray, the normal to the surface, and the refracted ray may not lie in one plane.

face-on (*Mining*). Said of the working of a mine in a direction parallel to the natural cleats. Opposite of *end-on*.

facing points (*Sig.*). See **points***.

far point (*Optics*). The object point conjugate to the retina when accommodation is completely relaxed. This is at infinity in emmetropia, between infinity and the eye in myopia, and behind the eye in hyperopia.

fats† (*Chem.*). Fats are essential components of the human diet, repairing the wastage of human fat, and, by breakdown and oxidation, providing some of the required energy.

fertiliser (*Agric.*). A specific chemical for application to the soil to rectify its growth-promoting qualities for various types of plants, and for adjusting its acidity or alkalinity. Typical fertilisers are sulphates and nitrates of ammonia or sodium, superphosphate of lime, basic slag, lime See **manure***, **liquid manure***.

fertility rate (*Sociology*). The criterion by which the numerical stability of a population is measured. It is unity if, on the average, each female produces one fertile female child. If it is greater than unity the population increases; if less than unity (which condition obtains in nearly all white-race countries), the population declines.

fiducial points (*Elec. Eng.*). The points on the scale of an indicating instrument which have been located by direct calibration, as contrasted with the intervening points, which are inserted by interpolation or sub-division.

field (*Maths.*). Of coefficients: comprises all numbers within the *domain** (q.v.) of the coefficients.

field lens (*Optics*). A lens placed in or near the plane of an image to ensure that the light in the outer parts of the image is directed into the subsequent lenses of the system and thus ensure uniform illumination over the field of view.

filtration (*Highways*). Authorised turning of certain traffic from a carriageway while the main stream of traffic is held up.

fishbone antenna (*Radio*). An end-fire array comprised of vertical resonators spaced along a transmission line.

flame blow-off factor (*Ind. Heat.*). Associated with the performance of gas burners, this expresses the relation between the velocity of combustible mixture and the rate of flame propagation, the latter varying appreciably with gases of different composition. See also **burner firing block***, **flame retention***, **piloted-head burner*** and **tunnel burner***.

flame failure control (*Ind. Heat.*). A device comprising a direct-flame thermostat with interconnected relay valve, which provides a constantly burning pilot flame for igniting the main gas burners, and automatically shuts off the gas supply to the main burner in the event of the pilot flame becoming extinguished through any cause.

flame propagation, rate of (*Ind. Heat.*). The rate of flame propagation of gases is the velocity or speed of a flame. This is dependent upon the combustion characteristics of the gas used in relation to the ratio of air added to the gas before or after ignition. Also described as FLAME VELOCITY and IGNITION VELOCITY.

flame retention (*Ind. Heat.*). The ability to retain a stable flame with gas burners at all rates of gas flow, irrespective of adverse combustion characteristics and conditions. See also **burner firing block***, **flame blow-off factor***, **piloted-head burner*** and **tunnel burner***.

flame temperature (*Ind. Heat.*). Usually the temperature at the hottest spot of a flame. Flame temperature measurement is normally performed by means of a thermo-electric temperature indicator connected to a special thermocouple having exposed wires of dissimilar metals at its tip. Calculated flame temperatures can be closely approximated by use of accepted equations having factors based upon combustion characteristics and flue gas analyses.

flame-thrower (*Mil.*). Apparatus designed to project a jet which ignites at the point of impact; the jet may consist of 70% water-gas tar (flash-point about 120° C.) and 30% crude benzine (flash-point about 26° C.).

flame trap (*Ind. Heat.*). A device inserted in pipe lines carrying air-gas mixture of a combustible or self-burning nature to arrest the flame in the event of a flashback (or backfire) occurring at the burner.

flame velocity (*Ind. Heat.*). See **flame propagation (rate of)***.

flanks† (*Build.*, *Civ. Eng.*). Also, the two outer quarters of the width of a carriageway. Also called HAUNCHES, QUARTERS, SHOULDERS.

flash-back chamber (*Ind. Heat.*). In certain types of acetylene generators, a compartment filled with water which serves the dual purpose of washing the gas and forming a water seal between the service pipe and the acetylene in the generator.

Flesch's index (*Nut.*). The measurement of the carpus, or wrist girth, in millimetres, an index which relates the individual to the average.

flexible progressive (*Sig.*). Said of a traffic-light system in which changes of aspects can be effected at any time within the cycles of operation as determined by a master controller

floating temperature control (*Ind. Heat.*). A condition of operation obtained with a furnace by the use of an automatic temperature controller which functions in conjunction with electrically operated valves. The exact rates of fuel and air flows are thus maintained to give a constant uniform working temperature, as opposed to the more commonly used method of 'on-off' control.

flue baffler (*Ind. Heat.*). An inverted cowl situated above the outlet of the flue of a gas-fired furnace or other heating appliance, and connected to ventilating piping, by which the combustion products are exhausted to open atmosphere, enabling the correct degree of flue draught to be constantly maintained irrespective of changing atmospheric conditions.

flue gas temperature (*Ind. Heat.*). The temperature of flue gases at the point in the flue where it leaves the furnace or other appliance.

flutter echo (*Acous.*). A multiple echo caused when an impulsive sound is reflected between parallel surfaces at a sufficient distance apart for the individual echoes to be appreciated by the ear.

focal sphere (*Maths.*). The sphere inscribed in a cone and touching a plane section of the cone in a point (called the focus of the conic section).

focometer (*Optics*). An instrument for measuring the focal length of a lens.

focus (*Maths.*). The point of contact of the focal sphere. See also **ellipse**, **hyperbola***, **parabola**.

fondant (*Confectionery*). A white plastic product made by boiling a sugar-water syrup to 245° F., cooling and creaming.

Foucault knife-edge test, foo-kō (*Optics*). A method of testing the aberrations of a lens or mirror by placing a knife-edge in the focus of a point source and observing the pattern of light and shade as seen in the lens when an observer places his eye immediately behind the knife-edge.

fouling point (*Sig.*). The location before the meeting of two tracks where the loading-gauge outlines come into contact.

Fourier half-range series† (*Maths.*). A Fourier series with only sine or cosine terms, valid for x between 0 and π.

Franzen's index (*Nut.*). A complex index for nutrition studies, involving the relation between the weight of the subject, the muscular development, as exhibited by arm girth, the development of the subcutaneous cellular tissue at the surface of the biceps, the vitality index, and Pryor's index.

frequency distribution curve (*Maths.*). A curve exhibiting a series of observations of values such that the base shows the values, the ordinates from which show the number of times these values occur.

frequency tolerance (*Radio*) The extent to which the frequency of the carrier of a transmission is permitted to deviate from its allocation.

Freon (*Refrigeration*). Dichlorodifluoromethane, CCl_2F_2, non-inflammable; suitable for use in refrigerators for air-conditioning, ships, etc.; no effect on ordinary domestic articles, and (up to 20% concentration in air) no odour.

fretting (*Highways*). Break-up of the road surface because of binder failure.

Friedman's test (*Med.*). See **Ascheim-Zondek test***.

frit (*Pot.*). Calcined flint, sand, or glass, ground finely after fusing, and used in body pastes or glazes so as to reduce, by chemical combination, any tendency of the ceramic materials to dissolve in water.

fulguration (*Med.*). See **electro-desiccation***.

function (*Maths.*). Of one or more variables: an expression in mathematical form involving variables. Usually written in the form $f(x)$.

See **algebraic—***
complementary—
explicit—*
gamma—*
implicit—*
integral—*
inverse—*
inverse trigonometrical—*
transcendental—*
trigonometrical —*

furnace (*Ind. Heat*).

See **bell-type— ***
bogie-type—*
combustion-tube—*
oven-type—*
radiant-tube—*
semi-muffle type—*
direct-fired*
salt bath.

furnace atmospheres (*Ind Heat*). Fall within three main classes: (1) *oxidising*, produced when air volumes are in excess of fuel requirements; (2) *neutral*, when air to fuel ratios are perfectly proportioned; (3) *reducing*, due to deficiency of combustion air. See also **protective furnace atmospheres***.

Galilean binoculars (*Optics*). Binoculars in which the objectives are of the usual doublet telescope objective type and the eyepieces are negative lenses.

gamma function (*Maths.*). The limit of an infinite product, denoted by Γ, such that

$$\Gamma(x) = \mathop{L^t}_{n\to\infty} \frac{n^{x-1}\, n!}{(1-x)(2-x)\dots(n-x)}.$$

gas-and-pressure-air burner (*Ind. Heat.*) A class of industrial gas burners designed to operate with low-pressure gas and with air under pressure from fans and compressors, proportioning and mixing of the two supplies being regulated at the burner inlets.

gas burner (*Ind. Heat.*). See references at **burner***.

gas combustion theory (*Ind. Heat.*). A group of molecules at the instant of chemical union emits waves of radiant energy, the resultant molecules dispersing with the remaining energy; some of the initial radiation is absorbed according to the properties and size of the enclosure in which combustion occurs, the remainder being returned through the chemical constituents of the unburned gas and air and the flue products, and transformed by thermal diffusion into the kinetic energy of the hot gas.

gas conditioning (*Ind. Heat.*). See **protective furnace atmospheres***.

gas orifice (*Ind. Heat.*). That part of a natural-draught-type gas burner or injector through which gas is directed into a throat or venturi tube, creating a velocity flow for the entrainment of primary combustion air.

gas pressure regulator (*Ind. Heat.*). A governor having a diaphragm-operated valve or other device actuated by gas pressure and balanced to produce a constant outlet pressure irrespective of fluctuating initial pressures.

gauge box (*Civ. Eng.*). A box which measures a known quantity of material such as cement, or similar material, for testing or making mixtures.

gelometer. See **Bloom gelometer***.

gentian violet (*Chem.*). A mixture of the three dyes, methyl rosaniline, methyl violet, and crystal violet, which is antiseptic and bactericidal. Used for the modern treatment of serious burns.

geodesic (*Maths.*). The shortest path between two points on any surface.

gluten † (*Bread-making*). The resilient protein product, chiefly glutenin and gliadin, remaining when starch has been washed from dough.

gnomon, nō′mon (*Maths.*). The remainder of a parallelogram after a similar parallelogram has been removed from one corner.

grader (*Civ. Eng.*). A power-operated machine provided with a blade for shaping excavated surfaces to the desired shape or slope.

green manuring (*Agric.*). The growing and subsequent ploughing in of plants, such as beans, rape, mustard.

grip† (*Build.*). Also, a small channel across the road-side to conduct surface water to a drain or ditch. Also called OFFLET.

ground (or **earth**) **system** (*Radio*). A system of wires, usually buried beneath an antenna system, to increase the conductivity of the ground in the neighbourhood of the antenna and make it more nearly a perfect reflector.

grubbing (*Agric., Civ. Eng.*). The removal of obstacles in the soil, such as roots of trees, hedges, etc., preparatory to cultivation or erection of works.

guard band (*Radio*). Any additional frequency band on either side of an allocated band (including any *frequency tolerance**, q.v.), to ensure freedom from interference from other transmissions.

half-toric sector (*Sig.*). A section of a signal-lamp lens which diverts a part of the light over a wide angle for local observation, the remainder of the light being focused over a small angle for distant observation.

Hardmetal (*Met*). Sintered tungsten carbide. Used for the working tip of high-speed cutting tools. See **sintered carbides***.

harmonic conjugate (*Maths.*). Two points are harmonic conjugates with two other points if the cross ratio of the range of the four points is harmonic.

harmonic ratio (*Maths.*). If the cross ratio of four co-linear points equals −1, it is harmonic.

Hartmann test (*Optics*). A test for aberration of a lens, in which a diaphragm containing a number of small apertures is placed in front of the lens and the course of the rays is recorded by photographing the pencils of light in planes on either side of the focus.

heat balance (*Ind. Heat.*). The evaluation of operating efficiency of a furnace or other appliance, the total heat input being apportioned as to heat in the work, heat stored in brickwork, loss by conduction, loss by radiation, loss by unburnt gases in waste products, sensible heat in dry flue gases and latent heat of water vapour, thus determining the quantity and percentage of heat usefully applied and the sources of heat losses.

heat density (*Ind. Heat.*). The degree of weight and pressure of live gases in heating chambers of industrial furnaces, upon which the rate of heat transfer depends.

heat detector (*Ind Heat.*). A special form of industrial thermostat of the indirect-acting type for operation in conjunction with a relay gas-flow control valve, and for controlling working temperatures in furnaces and heating appliances up to about 1000° C.

hiding power (*Paint.*). Of a paint: effectiveness in masking a given test surface when applied in a specified manner. The hiding power is an inverse function of the diameter of the particles in the paint.

horn, electromagnetic (*Radio*). See **electromagnetic horn*.**

hush-hush (*Cinema.*). The variation in background noise in sound-film or other types of reproduction, when a noise-reduction system is in use.

hydroponics (*Hort.*). The technique of growing plants over water instead of in soil, in the water being dissolved suitable chemicals, which feed the plant through the dipping roots.

hydroxylation theory (*Ind. Heat.*). Based on the idea that when a hydrocarbon is oxidised there is a natural tendency for its hydrogen atoms to be successively converted into OH groups, thus producing hydroxylated molecules with consequent heat evolution.

hyp (*Elec. Comm.*). One-tenth of a *néper* (q.v.)

hyper'bola (*Maths.*). (1) Section of a right circular cone by a plane which intersects the cone on both sides of the apex.—(2) The plane locus of a point such that the differences of the distances of the point from two fixed points (*foci*) is constant.—(3) The plane locus of a point such that the ratio of the distance of the point from a fixed point (*focus*) to the distance from a fixed line (*directrix*) is constant, and greater than unity, the ratio being the *eccentricity* The *major axis* is the diameter passing through the foci, the *minor axis* bisects this at right-angles. The equation is of the form $x^2/a^2-y^2/b^2=1$.

hypertensin (*Physiol.*). A substance, probably a polypeptide, formed by the reaction of renin and hypertensinogen, and acting as a vasopressor and vasoconstrictor, thus increasing the blood pressure. Also called ANGIOTONIN

hyperten'sinogen (*Physiol.*). A blood globulin which, reacting with renin, forms hypertensin.

hypocy'cloid (*Maths.*). See **cyclic curve*.**

hy'povitamino'sis (*Med.*). Any slight or ill-defined abnormal condition which results from partial deficiency in vitamins.

ignition temperature (*Ind. Heat.*). In the combustion of gases, the temperature at which the heat loss due to conduction, radiation, and other causes is more than counterbalanced by the rate at which heat is developed by the combustion reaction.

ignition velocity (*Ind. Heat.*). See **flame propagation (rate of)*.**

ignitron (*Thermionics*). A mercury-arc rectifier having an anode and pool of mercury, and fitted with an auxiliary dipping control electrode which initiates the main discharge during any part of the cycle when the anode is sufficiently positive.

imaginary number (*Maths.*). A real number x multiplied or operated on by i or $\sqrt{-1}$; i.e. $\sqrt{-1}.x$, or ix. See ***j***.

impact burner (*Ind. Heat.*). A nozzle-type burner designed to impact the flame on to a surface of broken refractory material, producing conditions of surface combustion, and effecting heat transfer mainly by radiation without direct flame contact with the object being heated. Principally used for the firing of low-temperature metal-melting furnaces, tinning pots and galvanising baths.

implicit function (*Maths.*). A variable x is an implicit function of y when x and y are connected by a relation which is not explicit (see **explicit function***)

implosion. The collapse inwards of an evacuated vessel, especially the glass envelope of a lamp or thermionic valve.

impulsing signal (*Elec. Comm.*). The signal containing the requisite impulses for operating mechanisms for routing calls in setting up connections; e.g. voice-frequency impulses over trunk lines.

incendiary bomb (*Mil.*). Any bomb designed primarily to cause damage by fire. Three main types are: (1) magnesium casing ignited by thermite, with or without a relatively small high-explosive charge; (2) oil-filled, containing benzine or crude oil; (3) phosphorus-filled, in which the phosphorus may be dissolved in carbon disulphide or other liquid, or be present in some other form.

incline (*Surv*). See **gradient.**

indeterminate equations (*Maths.*). Simultaneous equations which by reason of certain relations between the coefficients, or from insufficient data, have an infinite number of solutions.

index (*Nut*). A parameter of the human frame, used in nutritional and growth studies.

See **A.C.H.—*** **pelidisi—***
Bouchard's—* **Pignet's—***
Flesch's—* **Pryor's—***
Franzen's—* **Quetelet's—***
Livi's—* **vitality—***
Manouvrier's— *

indications (*Sig.*). The removable boards, discs, or lamps carried on the front of engines, or on the rear of trains, to describe the train, its destination, etc.

industrial gas burners (*Ind. Heat.*). The main types of these are: (*a*) low-pressure natural draught, (*b*) high-pressure natural draught, (*c*) low-pressure gas with pressure air, (*d*) high-pressure gas with pressure air, (*e*) air-gas mixture natural draught, (*f*) air-gas mixture positive pressure, (*g*) luminous or radiant flame burners. Each type possesses its own particular features in design, construction, and application.

inflammability, limits of (*Ind. Heat.*). The lower and higher percentages of air volumes in proportion to gas volumes whereby a combustible mixture is formed.

inflexion (*Maths.*). See **point of inflexion*.**

infra-red therapy (*Med.*). The treatment of disease by means of generators producing ether vibrations of a wavelength between 8000 and 160,000 A.U.

inositol (*Chem.*). See **bios*.**

inspirator (*Ind. Heat.*). The injector of a pressure gas burner, combined with a venturi mixing tube, primary combustion air being entrained from surrounding atmosphere by the projection of a gas stream into the injector throat.

instantaneous specific heat (*Ind. Heat.*). The specific heat value at any one temperature level, occasionally called ***true specific heat*** to distinguish from mean specific heat.

integral function or **integral** (*Maths.*). The function which, when differentiated, equals the given function. If $\phi(x)$ is the derivative of $f(x)$, then $f(x)$ is the integral of $\phi(x)$.

See **Abelian—*** **elliptic—***
definite—* **particular—***

integrating factor (*Maths.*). A multiplying factor which enables a differential equation to be transformed into an exact equation.

intensifying screen (*X-rays*). A screen treated with zinc sulphide which fluoresces under the action of X-rays and so contributes to the exposure of a photographic surface in contact with it.

intermodulation (*Elec. Comm.*). The modulation of each of the components of a signal or modulated wave by each other.

invariant (*Maths.*). A function of the coefficients of the equation of a curve or surface, unaltered by a *projective transformation** (q.v.).

inverse function (*Maths.*). If $y=f(x)$ and a function $\phi(y)$ is found such that $x=\phi(y)$, then $\phi(y)$ is the inverse function of $f(x)$, e g. $\log_e x$ is the inverse function of ϵ^x.

inverse trigonometrical function (*Maths.*). If y is a trigonometrical ratio of the angle x, then x is the inverse trigonometrical function of y: e.g. if $y=\sin x$, the inverse trigonometrical function is $x=\text{arc} \sin y$ or $\sin^{-1}y$, where arc sin y or $\sin^{-1}y$ is the angle whose *sine* is y.

Irish bridge (*Civ. Eng.*). A ford or watersplash treated so as to be permanent.

irrational number (*Maths.*). A number which can be interpolated on a scale of rational numbers, but which cannot be derived as a rational number, e g. $\sqrt{2}$.

island (*Highways*). A reserved area in a roadway, larger in extent than a street refuge, used for controlling the flow of traffic, and as a platform for pedestrians using public vehicles.

isthmus armature (*Teleph.*). A relay armature with a constriction near the end covering the pole of the core. Saturation of the isthmus during operation tends to equalise the operating and release currents.

key clicks (*Radio*). Transient radiation of electromagnetic energy outside the allotted frequency band when a telegraph transmitter is keyed, resulting in interference in other channels; due to sudden changes in antenna current.

keying wave (*Radio*). Same as *marking wave.*

Kick's law (*Chem. Eng*). Assumes that the energy required for subdivision of a definite amount of material is the same for the same fractional reduction in average size of the individual particles, i.e. $E=k_k \log_e d_1/d_2$, where E is the energy used in crushing, k_k is a constant, depending on the characteristics of the material and on the type and method of operation of the crusher, and d_1 and d_2 are the average linear dimensions before and after crushing.

king lever (*Sig.*). A master lever in an interlocking signal-lever frame which controls the system of interlocking.

Kohler's disease (*Med.*). Inflammation of the bone and cartilage of one of the tarsal bones.

kopf'ring (*Mil.*). (Ger.; literally, 'head-ring'). A metal ring fixed to the shoulder of a bomb to reduce its terminal velocity after release.

Kromayer lamp (*Med.*). Apparatus for the administration of ultra-violet rays locally. It has a quartz mercury-vapour arc and a cold-water cooling device, and is used in treatment of diseases of the ear, nose, and throat, and in gynaecological conditions. See **ultra-violet therapy*.**

K.S.K. (*Chem. War.*). *Ethyl iodoacetate** (q.v.).

laboratory sand-bath (*Ind. Heat.*). A gas-heated steel bath containing sand in which crucibles or other vessels are indirectly heated. Chiefly employed for drying precipitates, evaporating solutions to dryness, and for bringing materials into solution when steady heating is necessary.

lactoflavin (*Chem.*). See **vitamin B_2 complex*.**

land (*Acous.*). The uncut surface between the grooves in the surface of a recording material.

landing beam (*Radio*). The beam of radiation from a transmitter along which an aircraft approaches a landing field during blind landing.

landscape lens (*Optics*). A photographic objective of meniscus form, generally with the concave surface towards the object and with the diaphragm on the object side of the lens.

lauryl thiocyanate (*Chem.*). $C_{12}H_{25}SCN$. A salt of lauryl alcohol; used as a disinfectant.

layby (*Highways*). A widening of the carriageway so that vehicles can draw in to the kerb without causing obstruction to through traffic.

laying the bearings (*Acous.*). In tuning fixed-pitch instruments, such as the piano or organ, the technique of tuning the 12 semi-tones of a central octave. All other notes are then tuned by unison or octaves.

leptosome (*Nut.*). The tall or slender type of human figure.

lethal index (*Chem. War.*). See **mortality product*.**

level† (*Civ. Eng.*). Also, a ditch or channel for drainage, especially in flat country (e g. the Fens).

Lewis Jones condenser (*Med.*). Apparatus for testing muscle reactions. See **R.D.***

lewisite (*Chem. War.*). $ClCH=CH \cdot AsCl_2$. Dark-coloured oily liquid (colourless when pure) with a strong smell of geraniums. Vesicant having lachrymatory and nose-irritant action. Mortality product, 3000 to 5000.

limit (*Maths.*). A sequence of terms approaches a *limit L* when every term after a given term differs from L by less than a finite quantity, however small.

line (*Maths.*). In a plane: the shortest distance between two points. On a sphere: a portion of a great circle.

line splitting (*Teleph.*). The disconnection of a trunk line at a switching point by a prefix signal, so that the signal required for switching at the point is not passed on unnecessarily.

line stabilisation (*Radio*). The dependence of a valve oscillator on a section of transmission line for stabilisation of its frequency of oscillation; e.g. a quarter-wave line acts as a rejector circuit of very high Q, thus giving a highly critical change in phase at the resonant frequency.

liquefied petroleum gases (*Ind. Heat*) These fall within three main categories, viz, propane, butanes, and pentanes. The two sources are natural gas wells and oil refinery separation.

liquid heat treatments (*Ind. Heat.*). See **salt bath.**

liquid limit (*Agric.*). Of a soil: the moisture content corresponding to a specific degree of consistency as indicated by a standardised apparatus.

liquid manure (*Agric.*). A fertilising liquid made by steeping animal or poultry droppings in water.

live fence (*Highways*). A hedge.

Livi's index (*Nut*). An obsolescent index of the human frame, given by 100-times the cube-root of the weight divided by the height.

loam (*Agric.*). A soil mixture consisting of an indefinite mixture of clay and sand or silt.

lockspit (*Surv.*). A continuous shallow excavation of V-shape along a defined line over the surface of the ground.

longitudinal magnification (*Optics*). The ratio of the length of the image to the length of the object in a lens system when the object is small and lies along the axis of the system.

loop road (*Highways*). A road route made or used to avoid obstructions.

lumino-therapy (*Med.*). *Chromo-therapy** (q.v.).

luminous gas flame (*Ind. Heat.*). Produced by admitting no primary combustion air to the burner. The principal reaction which causes luminosity is the thermal breakdown of the hydrocarbons into carbon and hydrogen, the carbon being heated to incandescence by the heat of the flame.

lune (*Maths.*). The portion of the surface of a sphere intercepted by two great circles.

Maclaurin's series (*Maths.*). Modification of *Taylor's series** (q.v.), putting $a=0$.

magnetic shield (*Elec. Eng.*). A surface of magnetic material which reduces the effect on one side of a magnetic field on the other side. A substantially complete shield is thus used to protect A.C. indicating instruments from errors arising from external alternating magnetic fields.

magnetic suspension (*Elec. Eng.*). Any arrangement whereby a magnet is used to assist in the support of, for example, a vertical shaft in a meter, thereby relieving the jewelled bearings of some of the pressure.

Magnuminium (*Met*). A series of magnesium-base alloys similar to Elektron; sp. gr. 1·8.

malthenes (*Chem.*). Such constituents of asphaltic bitumen as are soluble in carbon disulphide and petroleum spirit. See **asphaltenes*, carbenes*.**

maltose † (*Chem.*) In cereal chemistry, the *maltose figure* indicates the natural sugar content and diastatic activity of flour or meal samples.

Manouvrier's index, ma-noov'ri-ā (*Nut.*). The height of the human frame, divided by the sitting height, less unity. A comparative index, which may indicate a disturbance of nutrition.

Mansell disc wheel-bond (*Sig.*). Electrical connection between the fixed axle and the tyre of a wheel.

manual hold† (*Auto. Teleph.*). Also, the condition when neither the calling subscriber nor the controlling operator can release the connection in the normal manner.

manure (*Agric.*). Natural or artificial food material for plants and trees, supplying phosphates, nitrogen and potash. Natural manure from the farmyard contains these constituents, and is helped out by decayed leaves (compost) and animal products, wood ash, and soot.

marker beacon (*Radio*). A small transmitter, usually emitting a highly directed vertical beam of radiation, intended to indicate a known point or boundary, especially in blind-landing systems.

marker groove (*Acous.*) A groove cut at the beginning or end of a recording.

marker light (*Sig.*) An indicating light on a signal post, to indicate the position or aspect of the main signal should its light have failed.

marl† (*Agric*). A soil consisting of an indefinite mixture of calcareous clay or calcareous loam.

massage (*Med.*). Treatment of the body tissues by means of scientific manipulations. See **effleurage, petrissage*.**

matrix (*Maths.*). A system of elements of real or complex numbers arranged in a square or rectangular formation; e.g., given a set of linear equations $\sum_{j=1}^{j=n} a_{ij} . x_i = y_i$, the equations can be replaced by the equation $A . x = y$, where A represents the matrix of the coefficients. See **determinant*, non-singular matrix*, order*, rank*.**

Maxwellian viewing system (*Optics*). In some photometers, spectrophotometers, colorimeters, etc., an arrangement in which the field of view is observed by placing the eye at the focus of a lens, e.g. in the plane of a spectrum, instead of using an eyepiece.

median, median value (*Maths.*). That value in a series of observed values which has exactly as many observed values above it as there are below. See **mode*.**

melamine (*Chem.*). A cyclic trimer of cyanamide with the formula $C_3H_6N_6$; condensed with formaldehyde it gives a thermosetting plastic which, combined with α-cellulose pulp, is used for moulding, especially for table-ware owing to its heat-resisting properties and chemical inertness. The unfilled resin is used for varnishes and laminates.

mes'osome (*Nut.*). The medium type of human figure.

mesotron (*Phys.*). A short-lived or transitory positive or negative particle observed as a result of cosmic radiation and having a mass about 200 times that of an electron.

Mev (*Thermionics*). A unit equal to one million *electron volts** (q.v.)

microscope † (*Optics*). See also **ultra-violet microscope*.**

minor (*Maths.*). A sub-determinant, i.e. a determinant contained in another determinant of higher *order** (q.v.).

mode, modal value (*Maths.*). The value of a series of observed values that is the most frequently observed, as exhibited by a frequency-distribution curve representing the observed values. See **median*.**

modulating fuel-air proportioning valve (*Ind. Heat*). See **floating temperature control*.**

modulation factor (*Radio*). Same as *depth of modulation.*

mole drainer (*Agric.*). A cylinder on the lower edge of a blade, which is drawn longitudinally through soil so as to form a natural drainage channel.

molecular distillation (*Chem.*). Distillation at a pressure of *ca.* 10^{-3} cm. Hg., such that the mean free path of the molecules is of the same order of magnitude as the distance between the heated and cooled surfaces. Used for fractionation of thermolabile organic compounds, e.g. vitamin A and essential oils.

molecular formula (*Chem.*). The formula giving the number of atoms in a molecule of the compound, e.g. benzene C_6H_6, formaldehyde H·CHO, aluminium chloride $AlCl_3$. In organic chemistry, elements are usually given in the following order, C, H, O, N, S, halogen, etc. Functional groups are written separately, e.g. Prontosil $(NH_2)_2C_6H_3{\cdot}N{=}N\,C_6H_4{\cdot}SO_2NH_2$, not $C_{12}H_{13}O_2N_5S$.

mon'ochord (*Acous.*). A laboratory apparatus for demonstrating the properties of single stretched wires and the sounds generated thereby.

monoton'ic sequence (*Maths.*). A sequence such that all members either do not increase, or do not decrease.

mortality product (*Chem. War*). A measure of the toxicity of a *war gas** (q.v.), given by the formula $W = c . t.$, where W is the mortality product, c the concentration in milligrams per cubic metre, and t the time in minutes for exposure to this concentration to result in certain death.

motorised fuel valve (*Ind. Heat*). See **adjustable-port proportioning valve*.**

mulching (*Agric.*). The process of covering the top-soil with manure, compost, decaying leaves, or bracken, to protect the underlying plant-roots from frost.

multiple modulation (*Radio*). The use of a modulated wave for modulating a further independent carrier.

multiple point (*Maths.*). On a curve: a point through which pass more than one distinct branch of the curve.

multiple-unit steerable antenna (*Radio*). An extended antenna comprising a number of units, the total polar diagram of which can be rotated by varying the relative phases of the contributions of the individual elements. Abbrev. **musa.**

multiplex transmission (*Radio*). Transmission in which two or more signals modulate the carrier wave.

multiply-connected domain (*Maths.*). A domain which is not *simply-connected** (q.v.).

musa (*Radio*). Anagrammatic abbrev. for *multiple-unit steerable antenna** (q.v.).

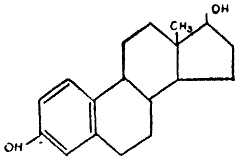
mustard gas† (*Chem. War.*). Very persistent vesicant; oily brown liquid (colourless when pure). Stable and penetrating; faint garlic-like odour Insidious effects on the human body, delayed 6-24 hours. Mortality product 1500.

N.A. (*Optics*). See **numerical aperture***.
near point (*Optics*). The nearest position to the eye at which an object can be seen distinctly. The object point conjugate to the retina when accommodation is exerted to its fullest extent
negative transference (*Psycho-an*). *Transference* (q v) in which the infantile emotions displaced on to the analyst are those of hostility and hate.
Neoprene (*Chem.*). The first commercial synthetic rubber (U.S.A , 1931). It is a polymer of chloroprene $CH_2=CCl\ CH=CH_2$ derived from acetylene and hydrochloric acid
net fertility rate (*Sociology*) See **fertility rate***.
neutral flame (*Ind. Heat.*) In the welding of metals a neutral flame is produced by a mixture at the torch of acetylene and oxygen in equal volumes, the additional oxygen necessary to complete combustion being absorbed from surrounding atmosphere It is claimed that a neutral flame does not produce chemical changes detrimental to the metal with which it is in contact
nicotinic acid (*Chem.*). See **vitamin B_2 complex***.
nip (*Chem. Eng.*). See **angle of nip***.
node (*Maths.*). A multiple point on a curve through which pass two distinct branches which do not have a common tangent at the point. See **crunode*, acnode***.
nom'ogram (*Maths*) An alignment chart arranged so as to obviate specific types of calculation.
non-persistent (*Chem. War.*). Said of a true gas which quickly dissipates under normal atmospheric conditions
non-singular matrix (*Maths.*). A square matrix the determinant of which is not equal to zero.
null indicator (*Elec. Eng*). Any device, such as head telephones or a sensitive galvanometer, for determining zero current, or voltage, in a specified part of an electric circuit, as in a bridge. See **nodaliser.**
number (*Maths.*). An attribute of objects or labels obtained according to a law or rule.

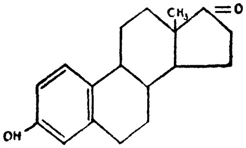
See **algebraic—***
complex—*
imaginary—*
irrational—*
ordinal—*
rational—*
real—*
conjugate complex numbers*

numerical aperture (*Optics*). The product of the refractive index of the object space and the sine of the semi-aperture of the cone of rays entering the entrance pupil of the objective from the object point. The resolving power of the objective is proportional to its numerical aperture. Abbrev. **N.A.**
nylon (*Plastics*). Generic name for synthetic, colourless, fibre-forming polymeric amides of protein-like structure, characterised by extreme toughness, tensile strength and elasticity. It can be produced in fibres and sheets, and in flake form for moulding.

oblique axes (*Maths.*). Co-ordinate axes which are not mutually perpendicular.
occupation road (*Highways*). A road which gives access to properties but is not maintained by the owners of the properties.
octave (*Acous.*). The musical interval between two notes when the frequencies of their fundamental components are in the ratio 2 : 1.
oestra'diol (*Physiol.*). The hormone secreted by the ovarian follicle (follicular hormone) and responsible for the development of the sexual characteristics of the female. Sometimes known by the proprietary term, Oestilin. Oestradiol ($C_{18}H_{24}O_2$) is a sterol having the following structural formula :



oestrogen (*Physiol*). The generic term for female sex hormones.
oestrone (*Physiol.*). The urinary excretion product of oestradiol. Oestrone ($C_{18}H_{22}O_2$) has the following structural formula :



offering signal (*Teleph*) A signal which breaks through an opposing *busy* to offer a call (e.g. a trunk call) to an engaged subscriber, who is busied by his final selector.
offlet (*Civ. Eng*). See **grip***.
oil (or **fuel oil**) **burner** (*Ind Heat.*) A device designed primarily for oil atomisation by means of a stream of low- or high-pressure air or steam passing over the oil-flow orifice, thus producing a combustible mist composed of myriads of oil particles held in suspension in the air or steam, and enabling, with a firing block (or quarl) as an adjunct, stable flames to be propagated.
oiticica oil, —sē'ka (*Chem.*). A quick-drying oil obtained from the nuts of *Conepia grandifolia* of Brazil ; used for same purposes as *tung oil* (q.v.).
oleo-resin (*Paint.*). Oily resinous sap of plants, partially deprived of volatile constituents.
Oligot'richa (*Zool.*). An order of *Ciliata* having the cilia reduced or absent, the sole motile organs being membranelles; peristome usually at right-angles to long axis of body; adoral zone of membranelles winds to left, forming nearly or quite complete ring around peristomial margin.
Opalinata (*Zool.*). The only order of *Protociliata** (q.v.) having the characteristics of the subclass.
opaque enema (*Radiology*). An enema of barium sulphate used in radiology to outline the colon.
optical path (*Optics*). The distance travelled through a medium by a ray of light multiplied by refractive index of medium, being length of equivalent path in air (strictly vacuum).
optimum gas rate (*Ind. Heat.*). The correct rate of gas flow to a burner in relation to the actual heat requirements of a furnace or other appliance.
order (*Maths.*). Of a curve or surface : the number of points, real, coincident, or imaginary, in which the curve or surface is intersected by a straight line.—Of a matrix : (1) a square matrix of *n* rows and *n* columns is of order *n* ; (2) a rectangular matrix of *n* rows and *m* columns is of order *n*×*m*, or *n* by *m*. See **rank***.
ordinal number (*Maths.*). A number derived from the notion of counting, and possessing the fundamental property of order or position in an aggregate.
oven-type furnace (*Ind. Heat.*). An industrial heat-treatment furnace fired under the hearth, the live gases flowing directly into the heating

chamber through live-gas flues disposed along each side of the hearth. Frequently known as a SEMI-MUFFLE FURNACE.

over-gassing (*Ind. Heat.*). A condition resulting in a gas-heated furnace or appliance when the burners are calibrated for, and operated at, a higher gas rate than that actually required.

osculation (*Maths.*). See **point of osculation***.

overhaul (*Civ. Eng.*). The excess of the actual *haul* (q.v.) above the free haul (i.e. the haul which is conveyed without extra cost).

overlap (*Sig.*). The length of advance track beyond a stop signal which must be unoccupied before the previous stop signal can clear.

overs (*Print.*). Extra sheets allowed to a job to provide for ordinary *spoilage** (q.v.). See also **printer's ream.**

overspun wire (*Acous.*). A wire for a musical instrument (e.g. for a low note in a piano) round which a loading wire is tightly spun in order to lower its fundamental pitch.

oxytocin (*Physiol.*). A hormone secreted by the posterior lobe of the pituitary body, which stimulates the uterine muscle to contract.

π (*Maths.*). The ratio of the circumference to the diameter of a circle; i.e. 3·14159 . . . Calculated to any degree of precision by the summation of a converging series.

packway (*Highways*). See **bridle-path*.**

pad roller (*Cinema.*). A non-sprocket roller for pressing the edges of cinematograph film on to sprockets, so that a sufficient number of teeth of the latter may be engaged by the sprocket holes in the film.

pantothenic acid (*Chem.*). See **vitamin B_2 complex*.**

parabolic catenary (*Maths.*). See **catenary*.**

paraly′sant (*Chem. War.*). A war gas which acts on the central nervous system, e.g. prussic acid.

paraxial focus (*Optics*). The point at which a narrow pencil of rays along the axis of an optical system comes to a focus.

partial air-gas mixture (*Ind. Heat.*). A mixture in which the proportion of air pre-mixed with a gas is below that needed for combustion, the remaining air volume being entrained or otherwise introduced at a secondary stage in or near the burners.

partial differential coefficient (*Maths.*). If $z=f(x, y,$ etc.), then the partial differential coefficient of z with respect to x is the limit

$$\underset{h \to o}{L^t} \frac{f(x+h, y, etc.)-f(x, y, etc.)}{h},$$

if this limit exists, and is written $\partial z/\partial x$, or f_x $(x, y,$ etc.).

particular integral (*Maths.*). Solution of a differential equation formed by assigning values to the arbitrary constants in the complete primitive. Alternatively, a non-singular solution of a differential equation containing no arbitrary constants.

partic′ulate. Said of a material consisting of particles.

particulate cloud (*Chem. War.*). Any war 'gas' which consists of a finely divided solid suspended in air; e.g. D.M., D.A., D.C.

pegs (*Surv.*). Shaped sticks of wood driven in the ground, marks on the flat top indicating a point and level for surveying purposes. See **recovery pegs*.**

pegtop paving (*Civ. Eng.*). A paving of setts each of which is small in visible area.

pelidisi index (*Nut.*). Index obtained by dividing the sitting height in cm. into the cube-root of ten-times the weight in grams.

pencil (*Maths.*). Of lines: a number of lines passing through a fixed point called the *vertex.*—Of planes: a number of planes having a common join.

penic′illin (*Chem.*). An ether-soluble substance, not yet obtained in pure form, produced by certain strains of the mould *Penicillium*, and having an intense growth-inhibiting action against various bacteria. It has been successfully used in combating infection in, e.g., wounds. Similar substances appear to be produced by other moulds.

penning (*Civ. Eng.*). The same as *pitching.*

perfect combustion (*Ind. Heat.*). A condition only attained by exact and precise proportioning of fuel and air, so that the products of combustion contain neither unburnt gas nor excess air.

pericycloid (*Maths*). See **cyclic curve*.**

perilla oil (*Paint.*). Substitute for linseed oil; derived from the nuts of *Perilla ocymoides*

periodic antenna (*Radio*). An antenna depending on resonance in its elements, and thereby presenting a periodic change in input impedance as the frequency of the drive is varied.

persistent (*Chem. War.*). Said of a war 'gas' when this is a liquid which, having a low vapour pressure, evaporates very slowly in ordinary atmospheric conditions.

Perspex (*Plastics*). A proprietary thermoplastic resin of polymethyl methacrylate, of exceptional transparency and freedom from colour; widely used in sheet form for windscreens, transparent gun-turrets in aeroplanes, etc.

petrissage, -sahj′ (*Med.*). A kneading manipulation in massage. See **massage*, effleurage.**

Petzval curvature (*Optics*). The curvature of the image surface of a lens system in which spherical aberration, coma, and astigmatism have been corrected.

phosgene† (*Chem. War.*). Non-persistent colourless war gas. Faint odour of musty hay. Lung irritant, with delayed oedema; highly lethal, mortality product 450 to 5000.

phosphatase (*Chem.*). A non-proteolytic enzyme of protein nature occurring in the kidneys, intestines, and bones. Its action is to hydrolyse orthophosphoric esters to phosphoric acid and alcohol, and also to synthesise the ester from the components.

photo-engraving (*Print.*). Preparation of a printing surface by photography followed by chemical and mechanical treatment.

photo-mechanical (*Print.*). Said of any process involving a printing surface prepared by photography from which copies are made mechanically.

photon† (*Light*). A unit of retinal illumination. The illumination on the retina is one photon when a surface with a brightness of one candle per square metre is seen through a pupil of 1 sq. mm. area.

photopic luminosity curve (*Light*). The curve giving the relative brightness of the radiations in an equal-energy spectrum when seen under ordinary intensity levels.

phylloquinone (*Chem.*). See **vitamin K*.**

Pignet's index, pēn-yā (*Nut.*). The height in centimetres, less the weight in kilograms, less the chest girth in centimetres; an index which gives an inverse qualitative indication of corpulence.

pile-up (*Teleph.*). The collection of moving and fixed spring-contacts, with their insulators, formed as a unit for incorporation in a relay.

piloted-head gas burners (*Ind. Heat.*). A special class of burner, principally employed for general and critical direct-flame heating processes. They incorporate in the burner head or nozzle a by-pass system by which low-pressure feeder flames are produced around the main flame, to secure positive retention when the velocity of the combustible mixture is in excess of the flame speed.

pinhole camera (*Photog.*). A camera in which the lens is replaced by a small pinhole.

Pirquet's index, pĕr-kā (*Nut.*). See **pelidisi index***.

pivot factor (*Elec. Eng.*). In an electrical indicating instrument, the factor full-scale torque/weight of movement, which is a measure of freedom from error due to friction in the bearings of the movement.

plansifter (*Flour-milling*). A machine used for separating into various particle sizes the different intermediate products of the milling of wheat It consists essentially of a series of horizontal sieves mechanically operated.

plastic limit (*Agric*). Of a soil: the moisture-content corresponding to a departure from a plastic condition, as indicated by a standardised apparatus.

plate, platter (*Acous.*). Colloquialisms for *disc record.*

point (*Maths.*).

See **conjugate**—* **singular**—*
multiple—*

points (*Rail*). Movable tapered blades or tongues of metal for setting alternative routes of running rails. Each such blade is pivoted at the *heel*, its *toe* being locked against the *stock* rail. Points are termed *facing points* if the train approaches the toe, and *trailing points* if the train approaches the heel.

See **catch**—* **spring**—* **trap**—*

point of inflexion (*Maths*). On a curve: a point at which the tangent to a curve also cuts the curve.

point of osculation (*Maths.*). On a curve: a multiple point through which two branches pass which have a common tangent at that point.

polar (*Maths.*). Of a point with respect to a curve or surface: the line or plane through the points of intersection of tangents from the point to the curve or surface, drawn through the given point, which is called the *pole* of the line or plane.

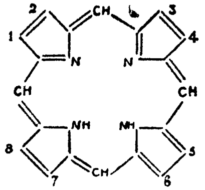
polar co-ordinates (*Maths.*). (1) Of a point *P* in a plane: the distance of the point, *OP*, from a fixed point *O* in the plane, called the *pole*, and the angle made by *OP* with a fixed direction. (2) Of a point *P* in space: the distance of the point, *OP*, from a fixed point *O*, called the *pole*, and the angles made by *OP* with two fixed planes which are not parallel.

polar reciprocation (*Maths.*). A method of transformation in which lines are replaced by points and points by lines; usually by replacing a line by its pole and a point by its polar with respect to the imaginary circle $x^2+y^2+1=0$. Sometimes called DUALISING.

Polaroid. Transparent plastic sheet containing orientated doubly-refracting crystals of an organic iodine compound. Transmits plane-polarised light. Used in spectacles and filters for minimising reflections.

pole (*Maths.*). (1) Of a line with respect to a conic: the intersection of the tangents drawn from the points of intersection of the line and the conic.—(2) Of a plane with respect to a quadric: the apex of the tangent cone to the quadric drawn at its intersection with the plane.—(3) Of a line on a sphere: the ends of a diameter of a sphere normal to the plane of the line.—(4) Of a circle: the ends of the diameter of a sphere normal to the plane of the circle, which need not be a great circle.

porphin (*Chem.*). A group of four pyrrole nuclei linked by methene groups, and having a complete system of conjugated double bonds, which accounts for the (reddish) colour of its derivatives.



por'phyrin (*Chem.*). A substituted porphin free from metal.

positive feedback (*Radio*). Interconnexion between the output and input circuits of an amplifier so as to facilitate the voltage, current, or power drive of the input by the addition of voltage, current, or power from the output, thus reducing the resistance of the source of amplified power and, if the feedback is sufficient, setting up sustained oscillations independently of the input drive. See **negative feedback.**

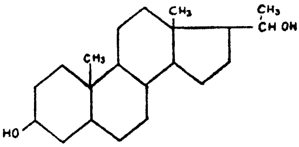
positive transference (*Psycho-an*). The type of *transference* (q.v.) in which the infantile emotions displaced on to the analyst are those of love.

power level† (*Elec. Comm.*). Though usually identified with transmission level, the term frequently refers to the actual power passing a point in a transmission system. See **zero power-level.**

pozzolana† (*Civ. Eng.*, etc.) Other substances (burnt clay, slag, etc.), having the same effect. See **gaize.**

prefix (*Teleph*). The signal which precedes an operational signal and prepares apparatus for receiving the operational signal. See **suffix***.

pregnandiol (*Chem.*). A steroid which is apparently the end product of the metabolism of progesterone, and is found in the urine during pregnancy and at one stage of the menstrual cycle. It is excreted partly free and partly combined with glycuronic acid. Its structure is:



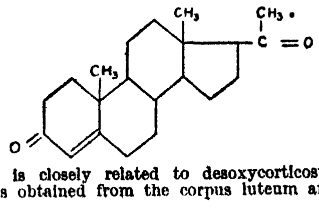
primitive (*Maths.*). See **complete primitive***.

principal ray (*Optics*). The ray from an object point lying off the axis and passing through the centre of the entrance pupil of the system.

prismatic binoculars (*Optics*). Binoculars in which the two tubes, instead of being straight and parallel, are formed thus: , and are fitted with total reflecting prisms at the angles.

process-engraving (*Print.*). Photo-engraving.

progesterone (*Chem.*). One of the female sex hormones. It is a steroid:



and is closely related to desoxycorticosterone. It is obtained from the corpus luteum and the placenta. It is concerned in preparing the uterus to receive the fertilised ovum, and in maintaining the continuance of pregnancy. It has been used therapeutically in cases of habitual abortion.

projection† (*Geog.*, *Surv.*). An arbitrary method of representing on a plane surface (e.g. a map or plan) details existing on a spherical surface (e.g. the earth). Types: (1) *cylindrical* (*equal-area*), in which projection is made from a sphere on to the surface of an enveloping cylinder from the axis; (2) *conical*, projection from the centre of the sphere on to the developed surface of a tangent cone; (3) *gnomic*, projection from the centre of the sphere on to a tangent plane; (4) *Mercator's* (not strictly a projection), derived from a correction of cylindrical projection; (5) *Mollweide's*, development of the spherical surface along its latitudes, giving a true ellipse

projective properties (*Maths*). Of a figure · properties unaltered by projection, e.g. the class or order of a curve.

projective transformation (*Maths*). A transformation projecting one figure into another

proof†. Proof spirit is taken as the standard strength of alcoholic liquids for fiscal purposes. A spirituous liquid which is x% *overproof* contains as much alcohol in 100 vols. as in $100+x$ vols of proof spirit. A liquid which is x% *underproof* contains as much alcohol in 100 vols. as is in $100-x$ vols. of proof spirit.

protective furnace atmospheres (*Ind. Heat*) An inert gas produced from the products of combustion of gas and air in predetermined proportions, the atmosphere being first cooled, cleaned, dehydrated and desulphurised before delivery to heating chambers of furnaces operated for bright-annealing of non-ferrous metals and bright treatment of steels. See also **furnace atmospheres***.

Protociliata (*Zool.*). A subclass of *Ciliophora*, having no mouth (astomatous) or peristome; parasitic forms.

protopathic. Said of painful cutaneous stimuli.

pro′topor′phyrin (*Chem.*). 1 3·5 8-tetramethyl-2·4-divinyl-6·7-dipropionic acid-porphin. It combines with ferrous iron to give reduced haematin, the prosthetic group of haemoglobin.

provitamin (*Chem.*). A substance, not a vitamin, which is readily transformed into a vitamin within an organism; thus, *β*-carotene results in vitamin A, and ergosterol, after irradiation, in vitamin D_2.

Pryor's index (*Nut.*). An index, basiliac diameter to height, which, used in human growth studies, numerically expresses constitutional types, e.g. *leptosome**, *mesosome**, and *amplosome** (qq.v.).

pug† (*Hyd. Eng.*). To prevent leakage by packing cracks with clay: the material so used.

pug mill (*Civ. Eng.*). A mixing machine for wet materials, as used in the making of mortar.

pugging (*Paint*). The process of mixing pigment with minimum oil in a special stirring machine, to form a very thick paste. The mixture itself.

pyknosome (*Nut.*). See **amplosome***.

pyridoxin (*Chem.*). See **vitamin B_1 complex***.

Pythagorean (diatonic) scale (*Acous.*). See **equitonic scale***.

•

quadric (*Maths.*). The surface represented by the general equation of the second degree in three dimensions; e.g. ellipsoid, paraboloid, hyperboloid, or quadric cone. Alternatively, a surface whose intersection with any plane is a conic.

quarl (*Ind. Heat.*). See **burner firing block***.

quarters (*Build.*, *Civ. Eng.*). See **flanks***.

quarter-wave line (bars, or transformer) (*Radio*). A quarter-wavelength section of transmission line designed to operate as a matching device between lines of different impedance level.

Quetelet's index, ket′lā (*Nut.*). The weight of the human body divided by the cube of the height; an obsolescent index used in growth studies.

racking (*Cinema.*). *Framing* (q.v.).

radiant gas flame (*Ind. Heat.*). See **luminous gas flame***.

radiant-tube furnace (*Ind. Heat.*). A modified form of muffle furnace, the heating chamber being provided with a series of steel alloy tubes in which the fuel is burned, thus excluding products of combustion from the heating chamber.

radiolocation (*Radio*). The technique of ascertaining the relative position in space of a reflecting object, such as an aeroplane. A radio pulse is broadcast, and the direction of arrival and the time-delay of the reflection, analogous to acoustic echo, give the required data.

ramploid cusp (*Maths*). See **cusp***.

rank (*Maths*) Of a matrix: a matrix is of rank r if it contains at least one determinant of order r ($\neq 0$) and all higher-order determinants are zero.

rarefaction (*Phys*). Diminution of air-pressure below normal, as in alternate half-cycles in the transmission of a sound-wave.

ratio (*Maths.*). See **cross—*** **harmonic—***

rational number (*Maths.*). A number which can be derived from ordinal numbers by the four fundamental algebraical processes—i.e. addition, subtraction, multiplication, division.

ravelling (*Highways*). *Fretting** (q v.).

R.D. (*Med.*). Reaction of degeneration. Term used in physiotherapy for abnormal responses to the electrical reactions of muscles.

ray† (*Light*). See **extraordinary—*, ordinary—, principal—***.

Rayleigh limit (*Optics*). A limit of one-quarter of a wavelength, representing the maximum difference in optical paths between rays from an object point to the corresponding image point for perfect definition in a lens system.

re-alignment (*Eng.*, *etc.*). The alteration of machinery or the layout of a road with respect to another centre line or axis.

real number (*Maths.*). Any rational or irrational number. See **complex number***.

re-circulation heating system (*Ind. Heat.*). A method of heating industrial ovens and low-temperature furnaces whereby the atmosphere of the working chamber is under constant re-circulation throughout the complete heating system, movement being obtained by some form of fan.

recovery pegs (*Surv.*). Special reference pegs established in known survey relation to the working setting-out pegs, so that the location of these can be recovered if disturbed.

rectangular axes (*Maths.*). Co-ordinate axes which are mutually at right-angles.

reducible equation (*Maths.*). An equation which can be expressed rationally in the *field** (q.v.) of the coefficients.

reference mark (or object) (*Surv.*). A distant mark from which the angular distances to other marks may be taken at a station.

reflector (*Radio*). Part of an antenna array which reflects energy that would otherwise be radiated in a direction opposite to that intended.

regular convex solids (*Maths.*). Solids having all faces bounded by plane surfaces and all corners congruent. They are (1) *tetrahedron*, four equilateral triangular faces, (2) *hexahedron* or *cube*, six equal squares as faces, (3) *dodecahedron*, twelve regular pentagons as faces, (4) *octahedron*, eight equilateral triangles as faces, (5) *icosahedron*, twenty equilateral triangles as faces.

regulus (*Maths.*). One of the sets of lines forming a *ruled surface** (q.v.).

release signal (*Teleph.*). A signal sent through a connection, which, after its cessation, releases all lines and apparatus used for the temporary connection.

relief road (*Highways*). See **by-pass road.**

remodulation (*Elec. Comm.*). Transferring the modulation from one carrier to another carrier, as in the frequency-changer in a supersonic heterodyne radio receiver.

renin (*Physiol.*). A protein liberated from the ischaemic kidney into the blood-stream, where it reacts with hypertensinogen to produce *hypertensin** (q.v.).

resolvant equation (*Maths.*). An equation used in the solution of a higher-order equation.

respirator. See **gas-mask.**

rheology (*Phys.*). The science of flow of matter. The critical study of elasticity, viscosity, and plasticity.

ribbon-flame burner (*Ind. Heat.*). A tubular gas-burner on which a ribbon of flame is produced by means of alternating corrugated and plain steel strips inserted in a milled slot, thus forming honeycombed flame ports, or by the tube being drilled with lines of very fine holes in close formation.

riboflavin (*Chem.*). See **vitamin B_2 complex*.**

ripple† (*Elec. Eng.*). Also, the alternating components in a direct current or voltage obtained from rectified alternating current.

ripple percentage (*Elec. Eng.*). The ratio of the r.m.s. ripple voltage to the average voltage, expressed as a percentage.

rise† (*Highways*). The vertical distance between the crown of a road and the lowest point of its surface.

Rittinger's law (*Chem. Eng.*). States that the energy required in a crushing operation is directly proportional to the area of fresh surface produced, i.e. $E = k_r(1/d_2 - 1/d_1)$, where E is the energy used in crushing, k_r is a constant, depending on the characteristics of the material and on the type and method of operation of the crusher, and d_1 and d_2 are the average initial and final linear dimensions of the material crushed.

road (*Highways*).

See **accommodation—*** **loop—***
arterial— **relief—***
by-pass— **service—***
county—* **trunk—**
district—* **bridle-path*.**

roller (*Cinema.*). See **drag—*** **pad—*.**

roller mill (*Eng.*). In its simplest form, consists of two rolls of suitable material, mounted with their axes horizontal, running in opposite directions; used for a wide variety of crushing and mixing operations.

root (*Maths.*). A value of the variable in a conditional equation for which the equation is true.

rope (*Bread-making*). A condition of bread, caused by *B. mesentericus*, in which the crumb of the loaf develops an objectionable smell and later is partially liquefied.

rubble drain (*San. Eng.*). A drain partially filled with stones so that the drainage can percolate into the soil. Also called STONE DRAIN, BLIND DRAIN, SPALL DRAIN.

ruled surface (*Maths.*). A surface defined by sets of straight lines the whole of which lie in the surface, e.g. a hyperboloid of one sheet.

rummel (*San. Eng.*). See **soakaway*.**

running sand. See **quicksand.**

Sabouraud pastille, sa-boo-rō (*Radiology*). A means for measuring the dose of X-rays to which a surface has been exposed.

sagittal field (*Optics*). The image surface formed by the sagittal foci of a series of object points lying in a plane at right angles to the axis.

sagittal focus (*Optics*). The focus of an object point lying off the axis of an optical system in which the image is drawn out by the astigmatism of the system into a line radial to the optical axis.

sand† (*Geol.*). In the mechanical analysis of soil, sand, according to international classification, has a size between 0·02 and 2·0 mm. See **silt*.**

scalper (*Civ. Eng.*). See **sledger*.**

Schnee bath (*Med.*). An electro-therapeutic method in which the four limbs are immersed in four separate baths, when currents such as sinusoidal, galvanism, or faradic, are used.

Schott treatment (*Med.*). Treatment of heart disease by means of baths and regulated exercises.

Schotten-Baumann reaction (*Chem.*). The introduction of a benzoyl group into hydroxyl, amino, or imino compounds, by shaking with benzoyl chloride and excess aqueous alkali.

Scotch block (*Rail.*). An arrangement for attachment to running rails, to prevent the passage of rolling stock.

scotopic luminosity curve (*Light*). The curve giving relative brightness of the radiations in an equal-energy spectrum when seen at a very low intensity level.

screed† (*Civ. Eng.*). A strip of wood or metal temporarily inserted in a road surface to form a guide for the template for forming the final surface of the road.

screen (*Elec. Eng.*). See **electrostatic shield.**

screening (*X-rays*). Visual inspection of images cast on a fluorescent screen when X-rays pass through the object under examination.

sealing-in burner (*Ind. Heat.*). A gas or oxy-gas burner employed for sealing glass containers such as the envelopes of electric lamps and radio transmitting and receiving valves.

secondary spectrum (*Optics*). The residual longitudinal chromatic aberration in a lens corrected to bring two wavelengths to the same focus.

sedimentation analysis (*Chem.*). A method of analysis particularly suited for the study of suspensions which undergo changes in concentration. The apparatus consists of a beam balance, having a disc suspended from one beam and a compensating spring at the other end. The disc is dipped into the suspension and the increase in weight due to the settling of the particles on the disc is balanced by the spring.

sele'nophone (*Acous.*). A sound-recording and reproducing system in which a variable-area track is recorded and multiplied by printing on a narrow paper tape. Reproduction is effected by collecting the light reflected from a slit, focused on the track, with a light-sensitive cell.

semi-muffle-type furnace (*Ind. Heat.*). See **oven-type furnace*.**

sequence (*Maths.*). A set of numbers derived according to a rule, each member being determined either directly or from the preceding terms.

See **convergent—*** **divergent—***

sequence signal (*Teleph.*). A signal with more than one component but no spaces between, e.g. when the components have different frequencies.

series (*Maths.*). The sum of a number of terms of a sequence.

See **binomial—*** **Maclaurin's—***
double—* **sum of infinite—***
Fourier— **Taylor's—***
Fourier half-range—*

service band (*Radio*). The band allocated in the frequency-spectrum specified for a definite class of radio service.

service road (*Highways*). A minor road parallel to a main road, and serving local traffic without obstructing the main road.

sett paving (*Civ. Eng.*). A pavement constructed with setts on a suitable foundation. Termed a CAUSEWAY in Scotland.

settling (*Chem.*). Sedimentation under gravity of a solid suspension in a liquid. See **Stokes' law***.

shading (*Television*). *Tilt-and-bend* (q.v.) adjustments.

shielded line (*Elec. Comm.*). A line or circuit which is specially protected from external electric or magnetic induction by suitable shields.—(*Radio*) A transmission line enclosed within a sheath so that energy is confined within the sheath and so not radiated.

shift (*Surv.*). The movement of a circular arc from a tangent line to accommodate a transition curve between the arc and the tangent.

shock (*Med.*). An acute peripheral circulatory failure due to diminution in the volume of circulating blood and usually characterised by a low blood pressure and a weak thready pulse. It occurs (often associated with congestive cardiac failure) in, e.g., coronary thrombosis, pulmonary embolism, acute infection, or following trauma. The essentials of treatment are (1) warmth, (2) morphine in the initial stages but not later, (3) plasma or serum given intravenously in large amounts, (4) cardiac stimulants. Adrenalin is contra-indicated and oxygen therapy is useless unless there is some degree of central failure.

short-wave therapy (*Med.*). Treatment by means of short-wave generators in the electrical condenser field with high-frequency energy of from 6 to 30 metres wavelength. Therapeutic results of short-wave therapy are due, principally, to the heat produced in the body tissues. See also **diathermy.**

shoulders (*Build., Civ. Eng.*). Of an arch or road, see **flanks***.

sight distance (*Highways*). The distance over which objects at a specified height above the surface of a road can be sighted from each other.

signal face (*Sig.*). The side of a signal head or set of signal lights which exhibits an aspect or indication of the signals.

signal generator (*Radio*). A specialised high-frequency oscillator, designed to provide known voltages, from one volt down to fractions of microvolts, over a wide range of wavelengths; used for testing or ascertaining the performance of radio-receiving equipment.

silica gel (*Chem.*). Hard amorphous granular form of hydrated silica; chemically inert but very hygroscopic. Used for absorbing water and vapours of solvents. The gel is regenerated by heat.

silt† (*Geol.*). In the mechanical analysis of soil, silt, according to international classification, has a grain-size between 0·002 and 0·02 mm.

simply-connected domain (*Maths.*). A domain in which any closed curve may be contracted to a point without leaving the domain.

singular point (*Maths.*). See **point of inflexion***, **multiple point***, and **conjugate point***.

singular solution (*Maths.*). Of a differential equation: a solution which cannot be derived as a particular integral from a complete primitive.

sintered carbides (*Met.*). A better term than *cemented carbides* (q.v.). The process of sintering as used in powder metallurgy consists in mixing metal powders having different melting-points, and then heating the mixture to a temperature approximating the lowest m.p. of any metal included. In sintered carbides, powdered cobalt, having the lowest m.p., acts as the binder holding together the unmelted particles of the hard carbides.

sinusoi'dal current (*Med.*). An alternative current of considerable value in the treatment of paralysed or weakened muscles.

skate (*Rail.*). A *retarder* (q.v.).

skew lines (*Maths.*). Non-parallel straight lines which do not intersect.

skimming (*Agric., etc.*). (1) The superficial cultivation of soil, the weeds being sheared off and left to die before ploughing.—(2) The removal of the top layer of the ground, or of the irregularities of the surface.

sledger (*Civ. Eng.*). A machine for the first stage of crushing of rock in quarrying. Also called SCALPER.

sleeve control (*Teleph.*). The control of signalling and switching on trunk boards by the third wire attached to the sleeve of the plugs terminating the cords.

slip† (*Pot.*). Used also for casting pottery in plaster moulds and for the centrifugal casting of electrical porcelain insulators.

slip (*Civ. Eng.*). A small or local *landslip* (q.v.).

slipper (*Rail.*). A *retarder* (q.v.).

S/N ratio (*Elec. Comm.*). See **speech/noise ratio***, **signal/noise ratio.**

soakaway (*San. Eng.*). An excavation for drainage which percolates away into the soil. (Scottish term, RUMMEL).

soil (*Agric.*). The uppermost layer of the earth, which supports the growth of plant life. Soils may be heavy clay, loam (natural mixture of sand and clay), peaty (excess of decaying leafy matter), light or sandy (chiefly silica). The loamy type is most generally useful for agriculture, and other types may be corrected by the admixture of clay, manure, or fertiliser with the sandy types, and by breaking up the clay with the subsoil for weathering. Sour soil (excess acidity) is corrected by lime dressings.

soil mechanics. The description, theory, and application of information respecting the properties of soil, its structure, and movement.

soil sampler (*Civ. Eng.*). A hollow circular tool, with a sharp edge, for extracting specimens of soil for examination or analysis. Also SOIL BORER, SOIL PENCIL.

solid angle (*Geom.*). Of an area subtended to a point: the area on the surface of a unit sphere intercepted by the cone whose base is the area and apex the point, which is also the centre of the sphere.

soluseptasine (*Chem.*). See **sulphonamides***.

somatomet'ric (*Nut.*). Concerned with measurements made on the human body, especially for statistical purposes.

sonom'eter (*Acous.*). A *monochord** (q.v.).

soya-bean oil (*Chem.*). Drying oil, abundant in soya beans (the seed of *Glycine Soja* and *G. hispida*, widely grown in the Orient). Used in soaps, paints, varnishes, and rubber substitutes.

spall† (*Masonry*). Also, such a fragment detached by weather action.

spall drain (*San. Eng.*). See **rubble drain***.

spar (*Aero.*). A main structural member of a main plane, tail, or control surface, which carries the applied loads. The ribs forming the aerofoil surface are attached to spars.

speech/noise ratio (*Acous.*). The number of decibels by which reproduced speech must be attenuated before it becomes unintelligible because of the accompanying noise.

spherical triangle (*Maths.*). A triangle formed by three lines (see **line***) on the surface of a sphere.

spherometer (*Optics*). An instrument for measuring the curvature of a lens surface.

spit (*Agric.*). The unit of depth of digging—the length of a fork or spade.

spoilage, spoils (*Print.*). Sheets spoilt in printing (e.g. at beginning of job) or otherwise imperfectly executed (e.g. owing to misapprehension of instructions). See **printer's ream, overs***.

sponson (*Aero.*). (1) In a flying-boat, a stub *plane* (q.v.).—(2) Sometimes, a wing-section to give extra lift in flight.

spring points (*Rail.*). Points which are normally held closed by springs in determining the route when they are *facing points*, but can be passed through as *trailing points* (see **points***).

spurious radiation (*Radio*). Radiation of frequencies outside the band allotted to the transmission.

Stabilovolt (*Elec. Comm.*). A partially evacuated tube containing a gaseous discharge through a series of electrodes, the potentials between which tend to a greater constancy than the voltage applied through a resistance to the end electrodes.

stacked array (*Radio*) See **tier array***.

stand oil (*Paint.*). A lithographic varnish, also used in printer's inks, paints, and enamels. Obtained, by heating, from old clarified tanked oil, or by burning off linseed oil at its ignition point.

ster'nutator (*Chem. War.*). A war gas which has an irritant effect on the respiratory passages, e g. D.A., D M., D.C.

Stokes' law (*Chem. Eng.*). An expression of the behaviour of small spheres falling freely in a fluid, i.e.

$$v=\frac{2}{9}\,gr^2\frac{(S-1)}{\mu}$$

where v=velocity of fall in cm. per sec., g= gravitational constant, r=radius of particle in cm , S=its specific gravity, and μ the coefficient of viscosity of the fluid in c.g.s. units. The critical radius of a sphere above which Stokes' law no longer holds is stated by Allen (*Phil. Mag.*, 1900, p. 324) to be,

$$r=\frac{0\cdot 00846}{\sqrt[3]{S-1}}\text{ cm.}$$

stone drain (*San. Eng.*). See **rubble drain***.

stub (*Radio*). A quarter-wave resonating line, of high impedance, used for anchoring antenna arrays without insulators.

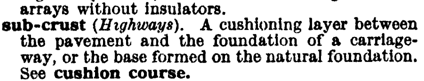
sub-crust (*Highways*). A cushioning layer between the pavement and the foundation of a carriage-way, or the base formed on the natural foundation. See **cushion course.**

submerged combustion (*Ind. Heat.*). A method of heating liquids by submerged burner equipment of special design, which maintains the flame in direct contact with the liquid being heated.

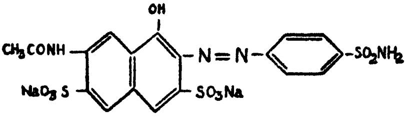
suffix (*Teleph.*). The operational or functional signal transmitted after the *prefix** (q.v.).

sulphon'amides (*Chem.*). A group of drugs with a powerful anti-bacterial action, used in the treatment of various infections. They are more effective in the body than in the test-tube, and are believed to act by interfering with the metabolic processes of bacteria, which are thereby rendered more susceptible to the natural defences, the leucocytes and immune bodies. The earlier drugs were most effective against haemolytic streptococci, but later members of the group are potent against other organisms. Many compounds of this group have been tested and used. A comprehensive list cannot be accommodated here, but the following are representative members:

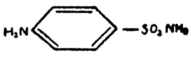
The first to be used was PRONTOSIL, a reddish powder, the hydrochloride of 2'·4'-diaminoazo-benzene-4-sulphonamide:



PRONTOSIL-SOLUBLE, which has greater anti-bacterial effect, and is more soluble, is the disodium salt of 4'-sulphonamido phenylazo-7-acetylamino-1-hydroxy naphthalene-3·6-disulphonic acid:

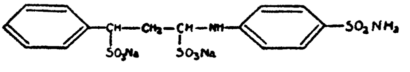


PRONTOSIL ALBUM (*sulphanilamide*), a white powder with still greater effect, is *p*-aminophenyl sulphonamide:—



It is particularly valuable in the treatment of wounds, to which it is applied direct. It has the virtue of simplicity and consequent cheapness.

SOLUSEPTASINE,

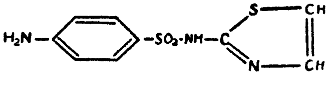


less effective than sulphanilamide, was prepared as suitable for injection, for which purpose sulphanilamide and the sodium salts of sulphapyridine and sulphathiazole (amongst others) are also suitable.

SULPHAPYRIDINE (*M. and B.* 693), 2-(*p*-amino benzene sulphonamido) pyridine,

is a white crystalline powder, sparingly soluble in water. It is usefully effective against pneumococci, gonococci, meningococci, and staphylococci.

SULPHATHIAZOLE (*Thiazamide*) is the thiazole analogue of sulphapyridine (which it resembles in physical properties):



It is more active than Sulphapyridine against staphylococci, but less so against pneumococci.

SULPHAGUANIDINE is the guanidine analogue of sulphapyridine. It is almost insoluble in water and is therefore useful in infections of the alimentary track—e.g. dysentery. Good results have been claimed in ulcerative colitis and in cholera.

sum of infinite series (*Maths.*). More precisely, sum to infinity. The limit, as n tends to infinity, of the sum of the first n terms.

superphosphate (*Chem.*). Superphosphate of lime, an agricultural fertiliser; a mixture of calcium sulphate and dihydrogen calcium phosphate; made by treating bone ash or basic slag (calcium phosphate) with sulphuric acid.

sun-ray treatment (*Med.*). Popular but erroneous term for *ultra-violet therapy*.

surface combustion (*Ind. Heat.*). Occurs by bringing a combustible mixture of gas and air into contact with a suitable refractory material in such a manner as to produce a flameless or nearly flameless state of combustion, the surface of the refractory material being maintained in a state of incandescence.

sylphon bellows (*Phys.*). See **bellows***.

T 773 (*Chem. War.*). $\beta\beta'\beta'''$-trichlortriethylamine, T 773 (U.S.), which has been shown to have vesicant action.

tangential field (*Optics*) The image surface formed by the tangential foci of a series of object points lying in a plane at right angles to the axis.

tangential focus (*Optics*). The focus of an object point lying off the axis of an optical system, in which the image is drawn out by the astigmatism of the system into a line tangential to a circle centred on the optic axis.

tank line (*Radio*). A quarter-wavelength line used as a frequency stabiliser in an ultra-short-wave radio transmitter

Taylor's series (*Maths.*). A series expansion for a continuous function giving the value of the function for one value of the independent variable in terms of that for another value. Under specified conditions the series is

$$f(a+h)=f(a)+hf'(a)+\frac{h^2f''(a)}{2!}\ldots\text{etc.}$$

T.C.P. (*Chem*). A proprietary antiseptic and germicide of which the active principle is trichlorophenylmethyliodosalicyl dissolved in water.

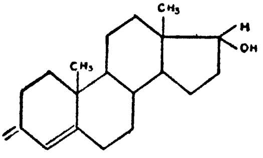
telecentric stop (*Optics*). A stop placed in the second focal plane of a positive lens, forming a viewing system by which a scale can be read without parallax errors.

temperature control (*Ind Heat.*). Control, by means of instruments of the thermo-electric and thermostatic types, of operating temperatures in furnaces and heating appliances; it is achieved by relayed automatic control of the fuel and air flows according to the predetermined temperature setting of the instruments.

terrestrial eyepiece (*Optics*). An eyepiece consisting of four separated lenses to erect the inverted image formed by a telescope objective.

terrestrial telescope (*Optics*). A telescope consisting of an objective and a four-lens eyepiece (terrestrial eyepiece), giving an erect image of a distant object.

testosterone (*Chem.*). A steroid,



obtained from the testis. It is the most active androgenic substance so far isolated and is probably the male sex hormone. See also **androsterone***.

Thermit (*Eng.*). A mixture of aluminium with half an equivalent amount of iron oxide, used in welding and repairing machinery. See **aluminothermic process.**

Thermolux (*Glass*). A proprietary *safety glass* (q.v.) the middle layer of which consists of a felt of glass fibres; the edges are hermetically sealed.

hiamin (*Chem.*). Vitamin B_1.

Thiazamide (*Chem.*). See **sulphonamides*** (*sulphathiazole*).

Thomas bar (*Med.*). A leather bar placed externally on the sole of the shoe in the treatment of hallux rigidus.

ier array (*Radio*). An antenna comprising a number of radiating elements, one above the other. Also STACKED ARRAY.

ocopherol (*Chem.*). Vitamin E.

one-arm (*Acous.*). The swivelling tube connecting the sound-box to the horn (of which it forms a part) in an acoustic gramophone. By extension, the arm which carries the electric pick-up when reproducing from sound records electrically.

toroidal surface (*Optics*). A lens surface in which the curvature in one plane differs from that in a plane at right angles.

total air-gas mixture (*Ind. Heat.*). A mixture in which the proportion of air pre-mixed with a gas represents the total volume needed for perfect or complete combustion.

toxic smoke (*Chem. War.*). A war 'gas' in the form of a particulate cloud, i.e. arsenical compounds released by heat generators or detonators; odourless and invisible, except at the point of discharge. See **D.A.***, **D.C.***, **D.M.***

toxicity (*Chem. War.*). See **mortality product***.

tracing (*Eng.*). An engineering drawing transferred to transparent tracing paper or cloth, in indian-ink for permanence and for making good blueprints. A *tracer's* work carries no design responsibility. See **draughtsman***.

tracking (*Highways*). (1) The driving of vehicles in an approximately single track.—(2) Lines of wear in the carriageway from so doing.

trailing points (*Rail.*). See **points***.

transcendental functions (*Maths.*). Functions of a variable which are not rational or algebraical, but are usually expressible as an infinite series or product, e g. trigonometrical or gamma functions.

transfer instrument (*Elec. Eng.*). An instrument which gives an indication independent of frequency, including zero frequency, so that it can be used for calibrating a c. instruments when calibrated with d.c., e.g. an electrostatic wattmeter.

transfer signal (*Teleph.*). A signal which transfers a connection to a distant operator.

transformation ratio† (*Elec. Eng.*). More precisely, the ratio of the electromotive forces in the windings, or the ratio of the number of turns in the windings —(*Elec Comm*) The *turns-ratio** (q.v.) of windings on a transformer.

transparency (*Thermionics*). The ratio of the free space (window) between grid or screen wires in a thermionic valve to their total area.

trap points (*Rail.*). Points placed in running rails to prevent unauthorised switching of trains.

treadle (*Sig.*) An electrical contact operated by the deflection in running rails caused by the passage of wheels.

trichromatic coefficients (*Light*). The relative intensities of three primaries of a given trichromatic system of colour specification required to match a colour sample. Generally the three coefficients add up to unity.

trichromatic colorimator (*Light*). An instrument for measuring colour. Three radiations, usually specified red, green, and blue, are mixed together, the intensities of these required to make a match giving the specification.

tricusp (*Maths.*). See **cyclic curve***.

trigonometrical functions (*Maths.*). Sines and cosines, their inverses, and functions derived from them.

trochoid (*Maths.*). See **cyclic curve***.

trunk offering (*Teleph.*). The practice whereby an operator can offer a trunk call to a subscriber who is already engaged on a local call.

tunnel burners (*Ind. Heat.*). A general class of industrial gas burners using a refractory tunnel at the burner exit for the main purpose of positive flame retention. The tunnel serves as an ignition zone and accelerates the rate of flame propagation, through turbulence and temperature rise, to a point where it is in equilibrium with the relatively high air-gas mixture velocity employed with burners of this kind.

turnover frequency (*Acous.*). In disc recording, the frequency, generally between 200 and 500 cps., where the change from constant-amplitude to constant-velocity recording takes place.

turns-ratio (*Elec. Comm*). The ratio *N* of the turns in any pair of windings on a transformer. Power passing between such windings changes its impedance level inversely as N^2, because in a given winding space the electromotive force is proportional to the number of turns.

T.W. antenna (*Radio*). An antenna in which the radiating and non-radiating elements are formed into the edges and diameters of a series of adjacent rectangular boxes.

twin plate (*Glass*). The normal type of plate glass as now made. Grinding is done on both sides at once, as is the subsequent polishing, giving a high degree of flatness without wave or distortion.

two-stage pressure-gas burner (*Ind. Heat*). A burner of the natural-draught type designed for operating with gas under pressure, normally about 5 lbs. per sq. inch, and having primary and secondary air inspirating stages in the injector Unlike most other types of natural-draught gas burners, the two-stage type is capable of entraining maximum and even excess volumes of combustion air.

U.A.X. (*Teleph.*). Abbrev. for *unit automatic exchange.*

ultra-violet microscope (*Optics*). A microscope in which ultra-violet rays illuminate the object. The lens system is constructed of materials (such as quartz) which are transparent to such rays, the image being registered photographically.

ultra-violet therapy (*Med.*). Treatment of disease by means of ultra-violet rays. The therapeutic rays (3000-4000 A.U.) are generated by two types of apparatus: carbon and tungsten arc lamps, and quartz mercury-vapour lamps.

unit processes. Operations (e.g. size-reduction, evaporation, distillation) which, suitably modified, are common to many industries and form integral parts of a complete manufacturing process.

universal combustion burner (*Ind. Heat.*). An industrial gas burner of the natural-draught type having one injector for the entrainment of primary air prior to combustion, and a secondary injector through which the flow of additional air into the combustion chamber can be regulated. By inter-adjustment of the two injectors it is possible to obtain a full range of combustion conditions such as a fully aerated flame, a partially aerated flame with diffused secondary air, or a luminous flame with the total volume of air for complete combustion admitted at the secondary stage.

uridro'sis (*Med.*). A condition in which the constituents normally found in urine are excreted by the sweat glands.

vane relay (*Sig.*). A relay used in railway signalling in which the moving element carrying the contacts comprises a disc or vane, which is propelled by the reaction of eddy-currents induced therein by a coil-excited magnet.

vasopres'sin (*Physiol.*). A hormone secreted by the posterior lobe of the pituitary body, which increases blood pressure by constricting the small blood-vessels.

vasopres'sor (*Med.*). Causing a rise of blood pressure. A substance which causes a rise of blood pressure.

vee antenna (*Radio*). A line radiator folded in the form of a V in the horizontal plane, either alone or multiplied in an array.

vesicant (*Chem. War.*). Any war 'gas' the action of which on the body causes blistering and destruction of tissues; e.g. mustard gas.

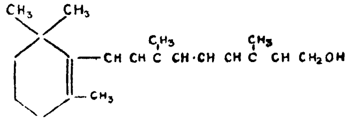
vinyl resins † (*Plastics*). These are now widely used in the making of gramophone records, water-tubes, floor-coverings, etc.

visual acuity (*Light*). The power of the eye to resolve fine detail Expressed as the angular separation of object points or lines when they can just be resolved.

vitality index (*Nut*). The index of chest girth divided by the height, the former being the average of inspiration and expiration.

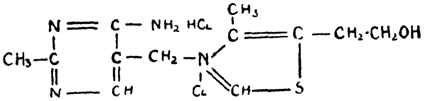
vitamins†. Further details regarding known vitamins are given below.

vitamin A†. This is an unsaturated alcohol with the structure:



Animals can obtain it from its precursors, or 'provitamins,' the *carotenes* (q.v.). Lack of vitamin A causes night-blindness and, in more severe cases, xerophthalmia, excessive keratinisation of other epithelia (and hence, perhaps, increased susceptibility to infection) and, in the young, deficient growth. The richest natural sources are the liver oils of fish (halibut, cod, etc.), but valuable sources of the vitamin and its precursors are milk, butter, eggs, and various vegetables. The daily requirement of the normal adult is not certainly known but is believed to be at least 3000 International Units (1 8 mg.).

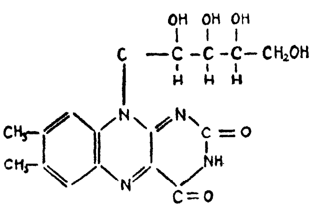
vitamin B_1†. This is isolated as its chloride-hydrochloride, with the structure:



Vitamin B_1 is essential for the proper metabolism of carbohydrate (of especial importance to brain and nerve tissue), its pyrophosphate ester forming the co-enzyme of the enzyme carboxylase. The richest natural sources are yeast and the germs of cereals, but it is present in most foods. The minimum daily requirement is about 1 mg. (333 I.U).

vitamin B_2 complex†. The group includes:

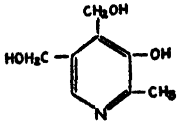
RIBOFLAVIN (*lactoflavin, vitamin B_2*), a yellow crystalline substance with the structure:



Its phosphoric acid ester is, or forms part of, the active group of various oxidising enzymes. Lack of it causes failure of growth and, in man, a syndrome characterised by thickening and cracking of the lips and by corneal lesions. The daily requirement is believed to be 1 to 3 mg.

NICOTINIC ACID (*pellagra-preventing factor*, pyridine-*m*-carboxylic acid) also forms an essential part of various oxidising enzymes. Lack of it leads to *pellagra* (q.v.), maize being an extremely poor source. The daily requirement is unknown but may be about 5 to 10 mg.

PYRIDOXIN (*adermin*, *vitamin B_6*) is also a pyridine derivative.



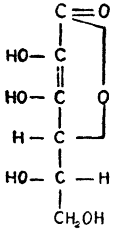
It may be concerned in oxidations and possibly in haemoglobin formation. In rats, deprivation causes a characteristic dermatitis. Human requirements are unknown.

PANTOTHENIC ACID (*bios* IIA) forms part of the 'filtrate factor' which has been of therapeutic value in the treatment of certain anaemias It has the structure:

$HO \cdot CH_2—C(CH_3)_2—CH(OH)—CO—NH \cdot CH_2\ CH_2 \cdot CO \cdot OH.$

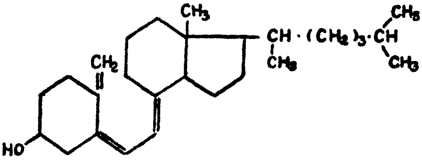
Deprivation causes a characteristic dermatitis in chickens. It is necessary for rat growth. Human needs are unknown.

vitamin C†. This is probably concerned in oxidation-reduction reactions in the living organism. Its structure is:



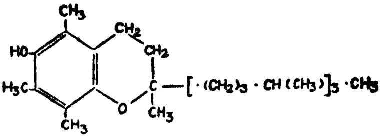
Almost complete lack leads ultimately to scurvy, partial lack to vague ill-health. The daily requirement is at least 15 mg. Certain fruits are very rich in ascorbic acid (rose-hips, black-currants, citrus fruits, etc.), as are many green vegetables; potato and turnip are also valuable sources.

vitamin D†. Some ten antirachitic substances have been obtained by ultra-violet irradiation of sterol precursors, but only two have been isolated from natural sources. Of these, *calciferol* (D_2) is usually prepared artificially from ergosterol; the other, *D_3*, appears to be the commonest natural vitamin. They are white crystalline substances. Vitamin D_2 has the structure:



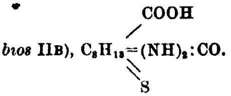
The richest natural sources of vitamin D are the fish liver oils, but it is present, in smaller amounts, in most animal fats. The daily requirement of the growing child and of the pregnant or lactating woman is believed to be about 500 I.U. (=12·5 micrograms of calciferol); that of the normal adult is unknown.

vitamin E†. In some species at least, deficiency causes, in the females, inability to reproduce, the foetus dying and being resorbed; the condition is cured by the vitamin. In the males of the same species complete deprivation of the vitamin ultimately produces degenerative changes and permanent sterility. Human requirements are not known, but good results have been claimed from the therapeutic use of tocopherol in cases of habitual abortion. Three closely related tocopherols are known; the most active of these, α-tocopherol, has the structure:



The richest natural sources are the oils of cereal germs

vitamin F. Highly unsaturated fatty acids (linoleic, linolenic) required in small amounts, possibly to aid in the absorption of ordinary fatty acids.



vitamin H (*biotin*, *bios* IIB), $C_8H_{13}\overset{\diagup COOH}{\underset{\diagdown S}{=}}(NH)_2:CO.$

A water-soluble vitamin essential for normal growth of yeast, and protecting rats or chicks against a nutritional injury caused by eating excess of raw egg-white. Human needs, if any, are unknown

vitamin K. A fat-soluble vitamin required for the production of prothrombin and therefore for normal blood coagulability. Two active substances have been isolated. Vitamin K_1 (*phylloquinone*), found most abundantly in the green leaves of plants, is 3-phytyl-2-methyl-1·4-naphthoquinone, K_2, formed by putrefactive bacteria, is 3-difarnesyl-2-methyl-1 4-naphthoquinone. Active analogues, all derivatives of 2-methyl-1·4-naphthoquinone (some water-soluble) have been synthesised and used therapeutically in various conditions involving delayed blood clotting.

vitamin P. A water-soluble vitamin, possibly related to the (yellow) flavanone, hesperidin, present in citrus fruits, black-currants, etc., and believed to be concerned in maintaining the resistance of the capillary walls to changes in pressure.

vizor (*Sig.*). A hood placed over a signal light to prevent both spurious aspects caused by reflection of external lights, and visibility of the aspect from unintended angles.

Vocoder (*Acous.*) Electrical arrangement for coding, transmitting, decoding, and reconstituting speech.

vulcanite. Hard vulcanised rubber, in the making of which a relatively high proportion of sulphur is used. *Ebonite* (q.v.) is one form; coloured varieties are obtained by adding various ingredients. See **vulcanisation of rubber.**

war gas (*Chem. War.*). Any solid, liquid, or gaseous chemical substance used in warfare to produce poisonous or irritant effects upon the human body. War gases are broadly classified according as they are or are not rapidly dispersed by atmospheric action (see **non-persistent***, **persistent***), or according to the principal effect of the gas, viz. (1) *acute lung irritants* (e.g. chlorine, phosgene); (2) *lachrymators*, 'tear gases' (e.g. bromobenzyl cyanide); (3) *paralysants*, acting on the nervous system (e.g. prussic acid); (4) *sternutators*, 'toxic smokes' (e.g. D.A., D.C., D.M.); (5) *vesicants*, 'blister gases' (e.g. mustard gas).

wave angle (*Radio*). Either the angle of elevation or the azimuth of the arrival or departure of a radio wave with respect to the axis of an antenna array.

wave-guide (*Radio*). A hollow metal conductor within which very-high-frequency energy radiated from a dipole can be transmitted efficiently.

wearing course (*Highways*). The accepted term for the uppermost layer in a carriageway construction. Also termed WEARING (or ROAD) SURFACE, COAT, SHEETING, TOPPING, VENEER, CARPET, CRUST.

Weir-Mitchell treatment (*Med.*). The treatment of neurasthenia by rest, liberal feeding and massage.

wen (*Med.*) A *sebaceous cyst* (q.v.).

Wheelabrating. A method of cleaning metal surfaces of sand, scale, and foreign materials by means of steel shot or grit hurled by centrifugal force under control from the rapidly spinning Wheelabrator unit

wig-wag (*Sig.*). A level-crossing signal which gives its indication, with or without a red light, by swinging about a fixed axis.

wired glass (*Glass*). Glass in which a wire mesh has been incorporated during rolling. Effective against fire and explosion blast.

wolf note (*Acous.*). An extraneous non-harmonic note made by a bow on a violin string.

zone plate (*Optics*) A transparent plate divided into a series of zones by circles whose radii are in the ratio $1 . \sqrt{2} . \sqrt{3} . \sqrt{4}$, etc. Alternate zones are blacked out and a concentration of light is formed at a point on the axis if a plane wave is normally incident on the plate, which thus acts as a lens.

DATE OF ISSUE

This book must be returned within 3, 7, 14 days of its issue. A fine of ONE ANNA per day will be charged if the book is overdue.
